5. Lord Auckland, in approving and confirming the Commissioner's proceedings, remarked, that he was willing to entrust that officer with the discretionary power solicited, provided no considerable expense should be incurred, and he only availed himself of the permission when circumstances would render it inexpedient to await the previous sanction of Government.

6. On the 20th June, the Commissioner submitted the Report of Captain M^cLeod, and subsequently that of Dr. Richardson.

7. From Captain M^cLeod's Report, it will appear that he quitted Moulmein on the 13th December 1836, and after proceeding as far as "Zimmay" (a town of the Shans belonging to the Siamese), it was evident that the authorities were unwilling to permit him to penetrate to China, in the first place asserting that

the roads were impassable, in consequence of their being infested with robbers, and afterwards, with withholding their permission for him to proceed. A detention of some days consequently took place, during which time Captain McLeod took every opportunity of impressing upon the people the advantages which must result from an open and unrestricted commerce, and of ingratiating himself with the chiefs, in which he appears to have been successful.

8. Personally, the authorities were well disposed to forward Captain McLeod's views, but it was evident they were fearful of incurring the censure of the Government of Bankok, who, it would seem, were wholly opposed to any communication being opened with our Government. At length, after frequent remonstrances, permission was given to Captain McLeod, as a favour, to proceed to Kiang Tung (which place appeared, from the reports of the Chinese traders, to be one of importance, and on the route to which there were many considerable stations). Accordingly, on the 29th January 1837, that officer set out for that town, under the escort of a Shan officer, who had been privately instructed to mislead and conduct the party by the route the Chinese caravans travelled. As, however, Captain McLeod had anticipated some such deception, and firmly persisted in pursuing the route to Kiang Túng, the escort acquiesced and consented to accompany him.

9. On Captain McLeod's arrival at Kiang Túng, on the 20th February 1837, the chiefs of the town were lavish in their terms of respect, and evinced a hearty desire to cultivate our friendship, the Tsaubwa promising that he would do all in his power to induce traders to visit Moulmein if the route by Zimmay were open to them.

10. From all the information which Captain McLeod could obtain, it would appear that these people are nominally tributary to the Burmese, for whom they have little affection, and would willingly throw off their yoke to place themselves under British protection, of which they have a very high opinion. The country is well peopled, and is most favourably situated for commerce with China, with which nation a considerable trade is carried on.

11. The merchants who accompanied Captain McLeod, finding a good market for their merchandise, stopped at Kiang Túng, while that officer, having provided himself with ponies, left on the 1st March for Kiang Húng, where he arrived on the 9th. This place is described as one of considerable importance, and it might almost, Captain McLeod observes, be considered a Chinese province, though at the same time it acknowledges some dependence on the Burmese. The country was hardly resettled, after having been convulsed by political events arising out of an attempt, on the part of the uncle of the heir to the throne (who was a minor), to possess himself of the reins of government. At first the functionaries of the place seemed suspicious of the motives which had induced the mission, and reference was made by them to the Chinese authorities at Yunan for instructions. The orders received thence forbade Captain McLeod's proceeding, and stated that the proper route was by Canton, where British ships were constantly arriving. As far as the trade went, the Chinese officers observed that their own merchants were at liberty to visit Moulmein, and ours to trade with them on the Chinese frontier. After remaining at Kiang Húng some days, orders were received from the Burman Court, directing Captain McLeod's return by the route he had come, and finding that it would be useless to remonstrate, he left Kiang Húng on the 26th March, reached Kiang Túng on the 31st of that month, and Zimmay on the 18th of April. At this town Captain McLeod remained some time, endeavouring to obtain permission for the road through Zimmay to Kiang Túng being thrown open to the traders, as it appeared to that officer the success of the mission depended upon this concession, and as this was the only good and safe route by which the merchants could travel, and on which, too, many important towns were situated. The Chou Hona (or chief officer) positively refused to permit traders to pass through the Zimmay territories to Kiang Túng, and stated that the King of Siam had forbidden all communication between the two States; for although the Kiang Tungs were not Burmans, yet they were subjects of Ava, and the hatred between the Siamese and Burmese could never be eradicated. All discussion and remonstrance were in vain; the Chou Hona would not, and could not, permit the traders to pass by Kiang Túng, and over the other route by which the Chinese caravans came to Zimmay, and which is

very

very difficult and dangerous; Captain McLeod consequently returned to Moulmein by a different route.

12. Upon the whole, the people generally were very well inclined to carry on an extensive trade, and also to permit the Chinese and our traders to pass freely through the country; the great obstacles are the jealousy and animosity existing between the Courts of Bankok and Ava, and without the permission of the rulers of those countries, it would not be possible to prosecute the trade with any advantage. All the Chinese who were spoken to on this subject, appeared very anxious to trade with Moulmein, but represented the difficulties as too great by any other route than that of *viâ* Kiang Túng and Zimmay.

13. Dr. Richardson's Report is not so favourable as that of Captain McLeod. After having with great difficulty and with a very scanty supply of provisions, penetrated through the Red Karen country, the inhabitants of which though rude were very friendly, that officer reached the Burmah town of Moné, in the Shan States; here he was subjected to much indignity, and not permitted to proceed until instructions had been received from Ava. The interval was employed in endeavouring to ingratiate himself with the chiefs, and to prevail upon them to protect such traders as might visit the place. In these endeavours he was partially successful, and those traders who had accompanied him were permitted to open and expose their goods for sale. Shortly after intelligence of Prince Sarrawaddie's rebellion was received, and the chiefs strongly urged the necessity of Dr. Richardson's return; but a few days subsequently a permission arriving for him to proceed to Ava, he determined on going thither, and after much difficulty and detention, he reached that city on the 28th May in company with some of the chiefs; he left Ava on the 17th June following, in the company of Colonel Burney, the Resident at that Court.

14. The Commissioner in commenting upon these two missions, observed, that much benefit might accrue, were it possible to prevail on the Court of Bankok to open the road to Kiang Túng *viâ* Zimmay. He proposed, with Lord Auckland's sanction, to address a letter to the Minister of Siam, detailing the objects and urging the expediency of the measure. Regarding the eastern route, noticed as the one now used by the Chinese traders between their country and Zimmay, he thought it would not be amiss if an officer were deputed to visit the chiefs of the people on that route, which had never yet been travelled by Europeans. The country was represented to abound in cattle, and could supplies be drawn from thence, it might prove a matter of great consequence, and one likely to bring about a considerable reduction in the expense of provisioning the European troops stationed in the Tenasserim Provinces, besides rendering them independent of the precarious sources from which the supplies are now procured. It is to be regretted, Mr. Blundell remarked, that the route so successfully travelled over by Dr. Richardson cannot be available, in consequence of the unsettled state of the Burmese Empire, and the jealousy of their present ruler.

15. Subsequently the Commissioner forwarded the Journals of Messrs. McLeod and Richardson, and along with that of the former officer, he submitted a letter explanatory of several circumstances alluded to therein, and expressive of Captain McLeod's willingness to undertake a mission to the more easterly Shan States, which appeared to be very desirous of cultivating a friendly intercourse with us.

I have, &c.
(signed) *A. Ross.*

Fort William,
the 3rd August 1838.

This Despatch having been laid before the Honourable the President in Council of India in Council on the 24th September 1838, is forwarded with his approbation.

(signed) *T. H. Maddock,*
Officiating Secretary to the Government of India.

No. 32.

From *E. A. Blundell,* Esq., Commissioner in the Tenasserim Provinces, to Lieutenant *W. C. M^{c}Leod,* Assistant to the Commissioner; dated the 25th of November 1836.

HAVING received the sanction of Government to depute an officer to endeavour to reach the frontier provinces of China, in order to open a communication with that country and with the intermediate States, I have the honour to acquaint you that I have selected you for this interesting duty, and to request your attention to the following instructions.

2nd. You are aware, from a perusal of the Report of Dr. Richardson's last mission to Laboung and Zimmay, that he fell in with the caravan of Chinese traders who annually visit those places, and who expressed to him both a willingness that he should accompany them on their return home, and an assurance that he would meet with no difficulties or obstruction either on the route or in their country. Judging from this, and from the little information I have obtained on the subject, I am led to entertain sanguine hopes of your success on this, the main object of your mission, though, after reaching Zimmay, the ulterior means of effecting it must be left entirely to your judgment and discretion.

3rd. You will quit Moulmein as soon as practicable after the 1st proximo, and proceed direct to Laboung and Zimmay, to the chiefs of which States you will be furnished with letters of introduction. In another paper you will receive instruction on some points relating to those States not connected with your mission to the frontiers of China. A perusal of Dr. Richardson's Journals of his several visits to these States, will supply you with ample information regarding them. There is every reason to expect that your reception among them will be cordial and friendly, and that you will readily be allowed to proceed through them. The object of your mission will be made known in my letters to the chiefs, and their assistance requested in promoting it. In your communication with them, you will explain that it is our anxious wish to open a trade with all our neighbours, whereby each may be mutually benefited, and that as they have always expressed themselves to Dr. Richardson, willing to promote those views, you have been instructed to proceed as far as China in order to make known to the different countries through which you will pass the market that is open for their produce at Moulmein, and the facility of obtaining there all they want in exchange; and, on your return, to make known to your countrymen what description of merchandise they may send to those distant countries, or have ready here to dispose of to their traders who may visit us. You will point out how advantageous in every respect has our position here already been to them, and how much they will benefit by an extended trade passing to and fro in their territories. You will use every endeavour to impress on them, and indeed on the authorities of every place through which you may subsequently pass, that the object of your mission is solely to open new channels of trade, and to give and receive information by which trade may be promoted. You will endeavour to ascertain in conversations with the chiefs the light in which they would view caravans of traders from other countries bound to Moulmein passing through their jurisdiction, the impediments that may be placed in their way in the shape of tolls or other exactions, and the protection that would be extended to them. Some may be objected to from old enmity, others from jealousy, commercial or political, though no such objections may exist to our traders proceeding thither. Should any particular arrangement on this head be proposed, to which you may think it advisable to accede, you will do so, subject to my approval, and whether deemed by you objectionable or otherwise, you will report to me from Zimmay on the subject before proceeding on your mission.

4th. At Zimmay you will of course fall in with the Chinese traders, in concert with whom, or on information obtained from them, your subsequent movements must be guided. On this point no definite instructions can be laid down for you. It would be desirable that you reach your destination early in the season, so as to be enabled to return before the rains set in; but should you find this impracticable,

impracticable, and you see reason to anticipate a friendly reception among the Chinese, there will be no objection to your passing the wet season with them; but you will consider it preferable to avoid this if practicable and consistent with the whole scope of your mission. In whatever manner you proceed, and by whatever route, you will endeavour to render yourself agreeable to the people and their chiefs through whose country you pass. You will cautiously avoid doing or saying anything that may give offence, or that may lead to the inference that your object is anything but that of opening a trade with them and recommending a commercial intercourse with us.

5th. Mon Lá appears to be the town from whence the Chinese traders, who visit our neighbourhood, come, and towards it you will direct your route. Should you reach this place, you will be guided by circumstances, either to extend your journey still further into the Chinese country, or to return either by the same or by another route from that which you will travel on your way up. You will consider it, however, a most material point to effect your return by another route, and especially direct your attention towards reaching either Ava or our settlements in Assam. Travelling as you will do in countries as yet unknown to us, it is impossible to give you any instructions that will assist you in this desirable object. Everything will depend on your prudence and discretion, and much may be expected towards removing all impediments to your movements in any direction you may desire, from your success in rendering yourself personally agreeable to those who have it in their power to interrupt your progress.

6th. I need not particularise the various points of information on the countries you will visit, to which your attention should be directed. As relating to countries and to people of whom we know little or nothing, every information will be valuable. Your abilities and experience in surveying will, I trust, enable you to furnish a map of your route, to fix the sites of the towns you may pass through and the course of the rivers you will cross. I would recommend, however, a cautious use of your surveying instruments, so as to avoid giving cause of jealousy or apprehension of your object, and to refrain from using them altogether whenever such jealousy may be manifest. You will endeavour to collect every information on the produce of the countries you visit, the probable demand for English manufactures, the course of trade, the encouragement and protection afforded to traders, and every other point that may prove useful towards opening a commercial intercourse with them. You will note the manners and habits of the people, the nature of the Government, the influence, direct or indirect, of the surrounding more powerful nations of China, Ava, and Siam, the estimation in which we are held, the desire or otherwise of cultivating an intercourse with us, and the cause of any impediment that may exist towards it. I have reason to believe that several adventurous individuals, natives of India, have already found their way in that direction, and that they have passed themselves off as deputed by authority here, and confiding in the ignorance of us that must exist among these people, have given themselves considerable airs, and perhaps done much mischief. One instance of this has been reported to me by Lieutenant Colonel Burney, the Resident at Ava, who had seen an individual of this description, who was apprehended and sent to Ava. You will put a stop to future adventures of this kind by explaining to the several authorities that we are not in the habit of deputing such persons, and that they should listen to no stories of the kind that may be related to them, that they are mere traders, towards whom their protection should be extended, but beyond this they are entitled to no attentions. Should any instance be brought to your notice, you will strongly discountenance it, and point out the improbability of deputing such persons without letters or other modes of introduction. You will be careful, however, to separate their trading from their assumed official characters, and while you claim protection and encouragement for the former, remonstrate against their being received in the latter.

7th. On scientific subjects, productions in natural history, botany, mineralogy, &c., &c., you will collect every information within the scope of your knowledge on these subjects.

8th. Should you succeed in reaching Ava, on your return, you will place yourself under the orders and instructions of the Resident in that Court, to whom

you will be furnished with letters, and who will be written to on the subject of your possible visit. Should you reach our possessions in Assam, you will consider yourself at liberty to proceed to Calcutta, and report the result of your journey immediately to Government.

9th. You will be furnished with letters to the chiefs of Zimmay, Laboung, Keintoung, Keinhong or Kein Yongye, and Mon Lá. You will also be supplied with various articles of presents to these chiefs, and to others as yet unknown to us, but whose assistance and protection may be extended to you, or you may find it desirable to obtain.

Additional Instructions to Lieutenant *W. C. McLeod*, relative to the Shan States of Zimmay and Laboung; dated 25th November 1836.

These States are now annually visited by considerable numbers of natives of India, who are sent there to purchase cattle, and whose conduct, it is to be feared, is the cause of considerable annoyance to the authorities and of mischief in other respects. You will not consider yourself invested with any peculiar authority over these people, but if instances of their misconduct be brought to your notice in your communications with the chiefs, you will assist them in restraining it by explaining that such of our subjects as visit other countries, must abide by the laws of those countries, in any breach of which they will never meet with the support of their own Government, and that such offenders are as liable to punishment as their own people.

You will make inquiries on the present state of the cattle trade, and ascertain as far as practicable the probable continuance of supplies, and the impediments that may exist to the free exportation, which has been assured to us on Dr. Richardson's several visits.

You will collect information on the settlement of the Government, and the present state of affairs consequent on the death of the late principal chief Chou Chi Wit, the head of the family, who retain among them the several Shan States to the northward.

You will mention that the Karens residing south of the Thoung Yin still complain of the Shan officers calling on them for tribute money. You will not bring this forward as a subject of official complaint, but represent it as a disobedience of orders on the part of their officers, which may some day subject these subordinates to serious consequences, as these Karens have been instructed to resist all such payments, and to apprehend and send to Moulmein anyone that may demand them.

You will cautiously avoid all political subjects in your conversations with the chiefs, and, if introduced by them, you will state at once that your object is solely that of extending trade, and that you are not authorised in any way whatever to discuss other subjects with them. You will discountenance all allusions to them even in private conversations, but do so always in a kind and friendly manner. You will avail yourself of opportunities, both public and private, of making known to the chiefs how greatly we acknowledge their friendliness and liberality, and how desirous we are of ensuring a continuance of it.

It is to be feared that some of the natives of India who proceed to the Shan States in trading excursions, are occasionally engaged in the traffic of slaves that takes place between the Shans and the Red Karens. You will warn them against such proceedings, and explain to them the penalties to which they subject themselves should they introduce slaves from thence into these provinces under any pretence whatever.

From *E. A. Blundell*, Esq., Commissioner in the Tenasserim Provinces, to the Chief of Laboung.

When Dr. Richardson returned to Moulmein in the month of Katsoung 1197 (May 1835), he reported to me that he had been most kindly received by you, and that you stated that you would permit an English officer to pass through your

your territories and afford him every assistance, should I wish to send one to the countries beyond yours, even to China. I have reported this to the Ruler of India, and I have received his orders to depute an officer on a friendly visit to China and to the intermediate countries, in order to open a road of trade with them, to obtain their permission for our traders to visit them, and to recommend their traders to bring their produce to Moulmein and exchange it for ours. The officer whom I send is Captain M^{c}Leod the Governor of Mergui, whom I hope you will receive as kindly as you always have done Dr. Richardson, and that you will find him equally agreeable to you. Dr. Richardson has this year gone with a caravan of traders to Moné, as it is the wish of the English to become known to, and to trade with, all the countries in the neighbourhood, in order to the mutual benefit of all. As there is now a constant intercourse between your country and Moulmein, and numerous traders from hence go annually to Laboung and reside there a long while, it is desirable that an officer should occasionally visit you, in order to thank you for the protection afforded to our traders and to ascertain your wishes, and whether by the misconduct of inferior persons any offence is given that may injure the strong friendship that ought always to exist between us. Nothing has occurred here to give offence, and if anything has occurred in your country, Captain M^{c}Leod will hear it and report it to me. After this, I hope you will fulfil your promise and allow Captain M^{c}Leod to go on his journey to the countries, and afford every assistance and protection he may require; to open a trade with other countries is a good work, because the people of all countries benefit by it. Moulmein is a seaport town from whence the produce of distant countries can be conveyed to all parts of the world, in ships, which bring other merchandise to Moulmein. It is therefore the wish of the English to induce the people of distant countries to bring their produce to Moulmein, because it will always sell well, and they can purchase English articles cheap, therefore Captain M^{c}Leod is deputed to point this out to the countries between yours and China; you will benefit also by so large a trade passing through your country, and your name will become renowned among the English who will always be your friends. As a promise was given to Dr. Richardson on his last visit to allow a free permission to traders to pass to and from Moulmein through your territories, and as some Chinese traders visited Moulmein last year, I feel confident you will continue this friendly permission, and Captain M^{c}Leod will report to me your wishes on the subject. I have given Captain M^{c}Leod a few presents for you as a token of respect and friendship.

A similar letter to the above is also written to the Chief of Zimmay.

From *E. A. Blundell*, Esq., Commissioner in the Tenasserim Provinces to the Tsaubwa of Kein Yon-gyi; dated the 25th November 1836.

EVER since the English have had possession of Moulmein, they have been desirous of opening a trade with all the countries round about. The people of your country have never visited Moulmein, and are therefore unaware what a market is here open for their merchandise. The people of Moulmein have never visited your country because they have never learnt whether you will allow them to do so. It is not right that the two countries should remain any longer in ignorance of each other, and lose the benefit which would accrue to both by an exchange of their several articles of merchandise. I have therefore deputed an English officer, Captain M^{c}Leod, the Governor of Mergui, to pay to you a visit. Captain M^{c}Leod has been to Ava, where he was presented to the King, and is known to all the ministers of the Court, who will be informed hrough the British President, Colonel Burney, of this visit. I hope you will receive him and all his followers kindly, and allow any merchants who accompany him to dispose of their goods. Captain M^{c}Leod will give you every information regarding Moulmein, and will explain to you how beneficial it would be to both countries that a trade should be open between them. I have directed Captain M^{c}Leod to proceed on to Mon Lá, to visit that place in order in the same way to open a trade with Moulmein. I request you will, as a token of

your friendship, allow him to proceed there, and afford him every protection and assistance he may require. I have given Captain M^{c}Leod a few presents in token of my friendship for you. Dated 25th November 1836, corresponding with 3rd Waning of Natdau 1198.

From *E. A. Blundell*, Esq., Commissioner, Tenasserim Provinces, to the Governor of Mon Lá; dated the 25th November 1836.

THE merchants from Talé, and from your country, who annually visit Zimmay, Laboung, Lagon, and Yahaing, some of whom visited Moulmein last year, and were kindly received by all the officers of the town, have doubtless informed you that the merchants of Moulmein are desirous of trading overland with your country. I was very glad to see the traders from your country at Moulmeim, and I hope they will come every year in great numbers. The traders of Moulmein would be very glad to visit your country, but it is very distant, and they do not like to do so until they know whether they will be received in the same manner that your traders are received here. I have therefore deputed an English officer, Captain M^{c}Leod, to pay you a friendly visit, and to ask permission for the traders of Moulmein to visit Tallay and your country with goods to sell and exchange for goods of your country. Captain M^{c}Leod will give you every information on the subject of trade at Moulmein, and explain to you how desirable it is that the traders of one country should visit the other, in order to dispose of their goods. The people of your country are great traders, and the people of this country are the same, therefore the Governors of the two countries should become known to each other by friendly messages. If an officer from your country should visit Moulmein, I shall be very glad to see him, and I will receive him like a younger brother. I hope you will receive Captain M^{c}Leod in the same manner, and allow him, if he wishes it, to go to Talé to pay his respects to the Tsaubwa, and present a letter from me to ask permission for the merchants of Moulmein to bring their goods and dispose of them in his country. Whenever Captain M^{c}Leod desires to return, I hope you will assist him to do so. He will present you with a few things from Moulmein in token of friendship which should always exist between us. Dated the 25th November 1836, corresponding with the 3rd of the Waning of Natdau.

From *E. A. Blundell*, Esq., Commissioner in the Tenasserim Provinces, to the Tsaubwa of Talé; dated the 25th November 1836.

THE bearer of this is an English officer, Captain M^{c}Leod, whom I have sent to pay his respects to you, and to ask your permission for the merchants of Moulmein to carry their goods into your country and dispose of them there. Your country is very distant from Moulmein, and the merchants of this place would be afraid to venture so far, unless they were assured you would give them permission and treat them kindly. The merchants of Talé have already visited Moulmein, and have been kindly received, and I hope they will come in great numbers every year. Captain M^{c}Leod will give you every information about what merchandise is to be procured here in exchange for that of your country; and if you will send an officer to visit me in the same manner as I send Captain M^{c}Leod to you, I will receive him like a younger brother. By friendly messages of this kind countries become known to each other, and both benefit by exchanging their commodities. As I do not speak your language, I am obliged to write this letter in Burmese, which I hope you will be able to understand. Captain M^{c}Leod takes a few things from me to present to you. Dated the 25th November 1836, corresponding with the 3rd of the Waning of Natdau 1198.

(No. 32.)

From *E. A. Blundell*, Esq., Commissioner in the Tenasserim Provinces, to *D. Richardson*, Esq.

A CARAVAN of traders from among the inhabitants of this province, to proceed to the Shan States of Englay and Moné, with articles the produce of this country and others of British manufacture, to be exchanged for the produce of the countries they may visit, having been formed, with the understanding that they should be accompanied by a British officer, I have the honour to select you for this duty, and to request your attention to the following instructions :—

2. The object for which the countenance and protection of a British officer is sought, is that of ensuring them a safe passage through the slip of territory on the west bank of the Salween occupied by the Red Karens, who were visited by you last year. There is no reason to anticipate your encountering any difficulty in passing through that country, as the chiefs there seem well impressed with an idea of our power, and, as far as we have had any communication with them, seem desirous of being on friendly terms with us; but their predatory habits would render the caravan now proceeding through their country too great a temptation unless protected by the warrant of their being British subjects, afforded by the presence of a British officer. You will make a point of visiting all the chiefs of districts or villages through which you pass (for they seem to be in a great measure independent of each other), make them a few suitable presents, explain to them the nature of your mission, and obtain their permission to pass through their country.

3. You will be careful to see that advantage is not taken of your presence by the traders to evade payments of such duties as may be customary or may be fairly and lawfully demanded, though you will resist, in as far as may be practicable, all exorbitant demands and exactions.

4. As circumstances may intervene to prevent your accompanying the caravan on its return, it will be desirable that you obtain from the several chiefs you may visit on your way up, and, if possible, in writing, their promise to allow a free and unmolested return passage.

5. Having conducted the caravan through the Karen-nee country, you will enter others of which little or nothing is known beyond the fact of their being dependent on Ava. Having accompanied the caravan to its destination, and secured for it the protection of those in authority there, you will endeavour to make good your way to Ava with the letters with which you will be furnished to Lieutenant Colonel Burney, the Resident at that Court, and report to that officer the result of your conduct of the caravan. As the route you will have to traverse in order to reach Ava is unknown to us, and has not hitherto been visited by Europeans, I am unable to give you any but general instructions as to the best mode of effecting your object, leaving you to be guided by your own judgment and discretion in all contingencies that may occur.

6. The caravan under your conduct will, in all probability, halt at Moné, though should any of the people feel desirous of accompanying you to Ava, it would be desirable to allow them to do so. You will state to the authorities of Moné that you have despatches from me to the Resident at Ava, and that you have been directed by me to deliver them personally to that officer, and to report to him, for the information of the Court of Ava, the result of your mission. In your communication with the authorities of the places you may visit or pass through, you will be perfectly open as to the object of your mission, explaining to them that it is solely for the purpose of opening a trade with Moulmein, where a ready market will be found for their produce, and where, if their merchants will visit it, they will find every encouragement and protection extended to them. You will steadily avoid even the appearance of having any other object in your visit. It is not improbable that overtures may be made to you by some of the people in the country beyond the Karen-nees, on the subject of emigration to these provinces. You will be very cautious about encouraging or even listening to any proposition of the kind, so as to give no cause for jealousy or apprehension of the object of your visit.

7. As the countries you are about to visit are almost entirely unknown to us, I need not remind you that information of every kind relating to them will be highly desirable, more especially on commercial points, the nature of the demand for English manufactures among them, and the produce obtainable in return; the feelings and wishes of the authorities and of the people with regard to a more intimate intercourse with us; the duties or tolls demandable at the several towns, and the protection afforded to our traders visiting them.

8. You are aware that a few years ago numerous traders from that part of the country used to visit Moulmein by the route of Tongngoo and Shoay-gein, and the discontinuance of their visits is ascribed to the exactions and oppressions they met with at those places. The route you are about to travel is free from these exactions, and it will be an object with you to point this out to the people there, and to ascertain how far the influence or authority of the Court of Ava, exerted directly or indirectly, may prevent its being followed in future seasons. It is said here that were the route through the Karen-nee country known to the Shan traders to be safe from depredations, they would immediately avail themselves of it. It is to be feared, however, that this is not the sole preventive, and that the Court of Ava is jealous of this portion of its people having too intimate communication with us. The first objection to trying this route is likely to be entirely removed by your mission; and if you discover any influence at work to prevent its being followed, you will be enabled to communicate the result of your observations to the Resident at Ava, and, with his assistance, remove all other obstructions that may exist to a free commercial intercourse between the countries.

9. You will be furnished with letters to the known three chiefs of the Karen-nee country, and to the Tsaubwa of Moné; in that written to the latter it will be mentioned that you are directed to proceed on to Ava with despatches to the Resident, and his assistance requested to enable you to do so.

10. You will be furnished also with different articles as presents to those in authority whom you may visit.

From *E. A. Blundell*, Esq., Commissioner in the Tenasserim Provinces, to *Pa Bo*, Chief of Karen-nees; dated the 25th November 1836.

Dr. Richardson, who visited you two years ago, has been directed by me to accompany a caravan of Moulmein traders to Moné, in order to open a trade between that country and Moulmein. You received Dr. Richardson very kindly when he last visited you, and promised a free and unmolested passage to traders to and from Moulmein, passing through your country. If you do this, there will always be a friendship between you and the English, who you know are a very powerful nation, and their friendship very valuable. All that Dr. Richardson will ask of you is, to give orders to your people not to stop or molest traders who may be going from Moulmein to Moné, or from Moné to Moulmein. If you do this, and cause your orders to be strictly obeyed, the English will be thankful to you, and you may always reckon on being friends with them. Dr. Richardson will give you a few presents from me.

From *E. A. Blundell*, Esq., Commissioner in the Tenasserim Provinces, to *Pa Bang*, Chief of the Karen-nees; dated the 25th November 1836.

Dr. Richardson, who visited the Chief Pa Bo two years ago, has been directed by me to accompany a caravan of Moulmein traders to Moné, in order to open a trade between that country and Moulmein. The Chief Pa Bo received Dr. Richardson very kindly when he last visited him, and promised a free and unmolested passage to traders to and from Moulmein, passing through his country. If you do this also, there will always be a friendship between you and

and the English, who you know are a very powerful nation, and their friendship very valuable. All that Dr. Richardson will ask of you is, to give orders to your people not to stop or molest traders who may be going from Moulmein to Moné, or from Moné to Moulmein. If you do this, and cause your orders to be strictly obeyed, the English will be thankful to you, and you may always reckon on being friends with them. Dr. Richardson will give you a few presents from me.

A similar copy to the above is also written to Kay Bo, another chief of the Karen-nees.

From *E. A. Blundell*, Esq., Commissioner in the Tenasserim Provinces, to the Tsaubwa of Moné; dated the 25th November 1836.

I HAVE directed an English officer, Dr. Richardson, to accompany a caravan of traders of this country, who desire to proceed to Moné, and there dispose of their goods and purchase others, in order to request your protection towards them, and to point out how desirable it is that a constant trade should exist between Moné and Moulmein, whereby both countries would so greatly benefit, and the friendship existing between the two great countries of the English and Burmese be increased and strengthened. During these last two years a few traders have gone from Moulmein to Moné, and a few have come from Moné to Moulmein, but now that an English officer is deputed to visit you, in order to open the road of trade and to request your protection of the traders from Moulmein, they are greatly rejoiced, and will accompany him in much larger numbers than before, and their numbers will no doubt increase every year, when they see and know the two countries are so friendly as to be like one, and that they will be received at Moné, and treated in the same way that all traders coming to Moulmein from distant countries are received. Dr. Richardson is well known at Ava, where he received a title from the king, and where he enjoyed the goodwill and friendship of the Woongyis and Atwen Woons; I have therefore desired Dr. Richardson to proceed to Ava, in order to deliver a despatch from me to the British resident, Colonel Burney, and to inform him of his visit to Moné through the Karen-nee country, for the purpose of opening a trade, in order that the Resident may communicate the same to the Lhwotdau.

I have written to the Resident, Colonel Burney, by the route of Rangoon, to say that I have deputed Dr. Richardson on a friendly visit to you, and from thence to proceed to Ava with letters for him. Dr. Richardson takes a few articles as presents from me, as a token of strong friendship.

CAPTAIN M^{c}LEOD'S JOURNAL.

Captain M^{c}Leod's Journal.

From Captain *M^{c}Leod*, Assistant to the Commissioner, to *E. A. Blundell*, Esq. Commissioner in the Tenasserim Provinces; dated 25th August 1837.

I HAVE the honour herewith to forward a copy of the journal kept by me during my mission to the Frontiers of China, and a map constructed from the rough survey made by me with my compass, and such materials as I could collect, thus filling up a blank in our geographical information.

Knowing as well as we do the little dependence to be placed in the accuracy of native sketches, &c., much still remains to be done; yet, however, what I now offer will, I trust, in the absence of absolute survey, be considered of service and of assistance to others, who may turn their attention to the countries represented in the map.

The latitudes of the places I visited have been fixed by observation, but the longitudes have been roughly calculated from the direction travelled by compass, checked by my latitudes as often as taken, which was almost daily. I did

Captain McLeod's Journal.

not fail to take lunars, but not having instruments I could implicitly depend on, and not having worked them out from the want of a nautical almanac before I commenced the construction of the map, I have thought it advisable to adhere to my original plan.

Having brought the duty I had the honour of being selected to perform to a conclusion, I trust that, should I not have realised the expectations of my superiors in having, in my journal, thrown sufficient light on the geography, history, &c., of the States I have visited, that it may be taken into consideration, that Dr. Richardson has left me little to say respecting those of Labong and Zimmé; that the manners, customs, &c., of the inhabitants of Kiang Túng so strongly resemble those of the Burmans, that I have avoided noticing them more than is absolutely necessary. With reference to Kiang Húng, being the State which offered the greatest interest and novelty, both from its relation and position to China, I had many impediments to contend against in establishing friendly intercourse between the people and myself. It was the first time the authorities had held any communication with an European; I was, on my arrival, received with mistrust and suspicion; a strong Burmese party existed, which was anxious to prevent our obtaining a friendly footing in the place, and had, prior to my arrival, made considerable progress in exciting the alarm of the authorities by misrepresenting our character, so that, before I could fulfil my mission successfully, it was necessary, not only to remove the unfavourable impression and distrust which had been conveyed to their minds, but to gain their confidence. The unsettled state of affairs further causing party feeling, rendered the chiefs and people cautious and suspicious even of each other, thus increasing my difficulties.

I trust that I succeeded in impressing them, finally, with a friendly disposition towards us, a just estimate of our character, and raising an anxious desire that an intercourse should be established between our distant countries. The letters brought down by me from all the States sufficiently attest that in this last point I was most successful; I can only assure you, that I lost no opportunity, and spared myself no trouble, to fulfil in every respect the duty I was entrusted with.

Having received from all the States an assurance of goodwill and their wish to carry on a free communication and trade with us, it now remains with Government to decide what steps ought to be taken to establish a permanent intercourse with them. With this view I respectfully beg to offer such suggestions as have occurred to me.

Though the demand for British goods is at present limited, yet a desire to obtain them exists, which will undoubtedly greatly increase as the facility of procuring them becomes more certain; and we may in return obtain large supplies of tea, the produce of the Shan districts, besides China goods.

Some encouragement ought, in the first instance, to be held out to induce our traders to proceed towards China as far as Muang Lá or Kiang Húng at least. The trade, once commenced, may be given up by our merchants without any bad consequences, if they do not find it sufficiently profitable; but unless some officer is again sent up, and some further exertions are made by us, in spite of all the Chinese merchants said, I doubt whether the caravans will be drawn down to our provinces.

I would, therefore, suggest that an officer be again despatched, and advances be made to respectable traders to take investments up; the officer will take care that Government is not defrauded. Though these merchants will be somewhat in the way of the officer, yet their presence will aid much in allaying suspicion, and showing the chiefs that trade is really our object.

The authorities at Zimmé, not only from their own inclination but also under instructions from Bankok, having declined to permit our merchants to pass through that place to China *viâ* Kiang Túng, leaves us little hope of gaining a passage through that country; and knowing the implacable enmity which exists in the Siamese against all connected with Ava, it is not likely that our wishes will ever be acceded to. It, therefore, only remains for us to endeavour to obtain a free passage through the States of Muang Nan and Muang Luang Phaban, which, permitting the Chinese caravans to enter their territories direct from those of Kiang Húng, would not, it is to be presumed, object to granting our traders the same indulgence.

It is my opinion, that our traders will not take advantage of the permission so obtained for more than one or two trips, not in consequence of the road being worse than the other, which I am inclined to discredit, but because the mode of transporting their goods by elephants is attended with inconvenience and delay; this, however, might lead to the Chinese coming down, and thus render our traders proceeding up unnecessary.

A mission to the States of Muang Nan and Muang Luang Phaban would be attended with considerable advantage to us, without reference to the trade into China; no officer has yet visited those States, and it is well known that they are most anxious to open a communication with us, and have expressed their disappointment that no notice has yet been taken of them.

At present, we are wholly dependent for our supplies of cattle on Zimmé (for the stock at Labong is nearly exhausted), a State which has, from the commencement, shown a disinclination to permit their free export, whereas of the other States mentioned, one abounds in black cattle and the other in buffaloes.

A friendly communication being opened with them, will, no doubt, have the effect of making the Zimmé officers more anxious to oblige us, particularly when they find that we can do without them, for our trade, though trifling, is of considerable importance to them.

The officer sent on the mission ought to be directed, after visiting the States of Yahaing, Muang Phé, Muang Nan, and Muang Luang Phaban, to proceed along the eastern bank of the Mé Khong, and to find his way to Esmok, if not prevented by the authorities on the frontier; failing in this to pass on to Kiang Húng, and from thence to Muang Lém and the States more to westward, and thus open a friendly communication with all the States on the frontiers of China.

The last part of this route is reported to be closed up by the Ka Kués and Lawas, but too much dependence ought not to be placed in these reports; should they be found correct, however, the officer ought, from Kiang Túng, to go westward to the ferry across the Salween, and descend that river to Moulmein, when he would have an opportunity of surveying it. The advantages to be derived from the navigation of this stream I have already touched on in my journal.

* * * * *

A JOURNAL kept by Captain *W. C. McLeod*, Assistant to the Commissioner in the Tenasserim Provinces, during his Mission from Moulmein to the Frontiers of China.

In writing the names of rivers, towns, &c., in the accompanying journal, in some instances, the common and known mode of spelling them has been followed; in others, the names used by the inhabitants of the State to which they belong have been given, adopting the system of orthography, as far as possible, published in a plan of a vocabulary, printed at the suggestion of various friends to native education.

Of the Shan words commonly used—

Doé, signifies a hill.	Pang, a halting place.
Viang and Kiang, a fortified town.	Mé, a river, also used for a stream.
Muang, a city, the capital of a district.	Nam, a large stream.
Ban, a village.	Hué, a rivulet.

N.B.—The thermometer used throughout was only divided to 2°.

13th December 1836.—Quitted Moulmein at 6h. 5m. p.m., with the tide, and in two hours and a half reached the village of Tarana on the Gyne, where we put up for the night.

The country in the direction we are now proceeding, being for some distance well known, and in fact the whole journey to Zimmé having already been described by Dr. Richardson, I shall in the first part, merely mention the places we stopped at, and latterly confine myself to a brief description of each day's march.

14th December.—Started from Tarana at a quarter-past six, with the tide, and stopped at the village of Gyne, at a quarter-past 11, which place we quitted at half-past four, and brought to at a quarter-past nine, at the village of Aulan.

Captain McLeod's Journal.

15th December.—Left the above village at six, and stopped at Kazaing from a quarter to 11 to 2 o'clock, and put up for the night at the village of Athárue, at 8 p.m.

16th December.—Started at a quarter-past seven, and a quarter of a mile above the village, entered the Lhaing Bue river, which here joins the Dagyne, and to which the influence of the tide reaches. In ascending the former stream, it was found very shallow, and once we were obliged to get out of our boats and have them pulled over the sand banks. It took us five hours and 49 minutes to reach the village of Paik Tsoung.

Our elephants, &c., which had been sent by land, not having arrived, we remained here until the 21st December.

From Paik Tsoung to Ongau.—Direction, N. 5 W. Estimated Distance, 11 miles. Time, 3½ hours.

On quitting the village we passed through a forest of high trees, free from brushwood, and reached a small plain, which had been cultivated by the Karengs, and the remains of whose huts are still visible; a low range of hills was seen to the eastward running north-west and south-east, distant about 15 miles. From this spot to the halting place, we passed over some small plains, crossed many small streams, and went through a jungle consisting of high forest trees, sometimes of Saul and the Kanien or wood oil tree, and at others of a few teak (but of small size) and bamboo.

The road was throughout good. The ground on which we halted was very confined, inclosed by low hills, and hardly affording, even one small party, a sufficient space to encamp on.

22nd December.—From Ongau to The Biu Stream.—Direction, N. 10 E. Estimated Distance, 14 miles. Time, 4h. 39m.

Immediately after quitting our encamping ground the road ran over very low hills, covered generally with a bamboo jungle, but latterly with a few fine teak trees, which not being situated on the banks of any large streams, had escaped the axe of the wood-cutters. We then descended through the narrow and rocky bed of a watercourse between two hills, on reaching the bottom of which we crossed a stream of 20 feet wide
1.17. and half a foot deep, flowing to the eastward. There is a good spot for halting on the left bank of this stream, the ground being rather open.

Beyond this the road traversed a flat country, with an occasional plain, from which
2.36. hills were seen to the eastward, distant about three miles. We then crossed the Lhaing Bue, about 35 feet wide and half a foot deep, with high banks, and flowing over a stony bed to the southward. Near its banks are a few teak and some kanien or wood-oil trees of considerable size.

From this, the road which had been very good, after running over some high and open ground, became very bad, confined between low hills, from which many small springs flowed, rendering the path soft and muddy; and the jungle was so thick from creepers, &c. that the rays of the sun can never reach the ground.

After crossing the The Biu Khyoung, a stream of about 25 feet broad and one deep, flowing over a stony bed to the westward, we encamped on its right bank under some fine trees. This place is also called by some Mayan beng Tsakan; both names are taken from some trees on the banks of the stream.

We passed several droves of cattle to-day *en route* to Moulmein, chiefly belonging to people from Labong.

23rd December.—From The Biu Stream to the Wen Wi.—Direction, N. 10 W. Estimated Distance, 14 miles. Time, 4h. 30m.

A short march brought us to the Yembain River, a stream of about 50 feet broad and
39. 2½ deep, flowing from north 30 west and sweeping round to the southward. It takes its rise in the hills in a north-easterly direction from this, and discharges itself in the Salween (Thanluen) about 45 or 50 miles direct north of Moulmein. A short distance before reaching this river the Yembain and Dagyne roads join the one by which we are proceeding.

Thus far the road had been very good, passing over high ground and through a fine jungle perfectly free from underwood. It now ran over hills (the ascents of which, though not long, were steep) and occasionally followed the left bank of the Yembain River; but after crossing the Khyoung Kouk, or Crooked Nullah, about 17 times, and another large stream of 15 or 20 feet wide, five or six times, and the Yé Tagon, or Waterfall Stream,
2.29. repeatedly, we attained the summit of a steep hill, from whence the latter takes its rise.

We now gradually descended, frequently crossing a stream with abundance of water, which was very tortuous in its course, sometimes flowing to the northward and sometimes to the southward, and reached the right bank of the Wen Wi, where we halted.

This stream is about 25 feet broad and 2 deep, flowing to the southward over a stony bed, and discharging itself into the Thoung Yin River.

Almost all the bamboo we fell in with to-day was dead.

24th December.—

Captain Mc Leod's Journal.

24th December.—From the Wen Wi to the right bank of the Thoung Yin River. Direction, N. 40 E. Estimated Distance, 3½ miles. Time, 1h. 9m.

Crossed the Wen Wi close to the encamping ground flowing to the eastward, shortly after which we ascended a steep hill (covered with saul trees and bamboo), having parallel ranges on both sides running north and south, only separated from us by precipitous and narrow ravines of considerable depth, and all thickly wooded. The descent, which was at first very gradual and through a fine bamboo jungle, became steeper as we advanced; finally the road became very bad, running along the rocky and broken bed of a small stream, between the hills, to the Thoung Yin.

The hills, forming on both sides of this river, fall precipitously to the water and have a most rugged appearance, but are, with the exception of the tops which rise in broken peaks, covered with vegetation.

We crossed the river on rafts, but the elephants forded it a little above.

This river is the boundary between us and the Shan States tributary to Siam in this direction, and, it is said, formed the line of demarcation between the Burmans and Siamese. We preserve the Burmese name, but the Shan and Siamese call it the Mé Niun. It takes its rise in a range of mountains in about 16° 20′ north latitude, and 99° east longitude, and flowing in a north-westerly direction, discharges itself into the Salween, about 75 miles due north of Moulmein, after having received many tributary streams, and uniting its waters with those of the Maing-lón gyi River, called by the Shans Mé Nium, which comes from the northward. Its course here is to the northward, but a little higher up it flows from the eastward. It is at present about 289 feet wide, and during the rains 358 feet; its rise during that season is about 25 feet; its bed is rocky and varying in depth.

Its banks are said to abound in teak, thengan, and other durable woods; and the pine which grows on some of the hills a little distant from it might, no doubt, be floated down some of the mountain streams which feed it. The produce of this part of the country has been hitherto looked upon as unavailable, in consequence of the falls in the Salween below the junction of this river with it; but as timber has been lately taken down over the rapids, thus showing it to be feasible, advantage will no doubt be taken of its capabilities. There are a number of Kareng villages in its vicinity, the inhabitants of which ply up and down it with their goods; there would be no difficulty in securing the services of these people in cutting timber.

We here expected to procure a supply of rice from the Karengs on our side of the river. Some of those, however, who resided near this have removed to a greater distance, and others have gone over to the Shan side of the river, on the plea of more tax being demanded from them by us than was fixed on.

25th December.—From the Thoung Yin to the Tsheng Tswé Stream. Direction, N. 25 E. Estimated Distance, 13 miles. Time, 4h. 20m.

About half-an-hour after starting we reached the Mé tha wó, a stream of about 50 feet broad and 1½ deep, flowing to the westward, over a bed of large slippery stones. The road, which to this had run over a level country at the base of some hills to the eastward, now followed the course of the stream, which we frequently crossed.

We then reached the foot of some hills, which we ascended, and after passing over two or three of them (some very steep and high), attained the highest point of the range, from which we descended to this place, on the right bank of the Tsheng Tswé Khyoung, or Elephant Tusk Stream, flowing to the westward, and halted. 1.25. 2.10.

The path, after we commenced to ascend, was good, and continued so all the march, and was well shaded by jungle.

From the top of the hills we could see several ranges to the eastward and westward, some of them not far from us, running from north west to south east, but very irregular, and their sides steep and precipitous, and all covered with a thick jungle similar to what we had passed through.

We fell in with a party of Talain settlers from Zimmé and Labong with cattle for the Moulmein market. They told us that they were obliged to give security for their return before leaving Zimmé.

26th December.—From the Tsheng Tswé Stream to the Pooukben halting-place.—Direction, N. 80 E. Estimated Distance, 8 miles. Time, 2h. 38m.

The road to the Red Karengs country, *viâ* Maing-lón-gyi, separated from the direct road to Labong and Zimmé at the Tsheng Tswé Stream; Dr. Richardson, who had been my companion thus far, proceeded by the former this morning, in prosecution of his mission.

The road to-day ran over the highest mountain in this range, in ascending which the trees gradually became stunted, and at the summit none but small ones are seen, partially scattered about; there is also a good deal of table-land covered with grass. 50.

From the top we had a fine view of the surrounding country, which, with the exception of the flat alluvial plains round Moulmein, was one mass of hills in all directions, piled range upon range without regularity, but running from north-west to south-east.

This mountain is called by the Burmans Taikpyoung, in consequence of its barren and bleak appearance.

Captain McLeod's Journal.

The highest range seen, called by us the great Siamese range, forming our eastern boundary with Siam, bore south 10 east, and was called Salé by a Kareng with me. Those mountains Captain Grant made, I believe, 7,000 feet above the level of the sea.

I had no means of ascertaining the height of the range on which we were with any accuracy; the thermometer, however, in the shade stood at 74° Fahrenheit, and water boiled at 206°.

Having traversed the table-land at top of the hill, we commenced descending, sometimes
1.15. very greatly and at others hardly with any fall, and reached the shoulder of the hill, where
2.38. we halted. Here water boils at 209° Fahrenheit.

Having sent the interpreter on yesterday to look for the Kareng villages and procure some provisions, for since leaving Paik Tsoung we had not seen a single habitation, we here found the head Kareng of a district, awaiting our arrival with a plentiful supply of rice, fowls, &c. He complained of the kalas (strangers) from Moulmein taking rice, &c. without paying for the same, and otherwise ill-using them. I recommended him to resist these aggressions by force, that the kalas would soon desist when they found that the Karengs would not put up with them. He would not hear of my paying for the articles furnished by him; I, however, made up for his liberality by making him some presents.

27th December.—From Poukben to Súp Khóng. Direction, S. 80 E.
Estimated Distance, 11 miles. Time, 3h. 2m.

We commenced descending at once; at first down the side of a steep hill, and having reached the Mé Satang, a stream of about 10 feet wide, proceeded along its course, sometimes going along its bed for some distance, and after crossing it about 30 times, arrived at its junction with the Mé Gnau.

2.3. We were here obliged to form rafts with bamboos (which were abundant) to convey the baggage across; for, though the stream was not above four feet deep, yet such was its strength (rushing over a rocky bed), that the coolies could not force their way against it with their loads. This river is about 80 or 100 feet wide, and comes from no great distance from the eastward, and falls into the Maing-lón-gyi river or Mé Nium above the junction of that stream with the Thoung Yin.

The road from this was good, the rise not perceptible, and through a thick jungle, as before; having crossed the river four times more, always with difficulty, in consequence of the large, loose, slippery stones forming its bed and the force of the current, we halted on a convenient spot on its right bank.

Fish is abundant in this river, which in many places was inclosed by stakes.

Here we found the head Kareng from another division with a large party (his village not being distant) awaiting our arrival with a plentiful supply of rice, &c.; he made a similar complaint to the other respecting our traders travelling this road.

28th December,—From Súp Khóng to the Mé Khóng. Direction, N. 40 E.
Estimated Distance, 14 miles. Time, 4h. 30m.

22. Shortly after starting we came upon the Mé Khóng, a stream of about 70 feet wide with two feet of water in it, flowing from the northward and eastward, its velocity, bed, &c. resembling the Mé Gnau, into which it falls a little below the spot we stopped at yesterday.

We continued to march along the course of the stream, crossing it repeatedly, and occasionally passing over hills covered with jungle, but not of any considerable height.

2.54. We then left the bank of the river and ascended some high and steep hills, sometimes looking down from a great height upon the river below, confined by precipitous and rocky banks. The descents from the hills were sometimes very steep, but latterly more gradual, and on again reaching the right bank of the Mé Khóng, we halted in an old betel vine plantation.

This has been a very trying march for both the coolies and elephants, in consequence of the difficulties of crossing the stream and hills; the latter did not follow us over the last hills, but came along the bed of the stream.

Two roads separate close to the halting ground we quitted this morning; the more easterly running over some high hills is said to be somewhat longer and more difficult from this side than the westerly, which we took, principally because there are some Karengs located near it.

In the evening, with the assistance of some Karengs who accompanied us, we procured a supply of rice, &c. from the inhabitants of another division. As this is the last station we shall meet with until we reach the Shan frontier village, we are obliged to lay in a supply for six days.

These people have, throughout, shown me much attention, in return for which, and to secure their continued assistance to travellers, I gave each of the head men an old musket, than which I could not have presented them with anything more acceptable.

At this place we could only get the red rice, which alone is grown on the hills, and is more productive than the white. There is no difference between the two in taste, but the former is not so inviting in appearance, when boiled, as the latter.

The Karengs we have met with in the Shan Territories are superior in appearance to those seen in our provinces, both as regards their person and dress, being fairer and more cleanly. They appear to be well treated by the Shans, at least they did not complain in any

any way of having heavy contributions levied on them; and if what they told me be true, the tax taken from them is very light, consisting of a little wax or cloth. Captain McLeod's Journal.

They are by no means numerous on this road; and the three districts I have passed through contain altogether about 25 houses.

29th December.—From the bank of the Mé Khóng to the Mé Piláu. Direction N. 10 E. Estimated Distance, 3 miles. Time, 1h. 12m.

We had very heavy rain during the night, which not only rendered the road difficult, but increased the strength of the river, in the bed of which the masses of rocks were much larger than those met yesterday, and the stones equally slippery. We came along the side of the stream, crossing and recrossing it frequently, the jungle thick as usual, and halted at the junction of the Mé Pilâu with it; this is a stream of the same size here as the Mé Khóng and in other respects like it, but flowing from the northward.

Not having yesterday procured a sufficient quantity of rice to last us to Muang Haut, we are prevented going further. Most of our things being wet from the rain last evening, we are not sorry to have an opportunity of drying them.

The elephants were three hours on the road, in spite of the short distance.

30th December.—From the Mé Piláu to near the Mé Tian. Direction, N. 60 E. Estimated Distance, 11 miles. Time, 4h. 9m.

For about an hour's march the hills receded a little and formed a small valley, in the midst of which a single hill of limestone rises abrutly, it is perforated from above, has a cave in it, with water oozing from it in some places.

After following the course of the Mé Khóng and crossing it no less than 15 times, though not with the same difficulty as before, we passed over a succession of hills gradually rising to the sources of that stream, and close to which, almost as if issuing from the same rock, are some hot springs. A thermometer dipped in one rose to 94° Fahrenheit. There was no particular taste in the water, but on our approach a sulphuric smell pervaded the atmosphere.

From this spot we ascended a very high and steep hill, said to be higher than the one passed on the 26th. Coming on it unprepared, I had no means at hand of ascertaining the fact even roughly. It was unlike the other, being covered with fine large high trees and bamboos, and at the summit much long grass mixed with jungle, which appeared to afford shelter to tigers, the fresh mark of whose feet showed us that some had been prowling about not long before we ascended.

The descent from this high point is gradual, and we encamped on the first convenient spot we met, on the left bank of a stream of 10 feet wide, flowing to the northward and eastward.

The whole road lay through a thick jungle.

The Burmans call this Yhit Kabó tsakan, Bugwood halting-place, in consequence of there being some wild cinnamon trees near it, the bark of which, they say, smells like that insect. The Karengs make no use of this bark, though the flavour, when fresh, is very good, but it becomes bitter by being kept.

We met with many wild citron trees to-day, but the fruit is bitter and not eatable.

The elephants were nine hours on the road.

31st December.—From near the Mé Tian to the banks of the Mé Tian. Direction, N. 55 E. Estimated Distance, 14 miles. Time, 4h. 4m.

Shortly after starting we came upon the Mé Tian, a stream about 10 feet wide and one deep, flowing from the eastward, and along the course of which the road ran, frequently crossing it and other smaller streams, all of which fall into it.

The road at first was very bad, cut up by elephants, and the deep holes made by them filled with water and mud. We then ascended some inconsiderable hills covered with jungle, at the top of which we passed over a very deep, but small swamp, from which springs were issuing, evidently the source of some stream. After passing this the road improved; we ascended a little and proceeded along the sides of the hills, from which we looked down upon the deep valley of the Mé Tian on our left, and as we advanced had a view of the lower hills to the southward and eastward beyond which the Mé Ping runs, all, like these hills, covered with thick jungle.

The features of the country and jungle now changed, the trees which had been saul gave place to the pine, unmixed with any other trees, and perfectly free from underwood, and through a fine forest of which, over slightly undulating grassy hills, and a very good road, we gradually descended, and on again reaching the Mé Tian, encamped on a small open plain, the first we have met with for many days.

All the hills to the southward and eastward are covered to the summit with pine, which though small on our first falling in with them, became very large and tall as we descended; some, though not the largest, measured in girth nine feet, and must have been at least 50 feet to the first branches. The Shans burn the wood for lights, and the oil is also extracted for the same purpose.

Though I did not observe any stream near the road, for we did not fall in with a single one from the swamp to the encamping ground, there is no doubt that some must exist from

Captain McLeod's Journal.

the conformation of the hills, by which this valuable wood might be conveyed to a good market.

The road, which we left to the eastward on the 28th, joins the one we have come along, at the commencement of the pine forest. The cattle merchants invariably take it in returning to Moulmein in preference to the one we have travelled by, as they not only avoid the ascent of steep hills, but the frequent crossing of the different streams, and it is said to be a descent the whole way to the Mé Gnau.

This is a notorious place for tigers, and small parties of travellers consider it so dangerous to sleep on the ground, that they are obliged to erect small platforms between the branches of the trees, on which they pass the night.

1st January 1837.—From the banks of the Mé Tian to the Mé Hau. Direction, N. 25 E. Estimated Distance, 17 miles. Time, 5h. 14m.

The whole journey this day was over hills gradually descending, and through a pine forest.

We passed the Mé Lai, a stream of about 15 feet wide and one deep, flowing to the eastward, on the left bank of which there is a good spot for encamping; though before crossing it we met two or three streams, yet afterwards we did not fall in with a single
3.5. one until we reached the Mé Hau, a stream of about 10 feet wide, on the bank of which we halted.

This was a very long march for the elephants; they did not arrive until seven o'clock at night, and one, which was taken ill yesterday, could not come on beyond the Mé Lai. The coolies were even later.

Much delay occurs in our mode of travelling with elephants, they are all let loose immediately on reaching the halting ground (their hind legs being tied together) to roam through the jungle for forage, for they are not fed as in India, a little paddy even is not given them; and finding them the next day is a business of some difficulty, whereby we are frequently detained until past eight in the morning, and have to perform the journey during the hottest part of the day. The Shans travelling make very short marches, and load their elephants very lightly.

Some Talains from Labong with bullocks, and some buffaloes for Moulmein, passed us to-day, also four elephants belonging to the chief of Zimmé, carrying a small quantity of iron and salt, to exchange for cloth and cotton amongst the Karengs.

2nd January.—From the banks of the Mé Hau to Phayá tsakan, or Pagoda halting place. Direction, N. 30 E. Estimated Distance, 3½ miles. Time, 1h. 2m.

Having crossed the Mé Hau, we passed through a country similar to that of yesterday, though the pines were frequently smaller and intermixed with other forest trees.

24. Soon after starting we crossed the Mé Ton, a stream of about 15 feet wide, flowing over a sandy bed to the eastward and southward; here there is a good spot for encamping.

We made a very short march to-day, in consequence of being obliged to send back two elephants to assist the sick one.

At this halting place, we only procured a scanty supply of water from a small stream in the valley to the right. The Burmans call this Phayá tsakan, from there being an image placed in the crevice of a banian tree, and to which, judging from the numerous white muslin handkerchiefs, &c., made into flags, and fixed to the tree as offerings, travellers must all pay their devotion.

3rd January.—From Phayá tsakan, or Pagoda halting place, to the Mé Gnót. Direction, N. 60 E. Estimated Distance, 10 miles. Time, 2h. 48m.

After ascending a little at first, the whole way is a descent, along the sides of hills which are broken and stony, and in one place very steep, but the direction of road is selected with judgment. On our way, we entirely lost the pine, its place being taken by the pouk and saul, both stunted in their growth, and small bamboos.

1.43. We crossed many streams, all falling into the Mé Gnót, which having reached we proceeded along its bank and ultimately having crossed it, halted on its left bank.

This stream varies in breadth; in some places 60 and 70 feet, and others, and where we crossed, about 20 feet and 2 deep. Its bed is rocky, and at times it is seen dashing over huge masses of rocks and falls of considerable breadth.

We here met a party of Burmans formerly residents of Moulmein, but who, having taken wives at Zimmé, now reside there. They are proceeding to Moulmein with cattle.

4th January.—From the Mé Gnót to Muang Haut. Direction, N. 40 E. Estimated Distance, 9½ miles. Time, 2h. 45m.

After crossing the river twice, the road ran over low hills, at times rocky, covered with bamboos, and gradually sloping to the valley of the Mé Ping.

1.23. We reached the foot of the hills, crossed the Mé Pa Pi, a stream which during the rains must be about 70 feet wide, though now only 30.

Beyond it the road from Maing lón gyi joins from the westward and that from Maika from the eastward. The latter leads to Moulmein also.

After proceeding through rather an open country, and over the foot of many low hills,

we

Captain McLeod's Journal.

we reached the Mé Haut, a stream of about 20 feet wide and half a foot deep, flowing to the southward and eastward towards the Mé Ping.

We then passed over the fields belonging to the village, which appear to have been productive, and are well irrigated by small watercourses. The average produce is said to be from 60 to 100 per cent. The rice grown here is entirely of the glutinous sort, called by the Burmans "kouk nhien," which is the common food of the inhabitants of these districts. The common rice, which they call coarse rice, is only grown and used by the Talain and Burmese refugees (who chiefly reside near the large towns), and also for starch by the weavers.

Immediately beyond the fields is the village of Muang Haut, which though only containing about 25 houses, and having under it two or three small villages, is dignified with the appellation of a Muang or city, the capital of a district. It is situated on the western or right bank of the Mé Ping, and is the frontier village in this direction. A few cocoanut, palmera, plantain, and other fruit trees are seen about the place.

The inhabitants have taken advantage of the banks of the river, which have fallen in close to the water, and formed narrow ledges of about 4 and 6 feet wide, and planted them with radishes, onions, &c. The sandy islands, too, with which the river abounds, are laid out with cucumbers, pumpkins, &c., all under the charge of the women, who are seen at all hours at work.

The houses here are large, raised on high and strong posts, the sides of split bamboo, and the roof thatched with grass, but built in an extraordinary shape, the sides sloping inwards from the wall plates to the floor.

Silkworms are reared here, but not in any large numbers, the silk being merely for home consumption. I am told that some are to be found in all the villages. The mulberry here, on which they are fed, is a mere shrub.

There are two head men here, one appointed by the Zimmé authorities, to whom the village properly belongs, and the other by the Labong people, placed here during the late Chou Chi Wit's life, he then being the head of the family, and having jurisdiction and control over Zimmé and Lagong as well as Labong. They called on me with a present of fruit, apologised for not having a house ready for me, as they had not heard of my approach, and endeavoured to persuade me to remain a day or two to allow them time to forward intelligence of my arrival to the Tsóbua. They were very civil and attentive, and supplied me with four elephants to relieve my own.

We here met some Lawas, who had come down from their village to barter iron for fowls, with a supply of which they were returning. They are a short, ill-formed, and ugly race, with flat noses, low foreheads, and protuberant bellies. They have a peculiar language of their own, but no written character; they are said to be the aborigines of the country, but now reduced to the possession of two or three villages, containing 200 houses towards Maing lón gyi. The return of the iron ore smelted by them, I am told, is very uncertain. Dr. Richardson mentions them in his journal, having passed through their village on his mission to Labong in 1829-30.

The Mé Ping is here at present about 535 feet wide, and not fordable, but from bank to bank it is about 747 feet, and during the rains it frequently even overflows them. Its waters are clear, and pass down at the rate of about two miles an hour. It rises in some hills to the northward of Zimmé, and distant about 80 miles; its source, they say, is in a tank or lake on the top of a hill, and is called Nong Uk. It unites its waters with those of the Mé Quan, Mé Wang, Mé Niun, and Mé Nan, on which the cities of Labong, Lagong, Muang Phé, and Muang Nan, respectively stand, and flows by Bankok, under the name of the Mé Nam. It is navigable from Zimmé to Bankok, but during the dry weather large boats, though flat bottomed and drawing but little water, cannot come up beyond Yahaing. Some trade is carried on by it, between Zimmé and the lower provinces.

There is a quantity of teak collected here for transport to Bankok, belonging to the chiefs who have gone down. It is brought down from above Zimmé.

5th January.—From Muang Haut to Ban Pé. Direction, N. 20. E.
Estimated Distance, 15 miles. Time, 4h. 30m.

The road for a short distance is along the right bank of the river (which afterwards is seen once or twice during the march much narrower, free from sands, and the banks very steep), and has been very good, sometimes sandy and heavy, through a jungle of trees and bamboos, often free from brushwood, and at times across small grassy plains with stunted trees surrounding them, which bear the mark of the rise of the river during the monsoon.

The Karamet or bastard sandalwood tree abounds in the woods, but the Shans do not make any use of it.

On the march we crossed the Mé Tchin, a large river of about 350 feet wide when full, but now 200 feet and 3 deep, with high banks. It rises in the hills to the north westward, and discharges itself into the Mé Ping, about two miles below this. 2.21.

The road for some distance after crossing this river is very good, but latterly runs along the foot of low stony hills.

We halted at the village of Ban Pé, consisting of 10 houses, on the right bank of the Mé Ping. The direct road to Zimmé passes to the westward of this village, through a large one of the same name, and runs along the right bank of the river. We, however, took the nearest road to Labong.

Captain McLeod's Journal.

On the road to-day we saw large herds of fine cattle, and also buffaloes, most of the latter of a light brown colour.

6th January.—From Ban Pé to Nóng Lóng. Direction, N. 30 E.
Estimated Distance, 16 miles. Time, 5 hours.

We were delayed this morning for the want of a canoe to cross the Mé Ping, and after much difficulty procured one from a distance. This would not have occurred in a Burmese village. The contrast in this respect between the Burmans and Shans is great, the former selecting the banks of streams to reside on, and almost every house having a canoe attached to it, whereas the latter show no preference with respect to such sites, and perform their work entirely with the assistance of elephants.

The road throughout was good, chiefly running over a flat country (which must be under water in many parts during the rains), and over very low hills; the trees smaller than usual, and more apart, and the bamboo common.

We encamped at the village of Nóng Lóng, containing about 25 houses, on the right bank of the Mé Lí, a stream running from the southward and eastward to the northward and westward, now only 60 feet wide and 2 feet deep, but during the rains at least 150 feet.

It takes its name from an old town (now reduced to a village) to the southward and eastward of this, and rises in some hills beyond that place. It discharges itself in the Mé Ping, a short distance from this village.

7th January.—From Nóng Lóng to Ban Dôn. Direction, N. 50 E.
Estimated Distance, 16 miles. Time, 4h. 30m.

The road to-day has been throughout good, over high ground and occasionally over plains, the soil sandy, the jungle principally of saul, with a few teak trees here and there, and the whole free from underwood.

We stopped at the village of Ban Dón, situated on an extensive plain, which had been cultivated, having numerous villages scattered around it, and their sites marked by cocoanut, betel, and other trees growing around them.

We only crossed one or two dry nullahs on our march to-day, and found no water until we reached the fields belonging to the villages in this district. Much care and attention is given to the watercourses which intersect the fields in different directions for the purposes of irrigation, being cut from the Mé Tá, a stream to eastward, and distant about four miles. To raise the water from the river to the level of these watercourses, an embankment is merely thrown across it, and removed when not further required.

This village though small (containing 15 houses), is in good order and clean; it has a monastery; no village, however small, appears to be without one, and the number of idle priests surrounding my tent all day is almost incredible.

We here met the son of the late Muang Niong Tsóbua, who came to call on hearing of my arrival, and stopped and dined with me. He at once asked me whether I was going to China; that he and his countryman had always been praying for the road to be thrown open through his old country, and volunteered to give any information I required at some other time, as there were too many strangers present, though the villages I saw around were entirely peopled by families from his town. The head man of the surrounding villages also came to pay his respects, and brought me a present of rice, &c., and wished to erect a shed for me.

8th January.—Being particularly requested to halt here for a day, that information of my approach might be conveyed to Labong, I did so.

I paid the Muang Niong prince a visit: he is staying in a wretched small shed, and has come out to superintend the reaping of his grain. All the chiefs at this time of the year, from the Tsóbua downwards, remove with their followers and families to their fields, where they reside in temporary sheds, and not only superintend, but assist in collecting the harvest.

It was a novel sight to see the number of elephants grazing indiscriminately together in the fields with bullocks and buffaloes.

The trees surrounding these fields are called by the Burmans pouk, from which the stick lac, which forms one of the chief articles of export from these States to Siam and Moulmein is collected.

During my visit to the Muang Niong chief to-day, he appeared to think my mission had other objects than what I stated. He said, he hoped the British would interfere and have him and his countrymen released, either to return to their own country or to settle under us in the Tenasserim Provinces; that they, with the people of Kiang Túng and other places to the northward were sorely oppressed; that to the known benevolence and humanity of the English all their hearts were turned. I, however, gave him no hopes of our interfering as they were not our subjects, and had voluntarily placed themselves under the Siamese Shans.

He told me that he was certain that at Zimmé they would object to my proceeding towards China, on the grounds of the Chou Hona's absence; that they dared not, however, prevent my going, if I persisted; that some show of refusal was required to be made to save the authorities from blame at Bankok; that the chiefs of Zimmé are afraid, that by opening a free

free communication with the countries to the northward, all the inhabitants belonging to those parts would escape, for they were aware of the feeling existing amongst them, caused by oppression. He also gave me the particulars of a mission lately sent from Kiang Túng to the States of Zimmé, Labong, and Lagong; but as I shall collect further information hereafter, I shall not here repeat what he told me. Captain McLeod's Journal.

Some of the Court officers from Labong came to welcome me in the evening, stating that being in the neighbourhood and hearing of my arrival, they thought proper to come and pay their respects.

9th January.—From Ban Dón to Labong. Direction, N. 40 E.
Estimated Distance, 9 miles. Time, 2h. 55m.

An inferior officer came out this morning to escort me, and I was provided with six elephants from the village.

The road to Ban Pathan Ka noi (also called Súp Tá) lies entirely over fields; the village is situated on both banks of the Mé Tá, and contains about 30 houses; the village of Ban Pathan-luang, having a great number of houses, is lower down the stream. The Mé Tá is here about 100 feet wide and 2½ deep.

A further march over fields brought us to the village of Ban Pathan or Palmira village, 55.
which is a straggling place standing in topes of palmira trees. A great deal of palm sugar is made here.

Cultivation continues to a little distance beyond the village, where it makes way for pouk trees, and the mimosa catechu; this last has been very common since descending the hills.

We reached the left bank of the Mé Quan, and after going along it for some time, 1.17.
arrived at the village of Ban-Niu (consisting but of one street facing the river, and con- 1.37.
tinuing nearly the whole way to the town of Labong), with many gardens, in which tobacco and safflower were planted.

At the place where Dr. Richardson had formerly encamped, I was met by some petty officers and requested to fix my camp. They said that they had been sent by the Court officers to congratulate me on my arrival, and that sheds should be erected for my followers in two or three days, as the inhabitants were absent in their fields, for not hearing of my approach until yesterday, they had not had time to collect materials and people, many having accompanied the Chou Hona and Chou Raja But to Bankok.

These chiefs, as well as the Chou Hona and Chou Raja But of Lagong, had been ordered down by the King of Siam with a view of filling up certain Tsóbuaships, which had been long vacant by the death of the former chiefs. The Chou Hona of Zimmé had also gone down, I heard, but this was with reference to an advance made by the troops of that place towards the Burmese frontier.

I informed the officers that it was not my intention to lengthen my stay above two days unless necessary, as I was anxious to proceed to Zimmé, and would therefore dispense with the sheds.

I sent the interpreter with the officers to the Chou Raja Wun, to announce my arrival and to inform him that I had brought a letter and presents for the Tsóbua from the Commissioner in the Tenasserim Provinces; and that though I had heard that none had been appointed, and that the Chou Hona and Chou Raja But were absent, which I regretted, yet as the English and the chiefs of Labong had always been on the most friendly terms and Dr. Richardson had always experienced much kindness and attention from them, I had determined on delivering the letter, &c., to him, and making his acquaintance. He in reply, after some compliments, apologised for not having had sheds built, but invited me into the town, where my people would find shelter in the out-houses or sheds attached to the late Tsóbua Palace. The weather being threatening, I gladly availed myself of the invitation.

Having crossed the Mé Quan, I entered the town and found all the court officers waiting my arrival near the Court House. They welcomed me and whilst my tent was being pitched in the front of the Court, we sat down, I on a chair and they on mats, and had a conversation respecting the objects of my mission. I took the opportunity of expressing how glad we were at the continued supply of cattle we received, and that the cattle merchants I had met on the road were chiefly from this place. They spoke of the tranquillity and happiness they were enjoying, which they attributed entirely to us. There were many persons present, who had been brought away from Kiang Tsen, Muang Niong, and other places, who had experienced the calamities of war, and therefore could appreciate the blessings of peace, and were no doubt sincere in their expressions of gratitude towards us. They rejoiced to hear, that I had come up for the purpose of opening a communication with China, and with all their northern neighbours.

I requested that I might be admitted to a conference with the Chou Raja Wun with as little delay as possible, having a long journey before me. They required me to furnish a list of persons with me, &c., for the purpose of being communicated to the Tsóbua of Zimmé, who is now the controlling authority over the territories of Labong and Lagong.

It is prognosticated, that a great number of Chinese will come down this year, and earlier than usual, in consequence of the cold having set in sooner and being more severe than it is generally.

January 10th.—Many officers and others came to call on me, amongst them the Chou Hona's son-in-law (a brother of the Zimmé Chou Raja Wun), a person of agreeable

Captain McLeod's Journal.

manners, also the Chou Hona's second wife, the Chou Raja But's wife, and many others. They all brought presents of fruit, rice, vegetables, &c. However civilly intended and well-behaved, the gaping curiosity of the crowd is very disagreeable; my tent has been surrounded and full all day.

At about one o'clock, the Chou Raja Wun arrived at the Court House, carried in a chair (to which two bamboos had been fastened) by two coolies. I was shortly after requested to proceed to the Court, 20 yards from my tent. A carpet, similar to the one that the Chou Raja Wun was seated on, had been spread for me by his side, on the elevated platform at the end of the building, on which I took my seat. The Court and other officers were seated in a line on each side of the building, the highest in rank occupying the upper end near us. After mutual compliments, and my having thanked him, in the Commissioner's name, for the supplies of cattle we drew from his country, and the protection afforded our traders and subjects, which he assured me should not be discontinued, the letter from the Commissioner was opened, and read by my Burmese writer, there being no person present able to do so, and interpreted by my interpreter; the Chou Raja Wun making a reply to each paragraph as it was explained to him. He expressed himself sensible of the great advantages his country had derived by our possession of the provinces; that he was now old, and had the satisfaction of thinking that his sons would enjoy peace through us, and not as in former days, when none went to bed certain whether they would next day be free or in captivity.

He assured me of his anxious desire to facilitate by every means in his power, a continued intercourse between us, and further to strengthen the existing friendship. That he had much satisfaction in seeing me and hearing the purport of the Commissioner's letter. He distinctly said, that so far from there being any objection to my proceeding to China, he would be glad to forward our plans, if it laid in his power, but Zimmé was now the residence of the controlling chief, and that all depended on him; but I had his best wishes for my success. He asked me whether there was anything the English required, that the only reason an officer was not sent to Moulmein was, that they had nothing to communicate. In reply, I told him I was very thankful to him for the very kind and friendly reception I had met with, and for the strong friendship of which he had assured me, and of the sincerity of which we had had many proofs.

He applied to me for information regarding a report that had been current of our having sent ships and steamers to Bankok to demand the Talains, which had alarmed them greatly. On my contradicting it, he thanked God, and said he had heard various reasons given for Dr. Richardson's and my mission, partly coupled with the above report, which he was now satisfied were false, and circulated by some malicious persons.

All the officers joined him frequently during the interview in his assurances of good will and amity towards us.

They invited me to stay for some days, but I excused myself, and intimated my wish to start to Zimmé the day after to-morrow, on the plea of the long journey I had before me.

If one were to judge of the wealth of the place from the dress and appearance of the chiefs seen to-day, one would not give them credit for much. The Chou Raja Wun had on an old Chinese felt hat (no turban), with a narrow border of tinsel round it; this he did not take off during the conference; his vest was of coarse white cloth, and his lower garment of the usual silk of the country. Most of the officers were without jackets, and had a mean, dirty appearance.

The court house is entirely built of bamboos, and a more wretched, tumble-down place can hardly be imagined. It was unincumbered by any furniture, and the records appear to amount to a few rolls of leaves thrown carelessly over a beam. Close to the court is the jail, an open shed of about 12 feet square, at one end of which are the stocks. There are two men in for elephant stealing; they had double irons on their legs and chained together by their necks; their punishment for the theft, if proved, will be to pay treble the value of the animal and all expenses. No guard is kept, except over very desperate characters, for their relations and friends are held responsible that they do not escape. They are likewise fed by their relations.

The town of Labong, called by the Shans Lapûn, is situated on the right bank of the Mé Quan, here at present 100 feet wide and two feet deep, but from the bank to bank about 200 feet. It is surrounded by a brick wall, varying from 15 to 20 feet high, with loopholes for musketry in the parapet which is about 4½ feet high, and 2½ feet thick at the top. The wall in many places is falling down, and is not kept in the slightest order. I did not observe a single embrasure for a gun. The town is crowded with cocoa-nut and betel-nut trees, both inside and outside, and contains about 400 houses, almost all of bamboo, with the exception of some belonging to the chiefs, which are of wood. They are built without regularity, along streets rather wide, and each compound surrounded by a bamboo palisade, enclosing a garden. The gateways, of which there are four in the eastern face, one in the northern, two in the southern and western sides, are faced with stone. I was, however, unable to go round the fort. The northern, southern, and western faces are said to have ditches. Under the sheds occupied by my followers there were eight guns of sorts, the only ones, I believe, belonging to the place.

The river flows along the eastern face of it, and falls into the Mé Ping about three or four miles to the southward. It is only navigable at present for very small canoes. It rises in the hills to the northward and eastward, and its source is about 30 miles distant from this.

There

Captain McLeod's Journal.

There is no life in the place; it almost appears deserted; few people are seen moving about, and *there is no trade.* Our merchants cannot get prime cost even for their goods. There is not a single shop in the place; the wants of the people being few, they are supplied from the produce of the country and home manufactures.

Some old women, about 40, with a few pulses and herbs, a little betel, fish, &c., in small bags and baskets, assemble every day for about an hour, and this constitutes the bazar; no money is taken; they exchange one thing for another as they may require them.

I saw the Chinaman mentioned by Dr. Richardson as being father-in-law to the late Tsóbua; he informed me that the Chinese who visited Moulmein, in 1836, were well pleased with the market, but until the road is made they cannot travel by it. He, however, promises to endeavour to take 100 or 200 mules down this year or next. He doubts whether I shall be permitted to enter China, but promises to send a younger brother, who had been two years here, with me.

11th January.—I paid the Chou Raja Wun a visit in his house outside the fort, to the northward. It is a common bamboo building, not superior to those of his neighbours. I was civilly received by him, and we conversed without reserve for some time. I took the opportunity of impressing him with the advantages of commerce, to which I chiefly attributed the rise and prosperity of Moulmein. On taking leave, I said, I only hoped that I should be as well treated at Zimmé as I had been here; he told me that I should find things very different there; that the Zimmé people are a bad set, and did not look upon us in the same light as they did.

On my way out, I observed a ditch on this face of the fort. The trees here are so thick that I could hardly distinguish the wall.

Opposite the town, on the left bank of the river, is the village of the Muang Niong people. The present Prince's father, who was Tsóbua of that place, rebelled against the Burmans, and brought nearly the whole of his subjects under the Siamese Shans, they having promised that he should be permitted to fix on his own place of residence, be left independent, and enjoy every advantage he could desire. At his instigation, too, the Kiang Túng, Kiang Tsen, and many other Tsóbuas and chiefs followed his example, under similar engagements; however, when they were once in the power of the Siamese, no regard was paid to these, and an attempt was even made to remove them towards Bankok.

The only building to be noticed here (for the late Tsóbua's palace has been pulled down by the Chou Hona and the Chou Raja But, and the materials appropriated to their own use) is the pagoda, a very old building, held sacred by all Bhuddists, and one of those mentioned in their sacred books.

It is situated in the middle of the town, and its spire is seen some distance off. It is about 80 feet high, and is covered with square plates of copper, about 18 inches by 12 inches, gilt over, and is said to have been erected by seven successive kings. The first made it but seven cubits, and each other king succeeding to the throne added seven cubits, and a princess added a gold cup and the thi, or umbrella, crowning the spire. It is surrounded by a double paling formed of square copper rods, hollow inside, and having a stick running through each for support, and at every 10 feet is a pillar of the same metal, ornamented at the top with a ball.

There are several cast-iron lanterns and tables for offerings, all of which prove that, if made here, the place at one time possessed skilful workmen, but I could gain no satisfactory information on the subject.

I am told that copper was once found in this country at a place called Muang Kút, but the hill was struck by lightning and the mine filled up; it is, however, more likely that the copper plates, &c., were brought from China.

Our traders here speak in the highest terms of the conduct of the authorities towards them. That not the slightest restraint is put on the cattle trade; that frequently, when they have not sufficient money to pay for passes, the court officers will take goods to accommodate them, and no delay occurs in writing out the passes (which is not the case at Zimmé), and in fact, they are treated in every respect like the inhabitants of the place, if not better.

12th January.—From Labong to Zimmé.—Direction, N. 20 W.
Estimated Distance, 17 miles. Time, 5h. 30m.

I was delayed, much to the annoyance of the officers, until 10 o'clock, by the non-arrival of the elephants, which were to assist in carrying my baggage. Before I started, they called my interpreter, and begged he would ask me not to be angry if my reception at Zimmé should not be what I expected it; that the authorities there have not the same friendly feelings towards the English as they have, and to caution me to be on my guard.

We left the town by the northern gate. The high road to Zimmé being rather circuitous, and the country being now dry, we took a pathway across the fields, leaving the road to our right, and proceeded in a direct line towards a high hill, at the foot of which the town stands.

An hour's marching brought us to the village of Patapa (situated in a grove of mangoe trees), which is the boundary between Zimmé and Labong; there are three villages of this name close together, containing altogether about 40 houses. Near this is a tank fed by a branch of a broad watercourse of about 30 feet wide, with 2½ feet water in it, cut from

Captain McLeod's Journal.

the Mé Ping, and along whose banks we proceeded for 2h. 10m., the country low and sandy, having occasionally bamboos, but generally plains with long grass; the whole must be necessarily under water during the monsoon.

We then reached the fields belonging to Zimmé, the Mé Ping flowing a short distance to the westward, with the straggling village of Pâk Mung along its banks (where many of the Talain refugees reside), and continued to pass over fields separated occasionally by belts of jungle of pouk trees, until we reached the village Ta-wan-tan, on the left bank of the Mé Ping, where most of our traders live.

In the fields we passed the temporary sheds, which had been erected for the residence of some of the chiefs, to whom they belong, and who, with their followers, are occupying some of them, and are to be seen busy in thrashing the grain. It was an interesting and lively scene, particularly to see the number of elephants and bullocks waiting to convey away the grain. We also met many on the road going to and returning from town.

The river is here about 300 yards wide from bank to bank, and four feet deep, flowing in a south-westerly direction, having the ruins of a small pagoda in the middle of it, which stood formerly on an island, but which has been entirely carried away by the current.

From this to the town there is a raised road across fields, but etiquette not permitting me to enter the town, having crossed the river, I made for the place where I was to encamp (being at the north-east angle of the fort), direct across the fields, and reached it at about a quarter-past three.

The person who accompanied me from Labong, quitted me at the river, to proceed to the town to report my arrival; it was fortunate some of our merchants came out to meet me, as I should otherwise have had some difficulty in finding out where I was to stop, for no officer met me. After waiting for upwards of an hour, I sent my interpreter to remonstrate against this slight; he returned with a message requesting me not to enter the town, but to take possession of an old dilapidated zeat or resting house; that no neglect was intended, but they had not, before the Labong officer arrived that day, known of my approach, and that the person whose duty it was to receive me was unwell.

The zeat is the same as Dr. Richardson occupied, but now with scarcely any roof and no floor; I therefore had my tent pitched to live in. At night one of the court writers came with a message from the officers of government, and a supply of rice, making excuses for no officer meeting or visiting me, and wishing to know whether my journey was to be extended beyond Zimmé. I expressed my surprise that they should be ignorant of the object of my visit, as I had informed the officer at the frontier village, and the authorities at Labong had written some days before announcing my approach; that China was the place I wished to proceed to, and when an officer came to me (as he had informed me he was a petty writer only), I would explain everything they required. He asked me likewise the object of Dr. Richardson's mission to Moné, and that of another officer, but to what place he did not know.

At night some Chinese merchants, residents here, came to visit me, and had a long interview with my Chinese interpreter.

They are rejoiced at the idea of my going to China, and do not apprehend the slightest difficulty to my penetrating as far as Puer. The only objection they made to the Moulmein trade, which they say is profitable to them, is the road.

They strongly urged me to go by Kiang Túng; that the road travelled by the Chinese caravans is very bad, over exceeding high mountains, impassable for elephants, and having only a few scattered villages belonging to various hill tribes on it; whereas by the other, I should not only find a good road and few hills of consequence, but meet many towns where our traders would be enabled to dispose of their goods, besides seeing a great number of Chinese merchants. They begged that I would not mention to the authorities here that I had had any communication with them.

The Kiang Túng road is closed, even against the Chinese, from the excessive jealousy of the Siamese towards the Burmans.

13th January.—The person who came last night returned this morning, in company with one of the court puniahs; the same questions were repeated, adding that they heard I had determined on going to China *viâ* Muang Nan.

I undeceived them, if such indeed was their opinion, which I doubt, but I apprehend they are anxious I should proceed by that place, to relieve them from either the responsibility with their own Government for permitting me to proceed, or the risk of displeasing us by a refusal. I told them I had not made up my mind, and could not determine until I had seen the Tsóbua. They informed me, that the 16th had been fixed for my introduction, and on my requesting my reception by him might not be delayed longer than was absolutely necessary, as I had a long journey before me, and was anxious to have all matters connected therewith settled as soon as possible, they said that the Tsóbua was going to the pagoda to-morrow, and there was no use in being in a hurry, as it would be necessary to consult the chiefs of Labong and Lagong respecting my journey before a reply could be given me.

14th January—Puniah Sulim, a Talain refugee, a puniah, and the factotum of the Chou Raja Wun, came with a civil message and a present of betel, salt, tobacco, &c., from his master. Our traders derive much assistance from his master and him, when they have complaints to make. They all unite in speaking well of the Chou Raja Wun, judging

judging from which it is to be supposed he is well inclined towards us. Not so the Chou Hona, who is said to take every opportunity of showing his dislike to them. From this person I learnt that the Tsóbuaships of Muang Phé and Muang Nan were vacant, by the death of their former chiefs. The Chou Honas of those places have exercised the government over them, but during the lifetime of the late Chou Chi Wit he is said to have had a sort of controlling authority over the whole, but since his death the chief of Zimmé has not been vested with the same power. Before he left me I asked him to request his master to expedite my introduction; that even a day was of the utmost consequence to me.

The officers above mentioned, with many others, and the sons of the late rulers, have been ordered to Bankok, with a view of filling up the vacancies. The cause of the Chou Hona and other officers from this proceeding to the capital is said to be connected with an attempt made some time before to bring away the inhabitants of two Burmese towns, Mok Mai and Kanti, on the western bank of the Salween. An officer of the former place (falling into disgrace, though they will not admit this here) came and placed himself under the protection of the Chou Hona, and likewise told him that all the inhabitants were anxious to come over in like manner, if assured of protection. A force of 1,500 men was accordingly moved towards the frontier under Chou Raja Wun. They, however, met a Burmese force prepared for them, and the chief being asked the cause of his journey, with such a military display, replied he had come out on a hunting excursion. He was recommended, the next time he ventured so far, to come with a stronger party. He was obliged to return without performing anything.

The Red Karengs had joined the Siamese Shans, and were most anxious that the Chou Raja Wun should attack the Burmans; no doubt only to take advantage of the commotion and catch a few prisoners to sell. His orders, however, would not permit him, even if inclined, to indulge the allies.

One of their chiefs has accompanied the Chou Hona to Bankok, with presents for the king. The Labong chiefs and many here strenuously opposed the above expedition.

The cattle merchants here complain much of the vexatious system in practice of being obliged to give in the names of the venders at the court. A person rarely now takes a pass from this place, but smuggles the cattle into the Labong territories, where no difficulties exist. The stock at Labong is nearly exhausted, but cattle is still abundant in this province. The price the same at both places, viz., from 5 to 7 rupees for a cow, and from 7 to 11 for a bullock. At Muang Nan they are said to be plentiful, but less so at Muang Phé; at Muang Luang Phaban buffaloes are more numerous. The chiefs of those places will not permit their export, assigning as a reason, that no British officer has ever been deputed to their territories, though we have courted the friendship of the States in this direction. They are reported to be very well disposed towards us, and most anxious to establish a free intercourse with us.

Muang Nan is as large as this place; Muang Phé the size of Labong, and both on the western side of the Mé Khong; but Muang Luang Phaban is much larger than any of the other towns, and is situated immediately on the eastern bank of that river. The inhabitants are called Láu by the people here; only one or two of our merchants have yet found their way there.

The Muang Niong Chief from Labong paid me a short visit, and told me they had determined here not to let me proceed, at least to object to it, but if I persisted they would not prevent me, but would in no way assist me. He promised to return before he quitted this place, and again give me any intelligence he could collect. He, however, sent an excuse in the evening for not coming himself, and desired his brother-in law to tell me that they had decided on hearing first what I had to urge before coming to any decision.

In the evening, a court peon came to tell me the Tsóbua would receive me to-morrow instead of the day after, and to my inquiry, whether any persons would come to escort me, replied in the negative.

15th January.—Sent early in the morning to the Chou Raja Wun, to request some person in office might come to accompany me to the Tsóbua's. At 11 some of the court officers came with trays for the presents, and to escort me. I rode into the town and was requested to dismount at the gate of the Tsóbua's compound, and was received by him in the great hall, a brick building with small windows, papered throughout, and covered with rude daubs taken from the 550 zats or existences of Guadama, and figures of Europeans, &c. The roof is supported by two rows of pillars in the centre. The throne, which was placed at one end of the building, had over it a pyathat, or graduated circular spiral roof of white cloth, seven in number, each cut in the shape of an umbrella. At the foot and in front of the throne, a carpet was spread for the Tsóbua, with a cushion on it, and, opposite to him, a carpet was likewise placed for me; the Chou Raja Wun was on my left beyond the range of pillars, and the other officers on my right. All were better dressed than those at Labong, but without any ornaments; some with, and some without jackets.

In the outer court were musicians making a great noise, and at the doorway of the hall a few men ranged with muskets and swords. After waiting for about 10 minutes, the Tsóbua made his appearance; he was preceded by a few men shabbily dressed, armed with swords and spears, who ranged themselves on each side of the throne. He was dressed in a coarse white jacket, and the ordinary cloth of the country (which resembles the Burmese putcho, though not of such gay colours) round his body; he held a common dah without

Captain M^cLeod's Journal.

scabbard in his hand. This I was told was their custom, and borrowed from the Lawas. He is an old man, upwards of 83 years, but not so decrepid as might be expected. I thanked him in the Commissioner's name for the supplies of cattle we drew from his territories, and the encouragement and support afforded our merchants, and assured him of our sincere wish to continue on the terms we had always been with him. He expressed himself happy to see another British officer, and hoped to see many more; that they should always be welcome. He was happy to find we were so friendly inclined towards them, and hoped, that as the feelings was mutual, it would always continue.

On the Commissioner's letter being read, and the contents explained to him, he expressed his surprise at my intended journey to China, and intimated his wish that I should not go. I had prior to this informed several officers of Government of the object of my visit, and spoke of my journey to China as a matter of course.

I now brought forward every argument I could think of in favour of my proceeding. I pointed out the advantage his country had already derived, both in a commercial and political point, by their intercourse with us, and our position on the coast; that the English and Siamese nations had been friends from time immemorial; that the sole object was to open a trade with their northern neighbours, by which they would benefit, as well as ourselves, and to secure the same protection to our traders as they enjoyed here; that they had been sufficiently long acquainted with us to know that our views were pacific and just; that we little anticipated any objection on their parts to allow me to proceed, and to permit our traders to visit the country beyond them as far as China; that they had always expressed themselves anxious to extend their commercial connections; that from what they had said to Dr. Richardson, we had been led to conclude, that they would willingly second the object in view, and depending upon their liberality and friendship, numbers of merchants had accompanied me, with property to a considerable amount. I, therefore, hoped as a proof of their good will towards us, they would not throw any obstacles in my way, and prevent our establishing a regular trade with the Chinese; that if they refused to accede to our request, it would surprise everybody, and appear as if they were suspicious and would not trust us, or they did not wish to oblige us. He said it was only from his regard for me that he objected, as the roads were difficult, infested by bad people, and the distance too great, and asked a second time, whether I did not intend to visit Muang Nan, as there was a road from it to China. I told him my country is more than 200 times the distance that Zimmé is from China; that the English are a nation of travellers and merchants; that I had made up my mind to encounter many difficulties; and with reference to Muang Nan, I had not been deputed to that place, as we looked upon the Zimmeers as our staunch friends, who would always be ready to oblige us. Finding I would not give up the point, they said, the road had never been opened to any one, that the Chou Hona was absent, and it would be necessary to consult the authorities at Labong and Lagong, as was customary on all matters of importance, and that a reply should be given me in six days; but that even if it were not satisfactory to me, and I insisted on going, they would not prevent me. I told them I had come as a friend, and if they refused me permission, I should not certainly attempt to force my way, but return without delay to Moulmein. I only begged them not to detain me longer than was necessary, that my approach had been communicated to them as well as the object of my visit, that I had a long journey before me, and was anxious to return before the rains.

The Chou Raja Wun was the person who spoke throughout. The Tsóbua said but little; he, however, inquired the object of Dr. Richardson's mission, and whether another officer had not been sent on one into the territories of Ava, and whether we were not to meet at Kiang Túng.

I was requested to postpone any subject I might have to bring forward, until the above one was first settled. I was also requested, should I wish to go about the fort or elsewhere, to send a message to the court, when a person should attend me. Whether this was intended as a compliment or not, I cannot say. After some general conversation respecting England, &c., I took my leave.

At the gate there were four iron guns (12-pounders) of foreign casting, on rude carriages, each under a shed. Besides these there were, I suppose, about 40 of all sizes and sorts heaped together on one side. In front of the palace is an open space, on which stands the court-house, a good building for this place, and the jail, a small shed about eight feet square, with a strong palisade around it, with an entrance just large enough to admit of a person creeping in, and was more like a cage for wild beasts than for men.

On my return home I was visited by the chief priest, who is a connection of the Chou Hona. Curiosity brought him and a train of priests. He asked for everything he saw, my cot, tent, chair, sextant, &c., and was in no way abashed or prevented continuing to beg by frequent refusals.

The ex-Tsóbua of Kiang Túng, now residing here, is absent with the other chiefs at Bankok. The cause of his going down is the attempt made by his younger brother, the present Tsóbua of that place, to open a communication with the Shans, and through their territories with us. His son is not a very aristocratic looking personage.

There is great difficulty in distinguishing the chiefs from the other people from their dresses alone, for all are clad almost alike; the number of retainers following a person only sometimes gives a clue to his rank.

The Chinese merchants again came and entreated me to persist in going forward; they repeat

repeat that they do not think I shall have any difficulty in entering China, but they evidently speak at random, without having given the subject much thought.

I heard to-day of three Thugs having been here about two or three months ago. They came accompanied, according to some accounts, by a Chinaman, by others, by a faqueer well known at Moulmein, from having kept his hand erect above his head for years. They had assumed the disguise of faqueers, but clad themselves in the yellow garment worn by the Burmese and Siamese priesthood, which gave them additional sanctity in the opinion of the people here. They took up their abode in a zeat, and lived on charity. One of them dying led to their discovery. No sooner did they find out that their true character was known, than they quitted the place, it is supposed for Lagong. The police were immediately informed of their character by some of our traders, but they would not apprehend them, as no communication had been made from Moulmein, and they were afraid of fault being found with them for seizing and confining any of our subjects.

16th January.—Called on the Chou Raja Wun, a handsome man of 40 years of age, and of pleasing manners. He received me with proper Siamese indifference, but I was no sooner seated on the carpet spread for me, than he came and took his seat close to me, ordered chairs for us, and made himself pleasant. He is very open to flattery, and was much pleased with my having a good opinion of his power and influence; he said that it was absurd to send for the officers from the other states; that he was the person who would decide the question about my proceeding towards China, and I should attribute my success or failure to him. I did not fail to urge the advantages my mission would be to both countries. He is very inveterate against the Burmans, and expressed himself in the strongest language against them; that the two nations could never be on good terms; that it was only since our occupation of the coast that hostilities had nominally ceased. From his manner of questioning me, I think that he is suspicious of the motives of Dr. Richardson's and my mission. The Kiang Túng people having lately come here for the purpose of opening a communication with them and with us, appears to be the grounds for mistrust.

Before we parted he threw off all reserve, put on my cap, and introduced me to his wives and children, of both of whom he has a vast number.

Amongst the refreshments served up was some pickled tea leaf, differing somewhat from the Burmese article of the same sort. The tea is the produce of this province. I must not forget to mention some cocoa-nut water I was presented with; it was quite scented and sweet, and had not undergone any process, for the Chou sent two to my tent; they are scarce, there being but two trees in the place, but none of the fruit at present old enough to be taken for planting.

The Tsóbua is entirely given up to making presents to the priests and pagodas; he is said to be a mild and well-disposed man, and liked by his subjects. From his age and mode of passing his time, he cannot be supposed to trouble himself much with the affairs of the state, more than ordinary power, therefore, falls to the Chou Hona, the second officer in the province, and the general successor to the throne. He again is represented as having been once much addicted to opium smoking and the use of ardent spirits, and only kept within bounds from fear of again incurring the displeasure of the ministers at Bankok. He is said to be of a bad and severe disposition, and much feared by the people. Report says, that he is unfavourable to too much intercourse with us, and invariably shows a dislike to our traders.

The Chou Raja Wun is the third officer, and is a sort of commander in chief. He is the son of the former Tsóbua. He is not a man of any ability, but is supposed to be friendly inclined towards us.

Received a letter from Mr. Blundell, dated 20th December, with one for the Tsóbua of this place and Labong.

On my way to the Chou Raja Wun to-day, I observed a few fine Pernambuco cotton trees in some of the gardens, reared from seed given by Dr. Richardson; it is much prized. The trees though very fine, do not produce cotton in proportion; a great number of the plants died when young. I also saw some bamboo, the culms of which were of bright yellow colour, prettily striped with green; its size that of the common bamboo; I never saw it elsewhere.

17th January.—The Chou Raja Wun came to visit me to-day, and brought a Kareng cloth, valued at three rupees as a present, in return for a musket and fusil I gave him yesterday. A number of officers accompanied him. He paid me a very long visit, and I satisfied his curiosity by showing him everything I had. I again spoke about my journey, and of their permitting the Chinese to come down, but hesitating to let us go up. He begged of me to be patient, and he hoped all would be satisfactorily settled.

Whilst he was with me a man came in the name of the Tsóbua, and asked for a list of the presents I had for China, on the plea of its being customary; for if I was robbed on the road, they would be held responsible. I, however, declined satisfying their curiosity, for it was nothing else, until I was starting, when they should have a list of everything I had, if they wished it.

Chou Tsan, an elder brother of the Kiang Túng Tsóbua, sent to say he wished to call on me; he however came after dark, and evidently on the sly. He said that the people from his and the surrounding northern countries now in captivity, all rejoiced at my mission; they have longed prayed for the communication to be opened;

Captain McLeod's Journal.

that they looked upon the English as their intended benefactors, hoping we would extend the same protection to them as we had done to the Talains and other Burmese subjects now residing in our territories; for they all knew that we could do what we pleased, possessing the power and influence we did. He gave me a short sketch of the motives which led them to join the Siamese, as well as the particulars of the late mission from Kiang Túng to the chief of this place. He complained of the oppression of the authorities here; that their followers finding their chiefs could not protect them, and obtain justice for them, had left them, and enrolled themselves amongst those of some of the Siamese chiefs; that the Zimméers were all aware of the hatred their conduct towards them had inspired in them; they, therefore, did not wish us to have any communication with Kiang Túng or them. He told me that the authorities were much embarrassed how to act with respect to my journey; on the one hand, the fear of the court at Bankok and the Chou Hona operated, and on the other, that of displeasing us. That I had some supporters amongst the chiefs, some of whom were very liberal, and that there had been more than one consultation on the subject. Nothing could be kept secret, as their relations were, either by marriage or otherwise, connected with all the chiefs, and they always knew what was going on. He mentioned that numerous reports had been abroad, and that some of the chiefs suspected my journey had some other object in view than what I had stated. He was anxious to know whether I had been sent up in consequence of the late mission to this place from his brother. I told him it had no reference to it, though we were glad to find that the Kiang Túng Tsóbua was so friendly deposed towards us; that our object was to communicate and trade with all countries. I requested him in future not to come by stealth, as he had done on this occasion, as I had nothing to communicate to him privately. I could assure him, I had stated the object of my mission, and however glad I should be to see him, much injury would be done to the cause we were both concerned about, if the suspicions of the chiefs were raised, which would easily be done, after what he had told me; he must, therefore, excuse my caution.

18th January.—I had an interview with the Tsóbua to deliver Mr. Blundell's letter respecting the runaway Thugs, and explained to him the habits and customs of that sect, and the bad effects of harbouring them. He promised to issue orders to all the places under his jurisdiction for the apprehension of any who may be found, or arrive hereafter. I mentioned having heard of some having been here, but all the officers pleaded ignorance of the fact.

I took the opportunity of bringing forward the complaint of the cattle merchants, stating that we had been led to expect that the same system in force at Labong would have been adopted here, and the same duty only demanded. The regulation for registering the names of the vendors really amounted to a prohibition to the trade; for the people are obliged to attend at the court, leaving their villages, however distant, and subjecting themselves to loss of time, besides paying the large sum of one tical a head for cattle sold by them; under these circumstances, the people objected to deal with our traders. I urged them to do away with the registry regulation, and if they are determined not to give up the tical (for this is a perquisite of the court officers, who are a large and influential body) at least to reduce the sum, and demand it from the purchaser. They said, that the regulation had been made to prevent theft, but when I endeavoured to prove to them that such precautions were unnecessary, and asked them whether cattle was the only thing in danger of being stolen; they said they required two days to consult before they could give me any answer. They are always glad to offer any excuse for a delay. It is not so much the tical demanded that the owners of cattle object to (for this necessarily falls on the purchaser at present), as the inconvenience they are subjected to, and the reference too often made to the book to squeeze money from them. I am told, though I do not believe it, that they are taunted with selling cattle to the kalas (strangers), and told, that the order was only given to quiet us and not intended to be acted up to.

I may here state, that I asked one of the chiefs, in a conversation we had about his sending some cattle to Moulmein for sale, whether he took a pass, he said he merely paid a quarter of a tical at Muang Haut, and nothing else, so the hardship does not weigh equally on the rich and poor.

During this visit, I likewise brought forward the complaint of our Karengs, of tribute being levied from them by the Shan authorities on the right bank of the Thoung Yin. The chiefs assured me, that strict orders had been before issued on this subject, and fresh ones should be again sent; but they begged me not to give credence to it; that their own Karengs often accused our people of the same, but they well knew it was a subterfuge made use of to get off the payment of their tax, which was never remitted. I warned them that orders had been issued to our people to apprehend and send to Moulmein any person attempting to demand anything from them in future.

I again begged the Tsóbua to expedite my departure, telling him that as we only requested the same indulgence as they granted the Chinese, we should now be able to judge of the truth of their professions of good-will towards us.

The Chou Raja Wun was not present; the Chou Raja But, the Tsóbua's son, said but little, and Chou Na Noi Tsuriniah, one of the Tsóbua's nephews, was the principal spokesman. Before taking leave, the Tsóbua requested that I would send to him, or any of the officers, for anything I required; and added, that I was at perfect liberty to go about the place, and see everything I pleased. I had hitherto abstained from going about for fear of exciting their suspicions.

After

Captain MLeod's Journal.

After leaving the palace, I called on the Chou Raja Wun, and repeated to him all that had passed. He was very friendly, showed me all over his house, which is the largest in the place, entirely built of wood, and was his father's palace. The houses here are all much better than those at Labong; and those of the chiefs very good, entirely of wood, and covered with shingles, which answer well here (the rains though heavy are not continual), and last many years. He is as bitter as usual against the Burmans, and in reply to some remarks of mine on the advantage it would be to them to be on terms of friendship with all their neighbours, as we are, he said, he knew it is our custom to forget dissension and injuries after a peace is concluded, and to look upon and treat our former enemies like friends; but they never could forget the treatment they had experienced under the Burmans.

Chou Tsan, the Kiang Túng chief, with a number of his relations, came at night; they had been lurking about my tent for some time to see all other people away. As I had before particularly requested him not to come at such late hours, after addressing a few civil questions to him, I excused myself on the plea of wishing to write, much to his disappointment. I desired the interpreter to let him know the true reason for my not holding a longer conversation with him.

19th January.—Called on the Tsóbua's eldest son, the Chou Raja But; I have been prevented from doing so before, in consequence of his continual absence in his fields. He does not appear to be of an active disposition, and has but little influence in the government of the place, except with his father, whom he greatly resembles. He received me very civilly, and hoped everything would be soon settled as I desired. He showed me two or three guns made by his brother-in-law, the only good gunsmith in the place; they did him much credit.

Though I have been daily visited by the families of some of the chiefs, to-day the Chou Raja Wun's chief wife, and those of the other principal officers, came in a body, bringing small presents of betel, tobacco, &c., and, as usual, were not backward in asking for what they required, but most particularly requested I would give them some cosmetic to improve their beauty. The Chou Raja Wun sent his band, the only one in the place, at the same time. It consisted of four or five of the common and most noisy Burmese instruments; the performers were little boys, who played without regard to each other or time, nor was any particular air intended, I believed.

A shed was ordered to be erected in the morning near my tent for visitors to sit under, by the Chou Raja Wun; just at dusk a few bamboos were brought.

There is not the same parade and show here amongst the chiefs as in Burmah, neither in their dress, ornaments, numbers of followers, &c., nor in their houses.

Chou Kurn Kam and many other chiefs also called to-day. The Chou has been lately to Bankok, and boasts of his King being on terms of friendship now with the Americans too; he met some merchants of that nation there, and, by his accounts, they did not fail to boast of their prowess, the extent of their country, &c.

He is an intelligent man and one of the most liberal in the place; and says the King of Siam is most anxious to encourage foreign trade, and strangers settling at Bankok; he says that land has been granted to some Americans, to grow coffee on.

A despatch was sent off to the Chou Hona to-day respecting me, but what the contents are I could not ascertain, though told it was merely to announce my arrival, &c.

20th January.—I returned the visits of the chiefs who had called on me, and of the head priest, a person of great influence both from his connections and situation. He received me with much civility and freedom, walked with me, showed me about the various buildings attached to his monastery, and conversed on perfect equality with me, forming a striking contrast to some of the Burmese priests in this respect.

Their religion is the Buddhism of Ava. Almost all the pagodas, called zedi, both by the Burmans and Siamese (that is, the masses of brick of spiral form), in and out of the town, with few exceptions, are either in or fast going to ruins, and must all have been erected by the Burmans during the time they possessed the place.

The sacred buildings here are of brick, consisting of one hall, varying from 60 to 100 feet in length, and 35 to 50 feet in breadth, at the end of which a large image of Guadama stands on an elevated platform, surrounded by smaller ones. The floors are raised about three feet, and bricked, and generally smeared over with thittse; the sides of some are closed up, and of others the wall only run up half way. The roof over the centre of the building, being raised higher than those covering the sides, is supported by very fine lofty posts of teak, and the whole tiled and adorned with carved wooden ornaments, and a small pyathat over the centre.

The insides of the buildings are painted with subjects taken from their sacred writings, principally from the 550 zats, and by no means badly done; the pillars and roof are highly ornamented and gilt. The interiors of most of these buildings, which are numerous in the town, are rich and handsome, and kept remarkably clean and in good order. The priests reside in brick buildings of a similar size, but not ornamented, the interior being partitioned off into small rooms for their accommodation, rendering the building very dark. The numerous trees about these religious buildings render them cool and pleasant; and the grounds, which are surrounded by a low brick wall, are kept swept and remarkably neat and clean. The chief priest informed me there were 75 monasteries, or residences for priests, attached to the buildings I have above described, in the town alone, occupied by 344 priests, who, in the whole of his jurisdiction, amount

Captain McLeod's Journal.

to about 2,000, exclusive of probationers. However great this number may seem, I do not think it at all exaggerated, for they are to be seen at all hours, and in every direction, loitering about idle. They are by no means as strict as the Burmese priesthood in the observation of those duties and acts which are considered as essential to their profession. They are here seen mixing with the people, sitting in the bazar, conversing with women, entering private houses, riding elephants, eating after the sun has passed the meridian, and many indulging in spirits, cock-fighting (which is a favourite amusement of the young chiefs), few going with unshod feet; and that abstraction from worldly thoughts in their demeanour, which is strictly enjoined, is not observable, nor are they said to deny themselves indulgences totally inconsistent with their sacred calling. The yellow robe, in fact, appears to be the emblem of idleness, ease, and debauchery.

In the centre of the town are the ruins of a large pagoda much higher than any of the others here. It has a square basement of considerable size and height, and appears to have been arched; the whole of the wall and upper part has fallen down. It reminded me much of the ruins of some of the smaller pagodas at Pagham Myo, on the Irrawadi. It is said to have been built by the Burmans during the time they were masters of this place. In the same inclosure, near the eastern gate, is a small building of brick, said to be the abode of a guardian nat or deity of the place; it is kept locked and only opened once a year, when offerings and sacrifices are made and left within the building, on which the demi-god satisfies his hunger during the rest of the year. I am assured that human victims were immolated at his shrine formerly, but now pigs and bullocks are substituted. Every house in the province is obliged to contribute towards this festival.

I also called to-day on Chou Kurn Kam; he is very friendly and came to see me at night, and stayed late. He is a brother of Chou Maha Tep, a person Dr. Richardson found very friendly, but who is at present down at Bankok. He told me not to mind a little delay, that I should be permitted to proceed, for how could they refuse me after allowing the Chinese a free passage?

Our traders complain much of the vexatious delays they experience here, when they have complaints, either against each other or any of the inhabitants of the place, and the total absence of justice. The Puniahs, who are a numerous body, are many of them attachés of the Chou Hona; these officers have the decision of all suits and cases in court, and are an influential body. The presents they receive and the fines they levy being their only emoluments, it may be imagined that they are not over upright.

Every individual in the place is, from necessity, obliged to enrol himself as a follower of some chief to ensure himself protection; justice is often measured out according to the influence of the master of the litigants. The chiefs can themselves also settle all disputes in their houses. The plaintiff is obliged to bring the defendant to court; this person often refuses to attend until it is convenient for him to do so; but there is no remedy.

In cases of debt, the debtor is imprisoned; and if he is unable to satisfy his creditor he and his family are delivered over to him to be sold. All offences, save murder, are punished by fines; the principal part of which goes to the aggrieved party, the remainder to the chiefs and court officers. If a theft is proved, three times the value of the article stolen is decreed to the owner of the thing; and if not paid, the offender, after suffering imprisonment in irons, is made over, with his family, to be dealt with as in cases of debt. No inquiry is made, however, before the prosecutor lodges or gives security for the amount of the value of the property stolen, for if he fails in proving his charges he forfeits the amount, which is given over to the supposed culprit, otherwise no investigation takes place, however suspicious the circumstances may be against him. The fines for assaults and abuses, &c., vary according to the rank of the party complaining.

The litigants are obliged to provide the officer daily with refreshments and sometimes food, whilst the case is pending, besides making them small presents to insure their assistance. Under these circumstances, it is not surprising, that our traders do not obtain what they consider justice.

I questioned some of these officers regarding their laws, whether they had any written code to guide them. They said they had in Pali, they believed, but usually decided the cases according to their own judgment.

21st January.—The Muang Niong prince from Labong came to beg my assistance to recover two stolen elephants, said to have been taken to Moulmein, belonging to the chief puniah of that place; as well as to enable him to get some money due to him by some natives of India. I accordingly gave him notes to the authorities at Moulmein. He informed me that the officer from Labong is waiting for the one from Lagong, who will have to pass through the former place, and both will come here together to consult about the propriety of permitting me to proceed to China; but he strongly suspects that they will not attend, but allow the Zimmé chiefs to bear all the responsibility themselves, a bad feeling existing amongst them.

He told me that a mission was sent during Chou Chi Wit's time to China; it was well received, its object was to open the Golden Road; that one of the officers who formed the mission is still alive.* He brought a rough sketch of the country to the north of this, as he had before promised.

From

* All my subsequent inquiries on this subject were fruitless; all denied any knowledge of the mission.

Captain McLeod's Journal.

From the various stories I have heard respecting the late mission from Kiang Túng, the following appears to be the correct version;—The Tsóbua of that place, having obtained the King of Ava's permission to open a communication with this state, sent an officer with letters and presents to the Tsóbuas of Zimmé, Lagong, and Labong, hoping that they were willing to forget their former differences and animosities, to become friends and permit a free communication and trade between their subjects, and through their country with the English at Moulmein. From 40 to 50 merchants accompanied this officer, and brought a large sum of money to lay out in the Moulmein market. He was received with marked disrespect by the authorities, though many of the officers were inclined to accede to the Tsóbua's request, but the Chou Hona, and Chou Raja Wun, principally opposed the concession. The Chou Hona would not permit the officer even to return or the merchants to proceed to Moulmein, on the grounds of their motives being suspected. The matter was quietly referred to Bankok, and under instructions from the Court, a reply to the letter was sent, declining all intercourse with the Kiang Túng people, and stating that it was necessary that the King of Ava should address the King of Siam, whose subjects they were, if the amicable disposition set forth in the letter really existed.

This officer only quitted this about 20 days before I arrived here. The merchants were obliged to buy up such English goods as they could find in the place, and returned with the greater part of their money.

It may not be out of place, however, to mention, that the greater part of the inhabitants of this place are people from Kiang Túng, Muang Niong, Kiang Then, and many other places to the northward. They were originally subjects of Ava, but about 34 years ago, in consequence of the rapacious and oppressive acts of the Burmese commanders and troops stationed in the different provinces, over which they appeared to have exercised the rights of conquerors, the chiefs entered into a secret negotiation with those of this place and of the other States in this direction, subject to Siam, to throw off the yoke of Ava, and in a body to come and place themselves under their protection. To enable them to do so, they were to make a diversion in their favour by advancing towards and attacking the different towns, when the inhabitants would at once join them. They were promised liberty to settle where they pleased in the Siamese territories under their own chiefs, and also other important advantages, none of which, however, have been fulfilled; so far from it, they are distributed amongst the five towns of Zimmé, Labong, Lagong, Muang Phé, and Muang Nan. Some of those here were afterwards taken and brought away against their will; all are, however, now treated with mistrust and, they wish to make it out, with severity.

The revolted Kiang Túng Tsóbua (who is absent at Bankok), with four brothers and all their followers, voluntarily placed themselves under the Siamese. They had fixed on Kiang Then, or Kiang Tsen, on the Mé Khong, as the place for their abode, but, on reaching it, the bad faith of the Siamese became so apparent, that the present Tsóbua of Kiang Túng, the youngest but one of the brothers, after vainly endeavouring to persuade the others to return, fought his way back to his old town, with a few followers.

These territories, therefore, may be said to have risen to their present strength entirely from the mismanagement, avarice and cruelty of the Burmans; they were insignificant before in point of numbers, and never could have coped with their more numerous neighbours.

The real military strength of these provinces must be small, when it is considered that all the captive Burmese Tsóbuas are obliged to furnish their quota and accompany the troops, on all occasions of war; they, with the Talains, comprise more than two-thirds of the population of the country; they are disgusted with the treatment they receive, and are ripe for revolt. With respect to us, they would gladly join us on any occasion, and place themselves under our protection.

The Court at Bankok does not, it appears, place much faith in the attachment and fidelity of these distant provinces, for the oath of allegiance is administered to the chiefs, great and small, as often as they go to Bankok, which they are obliged to do periodically. It rather courts them as much as possible and, indeed, the tribute levied is very light.

I apprehend much difficulty will be found in persuading the authorities here to permit our merchants to pass through the territories, and trade with their implacable enemies the Burmans, having the fear of the unfortunate captives either rebelling or escaping, when in communication with their relations. In fact, it can hardly be expected, that the Zimmé people will run the risk of losing so large a proportion of their subjects to please us.

These fears have lately been increased by the deserters mentioned before from Mok Mai. The Chief (or Tsóbua, I believe he is called) of that place and Kanti being very young, the towns were placed under the superintendence of an officer by the Court of Ava; such, however, were the acts of cruelty and misrule of this person, that they reached the Court of Ava, and he was ordered to be removed a-là-Burmah; he, however, effected his escape to the Zimmé territory, and fabricated the story which caused the Chou Raja Wun to march with the force, as before stated; he likewise added, that the King of Ava had given out that it was his earnest desire to become possessed of Zimmé, and taunted the Shan Tsóbuas with not being able to gratify his wish. The Kiang Túng Tsóbua, he said, had undertaken to add Zimmé to the kingdom of his Majesty in three years, with the assistance of his relations here, and as a preparatory step was erecting a fort round his town. The mission arriving shortly after this, and it being true

Captain M^cLeod's Journal.

that they were erecting a wall round the town, some of the chiefs became fully convinced of the truth of the deserter's story.

I regret much to find, that some of the natives of India now residing here have turned their attention to the degrading speculation in slaves. They are, however, men of the lowest description, and some who will not, I am satisfied, even return to the British territories. I have warned them all of the heavy penalties attached to their importing any of these unfortunate creatures into our provinces. The Red Karengs seize these unfortunate people in the Burmese district, and keep them until some persons from this go and give bullocks in exchange for them, but they themselves never bring them across the Salween. The price varies from two to seven bullocks, according to the age and beauty of the women and strength of the men.

The Burmans are much more liberal to their slaves than the Shans; there is no redemption for any person once sold here. Should a slave marry, the children are the property of the master, who puts the same price on each that the parents cost.

A poor woman entreated me to obtain her release. She and her mother had been seized, but sold separately, each living in a different house; they were each exchanged for five bullocks. On my sending back privately to know her price, they demanded 400 ticals, equal to 180 rupees. The person asked the master to take 300 ticals; he agreed, provided he was allowed to keep a young child of two months old, born in his house. My inquiries have not led me to suppose that the trade has decreased at all of late.

22nd January.—Hearing no intelligence of the approach of the officers from Lagong and Labong, I called on the Chou Raja Wun, and complained of the unnecessary delay I had been subjected to; that it appeared to me, that the officers from the two towns were not inclined to attend to the invitation sent them, for a person on private affairs could go to Lagong and back in six days, and it was extraordinary that public business should not be more punctually attended to, and requested an audience of the Tsóbua, as I had determined on starting on the 24th, and it would rest with him whether towards China or Moulmein. He admitted that I had cause to complain, but begged I would defer my visit to the Tsóbua until the 24th, before which, he had no doubt, the officers would arrive. He informed me that my proposition about the duty on cattle had been complied with.

I suspect that they have sent to the Chou Hona for instructions, for they are endeavouring to amuse me as much as they can. The shed commenced some days ago is not yet a quarter finished, though in reality six men could have put it up in less than three hours, and they are talking about plays and dances being given under it when completed. I am told that he must be now at Bankok; that, with the greatest dispatch, it would take 15 days to reach that place; that a boat would take that time even, and to return by water it requires 45 days. A person can reach Yahaing in 11 days from Bankok, and this in seven more.

Some Labong people belonging to the Chou Raja Wun of that place came to see me, as their master had directed them to do so (in consequence of their coming here on business), to tell me that he was decidedly of opinion I ought to be allowed to proceed to China, and all the roads thrown open to our merchants. Such was the promise and intention of the late Tsóbua Chou Chi Wit, which ought to be strictly observed. As to the promise, this, I suspect, is the first we have heard of it, and I should say that his good intentions, too, are to be doubted in this case, though he was a liberal man in his views.

The jailor from that place also came; he told me, before one of Labong chiefs, that three parties of Thugs had been and are living at that place, making altogether 11 in number; that they are working merely for their rice, assisting the people in getting in their grain; that they wished to go to Muang Nan, but had been prevented by the authorities, as they had brought no passes. The whole story is so clear and plausible that I determined on sending to Labong. I, therefore, made him promise to call to-morrow morning and accompany the interpreter, and he is to receive, as a remuneration, three rupees for each man whom he points out.

Sent my interpreter with Busti (one of our traders) to the Court, with a request they would oblige me by ordering the settlement of his demands against Sumut Allee and Edu; that he was to accompany me, and could not do so before his claims were adjusted.

Chou Kurn Kam brought me a pony as a present, but requested, if questioned, I would say I had purchased it. He is a good social man, fond of port wine and cherry brandy, and a great beggar, like all the Shans, who have not the slightest delicacy in asking for everything they see. He had been sent for to-day by the Chou Raja Wun, and told, that I had determined to make a move, and was angry at the delay; that it was agreed I should be permitted to go onwards, but he endeavoured to persuade me to wait until the officers came; that as they had been sent for, they might take umbrage at my going without meeting them. I told him that I had overstayed the time fixed on for a reply, and nothing certain was known of their approach, and, I could no longer delay my departure.

23rd January.—No jailor making his appearance, sent the interpreter to the Chou Raja Wun of Labong, with Mr. Blundell's letter, and directed him to repeat what he had heard me say here regarding the Thugs; also to ask permission and assistance to apprehend those at the place, according to the information given me yesterday.

Some Burmese and Talain prisoners and refugees have long been in communication with my people, all most anxious to return to their own country, or to our provinces. Two or three of the head men visited me to-day; they have been long buoyed up by the hopes

Captain McLeod's Journal.

hopes of our interfering in their behalf. They have adopted the Shan dress, and have cut their hair after the fashion of the country; it was with difficulty I could recognise them as being of another nation. Necessity, they said, had obliged them to make these changes, in hopes of causing their masters to forget who and what they really are. They are not, I believe, badly treated, but are supposed to be discontented, and have, indeed, a strong longing to return to their own countries.

Some hills, forming the apex of a range, are due west of the town, and distant from it about three miles. On the top of one of the hills, not the highest, is a gilt pagoda of great sanctity, a place of favourite resort to the religious. I determined on visiting the spot, and, accordingly, this morning started for it. We passed through the ruins of a small square fort about half-a-mile distant from the western gate of the town; it is one built by the Burmans, who, when they last invested the place, had numerous works all round it.

From this we went over fields to a village at the foot of the hills, where the ascent begins, at first very gradual, but latterly very steep. We crossed one or two very fine springs flowing down, and by which the ditch round the fort is filled and the town supplied with water. A fine row of pines is planted on each side of a long flight of steps leading immediately to the pagoda.

The pagoda is covered with copper plates, which are gilt, and is surrounded by brass palings, like the one at Labong; it is, however, much smaller. The court is enclosed by sheds, and numerous zeats are erected outside.

From this high position we had a fine view of the country and town immediately below us, but it was too hazy to distinguish the hills forming the eastern boundary of the valley of the Mé Ping.

This river flows from a north-20-west direction, and below takes a south-20-west course, forming a segment of a circle round the town. Its banks are darkened by trees, concealing the houses of many small villages. We could see one or two large tanks to the northward, not far from the town. The country around is, in fact, one sheet of field, with numerous topes of trees, marking the position of so many villages. The valley is rich, and said to be about 35 or 40 miles long, and 15 wide in some places.

Of the town we could only see that the inner fort is a square, with a ditch all round it, and the outer fort, as it is called, is built on the eastern and southern side and is irregular in form.

We could not distinguish a single house for the number of cocoa nut and betel nut trees which fill the town, the old ruined pagoda, before mentioned, in the centre of it, Zedi Luang (or Great Zedi) alone was visible.

The town of Zimmé, or Kiang Maí, as it is called by the Shans, is in 18° 47″ north latitude, and about 99° 20″ east longitude. Water boils at 210½° Fahrenheit. It stands in a plain on the right bank of the Mé Ping. On its eastern side flows the river, having fields between it and the town, and likewise beyond it. To the northward and eastward is a large swamp or tank; to the northward and westward, broken ground and gardens; to the westward, the old Burmese fort and fields; and to the southward fields bounded by the river. The north-east angle of the outer fort approaches within 300 yards of the river, which continues its course from this point, increasing its distance gradually to about three-quarters of a mile, and then sweeps round, at the distance of a mile-and-a-half, parallel to the southern face of the town.

The river is now fordable in several places near the town, there not being above 3½ feet of water in it; but a good wooden bridge, of 200 yards long, is thrown across it near the north-east angle of the fort, over which bullocks and carts pass. During the rains this is the only way across, and is on the high road to Labong.

The inner town, where the Tsóbua and principal chiefs reside, is a square, each face being about 2,050 paces long, with gateways in the middle, except on the southern face, where there are two, at about 560 paces from the angles; the walls are about 22 feet high and 3½ feet broad at the top, having large bastions at the angles, and the gates covered by another in front of them, with a small bastion at their sides. These have embrasures for guns, some high up and some low down. There are also some embrasures here and there along the curtain. The whole is surrounded by a broad ditch of about 50 feet wide, filled by the springs from the hills, which enter it at the north-western angle; its depth varies—in some places it must be 15 feet, and at others, about nine feet. It is a formidable place to the undisciplined forces of their neighbours, but a few shots from British guns would soon bring the wall down, which, in fact, is of itself in many places giving way.

The wall of the outer fort commences within 200 paces to the southward of the north-east angle, along the east face of the inner fort, and runs in an irregular line, with bastions and one gate, in a south-50-easterly direction, and ends in an angle within 300 yards of the river; it then takes a southerly direction, having one gate about 100 yards from the bastion. Thus far it is of brick; it continues to some distance in the above line, then gradually runs in an easterly direction, and ends in a high bastion to the south-westward; the distance from this to the south-west bastion of the inner fort is about 450 paces, and to it it runs due north. From the gate near the north-east angle is a stockade of wood, having along its southern face three gates, with bricked bastions, the centre one being the principal entrance, from which a raised road runs to the village of Táwang tan, on the Mé Ping. The outer fort is likewise surrounded by a broad ditch; part of it to the southward and eastward is now dry, and, when full, must be about

Captain McLeod's Journal.

eight feet deep; along its north-eastern face it has a swamp and large tank, from which the ditch is fed.

One main street runs from the gate near the north-east bastion of the exterior fort to the gate in the eastern face of the main fort. From this gate again, a road runs to the opposite gate in the western face; about half way between these gates a road runs at right angles to the northward, to the White Elephant Gate in that face, and also one to the southward (inclining a little to the eastward), about half way between the cross roads and western gate; another road runs to the other gate in the southern face of the fort.

The outer fort is not in some parts inhabited, being swampy; it is the residence principally of the Kiang Túng, Kiang Then, and other Tsóbuas, with their followers.

The inner fort is abundantly watered by watercourses intersecting it in all directions, the water being brought from the hill, entering the ditch and fort at the north-west angle.

There is a tolerable bazar here in the outer fort, along the main street, kept by women; small sheds are erected along each side of the road, in which they display their goods.

The fresh meat sold here is pork, and occasionally beef, both slaughtered by Chinamen: dried fish and meat are brought from the northward from Kiang Then, and along the road to Kiang Túng, the country in that direction being intersected by numerous rivers and streams swarming with fish, and the woods abounding with deer, &c.

With reference to the trade here, there is but little demand for our goods, the shani, a red cotton stuff, is the only thing in request, and that even does not fetch its prime cost. Our traders exchange it for cattle, and make some profit by taking them to Moulmein. Though all our piece goods are admired, yet from the Tsóbua downwards they have no inclination to part with their money; and if anything foreign is seen in their possession, one may be pretty certain it has been given to them. In fact, if it were not for the cattle procured here none of our traders would visit the place.

The exports consist of grain, teak wood, stick lack, tobacco, palm sugar, and safflower, &c., to the Lower Provinces. From Bankok, they get in return a small quantity of salt, chintz, China crapes and China ware.

They carry out to the Kareng villages iron (procured from the Lawas), salt, and hatchets, &c., which they barter for cloths, onions, chillies, wax, and cotton. To the Red Kareng country they export cattle, and procure in return slaves, ponies, and stick lack. By the Chinese they are supplied with copper and iron pots, tinsel, lace, gold thread (of a very bad description, of which they use a great deal for the embroidery of pillows, dresses, &c.), silk, chiefly raw, and a little gold; and in return give cotton, ivory, rhinoceros and deer horns, dried shrimps, birds' feathers, all but the first obtained partly from our provinces. There are about 20 Chinese settled here, who act as agents for others. The caravans generally to this place and Labong consist of about 300 mules.

I must not fail to mention that quantities of betel nut, with which these territories abound, are smuggled for sale to Kiang Túng, where there is none, and the consumption great. It is a profitable trade, and the authorities must be aware of it.

Women are seen weaving in every house, either white cloth of a coarse texture, or silk putcho (men's cloths), and tamiens (women's petticoats) of cotton or silk, the former the produce of the country, and also some of the latter.

The dress of the men consists only of a cloth round their loins, and a sash of the red cotton stuff tied round their waist; sometimes a jacket is worn; they generally go bare-headed, with their hair cut after the Siamese fashion, kept well greased; but when they wear a turban it is of an uncommon size, and of the red cotton stuff. A bunch of flowers put through one of the holes of the ear, and occasionally an earring, is the only ornament worn by the lower classes. The jackets of the chiefs are either of white cloth or China silk; those of the common people sometimes of blue, with a border of tinsel.

They smoke tobacco generally in pipes, but both men and women chew betel to an excessive and disgusting extent; they are never to be seen with their mouths empty; their teeth are particularly black, which they consider a beauty; even young children are taught the dirty practice when they can just walk. A bag into which the betel apparatus, &c., are put, forms an essential part of a man's equipment; it is slung over his shoulder, and he is never to be seen without it.

The dress of the women consists of the petticoat made of coarse silk, with a worked border in silk and gold thread, or of common cotton of party colours, not open in the front like the Burmese ones; it is kept up merely by a twist below their breasts; a jacket of pink, or a very dark blue cloth, made and dyed by themselves (the deep colour of which particularly struck me) with a tinsel border or edging is carried, not to be worn, but thrown loosely over their shoulders, with which alone they sometimes partially conceal their breasts. Their hair, which is long, is tastefully tied in a knot on the crown of their heads, and the only ornaments used are a gold chain twisted round their hair, a gold pin stuck through it, and gold bracelets; few wore earrings.

The chiefs are, generally speaking, very fine looking men, and differ in appearance from the common people; they are tall, fair, have good noses, and light eyes. The other men generally are tall, stout, hardy, and active. The women are also tall, and remarkably well-proportioned, and very fair, and a handsome race, but their mouths are disfigured by the use of betel, and many are subject to goitre. The children are particularly fair, generally with light eyes and the hair having a slight tinge of red.

Every

Every man, as I have said before, is considered the follower of some chief; besides what he furnishes to his immediate superior, he pays to Government three baskets and five pi of paddy for each buffalo and plough as a tax; this is stored for public purposes.

A duty of one viss for each basket of seed sown is collected on cotton.

2 viss of tobacco for every - - - - -	1,000 plants.
2 viss of safflower - - - - -	1,000 ditto.

Betel, 144 strings, or 288 nuts (for here the nut is cut into 10 or 12 slices, and run on a string and left to dry) for a plantation, however small or large.

Chilly, one viss for a garden.

Salt, 20 viss for a boat-load from Bankok.

The above are divided, with the exception of the grain, in the following proportions: The person employed in collecting receives one-fourth, the Tsobua, the Chou Hona and the Chou Raja Wun, and the master of the village one fourth each; others again told me that the Tsóbua, Chou Hona, got one-third each (the Chou Raja Wun sometimes shares with the latter), and the remaining one-third is divided between the master of the village and petty officers. A division of the country with respect to this tax has lately been made, the villages on the left bank of the Mé Ping, above the village of Ta-wan tan, are to pay to the Chou Hona; those below that village to the Chou Raja Wun, and all on the right side of the Mé Ping to pay to the Tsóbua.

Every person catching an elephant, should he dispose of it, gives his immediate chief 30 per cent., the same on ivory; but should he be very successful and catch 10 or 20, the master, after taking care of himself, presents one to the Tsóbua, and one to the Chou Hona. These animals are caught to the southward of this, about the Thoung Yin, and in our territories; a few only are found to the northward.

The principal emoluments of the chiefs arise from their own fields, the little trade they carry on, and the presents they receive.

The people appear to me to be less oppressed by the Government than the Burmans, and not subject to the payments and heavy demands levied in that country.

The teak forests, which extend beyond this, as well as on the Thoung Yin, Mé Nium and Salween, are the property of the chiefs. They generally allow people to cut, by paying them 10 per cent. The forests on the Thoung Yin and Mé Nium belong to Chou Hona, who has given people permission to cut there, and some wood from them has already been taken to Moulmein. The Chou Raja Wun, to whom those on the Salween belong, refuses to permit any person making use of the wood until he goes to Bankok and obtains the king's sanction. The wood on all these rivers are perfectly useless to the Shans, there being no possible means of conveying it to any of their towns.

The boats made to navigate the river here are formed of one tree, opened out until nearly flat, and a broad plank is added to each side; not a nail is used in the whole of their construction; the bottom is generally of thengan, and the sides of teak. Their general length is about 60 feet, and only six broad; they carry 300 or 400 baskets, and sell for 120 Siamese ticals, and a duty of 10 per cent. on the price is collected on them.

The rupee is current here as well as the Siamese tical (the round coin), but the money most in circulation is coarse silver of about 80 per cent. alloy, I believe, melted into a circular form, in which a hollow is formed by blowing when hot; the bottom of this cup is so fine that it is apt to break; when this occurs, or when it is cut, the value is much deteriorated. It bears a small mark or stamp made by the court officers (by whom it is issued) on the edge. Of this description there are two sorts of equal alloy, but one twice the size of the other. One hundred ticals are given for 45 Madras rupees, but these are only equal to 75 Burmese ticals. They use the same weights and measures as the Burmans, but deteriorated one-fourth, or 25 per cent.

The owner of each house is supposed to have a musket, and certainly no Shan is met beyond the town travelling without one. Each chief may be called upon to supply, at the utmost, two-thirds of his followers during any war, these are obliged to supply themselves with provisions and carriage. Their own chiefs furnish at the rate of one elephant to five men; if the campaign is a distant one, Government occasionally gives an elephant. Two men can be exempted from going by supplying an elephant for the public service. Each man is furnished with one viss of powder and 50 balls from the stores, and should he not possess a musket one is lent him. Some are also armed with spears and swords. Elephants alone are used for the transport of an army, and of these there are a great number in all the Siamese Shan towns. One branch of the army consists of elephants trained to carry two jingals and four men each, but these are never fired over the animal's head; he is made to turn his tail to the enemy before they are discharged. From the materials with which their army is constructed, it can only be expected to be an undisciplined mob. The Shans are considered adepts at lying in ambuscades and for night attacks. They certainly are quick of sight and hearing, and creep through the forests in a surprising and quiet way; their constant life in the woods in search of game gives them this advantage. All their attacks on their neighbours' villages have been made at night. They never wait to make a regular attack or fight by day; if they fail in their attempt, they retreat and watch a more favourable opportunity. They are not, I should say, a brave race, but boast exceedingly of their victories over the Burmans, and consider one of themselves as equal to 10 Burmans. They

Captain McLeod's Journal.

are hardy and capable of undergoing fatigue. A little of the glutinous rice cooked at night, and tightly pressed into a small basket, which they carry tied round their waists, and out of which they eat at all times (using no plates or wooden dishes) with a little dried fish or meat, or a few herbs and salt, affords them an ample and hearty repast; but when at home they consume large quantities of spirits; but their food in other respect is not much better than what I have mentioned above.

Before daylight every day I am awakened by the noise of the bells attached to the bullocks. These animals are employed the whole day in bringing in the grain, following each other in a regular unbroken line, the leaders being decked out with peacocks' feathers, and various ornaments, as a sort of mark. Strings of elephants are also seen conveying the same article, as well as bringing in thatch, and pulling along bamboos, and timber, and performing all sorts of work. The number in this province is said to exceed 1,000. I am in a noisy neighbourhood, between the bridge and gate, where at least half a dozen spirit shops are erected; and the elephants bringing in the grain stop at each by instinct to enable his rider to take a glass, for which he throws down a little paddy. The scenes of drunkenness are excessive, and I really never saw it exceeded anywhere.

An elephant can be hired for from 10 to 15 ticals a month, whilst the wood-cutters in our provinces pay, I believe, 5 rupees a day for one. Carts are also used, but instead of yoking oxen to them, they are pulled and pushed along chiefly by the women. Their construction is good, and the whole very much resembling an English one.

The Siamese Shans are not a social race; they have no amusements amongst them; instead of seeing them like the Burmans, after the day work is over, playing at football, and jumping about, singing, &c., every person returns to his house, and everything is perfectly quiet early in the evening.

Their muskets are generally of all countries, English, French, &c.; very old and dangerous to fire. Muskets are now made here, chiefly by the Lawas, but they prefer an English one, however bad it may be. Lately great numbers have been imported from Bankok, apparently of Chinese manufacture, and sold there for eight or ten ticals each. They prize an English gun-lock greatly.

I was furnished by various individuals with accounts of the population and number of available men in the different provinces to carry arms; these did not vary much.

I give an average below; a census was attempted to be taken during the reign of Chou Tsati, the former Tsóbua of this place (the present Chou Raja Wun's father), but was not completed.

The number of men able to bear arms amounted in the southern districts to 5,000, under 300 Thuggis or heads of villages, but they are said to exceed that number in the eastern, and northern, and to be less in the western districts. The Kiang Túng, Muang Niong, and people from other States now residing in the territory are included in the statement.

NAMES OF PROVINCES.	Men Furnished for Constant Public Service to the King.	Men Furnished for the Attack on Wintchiang.	Houses in Town.	Population of Provinces.
Zimmé - - - - - - - -	20	5,000	704	50,000
Lagong - - - - - - -	20	5,000	400	30,000
Labong - - - - - - -	15	3,000	400	10,000
Muang Nan - - - - - -	20	5,000	700	30,000
Muang Luang Phaban or Lautchiang -	25	- -	700	50,000
Muang Phé - - - - - - -	15	1,000	150	5,000
Muang Tchiang or Win Tchiang, also called Chandapuri - - - - -	50	—	—	—

I should think that the number of houses in Zimmé far exceed that put down, but the person assured me he had, at my express request, extracted it from the public records; that the number of houses registered in the whole provinces is 7,000; this he took from the list made for levying the money for the celebration of the festival of the guardian Nat, or spirit of the place, and could be depended on. This would give the population mentioned, allowing a fraction more than seven to each house, which here contain more inhabitants than those in Ava. I should say that the number stated far exceeds the population in the province, but that the town contains more than is put down.

The tribute paid by these States to Bankok consists almost entirely of teak wood; the quantity I am told is not fixed, nor is the period of payment regular. Sometimes it is not sent for two years, at others annually. It consists generally of 250 trees of five fathoms in length and two feet in diameter.

The

Captain McLeod's Journal.

The other provinces pay in the same proportion with reference to their size. Sometimes, however, when elephants or wood are required by the king, a civil message is sent up intimating his wants, which are of course supplied.

Dr. Richardson has already given an historical sketch of the Tsóbua, or kings of Zimmé, &c.

The inhabitants do not apply the term Láu to themselves; they consider Laos or Láu, lying on the eastern bank of the Mé Khong or Cambodia River, and Muang Luang Phaban, or Lantchiang (called by the Burmese Maing Lón Kaban, or Lenzeng) the capital; some, however, include Chandapuri, Muang Tchiang, or Win Tchiang (Elephant City, from the number found there) within this kingdom; others make it a separate one, formerly ruled by a king of its own. Likewise Láu means a million Tchang elephants.

The Siamese, I am told, call the inhabitants of Zimmé, &c. Thai Noi, or the common people, Bau Thai, and the chiefs Puniah Kiang Mái. They also call them Láu Phúng Dam, or Black-bellied Láu, and the inhabitants of Muang Luang Phaban, and Win Tchiang, Láu Phúng Ham, or White-bellied Láu.

These appellations have been given in consequence of the former being in the habit of tattooing their limbs and continuing it in a particular form over one side of the belly, while the latter, like the Siamese themselves, do not in any manner disfigure themselves. This shows that the Siamese consider Zimmé as a part of Láu or Laos, by applying the term Láu to both the inhabitants of the eastern and western sides of the Mé Khong, or Cambodia River. This may, however, have originated from Zimmé having been once subdued by and tributary to Laos. They do not understand the term Yun, as applied to this part of the country by our geographers. They assert that that country is to the eastward. The Burmans, I believe, call Cochin China, Yun gyi; may not this have led to the appellation being given to the country immediately to the eastward of the Salween?

Accompanying is a list of names by which the inhabitants of the neighbouring States are known by the people here :—

The Burmans are called - - - - - - - -	Mán.
The Talains - - - - - - - - - - -	Meng.
The Siamese - - - - - - - - - -	Chou Tai.
The inhabitants of Win Tchiang and Muang Luang Phában -	Laú.
,, ,, Kiang Túng - - - - - - -	Khian.

,, ,, Muang Niong - - - - - - -	Li.
,, ,, Muang Lem - - - - - - -	Lem.
,, ,, China - - - - - - - -	Hau.
,, ,, Cochin China - - - - - - -	Min and Kío.
The Karengs - - - - - - - - - -	Niang.

Win Tchiang was taken about 10 years ago and destroyed; most of the inhabitants were removed to Bankok. It is situated on the western bank of the Mé Khong, below Muang Luang Phaban; Chandapúri is on the eastern bank opposite it, but they are considered as one city, and the names indiscriminately used for either or both.

The town on the eastern bank is described as being very strong, surrounded by a fort, with a large stream flowing on its northern, and another stream partly on its eastern side, with a swamp towards the eastern and southern sides, backed by high hills. It was at the time of its destruction tributary to Siam, but paid a triennial tribute to Cochin China. The Tsóbua of the place was inclined to throw off his dependence on both countries, having made proposition to the ruler of this place to join, and together to declare their independence, which led to its overthrow.

Muang Luang Phaban, though a Siamese province, pays triennial tribute to the Cochin Chinese, the enemy of their immediate masters, and between whom a war is raging at present. It likewise sends two elephants every eight years, as a mark of submission to China. The town is described as being on the eastern bank of the Mé Khong, surrounded by a fort with a fortified hill in its centre. On its eastern side are high and impassable mountains; on its northern side is a river, which also washes part of the eastern face. The Mé Khong flows to the westward, and it is only open to the southward. It was governed by a Tsóbúa, who lately died, and it is supposed his son will succeed him.

Zimmé and all the country in this direction formerly belonged to the Lawas, who are now but few in this district; some are found in about six villages to the northward, beside those near Muang Niong; the rest have fled to the mountains round Kiang Túng, which country, however, is said also formerly to have belonged to them. It was also subject to the Láu prior to its conquest by Ava. It carried on war with both Ava and Siam at the same time, and eventually was conquered by the former; rebelled against it, and placed itself under the protection of Siam.

The kingdom of Kiang Mái comprised 57 cities, mentioned in the Burmese books as 57 Kraings (corruption, I suppose, for Kiang, a fortified or walled city), many of which at present exist, or their ruins can be traced. Muang Nan and Muang Phé were included in the number, and the capital was both Kiang Mái and Kiang Hai, a place to the northward on the Mé Khók. It extended from the Mé Khong (Cambodia river) to the

Captain M'Leod's Journal.

Mé Khóng (the Salween) east and west. To the northward it was bounded by the territories of Kiang Tsen and Kiang Túng, which extended to the Mé Khók; to the southward by the territories of Muang Kam peng, belonging to Siam. Its boundary is at present undefined to the northward, but the Mé Tsai is sometimes mentioned as forming it. To the westward it extends to the Salween, to the eastward to the hills bounding the valley of the Mé Ping; to the southward, on the left or eastern bank of the Mé Ping, to the village of Patapa; and on the right, or western bank, to the Mé Gñáu, or by some accounts to the Mé Tian, to the southward of which the territories of Lahaing or Yahaing commence.

The Labong district extends north to the same distance as that of Zimmé; to the eastward it is bounded by the territory of Lagong, as by those of Zimmé and the Mé Ping to the westward. To the southward it extends to the Mé Phít; Lagong or Lacon has Muang Phé to the eastward; to the northward its jurisdiction runs up as far as those of Labong and Zimmé; that to the southward, I could not exactly ascertain, but not further than that of Labong. I am unable to obtain satisfactorily the boundaries of Muang Phé and Muang Nan to the southward; the former is but a small territory. The latter is as far as Kiang Khong only confined to the western bank of the Mé Khong, but beyond which it is said to have a strip of country on the eastern bank towards the Kiang Túng territories. Muang Luang Phaban extends to the southward to the province of Chandapuri or Win Tchiang, to the northward it is bounded by that of Kiang Húng.

The ignorance and indifference shown here almost by all respecting the territories, &c., &c., of the neighbouring States is incredible; few could tell me whether the Tsóbua of Muang Nan was dead or not. They do not even trouble themselves much to make themselves acquainted with what more immediately concerns themselves.

Zimmé, Labong, and Lagong form the patrimony of one family, all the chiefs being connected. The oldest chief, who generally resides at Zimmé, has a sort of controlling authority over the others; more in their external relations than internal government; much jealousy, however, exists amongst them.

Muang Phé and Muang Nan stand in the same relation to each other as the others.

24th January.—This being the day fixed for my visit to the Tsóbua I waited on him, and told him I much regretted that I could no longer delay my departure; that I wished to quit the place the next day, either for China or Moulmein. He said, that I had long patiently waited, and as the officers from Labong and Lagong had not arrived, he would take the responsibility on himself, and orders should be issued for my being accompanied by a Shan officer by the road the Chinese caravans come, which was also open to our merchants; but requested I would wait a day or two to have elephants prepared for my journey, as he was anxious that I should be escorted properly. Having now obtained permission to proceed, and that point being settled, I complied with his wishes. I thanked him for this proof of friendship towards us, and asked whether they had any objection to throw open, in like manner, the road to China, *viâ* Kiang Túng; this, they said, could not be done until the Chou Hona returned.

Before taking my leave, I inquired what orders had been issued about the tax levied on the cattle venders. To my surprise, after what the Chou Raja Wun had told me on the 22nd, they declined to make any alteration until the Chou Hona returned.

Tradition mentions that an army of Chinese once appeared before this town much too strong for the inhabitants to cope with; that they had recourse to a stratagem which, though not the first time called into play, proved successful and the means of saving the place. It was agreed that each party should erect a pagoda of a certain height, the Thi, or umbrella, at the top of which should be distinctly seen by the other, and whichever was first finished the party who erected it was to be considered as the conquerors, and thus bloodshed would be avoided. The time fixed on for this trial of numbers was short. The Siamese formed a high mound of earth, the trees in the town concealing it, and merely raised some brickwork at the top to support the Thi which was placed on it; whereas the Chinese, who were far more numerous, built a regular pagoda of brick, which they finished within the prescribed period, with the exception of putting up the Thi; but on seeing the one in the town towering above the trees, they were satisfied the Zimméers were too numerous, and at once retraced their steps. Whatever foundation there may be for the story, the pagoda is still called the Chinese Pagoda, and has a Chinese name, Utaú, given it after the commander of the expedition. It differs totally in form from any I have before seen, consisting of five round balls of masonry raised on a square pedestal, each diminishing in size towards the top and without any Thi on it. It is situated about 500 yards from the northern face of the inner fort opposite the White Elephant Gate.

25th January.—The party I sent to Labong was unsuccessful in discovering any Thugs, and all the chiefs there assured the interpreter, that from a part of the gaoler's story being false to their knowledge, they suspected the whole to be so; that they had never heard of any being in the place, and the informer was a man of bad character. They promptly rendered every assistance that was required, and assured the messenger that should any of the men enter the district they should be seized and sent to Moulmein. The interpreter returned to-day and met the gaolor on the road. The authorities

Captain McLeod's Journal.

rities there, however, threatened to punish him if he does not substantiate what he told me.

I called and took leave of the Chou Raja Wun, and obtained permission for a Chinaman, who is acquainted with the different roads, to accompany me.

26th January.—I have found the greatest possible difficulty in obtaining any satisfactory information respecting the road to China, though I have been here so long. Those who can supply it appear unwilling to do so from fear, and those again who speak on the subject, appear to be interested in the route they recommend, and others again have been evidently schooled to repeat what the officers of Goverement have told me. The Chinaman I yesterday hired, and those here, recommend the Kiang Túng road, and start very many objections to that travelled by the Chinese caravans. I shall endeavour to obtain permission to select my own road before I quit this, though I fear it will be a difficult matter. The merchants who have accompanied me are much in my way, for it is evident, that the road they wish me to go by is totally impracticable for them with their elephants, and therefore in a commercial point totally useless; and it would be unjust, after inducing them to accompany me for the purpose of establishing a trade with the Upper Provinces, to begin by ruining them, which would be the consequence of my going by the above route or leaving them. The goods brought up by them have been especially selected for the Kiang Túng and other markets in that direction, and are unsaleable here.

The Balli or Pali here is the same as known in Ava, only pronounced with a peculiar Shan accent. It is written in the common Shan character, which is totally different to the Siamese, and approaches the Burmese greatly in formation.

I went to see the chief priest to-day, and gave him what information I could regarding the site of the places mentioned in his religious books, for he was totally ignorant of them before; he was much pleased and questioned me especially about Ceylon (Lunka). He presented me with a small book at my request containing both Pali and Shan writing. Literature is unknown amongst them; almost the only books they possess are those on religion; all can read and many write, but here their education and studies end.

The only sacred relic known here is the impression of Guadama's foot near the village of Ban Nia Mun, two nights' journey to the northward of this, on the same range of hills as the pagoda to the westward. The impression is called Pabát Sip hoi, showing that the four Buddhs have each trod on the identical stone, the print of each succeeding one being smaller than the preceding one. There is a cave called Tam tap tau near Muang Tang where the last Buddh (Guadama) is said to have rested after a surfeit of pork, which caused his death.

27th January.—No elephants ready yet; to-day some of the court officers came to beg of me to stay a day longer, which I declined to do. It appears to me from the conversation I have had with the chiefs and others, and from their mode of expressing themselves, that they are merely passing me on into another Shan district, that the country on this side of the Mé Khong and Kiang Khong (the town at the ford) belongs to the Muang Nan district, and though they have told me here that they exercise government over it, and they anticipate I shall be either refused a passage or be obliged to obtain permission first from the authorities at Muang Nan, and thus remove the blame from themselves, or by delay gain time to receive a reply from the Chou Hona, should they have referred the matter to him.

Judging from the jealousy existing even between the authorities of Labong and this place, when they are connected both in relationship and government, it is to be concluded that that feeling would be stronger when the States are in every way distinct and unconnected, and that one would not allow the other to interfere in any way with its prerogative. There is no Tsóbua at Muang Nan, he has been dead some months, and the Chou Hona and the Chou Raja Wun are both absent at Bankok, and only a petty officer in charge, who it is not likely would take any responsibility on himself, so that I should run not only the risk of further delay, but of failing altogether.

I am told that I shall be 20 days without meeting any villages by either road; I have therefore purchased two elephants (having first obtained permission from the Tsóbua and Chou Raja Wun, without which nobody would dare sell me one) to be independent of the Shans. I have been compelled to do so, in consequence of two of mine being sickly, and must be very lightly laden, and in fact they must all be so for the journey is long, and the roads over mountains.

I had determined upon moving off to-day, but as three or four men of the Chinese caravan have arrived, I am anxious to obtain information from them, and have therefore postponed my departure.

28th January.—180 mules belonging to the Chinese arrived this morning. The men were as urgent as the others about the road by Kiang Túng, and affirm that there is no road along the eastern bank of the Mé Khong, as stated by the authorities here; that the towns put down (for they have given me a route) are all deserted; that if such a road existed they would come by it; they come by the road they now do, not from choice but necessity, there being no other. They likewise confirm my surmise about the difficulties of the other road. Takhong (or Dakhong, as it is more commonly pronounced), belongs to the Muang Nan jurisdiction, and the country to the eastward, until it joins the

Captain M^cLeod's Journal.

Kiang Kúng territories, is under that place and Muang Luang Phaban. A Chinaman stated that the territory of Lachua interposes between the Muang Luang Phaban and the Kiang Húng territories; that the city of that name, the capital of the province, is far to the eastward. He added there is no chokey on this side. I could not, however, gain any information about this place from any of the Shans.

They say that to ensure a regular trade with Moulmein, I must communicate with the chief merchants in China, who make the necessary advances to those who accompany the mules, and fix upon the place they are to visit. They rejoice at my going up, and promise to come next year expressly for Moulmein; that they will go this year, if they do not find a ready market here. They likewise say that they have heard that the road to Moulmein is very bad—much worse than any other they travel over. I shall leave a person to conduct them should they wish to go on, and, to stimulate him to exert himself in persuading them, have promised him a remuneration, if he succeeds.

This party is from Kien Toung of the Chinese, and Muang Ku of the Shans; they did not come through Esmok, the Shan Muang Lá, but left it to the eastward about half a day's journey. To Muang Lá from Muang Ku, they were one month, and from thence here 40 days. Judging from the pace they came along to-day—the mules at a trot and the men running—if this rate is kept up, the absolute distance must be much greater than we suppose.

They do not apprehend any difficulty to my entering China; I must, however, do so through Kiang Húng and Esmok, which are the frontier towns.

The country on the eastern bank of the Mé Khong is inhabited by mountain tribes called Kamu and Kamet. They are described as being very dark in colour, and not incumbered with much clothing. They are tributary to Muang Luang Phaban and Kiang Húng, though more in name than reality. They are harmless races, and given to agriculture. They reside on the hills in small villages—not on the road—chiefly along the Mé Tá, a stream which falls from the eastward into the Mé Khong, and it requires considerable knowledge of the country to be able to discover their abodes. With them the Chinese exchange their goods for the provisions they require.

I remonstrated with the Chou Raja Wun against their sending me by the road they propose, chiefly from what the Chinese told me—pointing out to him, that I could have gone myself at once to Muang Nan, and have avoided all the unnecessary delay to which I had been and am likely to be subjected, and mentioned the ruin that would be the lot of the traders, for they could not accompany me. It was ultimately agreed, that I should select my own road, that I should be guided by the information I collected on the march, and that I should not, in consequence of my travelling with my party over any particular one, consider it as opened permanently, but merely as a favour to me, being on a mission; that the Dakhong (Ta means a ford or ferry) road alone has been conceded to us.

I have avoided making any allusion to the Kiang Túng road in particular, though it is my intention to proceed by it, for fear of alarming them. I hope by this road being once travelled, it may render our eventually obtaining permission for our merchants to proceed by it, less difficult. I should myself prefer going by the road frequented by the Chinese, in spite of the difficulties, but the merchants with me are in my way, in the first place; and knowing that the Kiang Túng Tsóbua has made an attempt to communicate with us, and seeing the decided objection they have to my intercourse with that prince, I consider that I ought to communicate with him, if possible, that I may obtain his assistance in overcoming difficulties in advancing beyond that place, besides taking advantage of any inclination the authorities here have of obliging me during the Chou Hona's absence.

With respect to the other road, I do not apprehend any difficulty in obtaining, hereafter, the sanction of the authorities at Muang Luang Phaban and Muang Nan for our merchants to proceed by it, should we desire it, merely by sending an officer there; for their permitting the Chinese to visit them as they do, shows they have not the same fear and hatred of their northern neighbours as the authorities here have.

In the evening the Kiang Túng people came to ascertain, whether I am going to Kiang Túng, and would take charge of letters and a musical box; this I declined to do, telling them I had not determined by what route I shall go.

29th January.—The person who is to escort me not having been informed yesterday of the permission given me about the road, I sent for him early this morning, intending to go with him to the Chou Raja Wun; he, however, had been to the court officers after seeing me yesterday, and had been directed by them to attend to my wishes.

In spite of an order given by the Chou Raja Wun on my application some days ago respecting the settlement of the suits which some of the merchants about to accompany me had, nothing has yet been done. One Sannut Allee and one Edu are great rogues; both much involved at Moulmein, and have, at the expense of their creditors, gained the favour of the petty officers here, by making them presents. They have both adopted the Shan costume and crop; the former is a follower of the Chou Raja Wun, and the latter of the Chou Hona, though these officers do not countenance them in their roguery.

Before

Captain M^cLeod's Journal.

Before starting all the Chinese merchants waited on me, bringing me as a present some walnuts, nails, and horse shoes, the latter particularly valuable, as I have purchased three ponies here (no mules to be had) to be prepared, in a measure, for the Dakhong road. My Chinese interpreter, who has been a trader and travelled with the caravans from Talé to Ava for many years, is quite at home with the ponies. These men travel unarmed; they pay no tax here, but in a body make the chiefs a few trifling presents.

Some of the merchants, who have come up in consequence of my mission, remain here, and others intend visiting Muang Nan and other places to the eastward; those who accompany me have six elephants and one pony amongst them, and with their followers amount to 21 persons, and have with them property to the value of about 12,000 rupees.

From Zimmé to Kiang Túng.

29th January.—From Zimmé to Ban Niú. Direction, N. 45 E. Estimated Distanec, 6 miles. Time, 1h. 54m.

Got off at 8.46, being escorted by a Shan officer with 10 men and six elephants. After crossing the bridge over the Mé Ping, the whole march lay over fields (which were well watered by water-courses communicating with the Mé Ping), or flat, swampy and open ground, with only, occasionally, a little brushwood. The cultivation most extensive, and round the plains numerous villages. These are well inclosed with strong palisades to prevent the cattle and elephants (which are here numerous and always let loose) from entering the gardens. We crossed one small stream, the Mé Khán, and having reached the Mé Quan, the Labong river, which is here about 25 feet broad and two and a half feet deep, halted at the village of Niú, on its left bank. We have not come by the high road, but by a pathway which is considered shorter. I remonstrated with the Shan officer for stopping so near the town; as might be expected he had numerous excuses ready—no villages nor water are to be found for a great distance in advance, and we must likewise take provisions from this, &c. 41.

At this village some of the persons who escorted the Kiang Túng officer, when he returned with 100 men and 50 elephants, were very eloquent in recommending the Dakhong road, saying the other was twice as far, and impassable even for ponies; that the Kiang Túng people had cut down trees, after their return, to block it up. No sooner had I quitted the town to-day than the court officers had the owners of the elephants I purchased up before them, asked them how they had dared to sell them to me. One of the merchants accompanying me happened to be present and heard this. The owners of the elephants declared they had not sold them, but had merely hired them to me for the journey. So much for permission given by the authorities for the free sale of cattle, &c.

30th January.—From Ban Niú to the Mé Lai. Direction, N. 55 E. Estimated Distance, 16 miles. Time, 5h. 6m.

From the time of leaving our halting ground to the village of Muang Lón, a large place of 100 houses, the road or path is a continuation of the one we came along yesterday, and has been through a fertile and well-cultivated country, irrigated by canals, and having numerous villages scattered over it.

The only stream we crossed was the Lón Sák, of about 15 feet wide, with very deep sandy banks, close to the village of Tsánanta.

After quitting the village of Muang Lón, we got into the high road coming from our right, and shortly after the valley of the Mé Ping ended in this direction on our left. The road then ran along the foot of low and sloping hills, well wooded with teak and saul, free from underwood. We passed a great deal of wood ready cut and prepared for house building. Passed some very fine Kaneen, or wood-oil trees, on the banks of the Nam Dók Den, which we frequently crossed, and then ascended a steep and rocky hill covered with grass and jungle; after getting over this hill, we reached a small open spot with teak trees, on the Nam Dók Den, called Pang Mé Tsak, or teak-wood halting place. Here a road ran to our right over low hills to some village, in the direction of which the tea plant grows wild. We then passed over undulating hills (with pine trees, but none of any size), and halted on the right bank of the Mé Lai, a stream of about 20 feet wide, with two feet of water, flowing to the northward and falling into the Mé Quan. 2.9. 3.55. 5.6.

The road good all the way, and jungle high but not thick. The direction of the hills north-west and south-east. To the southward of this halting place is a village, from which we procured rice, &c., but the distance I do not know. A letter reached the Shan officer here from the court respecting the road: the interpreter overheard a part of it being read, directing him to frighten the Chinaman and prevent his showing me the Kiang Túng road, and by no means to take me by it. I was not a little surprised and annoyed at the double-faced behaviour of the authorities. I entered into conversation

Captain McLeod's Journal.

with the officer, who told me the purport of the letter privately. I was convinced they were determined clandestinely to use every means in their power to prevent my journey, but to appear outwardly to be assisting me, from fear of offending us. I at once informed the Shan officer that it was my determination to proceed by Kiang Túng, unless the information I obtained on the road differed much from what I had already collected, and he had better communicate with the chiefs, and obtain final and positive orders how to act, for after what had passed between Chou Raja Wun and myself I would not submit now to be dictated to by him, and that the least thing the Chou Raja Wun could have done, had he authorised such an extraordinary proceeding a few hours after my back was turned, was himself to have written to me; and that I, certainly, would not pay any attention to communications conveyed through the court officers and him.

31st January.—From the bank of the Mé Lai to Pang Mung on the Mé Quan. Direction, N. 25 E. Estimated, Distance 12 miles. Time, 4 h. 2 m.

12m. We went over some high open ground with large trees, and crossed the Mé Wong, a stream of about 20 feet wide by one deep, flowing here from east to west, and recrossed it near its junction with the Mé Lai, into which—here increased to about 40 feet—we
38. descended, and went along its bed for some distance; it then flowed off to our left, and
1.4. we passed on through a low rocky gorge, and crossed a good-sized stream flowing from
1.17. the south-east to the north-west, and falling into the Mé Quan, Having then passed over a small hill, we came upon the Mé Quan, at present 50 feet wide and the bed very
2.51. rocky, flowing to the southward; which having repeatedly crossed, we reached the village
3.14. of Indekali on its left bank, a little off the road. Having crossed the Mé Wan, which
3.26. comes in a parallel direction to the Mé Quan, and falls into it below the village, we came again upon the latter stream reduced to 15 feet wide, and proceeded along the valley formed by it (crossing it repeatedly) to the halting place, called Pang Mung, on its right bank.

The whole road to-day may be said to wind along the valleys of the streams mentioned, which we crossed altogether no less than 37 times, and occasionally going over a hill, though the whole way higher hills ranged themselves on both sides; these were covered with dense wood and long grass. We passed a few teak trees, also a few pine; but the saul was abundant.

We passed many places where we might have stopped until we arrived at the village of Indekali, but none afterwards. In the evening some Chinese, with 130 mules, passed us, going at a very quick pace; what with their screaming and calling out to their mules, and the bells on them, two of my ponies took fright and ran away towards town. The party encamped near us, it being late. The Chinaman I had hired at Zimmé was acquainted with them, and received a letter from his friends in China.

The Shan officer, as is customary, had a shed made and covered with the branches of trees, &c., and a raised place to sleep on put up, all of which his followers did most expeditiously. His howdah, which was placed close to him, contained everything he had and required.

1st February.—From Pang Mung to Ban Kai Nôn Noi.—Direction $\begin{cases}\text{N. 60 E.}\\ \text{N. 15 E.}\end{cases}$

Estimated Distance $\begin{cases}10\frac{1}{2}\\ 7\frac{1}{2}\end{cases}$ miles. Time $\begin{cases}3\text{h. }24\text{m.}\\ 2\text{h. }28\text{m.}\end{cases}$

The first part of this day's journey was over well-wooded hills, occasionally steep but not high; we crossed the Mé Quan often, as well as other streams, and reached the source of the former.

51m. After passing over some hills, we descended into the valley of the Mé Láu, a stream of about 10 feet wide, flowing to the northward and eastward, along which we proceeded, crossing it frequently, and occasionally over low hills, with higher ones on both sides, the whole well wooded.

3h. 24m. We now reached a small arid plain, which having crossed, the road ran on the left of the narrow valley of the Mé Láu, over low, undulating, and stony hills, free from underwood, with an open jungle. We then crossed to the right bank of the Mé Láu,
4.31. whence, about half a mile in the north-easterly direction, is the village of Ban Kai Nón; we, however, left it to our right, and proceeded between the hills, the stream flowing close to our left, which after again crossing, we halted for the night close to some field with three or four deserted houses.

This has been rather a long march; my elephants were not in before six. Some of those belonging to the merchants, and some of my coolies did not make their appearance at all, and were, during the night, kept on the alert by tigers. When we reached the valley of the Mé Láu (3 h. 24 m.), we saw a circular pool, in the centre of which the water was bubbling up and vapours issuing. The water at the edges was merely warm. I endeavoured to reach the centre of the spring, but the mud below was so soft and deep as

Captain McLeod's Journal.

as to render my attempts abortive; as I advanced, however, the heat increased, and latterly was hardly bearable.

Tea grows wild to the southward and westward of the hills passed to-day, before reaching the Mé Láu. These plantations are the property of certain chiefs, who collect the produce and give 100 viss for two plantations, which is divided by the Tsóbua, Chou Hona and Chou Raja Wun. The principal use made of the leaf is as a pickle, used at all times by the people. A small quantity is also dried and used, made into a decoction. It is gathered four times during the year, and best crop after the rains; all the care bestowed on the plant is to prune it occasionally, and the process of drying the leaves is short and simple, merely being once stirred about in a vessel over a fire, and then exposed to the sun. The tea appears to me of a coarse description, but whether naturally so, or from the little attention paid to its cultivation, I cannot say.

2nd February.—From Ban Kai Nón Noi to Muang Fue Hái.—Direction, N. 15 W. Estimated Distance, 7 miles. Time, 2h. 34m.

The journey to-day was entirely along the plateau, at first with long grass, and then with stunted pouk trees at a distance from each other. The eastern hills not observable for the fog; but those to the westward are about one and a half miles distant, and running from north-west to south-east, and of no height.

We passed the village of Banchi di San Niot, containing about six houses. We likewise crossed one or two streams, the principal one near the village of Fue Hái, and called after it, Nam Fue Hái; however, before reaching it we passed a few houses belonging to this place, and afterwards arrived where most of the houses are, and halted.

This village, though it is dignified with the title of a Muang, or capital of a district, is divided into three divisions, and contains altogether 50 houses. It is situated on an extensive plain (which in season is covered with grain), and on the left bank of the Mé Láu, which is here about 30 feet broad.

The valley here runs to north (10) west, few low hills only bounding it on each side, and is about two miles in breadth. The chief or person to whom this village was assigned, and who was a relation of the Tsóbua, has been dead three days; his relations and followers, however, did not appear to be very melancholy on the occasion.

The houses are good, with small gardens round them planted with radishes, tobacco, safflower, and sugar-cane, but only a few trees are to be seen.

3rd February.—From Muang Fue Hái to the banks of the Takau Stream. Direction, N. 15 W. Estimated Distance, 14 miles. Time, 4h. 27m.

After leaving the village we crossed to the right bank of the Mé Láu; the road then ran over open, low grassy plains (in many places swampy and cut up by elephants' tracks, and the whole of which must be under water during the rains), and through a bamboo jungle, occasionally mixed with a few trees, but mostly stunted.

On our way we passed the ruins of an old fort called Kiang Po Pau Viang Hau, or Chinese town, in a thick jungle, but on rising ground; and afterwards arrived at the village of Tanko, containing about 20 houses, situated on the right bank of the Mé Láu, in a small, fertile valley, having near it three Lawa villages. 1.10. 2.1.

After quitting this we proceeded over high ground with a thick jungle, and amongst it some very large Thengan trees, some of which had been cut down, and canoes were being made on the spot; and after passing over two low hills, by a good and shady road, we reached the village of Takau, on the right bank of the Mé Láu, containing about 70 houses, inhabited by Lawas chiefly. There are two smaller villages of the same name near this. The bareness of the place surpassed everything I had before seen; the houses were good and built close together, but not a single tree or shrub about them. 4.4.

After leaving the villages the road lay through open ground and fields, until we reached a stream, Nam Takau (which flows into the Mé Láu close by), on the left bank of which we halted. 4.27.

The Lawas are said to be the aborigines of the country, but are now so reduced in circumstances and numbers as to be considered by the Shans as an uncivilised tribe, little better than the brutes of the field. They inhabit villages amongst the hills in this direction, but are not numerous; they are an agricultural race, but also employ themselves in extracting iron from the hills, making muskets, dahs, &c. There are altogether 10 or 12 villages belonging to them, and their number is estimated at about 4,000. Most of the cotton taken away by the Chinese is the produce of the Lawa villages; they also cultivate indigo and sugar cane, which, however, are to be found in most gardens.

Each house pays annually to Government a tax of 10 viss of cotton, 10 viss of chillies, 10 viss of tobacco, and five viss of safflower. They have no written character, and their language, which is totally different from the Shans, is not uniform, but differs in almost every

Captain McLeod's Journal.

village. Their worship, until of late, was entirely confined to Nats, but they are becoming converts to Buddhism, having in many of their villages priests and monasteries. They do not permit polygamy (unless the wife is barren), but are much addicted to spirits. The women are, without exception, the ugliest race I have seen; remarkably short and stout, their faces large, their foreheads low, mouths particularly long, with thick lips, and eyes small and wide apart. Their dress consists of a petticoat of white and red cotton stuff; they also wear a jacket, and conceal their breasts.

They do not remove their villages, but parties go to a distance and prepare the hills for cultivation by clearing away the jungle. They bury all deceased persons belonging to one family in the same grave, and only open a new one when it is full.

The Chinese with me say, that a large force from China penetrated as far as the ruined fort seen this morning, many years ago, but was much harassed by the hill tribes, and being cut off entirely from its supplies, the horses belonging to it were killed for food, and it was obliged finally to retreat; few of the men composing it reached their country, famine indeed proving their chief enemy.

4th February.—From the NamTakau to Ban Mé Phit. Direction, N.
Estimated Distance, 14 miles. Time, 4h. 22m.

The route to-day may be said to have been along the valley of the Mé Láu, but the ground being too low and swampy to be traversed at present, we kept along the bases of some low hills to the eastward, though occasionally obliged to cross the low muddy plains. The road, however, was generally good, and shaded by fine trees, teak and saul.

1h. 30m. We passed through the large village of Teng Dam, containing about 70 houses entirely inhabited by Lawas, and in every respect like the village mentioned yesterday; around it there are fields, and numbers of heads of cattle were grazing. We continued to pass

2.46. through a country similar to the first part of the march, and arrived at the village Nónquan, a scattered place, and said to contain about 50 houses, situated on a large plain, with the ruins of an old fort near it.

The valley here increases in breadth to about eight miles, with high hills surrounding it. A pass is seen through them in the direction we take.

4.20. To the village of Móng Món, containing about 15 houses, we passed over an extensive plain, so much cut up by elephants and cattle that our progress over it was necessarily slow; and to the village of Mé Phit, which contains about 25 houses, we passed entirely over fields skirted by the Mé Láu to the westward. For the convenience of water, we left the high road, passed through the village, and crossed over to the left bank of the Mé Láu, where we halted.

Near the village of Teng Dam quantities of the plant called by the Burmese Bom ma thaing, or wild sage, from which they obtain camphor, was growing in the old clearings, but I cannot ascertain whether the Lawas make any use of it.

Here arose some difficulty about elephants and provisions. They wished me to halt a day; we had come slowly enough, and I would not agree to it.

This village, as well as Nónquan, is inhabited by people belonging to Zimmé, Labong, and Lagong, all eager to be in advance to participate in the profits arising from hunting elephants, the sale of the flesh of wild animals (with which the woods abound), and the clandestine trade with Kiang Túng, with which place there is constant communication.

5th February.—From Ban Mé Phit to Pang Ma foi. Direction, N. 45 E.
Estimated Distance, 9 miles. Time, 2h. 55m.

21m. We passed the small village of Pa Bóng (5 houses) soon after starting, where we were

57. greeted by an unfortunate old Burmese woman who had been caught and sold by the Red Karengs. We did not get into the regular road until we reached the village of Ban Tue, containing 10 houses, and situated on a good stream of water. The road then ran over rather hilly and high ground, well wooded and shady (latterly with teak), crossing a swamp occasionally, but good throughout.

We halted on the left bank of the Mé Láu, which we had crossed no less than 11 times during the day.

The hills to the northward and westward approach to within one mile and a half of us. There is a small village or two at the foot of them inhabited by Karengs. Hot springs are said to exist in the range.

There is a road branching off here towards Kiang Túng which shortens the distance by half a day's march, and is the one which most of the persons, proceeding to that place clandestinely, take, to avoid passing the frontier village of Pák Bóng, where a puniah is stationed; who, however, must shut his eyes to the irregularities for his own advantage.

We made a short march, in consequence of the distance to Pák Bóng being said to be too great for the elephants to travel in one day; though I doubt this, yet I am obliged to be guided by the officer with me with reference to the halting places; he has stopped behind

Captain M^cLeod's Journal.

behind to procure elephants and provisions for his party. Though my elephants had abundant rest at Zimmé, yet they suffered so much from the march over the hills, that they are incapable of any hard work.

The Shans have been trying to frighten the Chinaman hired by me at Zimmé, by telling hsm he will be punished when he returns, and before which his family will be disgraced, tbat the road has been blocked up by the Kiang Túng people, &c. He consoles himself by saying that there are plenty of wives to be had, and he will go and settle at Moulmein.

6th February 1837.—From Pang Ma foi to Pák Bóng. Direction, N. 80 E. Estimated Distance, 8 miles. Time, 2h. 30m.

2.6.

The road this day lay entirely along the river (which we crossed 11 times), and sometimes went along its bed; frequently, however, the ground was high; though generally well wooded, it was occasionally open. A range of hills became visible towards the end of the march, to the north-west, running north-west and south-east, distant 10 miles.

We reached the village of Pák Bóng, on the left bank of the Mé Láu, and halted. 2.30.

This river is here about 50 feet wide and two deep, but during the rains about 150 feet. Its bed throughout is sandy. All the streams we have crossed since the 1st instant fall into it. It passes this in an easterly direction, and after flowing to a short distance, takes a north-easterly course, towards the old town of Kiang Tsen or Then, and discharges itself into the Mé Khók. It is crossed on the route from this to Kiang Khong, situated at the ford of the Mé Khong.

Fish is abundant in it. The stream is, in some places, partially staked across, and at others small sheds are erected from side to side in a line, over the water, with stakes of bamboos reaching the ground. Lights are kept in these sheds at night, or suspended from them, close to the water; the fish, being attracted by them, are easily caught or killed.

This village contains about 25 houses. No fruit trees are to be seen, except a few young jacks or plantains. The fields belonging to it are extensive. A chokey is established here to prevent communication with Kiang Túng. Though the Puniah is from Zimmé, yet some of the inhabitants are followers of the chiefs of Labong and Lagong.

The direct road to Kiang Tsen, and the road by which the Chinese caravans travel from the Mé Khong unite here. Between this place and Kiang Khong there are no inhabitants; the distance is five or six marches. There is a road likewise from that place to Kiang Tsen. As far as I understand, these are not the only roads; there are numerous paths in every direction, leading towards Kiang Túng, Muang Niong, &c., which are well known to the hunters and others. The head man of this place accompanied the Kiang Túng officer on his return, and though merely ordered to go as far as their boundary, has gone to the capital, and is amusing himself there.

The officer accompanying me only left Mé Phit this morning early, and rejoined me, at about 3 p.m. No elephants to be had here without a delay of four days at least; nor is rice to be procured, but for one day. I, however, surprised him by showing him that I had a supply for 20 days with me, and that I had no intention of delaying here for elephants, but that, agreeably to the permission given me, I should proceed by the Kiang Túng road. He said he thought, that as there had been sufficient time for a communication to reach us, and from the way his letter of instruction is worded, that if they really objected to my going they would have written to him, so he volunteered to escort me two marches beyond this. There was some demur about the merchants accompanying me; however, as they had always been considered as belonging to my party, and to follow me wherever I went, I told him, that if he prevented them doing so, he must be prepared to take the consequences; he on this waived the question, though, Shan like, he tried privately to make a bargain with them, as he said, not for himself; but to soften the Chou Raja Wun, and others, should fault be found.

7th February 1837.—From the Village of Pák Bóng to the right bank of the Mé Tsakón. Direction, N. 10 W. Estimated Distance, 10 miles. Time, 3h. 23m.

After crossing the fields belonging to the village, we proceeded over low, hilly ground, through a jungle of saul, and then crossed the Hué Tsai, eight feet broad, a little beyond which we passed a road leading to Nónquan, and gradually descended into a low, swampy belt of thick jungle, with some teak and thengan trees; beyond this we crossed the Hué Pa Wai, 10 feet broad, with plenty of water, and after passing over some low hills, reached a swampy and open plain, covered with long grass and weeds, which detained us a little. 52. 1h. 11m. 1h. 42m.

The range of hills to the westward are seen here, the highest part bearing N. 70 W. and distant about nine miles.

Captain M^cLeod's Journal.

We continued to skirt swampy plains for some distance, but towards the end of the march the country became higher and well wooded.

2h. 13m. 2.24. 2.34. We passed the ruins of another Chinese fort (Viang Hau), and having crossed a good stream of 15 feet wide, with abundance of water, reached a large plain, where the road from Pang Ma foi (the place we halted at on the 5th) joins this one.

We halted on a clear spot of ground on the right bank of the Mé Tsakón, a stream of about 15 feet wide and two deep, which, as well as all those passed to-day, flows to the northward and eastward, and falls into the Mé Láu.

The highest hills to the westward are not visible from this, but some of the lower ones of the same ranges are about two miles distant from us. None to be seen to the eastward.

A story, similar to what I have related before, is told of the old fort passed to-day. The Chinese with me fix upon two periods for the invasion of this country by their countrymen; one 490 years ago, and the other 90, by a chief named Menguonye, at the same time as Fuguonye attacked Ava, where he died. The Shans with me, however, know nothing of the period. By the history of Ava, I believe, Menguonye led an army from China, and invaded that country about 70 years ago.

8th February 1837.—From the right bank of the Mé Tsakón to the left of the Mé Khók. Direction, N. 55. Estimated Distance, 12 miles. Time, 4h. 7m.

1.26. We followed the course of the Mé Tsakón, through an open forest, with an occasional plain on our right, and then crossed it.

We ought yesterday to have come to this. We shortly after passed over a deep swamp and reached the Hué Pák Bóng. From this the country varied much, sometimes low, undulating hills, with fine forest trees on them, mixed with teak and saul; occasionally swampy, and latterly flat, with stunted trees scattered over extensive plains, about five miles broad, bounded by low broken hills to the westward (running north-west and south-east), and a few very low detached ones to the eastward. It continued so till we reached the ruins of an old brick fort, on the right hand bank of the Mé Khók, called Kiang Hái. Having passed through it we arrived at the ford of the Mé Khók, which we crossed, and halted on its left bank, on an extensive plain of reeds and long grass.

Kiang Hái was formerly a place of considerable importance and extent.

The palace and part of the town stood on some low hills, overhanging the river. There is nothing, however, left to mark its former greatness, but its brick walls, ruins of numerous pagodas, and some arched gateways leading to them: the town is entirely overgrown by jungle; like most old towns, it has a tradition attached to it. Its original name was Tsan Katsa Lacón, when founded is not known. It was once the capital of a kingdom. The king who altered its name was, from his birth, destined to become a mighty monarch; this was predicted from his strength, for he broke every cradle they put him into, until at last they were obliged to make one of iron, which is said still to remain suspended in its old place amongst the ruins, but the jungle around is too thick to permit of its being seen.

Zimmé, or Kiang Mái, took its name from his son, for whose maintenance it was assigned; prior to which it was called Muang Lamien; in like manner his wife received the town of Kiang Túng, then called Kematunka, which was also annexed to its territories.

This river is the largest we have met since crossing the Mé Ping. Three islands form above the ford, where it is about 627 feet wide; above, however, it is much narrower. It flows past in the north-east direction, coming from north 70 west; its course from the westward is marked by broken hills. The water, even at this season, nearly reached from bank to bank; at the deepest part it had 4½ feet of water. Its source is not very far to the north-west, and an old town, Muang Khók, stands near it. After receiving almost all the streams between the Mé Láu and the Hué Lük, it discharges itself into the Mé Khong, near and below Kiang Then.

The officer from Zimmé, who was to have returned from this, felt so much inclined to go on, and urged so many plausible reasons for so doing, that I assisted him in his embarrassment, by saying it would be too bad to leave me in the jungle, particularly as from the directions he had given me about the road, it was evident there was every chance of my losing the way. Though the Chinaman I hired at Zimmé had travelled it with the Kiang Túng people when they came a few months ago, I do not place much confidence in him. I am also anxious that the officer should witness what passes at Kiang Túng, to satisfy the authorities at Zimmé that my mission is purely of an amicable and commercial nature.

Captain McLeod's Journal.

9th February 1837.—From the right bank of the Mé Khók to Hué Lük. Direction, N. 10 E. Estimated Distance, 18 miles. Time, 5h. 56 m.

The road to-day lay chiefly over plains, with long grass and reeds, with a more than usual number of swamps, not improved by some rain we had. These plains having been crossed by the Kiang Túng people returning, when much more wet than they are now, their elephants sank deep in the mud, most of the holes made by them are dry, and others covered by water, in consequence of which, marching over them is rendered very troublesome and fatiguing.

We occasionally passed over rising ground, and low hills, with a thick jungle of bamboos in some places. The plains, however, generally had but a few stunted trees scattered over them.

After crossing the plain on which we halted yesterday, we came to a swamp, beyond which was a jheel of four and a half feet deep, and muddy. We were detained some time, and had much trouble in crossing it; beyond this, we had to pass over two very long swamps. 1.2.

We passed close to the site of an old village Ban Myan Lé, many years deserted, but the fields belonging to it can still be traced, and some Palmira trees mark its position. 3.17.

The country about it consists of fine large plains, with low hills bounding them to the westward, and increasing in height as they advance northward, with a remarkable peak visible, bearing north 15 west, called Doé Tón; those to the eastward again are low, and distant about two or three miles.

We reached the right bank of the Mé Katón, 10 feet broad, and one and a half deep, and proceeded along it for about 40 minutes; after having crossed it, and some other small streams, and traversing plains as in the first part of the day, we reached and halted on the right bank of the Hué Lük, a small stream, with very high and steep banks, close to the foot of the western range of hills. 3h. 34m.

Here we found a small stockade had been erected by the hunters, who are obliged to use this precaution at every place where they halt any time. We passed several during the latter part of the journey along the Mé Katón, where we might have stopped. Where there is no stockade, passengers are obliged to erect stages on trees to sleep on; these are necessary for their protection against the tigers. The fresh marks of these animals to-day exceed anything I could have supposed, and that they had been successful in seizing their prey was evident from the marks of blood on the road.

Deer and all descriptions of game are abundant in this direction, and the streams swarm with fish.

We passed a few tea shrubs to day on the high ground; these were from 10 to 15 feet high, growing wild.

The country is intersected throughout by pathways made by the hunters, several parties of whom, as also people from Kiang Túng, we met. The high road is only at present better marked than the different pathways, from many people having lately passed over it; a person not well acquainted with the roads would certainly lose his way.

10th February 1837.—From Hué Lük to Hué Kai. Direction, N. 10 W. Estimated Distance, 18 miles. Time, 5h. 53m.

The first part of the journey was over low hills (with narrow plains to the eastward), beyond which again the ground was high, thickly wooded with large forest and Kanien (wood-oil) trees, and some fine banians; between the hills, however, we had to cross over small swamps.

We then traversed a plain with stunted trees on it, and reached the Mé Khám Noi, a stream of 15 feet wide and one and a half deep, flowing over a sandy bed to the northward and eastward; on its left bank is a good place for halting. 2.7.

A road to Kiang Then branches off about half way between this and our last halting place.

After crossing three or four small streams we reached the Mé Khám Luang, and having proceeded along its low and sandy banks (planted with radishes) crossed it. 3.52.

It was about 45 feet broad and two deep, and flowing to the eastward. We then proceeded through a flat country, but the jungle thicker and sometimes of teak. We approached to within a quarter of a mile of some low, steep, rocky hills, with the peak a little to the northward. 4.8. 4.56.

We reached the Nam Phie, a stream of 10 feet wide, with high sandy banks covered with grass, but which during the rains must be under water. It discharges itself into the Mé Khám Luang. Before crossing this stream a road branches off to the northward and eastward, and leads to the old town of U-pón, now deserted. 5.14.

From the stream we proceeded over high ground, somewhat hilly, with open jungle, and reached the Hué Kái, a small stream, and halted on a low, confined spot.

Captain McLeod's Journal.

The road has been good throughout to-day.

We met on the road a party of Chinese with 150 mules and ponies, proceeding to Zimmé under the guidance of some Shans from Kiang Túng; they have very few articles for sale, but have some gold to dispose of for betel nut, which is in great demand at that place. In the meantime their partners at Kiang Túng are purchasing and packing the cotton for their return trip to China.

They come from Kien Taung or Muang Ku, and were delighted to see me and hear the object of my mission; they stopped and conversed with me some time, and said they had been induced to make the present attempt in hopes of being hereafter permitted to travel by this road.

11th February 1837.—From Hué Kái to the left bank of Mé Tsái. Direction, N. 5. E. Estimated Distance, 15 miles. Time, 4h. 33m.

After quitting the halting place we proceeded over a little hilly ground with thick jungle, and then plains of long grass and stunted trees, occasionally, however, with higher and thicker jungle.

1.22. 3.10. Having reached some hot springs, we crossed the Mé Lai, about 10 feet wide, with the Doé Tón to the westward. A low range of hills is now seen to the eastward, distant about seven or eight miles, and beyond them is another range, distant about 20 miles, in the direction of Kiang Then.

2.27. Having crossed the Nam Tsón Nák, and in 11 minutes after the Nam Phu, or Mé Má, a stream of 20 feet wide flowing to the eastward, we approached a broken and high peak to within a quarter of a mile, with low hills between it and us; but the principal range, which is high, diminishes gradually to the northward, running from north to south.

3.31. 3.56. We came to a tank of about 40 feet square, and said to be unfathomable; the water, however, is very good, and it contains quantities of fish. A little further on we passed through the ruins of an old town, Muang Kó; there is another old fort, in a north-easterly direction, distant two days' journey, called U-pón. On the road to it some extensive and deep hot springs are found.

4.26. The road continued the same, and we reached the Mé Tsái, which we crossed, and halted on its left bank. This is a stream of about 40 feet wide and two deep, flowing to the eastward. It unites its waters with those of some large streams from the northward, and flows into the Mé Khong. The deepest of the hot springs seen to-day was about four inches, issuing from under a rock; the soil soft and muddy, the surface of the water covered with green weeds. The thermometer, when immersed in water, rose to 97° Fahr. Beyond this spring there are two tepid streams of six feet wide, with about six inches of water in each, flowing fast to the eastward, showing that there must be some considerable springs amongst the hills to the westward.

12th February 1837.—From the left bank of the Mé Tsái to the left bank of the Mé Hem. Direction, N. 25 W. Distance, 18 miles. Time, 6h. 7m.

35. 1.58. 2.28. The first part of this day's journey was over a flat country, occasionally wooded and occasionally open, and then along the Mé Khám, which we frequently crossed and re-crossed, and met many good halting places. We gradually got amongst the hills following the course of the above stream; the road then became bad, over the slippery and steep side of a hill, not improved by late rains, and across which trees have fallen.

2.53. We then came to a small open space, beyond which we descended a steepish hill and arrived at a narrow gorge, through which the road led, with steep and rocky hills and masses of rock closing it on both sides. If the summits of these hills are attainable, they would form a barrier which no force could pass from Kiang Túng.

3.2. We then crossed a good sized stream, the Mé Tún, flowing to the southward and eastward, which joins the Mé Khám, and beyond which is an open plain and a good place for halting on.

4.44. We continued rather to descend, but now and then also to ascend, and having crossed the Mé Tún and other streams, several times, reached and crossed the Mé Tá Phung. We then passed over steep hills, the path much blocked up by fallen trees, and reached the Mé Hem, a stream of about 40 feet wide with three feet of water, which having crossed, halted on a confined spot on its left bank.

This river rises in some hills to the northward and westward, called Doé Pa Hem, flows to the southward and eastward and joins the Mé Tsái.

The road during the latter part of this day's march has been, without exception, the worst we have yet met with from Zimmé, and from the fallen trees one might almost have believed that an attempt had been made to render it impassable; but these had evidently been blown down, their roots having no hold in the soft soil.

13th February.

Captain M^cLeod's Journal.

13th February.—From the left bank of the Mé Hem to the Village of Hái Tái. Direction, N. 10 W. Distance, 12 miles. Time, 4h. 4m.

We passed over a low hill well wooded, and reached a plain on the right bank of the Mé Oú. This stream, where we crossed it, is about 35 feet wide, an island forming below the crossing, but its ordinary breadth above is about 20 feet and one and a half deep, flowing fast over a bed of round stones to the southward and eastward. From this the road occasionally ran along the sides of the hills, but chiefly along the foot of two low ranges, from whence numerous small muddy streams flow, forming small and deep swamps, along which bamboos and ratans grow in luxuriance. 49. 1.47.

It, however, improved towards the end of the march, the hills receding, the country became more open, we came to the village of Hái Tái, where we halted. 3.42. 4.4.

The valley here is about two miles in length, the highest hills are to the westward, running from north-west to south-east, and gradually declining to the northward, leaving, as it were, a pass through a little to the westward of north, but beyond again high hills are seen. The peak of Doé Tón is just visible, bearing south 10 east, and appears from this to form a distinct range from the other to the westward of it.

The Mé Oú is the only stream of any size crossed to-day; the others, three or four in number, too small to mention. The road, with the exception of the swampy places, was tolerably good.

This village is the first one in this direction belonging to Kiáng Túng; it has only lately been established, and consists of 10 houses. Beyond the Mé Móe, which flows by here, once stood the town of Muang Hái, a place of consequence, but now only the ruins of the fort are left.

The ground between this and the Mé Khók, as far as I can understand, is considered as neutral, and may be occupied by either the Siamese or Burmese Shans, for no boundary has been marked out.

The head man here mentioned, that the Tsóbua has lately peopled many of the old towns in the direction of Kiang Tsen, but they feared much that when the Siamese find them comfortable and settled, and fancy they are lulled into security, they will some night, like thieves, come and carry them off. He confirms all that I was told respecting the mission from this; and that the officer who was deputed, has been sent to Ava with all the presents he brought back. He says the Tsóbua will be delighted to hear of my arrival; he has long wished to meet a British officer, having heard of our visiting Zimmé.

We were informed that Maha Wang, the Tsóbua of Kiang Húng, has been dead some months, and his territory said to be in great confusion.

The head man of the village proposing to precede me to report my approach, I gave him a letter to the Tsóbua, informing him of my arrival within his territories, and of my being the bearer of a letter from the Commissioner in the Tenasserim Provinces to him.

14th February.—From the Village of Hái Tái to Súp Nium. Direction { N. 5 E. / N. 50 W. } Estimated Distance { 12 / 6 } Miles. Time { 4h. 28m. / 1h. 44m. }

Having crossed the Mé Móe, and close to it the Mé Húak, a large stream of 35 feet broad, and two feet deep, flowing to the eastward, and joining the Mé Hem, the road ran over a level valley, occasionally with jungle, but more generally open, with long grass, and some swamps, but not bad, with the Mé Húak winding its way on our left.

We reached the village of Hái Nüa, situated in an extensive plain, and on the right bank of the Mé Oú, a stream which we crossed before entering the village. We did not here see any inhabitants, but quantities of grass cut and tied ready for transportation, which showed that they could not be far off. 2.1.

On quitting the plain, we crossed the Mé Húak, about 20 feet wide and one deep; and having passed over a low hill, covered with thick jungle, recrossed the same stream, and ascended a high and steep hill, with khoung mu and other trees on it. The bamboo, though not thick along the road, is so down the sides of the hills. From the summit we had no view, being surrounded by hills and jungle. 2.47. 3.20

The descent for a short time was very steep, and the rain we had during the night made the road particularly difficult. It improved on our reaching the bed of a small stream, through which we proceeded for some distance. We then arrived at the foot of the hills where the Mé Pán, a large stream, of 60 feet broad, flows past to the eastward, and joins the Mé Tsái. Having crossed this river, we shortly afterwards came on the Mé Nium (which here unites with the former river), and followed its course between hills and through

Captain McLeod's Journal.

through small plains, crossing it several times. Where we first crossed it, it was 20 feet wide and one deep, but of course decreased in size as we advanced.

The road to Muang Paniak, a place lately established by the Kiang Túng Tsóbua, branches off at the junction of the two streams, and continues along the valley of Mé Pán

We halted on a plain at the junction of a small stream with the Mé Nium.

15th February.—From Súp Nium to Patchiang on the Hills. Direction, N. 25 W. Estimated Distance, 13 miles. Time, 4h. 33m.

After crossing the Mé Nium, close to the encamping ground and another stream five or six times, we ascended a high and rather steep hill and after passing over it, reached
1.34. the Mé Het and crossed it. This is a stream of 20 feet broad and two deep, flowing rapidly over a stony bed from the westward to the eastward. There is no space for encamping on near this on the high road, but by crossing the stream, a little higher up, there is an open plain of some size.

From this river we commenced to ascend a very high and steep range of mountains covered with jungle; the ascent was at times exceedingly steep, and on the way up we
2.48. had a fine view of the surrounding country, which was one mass of mountains. I counted eight or nine distinct ranges to the southward and westward, extending as far as the eye could reach; these appeared to run north-west and south-east, and gradually to diminish
3.38. in height, the most distant ones being the lowest. There were three ranges of high mountains also to the eastward, the highest about 10 miles distant, bearing south 70 east, and which, no doubt, concealed others from our view. We could see the Doé Tón, bearing nearly south, and the range to which it belongs was the highest observed to-day. We continued to ascend for some time, and arrived at an open space between the shoulders of two mountains, at the bottom of a short descent. This was to have been the halting ground, but there was no water, the spring being dry; we proceeded onwards, still rising higher and higher, with mountains as high as this range even, if not higher, to the southward and westward, and only separated from this by a deep valley.

We passed a few pines, the only ones met to-day, and descended slightly to our halting place, which is at the junction of two hills, with barely sufficient room for my small tent.

At the Mé Het we met some Shans proceeding to the villages in the jungle, who told us that formerly there was a road along the valley, formed by that river, to Kiang Túng, by which these mountains were avoided; but, as it would require some labour to clear it now, after so many years' disuse, the people availed themselves of the road we came by, which led to some Kúi villages.

The elephants were 11 hours on the road to-day, in consequence of the steepness of the hills, and only obtained a very scanty supply of water from a small stream to the right, on their arrival; one of them did not come in at all to day. Water boiled on the highest part passed to-day at 204½° Fahrenheit.

16th February.—From Patchiang to the Second Stockade on the Hills. Direction, N. 45 W. Distance, 6 miles. Time, 1h. 55m.

Immediately on starting we commenced ascending, and passed through an old deserted stockade on the shoulder of a hill, the sides of which fall down precipitously to the right and left, rendering the stockade only assailable in front. From this a road branched off to our right, leading to a Ka Kúi village; and from this point also the ascent became very steep, and continued so to the summit, which is said to be the highest part of the range.

38. From this high spot at first the descent was very gradual, but, after passing a forest of
1.2. pines, became very steep; at the foot of it we crossed a good sized stream, the Mé Nan,
1.28. flowing to the northward and eastward, and ascended again until we reached an old
1.55. stockade, like the one passed before, where we halted.

There is but little forage or water at this place, but the elephants are so fatigued by yesterday's march that we are obliged to stop here. The Shan likewise states there is no other spot for a great distance in advance where we should find water.

I was disappointed in having no view from the high hill passed to-day. On it there is an open space with short grass, which in days of peace and quiet was the spot where the inhabitants of Kiang Túng and of Muang Hái held their buffalo fights. Water boiled there at 204° Fahrenheit.

There is said to be a lake on the top of a hill in the range next to the one we are on, from which the Mé Khók, Mé Tsáe, and Mé Húak take their rise. The range bears south 45 west, and runs from north-west to south-east, at a distance of about eight or ten miles from us.

Two other ranges are seen in the same direction; the further, which is the higher, and distant 20 miles, is in the Muang Tsat district, and the old town of that name is situated beyond it. The range again in which the Mé Ping takes its rise is still more to the westward,

westward, and all the way to the Salween (Thanlwen or Mé Khóng of the Shans) are ranges of hills; and in the valleys between the ranges formerly there were towns and villages, which are now entirely deserted.

Some Chinese passed *en route* to town from the Ka Kúí villages, where they had been to purchase cotton. The Ka Kúí Puniah or chief passed also; he told us he had two districts under him in this direction, containing together about 800 houses. He could hardly make himself understood, speaking bad Shan. These mountains are said to be inhabited by about 5,000 or 6,000 of these people, and to them is the defence of this entrance into Kiang Túng entrusted.

17th February.—From the Second Stockade on the Hills to Muang Pák. Direction, N. 10 W. Estimated Distance, 9½ miles. Time, 2h. 52m.

After ascending a little we commenced to descend the hills, sometimes very steep, and at the foot of them came to a nice plain, with two streams of water flowing through it, and to which, undoubtedly, we ought to have come yesterday. From this spot the road ran over low undulating hillocks, covered with long grass (but no jungle), and valleys formed between them all well watered by streams and reached the regular Chowkey village of Muang Pák, on the bank of the Nam Pák, where, finding they had erected some sheds for us, we halted. 52. 2.52.

Near the village are some fields, and the surrounding hills have a most bare appearance, from their having been cleared for cultivation.

This place only contains six houses, but there are three or four other villages at short distances from it, which are comprised in this district. Tobacco and indigo were sown in the gardens belonging to the place at a short distance from it, but there was not a single tree near the village.

The houses here are like those I saw at Tummo, in the Kubbó Valley, totally unlike those at Zimmé, and said to be the pattern of those constructed by the Myé lat Shans. The ends are semicircular, and the roofs descending down to the floors.

Here we met a number of families moving to Muang Paniak and Muang Lem, two places lately repeopled. It was a most interesting sight; everything appeared so well and neatly packed and had the appearance of cleanliness and comfort. The people came from Kiang Túng itself.

The man who left Haí Tái with the letter respecting my arrival only passed this yesterday. I was informed it was necessary that I should remain here until they received orders from town, that they had sent a man forward with the intelligence of my arrival, and produced an order, written on a green bamboo, not to admit any person from the Zimmé territories without first reporting. However much disinclined to halt, I agreed to do so for a day.

18th February.—Halted. A great deal of tea grows in this neighbourhood. I did not, however, see any of the plantations.

The cold has been gradually increasing, and marching during the hottest part of the day is by no means unpleasant. The thermometer this morning outside my tent was 33° Fahrenheit.

19th February.—From Muang Pák to Muang Khien. Direction, N. 15 W. Estimated Distance, 16½ miles. Time, 5h. 19m.

Information having been received last evening that some officers from Kiang Túng had arrived at the village in advance, I was requested to wait until they came this morning. One was a Puniah and the other was an Awe youk, who, on making their appearance had, of course, a vast number of questions to ask respecting the number of people with me, where I had come from, &c., &c., some of which, however, I declined answering until I saw the Tsóbua; but at the same time informed them my visit was for the purpose of opening a friendly intercourse between the two countries. They informed me, that the Tsóbua and all his subjects were rejoiced at my arrival, and hoped it would be the means of establishing permanent peace and quiet through all the Burmese and Siamese Shan countries.

The Puniah, who spoke Burmese, was at Ava when I accompanied the Burmese Commissioners, in 1833, to the Manipur frontier; he had seen me then, and recognised me. I think the knowledge of my having been so employed added much to my importance in their opinion, and relieved me from some trouble and delay, being aware that I was well acquainted with their customs. We commenced our march rather late in the day, attended by the Kiang Túng officers. To Ban Tón Luang, a village with 15 houses, the road wound along the foot of some low hills, similar to those passed yesterday; from the village we ascended a high range, and reached a zeat on the summit, near which there is a spring of water. Though this is not quite the highest spot, it is nearly so, and we ascended but very little after this. 33. 2.49.

The descent is short, but very steep. We reached the Mé Khien, at the foot of the hills, 3.49.

Captain M^cLeod's Journal.

5.19.

hills, and proceeded over low hills, valleys, and plains of grass gradually falling to the northward; repeatedly crossing the Mé Khien and several other small streams. Towards the latter part of the journey, when it became more level, we marched over fields and old cotton plantations, and reached the village of Muang Khien, where we halted. In the valleys and on the sides of the hills in coming along, we saw several small villages and clearings inhabited by Lawas.

Here, likewise, we found sheds erected, and the head man of the village, a most respectable looking personage, waited on me, and in the evening returned with an abundant supply of provisions.

The village contains about 100 houses, tolerably good as to materials, but built without regularity; there is not a tree of any sort about them, nor are they separated from each other by any fence.

There were several Chinamen here pressing cotton and packing it; this is done in a well, into which the cloth to hold the cotton is introduced, and the cotton trodden into it, after which it is bound tightly round with strips of bamboo.

The packages are regularly weighed, great care being required that the two placed on one mule should weigh exactly alike, and be balanced; each mule carries from 50 to 80 viss of cotton; the cotton is valued at about 40 ticals for 100 Shan viss. The merchants generally give their goods in exchange for it.

It is grown in a great abundance in the valleys and on the sides of the hills chiefly by the Lawas and Kakúis. The trees are small and the plant is an annual, as at Zimmé; the seed is sown broadcast. The only preparation the ground undergoes is to have the old plants dug out and burnt for manure.

Their mode of separating the cotton from the seed is most expeditious, and performed by one person. An upright wooden frame consisting of two posts fastened in the ground, supporting in their centre a horizontal circular and smooth iron rod of an inch in circumference, which, passing through the former on one side, is formed into a knee, and is fixed to a heavy wooden lever of about 5 feet in length, within 6 inches of the middle, causing one arm to be longer than the other, to give it an impetus when in motion. A wooden cylinder of about 3 inches in circumference is placed parallel to, and in contact with the iron rod, and supported in the same manner, to this a handle is attached on the opposite side of the frame on the outside, and is turned by the hand. To the iron knee a string is fastened, which is conducted over a beam and brought down to a pedal, by which it is put into motion. The cotton is placed along the line of contact of the cylinders, which, revolving to each other, draw the cotton through, leaving the seed behind.

20th February.—From Muang Khien to Kiang Túng. Direction, N. 35 W. Estimated Distance, 7½ miles. Time, 2h. 14m.

The road ran entirely through an open country amongst low undulating hills still falling to the northward. We passed some small villages and crossed three or four inconsiderable streams, and reached a large banian tree on the southern face of the fort, which we had seen before from a distance, and to which the road led. We stopped here a few minutes, the officers with me wishing to await the arrival of some others; I, however, proposed going on and meeting them. From this we were taken by a circuitous road round the south-east side of the town.

About half a mile from it a deputation consisting of four or five officers and a large train of followers met me. They received the report made by the officers who accompanied me from the village of Muang Pák, and after congratulating me on my safe arrival, proceeded with me to the town.

On my entrance within the gates of the fort an extensive swamp with a few huts alone met my view. I was conducted to a very fine large, new enclosed zeat (built expressly, as I was told, for officers coming on missions from other States), near one of the gates of the town. Crowds of people had collected to witness my entry; none of the chiefs even ever having before seen an European.

The officers remained with me some time, and only left at my request, stationing some men to prevent the people from disturbing me too much, in endeavouring to satisfy their curiosity.

As I was anxious to be introduced to the Tsóbua with as little delay as possible, I requested that some officer might be sent to settle this point. In the evening the Minister, Puniah (or Paya as it was pronounced) Wang, called on me, attended by a train of officers and other followers, and brought several trays of fruit, &c., as presents. He is the factotum here. His wife was a sister of the Tsóbua's late wife, and his daughter is married to the Tsóbua's eldest son; so he may be supposed to have considerable influence. He tried to impress on me the honour done me by his visit; that he had come at the Tsóbua's express order, who had long been most anxious to establish a friendly connection with the English, and had endeavoured to open a communication with them; that he had never before called on any other officer, however high his rank. He was very angry and sore about the reply from Zimmé to their propositions about the road, which was not even couched in civil terms, as well as the detention of the officer there. This person had been sent on to Ava with the presents (four elephants), all given by the Tsóbua's own relations at that place, none by the Government.

The

Captain McLeod's Journal.

The Tsóbua's eldest son, Chou Maha Phóm, has been appointed from Ava Aing She Meng (Lord of the Eastern House) or Crown Prince, a title or appointment which confers on him certain privileges and power only little short of those enjoyed by the Tsóbua himself.

The Tsóbua has three sons, the eldest about 25 years of age, the second, Chow Patta Wun, about 18 years of age, and a younger one, at present in a monastery, of 12. He has two or three daughters, one of whom is married to his nephew, and one engaged to the late Kiang Húng Tsóbua's son. Unlike most chiefs the Tsóbua is content with one wife; all his children are by this one.

The Minister gave me some account of the disturbances in Kiang Húng, caused on the death of the late Tsóbua, Maha Wang (Maha Weng of the Burmans), but as I shall have hereafter to speak on this subject, I do not now mention what he told me.

With reference to my introduction, he said it was necessary that either I or some of my people should come to the court next day to meet the officers there; that they would then go to the Tsóbua and have the matter settled. He staid some time with me and conversed freely in Burmese.

Though our acquaintance had been so short, he did not fail to show that the Shans had no great attachment for their rulers, the Burmans. I was myself most guarded when he spoke on this subject. All the officers are Shans.

21st February.—Everybody agrees in stating that the Tsóbua is much rejoiced at the arrival of my mission. That he would be so appears to have been expected, for one of the officers about him, who was a favourite, but had fallen into disgrace, thought of regaining his former place by delivering the letter I sent from Hái Tái, and being the first to convey to him the intelligence of the arrival of a British officer.

The Tsóbua, who had not spoken or noticed him for many days, directed him to meet me outside the town, and the person was one of those who received me and returned with the report to the Tsóbua. He is now, in consequence, considered to be in a fair way to re-establish himself in the favour of his master.

Some officers again came about the list of people with me, which I had before supplied, and about the Commissioner's letter; they wished to know from whom it really was, where our King resided, &c. I gave them every information. They likewise wanted to see everything brought by the merchants, and to take a list of them. As this would have caused the merchants much inconvenience and perhaps loss, unnecessarily to unpack their goods, I easily persuaded the officers to be content with a general list of what they had brought, to be furnished by the men themselves, without opening their packages. We had some conversation about the duties; they spoke of levying 10 per cent.; however, I soon saw that they had no power to discuss and settle such matters, and therefore told them I should defer the discussion until I saw the Tsóbua.

I sent my writer and interpreter to the court with the merchants, there to ascertain what is wished respecting them, and also when I could be introduced to the Tsóbua. They there met Paya Wang, who informed them that the Tsóbua had given orders, that no duty should be levied on them, but added, that it was customary for merchants to make some trifling presents to the Tsóbua, his eldest son, and the court officers. Though the traders had gone prepared for this, I regret to say that they had a shameful and noisy dispute amongst themselves in the court, which ended in their only presenting articles to the value of about 30 rupees to be divided between all mentioned above.

The writer reported to me that the officers were remarkably civil, though evidently disgusted with the behaviour of the traders. I considered it proper to send afterwards and make an apology for their misconduct, and that I would arrange about the presents.

22nd February.—Agreeably to the arrangement made yesterday, I was introduced to Tsóbua to-day. At about 12 o'clock some officers came to escort me. On arriving at the gate of the palace inclosure, the officer with me asked me whether I would dismount, as no person ever entered it on horseback; knowing their customs, I immediately complied with his request.

On entering the gate I could not help observing the total absence of care and neatness in the compound. It was overgrown with grass, and the out-houses in a dilapidated state, and the whole surrounded by a brick and mud wall of 8 feet high. The Palace itself, a shabby-looking pile of wood, raised about 15 feet from the ground, on high pillars. After ascending the steps, and on reaching the door of the hall, the Tsóbua's two sons came forward and led me to a seat in front of the Tsóbua, where carpets had been spread for me and my followers. The interior of the building was very richly gilt, forming a strong contrast with its exterior. The throne stood at one end within a railing, very elegantly carved and gilt, with two white umbrellas on each side of it, and folding-doors leading to it from the back, as in the palace at Ava.

The Tsóbua, however, was seated on a handsome low gilt couch in front of the throne, surrounded by a number of men holding swords in gold scabbards at a respectful distance. His two eldest sons and nephew were seated on the ground on his right, and the officers ranged in lines on each side in front.

I was much struck with the grandeur of everything compared with what I had seen at Zimmé. Though many Tsóbuas are permitted to have thrones, white umbrellas, and other emblems of royalty, yet they cannot make use of them personally. The Tsóbua when he goes out has eight gold chuttas carried round him (the number allowed to the Tsekia Meng King's eldest son at Ava), but he dare not use a white one. The hall was

Captain McLeod's Journal.

crowded, the officers well dressed after the Burmese fashion, but the rest of the people with Shan jackets and blue trousers.

The Tsóbua is a remarkably fine tall man of about 55, but blind, which I did not know till afterwards, for when speaking to me he looked directly at me. He evidently thinks and acts for himself. He spoke in Shan, but understands Burmese perfectly. He addressed me immediately I was seated, saying that he was truly glad to find the English were willing to establish a friendly intercourse with him; that he had long wished it, and had been disappointed that no officer had ever before visited him, as we had been in the habit of going to Zimmé for a long time; that he had attempted to communicate with us, as I might have heard, but the jealousy of the Zimmé people would not permit it; that they did not wish us at all to have any communication with them; that fear alone had induced them to permit me to pass through their country at present. He asked about the Dakhong road, as he had understood it was intended that I should travel by it. The officer from Zimmé who was with me, related the whole affair perfectly correctly. The Tsóbua said that he had sent to Ava, and with the King's permission intended to make another effort to have the road thrown open; that matters of commerce and of war were distinct, the merchants passing through could do no harm. I made an excuse for the conduct of the Zimmé people, and told him I hoped the Chou Hona, on his return from Bankok, would comply with our wishes and permit all merchants a free passage.

The Commissioner's letter was then read by a Burman writer, and the Tsóbua listened attentively to its contents. He said his wishes were precisely the same as those conveyed in the letter; he was an advocate for a free communication with all the surrounding countries, and would joyfully render every assistance in his power to bring about so desirable an object.

He prayed for a continuation of that peace he had so long enjoyed with the Siamese through our means, though he now regretted to see symptoms of a breach on their part. That he had repeopled many of the deserted towns, and would continue to do so, but he feared the Siamese would not long remain quiet, except we interfered. With respect to my journey to China, he said that he was certain it was useless my attempting it, that the whole of the Kiang Húng district was in a state of anarchy and confusion; the Tsóbua had been dead some months, and his young son had fled to China, and that nothing appeared certain as to who would fill the vacant throne. Maha Noi was a claimant, though nobody knew where he was; and, though Chou Nó Kham had been driven from Kiang Húng, and numbers of his relations and followers put to death, there was no saying who would be the chief, and I ran personal risk, to no purpose, by proceeding there. The Chinese he said never interfered with their traders, for whom, in fact, they had a contempt, and would never believe, that an officer had come up solely for the purpose of obtaining permission for a commercial intercourse between merchants. That he could easily ensure a number of the Chinese, with his own traders visiting us, if they were at liberty only to pass through the territories of Zimmé. Finding I would not give up the point, he said, "Well, you must stay a few days with me, and we will talk about this by-and-bye; now tell me something about your country, &c." This was a signal for general conversation, and the topics discussed were as various and numerous as one could suppose; amongst others, the cause of the Burmese war was brought forward; they were well acquainted with the result, and from some expressions made use of by them, I am confirmed in my opinion that they have no esteem or regard for the Burmans, and it would not be a difficult matter to persuade them to throw off their allegiance to that nation. The Tsóbua's eldest son, a fine young man, occasionally whispered something to his father; he has an impediment in his speech; the second son is an intelligent lad. After paying a very long visit, I took my leave, attended to the door by the two sons, well pleased with my reception. They were much pleased with the presents sent by the Commissioner, especially with the fusils.

As my people were coming out, Paya Wang gave a hint that a present would be acceptable to recall me to his remembrance when absent. In the evening I sent him a fusil, and proposed to call upon him the next day, and also requested he would tell me what other officers I was expected to call upon. His reply was, that he could and would settle everything I required, so what was the necessity for my visiting any others; however, he would not say anything, as he might be considered envious..

23rd February.—The Tsóbua sent me a present of some delicious oranges, which came from a village three days' journey to the northward. I have had many applications today from people wishing to inspect my goods and to know their prices; they fancy that I am the head merchant of the party. They have no idea of my not having some goods for sale myself, as all their chiefs trade, from the Tsóbua downward. Some of the Chinese merchants even reside within the palace inclosure.

The whole of my day is taken up by visitors. The Tsóbua's connections brought me trays of various cooked dishes, fruit, rice, &c., &c., in the morning, as presents, and many other persons took advantage of their coming to satisfy their curiosity. On these occasions the women, whatever their rank may be, carry the trays.

Many Chinese merchants have been with me, hearing of the object of my mission, making inquiries about the Moulmein trade, and taking notes of the prices of different articles. The road *viâ* Zimmé not being open, is the only bar to numbers coming down. They all appear so eager that I feel obliged to recommend that some should first visit the place to satisfy themselves of the advantage of trading with us before they bring down their hundreds of mules of which they speak.

In

Captain McLeod's Journal.

In the evening I paid Paya Wang a visit; he resides immediately at the back of the Tsóbua's palace in a good large wooden house, built like those of the chiefs of Zimmé, but not kept particularly clean. He said it was necessary, that I should attend their consultation about my proceeding to China, or if I would visit the Tsóbua the next day, he had no doubt the point would be then decided. He informed me, that the Burmese Tseitké, who has been withdrawn lately, is at Moné, or Monáe, as the Shans call it; that the Meng myat bó, or Bó wun meng thá, as he is also called, a half brother of the King of Ava, who has the government of all the Shan States tributary to Ava, has his Yúm dau or royal court at that place, where a Burmese Tseitké is stationed; that all the Shan States are obliged to report to and receive orders from him, and that intelligence of my arrival and the object of my mission has already been sent to him.

I here met a respectable Chinese merchant named La Wang, who resides in the house; he has 150 mules, but has sent them with loads of cotton to Kien Toung or Muang Ku, and has remained behind to prepare a second load for them. We had a great deal of conversation about the Moulmein market, and the information given him by me appeared very satisfactory. The trade of this place is chiefly in the hands of the Chinese. He does not hold out much hopes of my being admitted into China. He thinks that if I had gone up as a merchant I might, perhaps, have succeeded.

24th February.—Waited on the Tsóbua, and was received as before; there was less formality observed than on that occasion; he again strongly advised me not to go to Kiang Húng. I proposed to endeavour to penetrate into China *viâ* Muang Lém, a province distant eight or ten days' journey in a north-westerly direction from this, and if I failed, to go to Ava *viâ* Thaini. He assured me that greater difficulties and dangers are to be met with on this road; that the Chinese even dared not travel by it; that the country between this and Muang Lém is inhabited by wild, independent tribes of Ka Kúis, who, like the Lawas (gaung piat Lawas, head-cutting-off Lawas) to the eastward of it and on the road to Thainí effectually prevent all communication; that the officers from Ava even dare not now go from Thainí to Muang Lém on business, however urgent. However, after some desultory conversation, and my telling him I was sure he had it in his power to ensure my reception at Kiang Húng, and civil treatment there even in its present disturbed state, he said, that as I was evidently bent on proceeding, he would not offer any further objections, but do all he can to ensure me a proper welcome there.

My visit was prolonged for nearly four hours. The position in which I was seated not being the most comfortable, which his son observing, whispered to his father; when pillows were ordered to be brought in for me. None of the officers are permitted to use these in the Tsòbua's presence. Refreshments were brought in for myself and party in much better style than at Zimmé, on silver trays, with a gold drinking cup for myself.

Though Paya Wang had given our merchants permission to sell, yet no person would purchase from them, requiring an official order before they ventured to do so. It is also necessary to have a Pue tsa or appraiser to value the uncoined silver current here, which being the same as in Ava, our unpractised traders are at the mercy of every rogue. As the presents made by the traders were not sufficient, I had before directed them to take suitable ones to the Tsóbua and Paya Wang, which they have done. To-day, on my application, an order was issued for the merchants of the place to consider the British merchants as their own countrymen at all times, and to trade with them. This is a great bazar day, one is held every five days, though there is a small bazar every day; on the present occasion the people from the neighbouring villages assemble in town to dispose of their goods.

The building I am residing in is close to the place where the bazar is held. The crowd was very great the whole day, Chinese, Shans, Burmans, Lawas, Ka Kúis, and Ka Kúas, all mixed together. They erect temporary stalls, with a cloth covering to protect them from the sun. Everything is procurable that the place affords. Rice, curries, meats, &c., are cooked and sold, and of which everybody appears to partake.

The Ka Kúis are found on the hills to the southward and eastward of this, and also to the northward towards Muang Lém; they reside in villages, but migrate from one place to another every three or four years. They cultivate grain, tobacco, chillies, &c., and cotton, which the Chinese obtain chiefly from them. They are said to pay no tax, but make such presents of mats, cloths, &c., to the chiefs, and also supply them with rice when they travel, as well as carry their baggage.

They are a short, ugly, and dirty race, much given to ardent spirits, like all the hill tribes. Their dress is much like that of the Shans, the head-dress of the women being ornamented with beads and strips of bamboo, of which the ornaments worn by them round their necks and in their ears are also made.

They have no written language, and have no idea of a Supreme Being or a future state, but worship (nats) spirits. They bury their dead, and all belonging to one family are placed in the same grave. An aperture is left near the head, into which food is daily placed for the use of the corpse.

The defence of the passes in the mountains is entrusted to them; their arms being the crossbow, poisoned arrows, spears, and matchlocks. They are said to number between 40,000 and 50,000. They commit frequent depredations, carrying off cattle and plundering caravans; the late Tsóbua of Kiang Húng found it necessary to send a force to chastise them, since which they have kept within bounds.

Captain M°Leod's Journal.

The Ka Kúas resemble the Ka Kúis generally in their habits and dress, but are considered more civilised. They wear their hair like the Chinese, with a tail. The married women only wear a head-dress, which is only made when they are entitled to adopt it; they will not part with this on any consideration, and it is buried with them at their death. This race is much afflicted with gôitre.

They are found chiefly in the mountains on both banks of the Mé Khong, and on those near the Nam Lém and Nam Té. They reside in villages, consisting of 10 or 15 houses, and cultivate the hills like the Ka Kúis, whose ideas of religion they likewise adopt. Their language resembles the Chinese in sound, but whether derived from it or not I cannot ascertain, but they consider themselves to be a colony from China. They have no written characters; I have not been able to obtain an estimate of their numbers.

The Lawas, who are here considered the aborigines of the country, are located to the eastward and round Muang Niong. The wild and independent tribes of this race are found in the high mountainous country to the northward and westward of Muang Lém; they hold little communication with their neighbours, and never willingly permit a stranger to penetrate into their mountains, and rob the caravans whenever they can. They are said to be 80,000 in number, and their villages large, consisting of 400 or 500 houses, and ruled by independent chiefs, who are frequently at war with each other. The heads of the conquered are much prized, and serve to decorate the warriors' houses. At this season, especially, heads are in requisition for the purpose of propitiating the nats (genii) of the woods and hills, and insuring good crops, and these they obtain by inveigling unsuspicious travellers into an ambuscade, and when secured, the heads are passed from house to house with much ceremony and rejoicing.

Some of this tribe, however, who live on the immediate borders of China near Muang Má, a large town belonging to Muang Lém, are said to give gold, which is found in the hills, in exchange for cattle, betel nut, salt, and silver.

The Mútsa is another tribe, not so large as the others; they are found both to the eastward and westward of this, and are chiefly under this place, Kiang Húng Muang Lém and Kiang Khieng. They dress, as far as I can understand, like the Ka Kúas. They are much addicted to spirits, bury their dead, have no written character, worship nats, and polygamy is only permitted, if the wife is barren. I did not see any of this race. Their language is described as a mixture of Burmese and Chinese, most of the former. Some can, however, write Chinese.

The Red Karengs, on the western bank of the Salween (called Niangs here), and by the Chinese Yang tsa, are said to be a part of a Chinese force who overslept themselves, and were left behind by the main army, when obliged to retreat (where from, nobody can tell me), for want of supplies. This took place in the time of the renowned Maha thata, a wise monarch, who reigned in Pinsaharit (some part of China), and was, in fact, Gaudama, the present Buddh, in one of his numerous but principal transmigrations.

They are said still to have the Chinese seal amongst them. Their forces are estimated here at only 300 musketeers, but they have numbers armed with bows, spears, &c.

25th February.—The Tsóbua sent a party of Burmese actors and musicians to amuse me, with a message that his two sons would call. They accordingly came in state, the elder with four gold chattas, and the younger with two. During the time the players were acting before us, I endeavoured to amuse them by showing them what curiosities I had, which did not amount to many, but everything in my possession was novel to them. The elder prince said he was anxious to learn English, and got a few words by heart. He regrets that their customs are such as to render his visiting Moulmein and Calcutta out of the question. I could only assure him of a welcome at both places, should he ever venture so far. His younger brother is even more intelligent than he is. They remained with me from ten to three.

They informed me that intelligence had been received that morning of the arrival, at Kiang Húng, of a force of 2,000 Chinese. That some of the troops from Kiang Túng had also been sent there.

Paya Wang accompanied the princes, and staid after they went away; he asked me, on his arrival, to send for Puniah Pap, the officer from Zimmé, who accompanied the officer belonging to this place back, and who is the head of the frontier village. I declined doing so in my own name, but told him he was at liberty to do so, if he pleased. This person resides in a small zeat close to me, but has not come near me, though the officer who escorted me from Zimmé lives in the same house as I do. He was sent for by the minister, just before the princes went away. He appears very apprehensive of being punished on his return to Zimmé for having come to this place.

Paya Wang informed me that it is the Tsóbua's wish to have me escorted properly to Kiang Húng, but he is doubtful whether it would be wise. He must pretend, to prevent mischief at Ava, that I had insisted upon going on, and he had unwillingly permitted me to do so. He represents the Burmans as being very jealous, and having, by their conduct, driven the last Tsóbua from his country; that they are very avaricious and greedy at Ava.

In the evening I walked through the town, and round part of the fort. The houses are chiefly like those of Zimmé, though some like those of Kubbó are also to be seen; they are raised on high posts, the sides and floor of split bamboos, and the roof covered with grass; they are separated from each other generally by a bamboo fence, and the enclosures of some are laid out in gardens, but even these are partially overgrown with jungle. The houses themselves are old, and appear as if they had been deserted for a long

Captain McLeod's Journal.

long time, and then reoccupied. There are not above six or seven wooden ones in the place, and those belong to the Tsóbua's family.

I should think that the town contains about 600 houses. The palace stands in the centre of the town; to the southward and westward of it are low hills and swamps; this portion is totally uninhabited. The roads to the north are narrow, and the houses, which are very poor, are widely separated from each other. In some places near the fort walls and some new monasteries, as if the road were not narrow enough, people were digging pits in it, and with the mud making bricks. It is a miserable place, and I could never have fancied an inhabited place, the residence of a Tsóbua, in such a wretched state. The pomegranate and the custard apple are the only fruit trees in the place. Peas, beans, &c., grow here in abundance.

There are some good kyoungs or monasteries, and places of worship, decorated with gilt ornaments, and the walls painted; they are in every way superior to similar buildings at Zimmé. This is partly accounted for by the work having been done by Chinamen. The priests, too, are stricter in the discharge of their religious duties, and do not parade the streets for amusement; the only point in which they are said to be rather lax is eating after mid-day.

The fort stands on high ground at the foot of the range of hills passed by us on the march, and which run to the north and north-east. On the north-western side are fields extending from three to eight miles, bounded by high mountains; on the other sides are swamps and low hills. The wall on the southern face has been lately extended, in consequence of an order from Ava, directing that all Tsóbuas shall surround their capitals with walls 6,000 cubits in circumference. The wall, which is about 15 feet high including the parapet, consists of a double wall of brick and mud of about two feet thick, with the space between them filled up with earth. In many places the weight of the earth during the rains has brought down portions of the wall, and parties of Chinamen are at work repairing these breaches, the inhabitants paying them for their labour. This industrious race furnishes the only artisans in the place. Many of them come in search of work, be it what it may, during the dry season, and after collecting a little money together they return to their homes. But to return to the fort; it has 12 gates, four or five of which are on the eastern face, but it has no bastions or embrasures for cannon. The wall, following the conformation of the ground, presents a most irregular fortification. I did not see a single piece of ordnance in the place. Swamps supply the place of a ditch, and where these do not exist, a cutting has been made in some places to the depth of 30 feet from the foot of the wall through the hilly ground to a level with the swamps, but no water enters it. Finally, its position is not strong, having the hills to the southward equally high, if not higher.

The extent of the Kiang Túng territory is at present considerable, reaching from the Salween to the Combodia river, and embracing many states formerly governed by different Tsóbuas, many of whom with their followers are now at Zimmé and other Siamese places. Of these, the principal are the Tsóbuas of Muang Niong, Kiang Then or Tsen, Muang Lem, Muang Lap, &c. To the eastward it is bounded by the Mé Khong and the territory of the Kiang Khieng Tsóbua; to the north-east, by the Kiang Húng territories; to the northward, by Muang Lem; to the westward, by the Salween; to the south-west, by some towns belonging to Moné; and to the southward, by Zimmé, &c. The town stands in 21° 17′ 48″ north latitude, and about 99° 40′ east longitude. Water boiled here at 208½ Fahrenheit.

The average range of the thermometer during my stay here, was at—

	In the House.	In the Sun.
6 A.M.	42°	—
9 „	64°	80°
12 „	74°	98°
3 P.M.	82°	110°
6 „	76°	—

I always find a fire at night necessary.

Kiang Túng is a great thoroughfare for the Chinese, who pass through it and spread themselves over its territories, or proceed to Moné and other Shan states on the western bank of the Salween.

They import the same articles as they do to Zimmé, with the addition of woollen cloths, carpets, thick cotton cloth, warm and fur jackets, and salt. For this last article, the inhabitants are entirely dependent on them.

Their exports consist chiefly of cotton and some tea from this and other districts to the north. Many of the traders who do not proceed further than this, are well known here, and have agents to prepare cotton for them before they arrive; this is sent off, the head merchant remaining behind to make his arrangements for a second supply, and his mules return from China bringing nothing but salt. Even some of those who go to Moné make two trips in the season. Those, however, who only come from the towns on the border of China, make three or four trips.

The merchants, during the first or second journey, frequently sell their cotton on the road, but never during the last trip; some must be taken home to be worked up during the monsoon, when all communication with these states is cut off. They likewise export to

Captain M^cLeod's Journal.

the frontier towns of China coarse cloth, which they purchase from the Ka Kúis and other hill tribes; this is entirely carried by coolies.

The men I have met here, come chiefly from Kien Toung, Shué Yunan, Mitú, Yunan, Puer, Esmok, and a few from Talé. La Wang gave me the accompanying list, as the prices of the articles in China, and what they are sold for here, though, in fact, they exchange their goods for cotton, &c.

IMPORTS.	Purchase Price in China.	Vending Price here.
	Ticals.	
Silk, 5 sorts, from 32 to 40 cubits, each piece	25 to 50	25 to 50
„ Raw, each bundle, weighing 2 viss	25	27
Iron Pots, weighing 1 viss each	¾	1½
Ditto - - ditto 2 ditto	1½	3
Quicksilver - ditto, 1 viss	5	5
Red Lead, 1 parcel of 90 Burmese tical	2	3 to 4
Carpets or Rugs, large, each	2½	4½
Ditto - - - small, ditto	1½	2¾
Salt, 100 viss	5	100
Flowered tinsel cloth, per yard	2½	4½
	Annas.	*Annas.*
Walnuts, per 100	6	8
	Ticals.	
Honey, 36 viss	10	1¾ per viss
Straw hats, each	2½ to 4	4 to 6
Fur jackets	12 to 150	16 to 200

EXPORTS.	Quantity.	Price.
Tea - - - - - - - - purchased at	1 viss	1¼

Birds' wings and feathers - - - - - -	per 100	35
Cotton - - - - - - - - - - -	„ viss	40 to 60

The viss quoted is the Shan viss, except when stated to the contrary. It is 20 or 25 per cent. less than the Burmese viss. The silver current here is the same as at Ava, and also the Chinese silver which is better, some being nearly pure.

The fur of the fue-chu is of a grey colour, and is considered the best; a jacket of this costs from 150 to 200 ticals. The animal from which the fur is obtained is a little larger than a rat, and lives on fruit. They are very scarce.

The next in estimation is that of the huli, both brown and white; the animal is the size of a large dog. It requires three skins to make a jacket, its price about 50 or 80 ticals; and the last sort is of sheepskin, with or without silk, from 12 to 16 ticals.

The Chinese maintain that the Ka Kúas and Ka Kúis came originally from China, from the Yuingian hills, called by the Shans Wingian, in the direction of Talé, and the Mútsa from Wi-nien-fú.

It is stated here that the last war between China and Ava originated in a quarrel amongst some boys, which ended in an affray, in which a Chinaman lost his life; the Chinese would have life for life, the Burmans or Shans declined to satisfy them in that manner, but offered the price of blood, which was refused by the Chinese, and an army was in consequence sent towards Ava by them. The peace was brought about by the intrigues of the commanders on both sides, by which the kings of each nation considered either that he had conquered the other, or that the other acknowledged his superiority, and in submission sent tributary offerings.

The duty collected on the traders from China to Moné, including presents, &c., is 2½ ticals on each mule, and back to China, about two more.

Paya-Wang brought me a message from the Tsóbua, requesting me to return here from Kiang Húng, as he was certain I should not be able to get any further. I told him that my

Captain McLeod's Journal.

my object was to open a communication with as many of the surrounding States as I could, and if I failed to penetrate into China or to Ava, I wished to return by the road on the eastern bank of the Mé Khóng, either that travelled by the Chinese usually, or the other one (which he assured me did not exist), as I must myself see the practicability of our merchants frequenting it, when I should be better able to discuss the matter with the Chou Hona at Zimmé. He told me they wished me to remain until they hear from Moné, but as I am in such a hurry, the Tsóbua has ordered only a petty officer to accompany me, and hopes I will not be offended.

It is fixed that I shall take leave of the Tsóbua to-morrow, and start in the evening.

The men here are not tall, generally rather dark, with broad faces, and small noses, though not flat; the chiefs, however, are fine tall men, fair and appear a distinct race altogether, one might almost say Chinese. They dress in the glazed dark blue Shan jackets, and wide blue trowsers; the Chinese jacket, both of cloth and fur, is common amongst them. They preserve their hair long, and wear a turban like the Burmans, and in the day-time when going about, a Chinese hat. The only ornament worn by the chiefs is a gold bangle. The betel utensils are here of gold or silver, according to the person's rank, carried in a Shan box as in Burmah. They do not chew the betel leaf and areca nut to the same excess as the Siamese, perhaps because it is not a produce of the country; they have, nevertheless, succeeded pretty well in getting black teeth. There is not an areca nut tree in the whole territory, and they are entirely dependent upon the Zimmé and Labong people for it. The price is here four ticals for a bundle of nuts, which contains 288 nuts cut up, and strung on strips of the bark of a certain jungle tree. A cocoa-nut sells for half a tical; it is also brought from the lower provinces.

The women are looked upon here in an inferior light to what they are in Burmah. Many of those who brought trays on their heads to me were the daughters of the first officers of the place, and were hardly noticed by the men. They are rather a short race, not fair, and broad featured; they wear a petticoat like the Siamese Shans, both in texture and make; a jacket is a part of their dress, and on their heads the young women carry a loosely-folded cotton handkerchief, having the appearance of a turban; and the elder women, when moving about in the sun, a small neat hat, made of bamboos delicately cut, which they place on the knot of hair at the back of their head. Amongst those who travel leggings are common.

There are a good many Burmans here; those belonging to the Ava Government at present consist but of six men. The others are traders from Moné and Ava, whence they bring English piece-goods, which are in demand here.

Our traders having found a good market, and hearing that the road to Kiang Húng runs over high mountains which afford no forage for their elephants, and of the disturbed state of the province, have determined on remaining.

The following list will show how profitable they find the trade here:—

	Price at Moulmein.	Vending Price here.
	Rs.	*Tical.*
White Book Muslin, a piece	3	9
Cotton Handkerchief, per 100, from	22 to 40	30 to 50
Red Cotton Stuff, per piece	15	35
Long Cloth, 80 cubits	13	35
Muslin, 25 cubits	7½	15
Silk Handkerchiefs, a piece of 7	9	15
Pulicat Handkerchief, 1 piece	3	3
Coarse Woollen Cloth for covering, 5 yards	5	9
Common Lappet	4	6
Carpets	4	10

The prices given are the Moulmein retail prices, and in rupees, and the Kiang Túng wholesale price, and in Yuet ní silver.

Several of the merchants of the place have at various times visited Moulmein, but *viâ* Rangoon. I made inquiries about the road through the Red Kareng country, and along the western bank of the Salween, which would be a much shorter way to bring up goods than the other. By that road there would be no necessity to pass through Moné, but through Mok Maí, Kaing Kham, and Kaing-toung; and from the Salween to this place is about six men's stages. The Burmans object to this road, from fear of the Red Karengs seizing and selling them, but no doubt Dr. Richardson's mission will remedy this evil.

The Salween is called by the Shans, both tributary to Ava and Siam, Mé Khóng, and by the Chinese Li Kiang, or Lun Kiang and Kin Lun Kiang. I could not gain any information regarding its source; some say it issues from the Talé lake, others from a tank on the top of a hill, one day's journey north-east of Talé; others again that its source is further to the northward, while some assert that it is a branch of the Mê Khong or Combodia River, called by the Chinese Ku Lun Kiang. This last notion must arise

Captain McLeod's Journal.

from the similarity of the two names; of the conflicting statements I incline to that which places it far beyond Talé.

This river, though its bed is rocky throughout, is reported to be navigable to the falls near Moulmein. A survey of it, as far as it is practicable to ascend it, is a desideratum. From its course it is of the utmost importance to us; it flows through a great portion of the country, partially or wholly subject to China, to Ava, to Siam, as well as the territories of the Red Karengs, to our possessions on the coast, and, if navigable, at once lays open the trade of those countries to us by a more direct and easy route. But we are unfortunately ignorant of its capabilities, no person having, I believe, ascended it further than 70 or 80 miles from the coast.

The Shans not navigating it is no proof of its being unavailable for this purpose; it passes no town of theirs, and unlike the Burmans, they appear to place no value on water-communication.

Should it be found navigable, even to the ferry on the road between Moné and Kiang Túng, a mart might be formed there for the sale and exchange of British piece goods and Chinese produce. Judging from the present demand for articles of British manufacture, and the high prices realised, a flourishing trade might be expected to spring up, especially when the facilities and cheapness of water-carriage are brought to bear on it.

We might expect to derive some advantage from the tea found in the neighbouring districts should it prove good. The plant, I conclude, is the same as that of China, as the leaf resembles the description of that given in the "Asiatic Journal," and the fact of the Chinese themselves taking away considerable quantities of it. The process of preparing the leaf for use by the Shans is rude and simple; it consists of merely subjecting the leaf to a little artificial heat, and then to exposure in the sun. This does not produce a fair specimen of tea for English tea drinkers to pass an opinion on. However, if desirable, I dare say that no great objection would exist to forming depôts for its proper preparation.

The Shans here call the inhabitants of the different States around them as follows:—They call themselves, Khén; the inhabitants of China, Hau; those of Ava, Mán; those of Kiang Húng, Lu; those of Muang Lém, Lém; those of Zimmé, Tai Nium; those of Siam, Chou Tai, also Tai Láo, and Tai Na; those of Cochin China, Kió; the Northern Shans they call Phóng and Tai Niu; the Mioné Shans, Khum.

Kiang Húng is also called Sip Song Pana (the same name is made use o by the inhabitants of that place), or 12 panas or cities.

Kiang Túng is said originally to have comprised 32 towns, Sam Sip Song Muang; thence Gongthounze Nhit Myo, 32 cities of the Gong, the name given to the inhabitants by the Burmans, and the place itself Kaing Toung. The Burmans invariably change the word Muang, or city, to Maing, and Kiang to Kaing. The Pale name for this province is Khémarata.

27th February.—I was to have seen the Tsóbua to day, and then to have started, but he sent me a message, begging I would put off my visit until to-morrow, as he is unwell.

Some Burmans arrived to-day from Muang Lém (called by them Maing lengyi), where they have been from Ava to demand the tribute due, which the authorities have of late been remiss in forwarding, and are supposed to be somewhat discontented, and disposed to discontinue offering presents of submission. That state is tributary both to China and to Ava; it pays, annually, tribute to the former, and triennially to the latter. Kiang Má is a state to the north-west, similarly subjected.

Though the authorities here assure me to the contrary, I hear that there is a road from Muang Lém into China, by which its communication with the province of Yunan is kept up; that some Chinese do go there and carry away both cotton and tea. The states in that direction report to Shun lin fú or Shun li fú. It is said to be nine days' journey to the Mé Khong River from Muang Lém, and four more to Muang Lá. There is a direct road from this into China due north, through the Kiang Húng territory, though not the city itself, but within two marches of it; 10 days to the Ka Kúi Hills on the borders, and near the Mé Khong, where the Kiang Húng territories end, and those of the Chinese Shans commence, and five days more to Muang Lá. It is necessary, travelling by this road, to hire a strong guard to escort one from Muang Wong; the Ka Kús, who inhabit the hills, never failing to rob travellers if not properly guarded.

The tribute paid to Ava by Kiang Túng is annual, consisting of the usual gold and silver flowers, cups, ponies, saddle, &c.

The revenue of the Tsóbua is derived from his own fields and trade, and the presents made by the Myotsas once a year and by the people generally; nothing in the place is taxed. Twenty per cent. is levied on all suits decided respecting money, which goes to the officers, and the fines in criminal cases partly to the Tsóbua. He is expected to furnish 5,000 troops to Ava, if called upon, during war. None from this were employed against us during the Burmese War; they were exempted on the plea of watching the Siamese. The whole force of the territory, including the hill tribes, some of whom are armed with matchlocks, are said to amount to 30,000. The matchlocks are made by the Lawas; the iron is procured amongst the hills, but their chief supply is from China.

The same system is in force here as in Ava, for recruiting and keeping up troops.

The Tsóbua is said to be a bold, intrepid man, and but for his blindness, the people of Zimmé would find him a troublesome neighbour. He is much beloved by his subjects. Having lost his wife some months ago, he has lately married the daughter of the Kiang Khúng Tsóbua, a lady who has arrived at the years of discretion.

The

Captain McLeod's Journal.

The same system of oppression is not pursued here as in Ava; I observed the officers of Government speak kindly and frequently to the people about them and in the streets; and the same obsequiousness is not met with. All the chiefs and officers are Shans of this province.

The Burmese code of law is in force here; justice is equitably administered, and though a few abuses exist, yet on the whole, the people have good grounds to rejoice at the mild and paternal Government exercised over them.

28th February.—At about 12 to-day I was invited to the palace. The Tsóbua is still ailing. He again spoke of the useless journey I was about to undertake, as I could not settle anything, there being no chief or head at Kiang Húng; he had, however, given orders for me to be escorted, so as at the same time not to give offence at Ava. He assured me of the great respect and esteem he had for the British character, and of his sincere desire to be on the most friendly terms with us. He urged me to use my best endeavours to have the road through Zimmé thrown open, and, failing there, to send to Bankok, for the king would not refuse us anything. I assured him that he could not possibly be more anxious than we were on this point, and that, of course, we should lose no proper opportunity of bringing it about. He complained of the reception his officer had met with at Zimmé, and the tone of the letter written to him, all of which he attributed to the Chou-Hona. He said that he was aware the Zimmé officer was present, but he did not wish to conceal his sentiments; that they had refused to hold any communication with him for fear of his relations escaping or intriguing with him; that such was not his aim; he did not wish to cause a war, but he was strong, and, had he a desire to make the attempt to release his relatives he would be backed by troops from Ava; he, however, preferred peace and quietness, and to improve his country by trade. We pressed the Siamese officer to repeat all he has heard, and to satisfy his chiefs that we are both only desirous to trade with them and through their country. The Tsóbua requested I would return by this road as he did not wish to encumber me with the presents he intended making, and that he wishes to send an officer and some merchants back with me. I repeated what I had before said to Paya Wang, but promised to send my writer back for the letters, &c., from Kiang Húng; whether I went forward or returned, as I should leave my elephants here, and that person would return with them to Moulmein. That with respect to the merchants, I thought, as nothing had been finally settled about the road with the authorities at Zimmé, they might take umbrage at any of them accompanying me. I knew that they would not dare to send an officer without obtaining permission from Ava, so I said nothing about him.

He promised to give our traders every encouragement and facility for trading; that they might go where they pleased, and if they wanted cattle or anything, and did not wish to go out to the villages, he would order the owners to bring them in.

That no duty, either export or import, should be levied on our merchants, and that the only things he objected to be made a traffic of and taken out of the country were men and women. I explained to him our abhorrence of this trade. He expressed a hope that I would repeat my visit, and that any officer visiting him should be at liberty to go where he pleased through his territories.

As he had asked me frequently if there was anything that I wished for, for nothing should be refused me, I begged of him to-day to procure for me a history of the province, which I am anxious to possess. He assured me that there is only one copy in the place, which he could not, therefore, part with; but he would have extracts made from it and deliver them to the person I sent back from Kiang Húng.

He was much pleased with a present I made him of a handsome large musical box. I was induced to give this in return for the great attention and kindness I have received. The Tsóbua felt everything about the box, and had the works explained to him, as well as they could be to a blind man, and it is surprising how quickly he appeared to comprehend its mechanism. He deplored his inability to see any of the handsome presents I had made them, but he was thankful that he was not deprived of the blessing of hearing, and could enjoy music, of which he was very fond.

He regretted that the deprivation of sight prevented his looking at an English officer. He told me that his blindness first commenced in the beginning of 1824, at Ava. He had been under the treatment of many Chinese doctors; one had couched one eye, and he saw distinctly with it for 20 days, when he consented to have the other eye operated upon; but, instead of finding the same relief as on the former occasion, he was seized with a violent pain in his head, became sick, and totally blind. He entreated me to inquire if he could be cured, and, if so, to ask the Commissioner to send a doctor up, whom he would reward handsomely.

I stayed at the palace until it was too late to start. When about to take my leave, the Tsóbua, after many professions of regard and esteem, requested I would not consider the Kiang Túng people like those of Zimmé; that they are sincere in their professions, whereas he has heard that the others are so outwardly, but not in their hearts.

In the evening a number of Chinese came to wish me a pleasant journey.

I gave the Zimmé officer, who returns from this, a note to the authorities at that place, taking the blame of his visiting Kiang Túng on myself, and requesting that he might be held blameless. I also made him a liberal present.

I have said little about the customs, manners, &c., of the people, for they resemble those of the Burmans in all respects. The language is the same as that spoken and written at Zimmé, with some slight difference in the pronunciation.

Captain McLeod's Journal.

From Kiang Túng to Kiang Húng.

1st March.—From Kiang Túng to Ban Pa Khan. Direction, N. 10 E. Estimated Distance, 6 miles. Time, 1 h. 49 m.

A Shan officer and 10 men came to escort me; I left my elephants at Kiang Túng as, in the first place, they were totally unfit for the journey; and, in the next, I hoped to dispose of them; my baggage is carried by ponies, which I had purchased at different times.

The first part of the journey to-day was over fields, and then, with the exception of in the immediate neighbourhood of two villages, we passed over grassy plains with clumps of small bamboos, and a few fine banian trees here and there.

On the way we crossed the Mé Lap, at the village of Ban Phung, over a good bridge. This stream is about 20 feet broad and two deep, flowing from the hills to the south-east and going to the northward through the plains, watering several villages which are seen around.

1.49. We halted at Ban Pa Khan, though anxious to have gone on further, but the officer with me assured me there was no water to be found for miles after commencing the ascent of the hills, to which we are now close. The village contains about 50 houses, with some fields in its vicinity; but is, like all those in this neighbourhood, and the town itself, destitute of trees, a few small custard apple and pomegranate being the only ones seen about the place; the produce of their gardens are peas, radishes, tobacco, &c.

The plains traversed to-day afford pasture to numerous herds of fine black cattle; we saw likewise some ponies grazing; those bred in this part of the country are not fine ones, and are chiefly used for carrying loads; their price varies from 35 to 50 ticals.

We met a party of Chinese, who had come from their country for the sole purpose of being employed as coolies for the season; they were making bricks, for which they receive 3½ ticals per 1,000, the villagers assisting to make the kilns, and supplying the wood to burn them.

2nd March.—From Ban Pa Khan to Ban Tapin. Direction, N. 35 E. Estimated Distance, 18 miles. Time, 6 h. 2 m.

We started at six, and had a most laborious day's march over high hills, but the road very good and shady; the hills are covered with forest trees and with little or no brush-wood. Some of the coolies were not in till six in the evening.

0.35m. On starting we proceeded along the valley to the foot of the range, and commenced the
1.38. ascent, which was very steep, and reached a zeat, considered as one bullock's stage. We continued to ascend, and having passed over the highest point of this portion of the hills,
3.16. reached a second zeat, in very good order, situated on the sloping shoulder of two hills, near some fine banian trees. From the first zeat to this is estimated another bullock's march.

We ascended again from the second zeat, and passed the only pine forest seen to-day on the top of the highest hill in the second range; the trees remarkably fine and large.

4.50. After this we descended considerably, but once more ascended to the top of a high hill, where we found another zeat.

From this third zeat the regular descent commenced; it was very steep in some places, and continued so to the Nam Lué, which we crossed in the ferry-boat, and halted at the village of Tipan, consisting of three Lawa houses. In the neighbourhood there are three or four small Lawa villages, the inhabitants of which, having heard of my intended arrival, had assembled to have a look at me.

During the journey, we easily obtained water at the two first zeats, from springs close at hand; at the last one, however, there was some difficulty, the spring being a considerable way down the side of the hill.

We met with many pathways between the first and second zeats, leading to villages and to cultivated spots on the side of the hills. From some parts of the road distant ranges of hills were visible I counted five, each higher than the other; all appeared to be thickly wooded. There are many Lawa villages to be found on them. We met many of the tribe carrying cloth from the town to dye of a red colour, an art in which they are said to excel. Some we found employed felling trees in the pine forest, and sawing them into planks, while others were carrying away the chips to sell in the bazars. The duty of keeping in order the zeats which we passed falls to them.

The Nam Lué is about 150 feet broad and four feet deep, with a rocky bed; it flows rapidly past in a north-easterly direction, and joins the Mé Lém.

A person is stationed here to collect at the rate of about 2 annas on every mule crossing the ferry; in lieu of money, trifling articles are given, chiefly salt, which is in great demand. This man stated that only 2,000 mules had passed this year.

3rd March.—From Ban Tapin to Muang Ma or Ban Kap.—Direction, N. 45 E. Estimated Distance, 16 miles. Time, 5 h. 7 m.

15m. Began our march by passing over a low hill, and then crossing Mé Lá Kung, a stream of about 10 feet wide, and after going along its bank for a short distance, we commenced
50. to ascend the range of mountains at the foot of which the Nam Lué flows. Having
1.45. attained the summit, we proceeded along the ridge for some distance, and then commenced

Captain McLeod's Journal.

menced to descend, and reached a plain (a good spot for encamping on), with a small stream, the Mé Foi, flowing through it.

From this the road follows the course of the stream at the foot of the hills, and occasionally over low hills which had been partially cleared for cultivation. We then reached another but larger plain (bounded on two sides by low hills) with some fields and gardens, and a few deserted houses, which I conclude had been occupied temporarily during the harvest season. In the gardens there was some fine tobacco and indigo growing, and in the fields a number of cattle were grazing. 3.41.

At the further extremity of the plain we came upon the Mé Má, a stream of 50 feet wide, flowing from the westward. It here receives the waters of the Mé Foi, and takes a turn to the northward. The hills now receded, diminishing in height to the northward, and the road runs through an open country. Having passed within sight of five or six villages, we crossed the Mé Má, halted at the village of Ban-Kap, consisting of about 40 houses. 5.7.

On our march along the top of the hills, we came upon some pathways leading to the Lawa villages to the westward, and after being an hour and a half on the journey, we reached the road branching off to Kiang Khieng and Muang Niong. So far the road had been considerably widened lately for the convenience of the Tsóbua's bride, nevertheless it continued tolerably wide and good throughout.

This place is the residence of the Muang Má Myotsa, a chief for whose maintenance it is assigned. The villages situated in the valley are included in the Muang Mâ district and belong to the same person; they are about 20, I am told, and that the number of houses in each varies from 15 to 30. The valley itself is rich, being watered by the Mé Má, and is nearly all under cultivation. The rice grown here is particularly white. The stream derives its name from a legend which asserts that it issues from the mouth of a horse.

The chief, a fine-looking old man, clad half in the Shan and half in the Chinese costume, which give him a strong resemblance to a Chinaman, came and called on me, bringing with him a plentiful supply of rice, &c., for myself and party; he, like the other subjects of the Tsóbua, was glad to see me.

There is a road from this to Muang Móng, running over hills which are not high; by it the Zimmé Shans formerly advanced to this place, and the chief was amongst those taken; he made his escape from Zimmé, leaving many of his family behind.

The houses here are far superior to those in Kiang Tûng; of better materials, larger, cleaner, and with verandahs; they are surrounded by nice gardens, in which an abundance of tobacco, radishes, peas, indigo, and safflower grow. The place possesses a small gilt pagoda, and a good monastery.

There are a good many artificial tanks supplied with water by the mountain streams on their passage to the Mé Má; these are used as preserves for fish, which swarm in them.

4th March.—From Ban Kap or Muang Má to Talau. Direction, N. 50 E. Estimated Distance, 14 miles. Time, 4 h. 36 m.

We continued to proceed along the valley of the Mê Má and passed several villages all watered by small streams from the hills; we then passed over a range of very low hills which close the valley to the northward, and crossed the Nam Mé, which is the boundary between the Muang Má and Muang La districts, in a few minutes after. 1.32.

From this the road passed over low hills and through narrow valleys (the former gradually diminishing in height), and finally we reached the valley and town of Muang La. The valley is about six miles in length and two in breadth, and the town contains about 35 houses, and stands on the banks of the Me Má. There are not so many villages in this valley as in the one we halted in yesterday. The banian tree is frequently seen and of some size, but their roots not deep, consequently many had been blown down. 3.40.

The coolies we brought from town were changed at Muang Má, and those again from that place were relieved here, which detained us a little.

We continued our march along the valley and crossed the Mé Má at a narrow gorge, which encloses the valley of Muang La, and beyond which is that in which Talau stands, and reached the town itself and put up in a large zeat.

Close to the place where we crossed the Mé Má, a pagoda is erected in a conspicuous spot on the side of a hill, to mark the boundary between the Kiang Túng and Kiang Húng territories.

This place and the villages around it, of which there are a good many, are similarly situated to those before passed; the town stands on the right bank of the Mé Lam, a large stream of from 150 to 320 feet, flowing into the Mé Khong. The Mé Má likewise waters the fields to the eastward of the town, and there joins the Mé Lam a few miles below the place. The town contains about 200 houses, and is the seat of one of the petty Tsóbuas, one of the Sip tson panas (12 panas or cities) under Kiang Húng.

The houses are well-built, chiefly of bamboos, and raised on good posts; they stand close together, some few with a slight bamboo paling round them, but without any garden or out-houses.

The road near the palace is clean and good; the Tsóbua's residence is built of wood and thatched like the other houses; it is surrounded by a brick-and-mud wall. The pitch of the roof of all the houses here is extraordinarily high.

Captain McLeod's Journal.

There is here a monastery and brick temple. This last is very handsomely gilt, and ornamented in the Chinese style. The roof is tiled, but the tiles are so much vitrified that, at a distance, the roof appears to be gilt.

The chief of this town is the Prime Minister at Kiang Húng, where he now is. His son called on me and said he was certain that his father would be glad to see me. Some of his near relations, too, have been carried to Zimmé, where they now are. My visitor was very fair, and followed the former fashion of the country, in having merely one ear bored; few, however, adhere to the custom now.

The dress of the people here is a mixture of Chinese, Shan, and Burmese costumes; their jackets made after the fashion of the former, the trowsers of the second, and turbans of the last. The women dress precisely the same as those of Kiang Túng.

On our way to-day, at no distance from the village of Ban-Kap, we found a young Chinaman under a tree, suffering from fever; he had been left there by his companions six days before, with a small fire and a little rice. He was suffering much pain internally, and was so weak, that though his head was below the level of his body, yet he could not move to put himself in a more easy posture. The cold alone was likely to have caused death to a sick person, the thermometer generally in the morning being about 40 Fahr.; he had been passed by hundreds of his countrymen, and seen by the villagers, yet none assisted him. On inquiry, I found that it is their custom thus to leave behind those who are sick or unable to travel, sometimes erecting a shed over them. I suspect, however, this barbarous act is generally had recourse to by those who are in no way connected with the sufferers, to get possession of their property. There was no excuse for leaving the person we saw as they had done; he said that he and his party (two others) belonged to Esmok or Muang Lá, and there was no urgent necessity for their hurrying on, as the rains were not near. Being within a few hundred yards of the village, and ascertaining that a doctor resided in it, I sent for him; and though he objected at first to undertake even to visit the sick man, he agreed to erect a shed just outside the village, to remove the person there, to feed and attend him, for a trifling consideration. They have some superstition against admitting men so left into their villages. All that the villagers or passengers do is to bury the corpse, if too near the place, or to set fire to the shed under which it may be.

Both yesterday and to-day we passed a great number of Chinese, proceeding to and returning from Kiang Túng. The plains near the villages are seen dotted over with white patches (all their cotton being packed in coarse white cloth), marking their encamping ground, and their mules grazing in all directions. The men also wander about, leaving their goods under the guardianship of fierce Tartar dogs, who well perform the duty entrusted to them.

They do not commence their march until about seven in the morning, and travel till about 11, when they halt until three in the evening, and proceed again till five, or near dark. The mules are let loose on all these occasions, and never wander to any distance from the ground on which their loads are deposited. The voices of their masters are so well known to them, that they are seen running towards them, from any distance, when called. They occasionally get a little paddy, beyond what they pick up themselves; on the march, they regularly follow each other in strings, all muzzled, to prevent their feeding on the road. Some of these animals are very fine, and valued at 200 ticals, and some again as low as 30 ticals. One active man has the charge of five mules, and none but a Chinaman, who has been brought up to it from his youth, can manage these animals. The saddles used are made of light wood, with a thick padding under them, and fitted to the shape of the mule's sides, but not touching the back; in front and at the back is a piece of wood to prevent the loads slipping. The saddle is not bound to the animal by girths, but has only a breast-band to prevent its falling back in ascending the hills, and a breeching behind to hinder it running forward. The loads are tightly bound to a narrow wooden horse with four legs, made to fit between the pieces of wood in front and at the back of the saddle, and from which they are never removed during the whole journey. One man takes hold of the legs on each side, and thus either loads or unloads the animals most expeditiously.

The men I have met with are a fine, stout, and rather tall race, well limbed, with the Tartar countenance, and fair. They always meet me with civility, and an almost invariable question is, whether I am a Mussulman, which most of them are.

Between Muang La and Talau, we saw many water wheels along the banks of the Mé Má, for the purpose of throwing up water for the irrigation of the fields. They are on the principle of the Persian wheel, large hollow bamboos being substituted for buckets or chatties.

In the Muang Má chief's house yesterday, and in some of the villages to-day, I met with a proof of these people having some knowledge of hydraulics, for the water was brought up to the verandah of the houses from the ground below through upright bamboos, serving as pipes.

5th March.—From Talau to Muang Phang. Direction, N. 60 E. Estimated Distance, 14 miles. Time, 4 hrs. 15 min.

Passed through the skirts of the town, where a bazar was held, and crossed the Mé Lam by the ferry. It is here about 12 feet deep, but fordable at a little distance above, where the Chinese cross. Two annas are taken here also for every mule passing through the district.

We

Captain McLeod's Journal.

We passed through an old double-walled mud fort, nearly opposite the town, on the bank of the river; and went over plains with some villages, and entered a thin jungle, and here the Talau district ends. Having passed through the district and town of Muang Lai, and leaving it to our right, with the fields and villages belonging to it, we proceeded through a thin jungle with high trees, and over low hilly ground, and reached some old fields and a good deal of open ground on the bank of the Nam Tsan, a stream of about 10 feet wide flowing to the southward and eastward. From this the road ran over low undulating hilly ground, thickly wooded; we next reached another plain, in which the village of Na Ngoi is situated, and is the boundary, on this side, of the Muang Lai district. From this, having passed over high and open ground with plains to the north-west and the village of Ban Khun, a good-sized place, reached the Nam Phang and halted at Muang Phang, situated, like the other principal places, in a valley with some villages round it. The hills surrounding it are higher than those lately seen. The road, both yesterday and to-day, has been very good.

9m.
42.
56.
2.15.
3.34.
4.8.
4.39.

This town contains about 60 houses, and, like most others, without a tree in it; there are, however, some tamarind trees a short distance off. This place and Muang Lai belong to the Kiang Húng Tsóbua, and are assigned to some public officer at the head of a department in his household.

Numbers of Chinese passed with cotton and salt.

6th March.—From Muang Phang to Muang Hám. Direction { N. 65 E. / N. 30 E. }

Estimated Distance, { 13½ Miles. Time 5 h. 11 m. / 4¾ „ „ 1 h. 23 m. }

After passing over a plain, we gradually entered a thick jungle, crossed the Nam Tara, a stream of about 15 feet wide, rushing rapidly over a stony bed to the eastward, and commenced to ascend, which we continued to do with little interruption until we arrived at the Mé Phit, a rapid stream of 35 feet wide flowing to the southward and westward over a stony bed. From this the ascent became very steep, until we nearly attained the summit of the first range, when it became more gradual, the road running along the sides and tops of the hills, with an occasional descent, until we reached two small streams, Nam Hak. Here having rested a short time, we again ascended still more, and reached what is considered the highest part of the road, but not of the hills by 300 or 400 feet. Here water boiled at 204½ Fahr., and my latitude on this spot was 21° 47′ 45″ N. Now we commenced to descend, and soon obtained a view of the valley below enclosed by high hills, except to the northward and eastward, where they are low. The valley is about seven miles long and two broad, and I counted no less than 18 villages in it, and was told they amounted altogether to 30, and some of them large. After reaching the valley, and crossing the Nam Khai, we arrived and halted at Muang Hám.

57.
2.13.
3.50.
4.5.
5.11.

The road has been very good throughout, and the hills all thickly covered with jungle.

Muang Hám is the seat of another petty Tsóbua. His palace resembles the one at Talau, only larger and of better materials. The Tsóbua and his family are at Kiang Húng.

The place contains about 200 houses, and the Nam Khai flows through it. There are a great many Chinese located here; they have a temple or house of worship of their own. The people of the place appeared to me not to be so well dressed as those I had seen before; both sexes very slovenly, perhaps from their dress approaching more to the Chinese than those before met with.

There are several tanks about the place for fish. There are two very handsome temples here, the interior of one extremely rich, and to which is attached a sexagonal building with eleven different stages or roofs gradually diminishing in size, and surmounted by an umbrella at the top, all of Chinese workmanship.

This valley is said to be very rich, and is watered by the Nam Khai and Mé Hám, the former coming from the southward and the latter from the eastward; they unite at a little distance to the westward and flow into the Mé Há.

To the north-west of this is Muang Khié, the capital of another Tsóbuaship; the road to it is good and there are no hills to pass over; it is the largest Tsóbuaship of the 12 dependant on Kiang Húng. The road to Muang Lém from Kiang Húng passes through it.

7th March.—From Muang Hám to Muang Hái. Direction, N., 20 E. Estimated Distance, 10 miles. Time, 3 h. 12 m.

Having crossed the Nam Khai, a stream of about 70 feet wide, flowing to the westward, by a bridge, and shortly after the Mé Hám, and passed over the fields and plains belonging to the town of Muang Hám and some villages, we crossed over a high range of well wooded hills, and reached the valley of Muang Hái, we then proceeded along the foot of the eastern hills forming the valley, and having passed three or four villages, besides seeing a great many scattered over the plains, arrived at this town of Muang Hái, where we halted.

2.20.

This town contains about 150 houses, and belongs to the Tsóbua of Kiang Húng; the chief officer is at Kiang Húng; it has 13 villages attached to it, and the valley is watered by the Mé Há, over which several bridges are thrown to facilitate the communication with the villages on the opposite or western side of the valley.

Captain McLeod's Journal.

There are a great many Chinese here, and amongst them some women; their houses are built of wattle and dab, differing completely from those of the Shans. There is a good deal of tea grown in this district, which is sold to the Chinese at 4 ticals for 10 viss; the chief is obliged to give the Tsóbua 100 viss as a duty annually.

The wife and family of the chief called on me; they are particularly fair, rather tall, and good looking.

8th March.—From Muang Háî towards Kiang Húng.

Direction	Estimated Distance	Time (*h.* *m.*)
N. 40 E. / N. 80 E.	4¼ miles / 16¾ „	1 23 / 5 29

The first part of the march was along the foot of the hills inclosing the valley to the westward, and the sides of which are laid out in tea plantations.

On again reaching the level plain we crossed the Mé Há, 120 feet wide, over a good wooden bridge at the village of Ban Don, which is entirely occupied by Chinese.

5.32. Following the course of the Mé Há we gradually got amongst the hills; these were high and occasionally rocky and steep. There were, however, loftier ranges on both sides of our route.

5.42. We crossed many streams, but only two of any size, the Nam Tsan and Mé Phung; they all flow into the Mé Há. There were many places along the road where we might have halted, but with one exception they were all too confined.

6.52. It being late we halted on the left bank of the Mé Há, much against the wishes of the Shan officer; he endeavoured to persuade us to stop at the open spot above alluded to, and to make two marches into Kiang Húng; but understanding from the men who accompanied us from Muang Hái, that by going on a little we should reach the capital to-morrow, I determined to push on. We discovered that the reason he did not wish to come on to this is an apprehension of being attacked by the Ka Kúis, a pathway leading by this from one of their villages. These people inhabit most of the hills to the north of this, and though nominally tributary to Kiang Húng, are a source of much annoyance, waylaying and plundering travellers.

The tea plants seen to-day were of all sizes, some only lately planted, while others were about 15 feet high; the plant is not in flower at present; little is done towards its cultivation, pruning is freely resorted to, but nothing is done to enrich the soil. The leaf is gathered four times a year, and undergoes the same rude process of preparation before mentioned.

The hills passed to-day, during the first portion of the journey, were covered with thick jungle; latterly this had been cleared in many places by the Lawas for cultivation, but left by them again after obtaining one or two crops. We could see the houses of some of this tribe perched upon many of the heights.

During the journey to-day we passed the charred remains of a Chinaman, who had been left sick or perhaps dying under a temporary shed of bamboos and grass; this had been reduced to ashes, but whether intentionally or not we could not ascertain.

I find that there is a more direct road to Kiang Húng from Muang Hám, where we halted on the 6th, but the Shan officer with me says that it is not used, as it runs over high mountains.

A number of Chinese porters carrying cloth and cotton to China, and some trading from village to village with dried fish and radishes, passed us; when travelling homewards they go the same distance, each day, as the mules. The load is carried on the back, supported by a rope running under the bottom of the pack, and fastened to a flat wooden collar resting on the back of the neck, to which it is fitted, and is supported by both shoulders; a rope is passed round the forehead and the upper part of the pack, this balances it and prevents it falling backward. These porters, though stout-bodied, are not such fine looking fellows as the men who accompany the mules, and who call the others the Karengs of China.

9th March.—To Kiang Húng.

Direction	Estimated Distance	Time (*h.* *m.*)
N. 75 E. / N. 87 E. / S. 40 E.	9 miles / 3 „ / 2½ „	2 53 / 1 16 / 1 46

The country continued the same as that passed through yesterday, latterly losing somewhat of its bare appearance; though we met with some steep short ascents, the descent was greater throughout, the road running along the side of the river, as yesterday; this dashes its way down over a rocky bed, with considerable force, its breadth varying from 80 to 200 feet, the banks occasionally very steep.

We passed by the village of Ban Lóng Túng on the right bank of the Mé Há, at the entrance of a valley; from this the road runs through fields and an open country with numerous villages, some of which were also seen on the sides of the hills enclosing the valley.

2.53. We next reached the large village of Kiang Lam; close to it is the old and nearly deserted fort of the same name on the right bank of the Mé Khong, which, however, we could not see. After leaving it we passed through gardens planted with tobacco, bamboos for pipes and umbrella sticks, and sugar-cane, and again reached the left bank of the Mé Há where we halted near a long bridge distant about three-quarters of a mile from the town, which we saw distinctly.

From

Captain McLeod's Journal.

From this, I sent forward to inform the authorities of my arrival, and was requested to remain where I was until a house was prepared for me, and people sent to escort me. Shortly after, five or six petty officers came out, and in the cool of the evening I accompanied them to town.

We crossed the Mé Há by a long wooden bridge; the breadth of the river at present is 136 feet with 5 feet of water in it, but during the rains 170 feet, with steep banks; on reaching the town, which we did in about 17 minutes, we proceeded by the great road to the southward, and at the extreme end of it found a spacious new house prepared for our accommodation.

This portion of the town has been entirely deserted by the inhabitants, and is occupied by the forces of some of the petty Tsóbuas, two of whom reside close by me, but by no means in so good a house as that which they have assigned for my use.

At the house I was met by a Puniah; and in the evening several of the court officers came to welcome me, and take down my replies to questions respecting the object of my journey, where I had come from, the number of people with me, and the rank of the officer who deputed me, &c. I requested that I might have an audience of the authorities of the place as soon as possible, as I had been informed of the Tsóbua's absence in China. They showed much ignorance of our position on the coast, &c.

The town which is of no size stands on the western face of a range of hills running north and south, in front of it the Mé Há joins the Mé Khong, and during the rains their united waters form an extensive sheet; now, however, the streams of both are confined within narrow beds, and only a plain of sand meets the eye.

This place is not fortified; there is one wide road running from one end of it to the other, and along this there are a great many houses belonging to the Chinese, very poor in their appearance; the streets are narrow, scarcely better than pathways, running up the sides of the hills, without any regularity, and along which terraces had been cut to admit of houses being built. The palace is a conspicuous building standing on the high ground at the foot of the hills, at the northern extremity of the town. The only other objects to be noticed are two or three monasteries, some small pagodas on the face of the hills, and a few banian trees here and there. With the exception of the valley of the Mé Há the country around is hilly, and extremely barren in appearance.

The Mé Khong or great Cambodia River passes to the north of the town; coming from the north-west it flows on to the eastward; its bed is narrower here than higher up, being confined on both banks by hills; it is crossed by a ferry within sight of the town, and the road to the Chinese frontiers, which strikes off at the village of Kiang Lam, is seen winding over the hills to the northward.

Kiang Lam was formerly the residence of the Tsóbua, and was also called Kiang Húng; the site of the capital was changed to its present locality by the late Tsóbua after he became firmly fixed in the chieftainship; in this he followed the example of the kings of Burmah and Siam, who usually, in succeeding to the throne, partly from superstition and partly for the supposed eclat attendant on founding a new capital for the Kingdom, adopt this expedient, regardless of the inconvenience and expense it causes their subjects.

10th March.—In the forenoon I had a second visit from the party who came yesterday, and was invited to the palace where the petty Tsóbuas and the Minister, who now transacts all the business of the country in the Tsóbua's name, would meet me.

The palace is inclosed by a wall of 15 feet high of brick and mud; the space it covers is very confined. The building, however, is substantial, and large, and embellished with handsomely carved and gilt ornaments, mostly Chinese; a good deal of stone has been used in its construction. It is covered with the shining tiles before mentioned by me.

On each side of the gate stands a large lion cut out of a single block of stone. Here I dismounted, and was received in the great hall by the assembled officers, who were all dressed in costly Chinese costumes. A wooden railing incloses the throne; in front of it stood two tables together; at one end of these the Minister (the Talau Tsóbua), the Muang Lóng Tsóbua, a nephew of the late Tsóbua's, and the Burmese Tseitké, were seated; opposite to them at the other end of the tables a chair was placed for me, and at one side of the tables, facing the throne, two Chinese officials were seated, with writing materials before them; the other officers, who are considerable in number, occupied chairs in a line on the left of the chiefs. So soon as I was seated the Talau Tsóbua opened the conference, observing, that they had long heard of the English, and were glad to hear from Kiang Túng the object of my visit; that they had long wished to open a communication with us, but that the state of Zimmé prevented it. I informed him that I was the bearer of letters and presents from the Commissioner in the Tenasserim Provinces to the Tsóbua, intimating the objects of my mission, and his wish that I should proceed to China; that when I quitted Moulmein we had not received intelligence of the late Tsóbua's death; and though I understood, that no successor had been nominated, I wished to proceed and deliver the letter to the late Tsóbua's son at Muang Lá. In reply, they stated that Mahá Dewi, the late Tsóbua's widow, was acting as Regent (being assisted in her deliberations by the twelve petty Tsóbuas) for the young Tsóbua, who had fled to China during the late disturbances here; that she possessed full power and authority to transact and settle all business in his name; and that Mahá Dewi did not receive me, as it is not customary for her to appear in public.

I have when speaking of the chief ruler of this territory called him Tsóbua; he, however, has the appellation of Tsen wi fuá, or Tsen wi buá, which title I shall in future use.

Captain M^cLeod's Journal.

The Commissioners' letter was delivered and read. They said, with reference to my journey to China, that orders must first be received from that place; that they regretted they could not possibly let me proceed without them.

I urged that I wished to avoid delay, as I had a long journey before me, and therefore would be obliged to them to permit me to proceed to Muang Lá, the boundary of their country, pending the reference; on their objecting to this, I pointed out that though they had expressed themselves glad to see me, yet their refusal might give rise to a supposition that they were not friendly inclined towards us; that my mission was purely of a commercial nature, and in no way connected with politics; that the English were on terms of amity both with the Chinese and Burmans, and the latter permitted our officers, on various occasions, to proceed through their territories; that I was acquainted with the Ministers at Ava, and that they had been informed of my mission, and further, that if each state, I had passed through, had in like manner referred the point for its king's decision, I would not have reached this place for a year or two.

The Minister remarked that it would not be polite to tell me to go back, but they could not permit me to go on; and as the rains were not far distant, it would, they thought, be unpleasant and inconvenient for me to wait for a reply from China; that it was true the state was tributary both to China and Ava, but it was nearer the former and looked upon it as its father.

On my applying for information regarding the likely length of time I should be delayed for a reply, they said that the officer at Esmok had no power to permit my advance, and the reference would be made from one officer to the next officer, and therefore they could not say.

The Minister compared himself to a stone, and me to water; and on my observing that to make this simile correct he ought to allow me to proceed, for it was well known that water ultimately overcame stone, he laughed heartily and said he did not mean in that way, but that he was there fixed like a rock to bear all the blame, and I wished to glide over him and pass along without any fear.

The Burmese Tseitkê, who I had heard is in disgrace, now told me that he would interpret the chief's wishes; that they did not like to speak plainly, and therefore I could not understand them, but they wished me to return. This, of course, I knew to be the drift of their speeches to me, but I did not find it convenient to understand them, so again pretended not to comprehend the Tseitké, though he spoke in Burmese, much to his annoyance.

The Talau Tsóbua in a set speech respecting the English, whom he highly complimented, added, that however desirous and glad they were to establish a communication with us, that they thought it strange an officer should be deputed on commercial affairs, and that no merchants should accompany him; that if I were a merchant they would permit me to proceed, but that there was a great difference between a merchant and an officer, and that as I was under no obligation to them, as they refused to accede to our request, they begged to decline receiving the presents brought up by me. I explained to them that with us it was customary to secure, officially, protection and security for our merchants before they ventured to trade with any foreign country; that some had accompanied me as far as Kiang Túng, but had been deterred from coming on by the reports of the unsettled state of the country; that on this point the Kiang Túng officer, who had accompanied me, would satisfy them. That with reference to the presents, they were not offered with a view of bribing them; that we considered it a custom of their own, intended for the purpose of cementing that good understanding which they had expressed themselves so desirous should exist between our countries; that whatever might be the result of the reference to China, as they assured me it was not in their power to permit me to proceed without permission being first obtained, though much disappointed, I could not be angry with them, and I should rejoice to think that my journey had not been fruitless if it were the means of establishing an intercourse between us, and gaining their friendship. On this, they all together answered, that what I had said was very proper, and they were rejoiced to find my sentiments were such as I expressed them, and they therefore thankfully accepted the presents from the Commissioner for the young Tsen wi fuá.

It was already evident that I should not be permitted to pursue my journey, but I considered it advisable to remain at the place a few days to endeavour to allay the suspicions the chiefs evidently entertained respecting the object of my mission, in spite of all their professions.

I, therefore, requested that the authorities at Esmok or Muang Lá might be informed, that I was the bearer of letters and presents to them, as well as to the Chief at Yunan, which I wished to deliver. I had not been furnished with letters for Yunan but for Talé. Finding, however, that the latter was of no use on this frontier, that the ruler at Yunan exercised government over the whole province, I determined to alter the address, and deliver it to him, if permitted to proceed.

Refreshments, consisting of cups of tea, dried fruits, and betel nut, &c., were served by attendants in Chinese dresses, who walked about with their shoes and hats on.

The conversation soon became general. The Talau Tsóbua was the principal spokesman; putting innumerable questions to me about England, &c.

After staying a long time, I took my leave. Mahá Dewi sent a message, previous to my departure, inviting me to dine at the palace the next day, and that the chiefs would be invited to meet me.

11th March.

Captain McLeod's Journal.

11th March.—At about two o'clock I was requested to proceed to the palace, where all the officers were assembled in the great hall to meet me again. A number of square tables were here standing; three of these were high, with chairs placed near them; the other tables, about 20 in number, were only sufficiently raised above the ground to admit of persons seated on the floor partaking of their meal. The three tables were for the Tsóbuas; I was placed at the one with the Talau Tsóbua, and those of Muang Hám, Muang Lóng, and Muang U' and the Tseitké. The other tables were occupied by the petty officers and my people, even the coolies.

The dinner was entirely Chinese, and served up by attendants in Chinese livery. The proceedings were conducted with due ceremony; dried fruits were first placed on the tables, which having been partaken of by the party, a large cupful of stew followed; all having helped themselves to a mouthful or two, it was succeeded by another dish, and so on, one dish following another, until there were about 15 different ones on the table at the same time. These consisted of various descriptions of fish, said to be from China, pork, &c., dressed in different ways, but chiefly stewed. Before partaking of a dish, they bowed to each other, an example which I followed; and then each helped himself to a mouthful, with the aid of chopsticks; then a pause ensued, after which the same ceremony was observed on each succeeding dish being placed upon the table. The dishes were well flavoured, though rich; there were no vegetables, rice and cakes forming part of the repast. I took the precaution to go provided with a spoon and fork, novel implements to those at the table, and which afforded them some amusement. Arrack was the only beverage; this was sipped continually, or drank off out of small cups, the same ceremony of bowing being observed as when eating; the quantity consumed must have been considerable, for they partook of it freely. When we first sat down there was much reserve and formality, but these were thrown off gradually, and they became talkative towards the latter part of the feast, which ended by tea being handed round. It was nearly dark when I returned home, much entertained and pleased.

The Talau Tsóbua is evidently a clever shrewd man, and very inquisitive on subjects to which I have never before known a Burman or Shan turn his thoughts; he is the only one here who appears to know anything about the Tenasserim coast, and the cause of our being there. He tells me that there is not one officer in ten who can speak and write the Shan language well, and not one in a hundred the Burmese, Chinese being the language in use amongst the higher classes. He is the only chief who speaks Burmese. The Shan spoken here is the same dialect as that at Kiang Túng and Zimmé, only differing slightly in accent. The character is precisely the same.

The minister spoke in terms of praise of the Chinese; that they are upright and just as a nation, though very particular in insisting upon every fraction due to them being paid; yet they never exacted more than they had a right to claim, and never retained any sum, however small, to which they were not entitled. In proof of their disinterestedness he mentioned that the Tsóbua of Kiang Khing, or Kiang Khaing, a small State to the southward of this, and tributary to Ava, wished lately to throw off his allegiance to that kingdom, and place himself under China, but the offer was unhesitatingly rejected.

An establishment of Chinese clerks is kept up to arrange the correspondence, revenue matters, &c. He compared the Chinese to the English, so far as he had heard of our character, except in one point, namely; that the English allowed anybody, who wished it, to go through any part of their country, and to see all that is to be seen, while the Chinese are so jealous, that they will not admit any strangers within their territories; that even the officers from Kiang Túng have never been permitted to go beyond Puer, except on one or two occasions, on most urgent business, and then only as far as Yunan.

A force of 2,000 men from the province of Yunan only left this three or four days before my arrival; its stay here had been but short. The inhabitants are nowhere called on to support such parties, and care is taken that provisions and everything which may be supplied for their use are strictly paid for.

Excuses were made for the absence of ceremony in my reception on my arrival. I was asked to make allowances for this, seeing the confusion the place had been in, and was assured that had I come in Mahá Wang's lifetime, it would have been such as became a stranger of rank. The minister declares that if I had been a merchant, he would have sent me on with people to Muang Lá; adding, that he had been lately severely reprimanded for allowing a Burmese officer to proceed to that place with a letter from Moné. He declares that no Burmese ambassador had ever proceeded to Pekin, but had only been permitted to visit Yunan. This is, however, not correct; there is ample proof at Ava, in the journals kept by the ambassadors, and other facts, to prove that the minister is mistaken. Pekin is here called Muang Wong, or Purking Chang.

12th March.—The Muang Khié and Muang Lóng Tsóbuas paid me a visit, the former a handsome young man, and the latter a nephew of the late Tsen wi fuá; they came to satisfy their curiosity by an inspection of my property. I called on the minister to-day, and was received in a very friendly manner by him. Even from him I could not obtain any positive information regarding the sources of the Cambodia and Salween Rivers, which are here known by the same names as at Kiang Túng. He was inquisitive as usual, questioning me about steam, Ceylon, and a variety of subjects; steam, he said, was made use of in China; but to what purposes applied he could not tell me.

The Chinese invariably speak of an iron suspension bridge across the Ku Lun Kiang,

Captain McLeod's Journal.

on the road between Talé and Yung Chiang Fú; this, no doubt, is nothing more than the chest suspended from an iron chain, by means of which the Burmese ambassadors were conveyed across a large river on their way to Pekin from Ava.

Kiang Húng is the Shan and Siamese name for this place. The Burmans call it Kaing Yun Gyi, and its inhabitants Lu thoungze nhit pana or pala. Chế Li and Ku Lun Kiang, are the Chinese names for it, signifying seven ngagas or fabulous monsters. The great Cambodia river is also called by this latter appellative, and, I conclude, gives the name to the town, in fact. The inhabitants speak of themselves as Lu-siptson pana. Zodi nagara is the Pali name for this territory. I am told that the principal forces in the Yunan province are stationed at Talé, in the north west; at Puer, in the south; Yung Chiang Fú in the north, and Quang Long Fú in the east; the number at each place being 3,000 or 4,000.

The authorities in these towns have no power to admit strangers to pass without a reference to Yunan, where the viceroy, Tsoungsu, resides. The present viceroy is a relation of the Emperor, and has held the appointment for some years; the usual term of office being 12 years, unlike the Fúquangs, the chiefs of towns, who are generally transferred from one place to another every three years.

The arrangement which exists between China and Burmah regarding to the nomination of the Tsen wi fuá is not clear. I am told that the one nominates and the other confirms; that for this purpose a consultation takes place, but how, or where, I cannot discover.

The Tsen-wi-fuáship of this territory appears to remain in one family, but the succession is not hereditary, as will be seen by the following list: A Tsen-wi-fuá dying, left four sons, Chou Nam Phung, Chou Upa Raja, Chou Thi Wan, and Chou Khai. The eldest, Chou Nam Phung, was appointed Tsen wi fuá, both by the Burmans and the Chinese; on his death his brother, Chou Upa Raja was nominated his successor, both by the Chinese and the Burmans. He, however, rebelled, and was deposed, and his younger brother, Chou Thi Wan was raised to the chieftainship. On the death of Chou Thi Wan, his eldest son, Chou Mahá Wong, was nominated by the Chinese, but the Burmans re-nominated Chou Upa Raja (the chief who had rebelled), but on his death, they confirmed the nominee of the Chinese. On Mahá Wong's death, the Chinese conferred the dignity on his son, Mahá Noi, but the Burmans nominated Chou Nam Phung's son, Chou Tsan. Chou Khai, Chow Nam Phung's youngest brother, never attained the Tsen-wi-fuáship. Chou Tsan, however, threw off his allegiance, and fled with a large number of his subjects, and placed himself under the Zimmé chief, where he still resides, with a number of the relatives of some of the petty Tsóbuas. This fact is one cause for the people, generally, being desirous to secure a free communication with that state. The Burmans next nominated Chou Thi Wan's second son, Mahá Wang. These two chiefs, namely Mahá Noi and Mahá Wang, ruled at the same time, one on the left bank, and the other on the right bank of Mê Khong; but their rule was not peaceful; there was constant warfare carried on between them, and though Mahá Noi obtained the assistance of the states of Muang Luang Phaban, and Muang Nan, Mahá Wang proved successful. His opponent suddenly disappeared, and his place of concealment is unknown, though some suppose he must be in China, others that he has fled to Cochin China, and some are of opinion that he has taken refuge in Muang Luang Phaban. It is believed that he has still many adherents in the state, and should he make his appearance at the present juncture, there is little doubt, that there will be bloodshed. During the hostilities above spoken of, neither the Chinese nor Burmans aided either party.

On the disappearance of Mahá Noi, the Chinese confirmed Mahá Wang. He is described as having been an intrepid and active chief, who filled the Tsen-wi-fuáship for 24 years. He was taken ill shortly after his return from Yunan, where he had been summoned, and after a protracted illness of some months, died about three or four months ago. The throne was hereon seized by Chou No Kham, the late Tsen wi fuá's son-in-law, to the exclusion of his son, Chou Phung, a lad of 13 years of age, not, however, the son of Mahá Dewi, but of his second wife.

Chou Upa Raja left two sons; the elder, Chou Phom, being suspected of intriguing to overthrow the government of Chou Tsan, was put to death by him. Mahá Kanan was the second son; he again had two sons; Chou No Kham the elder, the self-constituted Tsen wi fuá, married to Mahá Wang's daughter, and Chou Phom the younger, married to the daughter of the Burmese Tseitké. These resided at Muang Lam, the old fort mentioned in the last day's journey, with the Tseitké and his contingent or guard of 35 Burmans.

No resistance was made to the assumption of the throne by Chou No Kham, though the Talau Tsóbua, who was the minister during Mahá Wang's reign, and some of the other chiefs, were opposed to his elevation; they being unprepared with a force, and not being certain which side the other Tsóbuas might espouse, feigned acquiescence. The new chief despatched emissaries both to China and Ava with presents, to secure his nomination.

The Tseitké had some time before this received letters from his court to be presented to Mahá Wang, appointing his son Chou Phung Amig-she meng, Lord of eastern house, a title which confers on the bolder not only extraordinary power and authority, but also the right of succession to the throne. That officer, however, had withheld these despatches to facilitate the ambitious views of his connexions. The minister, in the meantime, discovering that it was in contemplation to make away with Mahá Wang's son, assisted him to escape to Chiaa. His plans to succour his late master's son did not end here.

Being

Captain McLeod's Journal.

Being joined by other Tsóbuas, a large force was secretly collected near the capital, the principal adherents of the new ruler were invited to the Court House on the pretence of investing some of them with additional honours, when four of them were put to death. The Tsen wi fuá had only time to make his escape with a few followers; his aged father, Mahá Kanan, and his younger brother were put to death the same night, and the Burmese Tseitké only escaped by the interposition of the chief priest.

The Court of Ava supports Mahá Wang's son, and the Chinese do so too, to all appearances; but should Mahá Noi come forward, it is doubtful whether he would not be nominated. Forces have been despatched in search of this fugitive Tsen wi fuá, but his retreat had not been discovered: some of his followers have been brought in lately, some were executed, and others banished.

Some people ascribe the late unfortunate occurrences, in a great measure, to the ambitious views of the minister, his object being to open a way to the throne for himself; and assert that he has kept the two superior powers in the dark as regards the executions which have taken place, and that he has sent valuable presents, chiefly to China, to conciliate the authorities there. They further insinuate that Mahá Dewi has lent herself to his intrigues, and is to marry him ultimately. There is little doubt, that these reports have been propagated by the supporters of Chou No Kham, for if there were even a shadow of truth in them, it is not likely, that the Tsóbua of Kiang Túng especially (whose daughter is betrothed to Mahá Wang's son), and those of Kiang Khieng and Muang Kheng would give their countenance to the existing state of affairs by the presence here of their officers. These officers attend all the deliberations which take place, and watch what is passing, besides having a small force at hand to aid the young Tsen wi fuá, if necessary. My writer once attended the Court, when the officers were assembled in council and transacting their business, which is done in open Court. He describes everything being conducted in a consistent and regular manner.

The state of Muang La is supposed to be inimical to the young chief of this place, and to be disposed to support either Chou No Kham or Mahá Noi, and has, consequently, not deputed an officer to assist in the deliberations.

Some of the petty Tsóbua's, with a party, left to-day for Muang Lá, for the purpose of escorting the young chief; the time of his return, however, is uncertain.

Yesterday two natives of India were reported as having arrived at Muang Hám, from Zimmé, and were ordered up to town. Thinking that they might be Thugs, I requested that they might be sent to me on reaching this place. This morning they made their appearance. One was a Puthan, from Delhi, who had travelled by land to Ava, and attempted to penetrate thence into China, but was stopped by the Burmese authorities on the frontier, and sent back, and at last got to Moulmein, whence he proceeded to Zimmé. He left that place with a companion, a discharged Lascar, to find their way to Cochin China, where he had been told there were a great many Mussulmans; but four or five days after crossing the Mé Khong, they missed the road and came on here.

No objection whatever was made to their crossing the Mé Khong, or proceeding beyond the Muang Nan and Muang Luang Phaban districts. These men describe the road travelled by them as not bad, and, though over hills, much better than that from Moulmein to Zimmé; they found villages or the abodes of some hill tribe nearly daily. They had been nearly two months wandering from village to village, off the high road, and therefore, could not give me any satisfactory information regarding that frequented by the caravans.

I took this opportunity of speaking about the Thugs, their horrible habits, &c., to induce the authorities to seize any who should appear, and to send them back to Moulmein; which they promise they will do, if the Siamese will permit the party to pass through their country.

13th March.—Thinking I had made a favourable impression on the chiefs, I endeavoured to persuade them to permit me to proceed towards China to meet the expected reply on the road, and be guided by its tenor. I was told the letter could only be opened by the chiefs at Kiang Húng, and that however anxious they were to prove the sincerity of their professions of friendship for us, yet it was impossible to comply with my wishes.

A report was dispatched to China, when information of my arrival at Kiang Túng and intended journey onward reached this place, as well as on my advent here. A letter was to be sent to-day, forwarding the copy of the letter from the Commissioner in the Provinces to the Tsóbua of this place. It will reach Muang Lá in three days; the journey is ordinarily made by the Chinese caravan in five days.

While my writer was with the Talau Tsóbua to-day, the Chinese Secretary brought the despatch for China, with a translation of the Commissioner's letter, to be stamped with the Kiang Húng seal, which is kept by the minister. The former was read and translated; it set forth most satisfactorily the object of my mission, the advantage which both countries would derive from the trade proposed to be established, and my wish to proceed towards China, having letters to the authorities there. It was altogether worded in a very proper manner; though it must be admitted that they have taken their time to make this communication, but I suppose that they delayed in the hopes of being able to lay before the authorities some certain information respecting the real object of my mission.

The chiefs endeavoured to prepare me for a disappointment: they assured me that

Captain M^cLeod's Journal.

none, even of their body, was permitted to advance far into China, and as this was my first visit, I must not be annoyed should I receive the refusal they anticipate, but hope that I may be more successful at some future time.

14th–17th March.—All the Tsóbuas here at present have visited me, and I have been to see most of them. The Talau, and the Muang U' Tsóbuas, and my neighbours often came to drink tea with me, but they prefer something stronger, and show a partiality for cherry brandy, and though the minister does not drink common spirits, he is far from averse to this cordial. Knowing from experience how addicted all Shans are to spirits, for in my communications formerly with the Kalé Tsóbua on the Manipur frontier, I found, that a bottle of whisky or port wine had a wonderful charm in rendering him communicative, in spite of the difficulties of carriage, I came provided with a supply.

The chief subjects of conversation on these occasions, are the strange and wonderful things to be found and seen in England, Calcutta, and China. They lose no opportunity of extolling the last-named country, and its system of government. The Talau Tsóbua told me, that he had perused the small work I had given him, but that it contained so many astonishing things, that he could hardly credit some. I am closely cross-questioned, and find it difficult to satisfy him always. There are usually so many listeners present on these occasions, that I am obliged to be cautious in making inquiries regarding the neighbouring countries, the situation of towns, and the different roads, those especially in China. It would be difficult to allay their suspicions if once aroused. Any sketch or map I might obtain of any part of China would not supersede those already published by the Jesuits, and with which we must be content until more accurate knowledge can be obtained from personal observation.

The Muang U' district to the southward of this, adjoins the territories of Muang Luang Phaban, on its north-west frontier. The caravans pass through it to Muang Nan, and the roads to Cochin China from this and from Muang Lá, traverse it. To the south-east of it, lie the territories and capital of Muang Li, governed by a Tsóbua who is tributary both to China and Cochin China. The Muang U' Tsóbua informs me that much salt is found in his district, and that no tax is imposed on the Chinese traders who pass through it; he estimates the number of mules going through it annually at 3,000; this, I am told, is much in excess of the true numbers, which is about 1,200. The town of Muang U' itself, is about 10-days' journey from this, and seven more to the ferry across the Mé Khong, towards Zimmé; Muang Phung and Muang La, likewise the residence of Tsóbuas, are only half a day's journey distant from each other, and three to the eastward of the Mé Khong; these places are five nights' journey from this, and six from Dakhong, the ferry on the Mé Khong. The route, however, through those places is not frequented by the caravans, many of the towns both to the southward and westward of them being now deserted. Utai, the frontier stockade in the direction of Muang Luang Phaban, belongs to Muang U'; beyond Utai is Muang Li, already mentioned.

The Chinese town of Esmok is only separated from the Shan town of Muang Lá, where a Tsóbua resides, by a small stream. The Chinese town has no gateway in its southern face, and only one in each of the others. The wall surrounding it is said to be three fathoms high, and three broad atthe top, on which horsemen patrol every night.

The mode adopted to give warning of danger is by signal fires; watchmen are constantly on the look out, and materials for the purpose are kept prepared. There are 1,000 men at present at Esmok; the troops garrisoning it do not generally amount to above 300. It is not a large place, and the officer ruling it is equal in rank to Burmese Myo wun.

Some of my people found their way to the Tseitké's; he is very anxious that I should call on him. He told them that he is in constant dread of losing his life; that there is a party against him in particular, who wish for his removal; that the Shans are not, he thought, over partial to the Burmans; that my arrival had allayed the ferment here to a great extent; that before it, armed parties were hourly parading the streets, persons were apprehended, several executed, and numbers banished to other towns.

I dined with the minister to-day; his house is a very poor and small one, about 40 feet square, raised on posts, the sides of bamboo mats, and roof covered with grass. It resembles in form those at Zimmé; none of the chiefs have good houses, and there is not a wooden one in the place. Those in which the people reside are very poor, and built of the same materials as the minister's. One great inconvenience in them arises from the smoke having no way to escape except by the doors or forcing its way through the roof; it is generally so cold that a fire at night is necessary. Four other Tsóbuas formed the party; they were very inquisitive about the different countries beyond the seas, articles of commerce and products of our country. I found great difficulty in replying to the numerous questions of the Talau Tsóbua on geography, astronomy, &c. &c., for want of significant words in Burmese. He had heard of my taking altitudes, and begged I would show him my sextant, and explain how I could see the sun on the ground.

They questioned me again about the cause of the war with Ava; they had heard it was in consequence of our protecting rebels, and taking territory that did not belong to us, but they themselves do not consider us to be an ambitious nation, or that acquisition of territory is our aim, though we had become master of such an extensive empire, as there was nothing to have prevented us from keeping Ava, yet we gave it up.

They wish to persuade me that both Ava and Siam pay tribute to China.

They pressed me to send merchants up, but the mountainous country these would have

Captain McLeod's Journal.

have to travel over is an obstacle; they could not return to Moulmein the same season, even if they disposed of their goods at once, for their elephants would not be in a condition for the journey even to Zimmé, and they could not dispose of them here. Some attempt might, however, be made, and should our merchants find the trade not remunerative, they might give it up without any bad effects; it might be the means of drawing the caravans down to the coast, and open a way into China for our traders, should they wish it; I look upon the road travelled by the Chinese caravans to the eastward of the Cambodia river, as the one by which this trade must be commenced. I am disposed to think that greater difficulties are represented to exist along it, than truth warrants; at all events, we can hardly expect the Siamese to give their consent, at once, to that by Kiang Túng being thrown open.

At night a Burman came, and told me in confidence, that orders had been received from Kiang Túng on no account to permit me to proceed beyond the Mé Khong, and if I attempted to cross the river to take my head off; that the Burmans look upon me as a spy, and the Shans were partly inclined to do the same. That Dr. Richardson had been ordered to return before he reached Moné by the authorities there, but refusing to do so, and persisting in continuing his journey towards Ava, that he had been seized, put in irons and imprisoned, and all his papers taken from him. Though I was amused at the fabrication of such a story, some of my followers are much alarmed.

18th March.—Though there are Chinese merchants still here, the principal ones have left the place in consequence of the disturbances. I have, however, seen many of them, and they are as anxious as all the others to visit Moulmein. I have given them every information they could possibly require. They import the same things as to Kiang Túng, the prices differing but little.

In the bazar I saw a great many medicinal roots, &c., but I did not observe any which is not to be found at Moulmein. Here, as at Kiang Túng, broadcloth is selling cheaper than at Moulmein; five yards of good red, blue, and green at 13 ticals, and light blue at seven. The cloth differing in colours on the two sides is what they most admire, none had been brought down this year. I have shown all the merchants I have fallen in with samples of the Pernambuco cotton, with which they were greatly pleased.

Cattle is abundant in this province; a cow sells for five ticals, a bullock for 10, and a buffalo for 17. These last are brought up from Muang Luang Phaban.

The following are the prices of articles not before mentioned; the others vary but little:—

	Ticals.
Blue cotton trousers, a pair	1
Tinsel lace, 3 fingers broad, for 2 cubits long	½
Needles, 1 viss	5
Coloured paper, 1,000 sheets	15
Papers with flowers, &c., 100	25
Cups, 100	11 to 15
Wax, 1 viss	1½
Salt, 1 viss	½
Camphor, 1 viss	1½
Sugar, 37½ ticals	½
Lead, 100 viss	12
Iron, 1¼ viss	10

I intended to send my Chinese interpreter to Muang Lá, and had obtained permission for him to proceed there; but in a conversation with the Talau Tsóbua, he appeared to think that the man could not return before I left, as he has little doubt respecting the reply I shall receive. My wish was that he should communicate with the merchants at that place, and find out, if possible, the feelings of the authorities. This the interpreter thought he could do without being brought into contact with any of the officers of Government or running any personal risk. The Talau Tsóbua said the chiefs would certainly hear of his arrival, have him up before them, and question him most minutely; detain him, he thought, until they sent up the information obtained to Yunan, to which he might be ultimately ordered, and that, being a Chinaman, there was no saying what the authorities might think of his having accompanied me. Under these circumstances, I did not think it prudent to send him; in fact, by this time his proceeding was unnecessary, as I obtained the information I required from some merchants whom I had before met at Kiang Túng, and to whom I had given notes to the authorities at Moulmein, should they, as they promised, proceed there next year. They had been to Maung Lá, and there sold their cotton, and were returning for another supply. They had heard many exaggerated reports in circulation about me; these they had contradicted, and informed all the mer-

Captain McLeod's Journal.

chants they had met with the real object of my mission. They had been sent for and questioned particularly by the authorities at Muang Lá. An account of my arrival had reached Kein toung, and was travelling towards Talé. The first intelligence the Chinese authorities received of my intended journey to their country was from some Chinese traders, who left Zimmé a week after me, *viâ* Dakhong.

There appears to be a vast number of tribes inhabiting the mountains around Kiang Túng, and this place, besides those I had already mentioned. I shall briefly state what slight information I could procure about them; for of those mentioned below, I only met two or three men of the Kadam tribe, and none of the others.

The La La have no written character, and their language differs from that of the others; they bury their dead, worship Nats, and are addicted to spirits; polygamy is permitted; they dress like other mountain tribes; they reside on the eastern bank of the Mé Khong, and are tributary to Kiang Húng.

The Yem dress like Shans. The remarks above also apply to them.

The Si Sún are principally under China, and are found to the north of this; they are opium planters. Some few write Chinese; they have a distinct language, but no written character; they worship Nats, and are tributary to China and Kiang Húng.

The Kali are located on the eastern bank of Mé Khong, to the north of this. They dress like the Chinese; have no written character; language different from the others; they worship Nats; polygamy is permitted. They are opium planters also, and are tributary to China and Kiang Húng.

The Putai dress like Shans, worship Nats, bury their dead; polygamy is permitted; they are addicted to spirits; they pay tribute to Loas and Cochin China.

The Kapín reside on both banks of the Mé Khong; they bury their dead; when any friend dies, those who have lately lost their relations, take money, and request the corpse to receive charge of it, and deliver it to their departed relations, who must stand in need of some comforts in the other world; the money is accordingly buried with them. Polygamy is countenanced; they worship Nats; dress like other mountain tribes; the women have a peculiar headdress; they are tributary to Kiang Húng.

The Kaláu are on the eastern bank of the Mé Khong, and are tributary to Kiang Húng and Muang Luang Phaban.

The Ka Káu. The usual remarks apply to this tribe, except that polygamy is not permitted. The maidens twist their hair on each side of the head in a peculiar way, so as to resemble the horns of a buffalo; they chiefly dress in white: they are under China, Cochin China, Loas, and Kiang Húng, and reside on the borders of those countries.

The Kadams are not a numerous tribe; they burn their dead; have been, lately, partially converted to Buddhism; have houses of worship and priests in almost all their villages. Their language, which differs from the others, has been reduced to writing, the Shan character being used. They believe in metempsychosis. Polygamy is not tolerated amongst them. They are described as a very quiet race; drink spirits, but are not much addicted to it. I only saw two or three men of this tribe; they are of a middle size, with broad faces, large noses, thick lips, eyes rather small and wide apart, and the hair rather curly; they are said to be much afflicted with goitre. Besides the tribes mentioned above, there are several others, namely: the Kama, the Kamet, the Tsen, the Thin, the Nga, the Ka, and the La, to the southward, and on the eastern bank of the Mé Khong; they are tributary to China, Cochin China, Muang Luang Phabun, and Kiang Húng. I have stated all the information I can collect of these different tribes; the people generally appear to know very little of them, and it is impossible to ascertain their numbers; indeed, many who spoke of them have never seen any of them.

I made some inquiries regarding opium; it appears that some of the hill tribes cultivate the poppy, and are tacitly allowed to do so, on paying the frontier authorities a consideration; the drug prepared is of a very inferior description.

19th–22nd March.—Being anxious to pay my respects to Mahá Dewi, though told that she does not appear before strangers, I sounded the Talau Tsóbua, who entering heartily into my views proposed it to her; she gladly assented, no doubt to gratify her curosity. I accordingly proceeded to her abode, a high wooden building at the back of the reception hall; having ascended by a handsome carved wooden staircase, I entered a capacious apartment, the walls of which were covered with gilding and coloured papers; the posts supporting the roof were decorated with festoons of red and gold, and the room ornamented with Chinese lamps and pictures. Shortly after taking my seat on a chair placed for me close to the Talau Tsóbua, Mahá Dewi entered, accompanied by Mahá Wang's sister; they took their seats on chairs, while the train of ladies following them took theirs on the floor. They, too, were richly, though to me, fantastically dressed, in a mixture of Shan and Chinese costumes; their attendants were dressed in the same style. Mahá Wang's sister, who addressed me in Mahá Dewi's name and her own, was profuse in her expressions of pleasure at my opening a communication between our distant countries; she apologized for the state in which I found the place, and for my reception not being more befitting, and such as they could desire; that had Mahá Wang been alive it would have been very different, and he would have permitted me to proceed onwards, at least to the boundary of his territory, if not into China itself.

I congratulated them, in my turn, upon the tranquillity which had been restored, and the overthrow of the enemies of the rightful heir to the throne, and assured them that the intelligence of the Tsen-wi-fuá's death would be a cause of great regret to the authorities

rities at Moulmein; but this would in some measure be relieved by the knowledge that his son is his successor, and that I hoped that he would be as friendly disposed towards the English as they declared that his father would have been. I assured them that I was much flattered by the attentiou I had met with, not only at Kiang Húng itself, but at all the places I passed through on the road belonging to it.

They informed me, that they expected the young Tsen-wi-fuá soon; that parties had gone up to escort him down, but it was doubtful whether he would be allowed to come immediately, as the Chinese authorities thought him too young to rule, and wished to detain him a year that he might be initiated in Chinese literature, &c. They hoped, that in the event of information being received of his speedy approach, I would remain to see him; in this invitation the minister also joined.

After some conversation on general topics, refreshments, consisting of tea and betel, were handed round; the attendants before doing so, performed their obeisances to the Princess by touching the ground thrice with their foreheads. It was proposed that I should be shown over the palace before I left. There is nothing particular to notice about it; the rooms are lofty and comfortably furnished. There is a room fitted up in the Chinese style, with marble tables for the use of the Chinese clerks; a great deal of stone is used in portions of the building; this is a hard sandstone brought down the Mé Khong from a distance of two days' journey.

The woods used in the buildings here are called by the Burmans Thengan, Yem, and Kiun Koulia. There is some teak found near this to the north, but very small and stunted in growth.

Dinner was sent for me from the palace in the afternoon; this has been done every second day since my arrival.

Some of the Tseitké's people came to visit me; they spoke of the contempt the Chinese authorities have for merchants, and about whom they do not trouble themselves, permitting them to go wherever they please; they say that some Burmans have been on trading expeditions as far as Kein Toung; but that the Chinese are averse to their proceeding beyond that towards Yunan; that on the appearance of any official, however inferior his rank, attempting to enter their country, their suspicions are immediately aroused; that officers even from this place, have not the privilege of going there, except on duty, but no objections are made to traders.

In crossing the Mé Khong at the ferry, one-quarter of a tical is levied on each mule or pony, which goes to the Tsen-wi-fuá, likewise three-quarters of a tical on entering the Kiang Húng territory; this last sum being paid, renders the Tsen-wi-fuá responsible for any losses the traders may sustain from theft within his territory; and as the Ka kúis at times attack the caravans, armed parties are stationed at certain places to escort the traders for some distance. On their return one-quarter tical is likewise collected; this is the only regular and acknowledged perquisite that the Burmese Tseitké receives; he with his followers, however, are supplied by the Tsen-wi-fuá with provisions. The usual number of mules passing through this place annually is about 5,000; more, however, are said to go to Thaini; tea and cotton are what the Chinese take away in return for their goods, but in what proportion I cannot ascertain; Muang Lém also participates in this trade, but no person can tell me the number of mules visiting those territories annually.

A great deal of tea is grown and prepared in the northern parts of Muang Lém district by a race of people called Palongs.

A trifling trade is carried on between Cochin China, Muang Luang Phaban, and this place, but none with the other Siamese States, except a little contraband traffic in betel nut with Muang Nan. English piece goods, &c., are brought up from Rangoon *viâ* Kiang Túng.

Many of the territories in China to the north and north-west of this, formerly belonged to the Shans, particularly the towns comprising the Kothan pyi, or Ko Shan pyi, or nine Shans countries; these were, Kóthá, Lathá, Tsanta (Zanda), Muang Wan (Mo Wun), Tsen Guen, Kiang Ma (Kaing Ma), Moná, Muang Li, or Muang Lyin, and Muang Mau. All nine towns now belong to China, except Kiang Ma, which, like this place and Muang Lém, pays triennial tribute to Ava. Some also mention a place, Muang Mung, or Maing Mam, which is similarly connected with both States; but I am unacquainted with its position.

As many towns have Shan, Burmese, and Chinese appellations, which cause much embarrassment, I subjoin those I have been able to make out:—

Shan.	Burmese.	Chinese.
Muang Meng Luang	Monien	Teng ye Fú.
Muang Meng	ditto	Puer.
Muang Wan	Mó Wán	Longtchuen.
Muang tse Luang	Maingtse gyi	Vinnan or Yunan.
Muang Ku		Kein Toung.
Wang Tshang	Wintcho	Yun Chiang Fú.
Muang Lem	Maing Yun gyi.	
Muang Tchan		Shuen Li.
Kiang Húng	Kaing Yun gyi	Che Li.
Baula Luang		Tsatchan.
Baula Noi		Yulau.
Muang Ham		Kanlampa.

Captain McLeod's Journal.

Thaini is called by the Shans Tsen vi and Men Tsen vi si sip kau Muang; by the Burmans Thaini, and Thaini Laze kolon maing, both referring to the 49 cities or towns comprised in its jurisdiction.

As some places have Pali names, which are used in historical works, the following are those I could collect:—

China - - - - - - - -	Widiharit.
The Provinces of Sack Wan in China - -	Pinsaharit.
Muang Nai, or Moné - - - - -	Konandi.
Muang Lém - - - - - -	Beik karata.
Kiang Túng - - - - - -	Khémarata.
Kiang Húng - - - - - -	Zodinagara.
Kiang Khieng - - - - - -	Tha khalarata.
Zimmé - - - - - - -	Nantapuri.
Labong - - - - - - -	Harijungia.

The Kambausa Taing was comprised, I was told, of the following towns:—

Burmese - - - - - - -	Shans.
Moné - - - - - - -	Muang Nai.
Thaini - - - - - - -	Tsen Vi.
Ngioung Yué - - - - - -	Hi Yong Wi.
Mobie - - - - - - -	Hapai.
Mogoung - - - - - - -	Muang Kong.
Momeit - - - - - - -	Muang Mit.
Momien - - - - - - -	Muang Gong.
Mogok - - - - - - -	——
Toung pien toung ma - - - - - -	——
and some say Ong lat Myo - - - - - -	——

This last list was given me by a Burman Shan; but I do not think it is to be depended on.

The Myé lat Shans are here called Nue.

The names for the other places and people are the same as at Kiang Túng.

The language spoken at Muang Lém is said to be a dialect between the Shan of this country and that of Moné.

The country to the north of this is mountainous and barren, and between Muang Lá and Tate the mountains are described as particularly high.

No tea grows in the province of Yunan. Coal is found about Puer and Muang Lá, which they have some mode of preparing, by powdering it and mixing it with earth, then making it into cakes, in which form it is transported from place to place.

The district of Litchou produces quicksilver and vermillion. At Kankein, needles are made. At Kiang Chi, silk and caps. Wa Chi furnishes jackets wove without seam. Kiang Nau, paper. Yung Chiang Fú, a stony substance, called by the Burmans "meik thila." Talé, copper pots, &c. The Hu Kuang Province has zinc; and Yunan is rich in minerals, copper, vermillion, quicksilver, &c. About Esmok and Puer salt is abundant.

I did not see a single piece of fine earthenware or porcelain here; the cups used are of the common sort. The pottery is of the rudest description, made by the people themselves.

The Chinese merchants, in speaking of the coolies we met carrying the heavy loads I have mentioned, told me that I could form no idea of the numbers of people perishing from hunger and poverty in their country; that the streets, towns, and country swarm with beggars. Famines are frequent, though no part of the province is left uncultivated that can be made use of.

The Kouk nhien rice is used here chiefly, but the other sort is also common. There is no wheat nor barley, nor is any brought from China. When I dined with the Talau Tsóbua I saw one or two sheaves of wheat that had been brought from Ava, and kept as a curiosity.

I procured some wax of the Shula Shú, a vegetable production, which is taken internally as well as applied externally, and is supposed by the Chinese doctors to heal and strengthen to an extraordinary degree.

Muang Lém, Kiang Má, Muang Tien, and Muang Mung, or Maing Main, pay their duties, and make their reports to Shuen li Fú.

23rd March.—Understanding that the reply had arrived from China to the reference made from this, and that it was unfavourable to my advancing, I called on the minister and told him that I wished to proceed to Ava, *viâ* Muang Lém; and, failing in this, to return by any road on the eastern bank of the Mé Khong. He received me in his usual friendly manner, but at once told me that he much regretted it was not in his power to accede to my wishes. All my arguments in favour of my projects failed to make him disposed to countenance either of them; but he promised to call in the evening with a definite reply, and to bring the letter he had received from China.

Some Shans from Muang Nan with elephants have arrived within the last week, at Muang

Muang Phung with betel-nut. That town had long been deserted, and only lately repeopled, and these are the first traders who have come there direct. Captain McLeod's Journal.

The Muang Lóng Tsóbua brought me, unasked for, a very rough map of the country, and the names of the towns forming the capitals of the Sip tson pana, or 12 Tsóbua-ships, and requested I would not show it to any person.

24th March.—Last night being very wet the Talau Tsóbua sent an excuse for not coming as he promised. He called to-day with the letter from China. It set forth that the authorities there had consulted all their historical works, and could not find a precedent for an officer entering China by the Muang Lá road; that English vessels daily repaired to Canton, to which place I ought to have gone. It contained the same observation about no merchants having accompanied me, &c., as were urged here, but ended, I was told, by inviting our merchants to come up and trade, and that their own traders were at liberty to proceed to Moulmein if they wished it; that orders had been issued to the authorities at Kiang Húng, which place was a town of their own, to pay me every attention and settle all my business; that if I still persisted in coming up, it would be necessary to obtain the Emperor's sanction. The letter bore the impression of the seals of both the civil and military authorities at Puer, and the envelope, consisting of a large bag of coarse brown paper, was stamped with the same. I requested them to furnish me with a copy of the letter, which they did. I pointed out to them that I had come from the ruler of one province to that of another one; that the nearest and most direct road to it is that by which I had travelled; that the English, having establishments on the coast, are anxious to open a direct communication by land with Yunan; the person honoured with an embassy to the Emperor would not, of course, come by the road I have; that the rulers of Laos sent up their tribute by this route, being the most direct. I requested that they would offer the same explanations as I had already given for merchants not having accompanied me. The chiefs said all they could to reconcile me to my disappointment. With reference to my proceeding by Muang Lém, or returning by the road on the eastern bank of the Mé Khong, as proposed by me, the Minister told me it pained him much not to comply with my request; the reason given is, that he had received a letter from the Kiang Túng Tsóbua, entreating him to send me back by that place, as after my departure he had received orders from Moné to detain me until instructions could be received from Ava; but that I had been permitted to come on on the Tsóbua's responsibility, and if he, the Minister, did not now comply with his request, the Tsóbua would incur the displeasure of his Government; that he himself was under great personal obligations to the Tsóbua, who had once received and protected him against his enemies when they sought to take his life; that this letter had been forwarded to China, and he had, in reply, been directed to have me escorted, when I wished to return, by the same road as I had come up by. He therefore hoped, that I would not object to this, for he would be obliged, in that case, to apply again for instructions to China. I thought it advisable to waive the matter with a good grace, for there can be no doubt what would be the result of such reference.

I wished to start to-morrow, but am to dine at the palace to take leave of my new friends and receive the letter for the Commissioner in reply to the one brought up by me.

Silver and iron are found in the Kiang Húng territory, but the former so small in quantity that the mines are not worked. The Bau-dwen or silver mines in the Muang Lém territory are very productive: they are worked by Chinese who are generally employed by the villagers, who, in a body, pay 1 viss 12½ ticals, monthly, for the exclusive working of the mine, be the quantity obtained what it may. The mine is said to be very deep and running to a considerable distance under a hill; many deaths are caused by parts falling in. The ore is melted in the common Burmese mode: the white soft powdery substance found adhering to the cover of the furnace in which the ore is smelted, is collected and sold for three times its weight in silver; it is considered good for sore eyes. Lead is also obtained and is sent to China and is there made use of to cover houses; the price is 2½ ticals for 75 viss.

There are salt mines on the eastern side of the Mé Khong at Utai, and some other places. The duty on grain here is collected at the rate of three-quarters of a tical for 20 baskets of seed sown, by some accounts; others tell me that each cultivator pays three-quarters of a tical for whatever quantity he may sow. The transplanting system is adopted as at Kiang Túng. The above tax is paid to China. An officer comes round annually to look into the state of the crops, and make remissions if necessary. The petty Tsóbuas pay direct to China. The grain is chiefly grown in the Muang Khié, Muang Hám, Kiang Khieng, and Muang Hái districts.

The tea districts are Baula, Ingu, I'pung, and Ban-man (a village). These are on the eastern bank of the Mé Khong. On the western bank are Nam Nau (village), cultivated by the Ka kúis, Sen Len, Muang Phan, Muang Hái, Muang Hum, Kiang Tien, Ban Phit, Ban Wa, Muang Wing, Muang ong Luang, and Muang ong noi. This list was given me by a Burman, therefore not to be quite relied on, particularly the names.

Baula and I'pung have establishments of Chinese to prepare the tea. The produce of these districts is paid as a tax to China on the whole tea grown in the Kiang Húng territories; 560 mules' loads are sent from these two places. Of these, 25 loads are of the tender shoots, for the Emperor himself; great as the quantity is, the Minister and other Tsóbuas invariably tell me the same, and therefore I have no reason to doubt its correctness; the other estates are private property.

Captain McLeod's Journal.

The leaf is collected four times each year, the quantity lessening each time. It is made up into circular flat cakes, and the decoction is the common beverage, without sugar or milk, at all hours of the day; it is by no means badly flavoured, differing much from what I have before tasted at Ava; they pay no particular attention to its cultivation. The Talau Tsóbua sent to Muang Hái and procured some seed for me.

I visited the ferry across the Mé Khong above the town, and had great difficulty in getting a small canoe to cross over in; my own people were obliged to pull me over, the Shans being afraid to do so. I measured the river above its junction with the Mé Há, where it spreads out into a large sheet of water during the monsoon. The banks are high, but above this spot, as well as at and below the town, the river is bounded by hills confining the stream within a much narrower bed than where I crossed. The stream at this season is about 450 feet wide; from bank to bank it is about 1,620 feet; its rise during the freshes, judging from the high banks, must be at least 50 or 60 feet. Its bed is rocky; at one place the stream rushed down with considerable rapidity, but its average velocity I should think is about three miles an hour. It is not at any season fordable, and must be now more than 15 feet deep, but how much more I cannot say. There were several canoes here loading with paddy to be taken down to the town of Muang Hám, being the produce of Kiang Lám and the surrounding villages. The river is said to be navigable for canoes all the way to its mouth in the dry season, though there are rapids and falls in it; one particularly between the towns of Kiang Khieng and Kiang Thén; and one near Chandapuri. After passing Kiang Khieng it takes a south-westerly direction to below the town of Kiang Thén, where again it turns off to the south-eastward and flows on in that direction; no trade is at present carried on by the river, though before the destruction of Wintchiang and the reduction of Muang Luang Phaban to its present comparatively insignificant state, many boats passed up and down with goods. Gold is found in the sands of this river. No regular duty is taken from the sifters, who are generally Chinese, but a permit is given them, and they make a present according to their success.

English piece goods sell here at a trifle higher than at Kiang Túng, but at present there is little or no demand. No duty is taken here, but a merchant bringing up a large investment makes a few trifling presents. Birds' nests, sea slugs, sharks' fins, gold thread, and lace, and asafœtida will always pay the trader bringing them up well.

There is a bazar here, as at Kiang Túng, every fifth day, but at present it is thinly attended. Provisions of all sorts are cheap. A few plantain and pomegranate are the only fruit trees I have seen in the place. Beans, peas, radishes, are found in all their gardens.

The religion is the Buddhism of Ava; there are not, however, more than six monasteries in the place. Their religious buildings are similar to those at Zimmé, though these are attached to some pagoda (zedi).

The people are generally of a lighter olive colour than those about Kiang Túng; some are, however, very fair. They are of a middle stature. They partake much of the Tartar countenance; many of the chiefs, indeed, are descendants of Chinese parents either on the father's or mother's side. The chief's dress, on particular occasions, is entirely Chinese, the upper garment of silk, worked and ornamented with various figures and devices in gold and silk, reaching the ground, with a conical light hat with the button of rank on it, shoes, &c. The hair being permitted to grow long behind, is plaited into a tail. At other times they are habited in a mixture of Chinese and Shan dresses; sometimes wearing turbans (with the hair confined under it) of dark blue cloth, with a fringe of gold thread at the end, which goes round their head two or three times. They wear their shoes on all occasions, but avoid treading on a carpet with them on. The only ornaments they use are earrings, and a pair of plain gold bangles. The common people dress like the Shans, with trowsers, substituting the Chinese thick or fur jackets for the common glazed and quilted one. Their hair is worn after the Burmese fashion, with a goung boung either of white muslin or a handkerchief. The chiefs do not puncture or tattoo themselves, though the common people do. Tobacco is smoked in small pipes, and though they chew betel, it is not to excess, and their teeth are generally white. This partial abstinence arises perhaps from the scarcity of the areca in these territories. Muang Hám, on the Mé Khong, is the only place where the nut grows, and the town is described as being surrounded by this palm.

The women are short and rather fair, but not so much as I expected to find them. They are of a middle stature, and dress like the women at Kiang Túng, with jackets like the Burmans, but, on great occasions, with long ones more in the Chinese style. I saw very few of them about the place, and never those of the chiefs when visiting at their houses. Many have been sent to different towns to be out of the way at present. They wear turbans of the same materials as the men, the ends falling on their neck behind.

There are several Chinese women here who have been clandestinely brought out of their country. Some of them came to see me, and the only thing remarkable was their insisting on prostrating themselves, with their heads touching the ground, three or four times, and standing with their arms crossed in a most respectful manner, and their deformed small feet.

The territory of Kiang Húng is bounded to the south, on the western bank of the Mé Khong, by those of Kiang Khieng and Muang Niong; to the southward and westward by those of Kiang Túng and Muang Lém; to the north-west by that of Muang Lém and the wild Ka kúis; to the northward by the Province of Yunan, and to the eastward by Tonkin and the Cochin China territories; to the southward by Laos, or the territories of

Captain McLeod's Journal.

of Muang Luang Phaban and Muang Nan. The Mé Khong flows through the length of it, and it is watered by numerous other streams of considerable size, all falling into that river.

The town, when fully occupied, may contain about 400 houses, but not above 250 now. It stands in about 21° 58′ north latitude, and 100° 39′ east longitude. Water boils at 210° Fahrenheit. The 12 Tsobuaships under it are:—

Muang Khié „ Lóng „ Kheng	On the western bank of the Mé Khong.
Kiang Khieng Muang Phung „ La „ Lá (Esmok) „ Hám Baula Luang Muang Ú Kiang, or Chin Tong Muang Hing	On the eastern bank of the Mé Khong.

This list was given me by the Muang Lóng Tsóbua; it varies with respect to one or two places from that given me by others, still, he being an officer of rank, I have taken his list. It is, however, worthy of notice, that none of the parties could give the names off-hand.

The tribute to China amounts to 65½ viss of silver annually, I am told, besides grain and the tea.

To Ava each petty Tsóbua triennially presents,

A gold cup, weighing	2½ ticals.
Tinsel cloth, each	1 piece.
Silk cloth, each	1 „
Shoes, each	1 pair.
Salt	1 cake.
Tea	1 viss.
Candles covered with gold leaf	1 viss.
„ with silver leaf	1 viss.
„ with gold flowers	1 viss.
„ with silver flowers	1 viss.

The Tsen wi fuá presents the same, with the addition of two ponies and the gold cup, weighing 7½ ticals. Each of the petty Tsóbuas offers the same annually to the Tsen wi fuá as they do triennially to Ava.

The Muang Lóng Tsóbua told me that his share towards a tribute to China was 10 viss of silver; that each Tsóbua pays according to the extent of his territory. Each Tsóbua takes two baskets of rice on each pair of bullocks yoked to a plough, and receives about 200 viss of tea and cotton annually from his subjects collectively. They are not obliged to pay their tax to China in silver; it may be paid in anything they please; 30 viss of silver is paid to the Tsen wi fuá, and 12 men are supplied by each Tsóbua for constant service.

The silver current is of the best description, either the Chinese stamped square coin, or Bau silver, or the Burmese Yuetni.

Rupees are in great demand, chiefly for ornaments for children; they willingly give one tical of Bau for one rupee; the few I had are expended.

The contingent to be supplied by this state for service, should it be called for by the King of Ava, is 5,000 men. The Chinese do not require the provinces tributary to them to keep up any force.

25th March.—Mahá Dewi's brother, the Muang Phung Tsóbua, came this morning and endeavoured to persuade me to delay my departure until the 27th. I have already, to please them, put it off one day; I therefore pleaded the approach of the rains as my excuse for not remaining. The falls of rain here are very heavy and frequent during the south-west monsoon, as also at Kiang Túng, much more so than at Zimmé, I am told.

At about 12 I was requested to proceed to the palace, where I was received by all the Tsóbuas, in their full dress. On two tables covered with red cloth were laid out the presents, arranged so as to make a show.

The officers from Kiang Túng, Muang Lóng, and Kiang Khieng, being about to leave the place, presents for them were likewise laid out. Those for the former consisted of a spear cased in silver, a small silver cup, a piece of blue cotton cloth, and a thin sheet of silver plate stamped with Chinese characters, which was suspended on his breast. This last is an honorary distinction borrowed from the Chinese, and intended as a mark of favour and friendship. Each of the others had a silver cup or piece of cloth and the stamped silver silver conferred on him.

Captain McLeod's Journal.

To my writer, interpreter, and cooly goung, they gave a small silver chunam box, a piece of blue cloth, and a piece of the stamped silver. To me they presented, in the young Tsen wi fuá's name, a very handsome worked Chinese dress of ceremony, similar to those worn by themselves, a Chinese dress hat, and stamped piece of gold plate; and a silver cup, from Mahá Dewi, two pieces of tinsel gauze, a pony, and an old Shan hat. From themselves, a fur jacket of the huli skin, a silver cup, and some tea. They insisted upon my putting on the Chinese dress and suspending the gold plate on my breast, which I did, much to their satisfaction. The letter for the Commissioner was delivered to me, its contents having been explained in the first instance.

They assured me, that my visit has given them infinite pleasure, that they will use their best endeavours to continue in our friendship, which they have been long anxiously looking forward to cultivate; that they have a high respect and esteem for us, and as soon as they are assured of a passage being granted them through the Zimmé territories, they will send their merchants down; and pressed me to return next year myself, and to bring up some merchants with me; that every protection shall be afforded them, and if they wished to proceed to China, every assistance shall be rendered, and no duty be at any time levied on their goods. They said that they hoped I have no cause to disbelieve the sincerity of their professions; they candidly confessed that, on my first arrival, they viewed the object of my mission with suspicion, which they hoped I will forgive, considering it was the first time they had had any intercourse with a British officer; that my frequent and unreserved intercourse with them soon removed all unfavourable impressions, and they hoped that I am satisfied of the truth of this from the manner in which they have latterly communicated with me. In reply, I told them I feared that some persons had been taking advantage of their ignorance of the British character, to work upon their fears. I could only assure them, as I have often done before, that I have faithfully told them the object of my mission; that our only wish is to extend our commercial intercourse; that we wish to see all at peace and happy; that we have no desire to extend our territories, though at the same time we are ever prepared to punish those who dare to insult us in any way, but they may rest assured that they will never have cause to regret the kind reception they have given me, and the permission they have accorded our traders to visit them. When I spoke about the extension of our territories, they immediately called out, "We know that well, for you might have had Ava had you wished it, and you did not even retain what you had taken by force of arms." After some complimentary and friendly conversation, we sat down to dinner. Nothing particular occurred until the Tseitké's departure (for I stayed till dark, they insisting upon my sitting down again every time I attempted to move), when the Talau Tsóbua said to me, "From your remarks, I think you know who was the cause of the stiff reception we gave you at our first interview; you are right in your surmise; though the Tseitké is a bad man, he had adroitness enough to work on our credulity, propagating many absurd and untrue reports, and describing the character of the English different from what we had heard and have now seen; you were represented to be like needles, trying to push in everywhere. He is a mischievous old man, and has been the cause of all the disturbances and bloodshed here; had he done his duty even to his own king, without reference to the son of the man to whom he is under the greatest obligations, nothing would have occurred. Mahá Dewi and we are all glad that you have not called on him." He could not finish without venting his spleen, as usual, against the Burmans, and lauding the Chinese.

During the repast a civil message was brought from Mahá Dewi, requesting I would permit her to have a knife, fork, spoon, and wine-glass; never having before seen such things, she wishes to keep them as curiosities.

When I took my leave, all the party followed me to the door and regretted that I would not prolong my stay amongst them, and wished me a pleasant journey. Their conduct on all occasions forms a contrast to what might be looked for from Burmans under similar circumstances; the aim of the latter is to treat strangers, whether equals, or even superiors, if they will permit it, with marked indifference and slight; whereas with my new friends the reverse is the case, their politeness being extreme. When visiting the Tsóbuas they invariably meet me at the bottom of the steps, and insist upon following me up into their houses, and when leaving, often accompany me to the gate of their enclosures, in spite of my remonstrances.

I have given all the Tsóbuas here a small present, such as my stock would afford: fusils are what they most want; however, I had but one to spare, which I gave to the Muang Lóng Tsóbuas, having before presented one to the minister. He is considered the best Chinese scholar amongst them here. I much regret not having some real curiosities to give to some of them, especially the minister, for they show a greater desire to gain information than any people I have met with, and it would be a great pleasure to contribute towards increasing their desire for knowledge.

Having in my way up heard of the road direct from this to Muang Hám without passing through Muang Hái, which would save me at least one day, I requested to be permitted to proceed by it. The Kiang Túng officer with me assured me, that the authorities would not comply with my request, as it was not the high road for officers to travel by; that even the Muang Niong and Kiang Túng officers now here would not be permitted to proceed by it. However, the Talau Tsóbua obligingly directed me to be escorted by it, and sent orders to all the towns in the Kiang Húng jurisdiction to have everthing ready for me on my arrival, particularly the coolies, so that I might not be detained, and that it should be left entirely to myself at what places I halted, without reference to what is customary.

Before

Captain McLeod's Journal.

Before starting I received three commissions; one from Mahá Dewi and her sister-in-law, for spectacles with the strongest magnifying glasses, and the same from the Talau Tsóbua, with the addition of a compass, and some flower and garden seeds, he being fond of gardening.

I had asked the minister for the history of the place: on the first occasion he looked serious, and after considering a short time he asked me whether I wished he should lose his head; that there was but one copy, and that lodged in the palace, and though he afterwards promised to have extracts made for me from it, he never did so. I must, however, do him the justice to say, that I believe he did not intentionally disappoint me, but his duties are numerous, and require, particularly at this time, all his attention and leisure.

I quitted Kiang Húng well pleased altogether with the result of my sojourn, which at first appeared likely to have terminated abruptly before it had hardly commenced, when I should have quitted the place, leaving an unfavourable impression. I am satisfied now, that, so far from this being the case, the authorities are sincere in their professions of respect and goodwill towards us.

From Kiang Húng to Kiang Túng.

26th March.—From Kiang Húng towards Muang Hám. Direction, S. 65 W. Estimated distance, 14 miles. Time, 4h. 33 m.

Started at a-quarter past nine, being escorted for about two or three miles by three Myo tsas (officers having towns assigned to them, though not Tsóbuas), and one officer with 22 men, who proceed to Muang Hám with me, where they are to be relieved by a similar number.

The first part of the journey lay through the valley in front of Kiang Lam, having in it numerous villages, some large, with cultivation, and watered by the Nam Lóm, a stream of about 20 feet broad flowing from the hills. The largest village we passed through was Dón Lón, of about 30 houses, though there were larger ones seen. We passed many heads of fine cattle grazing on the plains. At most of the villages bazars were established, and tanks formed to preserve fish in, but all the villages, like the town, having no fruit or other trees. Reached the foot of the hills, and shortly after passed the large and deserted village of Nam Lóm, and commenced to ascend the hills gradually rising through a thin jungle mixed with small bamboos, and halted on the top of a hill, with a fine stream of water a little way down the side of it, on our left, flowing to the north-west. We passed a good many Chinese to-day. Those coming from the westward and southward do not travel through Muang Hái. 1.22. 2.40.

27th March.—To Muang Hám.

Directions, { S. 50 W. / S. 70 W. / W. 70 W. } Estimated distance, { 12 miles. / 7 „ / 5 „ } Time, { 3h. 54m. / 2h. 29m. / 1h. 40m. }

We continued to ascend from the time of starting, and after surmounting a steep zig-zag ascent reached the highest point of the hills in this line, with higher ones, however, ranging on both sides; we then commenced to descend. On the sides of the ranges we saw many neat Ka kúa villages, consisting of 20 or 30 houses, but without any trees about them. Having reached the first narrow valley, with a fine stream running through it to the north-west and shaded by trees, we proceeded along it, and then came upon fields belonging to the Ka kúas on the hills, which extended to the village of Nóng Lóng. From this the streams flow to the southward and westward; the chief one is the Nam Hám, which we frequently crossed, the road running over low but steep hills and reached the valley of Muang Hám, which is watered by above stream. This was a long march; some of the coolies were 11 hours altogether on the road. We ought yesterday to have come further than we did, as we passed many halting places, and the village of Nóng Lóng, all having abundance of water. The distance from Kiang Húng to Muang Hám by the road we have come is shorter than by Muang Hái, but it is more hilly. The Chinese prefer it, having more places to encamp on, and more pasture for their mules. 1.16. 1.44. 3.29. 3.54.

The Tsóbua, who had left Kiang Húng six days before me, was absent on a hunting excursion; notice of my approach had only been received last night, but he sent me a message promising to be in the next day, if I would halt and stay with him a day or two.

Some men originally from this place, but now residing at Labong, are here; they followed Puniah Pap, and having relations here came on; though very anxious to return with me, they are waiting for something being made up by the Tsóbua for his sisters, who are with the Chow Raja; but at Labong they were seized and carried away by the Siamese Shans many years ago.

28th March.—From Muang Hám to Muang Phang. Estimated distance, 19 miles. Time, 6h. 3m.

Having reached the foot of the hills, began to ascend them, and attained the place where the latitude was taken in going; after which the descent commenced, and continued with little 1.27. 2.28.

Captain M^cLeod's Journal.

little interruption, though very gradual, until we reached the top of a very steep hill, from which the fall for a great distance was very great.

Passed some pine to-day, but at no height. I have observed that this tree does not always grow on the most elevated spots; it appears to depend more on soil, being generally found where the earth is of a whitish clay mixed with gravel. As usual, passed a number of Chinese on the march, particularly parties with cloths and cotton. In the evening, the head men of the place came to pay me their respects, and were anxious to know the cause of my not having gone on to China.

At this place, there are some Chinese who gain their livelihood by distilling spirits and carrying it to the Ka kúa and other villages. Coolie hire from this to Muang Húng is three quarters of a tical; to Talau the same; to Kiang Túng three and a-half ticals for Shans, but for Kadams, &c., less.

29th March.—From Muang Phang to Muang La. Estimated distance, 10 miles.
Time, 5h. 8m.

4.14. Started early; having reached Talau, breakfasted there. A great deal of the ground about this has been laid out in tobacco plantations since we passed up.

Not being expected until to-morrow, no coolies had been collected; however, to my surprise, they brought a number of women to carry my things. I was very averse to make use of them; they, however, laughed at my scruples, and told me they were generally employed carrying loads and baggage for the officers of Government passing through. They certainly marched off with mine as if they enjoyed it. They had only to carry them to Muang La, about three miles; the men also were away from this, as at the other place, as I was not expected so soon; I could not get any coolies, so was obliged to halt.

30th March.—From Muang La to Ban Tapin. Estimated distance, 24 miles.
Time 8h. 29m.

3.50. We breakfasted at the village of Ban Kap, or Muang Ma, and had the coolies who had accompanied us from Muang La relieved. To prevent any delay here, I desired the Kiang Túng officer with me to write off last evening to the head man here to have the coolies ready; though the note only arrived this morning, I found the old man had exerted himself, and had all prepared for me, he himself waiting to receive me with abundance of provisions. He was very inquisitive to know the cause of my not having proceeded to China. I told him that the lateness of the season, and the authorities having complied with our wishes respecting our traders, had caused my speedy return. He does not appear to be a friend of the Talau Tsóbua; he attributes all the bloodshed at Kiang Húng to his ambition, and was anxious to hear the particulars of the occurrences there. The villages in this valley have more fruit-trees than were seen at any others, for we passed numbers of fine mangoe and tamarind trees. Some Chinese have a village of their own near this, and make a good deal of sugar from the cane grown in the neighbourhood. The doctor with whom I had entered into an agreement about the sick Chinaman came to tell me that his patient died the day after our departure, and that he had had him decently buried, and now brought the balance of the money I gave him to return to me; he was not a little delighted on being told to keep it.

6.6. We intended to have made the Pang mé foi plain our halting place, but the gadflies were so troublesome, and the ponies became so unmanageable, that we found it necessary to push on. On the road, even, I was obliged to beat them off with small branches of shrubs, until my arms really ached.

31st March.—From Ban Tapin to Kiang Túng. Estimated distance, 23 miles.
Time, 7h. 27m.

1.33. Started at three o'clock. Though the moon was up, the hills and trees prevented our benefiting by her light to reach the first zeat, where we sat down to enjoy a blazing fire

3.3. some traveller had just quitted. We breakfasted at the second zeat; here a small party of Shans passed us from Ava and Moné, with a few piece goods: they had seen

4.22. Dr. Richardson at the latter place, but could not give any particular information respecting his movements. After passing the third zeat, we halted at the village of Pakhan, the heat being great, until the cool of evening, and surprised everybody by making our appearance in town. I sent to inform the minister of my arrival; he was, however, out in the country with his wife.

In the evening an old Burmese woman, who is a favourite in the place, came to tell me that Dr. Richardson was detained at Moné for orders from Ava, and appeared mysterious respecting some communication received concerning myself, which she said I would hear in due time. This old woman, when I was here before, appeared to take great interest in the success of my mission, and in the impression made by me on the people here; she frequently brought me the news from the palace, and was anxious I should not call on any officers of Government. Hearing that I had paid the minister a visit, she came and entreated that I would not demean myself by calling on any of the others; that I must keep up my dignity; that I was only to go to the Tsóbua, for though Puniah Wang never called on any officers deputed here by other states, that he had on me, to show how highly

highly they thought of me; that by making myself too common the Tsóbua's son would not visit me.

A criminal was sentenced to be executed, having committed numerous thefts and cruelties; the priests, headed by Tsóbua's youngest son, rescued him at the gate, though not without giving many hard blows; the young prince's presence prevented the jailors and their gang exerting themselves: the culprit was taken to a monastery, his head shaved, and he himself admitted into the priesthood, so that he is now exempt from all punishment.

1st April.—Puniah Wang returned in the evening; he rode in without any parade, his wife, dressed like a common woman, with a large Chinese hat, following him on foot. He came to see me after it was dark by himself. He told me of the letter from Moné, which he promised to show me; also a second one, finding fault with the Tsóbua for not forwarding a list of the presents made to him. They have since furnished one, he told me, but by no means a correct one, and that the Tsóbua had sent some of the things to the king. A list of the presents taken to Moné by Dr. Richardson, and copy of the Commissioner's letter, had been sent here. He likewise mentioned that there was a report of some quarrel or fight between the Prince of Tharawaddi and the Mengthagyi, and of the King's death, but supposed it merely originated in the known feeling of dislike existing between the two, and the general opinion that the latter had some views on the throne. There is likewise a report of some British officer having arrived at Tsagain, opposite Ava, with a large train of followers.

The Chinamen who had gone to Zimmé, and whom I had met on the road, returned yesterday; they came to see me, and told me that they had purchased betel nut there, but that the Chou Raja Wun would not allow them to carry it to Kiang Túng, saying that the subjects of Ava should never have their wants supplied from that place, and that they were determined to prevent all communication between the two places; that his younger brother should be sent to establish chokies on all the roads leading to Kiang Túng, on the Mé Khók, and seize all persons found trading. Several of the chiefs had endeavoured to obtain permission for them to take the nuts away, as they had purchased them; but the Chou Raja Wun was inexorable. They moreover added, the chiefs of Zimmé were very much afraid of the English; that all the Chinese merchants looked to us to have the road thrown open. They had been considerable losers by the journey, but the Tsóbua here had sent for them to make up their losses.

Puniah Wang, as usual, is very bitter against the Zimmé people, and he to-day spoke of the Burmans in no very respectful terms. He told me a nephew of Tsóbua's had come from Zimmé to see his uncle by stealth; that it would be known there, and it was the Tsóbua's intention to beg of me to use my influence to prevent his being punished. He doubted whether the Tsóbua would allow him to return until he is assured of it. I pointed out to the Puniah how unfortunate it was that such a thing should occur at this time; that I much feared the Zimmé people would become very suspicious, and make it an excuse for not throwing open the road to us; that I strongly advised the nephew's immediate return; he might get back without its being known that he had been here, and I could then, if he was found out, have better grounds for asking pardon for him.

Some of the traders I left here have been quarrelling amongst themselves, and, I fear, giving the officers no very good opinion of their respectability. Many have returned to Moulmein, some are to accompany me, and some to remain. I have induced one party to proceed to Moné, or along the right bank of the Salween to the Kareng-ni country. Some, without reason, complained to me that they have been prevented from going with their goods to the surrounding villages; this Puniah Wang denies, and I discovered afterwards that none had applied for permission, and gave me as their reason for not doing so, and for complaining without cause, that they had heard they would not be permitted to proceed. It is a great pity that more respectable persons do not come up both to Zimmé and this place; the men who now carry on the trade are, generally speaking, a vile set, and a disgrace to the British name.

2nd April.—I went to call on the minister early in the morning; he showed me the letters from Moné in Burmese, one directing that I might be detained here, and on no account be permitted to proceed, but that, if I persisted in going on, a list of my followers and servants was to be taken, and no assistance whatever given me. The other was about the presents. I had left my elephants here in hopes of meeting a sale for them, having at Labong heard there was always a great demand for them; however, the visit of the Zimmé people had overstocked the market. Puniah Wang wishes for a female one, and offers in exchange a pony he had refused 300 ticals for, yet he would not purchase the animal for 200 ticals from me.

Having procured rice, &c., for the march, the elephants left to-day. I made my arrangements to meet them on the road and to replenish my stock of rice; they will then proceed to Zimmé by easy stages.

Kiang Then, or Kiang Tsen, is described as having been formerly a large and flourishing place; that the lands about it are more fertile than elsewhere; the old town has a number of fine fruit trees about it. It is on the western bank of the Mé Khong. Opposite to it is a very fine large island. There is near it, too, a very large lake, which is never dry, and which supplies the people around with fish.

Called on the Tsóbua, who was very kind in his expressions towards me. I told him that I much regretted the steps he had taken to oblige me to return here, as I had fully

Captain McLeod's Journal.

explained to him before my departure my motives for wishing to return by another road to Zimmé, or to proceed towards Ava. He seemed hurt at my supposing he had done so, either from unfriendly motives or of his own accord. I relieved him by telling him I was acquainted with the particulars. He said he thought that I was making too much of the authorities at Zimmé; that they and the Siamese were much afraid of us, and if we insisted upon anything they must give in to us; that if we choose to do it ourselves or join him, we should easily compel them to grant our wishes about the roads. I told him our object is not war, though we are powerful, and speedily took vengeance on any who dare to annoy us; yet we wish to be at peace with all our neighbours, and gain privileges from their friendship and not by arms. He asked me, whether in case he called upon the English at any time, for he evidently saw the Zimmé people were seeking a quarrel, whether we would assist him. I informed him that my mission was purely of a commercial character, and I had no authority to entertain questions like that put by him, and that all I can do is, to make the Commissioner in the provinces acquainted with what had passed. He stated that the reason he is so urgent about the Zimmé road is the good of his country, and that he might hear something of his relatives in his old age; and that as we are anxious for a free communication with him, and with Kiang Húng, we are bound to do something to coerce the Zimmé authorities. He spoke of the Yandabo treaty protecting the Siamese; that if the Burmese Shans attacked them we should assist them, whereas they are at liberty to molest and carry away the inhabitants of the Burmese places with impunity. I assured him, that so far from our countenancing their aggressions, we regretted to hear that the Siamese were inclined to forget the blessing of peace which they had so long enjoyed, and which the chiefs invariably expressed their desire should continue. After making inquiries about my journey, reception, &c., at Kiang Húng, he spoke about his nephew (mentioned before by Puniah Wang); I told him that my interposition, I was fearful, might be productive of mischief to him, and interfere with our proposal about the road. It was, however, finally agreed that I was not to mention having seen his nephew until the Chou Hona returned from Bankok, and then to consult with his brothers at Zimmé, and to act as I thought prudent. I, however, again strongly urged his nephew's return, but to no purpose. A Burman dinner was served up for myself and all the officers; and I was obliged to partake of something. Neither the Tsóbua nor his sons touched anything.

Received a letter from Dr. Richardson at Moné, dated 6th of March; it was brought by some of the Tseitké's people. At about nine o'clock at night the Puniah, who had recognised me on my arrival, came to me with a message from the Tsóbua, saying he wished to see me that night privately, as he had something particular to communicate; I accordingly proceeded to the palace accompanied by my writer and interpreter. We were taken to the back of the building, where all was still; after passing through many dark passages and rooms, we found ourselves at the back of the hall of audience.

Here were the Tsóbua, his eldest son, and Puniah Wang. The apartment was only lighted up by one wretched oil light. The object of this secret interview was to renew the propositions of the morning in more distinct terms, he being fearful then of being too explicit. He was anxious to form an alliance, both offensive and defensive, that we should assist him when called upon, and we were to consider his country as ours, and he would bind himself faithfully to obey us in all matters. What I have mentioned will suffice to show the drift of the conference, which lasted a considerable time. He was quite prepared to place himself under our protection, but I did not countenance the proposal, and was cautious not to give him any encouragement or to commit myself in any way. He spoke in the warmest terms of gratitude of the King, but he has a strong dislike to the Mengthagyi and others at Ava. Before my departure the Tsóbua called Puniah Wang, and whispered something to him, and then walked to a large chest, and taking from it a sword with a golden scabbard, gave it into his son's hands to present to me. The Tósbua, addressing me, said that it was a Shan custom, when a friendship, such as had been formed between us existed, to exchange arms in testimony of the sincerity of each party; he hoped, therefore, that I would accept the sword and keep secret what had passed between us. The only thing I could offer in return was a double-barrel pistol of curious workmanship, and which I knew he was anxious to obtain; I accordingly told him that I would deliver it to Puniah Wang. On my way home I observed to the Puniah that the Tsóbua appeared to be greatly attached to the Burmans; he replied that he was much so to the King, but that his Majesty is now considered as not taking any interest in the Shan States, and the consequence is, that the Burmese Tseitkés lord it over them.*

3rd April.—I went to-day, by appointment, to take leave of the Tsóbua, and receive the letter for the Commissioner. The visit was a very long one, but during it nothing particular occurred; he pressed me to prolong my stay, and spoke about the Zimmé chokies, and his intention to send a party to reconnoitre.

He apologized for the paltriness of the presents that he had made, which were so far under the value of those he had received, that he was ashamed to offer them; but his country did not produce anything worth our acceptance, and we did not require gold or silver,

* Is it not possible that the intelligence either of the Prince of Tharawaddi's success, or of his having set up the standard of revolt, might have reached this, and, though I was kept ignorant of it, might have led the Tsóbua to think of throwing off the Burmese yoke, from which he derives no benefit, and seeking our alliance and protection.

Captain McLeod's Journal.

silver, of which we had abundance. I assured him that the costliness of a present itself weighed little in our estimation; that the friendship and regard he has professed for us, as well as the attention I have received, and the encouragement promised to our traders, exceeded in value any presents he could possibly offer us. The presents from the Tsóbua consisted of a sword in a silver scabbard, two silver cups, two pieces of Chinese tinsel gauze, and a fine pony. His eldest son presented a sword like the other, and a silver cup; a nephew of his, and younger son, each a cup. To my writer was given a sword like the above ones, and to each of my followers, a small Shan box, of the value of about four annas. I reminded him of the historical extracts he had promised me, which were brought and delivered to me, written in Shan.†

He asked me to procure for him a four-barrel gun, a watch, compass, and 12 English sword blades, that would cut through a musket at a blow! His eldest son wanted a double-barrel gun and watch for himself, a pair of pistols for his brother, and Puniah Wang a compass and thermometer. In the evening I went to see Puniah Wang; he spoke of sending a party with me to see where the Siamese chokies were placed; the party is to consist of a few Burmans; otherwise, he said, they would suspect at Ava that they have been intriguing with us and the Siamese. He again asked for the elephant, she had started with the others; he was so urgent that I agreed to exchange her, but he is to send a person with me to take charge of her, when we come up with her. The Chinaman whom I hired at Zimmé, and left here when I proceeded to Kiung Húng, I intended should return with my elephants; but after my departure a relation of his from China was beaten by some Shans and died in consequence; he is to waiting for the brother of the deceased to prosecute the assailants.

From Kiang Túng to Zimmé.

4th April.—From Kiang Túng to the Foot of the First Range of Hills.
Estimated Distance, 11 miles Time, 3 h. 35 m.

I was delayed by receiving a message from the Tsóbua, that he had directed all the officers to go and escort me out of the town. Knowing well that this was only done thinking thereby to please me, and show his respect for us, but that by it, he ran some chance of incurring the displeasure of the Burmans, I remonstrated, especially as I wished myself to escape the show. After some demur, he only insisted upon four or five of them accompanying me some miles; this I could not prevent, say what I would.

A party of one officer and 10 men are to accompany me to Hái Tái. I did not wish them to go with me into the Zimmé territories as was proposed. The Tsóbua apologized for sending so small a party, but the Moné letter was the cause; in fact, I suspect that they reported that I would not, either in going or returning, permit myself to be detained.

Having passed through the village Muang Khien, we halted on the plain at the foot of the first range of hills. 2.14.

5th April.—From the Foot of the First Range of Hills to that of the Second Range.
Estimated Distance, 16½ miles. Time, 5 h. 14 m.

Though the coolies and the people were called at half-past three to cook and eat their breakfasts, we did not get off until near six. We passed through the village of Muang Pák, and continued our march to the foot of the high range, when we halted. We met some Shans, who were going to town with salt and pickled fish caught in the Mé Het; these men certainly lead a most wandering life to obtain their livelihood. 3.44.

On arriving at Muang Pák, to my surprise, the man who had brought Puniah Wang's pony to be changed for the elephant, said he had been directed to return from that place either with the elephant or pony. It had been settled that he was to have accompanied me to Hái Tái, for we knew well that I should not overtake the elephants before. I suspect the man must have made some mistake, confounding the Chokey village for the frontier one, but he was very positive; I, therefore, allowed him to return, giving him a note to his master on the subject.

The jungle in many places had been burnt.

We met, in spite of the Zimmé chokies being established, a party of people from Nón-quan with eight elephants, taking betel-nut to Kiang Túng. They are followers of the Chou Hona of Labong, and did not fall in with the Chou Raja Wun's people. At the

† These, I find, are most meagre respecting Kiang Túng itself, but contain much of the founding, &c. of the States of Zimmé, Labong, &c.

Captain McLeod's Journal.

the halting place we met some more people going to Muang Paniak; a party at this place, two days before, lost a bullock by a tiger, we were consequently obliged to tie up the ponies a little after dark.

7th April.—From the Mé Nium to Hái Tái. Estimated Distance, 17 miles. Time, 5 h. 23 m.

All the swamps we crossed in going are now dry.

From the Mé Oú to the Mé Hem, an old halting place	0	40
From the Mé Hem to halting place - - - -	1	7

The road has become so much drier, that our marches are performed with more expedition than in going. We are enabled, having only ponies and no elephants with us, to start at or before day-light every morning. The place we have stopped at is not the one I intended to have halted at; I wished to have gone on, but having remained behind to talk to some people who had accompanied Puniah Pap, the Zimmé officer, on his return, I found on reaching this place, my tent pitched, and the elephants here.

The people I met were taking back on their elephants betel nut and cocoa nuts, presents from the Tsóbua's brothers, made when the officer from Kiang Túng visited Zimmé, and all of which he could not carry away, but left some at the frontier village.

9th April.—From the halting place in the Hills to the Nam Tsón Nák.

From Mé Má to Nam Tsón Nák - - - -	0	10

Having yesterday taken rice from the elephants I left a party with them to come on slowly, the weather being unfavourable and little or no forage procurable.

At the Mé Má we came upon a party of hunters; they had been very successful in shooting deer, &c., whose flesh they had dried, and in catching fish in the lake near Kiang-Then; one of the party had, in the morning, shot a large tiger on the road near the tank, which was inclined to dispute his passage, though mounted on an elephant.

10th April.—From the Nam Tsón Nák to our old encamping ground on the Hué Lük.

The heat is becoming very oppressive; the trees are nearly all leafless, and afford no shade; they have become more so since we passed the hills. I therefore make two marches in the day, which I am enabled to do having no elephants with me.

The swamps are all dry; also some of the streams we met in going. The Hue Lük is perfectly so. We are obliged to dig for water in its bed. Some of my people lost their way; the footpaths are so numerous over the plains (made by the hunters) that it is with difficulty we know the right one; they did not get in till dark.

11th April.—From the Hué Lük to the Mé Kón.

The

Captain McLeod's Journal.

The grass on the plains has been burnt, and the gad-flies are more troublesome than ever. The pony the Kiang Tsóbua sent is so fat and consequently not in marching trim, that he was with difficulty driven along to.day, and could not stand when he came to the halting place.

Before reaching the Mé Khók the prints of tigers were as numerous as they were when I passed before. As my baggage ponies came along, the people with them saw three of these beasts moving about.

12th April.—From the Mé Kón to Pák Bóng.

From the Mé Tsakón to Pák Bóng - - - - -	2	53

Puniah Pap, the officer who has charge of this frontier, has returned from Kiang Túng. Though he did not call on me when there, he did so shortly after my arrival at his village. He is much dissatisfied with the authorities at Zimmé. From him I obtained an insight into their sentiments. He confirms the account I had heard regarding the Chou Rajá Wun's fruitless advance towards the Burmese frontiers, and the story of the Mok mái officer, who, he says, is still in favour, and with the Chou Hona at Bankok, though a worthless, intriguing fellow. Some of the men, who had been sent to Kaintú and Mok mái as spies, were seized and imprisoned and the circumstance reported to Ava. They were ordered to be put to death; but the king, on hearing all the particulars connected with the affair, directed their release. He further informs me that he narrowly watched the officers while at Kiang Túng, and had spies of his own about the place; he is satisfied that they are all really amicably disposed, and that their only object is to open a free intercourse between the two countries and with us, and to see their relatives. The Chou Raja Wun is said to be much annoyed at his having gone in to Kiang Túng; and he is in a sad fright that they will punish him, though he had gone there from the best of motives. It will, however, be useless, he said, to make them acquainted with the true state of matters there, for they will not believe him unless he echoes the same story as Mok mái officer, or something like it.

He once received positive directions not to permit any person to pass the frontiers for the purpose of trading with Kiang Túng. He, however, could not prevent a number of people doing so, as there are numerous paths branching off before reaching his village. Many of the people also pass on the plea of hunting, but find their way to that place. That many of the Chou Hona's people went with permission, he supposes, from that officer (for with them he dares not interfere), but he sent back some of the Labong chief's people, who returned again with a note intimating, that if the articles were spoilt, he should be held responsible. This communication was forwarded to Zimmé, when he was directed to allow them to pass. The ex-Tsóbua of Kiang Túng at Zimmé once sent a few articles for sale; they were seized and confiscated. He speaks in the highest terms of Chou Maha Tep and his brother, as also of the Lagong and Labong chiefs, and attributes all the difficulty about the road to the Chou Hona and Chou Raja Wun. He likewise told me that these officers and some others made a stir about the Labong people opening a communication and trading with us at first, and would not allow their own people to sell their cattle, and it was not until the Labong and Lagong people had made small fortunes, and laughed at the Zimméers, that it was permitted; though at first, not generally, but only amongst the chiefs, for in reality the poor people are still prohibited from trading in cattle. They would not sanction the Kiang Túng officer purchasing any elephants, but bought up the best themselves, with the intention of again disposing of them to advantage; but the Lagong and Labong chiefs, hearing of it, were much displeased, and sent over to tell the visitors that if they required any, to come to them, and they accordingly supplied them, to the annoyance of the Chou Hona of Zimmé.

The road from Pang-ma-foi has been blocked up, by orders from Zimmé. The Chou Raja Wun is going to celebrate, with a great feast, the induction of his son into the priesthood, and it is to provide for this fête that his brother has been sent out hunting, but at the same time to be on the look-out for any unfortunate trader transgressing, to enrich himself with the spoils.

I left the pony given me by the Kiang Tung Tsóbua here (it being unable to march) in the charge of three men, with directions to come on in the cool of the day, by short marches, to Zimmé, when it is well enough.

13th April.—From Pák Bóng to the Mé Phit old halting place.

The villagers flocked round me to know the result of my mission. They are greatly interested in the matter, participating greatly in the betel-nut trade, &c. Some of their relations are still absent at Kiang Túng on a trading expedition. The village belongs to both

Captain McLeod's Journal.

both Zimmé and Labong. The people from the latter are followers of the Chou Raja But. They were brought away many years ago from Muang Khók and Muang Tsat, which were originally peopled by settlers from Thaini.

The report is that the Chou Hona of both Labong and Lagong are to be raised to the vacant Tsóbuaships, and the latter, who is said to be a very clever, good man, is to have the supreme control over the three provinces.

14th April.—From Ban Mé Phit to Ban Tanko.

	H.	M.
Estimated distance, 24 miles; time - - - -	7	42
From Mé Phit to Nónquan - - - - -	1	31
From Nónquan to Teng Dám - - - - -	1	47
From Teng Dám to the Mé Takau - - - -	1	37
From the Mé Takau to the village of Takau - -	0	21
From the village of Takau to the village of Tanko -	2	26

We lost the road between Nónquan and Teng Dám, though the one we followed was very good, and passed through one or two villages. From the village of Takau to that of Tanko, we came by a road running to the westward of the one we travelled by in going. I do not consider it so good as the other, passing over steeper hills, and crossing the Mé Láu often. We did not travel by it before, as the river was too deep in some places to walk through; it is, however, considered the shorter of the two.

The same anxiety was shown at this village as at Mé Phit respecting the result of my mission.

15th April.—From Ban Tanko to near the hot springs.

	H.	M.
Estimated distance, 22 miles; time - - - -	7	14
From Tanko to Muang Fue Hái - - - -	1	58
From Fue Hái to old halting-place at Ban Kai Nón Noi - - - - - - - - - -	2	56
From old halting-place to near hot spring - - -	2	20

The face of the country is so changed, that I am at a loss sometimes about the road. The trees are leafless, the long grass on the plains burnt, and the jungle in some places cut down for cultivation, with numerous newly trodden paths, either made by hunters or by villagers to get at the places temporarily cultivated by them; all the swamps are likewise dry.

Between Fue Hái and the deserted village of Ban Kai Nón Noi, on the Mé Láu, and as well as between that and the place where we halted in the valley of the Mé Láu, at a short distance from the hot springs, we missed the main road, but came by others equally good, though somewhat longer.

The tigers between Fue Hái and this have become very bold and troublesome; the Chinese who came from Kiang Túng lost, near Ban Kai Nón Noi, four ponies and two men killed by these animals in one night. The Shans say that two years ago the roads were so infested by them, that travellers were always obliged to sleep on trees; since that they have been tolerably free from them, but they are again becoming troublesome.

16th April.—From near the hot springs to beyond Ban Indekali.

	H.	M.
Estimated distance, 20 miles; time - - - - -	6	25
To the hot springs from halting place - - - - -	0	12
From the hot springs to Pang Mung - - - - -	4	7
From Pang Mung to Ban Indekali - - - - -	1	21
From Ban Indekali to halting place - - - - -	0	45

The hot springs were as unapproachable as before, but the water in the Mé Láu, close to it, having fallen considerably, some warm water was flowing from one side from under some rocks, which were, when we passed up, under water. This stream was filled with dead insects; the water had a greenish substance floating on it. The thermometer in the hottest spring rose to 150° Fahrenheit.

17th April.—From near Ban Indekali to the bank of the Mé Quan.

	H.	M.
Estimated distance, 24 miles; time - - - - -	7	34
From the halting place to old halting place on the Mé Lai -	2	21
From the Mé Lai to Ban Muang Lón - - - - -	3	2
From Ban Muang Lón to the Mé Quan - - - -	2	11

From Ban Muang Lón we quitted the pathway by which we went, and came by the high road. The country flat, with numerous villages and fields in all directions.

We stopped on the left bank of the Mé Quan, not at a village, in consequence of there being good pasture for the ponies where we are.

18th

Captain McLeod's Journal.

18th April.—From the left bank of the Mé Quan to Zimmé.

	H.	M.
Estimated distance, 4 miles; time - - - - -	1	15

The country the same as that near Zimmé, described on going; the road a good cart road, but over fields. We did not pass through any village, though we skirted a great many.

The authorities here were surprised to hear of my arrival; they supposed I would have monsooned at Kiang Túng, for, before my departure, they said it would be impossible for me to reach Muang Lá and return before the rains.

I sent the interpreter to the Chou Raja Wun to inform him of my arrival; he of his own accord went to the Court, when the officers were very inquisitive regarding the presents made and received by me, but nothing else.

The Chou Raja Wun sent his Puniah with some rice, &c., with many kind inquiries about my health.

Some merchants who had followed me from Moulmein, and arrived here about a month after my departure, applied for permission to follow me to Kiang Túng; the Chou Raja Wun refused them permission, but told them that the Dakhong road was open to them; he hinted that though he was afraid to give them leave, yet as their master was there, if they followed him, he could not prevent them. This was saying a great deal, and was tantamount to giving them permission. These men, however, delayed here to celebrate the Mohorum, and have arranged to start the day after to-morrow; my unexpected arrival will, of course, cause a change.

Great preparations are making for the Chou Hona's reception; he is expected in a week; and amongst others they are repairing the old zeat.

The thermometer in my tent at 12 to-day stood at 110°, and in the sun 128°.

19th April.—I have been fortunate in not having had any rain on my march; during the night we had a heavy fall, and again to-day. Having only the shell of a tent over me, I removed into the zeat, allowing the workmen, however, to continue their work. I called on the Chou Raja Wun to-day, and was very cordially received. I endeavoured to persuade him to allow the merchants who had come up after me to have the same advantage as their more lucky companions who had accompanied me. It was out of the question, he said, as he would, he was convinced, get into a scrape with the Chou Hona for even allowing me to go by Kiang Túng; he offered them passes and every assistance to go *viâ* Dakhong, and persisted in telling me that a note from the authorities here would secure them a free passage towards China. It was finally settled they should proceed by that route.

Fearing the officer who escorted me from this might incur the displeasure of the Chou Hona, I spoke about him to the Chou Raja Wun. The officer himself is absent in the country, and I can only find out that he was very well received by the Tsóbua, but not so by the Chou Raja Wun. He however promised that in case the Chou Hona should find fault, he would intercede for him. I explained my reason for having taken him on so far with me.

He asked me many questions regarding the Kiang Túng Tsóbua, the country, &c., all of which I answered without reserve, and took the opportunity of telling him, that I had attentively studied the object the Tsóbua had in sending the mission here, and that from the whole tenor of that chief's conversation with me, he might take my word for his intentions being purely amicable, without any desire to assist his relations to escape. He said that they have a certain hatred against the Burmans which they can never get over; and on my telling him that he ought not to view the inhabitants of Kiang Túng with that feeling, they being Shans, and more than two-thirds of the population of Zimmé being from those parts, who had voluntarily placed themselves under them, he declared that so long as they were under Ava, and bound to obey any orders received from thence, he can only look upon them as Burmans. His Puniah is as bitter against them as his master. He asked me whether I had observed many Zimméers at Kiang Túng. I endeavoured to avoid the question, but being pushed, for he said they were easily recognised by the size of their turbans (I suppose this question was put to discover something of the Tsóbua's nephew), I replied that during Paniah Pap's residence there, I had seen many, but that after my return my stay was so short, that I did not pay any attention to the people I met. I was pressed much to remain until the Chou Hona's arrival. I pretended that I had intended to go on, fearing the rains, but as they wished it, I would stop. I had, indeed, made up my mind to do so before, to receive a decisive answer about the roads from the Chou Hona.

The Chou Hona of Lagong has been appointed the Tsóbua of that place, and the Chou Raja Wun his successor. The Chou Hona of Labong, in like manner, is made Tsóbua of that place, and the Chou Raja But (the late Tsóbua's son) succeeds him. The Chou Raja Wun's elder brother, who has long been resident at Bankok in some office about the king, and was reported likely to have been promoted to the Labong Tsóbuaship, is to come up and reside here to assist the Chou Hona, who is to have the supreme control over all the states. On my quitting the Chou Raja Wun's house, a man followed me out, and said, "Why do you waste so much breath on them here about the roads; they have it not in their power to comply with your request? Go to Bankok and obtain permission, and stick the order up here; then let them refuse if they dare."

Captain McLeod's Journal.

The Chou Hona's son-in-law and one or two others called on me to-day.

The persons who disposed of the elephants to me entreated I would not say anything about the purchase of them unless questioned, and then to confirm what they had said.

20th April.—I was to have seen the Tsóbua to-day, but he sent early in the morning to say that he is ill and unable to sit up, and to request I would postpone my visit until the 22nd.

There is a report respecting Ava similar to what we heard at Kiang Túng. It is said to have been brought by some natives of India, but I cannot trace it to any person. One man, a Burman, declares he absolutely saw 300 men (European soldiers and sepoys) cross the Salween at Moulmein, on their march to Beleng towards Ava. The authorities here, during my long stay, frequently consulted me on this subject, but we never could distinctly trace how the report reached the place. There is no doubt that if we are led into a war with Ava, the Siamese Shans will take a more active part in the operations than they did in the last war.

There is a rumour that the Chou Hona, after quitting Bankok, had been recalled, in consequence of two English ships having arrived there to demand the Talain refugees; this appears an endless source of fear.

The supply of cattle at Moulmein this year will be very great; many men who have been in the contractor's debt are now mustering a few rupees to pay him, and proceeding there with large herds of cattle.

A merchant of ours was robbed here about two years and a half ago of about 200 ticals. Though there were many suspicious circumstances connected with the affair, he has never been able to have any inquiry instituted, the suspected parties being connected with people of influence. They at first pretended to doubt his having so much money, but this having been satisfactorily proved, they put him off by frivolous excuses for a long time, and finally demanded either security or a deposit of 500 ticals, which will be the amount of the remuneration to the suspected person, whom he will be obliged directly to accuse, and the expenses of the court, should he fail in substantiating his charge.

21st April.—Closed my packets for Moulmein, intending to send my writer on with the ponies, and myself to follow with the elephants, as the rains will have set in before I can quit this.

22nd April.—During the night we had heavy rain and a thunderstorm, during which opportunity was taken to rob some of my followers of clothes, &c., to the value of about 70 rupees. I sent and had the circumstance reported, and furnished a list and description of the stolen property.

On my visiting the Tsóbua to-day, I was received in the outer hall of his house. The good old man inquired particularly respecting my health, and hoped that all my party had been well. After thanking him for his kind inquiries and spoken about the states visited by me, and of the great desire evinced by the chiefs and authorities of all to trade with his subjects and us, I mentioned that, agreeably to the permission given by him before my departure, some of our traders were about to proceed *viâ* Dakhong, and that I had an interview with the Chou Raja Wun on the subject, who had promised them every assistance. He made no reply, but some of the court Puniahs said, it was necessary to consult on the subject, which required six days, evidently putting me off until the Chou Hona's arrival, though they had not the candour to say so at once. On my remonstrating against their dilatory proceedings, not only now but when I was here before, and stating that they unnecessarily raised difficulties, they said that they could not do business like us. The Chou Raja Wun was not present; some of the officers, when asked by the Tsóbua, admitted that he had issued some orders to the effect stated by me, whilst others denied it. They then had the effrontery to deny that it had ever been agreed that the Dakhong road should be thrown open to us. I addressed myself to the Tsóbua, stating that I much regretted to see the spirit of opposition and duplicity which pervaded all their discussions and promises to me. That they were unbounded in their expressions of goodwill and friendship towards us, but their actions did not bear out their assertions. I complained of what had taken place relative to the purchase of the elephants, and about the letter dispatched after me respecting the road, and that the strongest proof of the truth of my assertion was their present denial of their having thrown open that road to our traders. I had reported it officially to the Commissioner and had already publicly thanked them for it, and if anything further was required as a proof of my not having made a mistake, it was the Chou Raja Wun, on the 19th, himself proposing that the men should go by that road. Under these circumstances, though I had fully intended to await the Chou Hona's arrival to have the point respecting the Kiang Túng road settled, when the officers denied one day what had been agreed to the day before, it was useless my remaining, and I should therefore quit the place the next day. The Tsóbua admitted that I was right about the road, but begged I would not for a trifle hastily disturb the existing friendship. The officers pretended to be quite in the dark about the story of the elephants, &c., and now endeavoured to conciliate me by making an apology, and saying that they did not like giving a pass to the merchants now, as the Chou Hona was so near, but did not intend to deny what had formerly taken place. I told them, that it would have been more becoming had they at once told me the real truth; for it was certainly far from our wishes that any person should get into disgrace on our account; besides I had heard

heard that the Chou Hona was coming up with particular orders from Bankok respecting the road. I thought I had said as much as was necessary to show them I would not be trifled with. We, however, parted as usual on good terms.

I sent to the Chou Raja Wun, who at once admitted the cause of their wishing to delay giving the pass, and begged I would not be annoyed.

23rd April.—My elephants arrived this day, having come faster than I had intended, but forage was latterly so scarce that they were obliged to push on. I have found it necessary to alter my plans about the ponies; the elephants are in such bad condition that they will not be able to move for a month at least. I understand that a meeting has taken place at the Chou Raja Wun's, amongst those who were present at the discussion yesterday: some said I had, since my visit to Kiang Túng, assumed a higher tone; that my having gone there was an infringement of our treaty; I had, however, some supporters in the assembly, but they consoled themselves in the end by settling, that if we wished to assist the Kiang Túng people and fight, they were not afraid of us; for our army could never pass over the hills separating our territories from theirs.

24th April.—Chou Tsan, an old acquaintance, came at night to hear something respecting his brother and relations at Kiang Túng. He is in great apprehension about his nephew, who has so injudiciously gone on a visit there, and declares that none of his relations here knew of his intentions. I told him what the Tsóbua had requested me to do respecting him, and therefore asked him to consult his relations, and let me know. Chow Phom, his youngest brother, has gone to Mainlóngyi, intending to extend his journey to Moulmein. He is much afraid that, in consequence of his nephew's foolish behaviour, they will all be removed nearer to Bankok.

He informed me that the King of Siam had refused to permit any communication with Kiang Túng, and told his eldest brother, the ex-Tsóbua, who is on his way up, that he must bear his fate. The present Tsóbua has again written to the Tsóbua, Chou Raja Wun, and some of the chiefs here, by Puniah Pap, sending them each some trifling present and intimating, that he had sent the letter from this place to Ava, and when he receives a reply he will send an officer down to Bankok. The Chou Raja Wun remarked, the person deputed might go there, and should any officer again visit this place, he should be sent down there too, and there would be no road back to Kiang Túng for either of them.

There has been some consultation in consequence of a communication from the Chou Hona, who it is said has pledged himself to the king to reduce numerous places belonging to the Burmans, and bring them under his authority; to attack Muang Tsut and Muang Ka, both peopled from Moné, though on this side of the Salween.

There not being a blade of grass near this place, nor bamboos for the elephants, I have been obliged to send them to a village about 10 miles distant, there to remain during my stay here.

25th April.—The officer who accompanied me to Kiang Túng, returned from the country and called on me. The Tsóbua, on his arrival, inquired particularly after my health, and said he was glad to hear that I was getting on well, and told him he had done right in going on with me to Kiang Túng, respecting which place he made many inquiries. The Chou Raja Wun was angry with him, and did not ask him a single question about what he had seen.

The grounds for his anger is said to be, that a second letter was sent directing him not to accompany me beyond Hái Tái, the frontier village. The officer pointed out that he was in no way benefited by going with me; he had been selected, and ordered to escort me; it was true he received one letter close to town, to which he replied, and clearly stated everything I had said, and requested an immediate answer. Why did the Chou Raja Wun agree to my proposition about the road before leaving this? Why was he ordered by the Court officers to attend to my wishes? He considered that the friendship existing between the Siamese and English is such, that it would have been highly improper to have quitted me in the jungle. He went into Kiang Túng on my invitation, not merely for idle curiosity, but to see what was going on. That with respect to the second letter, it never reached him; it is said to have arrived at Pak Bóng four days after us, though we had proceeded by short and easy marches: if it were of such consequence, why was it not sent on quicker, and dispatched after him? Besides, what had become of it, for it never reached him. The fact was, he told me, that some communication had, he suspected, been received from the Chou Hona, and they were trying to shuffle the blame off themselves on to him.

Chou Kurn Kam, who is brother-in-law to Chou Na Noi Gúna, has returned from the country; he sent a message that he wishes much to see me, but is afraid to come and call.

26th and 27th April.—Called on Chou Kurn Kam; he says that the Chou Hona has been at Lahaing for a month, and was detained by the sickness of one of his family. Some person hinted to me, that if he heard I was at all undecided about staying, he would certainly delay his advance as long as possible, such is his supposed aversion to hold any communication with us. My friend is so annoyed at the Chou Raja Wun's behaviour, for

Captain McLeod's Journal.

he has threatened to put the Shan officer, his brother-in-law, in irons, that he will not interfere: he says the Court officers and Chou Raja But take totally a different view of the matter from the Chou Raja Wun. It appears that this officer has been found fault with by the Chou Hona for letting me go at all in advance during his absence, and that he is now, by the advice of Puniah Sulim, as the Chou Hona approaches, trying to lessen his share of the blame by acting with severity towards his brother-in-law. He was accused after my departure with being too intimate with me, and for having given me a pony. He told them I had given him a gun in exchange: this they did not consider sufficient. Chou Maha Nuit, a friend of Dr. Richardson, is a brother of the persecuted officer who accompanied me. He has just returned from Bankok, where he had gone in disgrace, partly, he says, for being too friendly with us, but I believe his going was entirely connected with the Mok mái affair. The king desired him to look about the city, see the number of kala (stranger) merchants settled there; that he was glad to hear British merchants came to Zimmé, that he gave them himself every encouragement; many had lands, and thus the tables were turned on his enemies. He reports the king as being very favourably disposed towards us, and of our intercourse with them.

Yesterday one of my coolies, being at a village across the bridge talking to an old Burmese woman, who was selling arrack, recognised the silk cloth one of her customers had on as belonging to some of my people; the man likewise had a piece of red China silk belonging to him round his waist; he observed the man take a dram or two without paying for them, and talk to the woman in a friendly way; he desired her, in consequence, to mark him, as he had got on his putsho; a scuffle ensued, and the thief was joined by three others, who overpowered my servant. The head man of the village hearing a noise, came out and separated my follower from another person; the thief had in the meantime contrived to escape, but without his putsho. My followers hearing a person calling out for assistance, went to the place, and brought the Thugyi to me; imagining that he was the person who had the cloth on, I sent my interpreter to the Chou Raja Wun, to request some person might be sent to take charge of him; after he had gone, finding out my mistake, and the Thugyi saying he knew the man from whom he separated my servant, I desired my writer to take him and the old shopwoman to the Chou Raja Wun, that he might detail the particulars. On their way they were met by one of the Chou Hona's Puniah, who, after saying something to the party, desired my writer in a very improper and peremptory manner to go away, setting the people at liberty. I called on the Chou Raja Wun, and related the particulars of the affair, and complained of the conduct of the Puniah; he took a very proper view of the business, and promised to have an inquiry instituted, and the offenders punished.

I expressed my surprise and regret at the steps I heard he was about to adopt against the officer who escorted me. He confessed he had given me leave to fix on my own road, but said he thought I would have gone by Muang Niong—a nice distinction now to set up; as if it were not the same as going to Kiang Túng, under which place it is. He attempted to justify himself for the harsh step he was pursuing, from necessity, to screen himself. He begged all that had passed might be forgotten, as the Chou Hona was so near, but, with reference to roads, it was his opinion that no communication ought to be carried on by us with the Burmans from between the Kareng Ni country and the Mé Khong.

At night Chou Kurn Kam, though unwell, came to see me. He told me of the consultation they had had about attacking some of the Burmese towns, and that when the Chow Hona arrived the point would be settled; that a great many of the chiefs are against it. On my reprobating the petty predatory warfare formerly carried on (which they are inclined to recommence), and which entailed so much misery on poor harmless villagers and caused ruin to the country, and asking him whether it would not be better to advance at once into the country of their enemy, towards the capital, rather than pursuing the system they did; he confessed they had not the power to attack Ava on a grand scale, and must therefore content themselves by venting their hatred on their neighbours. He is, however, himself much opposed to their slave-taking incursions, for they are nothing more.

The war between Siam and Cochin-China is not over yet. The Siamese intend to prosecute it with more vigour. They have fortified Kankok, but lately lost 3,000 men at sea on their way towards Cambodia. By all accounts they appear to have had the worst of it as yet. None of the provinces in this direction have been called upon to furnish troops.

I regret to say the finest elephant I had with me died on its way out to the village. The heat was so oppressive that another one fell down twice in going out.

29th April.—They have at last put the Shan officer in irons, but not in prison. He is kept at the Court-house. A large deputation, headed by the Chou Raja But, went to the Chow Raja Wun to beg him off, but without success. They say the Tsóbua has not been made acquainted with the affair.

30th April and 3rd May.—We have had much rain every day lately. The Chou Hona has been reported daily to be near the town; numbers of people have gone out for the last three days to meet him. The Chou Raja Wun and other chiefs proceeded to-day to escort him in one march of some three or four miles.

It is amusing to see the way the Shans here work in preparing the zeat for his reception and the sheds for the chiefs with him. The work to be done is apportioned out to certain parts

arks. I have seen a few leaves brought and put up one day, ing for fear of their being stolen, and so on day after day; and d have done in as many days, they have taken ten days and more Government superintended, and constantly visited the works: ilatory mode of doing everything.

u Raja Wun did not know of the relation of Kiang Túng Tsóhua some days after my return. Some of Punish Pap's people met him ported it. This, I am assured, is the chief cause of his fearing the leasure, and of his venting his spleen on the poor man he has put

re mentions his having accompanied some Shans in eight days from ne particular route. The Shans are unwilling that we should become a the different passes, of which there are more than one, and all far better an the road we frequent.

—The long-expected and dreaded chief, the Chou Hona, made his appearance was escorted by all the chiefs of the place, with about 100 elephants and ously armed. The only object of curiosity was the trappings of his elephant, rtainly very handsome. The Chou Raja Wun, dressed out in a silk jacket rimmed felt Chinese hat, rode on the neck of and guided his own elephant. up at the zeat. Two guns from town were dragged there with diffi- rable carriages, and which, on the Chou's entering the zeat, were fired, number returned the salute from the fort.

Kam sent me a message to say it would be considered friendly if I called on during the day, merely as a complimentary visit, and not to discuss any if I were inclined to do so, he would consult his brother, Chou Mahá Tep, wise arrived, and accompany me in the evening. I accordingly went, and received by the Chou Hona, who is a very intelligent and pleasant man. fter the Commissioner and respecting many points connected with the pro- er the health and eyesight of the Kiang Túng Tsóhua, and regarding the countries above, the roads, &c. He spoke of the flourishing trade carried by our merchants and the Americans, and how rejoiced he is to find we such goodwill towards them, and assured me of his anxious desire to ntercourse between our countries, but added that they could never agree anything to say to the Burmans, or those tributary to them. He spoke of mission, and said he was sure the Red Karengs, who were the bitter Burmans, would never consent to their passing through their country. I his countrymen, being good Buddhists, could permit and encourage the that country. He said that God had provided every nation according to eat to the Red Karengs he had given men, but no salt.

from that tribe, who accompanied him down to Bankok, went back soon, capital a most disagreeable, uncomfortable place, and Zimmé far superior nothing equal to his own mountains. I believe he was taken down with the Mokmái business.

ay be the Chou Hona's real sentiments towards us, he certainly made a ression on me. Before I took my leave, I told him that I had business to him, but should postpone it until after he had entered the town, as I h was their custom, but as the rains were near, I hoped he would expedite as much as possible. I gave him the same reason for not entering China to others. Many would not believe that I had had any intercourse with any ted with China, and it was only on seeing the Chinese dress, &c., that they had reached Kiang Húng.

urn the chiefs have conducted themselves very differently towards me to before. Two only called on me then, not knowing, I suppose, what view would take of my mission; to-day, however, numbers came, and amongst Hona's son, a dissipated, wild young man, of about 21 years of age.

alled on the new arrivals, viz.: Chou Mun Kio, a son-in-law of the Chou fficer holding a post under Government, and ranking next to the Chou ou Mahá Tep, and Chou Mun Ma, who all returned my visit in the all expressed their indignation at the officer who escorted me being put y that it was done by the Chou Raja Wun for fear of the Chou Hona being him, but as he is not, my friend will be released immediately. I endea- rest them about the roads, which they gave me an opportunity of doing, their praises of the English shops at Bankok. Though they agreed with fits of trade, they shook their heads to the Kiang Túng road, and said n was opposed to it, but there would be no objection to our traders going.

I have likewise had several of my old acquaintance calling to-day, and g them for not having come to see me after my long journey, they told re afraid, not liking the appearance of things. At about 6 p.m. Yesing 's son cross the river near where my tent is pitched and enter the shed mpy, I sent to invite him in. His reply was, that he "was ashamed to rumk."

Hona for this piece of bravado. Poor Puniah Pap is threatened with sev
for his proceedings, and is ordered to town; I suppose the matter will end
some of his property.

9th May.—I took leave of the Tsóbua to-day, and thanked him for his kind
speak of the roads to him, as it would only worry him to no purpose.
Chou Hona previously I had been led to expect, to give me an answer a

duty. I enquired whether anything had been settled. All present pleaded ignorance. I called on the Chou Hona in the evening, when he positively refused to make any alteration in the cattle duty, declaring that the same duty is levied on cattle taken to Lahaing, Muang Nan, and the Kareng-ni country as on those going to Moulmein. This I knew not to be correct. We discussed Sirdar Khan's robbery case; the Chow Hona took some pains to master the subject, and went fully into it, but as the poor man cannot prove who were the actual thieves there is no remedy by their laws. Our discussions being ended he made himself as agreeable as he could, and made me repeated professions of respect for us, and his wish to encourage unrestrained intercourse between our countries. He begged that I would write to him from Moulmein, if I heard anything relative to Ava politics. A number of visitors, chiefly relatives of the Chou Hona, came to see me in the course of the day, and gave me some commissions to execute at Moulmein.

Captain M'Leod's Journal

10th May.—There is a shameful attempt made to screen the thief who robbed my followers; excuses upon excuses have been made for delaying the investigation; at first, some days were required to identify the person marked by the Thugyi; then the court officers were too much taken up with the preparations for the Chou Hona's reception; after that they were in attendance on him, and yesterday they pretended that the hour for transacting business had passed before I quitted the Tsóbua's house; and, to-day, though they promised to settle the affair, if I would but remain, they told my interpreter, after keeping him waiting all day at the court, 'that the old woman was not forthcoming, having gone into the country.

11th May.—I made inquiries with regard to the Chou Hona's assertions about the duty on cattle; more than one person declared that only a quarter of a tical a head was taken on those exported to the Red Kareng country, and nothing on those carried to Lahaing, and other Shan places. So much for the Chou Hona's veracity. I was further informed that the people were directed not to sell their cattle under 12 rupees a head, and the authorities here did not like cattle going to Lahaing, as they knew that they found their way to Moulmein. One of the traders, who returned with me from Kiang Hung, has advanced the Chou Raja Wun's brother money for cattle, to be delivered to him within a certain time, in the Labong district.

Sent my coolies off early in the day, and was to have followed immediately after seeing the Chou Hona, but my ponies, which had been brought in from a village, where they had been some days, and were as usual loose at night, had been driven away to some distance by some person; everybody suspects it must be the Chou Hona's son, he being given to such mischievous tricks. I had been cautioned before his arrival not to keep them in town; and was told that he once cut the tails of several mules belonging to the Chinese traders.

I went to the Chou Hona about the theft case. He was very angry with the officers in whose province it is to settle it. I left with the Chou Hona a paper detailing the circumstances in full, and as I am obliged to leave some people with my elephants, he has promised to have the matter strictly inquired into and settled.

He complained of the worthless character of the generality of our traders here, who having obtained goods on credit at Moulmein, came up here, made liberal presents (some of which he confessed he received, for if he did not, others would), squandered the rest amongst women, and finally gained their livelihood by all sorts of roguery. He kindly offered to hand me over a few of these characters to take away with me.

I leave my elephants to follow when they are able to do so, with reference to their condition and the forage on the road. In the morning I received a message from the ex-Kiang Túng Tsóbua, to say that he was near the place and wished much to see me. I had been yesterday requested by some of his relations to delay my departure a day; this I could not do; however, he arrived during the day, and remained in his boat below the town, having come up all the way from Bankok by water. I left Zimmé at half-past six; dark as it was getting, I was very happy to quit it, and reached the place where the Kiang Túng Chief was staying, for he, like the Chou Hona, was waiting for a propitious day to enter the town; zeats had been erected for him by his relations and followers who were with him. His desire to see me was respecting my visit to Kiang Túng, and everything that a person in his situation would be interested about. He said the King had set his face against the communication with Kiang Túng being thrown open, and in fact directed that should any further attempt be made from there, the person so employed should be sent to Bankok. He lamented the folly of his nephew in going to Kiang Túng, but it was too late for me to do anything. He worked himself into a passion in speaking of the treatment his people were subjected to, and declared that they could not long put up with it, and if any attempt was made to remove them towards Bankok, which was sometimes threatened, they would not submit, and I have no doubt would find their way into our provinces. He confirmed all I had heard about the king's liberal views of trade; but denied the extreme powers which I supposed had been vested in the Chou Hona. He is a fine old man, upwards of 85 years of age, and is allowed the golden betel apparatus, a mark of great distinction amongst the Siamese.

Captain M'Leod's Journal.

From Zimmé to Moulmein.

11th May.—From Zimmé to Tsán bakók.

Direction, S. 5 W. Estimated Distance, 5 miles. Time, 2 h. 10 m.

Having crossed the Mé Ping at the village of Ta-wan-tan, we proceeded along its left bank, leaving the fields and road we had passed over on our way up to our left, and having traversed the village of Pák Mung, halted at about five minutes to 10 at the village of Tsán bakók on the Mé Ping, consisting of five houses. Here we found comfortable quarters in the sheds erected for the Chou Hona, on his return to Zimmé.

12th May.—From Tsán bakók to Ban Pathan ka noi.

Direction —{S. 25 E. / South} Estimated Distance —{6 miles / 10½ „} Time —{1 h. 59 m. / 3 h. 26 m.}

The road this morning lay along the left bank of the Mé Ping until we reached the watercourse mentioned on the march up; having proceeded a short distance along its left bank, we crossed it, and soon came into the road we had before passed over. After re-crossing the canal, instead of going by Patupa we continued in the direction of the village of Ban Súk, containing about 20 houses.

From the last crossing of the canal to this, at the period of our march up, it was swampy, and though a nearer route, was not then passable. From Ban Súk we proceeded across the fields to the northward and westward of Labong, and leaving the town about a quarter of a mile to our left, reached a road leading from it to the Mé Ping, which is about three or four miles distant to the westward. We then marched over a small plain, and through an open jungle of pouk trees and bamboos, and halted during the heat of the day
3,54. on the right bank of the Mé Quan. We started again in the cool of the evening (first crossing the Mé Quan), the road running through a thin jungle of bamboos, until we reached the Mé Nong Chang, a small stream of 15 feet wide, now nearly dry, on which the village of the same name is situated, containing 15 houses, and here joins the Mé Quan; after marching a short distance, we arrived at the village of Pathan, and got into the road travelled before, and continued along it until we reached the Mé Tá, which having crossed, halted at the village of Pathan-ka-noi, in some sheds erected for the Labong Tsóbua; here we found a party on their way to meet the Chou Hona of that place.

We had not received any certain intelligence at Zimmé of the movements of the Tsóbua of Labong, but the old Kiang Táng Tsóbua told me he had that day reached the place. Though anxious to see him, yet my arrangements having been made, I found it necessary to move on; however, not having had any communication with the place since my return from Kiang Táng I sent my interpreter in, when passing by the town, to inform the officers of my movements, and everything regarding my mission, to congratulate the Tsóbua on his accession to the throne, and to express my regret at not having known of his return before I quitted Zimmé, as I much wished to pay my respects to him.

The interpreter went to the Court, the officers expressed their delight at my safe return, &c., and took occasion to abuse the Zimmé people, and call them a bad set. They told him the Tsóbua had not arrived, nor did they know when he would. Unfortunately for their veracity the chief thugyi of Ban Dón passed me on the road, and told me he had formed part of the Tsóbua's escort the day before, and was then returning to his village. I fancy they wish to prevent my visiting the place, as it might be necessary to make some presents in return for those brought up by me. They very civilly, however, on finding I proposed to travel towards Lahaing, to within four or five marches of which the Labong jurisdiction extends, gave the interpreter a written order, directing not only the heads of villages within their province, but those beyond, to supply me with everything I required, and to pay me every attention. No person was sent to escort me from Zimmé, but they gave me a similar order to all the villages within their own district.

13th May.—From Ban Pathan-ka-noi to Ban Hun.

Direction. S. 32 W. Estimated Distance, 17 miles. Estimated Time, 5 h. 37 m.

We quitted the road travelled up at the village of Pathan-ka-noi, and after passing over
1.59. fields and the outskirts of some two or three villages, reached Ban-kok. Here the low hills enclosing the valley of the Mé Ping to the southward commence. We passed two or three pathways on our left leading to Muang Li and Muang Luan. The person whom I have hired to show me the road says, the one he is taking me by is the better one, there being no village on the other. We reached a large dry nullah to which the road had been over slightly undulating low hills, and the jungle of saul, generally perfectly free from brush-

wood

wood. The face of the country now changed, becoming more hilly and stony, with ravines and broken ground, and the jungle thick with underwood: the road, however, improved latterly, the jungle becoming more open. Finding some sheds erected for the Laos'ong Chou Hona, whose daily expected, on the west bank of the Mé Li, we occupied them instead of crossing over to the village of Ban Hun, on the opposite bank. The village has a number of areca and other trees about it, and contains about 30 houses.

Captain M'Leod's Journal.

8.0.

8.31.

At the commencement of the march I unfortunately injured my watch, and I have nothing, therefore, to guide me as to the time I am on the march, from which I need daily to calculate my distance. The time given is by guess, and therefore not to be depended upon.

14th May.—From Ban Hun to beyond Ban Pang.

Direction, S. 15 E. Estimated Distance, 18 miles. Estimated Time, 6 h. 12 m.

The Mé Li, which is 150 feet wide, though not full, was about 8 feet deep where we first came upon it: we were obliged to go down the stream a short distance, and then cross it in 2 feet of water. We left the village of Ban Hun to our left: and after crossing the Mé Li five or six times, we reached the fields belonging to Ban Papu, a small village of five or six houses.

1.54.

The road had been and continued good, though over broken rocky hills, with ravines; trees generally fine and high, and some teak amongst them.

We passed a good halting-place on the left bank of Mé Li, which we reached again, and where sheds had been erected for the Chou Hona by the villagers from Ban Pang. About this spot the country was level, but beyond it resumed its former appearance. We halted for the coolies on the bank of a small stream, and remained there during the heat of the day. On quitting this place the road ran along the sides of hills, with a slight descent, and was latterly very good. We stopped a few minutes at Ban Pang, a village on the Mé Li of five or six houses, and being early, went on over undulating hills, free from brushwood, with fine trees, and halted for the night on the bank of a nullah, with abundance of water.

3.20.

4.34.

5.34.

15th May.—From beyond Ban Pang to Muang Li.

Direction, S. 15 E. Estimated Distance, 20 miles. Estimated Time, 6 h. 21 m.

We crossed the Mé Li, and on reaching it a second time, halted on its right bank for breakfast. The road very good, through open jungle of high saul and teak trees, with an occasional open spot, and slightly hilly. From this the road was almost level, and very good, jungle and country, as before, all the way; having crossed the Mé Li twice, passed the two small villages of Ban Hai on it, each containing six or seven houses, we halted at Muang Li, having close to it crossed the Mé Te, which falls into the Mé Li. The town stands on the right bank of the river, contains 25 houses, and has two villages of the same name near it. There are five or six villages besides these under its jurisdiction, and is governed by a Puniah.

3.30.

4.40.

We have seen no high hills; those ranging on each side of us ever since we got amongst them are low. We passed the dry beds of many mountain torrents during the journey.

The Chou Hona's party passed us between the place we breakfasted at and Ban Hai; but we did not see him, he having gone into the depth of the jungle in pursuit of game.

16th May.—From Muang Li to Pang Tsen Doé.

Direction, South. Estimated Distance, 18 miles. Estimated Time, 5 h. 59 m.

We passed over fields, confined by two low ranges of hills, until we reached the second village of Muang Li. We then entered a jungle, the trees improving in size as we advanced; and after traversing a small plain, went over undulating, hilly ground, well wooded with saul and teak, without brushwood. We then got into rather low ground, and after crossing the Nam Mé Pe four or five times, halted for breakfast on its right bank. It here flows from the south-eastward, and is about 10 feet wide. We found some fine thengan trees on its banks. We then again got on hilly ground, with hills ranging on both sides of us; and after passing two streams, commenced to descend to the steep, broken, and rocky gorge of the range, and through the dry bed of a mountain torrent; the road was at times all but blocked up by huge pieces of detached rock which had fallen from above, where masses overhung the road, threatening to crush the traveller in their fall. We were not long in getting through this pass; the road was well shaded by large mango and thengan trees.

3.0.

2.5.

2.30.

3.45.

Captain M'Leod's Journal.

We continued to descend, sometimes greatly, until we reached the bank of the Mè Khan Noi, flowing to the southward, and of about 15 feet wide, when we stopped to rest. When we started again we proceeded over slightly hilly ground, and after crossing the Mé Phit several times, put up for the night on its left bank. It would be impossible to move artillery along the road by which we came over the hills to-day, but a company of pioneers, with some powder for blasting, would soon remove the impediments and render it passable.

17th May.—From Pang Tseu Doé to Pang Nam Dit.

Direction, S. 40 E. Estimated Distance, 17 miles. Estimated Time, 5 h. 32 m.

The road good, over hilly ground, falling gradually. Jungle open. Having crossed the
1.12. Mé Phit, now a stream of 25 feet wide, and with 1½ foot of water, we arrived at a village containing 12 or 15 temporary houses, belonging to the village of Mé Phit. From this, we followed the course of the nullah, which, though increasing in breadth, became dry
2h. 42m. with only stagnant pools of water here and there. We then reached an open country, with a low range of hills seen on our right; the soil rather red and stony, and jungle stunted.

4. We halted for two or three hours during the heat of the day in some sheds which had been put up for the Chou Hona, on the western bank of the Mé Phit. At many places as we came along parties from Ban Mé Phit were catching fish in the bed of the stream, and my people also got an abundant supply.

Though there have been low hills on each side of us nearly the whole way, we could not see them for the jungle, which latterly, however, was in patches, with small grassy plains. We saw abundance of teak ready cut along the banks of the river. After quitting the spot we stopped at, a range of hills was observed rising to South 60 East, and running north and south, distant about five miles, to the westward of which, the Mé Wang, the Lagong river, flows, and into this the Mé Phit falls.

Having crossed the Mé Phit three or four times, we left it to the eastward, and reached
4.17. the village of that name. It contains about 100 houses, and is the last village belonging to the Labong jurisdiction. The road from Lahaing to Lagong passes through it, and runs along the bank of the Mé Wang. We stopped here a short time to get a stock of rice and paddy. The road on starting again at first ran over fields, the hills to the westward gradually decreasing in height, and only a few low ones seen towards the southward; then entered a jungle of saul, and was sandy and heavy.

Having reached a small stream with scarcely any water in it, though early (for we started from Ban Mé Phit sooner than there was any necessity for thinking the march was a long one), we halted under some fine teak trees, as the Shans with me recommended, there being no water or grass for the ponies for some distance in advance.

It has threatened to rain every evening since we left Zimmé, and always thundered; we have, however, been fortunate enough to escape with only a few drops occasionally, though there have been heavy falls in the hills.

The temporary village we passed to-day is inhabited by people making saltpetre.

18th May.—From Pang Nam Dit to Tapin, on the left bank of the Mé Ping.

Direction $\begin{cases} \text{S. 30 W.} \\ \text{S. 70 W.} \end{cases}$ Estimated Distance $\begin{cases} 17 \text{ miles} \\ 1\frac{1}{2} \text{ „} \end{cases}$ Estimated Time $\begin{cases} \text{5 h. 24 m.} \\ \text{5 h. 23 m.} \end{cases}$

1.5. After passing through a fine forest of teak and saul, we reached the Mé Ta Wang, a large nullah, but now dry; the ground about it low with ratans growing. We then arrived
1.11. at some open ground and small plains. Here a road branches off to Lahaing, following the course of the Mé Ta Wang, and passing through some villages. It also leads to where we are to halt for the night.

2.11. We shortly after came upon a small pool of good water, and after passing through some fields, continued to traverse small plains with grass, or over high ground with saul and teak,
2.54. and reached the village of Nóng khien ka, containing about 10 houses. Having traversed
3.24. the fields belonging to it, and passed through country the same as before, we reached a capital open halting place, with a fine large pool of delicious water. A little beyond this the Lahaing road separates from the one we have taken; we then gradually got amongst low hills; the southern extremity of a range seen by us this morning to the westward of Ban Nóng Khien Ka, distant about five miles, running parallel to the valley; and having passed over them, reached a small open space on the left bank of the Mé Ping.

The river is here about the same breadth as at Muang Haut; it flows past this to the eastward, but lower down it takes a southerly course. It is not fordable here. The range of hills we have come over ends here, as also that on the western bank. Beyond this nothing but a flat country with grassy plains is seen. About 15 miles to South 50 East, is a low range of hills running north and south, called Doé Niang, from there being a number of wood-oil trees on it, and three villages inhabited by people employed in collecting the oil.

Lahaing

Captain McLeod's Journal.

Lahaing is situated at the southern extremity of these hills, on the Mé Ping, which flows along the western foot of the range, and the Mé Wang discharges itself into the Mé Ping to the northward of them; the distance from this to Lahaing is said to be three nights' journey for a man.

From the pool of water on this side of Ban Nóng khien ka to this we did not meet with a single stream, all the nullahs being dry.

The coolies could only come on slowly, little by little; the heat is excessive. Under some sheds the thermometer to-day stood at 118°, and in the sun 148°. We made a short move in the evening, passed over the foot of the same range as this morning, came along the bank of the Mé Ping, and halted for the night on a small open space, the Mé Ping on one side, and the hills forming an amphitheatre on the others.

There is good pasture for the ponies here. About four in the morning, when mine were loose and grazing together, a tiger started out from near where my tent was pitched towards them; they immediately made off for the jungle; the Chinese interpreter, fortunately, was lying down in the midst of them, and with much trouble brought them back.

19th May.—From the Tapin to beyond Ban Nát.

Direction { S. 77 W. / N. 25 W. } Estimated Distance - { 8½ miles / 1½ „ } Estimated Time { 2 h. 30 m. / – 30 m. }

The first part of the march was along the steep sides of the hills which fall precipitously down to the Mé Ping; sometimes the path was on the same level with the river, when it was good; at others, high above it, rocky and narrow, frequently with rocks jutting out from the sides, causing the greatest difficulty in bringing on my baggage ponies with their loads. Two absolutely went over the side, and were only prevented from being dashed to pieces below by the exertions of my Chinaman; they were, in short, obliged to unload them at two places to enable them to pass the projecting masses of rock. It would have been totally impossible to have travelled over this part last evening. This is, however, the road elephants take, the rocks being low down do not interfere with their bodies or loads.

Latterly, the road was very good, and having crossed the Mé Ping at the ford at Ban Nát, we halted. The breadth of the river here is about the same as below, with 2½ feet of water; above the village, it turns to the northward; the hills on the left bank below the village run parallel to the river, but above it they come from the northward.

This is a nice village, containing about 50 houses, with mango, tamarind, custard apple, and other fruit trees. It belongs to Lahaing; the head man was absent; with great difficulty we procured rice for three days, and that not until very late; we could, therefore, only make a short march in the evening.

The road very good over a flat country; low jungle; houses are seen now and then along the bank of Mé Ping, with spots cleared for cultivation. We halted for the night on the bank of the Mé Ping on an open space.

From Ban Nát to Ban Niang by water is six hours' journey. It would take some time to make the greater part of the road marched over this morning passable for artillery, carts, &c., but they might easily be sent down on rafts from the village to Tapin.

20th May.—From the right bank of the Mé Ping to the Mé Tian.

Direction { S. 74 W. / S. 60 W. / S. 15 W. } Estimated Distance - { 12 miles / 4½ „ / 4½ „ } Estimated Time { 4 h. 5 m. / 1 h. 32 m. / 1 h. 30 m. }

Started at about two in the morning; the first part of the march was through a flat open country, becoming gradually jungly, but neither high nor thick; we then got amongst very low hills, and reached the Hué Da; the bed of the nullah is 25 feet, but now has merely a pool of water collected in it from some rain we had yesterday; here is a good halting place, with abundance of grass. 1.30.

Two streams unite close to this; we proceeded along the bed of one, now dry, but when full, is nothing more than a mountain stream of about 70 feet wide.

We then gradually got amongst high hills, and went over a good many, but the ascents and descents gradual, neither steep nor distressing; jungle not thick, nor trees large; the road good, only in two or three places where masses of rocks blocked it up in a measure, but which could easily be removed. We passed a good many dry nullahs, but not one with water from the Mé Ping. 2.50.

We halted on the right bank of the Mé Tian, a stream of about 70 feet wide, flowing rapidly over a stony bed coming from about South 20 West, flowing by here North 40 West, and turning to North 20 West. It falls into the Mé Ping one day's journey below Maika, which again is one day's journey below Muang Haut. This stream is by some said to be the boundary of the Zimmé territory on this side of the Mé Ping; by others, the Mé Gnáu, which is more to the northward, is fixed on as being the line of separation between Zimmé and Lahaing districts. 5.35.

The hills about this terminate in peaks, and fall precipitously down on their northern sides.

We met a party from Moulmein proceeding to Lagong to purchase cattle, and also another on their way down with a large herd.

Captain McLeod's Journal.

21st May.—From Mé Tian to the summit of the Mé Tian Hills.

Direction {S. 10 W. / S. 55 W.} Estimated Distance {11 miles / 8 „} Estimated Time {3 h. 25 m. / 2 h. 59 m.}

2.30. The road ran alongside the Mé Tian, which we crossed occasionally, its breadth varying from 70 to 100 feet, with two and three feet of water. We passed many places where we might have halted; the road was good, only occasionally obstructed by rocks; latterly it ran along the steep side of rocky hills, which form on the sides of the river, at some places exposing much rock, but generally covered with thick jungle.

We met some of the finest thengan, khoung mú, and kanien trees I have ever seen, and apparently no use made of them. One mango tree measured in girth 23½ feet.

4. Halted for breakfast on the bank of the stream at an open spot, near which a pathway led off to the westward to a Kareng village. We met some of the people belonging to it on the road.

Having crossed the river three times we left it to our right, and then went along the bed of a very small stream, and over low ground, with hills on both sides. We then com-

4.36. menced to ascend a steep hill, the whole way covered with bamboos, with a few trees only occasionally; the hills seen around are thickly covered with jungle. The highest range observed on the way up is to the westward.

5.36. We reached a halting place on the shoulder of the hill where a stockade had been erected to place cattle in; water is obtained from a spring some way down a valley, and brought up in bamboos for the cattle. Near this was a fine mango tree, the fruit very good, and afforded us a refreshing repast.

The ascent became very steep latterly, and on attaining the summit of the range (or

6.21. the top of a peak, for it is narrow and falls precipitously to the south-west), whence I expected to have a fine view, a violent hailstorm came on and drenched us through. I remained until nearly dark, in hopes of getting some bearings, but to no purpose. I, however, got a glimpse of the highest range, I think, bearing North 60 or 70 West. The thermometer here was 70°, and water boiled at 207° Fahrenheit.

We descended a few feet only, and halted for the night. Here we found a small spring of water; we had not met any from the time we commenced to ascend.

The poor ponies are badly off, the grass has been burnt and the hills are too steep for them to go far down in search of forage. It is a dismal, cold, comfortless night for all; a strong bleak wind blowing the whole time, which, in our elevated and exposed position, is anything but agreeable.

22nd May.—From the summit of the Mé Tian range to the Village of Mé Tsa láu.

Direction {S. 40 W. / N. 85 W. / S. 20 W. / S. 20 E.} Estimated Distance {4 miles / 1½ „ / 6 „ / 3 „} Estimated Time {1 h. / - 30 m. / 2 h. / 2 h. 30 m.}

We at first passed through a bamboo jungle, but soon quitted it, and the remainder of the road to the Mé la mat was through a thick dense jungle, the descent at times very steep, and the storm of the night had rendered the pathway slippery.

1 h. At the foot of the descent we reached the Mé la mat, here about 10 feet wide, with half a foot of water and the bed rocky.

From this the road ran along the valley of the stream (crossing it frequently and going along its rocky bed) with hills on both sides; we then, having quitted the stream,

3.30. came to some rising ground with fine open jungle, amongst the trees some mango, and after passing over some fields, halted at the village of Mé la mat just in time to save ourselves getting wet; here we found a nice zeat.

There are three villages close together of this name, containing 30 houses inhabited by Toung-thus, who all spoke Burmese. They pay 1½ Siamese tical per house a year, to Lahaing. We did not get off till near dark, having been detained for a supply of rice; the road, which ran through a thick jungle, was, fortunately, very good; it became so dark that we were obliged to light some candles, but what with rain falling and the ponies inclined to stray in consequence of the slow pace at which we were going, we had much trouble and a most disagreeable march. Close to this we passed over some plains and fields, and halted on the right bank of the Mé Tsa láu at about half-past eight.

The houses constituting the village of Mé Tsa láú, amounting to eight or 10, are scattered.

We managed to get possession of a half unroofed house, which afforded us but slender shelter during the rainy night.

We could not procure any fowls at the village this morning or here, the Toung-thus not rearing them.

23rd May.—From Mé Tsa láu to the Mé Huk Hué.

Direction, S. 35 W. Estimated Distance, 15 miles. Estimated Time, 4 h. 58 m.

The first part of the march was over a good road, through a fine jungle of kanien or wood-oil trees (one of which measured 33 feet in circumference), and along the valley of the Mé

Captain McLeod's Journal.

Mé Tsá láu; we then left it to our right, and went over some high ground with small saul and teak trees perfectly leafless. We saw the Thoung Yin to our right, flowing to the northward and westward, and soon afterwards crossed it. Its banks and bed were sandy, and about 25 feet high. It had about 190 feet of water in breadth and two feet in depth, and across altogether was 300 feet. Having proceeded over low hilly ground and reached 1.50.
a stream flowing to the northward, and after going along its bed and crossing several dry 2.50.
beds of mountain torrents, we ascended a steep hill. The descent from it was hardly per- 4.10.
ceptible; on our right we passed some broken low peaks of rocks, and the country was thinly wooded, but latterly we met some fine trees, and having arrived at and crossed a good stream of water, the Mé Hok Hué, halted close to a small plain, but now without a blade of grass on it. The Shan with us does not know the names of the streams, &c. He says that the one we crossed after passing the Thoung Yin is the same as the one we have halted near, which I should say is not correct. I was anxious to go on in the evening, but was prevented by the account he gave me of the distance to the next halting-place. We passed the skeletons of several elephants during the march; many of the animals have not been dead above three or four days; the heat and scarcity of forage supposed to be the cause.

24th May.—From Mé Huk Hué to the foot of the Kokarit Hills.

Direction { S. 5 W. / S. 25 W. } Estimated Distance { 11 miles / 7½ „ } Estimated Time { 3 h. 37 m. / 2 h. 35 m. }

At the extremity of the small plain which we crossed, the Nabúli road separates from the 4 m.
one we followed, which leads to the Dagyne; it is in some parts rocky and bad, but is that most frequented by the Toung thus leading to Zathabin, where a number of that race reside. We passed over plains, the grass all burnt; the descent throughout was so gentle that it was not perceptible. We crossed a stream of about 15 feet, flowing to the south- 3.4.
ward. To this we might at least have come last evening.

We continued to pass through the same sort of a country as above mentioned until we reached the Mé Pé, about 100 feet wide, flowing to South 20 East with two feet of water 2.19.
in it. It falls into the Thoung Yin. There were some fine trees on its high banks, chiefly thengan and the wood oil and a few teak.

We then traversed a forest of saul, perfectly free from brushwood, in the midst of which we came upon a pathway leading to Lahaing, which place can be reached in three 3.22.
nights; from this there are two or three hills, however, to pass over; the road by Ban Nat 4.2.
is the one recommended. The road then ran over rather low ground, the jungle being thick with creepers and brushwood. Having crossed a stream of about 20 feet wide, flowing to the north and eastward, and passed along the sides of some low hills thickly wooded, and crossed a stream, I suppose the same as before mentioned, five or six times, we arrived at a good halting-place.

The country then resumed the appearance it had before reaching the low ground. We halted on the right bank of the nullah, with hardly any water in it, on a very confined spot at the foot of a range of hills.

The road very good throughout the day.

25th May.—From the foot of the Kokarit range to the Village of Kokarit.

Direction { S. 50 W. / N. 53 W. } Estimated Distance { 10½ miles / 3¼ „ } Estimated Time { 3 h. 29 m. / 1 h. 8 m. }

We passed over a range of hills and reached a stream of 25 feet broad, with a foot of 45.
water flowing from the southward and eastward, which having crossed we came upon another one of the same dimensions, called the Kokarit River, and followed its course chiefly, however sometimes going over steep but not high hills, and reached the old town 3.29.
and fort of Zoya (one of the 32 towns comprehended in the Province of Martaban), built on low hills. Here we stopped a short time to allow the ponies to get a little grass; they have fared badly for the last two days particularly, not having had any paddy, and in fact we have not seen a blade of grass since leaving the Mé Tian; they have subsisted entirely on leaves.

On quitting the old fort, the jungle which had been very thick amongst the hills became open and stunted, with fine plains of long grass around. It continued so to the village of Kokarit, where we halted.

This village is divided into two, both inhabited by Karengs, one calling themselves Mi Khin or Talain Karengs, and the others Mi Tho. The former are considered more civilised and advanced than the latter, and in fact some of the men, who were clad like Burmans, spoke that language like one of that nation.

The river here is about 100 feet broad, with 1½ feet of water in it, and falls into the Houndrau; it is navigable for small boats during the rains, but not at present. The hills we have come over appear to run south-east and north-west, but rather inclining to north and south. A low range only is seen from this, about five miles distant to the south-westward. There is an old town called Myawadi, one night's journey from this on the Thoung Yin, near which many Karengs are located. It is two nights' journey from this to the Dagyne, and one more to the Lhaing Bue.

Captain McLeod's Journal.

26th May.—From Kokarit to the Village of Mikalón.

Direction, S. 82° W.; Estimated Distance, 12 miles; Estimated Time, 3 h. 35 m.

The road to-day was entirely over small plains, and through an open jungle of saul running over high ground occasionally, but throughout good.

2.40. We passed through a Kareng village containing about 20 houses, and having reached the Houndrau, crossed over to the left bank to the village of Mikalón and halted. The river is here 750 feet wide, and fordable at low water, being affected by the tide. Its source is at no distance to the eastward. It passes this running from the eastward, and flowing to the north-west.

Finding it would take us three marches to reach Moulmein from this, and the weather being very threatening, I determined to proceed by water, and having procured a canoe, started at seven o'clock. No sooner had we got fairly in the middle of the stream than the canoe upset; most fortunately the tide had fallen considerably, and a sand bank which was forming at this spot rendered the river less deep than it otherwise would have been; the boatmen jumped out as fast as they could and kept the canoe from sinking; the water reached their breasts. It took us about a quarter of an hour and more to reach the shore again; in the meantime all my things were wet through, many damaged and some washed out of the canoe; amongst them were some botanical specimens in loose paper. It was too dark to see at the time what was carried away. We started again at nine in another canoe.

May 27th.—To Moulmein.

I took no bearings or time, the passage being partly made at night. We reached the village of Damathat, on the Gyne, at 8 a. m., when it commenced to rain and blow heavily. Having breakfasted here, we reached Moulmein at about five in the evening, a heavy gale blowing against us the whole way.

(signed) *W. C. McLeod*,
Assistant to the Commissioner in the Tenasserim Provinces.

Dr. Richardson's Journal.

DR. RICHARDSON'S JOURNAL

Of a Fourth Mission to the Interior of the New Settlements in the Tenasserim Provinces;

Being to the Chief of the Red Karens, the Tso-boa of Monay, and thence to Ava.

13th December 1836.—At 6 p.m., in company with Lieutenant McLeod, who was also sent by the Commissioner on a mission through the Lao or Shan States into Yunan, left Moulmein and proceeded up the Gyne River. We halted the first night at Tarana, and on the 14th reached Aulan, on the 15th Atharue, near the junction of the Dhagyne and Lhaing Bue, rivers of the same size; proceeded up the latter river, and at 2 p.m. on the 16th halted at Park Tsoung, near the old town of Lhaing Bue, the last of our villages in this direction. Here we waited for the elephants (which had been sent round by the Kaloung to avoid swimming the Gyne River) till the 21st, when we left Park Tsoung and proceeded along the road, by which I have three times before travelled en route to the Shan States; I found the road incredibly improved, looking in many places like a cart road, from the Shans dragging half wild elephants between tame ones by this route to Zimmé. On the 26th we parted company; Lieutenant McLeod continued his route to the north-east, and I struck off north, a little westerly, to Mein-lun-ghee, where I arrived on 1st January 1837 (exactly seven years from my first visit). We had been on short allowance of rice two days, and obliged to halt once, searching for the Karens, who had moved (as they annually do) to a part of the hills at some distance from the road. Between the Tsheng-Tswe halting place, where the roads branch off, and from this place, the road is little travelled, and all but impassable at this season. The hills on the first day are steep and rugged, and in the following two days we had to cross the mountain torrent May-gnou 24 times, so deep and rapid that it is crossed with considerable difficulty, and repeatedly carried the people some distance down the rapid fords. The last three days the road was much better; indeed, very tolerable travelling.

1st January 1837.—At 2.30 halted at Mein-lun-ghee, formerly called Yeun-Salen; it formed part of the kingdom of Pegu; it is now the frontier town of Zimmé in this direction, and the authority of its myo-woon or governor extends over that portion of the Zimmé territory which runs down on the Salween between our Provinces and the Burmese Shan States of Kiang-túng to the northward. The town of Kiang-túng, according to Lieutenant McLeod, is 21° 17′ N. lat. The territory of course runs some way to the southward of that; it is only about one-third of this distance that the Mein-lun-ghee territory reaches to the Salween. To the northward the Karen territory stretches two

or

or three days to the eastward of the river. In the evening the old myo-woon sent some of the heads of the village to my tent with a message that he would wait on me in the morning. They brought a small present of rice and fruit, which was very acceptable, as we had no rice for the people's dinner, and some time would have been required to beat and clean it had we been obliged to collect it in the village.

2nd January 1837.—On taking a list of the people this morning, I found my own people to amount to 26, the traders, including a body of 11 Shans from Whopong and the neighbourhood, to 65; in all, 91. The old myo-woon came out a little before noon, bringing with him some rice, eggs, and a fowl or two, followed by about 20 of the people of the village of both sexes and all ages. He put some questions regarding the object and destination of my mission, stating that he was placed at one of the frontier stations to see that no suspicious or objectionable person passed the frontier, but said he supposed I would not stop if he wished me. I told him at once that I was going to Monay with a letter to the Tsoboa, and from thence to Ava, but I certainly would stop if he obliged me. It was, however, for him to consider whether I was a suspicious person, or one likely to bring any sort of harm on his country, after he had known me for seven years as the instrument of the British Government in promoting friendship with their neighbours. I reminded him of the assistance I received from him about two years ago, under orders from the Zimmay chiefs, when on my way to the Karean-nee country, and threatened him with the displeasure of the Tsoboa and King of Bankok. It was settled I should proceed; and before he left me he told me privately (all the people present hearing him) that he only wished to screen himself in case of any fault being found with him hereafter. He promised me his assistance in getting provisions; indeed it would be perfectly impossible to procure them without it; and as I cannot reckon on more than four or five days' rice between this and Gnoe-daun (said to be 14 days from this), it will be necessary to halt three or four days till so large a quantity of provisions can be collected in this small place. It will also be absolutely necessary to purchase another elephant; the present loads, small as they would be considered in India, are already too much for them, and, with the additional rice, would knock them all up in a fortnight.

3rd January 1837 (Tuesday).—Halt for rice and an elephant. The Myo-woon has sent orders to the Kareans and small villagers in the vicinity to bring in rice; and after some deliberation as to the propriety of providing for me at the public expense, I believe I am, at my own request, to be allowed to pay for what provisions we are furnished with.

4th January 1837 (Wednesday).—Find to-day that the water in the May-neum or Mein-lun-ghee River is still so deep at this season, and particularly this year, that I shall be obliged to go by a different road from the one I travelled in 1835, to avoid the frequent fording, as the coolies could not cross their loads dry; this, however, will be an advantage, as the new road lies near Karean cultivation, and has furnished me with a pretext for requiring a guide, as no one with me has ever travelled the road. The person who accompanied me on my last mission to the Karean-nee country is anxious to go again; without him we could not obtain rice from the Kareans; with his assistance the difficulty of obtaining supplies will be much lessened. The provisions are promised for to-morrow, and we are to start on the day following.

5th January 1837 (Thursday), Mein-lun-ghee.—After halting here for four days, was not a little disappointed to find we could only be furnished with four or five baskets of rice, instead of 15 to 20, the quantity I had wished to procure. There is not an elephant, bullock, or man to be hired to assist in carrying it if we had obtained it, and there are no boats at this season at the Dhagyne tseik, as the traders in salt and betel-nut who resort there annually from Zimmay, have not yet come; had they been so, I intended to have sent a supply of rice for six or eight days up the river to meet us at the Ban-ong ferry. The old man appears to have done his utmost; he refused payment for what he has furnished, and assures me that by the present route we shall be plentifully supplied, but we must not expect to travel as I did before, without a halt, the people not having rice beat out without previous warning; he has acceded to the request of the petty officer who accompanied me formerly, to be allowed to do so again, and given him authority to order the Kareans to furnish us with all we may require, and assures me we shall be able by the way to prepare for any want of provisions we may anticipate in crossing the Karean-nee country. I here succeeded in obtaining an elephant for 200 rupees. On the old man coming to take leave of me in the evening, as he has shown a readiness to assist me, I gave him a fuzil and a piece of book muslin, with which he was very much pleased. Muskets of any kind are very much prized by them, but a fuzil is invaluable.

6th January 1837 (Friday), Ban-soop-han, 1 hr. 30 m., 4 miles 4 fur. N., a little westerly.—The guide was not ready to accompany us this morning, but has promised to overtake us to-morrow, and one of the people who have been ordered to accompany him has been sent on with us to this village, about 4½ miles north, a little westerly from Mein-lun-ghee; we have only crossed the river once, close to the village; it is here of considerable breadth; I consequently forded it without difficulty on horseback.

7th January 1837 (Saturday), Ta-pa-poon, 3 hrs. 30 m., 10 miles N., 15 W.—To this halting-place we have pursued the same route travelled by me on my former mission, and described on that occasion; for the next three days our course lies more to the southward

Dr. Richardson's Journal.

than the one then followed, carrying us amongst the hills, and avoiding the necessity of crossing the river. I found before I quitted Mein-lun-ghee that the greater number of the Taung-thoos, who were to form a large part of my caravan, will probably not overtake us on this side of the Salween, as they did not start till many days after us; I have, therefore, made arrangements with the Myo-woon not to detain them here, in case they should, in the hope of overtaking me, have come without a pass.

8th January (Sunday), May-nam-new, time 3 hrs. 20 m.; distance 8 miles N., 30 W.—9.40 start along the new road which is good and level till 10; it then lies along the bed of the May-pan, a small stream which runs between low hills, some of which have been formerly cleared for paddy, but are now covered with reeds and short bamboos; at 12 it descends for 10 minutes, then passes over the tops of the low hills and along narrow ledges at their sides till 12.20, from which time it descends till 1.0, when we halt; the guide has not come up. The hills throughout the day have worn a most desolate appearance, and were it not for the scanty marks of former cultivation would look as if they had never known an inhabitant; the forest along the lower parts of the march has been interspersed with teak trees, and about our halting-place there is a good deal of fine timber.

9th January (Monday), May-tchim-leen, 4 hours, 10 miles N., 10 W.—8.30. start; country much the same character as yesterday; march more along the tops of the hills; forests generally more open; 10.50, path lies up the bed of the May-mong, a small stream in a ravine, the sides of the hills forming which are covered with bamboos; 11.40, ascend a very steep hill and pass along the top of it, from which there was a view of some extent, but nothing to be seen as far as the eye could range except mountains entirely covered with forest, their descents all abrupt, and no valleys between them; at 12.20 a very steep descent, and crossing some of last year's paddy grounds; 12.30, halt in the bed of the small stream of May-tchim; procured one basket of rice to-day.

10th January (Tuesday), May-soo, 5° 12′ 4″ N., 4 W.—8.45, start, and proceed along a road of the same character as yesterday till 10, when we rejoined the road I travelled in 1835, from which a small patch of level ground covered with long grass and jungle continued for 20 minutes, when we commenced crossing the May-soo, up the course of which we continued to travel, sometimes on its bank, sometimes in the stream ankle-deep, till 1.45, when we encamped on its bank in a ravine; we have obtained no rice to-day, and as the guide has not joined us by the old road I gave him up. Though I cannot conjecture the cause of his non-appearance, I cannot attribute, to wilful deception of the old Myo-woon of Mein-lun-ghee; yet the man was so well pleased with the 20 rupees I gave him for his services on my last mission, that I can think of no other cause; we passed 10 or 12 Red Kareans with a large herd of (50 or 60) buffaloes, which they had received as the price for five children at Mein-lun-ghee.

11th January (Wednesday), May-song, 3° 15′ 6½″ S. W.—Our march to-day has been along the road travelled on my last mission, and we halted at the foot of the highest hills in the range; we were 25 minutes in ascending; it is one of the highest in the route; I measured its height by the boiling point of water on my last mission, which gave an altitude of 2,958 feet above the sea. From this the view commands an extensive range in the distance; to the southward and westward there is a high range of mountains, distant, perhaps, 30 miles; the whole country between one sea of smaller hills, nothing like a plain nor sign of animal life to be seen as far as the eye can range in any direction; the air cold and invigorating; the thermometer at 8 a.m. did not rise higher than 48°, nor at noon than 68°; the day was cloudy, and even in the sun it only reached. 73°. As we have obtained no addition to our stock of provisions to-day, we have been obliged to send off the guide who came with us from Mein-lun-ghee in search of the Kareans.

12th January (Thursday), May-thaung, N.W. 3° 15′ 8″.—Character of the country continues the same as yesterday; no sign of inhabitants near the road; passed that leading to the Dha-gyne-tseik or Ferry at half-past 11, the distance to which is about one day and a half's march. Through the instrumentality of the guideman who accompanied us from Mein-lun-ghee, we procured seven baskets of rice to-day, which were brought to this halting-place by 22 Kareans from the last of the Zimmay villages; as he has no authority over the Kareans in advance of this, I paid him and allowed him to return.

13th January (Friday), May-tchay, N.W. 4° 45′ 0″, 14 miles.—The country has been more level to-day; the jungle is still close, and the march lay principally along the course of the shallow streams.

14th January (Saturday), Pu-ta-kay, N.W. 4° 20′ 18″, 14 miles.—Country was more open than it has been since the day after we left Mein-lun-ghee; we have crossed no large streams, and rivulets less frequent; the hills are lower, and arborescent vegetation more scanty; food for the elephants is plentiful just at the halting place, but has been scarce all the latter part of the march.

15th January (Sunday), May-nam-pa-nak, N.W. 2° 20′, 7 miles.—Have been obliged to make a short march to-day and stop at our old halting-place, as there is no water between this and the Salween, a march of 4 hours and 30 minutes; came to the ground early and made the latitude by an observation at noon 18° 10′ 8″.

16th January (Monday), Ban-ong, N. 40°, W. 4° 20′ 60″, 14 miles.—Made the march to-day

Dr. Richardson's Journal.

to-day in precisely the same time as on my last mission. The Thooghee of the Karean village of Ban-ong of 25 houses on the western side of the Salween, came over to my tent soon after my arrival, and said he had orders to detain me and report to Pha-pho my arrival, as he wished to meet me here, and if he found it proper he would take me with him to his village. I remonstrated to no purpose on the unusual proceeding of stopping me here, after inviting me, when I last visited him, to return, and having entered into friendly arrangements for opening the gold and silver road of trade and friendship: his only answer was that he was a subordinate and must obey orders. As some of the people have been without rice to-day (indeed I have supplied the whole caravan for the last two or three days), I requested him to assist us in obtaining provisions, which he promised, and I believe will endeavour to do, though he took the people over to his village for the purpose of giving them paddy to beat out for themselves, and sent them back without, as it could not be collected till the morning.

17th January (Tuesday), Ban-ong, lat. 18° 16′ 16″ N.—I sent for the Thooghee this morning; he came over a little after noon and brought with him a small supply of rice, little more than half a day's allowance for all the people; he has sent to two villages in the neighbourhood to bring in a further supply for to-morrow. I have also sent some people back one day's march to a Karean village near the road, where we hope to obtain a basket or two; the difficulty of obtaining provisions here is always great, and this year particularly so from the failure of the rice crop. The Thooghee sent an express off this morning to Pha-pho to report my arrival; it appears that for some time, from intelligence he has received, he is expecting me.

18th January (Wednesday).—The Thooghee sent over for some of our people this morning to go up the river for rice; I have sent three or four of my people, and as many of the traders to a small Taungthoo village two days up, where there is a better chance of obtaining it than here; others have been out to one or two villages of some size which are in this neighbourhood, and have obtained, I believe, another half-day's allowance for everybody; the people told them they had been ordered by Pha-pho not to sell their rice, as it would all be wanted for me, and they would not let us have any without his order. I have not seen the Thooghee to-day.

19th January (Thursday), Ban-ong.—To-day has passed as yesterday, without my having any personal communication with the Thooghee of the village. I sent the interpreter to him in the morning to inquire as to the probability of our getting a supply of provisions, and when we may expect Pha-pho: he promises, if the chief does not arive to-morrow, to go himself with the interpreter in search of rice, of which he assures me there is a considerable scarcity this season; in the meantime, the people have made out for to-day by mixing the little rice they could get with maize and vetches, and our own people are expected to return to-morrow.

20th January (Friday), Ban-ong.—Nothing has occurred to distinguish this day from yesterday; neither our rice party nor the chief have yet arrived: we, however, succeeded in obtaining one basket of rice for two rupees; and a Burman, if turned into the jungle, even of the most desolate and unpromising appearance, will always succeed in picking up the material for a vegetable stew, on which, seasoned with a little of his favourite gna-pie and salt, he will be able to live very well for months, but they must have a little rice with it if possible; this they eat frequently; their appetites are not nearly so voracious as the natives of Hindostan.

21st January (Saturday), Ban-ong.—Seeing no prospect of the arrival of Pha-pho I sent for the Thooghee in the morning, and told him that as we were still unsupplied with provisions, and had heard nothing from the chief, unless something was heard from him in the course of the day, that I should cross the river to-morrow; the old man agreed with the justice of the proposal, and after a good deal of hesitation he has promised to supply me with boats in the morning. I, however, expect, should no communication arrive from the chief, he will evade performance: the rice party still absent.

22nd January (Sunday). Ban-ong.—As I yesterday anticipated, the Thooghee sent over this morning to say messengers had come in, bringing intelligence that Pha-bhang (the second chief) had gone to Dowm Tulwee, the residence of Pha-pho, and that they were both to start this day or to-morrow to meet me here; he therefore begged me to remain a day or two longer, with which request I was reluctantly compelled to comply, in consequence of the protracted absence of the party I sent up the river for rice. All the rice we have obtained here has been in small chance supplies, brought in by the people in our immediate vicinity; we have at no time since the first day had a full day's supply, and the difficulty of obtaining it is said (and we know from experience of last mission that it is so) to be greater in advance than it is here: had the people returned I should certainly have proceeded to-day. Some of the villagers told us to-day that a message from some of the Shan States, under the Burmans, had been sent to Key-pho with the present of a horse, to request a passage for traders through his country: the present and request were both refused, as not in accordance with the Karean custom, and from fear of the traders introducing diseases (small-pox or cholera), of which they are particularly afraid; and their hatred of the Burmese is greater than even the Zimmay people.

Dr. Richardson's Journal.

23rd January (Monday), Ban-ong.—Seven of the 12 people sent for rice returned this evening with about eight baskets; they were detained by the difficulty of descending two rapids, down which they were obliged to wait for the Kareans to bring them; their return was most welcome; two-thirds of the people had had nothing to eat to-day, and their return enabled us to breakfast about six o'clock in the evening. As we still hear nothing of the chief, I intimated to the thooghee my intention to cross the river to-morrow and proceed on my way. I learned to-day that Juman and Legie, two Bengalies from Maulmain, have been here again trading in slaves, and that four or five natives of India are now at Pha-pho's village on the same errand. We have been joined to-day by the Taung-thoos, with the Bodre tuga, amounting to 14, with 35 bullocks loaded with gna-pie and betel-nut, making the whole party, with 11, who joined at Mein-lun-ghee, 105 people, nine elephants, and about 50 bullocks.

24th January (Tuesday), Ban-ong.—Agreeably to the determination of yesterday, we commenced crossing about 11 a.m., with two small boats, all that could be obtained, and at 6 p.m. we had crossed everything except two elephants, which were restive, and six or seven bullocks. We met on this side of the river 80 Shans from different parts of the country north of the Kareans; they had passed themselves off for inhabitants of Laye tung, as that village has come into the Kareans, and pays the black mail; they had been, nevertheless, detained by Key-pho, one of the Karean chiefs, and it was only the intelligence of my approach that induced him to allow them to proceed; they had been 20 days from Loye-lung, and are now on their way to Maulmain. I took this opportuniy of writing to the Commissioner.

25th January (Wednesday), Ban-ong.—The people have been engaged all day in unsuccessful attempts to cross the refractory elephants, which both belong to the traders; one, a small female, was got over after a good deal of trouble, but the other, a large male, after trying every means thought most likely to succeed, is still on the other side of the river. Our rice is again out, and no intelligence of the old chief (unless some muskets fired off in the village to-night be in honour of his arrival). Five of the 12 people sent for rice on the 18th, and who were to have returned in four days, are still absent; we must, however, start in the morning, as we have little hopes of further subsistence here, and shall be one day at least without rice under the most favourable circumstances. I have advised the man to whom the elephant belongs to send him back to Maulmain. I have advanced him 75 rupees to buy five bullocks from a Shan trader, who is halted on the other side of the river waiting for slaves.

26th January (Thursday), Ka-tchaung lan, 3° 35′ N.W., 12 miles.—Waited till nine o'clock at the last village, to give the man another chance of crossing his elephant, when we started, finding it could not be accomplished; the first of the coolies came up at 12.35, but the elephants, owing to the sharp pointed rocks on the road, which distressed their feet, and the necessity of cutting a way for the howdahs through the branches and creepers for the first mile and a half, did not come in till 5.15. We met on the march to-day an old man and his family, taken at Mobie, being driven to the ferry for sale; their captor, an old Karean thooghee of about 50 years of age, was riding behind them, spear in hand. I asked him if thoughts of his own children did not make him feel some compassion for these poor people; he coolly answered "Khan" (fortune), and pushed on his prisoners.

27th January (Friday), Ban-to-ee, 4° 30′ N., 14 miles.—We started from the last ground at 7.30, and at nine met the thooghee of this village with the five people who were left by the others at the village up the Salween, where they went for rice; they remained one day there, and then proceeded overland to Pha-phos, a long half-day's march, crossing one high hill, from the top of which both the village they had left and that to which they were proceeding was visible: they halted two days at the chief's village, when he started to meet me at Ban-ong, by the way they had gone up, taking rice, &c. &c. with him. We consequently missed our supplies, and could only get a little cholum for the people's dinner to-day; the thooghee has procured us a little rice for to-morrow, and I have intimated to him my intention to proceed to the chief's village and there wait his return.

28th January (Saturday), Dwom Tulwee, 5° 25′ N.E., 15 miles.—The thooghee of the last village was civil and obliging, furnished us with nearly as much cholum as the people could eat for breakfast; I gave him half a piece of book muslin; left To-ee at 8 a.m., and halted here at 2.40, having rested the people one hour and 20 minutes on the road. We found the water had been let into our old halting place preparatory to cultivation, and took up a position on the other side of the road; the ground was white with bones, and I found we had encamped on the field where they perform sacrifice to the natts. The son of the old chief has promised us some rice, though they say the crops have entirely failed here for the last two years. The elephants did not come up till 5.30, and it was quite dark before the tents were pitched.

29th January (Sunday), Dwom Tulwee.—The son-in-law of the old chief came to the tent this morning, and said he was then starting with horses for Pha-pho, and begged me to remain till his return, which he said would, under the most unfavourable circumstances, not be more than five days, but he did not expect to be more than four. Pha-pho's youngest

Dr. Richardson's Journal.

youngest son, came this evening to borrow an elephant to go to a village a day's march from this for rice for our use, showing a much better disposition to assist us this year than formerly. I have agreed to send two of the elephants, and they are to start early in the morning. He at first objected to taking two, as they would be ashamed if they could not load them both; his scruples were got over by telling him that elephants did not like to travel alone, and that one was intended for his accommodation. I had a long conversation this morning with an old Shan woman, from Monay, the wife of the chief man of business and interpreter; she gave her opinion very freely of the Kareans, in presence of the chief's son, who was lounging about with his pipe in his mouth: she said they were jungle wild animals; they had neither temples nor laws; did not know good from evil, and were perfectly uncivilised: the bystanders, or rather sitters, though she was understood by two-thirds of them, seemed perfectly unmoved by her eloquence.

30th January (Monday).—Started the elephants for the rice this morning at seven, with the chief's son. I have not seen anyone else in authority to-day; this afternoon, a Shan Pounghee, who has established himself here with his countrymen, of whom there are about 25 or 30 families in the village, paid me a visit; he has at present six scholars in his kyoung; none of the Kareans have yet joined him, or pay any respect to his cloth.

31st January (Tuesday).—The eldest son of the chief came to the tent for half an hour to-day, and the interpreter mentioned to him that the servants had no yams for dinner: he immediately rose, leaving his pipe and knife, went home, brought as many as his hands would hold, and then went away, without any follower, to look after his buffaloes. I soon after saw him return leading one in, which a Shan, who was sitting near, said was to be sacrificed to the natts, which are extremely numerous; every tree, hill, river, stream, rock, in fact every object, natural or artificial, has one. Their children, wives, and the men themselves are seized by them when they go to the jungle for firewood, or even for water. How they were seized they could not very intelligibly explain; but it appears to be some obscure feeling of illness, and vague fancies, from a morbid imagination, of some approaching calamity. A sacrifice then becomes necessary; they consult the fowls' bones, the leg bones in preference, and if proper the sacrifice is made. They sometimes kill as many as eight or ten bullocks or buffaloes at a time, great part of which is left at the place of sacrifice to decay. When only one is killed, the head is put down, with the tips of the fore-feet on each side of it, the hind-feet a little behind and the tip of the tail a little further back, between them, all the most worthless part of the animal for the natt; the rest is taken home and eaten, and a small portion of the dressed victuals is brought out and added; sacrifices are made and prayers offered up, sometimes for a continuance of health; generally, however, it is only the evil spirits, who have inflicted some illness or misfortune, which are attempted to be propitiated. I asked if the cattle had no natts where there was such profusion, and if they were not offended at their living creatures being sacrificed to other natts. They said if it was not indicated by the fowl bones, they never made the sacrifice, even if the person was dying; and if indicated, it was made, even if they were dead.

1st February (Wednesday), Dwom Tulwee.—No intelligence of the chief, nor have I seen anyone having authority to-day. The elephants sent on the 30th for rice returned this evening, bringing about eight baskets. A supply has also been brought from Gnoe-daun by a Shan who has been once or twice at Maulmain. He says a large caravan, with about 500 bullocks, is now preparing to proceed thither with stick lac, who propose to pass the rains there.

There is a report that Pha-bhang has gone with a large force on a road to the westward. We have had a good many cases of slight fever amongst the people during the last 15 or 20 days; one of the merchants, who has been a sufferer is to-night attacked, with considerable prostration of strength and vomiting of blood.

2nd February (Thursday).—Pha-pho arrived last night in two days from the Salween; the fowl bones being unfavourable to a return by land, he came the first day up the Pon to Ban-toee in small boats, which they were several times obliged to unload and drag up the falls. From thence he came yesterday on horseback, and arrived here about 9 p.m.; he pleads fatigue as an excuse for not seeing me to-day, but I am to be introduced to-morrow; and from what I have heard from his son and the old Taung-thoo interpreter, I almost anticipate a refusal to my request to be allowed to pass through his territory. He has already ordered that traders from up the country north-west of this should not come further than Gnoe-daun, and from the southward and eastward than the Salween, in consequence of some trouble he and the old interpreter's son had last year with three men from Maulmain.

3rd February (Friday).— Waited on the old chief this morning with the Commissioner's letter and presents. He is evidently anxious to oblige us, but naturally afraid of opening a way into his country for the Burmans. After a good deal of discussion, I obtained his promise of transit through his country, and protection to traders as far as his power and influence on the people prevailed. Traders are to pay no duty, but to make a small present to the chiefs on receiving their pass; and as the old man has not the character of being avaricious, I do not suppose much will be expected. He distinctly stated that his

Dr. Richardson's Journal.

authority was supreme throughout the country; that there are three other chiefs of his appointment, and that there is no necessity for my visiting them. He spoke of the value of the presents, and regretted his inability to make a suitable return. My visit lasted for nearly three hours; and soon after my return the old Shan interpreter came out to the tent. I begged him, as we had already lost so much time, to get the letter for the Commissioner ready to-morrow, as I wished to take leave on the day after, and to start on the subsequent day. He had come to borrow a writer, as their only one was from home, whom I promised to send in the morning.

4th February (Saturday), Dwom Tulwee.—Sent the writer with paper, &c., into the village this morning, and the letter was ready by noon. The old chief regretted he could not visit me, as my tent was pitched on the spot where the cattle are sacrificed; and as he neither eats meat nor drank spirits, which they do to excess here, it would be improper for him to come here. His son and all the heads of the village, however, came without scruple. The place was of my own choice, as the place we occupied last year was under water; and there was no other spot, except in the centre of the village, level enough to pitch a tent.

5th February (Sunday).—This morning I called on the old chief for the letter. He was most anxious to detain us till the return of Pha-bhang's marauding party, which he told me amounted to 300 or 400 men; their attack is on some part of the Monay frontier, and he appeared very apprehensive of our falling in with them on their way home. We had been so long delayed I was determined to lose no time, and intimated my determination to start early to-morrow. I engaged two guides to Kadoo, who, I was glad to find, stipulated for terms before we started. The hire between this and Gnoe-daun is four tickels, coarse silver; and as the distance to Kadoo is twice as far, they are to receive eight tickels each on reaching that place. The old chief gave them strict injunctions to behave well, and authorised them to order the heads of the different villages to furnish us with rice; he also gave them instructions in Kareans, which I supposed to have reference to Pha-bhang's party. After hearing a great variety of opinions as to the best road, whether by Gnoe-daun or Kundoo, I have at last determined on the latter, as all agree it is the shortest. The hills are described by some of the people as nearly impassable, by others as not particularly difficult by the Kundoo road; by Gnoe-doun the road is nearly level, but two or three days longer, and food for the elephants scarce. I remained upwards of an hour, to my discomfort, sitting on a Tartar carpet on the hard floor, and left the chief fast asleep, with his head against a post, and his pipe in his mouth, in which state he might have been for a quarter of an hour, as he had not joined in the conversation for some time, and the house was too dark to see, till the people moved out of the doorway, to let me out.

6th February (Monday), Waterfall halting place, 4° 35′ N., 6 W., 15 miles.—From Maulmain to this place I have been less minute in describing the country and the route, having entered so much into detail in my last mission; but as the country in advance is perfectly unknown, never having been traversed by a European before, perhaps it will be thought necessary to describe the immediate route a little more particularly. Left Dwom Tulwee at 8.10 a.m., and five minutes brought us to the end of the little portion of table and on which the village is situated, when we descended a minute or two, and crossing a small plain of a few hundred yards in extent, between the foot of the hill and the Pon river, which may be brought under cultivation, and irrigated by the stream from the hill above, continued our march along the valley or ravine of the Pon, nearly due north. The river is of considerable breadth, perhaps 120 yards or more across, and full of rapids, sometimes amounting to falls, as that near which we are encamped, where the water falls two or three feet over the rocks, which reaches right across the river. The whole course of the river is interrupted by small rocky islands, covered with the common trees of the jungle, the water often, even at this season, rushing through amongst them, giving the appearance as if the river had taken this course lately, and not had time to wash away the obstruction. The whole march had more the character of a ravine than a valley, the hills never being more than a mile and a-half apart, generally not one-fourth of a mile; the road, which was apparently much frequented, lay along the banks of the river, within a few yards of it, except for about 10 minutes, when a small hill lay between us and it. The ferry to Gnoe-daun, which lies west of the Pon, we passed about 11 o'clock; one road to some hill cultivation about noon, and one to a small village east of our route, close to the halting place, were the only cross roads we saw, and little or no cultivation near the road, indicating, as does the whole appearance of the country, a very scanty population; the trees, even near the river, do not attain a large size, and on the hills, which are rocky (lime sand), they are scattered and stunted, some of the hills almost bare. We halted at 1.20, having rested 25 minutes by the way. The elephants did not get in till five o'clock; the heat, which is 92° in the tent at noon, is much felt by them, though at 6 a.m. the thermometer is only 54°, and at 9 a.m. 68°.

7th February (Tuesday), Nam-supee, 3° 40′ N. E., 11 miles.—Eight, start, and for 20 minutes continue along the Pon river, as yeterday, when we come on a small plain, which had been under cultivation within the last year or two; this continued 20 minutes more, and another 30 minutes brought us to Lun-baing (or Dun-daing of the Zimmay Shans, or the village of the plain), containing about 30 or 40 houses, with a good many pigs and cattle, but very few fowls. We passed the village at 9.40, when we halted till 10; again proceed,

Dr. Richardson's Journal.

proceed, and ascend the steep eastern hills, rugged and difficult, N. 70° E., for half-an-hour, where we were obliged to halt half-an-hour for the guide; our road then lay over some uneven table land, east, a little northerly, till 11.30, when we commenced the second steep ascent, which continues to this place, where we halted at 12.30, near a very small stream, trickling out of a high rock, to the eastward of the road. The hill rises above us in a very steep ascent, for perhaps 500 feet, and perpendicularly above that for about the same height. The hills to the westward, except some ranges in the extreme distance, are all lower than our halting-place (at which the boiling point of water is 206, giving a height 3,085 feet). There is throughout a disposition to the formation of table-land on the summits of all the hills, which, in some instances, is some miles in extent; on one of these tables it appears Gnoe-daun (a town surrounded by a stockade, surmounting a mud wall, inhabited by Shans, and, by all accounts, one of the most important in the Karean country) is situated; it is said to contain 400 or 500 houses, and the plain to be well cultivated, and perfectly bare of trees; indeed the hills altogether, to the westward of the Pon, are very scantily covered with arborescent vegetation. Met eight or ten traders to-day, with a few bullock-loads of salt; passed one cross road and two patches of old cultivation of some extent. A portion of the river, near the village, passed this morning; is visible from this bearing, S. 65° W.

8th February (Wednesday), Sa-len-lay, 3° 50′ N.E., 12 miles.—Left our ground this morning at eight, and continued to ascend for an hour along the sloping detritus at the bottom of a perpendicular eastern range of hills, much of which has been brought under cultivation. At an hour from the last halting place, the high perpendicular portion of the eastern range terminates in a bluff point, and the hills on both sides of the road have the same character; the rocks almost entirely disappear, the declivities are much less steep, and the whole country to the summits of hills, from the termination of the rocky range to our present halting place, has been brought under cultivation. The population must be very much beyond what I had formed any idea of; the cultivation, which consists of paddy and cholum, is conducted with much care; the soil, of a brown reddish colour, seems deep and good; the trees, which are of small growth and thinly scattered, are all cut off within a foot or two of the ground, their rooots appearing necessary to keep the soil from being washed away; the grass is perfectly grubbed out and burned, and the whole well turned up with the Chinese hoe; we passed three large villages, and they are said, and must be, to account for the cultivation of the whole country, very numerous; some of the paddy in the bottoms of the narrow valleys is cultivated with great neatness in terraces, as practised by the Chinese, and in these situations alone can irrigation be practised; on the hills they depend on the rain. Though our halting place appeared to be some miles from any village, five minutes after we halted it was crowded with people, who behaved in a very orderly manner, and left us at night fall; all along the road people left the villages and crowded to the tops of the hills to look at us, in some instances bringing as presents a few baskets of paddy. We have passed several streamlets to-day, and we encamped on one in a small terraced valley to-night; the Karean country is said by the guide to extend three days' march from east to west, and we have still three days to go to the northward before we reach the Burman frontier, though the Karean day's march is much longer than ours; still I had reason to believe afterwards that he was much under the truth. One of the elephant's howdahs was knocked down a precipice by a projecting stump in the very steep hill above the road, which, detaining us, we did not get in till 5 p.m.; the coolies all lost their way in the multitude of cross roads, and did not get in till six; the people were, however, everywhere perfectly civil to them, though their appearance must have surprised them.

9th February (Thursday), Too-lay-mae, 4° 30′ N.W., 13 miles.—Started at eight, and for the first 10 minutes ascend, then proceed along the undulating tops of the hills till 8.40, when the road lies along the bottom of a valley; 9.10, cross a small run of water for irrigation, in a terraced field, deep tenacious mud, through which we had a good deal of difficulty in getting my pony and the bullocks, and continue along the valley till 10.20, when it opens out to the eastward, and I expected to see something like a plain, but the hills continue as far as the eye can reach, though lower than where we now are, with one high range far east, beyond which flows the Salween, one day's journey from this; between this and the river there are no inhabitants, save the tiger, elephant, and rhinoceros, which are never disturbed, except by an occasional party of elephant hunters from Zimmay; 10.30, see Gnoe-daun due west, distant perhaps 10 or 12 miles, with its very extensive table lands, which are said to be all terraced and under cultivation; the terraces formed of stones and earth frequently five or six feet high, beyond which, perhaps, 25 or 30 miles distant, is a high range of hills, along the foot of which runs the Nam-may-meyat, a tolerably large river, at a short distance from Gnoe-daun; it takes a turn south-east, and continuing its course along the foot of the table hills, on which that town stands, joins the Pon south-westerly of where we now stand, and flows with that by the Salween, into the Bay of Bengal; the Pon is eastward of the former stream, and runs near the foot of the hills, along the tops and sides of which our road lies, 10° 40′. Suffie Hill, distant 30 miles north, 20 west, at the foot of which stands Thataung-lay, the inhabitants of which are called Taung-thoos (southern people), and were originally brought here from the old kingdom of Pha-taung, near Martaban, by Norata meng-tsoe, who reigned in Pagan in the year 379, Burman æra, or A.D. 1007. From this point we again ascend, and pass close to the road near a large village; the remains of a leopard which had been

Dr. Richardson's Journal.

killed a day or two, from 11, when the guide pointed out a division between the summits of two hills due north of this, through which our road lies to-morrow; we descend a steep rocky declivity to our halting place, which we reach at 12.30, near the first rocks on the road since leaving the last halting place; the country thickly inhabited as yesterday; eight large villages at one time within sight of the road.

10th February (Friday), Ban-sa-to, N.E. 2° 10′, seven miles.—Again started at eight; the guide had found out during the night that in a narrow ravine in this day's march, the trees from the opposite hills had fallen over the road in such a way as to render it impassable to elephants, though people and bullocks could go under them; we consequently, instead of going due north, as proposed, proceeded by a path very much to the eastward of our intended route, which threw us quite out of the line of cultivation and inhabitants; the road lay for 10 minutes north along the bottom of the valley, then over low hills, north 46 east till 8.50, when we commence a descent steep and rocky, with frequently little appearance of a path, the trees much impeding the progress of the elephants till 9.30 (south 35 east); at the foot of the descent, we reached a valley which had formerly been all under cultivation, a small village and little clear ground near it; beyond this, till 10 a.m., the branches of the trees and creepers were so interlaced, that I halted on the bank of a small stream in thick jungle, near the village called Bun-sa-to; it has only been inhabited three years by these people, who are Shans of Mok-mai, from which they were driven by the heavy taxation of the Burman Governments, 40, 50, or even 60 tickals of coarse silver being often demanded from one house during the year; whilst here, under Pha-pho, the whole village, which consists of eight or ten houses, by making a small annual present of five or six tickals value, are free from all demands, and even this small present seems voluntary. The last half hour, south, 60 east, we have seen little cultivation, and only this small village, which is a short half-day's march, due west from the ferry of Sa-to (or Ta-sa-to, ta being the Shan word for a ferry) on the Salween, from which boats go up and down constantly to Ban-ong.

11th February (Saturday).—Turrafae, N.E. 3 hours., nine miles.—Started at 8.30, and travel 1 hour and 20 minutes north, 19 west, through a jungle for the most part more open in a ravine amongst the hills, in some parts rocky and unpleasant, with one or two patches of clearing, and small streamlets, the greater part of the rest of the march north, 43 east, till 1.20, through a country which has at one time or other been under cultivation, but we saw none that had been recently so; in the last 10 minutes of the march we cross a small patch of clearing for next year, and halt on the side of the small stream of Turrafae, a little further from the Salween than yesterday.

12th February (Sunday), Pan, N.E. 4°, 13 miles.—March to-day of much the same character as yesterday (except the jungle was so open as not to impede the elephants), up and down the rocky hills, and along rocky ravines, no cultivation or marks of the country ever having been inhabited; some of the hills rather steep and difficult, and some of the timber larger than most we have seen; on this side, the Salween, about noon, we passed a clump of tolerably large fir trees on one of the hills; the hills had neither form, elevation, nor vegetation to give them interest, the whole dreary and desolate; a few small birds about our halting ground; what can have brought them here is difficult to imagine.

13th February (Monday), Kundoo, N.W. 6 hours, 20 miles.—Started at 8.15, and making a long march of six hours, halted here at three; the elephants did not arrive till half-past six, having been 10½ hours on the road. The first hour our march lay in bamboo jungle, winding amongst the hills, up the bed of the stream on which we halted last night; leaving this, we ascend a somewhat steep hill, the top of which is the Karean-nee boundary, in latitude about 19° 15′; from this the whole march is through tree jungle, more or less thick, with occasional patches for half-a-mile of bamboo, and some scattered fir trees; for nearly the last two hours the road was better and the hills became less lofty; at two we came on the clearing of the village, and making somewhat of a circuit, halted at 3 p.m.; about 4, the thooghee came out for half an hour, and at 6½ the elephants came in in a heavy shower of rain, which continued till 8 or 9 p.m.; the thooghee wished me to halt a day, and the rain, which will make the tents so heavy with the length of to-day's march, obliged me to do so on the elephants' account.

14th February, Kundoo (Tuesday).—Before taking final leave of the Kareans, it may perhaps be proper to give a short recapitulation of the route, distance, and direction of the march to their north frontier—a summary of the little which is known of the extent of their country, their numbers, and any peculiarity in their habits and customs that would strike the common observer in passing hastily through the country. From Maulmain, which lies in latitude 16° 29′ N., to the Thoung-yin river, which rises in the Siamese range of hills S.E., and taking north-westerly course, falls into the Salween, north, a little westerly of Maulmain, forming our boundary with Siam in that direction; the distance travelled is about 110 miles in a north-easterly direction, which may be done with elephants easily in nine days. In the dry weather the road is good, with abundance of water and forage; almost a perfect level till the last two days, when you come amongst the hills. In the height of the rains the road is impassable, and at the beginning and end of them very unhealthy, travellers being subject to severe remittent and intermittent fevers. After the fifth day you see no inhabitants, and depend for your supplies on the Kareans thinly

Dr. Richardson's Journal.

thinly scattered over the hills, to whom it is necessary to send notice of your approach, when they will meet you at the halting-places with rice, fowls, yams, eggs, and occasionally a pig; traders are obliged to go in search of their villages, which they remove annually some distance from the road, as they are averse to intercourse with strangers. The river is crossed one day and a half from its junction with the Salween, in lat. 17 34' 13", and is fordable for elephants from November till the middle of May, but rises many feet in the rains. From this to Mein-lun-ghee, which is a distance of about 78 miles, is travelled in a north-westerly direction; in this portion of the route the path is very bad, through a rugged, mountainous, and broken country, covered with thick jungle, and very little frequented; there is also in this stage of the journey the river May-gnou to be frequently forded, and the May-neum or Mein-lun-ghee several times; the Karean inhabitants of the mountains, who are not numerous, are often located at a distance from the road, difficult to be found, and provisions, consequently, difficult to be procured: the tax imposed by their own Government (they are subject to Zimmay) is exceedingly light, for one large village of eight families, the inhabitants of which were the only Kareans we saw between our frontier and Mein-lun-ghee, the whole impost did not exceed *Rs.* 1. 13. a family, according as they are favourably situated or otherwise for the sale of their produce. The day before reaching Mein-lun-ghee, the halting-place is at the village of Ka-pa, of 30 or 40 houses, situated in a small valley on the May-neum or Mein-lun-ghee river, the inhabitants of which possess considerable herds of cattle and buffaloes, and the portion of ground they have cultivated seems rich and productive: between the village and Mein-lun-ghee several villages are passed; the path which runs at a short distance from the river is good and well frequented. The city of Mein-lun-ghee, consisting now of 10 or 12 houses, stands on a small stream which falls into the May-neum, a little to the westward of it, two days from the Dha-guin-tsiek or ferry of the Salween, and about three-quarters of an hour's march north-westerly from the site of the old walled city of Yeun-tsalen, which is passed in this day's march, now overgrown with large trees, but the remains of the old wall and ditch of very considerable extent still easily traced. Yeun-tsa-len was formerly a part of the old kingdom of Pegu; it was given at a remote period as a dower with a Talyne princess to a chief of Zimmay; it must, however, at a later period have been reclaimed, as about 60 years ago we find in the Talyne history, that by order of the king of Ava, the myo-woon of Martaban, and myo-tsa of Maulmain, drove away some Shans from Zimmay, who had been sent with orders from the Tso-boa to re-establish a town there. The chief of Mein-lun-ghee has the title of myo-woon, and his jurisdiction extends over the whole of this valley of the May-neum, which is of considerable (some days') extent north and south, though east and west it is only a few miles; the whole of the inhabitants probably do not amount to more than 200 families; he has also jurisdiction over the Kareans of the hills, between this and the Karean-nee frontier, of whose numbers it is impossible to form even a guess; they are, however, certainly not numerous.

From Mein-lun-ghee to the Salween river (called by the Kareans Kooloo Khlo, Khlo meaning river) which is crossed in lat. 18° 16' 22", the distance travelled is about 116 miles by the course of the May-neum, and 109 by the hills; the former we performed in eight days, whilst the latter occupied eleven; the whole of this portion of the route is very thinly peopled, provisions difficult to be procured, water and forage for the cattle plentiful, path generally bad, either over steep hills covered with dense jungle, or along the stony beds of small mountain streams at the bottom of deep valleys or ravines, and so tortuous that the actual distance between the two points cannot be much more than half the distance travelled. The Karean-nee boundary, a small stream called May-tchay, at the foot of a hill, is crossed the third march before reaching the Salween, and this part of their country is almost destitute of people, and the few there are of the other tribe of the Kareans; I believe very few, or none, of the Red Kareans live east of the Salween River, though from Ban-ong, the village on the west bank, many of the people cross the river daily to cultivate their fields on the east side. The Salween, till within 60 or 80 miles of its mouth, is said to be one of the most impracticable rivers in this part of the country, with its bed full of falls and rapids, so as to render it dangerous in many, impassable in some parts, and its banks abrupt rocky mountains, with very few valleys or spots favourable for the habitation of men; where it is crossed it is about 300 yards wide at this season, and its banks, which are deep, are perhaps 600 yards apart, and are said be to filled in the rainy monsoon. The course of this reach is N. 70° W., though the general direction of the river nearly north and south. The Karean village of Ban-ong, containing 25 houses, stands in a small plain on the western bank; a principal part of their rice and garden grounds are on the eastern side of the river. From this to Dwom Tulwee, the residence of the chief Pha-pho, the distance travelled is 38 miles in a north-westerly direction, and occupies three days; the first over low stony hills, either bare or thinly covered with stunted trees, and the stones having exactly the appearance of being water-worn. Second day road more level. Towards the latter part of the march some cleared spots are passed where they cultivate cholum, and two small villages, one of 10 or 12, the other of 20 or 30 houses, and the halting-place is at a third, larger perhaps, 40 or 50 houses, on the banks of the Pon River, about two stones' throw wide, which rises in the Shan country, north of Laygea. Half of the third day's march, pretty good, lies up the valley of the Pon, which is perhaps 10 miles wide; the last half is bad, over rugged, broken hills, which bound the valley east, and the halting-place is at Pha-pho's village, lat. 18° 38' 17" N., of 70 houses situated on the lowest of the three table or shelf-like projec-

Dr. Richardson's Journal.

tions from the side of a high hill, found, by the boiling point of water, the one on which the village is situated, to be 1,021 feet above the sea; the second is 500 or 600 feet higher, and the third 2,049. The lowest is about 600 paces wide, and perhaps little more than half a mile long; the upper one is little larger, perfectly level, soil rich and well irrigated by a beautiful clear stream, which falls from the hill above: as there is said to be only one way up to the upper two flats, the Burmans and Shans look on the Kareans as perfectly secure in their impregnability.

From Dwom Tulwee to Kadoo, the latitude of which is 19° 23′ N., a distance of 100 miles in a north, very little easterly, direction, occupies eight days. This is the first Burman town, and lies about eight miles to north, little west, of the Karean boundary, which is marked by the summit of a hill about lat. 19° 15′. As this part of the route, never having been travelled by a European before, is given in some detail in the journal, it is not necessary to say more of it here than than it is a succession of mountains, generally lime or sand, more or less steep and more or less covered with jungle, in some places pretty thickly inhabited, where the soil, a red loam, is of some depth, and many of the hills capable of cultivation for dry, and many of the valleys for wet, crops.

The Kareans themselves say their country, without including the slip of territory to the eastward of the Salween, extends four days' march from east to west, and six from north to south; but this must not be supposed one of our short marches, as a Karean marches all day long. Gnoe-daun is their largest town, and is said to contain 500 houses. Most of its inhabitants, however, are Shans from the northward, who have fled here to escape from the Burman oppression. Their country is divided into three states by the three chiefs who rule it, viz., Pha-pho, Pha-bhang, and Key-pho; of these Pha-pho is nominally, and, under ordinary circumstances, really the head, and his people the most numerous; those of Key-pho and Pha-bhang, the most restless and daring in their inroads into the Burman territory. There are some other fanciful divisions, such as Lay-may (black necks), so called by the Burmans from a black crescent-shaped mark tattooed from the angles of the jaw to the pomum Adami. They are called by the Shans Tsurein, or Taleine; they wear their hair short, contrary to the usual custom, and ornament their head with a string of teeth round it, just above the ears. They are reckoned the greatest savages, and are said to be more muscular than the others; they inhabit the country north-east of Saga. Besides these are the En-bue (white chests) and Potaingo, near Shoe-gheen and Toungngoo, the Tamai, north of Mobie, and some others. Their own term for the nation collectively is Kaya, the meaning of which I did not learn. To the eastward the Salween may be reckoned their boundary; for though they have a few miles of territory, and some common Kareans subject to them, I believe there are no Red Kareans live to the east of that river; north they have the Burman Shan States, west the Burmans, and south, a somewhat extensive track, inhabited by the common Kareans, who, under their own chiefs, pay tribute to both the Burmans and Shans.

The town of Gnoe-daun, before mentioned, is the only walled town in the country, as far as I am aware, though there are some large villages in the neighbourhood of it, situated almost in contact with each other, having the general name Nong Palay, containing in all perhaps 300 houses, under Key-pho. The inhabitants are said to be some of the most desperate robbers of the whole tribe.

The only mineral productions I am aware of being found in the country are tin and lead, the former in great purity and abundance, though no doubt iron exists among their hills, which are generally of the older geological formations. There are three pretty large rivers, the Pon, the Tabek, and the Nam-may-meyat. The first and largest, into which the others fall, rises north of Laygea, in the Elephant-hill, the second near the town on the Shan frontier, from which it takes its name, and the third, said by some people to rise in the Neaung Eue lake (and I believe correctly so), runs round north of the foot of the hill on which Gnoe-daun stands, within half a day of that town, and may be navigated by small canoes from Neaung Eue to its nearest approach to Gnoe-daun; just before joining the Pon it takes an underground course for some hundred yards. The whole country is one succession of mountains from one extremity to the other, and the inhabitants, as far as I have seen the country, are located either on their tabular tops, which form they have an universal tendency to assume, Pha-pho's village, Gnoe-daun, Nong palay, and many other villages, being so situated, or near the tops of the round-formed hills, which, next to the tables, are most favourable to cultivation. The soil of the hills is generally of some depth, and of red colour (probably from iron). Though from some of the high hills I had an extensive view, I saw nothing like a volcano amongst them, nor did I hear of any that had become extinct. In so mountainous a country, as might be expected, there are numerous waterfalls in the course of the rivers; the Pon, as far as we travelled near it, has a continual succession of them; but none of them more than a very few feet, though the scenery is in some places of the wildest and most magnificent description. There is said to be one fall of great height in the Mobie River, but I could not ascertain the situation of it, and many people, who know the river, deny its existence. I only heard of one cave, called the White Elephant's Cave, above the junction of the Pon with the Salween.

Near Gnoe-daun there is a small lake, Teitone, the waters of which are used by the Shans of that town, both for irrigation and domestic purposes; it is made the means of constant exactions by the Kareans who inhabit its borders, who cut off the supply, and refuse to re-open it till they have extorted a brass drum or two (of which Gnoe-daun is the principal manufactory), or a sum of money in the coarse silver of the country. There is another lake at the foot of the hill on which Gnoe-daun is situated, called Nong palay

(Stony

Dr. Richardson's Journal.

(Stony Lake) by the Shans; it gives name to the large cluster of villages before mentioned; from the nature of the country there are probably many others, though in my rapid transit I did not hear of them. The monsoons are the same as on the east coast of the bay, but lighter. The leopard is common in all the jungles; and in the northern part of the country the royal tiger, elephant, and rhinoceros are found. Near the Salween all the domestic animals are scarce; horses are stolen and brought in small numbers from the Burman Shans; and black cattle and buffaloes are received in barter for slaves and stick-lack from the Siamese Shans. Pigs and poultry are also scarce. Fruits they scarcely cultivate, except the plantain; and even that, though so easily raised, is by no means plentiful. Pha-pho, to whom I spoke on the subject of their origin, seems, in common with the rest of the people, to know little about it, though, like almost all other nations, they believe themselves to have migrated to their present location at a very remote period; he says they came from the north-west. He gave a long and somewhat confused account of the origin of the human race generally, the founder of which, Pha Bee, a sort of demi-goddess, had three sons, from the eldest of whom, the Chinese; from the second, the Kullas; and from the youngest, the Kareans are descended. This little story did not agree with that of many of the southern Kareans I have spoken to on the subject, who call themselves the elder brothers of the White Kullas, and Paya Kaneo "Men" par excellence. Though there are many Shans from the Burmese territory farming small villages throughout the country, there is probably not one to 150 Kareans, to whose number it is scarcely possible to speak, from the way in which I crossed their country, and little information can be obtained from themselves on the subject. The factotum of Pha-pho, an up-country Shan, told me, when urging on me an alliance with them, on my last visit, for the purpose of making war on the Burmans, that they could bring 4,000 men into the field; and though doubtless on such an occasion he would wish to make the most of their numbers, I do not believe the number exaggerated. I passed in one day's march, when our route lay through an inhabited country, eight or ten large villages of, perhaps on average, 30 or 40 houses. In person they are generally small made, and low in stature, often small legs and projecting abdomens; of no appearance of muscularity, but they plume themselves on their swiftness, and in the race believe no nation in the little world they know of can compete with them; they challenged my people on every opportunity, and generally beat them. Their colour is fair, and exposure to the sun and weather gives them a red appearance, hence their name. In their habits they are perfect savages, in their persons filthy; in sacrificing a bullock or buffalo to the Natts they often smear themselves with the blood, which is allowed to remain till it wears off. Their habitations are of the rudest and most primitive description, of the same form and materials as those of the poorer order of Burmans, except that one end is always in form of a bow, where the entrance generally is, and they are darker and more filthy in the interior. The house of the principal chief, Pha-pho, was about 40 feet by 30, and perfectly dark, the only opening in it, except the crevices between the planks, being the door, and the roof (a sort of projecting verandah) coming so low outside that little light was admitted by it, and that little was intercepted during my visits by the people crowding round it; in the middle of the room was a fireplace, a small square wooden frame, a few inches deep, filled with earth, let up through the floor and supported from below, having a few inches of space between it and the floor; the roof was splendidly varnished; the half of the room was filled with yams, some growing, some decayed, the smell from which was most disgusting. The dress of the men is a short pair of breeches, generally red, drawn by a string tight above the hips, and reaching one-third of the way down the thigh; in warm weather this, and a handkerchief (most of them have managed to get a Madras or English one) round the head forms the whole of their dress; in cold weather they wrap themselves in coarse cotton sheets, of their own manufacture. The women wear a cloth about the same length as the men's breeches, which is their only dress in warm weather; in cold, they have an oblong piece of coarse cloth, intended to be white, but seldom or never washed, the two corners tied in a knot over the right shoulder; the rest of it hanging free reaches to the knee, the left arm being covered up, the right naked, and at liberty; sometimes two are worn with a knot on each shoulder; they also wrap themselves in sheets like the men, in the cool of the morning and evening. Those who can afford it are loaded absolutely with paltry small white, red, and green beads, wearing an immense roll round the ankle, round about the calf, the waist, the neck, and the head. Of domestic utensils they are destitute, except the common chattie for cooking, and coarse knives of different sizes; a trough, made of the half of a split bamboo, serves with most of them all the purpose of plates and dishes; rice, cholum, yams, and other esculent roots are their chief food, but they also consume a large quantity of animal food; all the cattle sacrificed to the Natts are eaten by them, and three or four days seldom pass without a sacrifice, at which times they also consume large quantities of a vile arrack of their own manufacture, which they drink habitually, and always carry with them if they leave their homes for a day; fortunately, opium has not yet found its way amongst them, nor do I know that gaming is amongst the catalogue of their vices; their general condition is on a par with that of other savages in the same grade of civilization, where the brute propensities and passions of men are unrepressed by education, and reason is weak in the infancy of nations as of individuals. They have of course no trades, nor any manufactures except of the clothes they wear; and of gongs and a particular kind of brass drum peculiar to themselves, one of which was transmitted by the Commissioner of the Tenasserim Provinces to Calcutta two years ago. Their

Dr. Richardson's Journal.

language is peculiar to themselves, differing altogether from that of the natives by whom they are surrounded, appears to be a dialect of the same language as that spoken by the common Kareans, who inhabit the hills south of them, but now so much altered that a conversation cannot be carried on between them as with the other Kareans; they have no letters, or symbols of any kind by which to represent their ideas; their religion, if it may be so called, consists entirely in attempts to propitiate by sacrifice the malignant Natts, by whom they suppose all sickness and misfortune is inflicted with no other view than to obtain the sacrifice of some animal or other; they endeavour to find out what, by a peculiar method of divination, with the leg or wing bones of fowls, holding two parallel between the forefinger and thumb, with the holes for the transmission of the blood-vessels upwards; they chose one for the person, and one for the deceased, or business to be undertaken, and introducing a small piece of bamboo into the holes, they judge by signs only known to the initiated what is proper to be done; they have neither priests, lawyer, nor physician, and use no medicine in illness: but a sacrifice is made to the Natts of a buffalo, bullock, pig, or fowls, as indicated by the bones; if the patient gets worse it may have been from a wrong sacrifice, and another of a different animal is made, and when he dies it may be either from the sacrifice being the wrong animal, or made to the wrong Natt. Marriages are early amongst them, and are not binding unless the female has been given away by her parents, when a pig or a bullock or two is killed, according to the wealth of the parties, and a feast given in the village, in which arrack is always an attractive part; divorce is easily obtained if there are no children, but should there be one child they are not permitted to separate. Before marriage great license is allowed. Their funerals are more simple than those of the white Kareans; the body is merely interred, and money, valuables, paddy, yams, pumpkins, in short every thing used by them in life is interred with it, in greater or smaller quantities, in proportion to the wealth of the individual; a horse is often let loose (if the person possessed one) on the occasion, with some distinguishing mark; he is never reclaimed; if the deceased was a person of substance sometimes as many as five or six bullocks are slain near his grave, the heads, feet, and tails left for the Natt, and the rest consumed by his friends and relations; with the poorer individuals a pig or a fowl or two is sacrificed in a more humble way.

The soil is of tolerable fertility in the hills, and in the valleys where irrigation can be employed it is good; their taxes paid to the chiefs are exceedingly light; nearly the whole country is high land, and the grain raised on the hills is such of course as can be grown without irrigation; the valleys in all that part of the country through which I travelled are so very narrow that though they are cultivated with care, in terraces as far up the side of the hills as their acclivities will admit of; they bear a very small proportion to the high lands, from which circumstance inundations are unknown; the great or general seed time is about April or May, and the harvest in December; cultivation on the hills is almost entirely by hand, and performed with considerable care and neatness, and the implement universally used is the Chinese hoe; in the valleys and level table-lands the buffalo plough is used. Rice is scarce and dear (we paid at one place two rupees per basket, and could not get as much as we wanted at that price; the cheapest we got was 12 annas), cholum more plentiful. The only articles they now export are tin, stick-lack, slaves, gongs, and keetsus or brass drums. They import cattle, buffaloes, salt, betel-nut, gna-pie, beads, and English handkerchiefs, and book muslin in small quantities. There is little prospect of any increase of trade to their country for some time to come. Their carriage is bullocks and cowrie baskets; their weights the same as the Burmans, and their currency coarse silver, the best of which has about 33 per cent. of alloy. Their chiefs are the three already mentioned, and the heads of villages subordinate to them; their power and influence with the people is very limited; when I mentioned to some of them that Pha-pho did not approve of their inroads into the Burman territory for the purpose of slave catching, they laughed, and asked if Pha-pho would feed their wives and children. The remuneration to the chiefs is very trifling, and I believe altogether paid in kind; they also derive some emolument from fines levied for theft and similar offences. The services of the people due to the chiefs seem almost voluntary; when an incursion into a neighbouring State (they have also contentions amongst themselves) is contemplated, it is not proposed openly, as any man calling another on such service is answerable to his family in case of his death, and particularly if he do not bring home his head, he is for years afterwards obliged to contribute to their support. Slaves are so common amongst them that hired labour is nearly unknown. A messenger or guide received about one tickal of coarse silver per day. Laws, as they are destitute of a written language, of course none but tradition and the will of the chiefs. Their punishments, as far as I could learn, are by no means sanguinary; the Thooghee of Ban-ong told me he did not believe a single man had suffered death by his sentence during the whole of Pha-pho's reign.

The village of Kundoo or Kadoo, which name is said to be a corruption of Burmese words ken-oo, or frontier post, contains in all about 60 or 80 houses; it has a small decayed stockade within which are 40 of the houses; the rest of the village is outside; it has a small bazaar and weekly market (Tuesday), when the people from the surrounding villages come in for betel-nut, gna-pie, salt, &c. &c., making their small payments by barter in rice; it is situated in a small uneven valley; the ground immediately in the neighbourhood south-east of the town is level, and laid out in rice fields, irrigated by a small beautiful mountain stream, and on the low hills in the valley, the whole extent of which may be 10 or 15 miles by 16 or 20, is cultivated the hill rice. It is still the Burman frontier town, though from the inability of that government to protect them they have been obliged to

pay

pay a black mail to the Karean-nee chiefs during the time of the present thooghee and his father, before which the Kareans used to carry off the labourers in the fields close to the stockade (the sum paid to the Kareans is about 500 tickals coarse silver per annum); the thooghee told me they found their burden only to be borne like a man over his shoulder on both sides; when they carried only on one end of the pole they could not get in at all; there were about 20 villages, small and large, under this thooghee, who seems to have somewhat of a precarious berth of it; his father and brother were killed by the Mok-mai Tso-boa about two years ago, on account of a supposed intrigue with the Shans of Zimmay to return to that country (from whence most of them and many of the Mok-mai people or their fathers were brought prisoners about 60 years ago); one of the head men of the village, a Burman, had been intriguing with the Zimmay chiefs, and Chow Raja Woon of Zimmay with (they say) 200 elephants and 1,000 men came to the Sa-to ferry to protect them; on their arrival on the east side of the Salween they did not however find it convenient to remove; the Chow returned to Zimmay disappointed, and sent my old friend Chow-ni-nan maha nut next, to find out the reason of their deceiving him. The person who had opened the communication met him on the Salween, and he carried him off to Zimmay where he still is; the Mok-mai Tso-boa put to death the Thooghee and his eldest son on a suspicion that they were implicated; the Tso-boa is also a Yam by descent, related to the heads of this village, and probably feared; in consequence of his connections, he might be under the suspicion of the Court of Ava. The present Thooghee, dreading the fate of his father and brother, left his family and entered the priesthood. About seven months ago he was raised by the Tso-boa to his father's appointment, and yesterday received the royal order for his confirmation from Ava. He came out to my tent to-day to request I would stop here till he heard, in answer to a report he had made to Mok-mai, of my arrival. I declined remaining, under the plea that, as I was going in the first instance and directly to his superior, he incurred no risk or responsibility in allowing me to pass, especially as we had been friends of the Burmans for the last 14 years. I also pointed out to him that he would certainly displease Pha-pho by detaining me. After some discussion he consented to my proceeding, and I shall continue my route by the Salaung road, with guides he is to furnish. The Bohrug road, through Mok-mai, is somewhat nearer; but there is a sharp turn round the point of a hill, over a precipice and under a projecting rock which overhangs the road, under which they say the elephants could not pass, and there is no way of avoiding it. I dismisssed the guides from Pha-pho's this evening, paying them one tickal of coarse silver a day, with many thanks to Pha-pho, who has, without mentioning it to me, ordered the people at this village, and those of Ban-hoat also, which is three days from hence, to forward me on my journey, the Mok-mai Tso-boa, it is supposed, will also come under his orders in a year or two. He has demanded from him a fine for his portion of the thooghee of this village who was killed by him. The question is not yet settled, but the Tso-boa sent him, whilst we were at his village, 500 tickals and a horse. Pha-pho denies the justice of the sentence, and says it implicates him, as they must have passed through his country.

15th February (Wednesday).—Salaung, N. E. 5° 40′, 17 miles.—Left Kundoo at seven, and in an hour was clear of the cultivatable ground of the valley. After leaving the last old clearing the road is tolerably good till near 11 o'clock, from which time it is exceedingly bad. A rocky difficult descent till past 12, at the botton of which we come into a level jungle, formerly the site of the populous town of Salaung, and reach the first water on the march, except some excessively bad in a sand pit, on the Kundoo side of the hill. At 12.50 cross the May-neum about waist-deep, and at one halt at the same village of Salaung, containing about 20 miserable huts, established two years ago by some people from Mok-mai. They are excessively poor, and their number so small that they are unable to dam the May-neum for irrigation of their fields, which are said formerly to have subsisted a large population. They live entirely by extracting catechu, and cultivating a few vegetables on the summer mud banks of the river. The May-neum falls into the May ting, which is as large as the Pon, about an hour from this, and thence into the Salween, 20 or 30 miles off east, a little southerly, above Ta-sa. The Salween is said to be navigable for small boats from Thataung to the Pank pank (parched paddy) falls in our territory. The catechu is very abundant here, and is said to attain a girth of two fathoms in favourable situations.

16th February (Thursday).—Hay-pang king, N. E. 3° 40, 12 miles.—7.10 left Salaung, and travelled in a ravine or valley along the best road we have seen since leaving Pha-pho's village. The small river on which we are encamped, and which we have repeatedly crossed to-day, runs into the May-neum at Salaung; there is always a stream of water it its bed, even at this season, though sometimes it runs under the sand for a mile or two; at others it is nearly ancle deep. Halted here at 11.5, still entirely surrounded by high hills.

17th February (Friday).—Ban-hoat, N. E. 3 15′, 14 miles.—Started at half-past seven; this day's march has been through a rocky country, the great portion of the jungle of bamboos; we are still amongst the hills, but the path itself runs over none of any height; at half-past 10 we came on a plain 10 or 12 miles in diameter, nearly circular, and as level as if deposited from a quiet lake, a great portion of it covered with bair, tamarind, and catechu trees, &c., under which a numerous herd of cattle were grazing. The soil is sandy and poor, and, from the appearance of the stubble, unproductive; several of the Burman

Dr. Richardson's Journal.

officers of the village rode out to meet me; at 11.35 halted at the large village of Baultrat, containing, perhaps, 150 houses situated on the western bank of May ting, a river of considerable size; it has a weak ruined stockade, and two or three small villages in the plain are under the jurisdiction of its chief; the inhabitants of the principal village are Burmans and Shans, nearly in equal proportions; of the smaller villages all Shans. The influence of Pha-pho extends to this village, of which he exacts the black mail; a caravan of Chinese traders come here annually for cotton; some of them who visited my tent were anxious to claim me as a Mussulman, to which religion they all belong. The Thoogyee, a Shan who is the Mok-mai Tsoboa's father-in-law, came late in the evening, bringing a nazeer of two small baskets of rice and a pumpkin. He says the eastern road is impassable for elephants, from trees having fallen into the ravines, but that the Mok-mai road is good and much frequented. I believe the truth to be that he wishes the Mok-mai Tsoboa to have the responsibility of passing or stopping me. As it will only lengthen my march one day, and as the appearance of being easily led will tend to diminish their distrust at my appearance here, I affected to believe him, agreed to go by that road, and he is to furnish a guide.

18th February (Saturday).—Mok-mai, S.W., 4 hrs. 20 m., 13 miles.—7.20 leave Ban-hoat, and for 10 minutes return along the road. We travelled yesterday from thence 20 minutes along a cart-road, across the valley, where we enter a pass in the hills, which soon opens into a second narrow valley, with a small village of 20 or 30 houses. Much of the valley is capable of irrigation, and a good deal of it brought under cultivation. The houses, as all we have seen in Burman territory, are miserably small and wretched; no garden or plantations round them, as in the Siamese territory. In Laos the people, on this being remarked to them, attributed it to the oppression of the Government, which makes a demand of money every month or two from the inhabitants of a decent house, and asked what was the use of planting gardens when the Kareans came and robbed them before our eyes. This last valley, which, perhaps, is 10 miles long, we crossed in 40 minutes, and commenced a rocky bad ascent in the bed of a winter torrent, a great part of the way over large loose rocks, which occupied one hour, when we descend into the valley of the May neum, on which the town of Mok-mai is situated, containing, perhaps, 300 or 350 houses, some pagodas, kyoung, and a small stockade sadly out of repair. At one o'clock we came to a sort of out-post of about 10 or 12 men, within a bamboo fence, looking out for the Kareens within sight of the town. Though the town contains many inhabitants, they are in a perpetual dread of their attack, and are, in fact, carried off daily (during the last month they have been unmolested) from the road we came to-day, between this and Ban-hoat. They make no secret of their fear and weakness, and told many tales of the Kareans' skill in kidnapping; amongst others, of three Kareans who came on a party of six of their people, and seeing they were the weaker party, waited till night, when they made a large bundle of bamboos, interwoven with thorns, which they threw over them when asleep, and standing on them, with their spears picked them out one by one, tied their hands and marched them off. As Mok-mai is the only town on the frontier which does not pay the black mail, they have to stand the principal brunt of their inroads. A night or two ago a village to the northward of this was attacked; I have not heard with what success. We halted about a mile from the town, and sent the guide from Ban-hoat to notify our arrival (he had a letter to the same effect from the Thoogyee of Ban hoat), and to know where we should encamp. He returned in about an hour and said we might please ourselves, either near a kyoung outside or in the town, near the Tsoboa's hoa, or palace, where he is at present engaged with the great poe or play, which will probably last two or three days. I preferred the former, as promising more quiet and less annoyance from the curiosity of the people. I could not have been worse off in both respects anywhere; we saw the whole of the inhabitants of the town, as we descended upon it, pouring out towards the pounghee house, and before I dismounted there was such a crowd that it was impossible to move to unload the elephants; and in a few minutes they commenced to shout and push each other about, shouting and insulting us in every way short of violence. I sent the Shan interpreter into the town to request the interference of the tsoboa. He almost immediately sent out an atwen-woon and some peons, who made more noise for some time than the others; however, they at last, by argument of rattan, established something like quiet; and after the tent was up asked for a list of our arms and the presents we had brought for the Monay Tsoboa, which was immediately given. He then went to the traders and got a list of their commodities, and we were tolerably quiet for the night.

19th February (Sunday)—Mok-mai.—The atwen-woon returned last night and intimated the tsoboa's request that I would remain here to-day; and as it was not contemplated that I should meet with any tsoboa between the Karean-nee country and Monay, and as he of Mok-mai is as independent in his own territory as the Tsoboa of Monay, I resolved to remain and visit him to-day, but have been so annoyed by the concourse of idle insolent people about the tent all day, that I have been unable to do so. I sent the Shan interpreter to inquire what time to-morrow it would be convenient for the tsoboa to see me, but he had gone to sleep (4 p.m,), and could not be disturbed. About 7 a.m. a than-dau-tsen came and proposed I should go to the tsetkay (inferior officer) sent here by the Ava Government, first, and thence to the tsoboa, to which arrangement I objected; and it was then settled I should go to the tsoboa at 11 o'clock to-morrow, and start the day following for Monay. I complained of the noise and insolence of the people to-day,

to-day, as not having allowed me one moment's quiet, and prevented me leaving the tent to wait on the tsoboa, as I intended. Dr. Richardson's Journal.

20th February (Monday)—Mok-mai.—Went into the town to wait on the Tsoboa this morning, and was requested to dismount at the gate; I was not asked to take off my shoes. The Tsoboa is a man about 26 years of age; he succeeded his father (who was killed during the late war) about five years ago, but has only within the last few months received the royal order for his investure, and authorising him to assume the ensigns of royalty. The father of one of his wives (the thoogyee of Ban-hoat) told me that the debts he incurred in making presents to people of influence about the court to procure it prevent his taking advantage of it, and the only mark of royalty about his house, which is rather a good one of wood and mats, is the frame of a window, which opens behind where he sits into an inner room, being gilt; there were two small chairs and a small cotton Bengal sitringee in his room. He was married to the daughter of the Monay Tsoboa about four months ago, and has eight other wives and four children, the eldest about 10 years of age. He spoke very little, and nearly all the conversation that passed in a visit of an hour was with the tsetkay.* His jurisdiction is bounded west by Thataung, (which pays a tax in silver to the king of Ava, and has also for some years paid to the Kareans), the Salween to the east, the Karean-nee south, and Monay to the northward, and is said to contain 30,000 houses, which must be very much above the number; judging from the size of the three valleys of Kundoo, Ban hoat and this, which are the only level parts of his territory we have seen, there may, perhaps, be 2,000; his contingent is 500 men. Many of his people have gone to live altogether amongst the Kareans for safety and quiet, and a majority of those left pay them tribute. I learned here for the first time that the tsoboas are quite independent of each other; but as the town of Monay is the largest and most central of the Shan towns in this direction altogether under the control of Ava, the Burmans have fixed the head quarters of the force they have in the Shan countries at that town. The Bohmoo meng tha Meng myat boo (General Prince Meng myat boo, a half brother of the king's son of a Shan princess), the general who commanded at Melaun during the late war, is, and has been since the peace, governor of all the Shan countries from Mobie nominally, but really from Mok-mai, south, to the Chinese frontier, north, and from Nat tike, the top of the pass from the valley of the Irrawaddee up to the Shan country, west, to three days beyond the May Koong (Broad River), or Great Cambodia River, east. He himself generally resides in Ava, but visits his government occasionally, in one of which visits he rode from Monay to Ava in three days. His deputy, who constantly resides in Monay, leaving, as usual, his family as pledges in Ava, is the Tsetkay daughee, who has several officers under him; and there are at the court of each of the other tsoboas two tsetkays, also appointed from Ava. These tsetkays, particularly the chief one, lords it over the tsoboas; to him the chief authority belongs, and all the external relation of the country is committed; and the royal orders are sent to Monay, from whence they are forwarded by the tsetkay; but the Monay Tsoboa has no authority to call any of the others. The lesser tsoboas have no tsetkays, and are looked upon as merely myo tsas. There are many Chinese here buying cotton at 60 ticals of ken (2), which is a very fine China silver, the 100 viss of cleaned cotton; 1,000 or upwards are said to be sent annually to the Shan territory, chiefly from Tali, a Chinese frontier town 45 days from Monay. Four or five have gone this year to ascertain the state of the Maulmain market, and unless they find it answer their expectations, I do not believe there will be much trade by this route for some time to come. The Shans are so much afraid of the Kareans on one hand, and their energies, and any motive to attempt the acquisition of property so destroyed by the oppressive nature of the Burman Government, which is unable to protect them, on the other, that though there is a decided taste for our finer cotton fabrics (which reach them by Ava, exposed certainly to heavy duties, but having the advantage of water carriage within 233 miles of Monay), the uncertainty of retaining the profit of their labour, will, I fear, prevent them putting themselves within reach of their lawless and savage neighbours. The people with me have had as favourable a market as the size of the place would warrant them to expect; and should the demand continue or increase, which under favourable circumstances it will do, the supply must be furnished by people from our Provinces.

21st February (Tuesday).—May-lome, N. E., 4 hrs. 10 min., 14 miles.—Left Mok-mai at eight, and travelled diagonally across about one half the length of the valley in two hours and a half, along a good road, except for a short space where the water had been let into the paddy fields, in which the people were at work with the common Shan plough, a rude imitation of that used in the south of Scotland. The probable length of the valley may be between 20 or 25 miles, and its width about one half that extent. The soil is white and poor, and the stubble of the last year's crop very small. We ascended the hill bounding the valley for half an hour, near a stream which pours down its pace, by which the fields below are irrigated, and come on a piece of table land, part of it under cultivation and watered by the same stream. We crossed these upper paddy fields in 10 or 15 minutes, and enter the jungle with a gentle ascent, which continues within half a mile

* I explained the nature of my mission, and the wish of the authorities at Moulmein to cultivate the friendship of the Shan Tsoboas, to whom I was commissioned through what we considered to be their chief, the Monay Tsoboa.

Dr. Richardson's Journal.

mile of this place, when we descend a short declivity, a little more abrupt than our ascent had been, into this small valley, which is cultivated in terraces, and supports the people of a small village of Ban lome of eight or ten houses, the first Burman village which is considered at all safe from the incursions of the Kareans, who last year destroyed a large village, the site of which we passed on our march to-day. The people never consider themselves safe travelling between this and Mok-mai in small parties. The nearest part of the Kareans' territory is three days south-west of this, but the intermediate portion of this and the Thataung territory is uninhabited, and the Kundoo people are glad to compound for their own quiet by not interfering with them in their retreat. They are said to come this year to Monay in parties of 150 or 200 men, and the force the Burman talk of in the Shan territory, though oppressive to the people, is perfectly insufficient for all purposes of protection from their predatory neighbours.

My guide to-day is a non-commissioned officer of the force and served in the late war; he was at Wet yea kon (Wattigam), of which he seems not a little delighted to talk. He told us that he assisted to carry off the body of Colonel M'Dowal, and that he took from the person of one sepoy 13 rupees, and from another 30, both of whom he declares were exceedingly drunk; he said a friend of his seized one who was sober, and discovered he had caught a tartar, when our acquaintance came to his assistance, and from him they took 20 or 30 ticals of Burman silver. He declares he did not kill any of these men. He has had losses, too, for his musket, which he says was a Frinthil (French) one, burst in his hand and carried off his little finger. The Mok-mai Tsoboa is so much distressed for money that he has great difficulty in staving off the claims of his creditors. We overtook at this halting place his brother-in-law and one or two of his influential people, all on foot, with some of the chief tsetkay's bailiffs, on their way to Monay to endeavour to raise money to satisfy the most pressing of the claimants. His difficulties are said to have been increased by having had to pay a fine to the Burman deputy governor of 6,000 tickals, on account of the death of the Thooghee of Kadoo, and the business is yet unsettled.

22nd February (Wednesday) Monay, N.E. 5° 40′, 18 miles.—Left the last halting place at 8 a.m., and reached this place at two o'clock, having halted by the way one hour and 20 minutes, travelling entirely amongst the hills, though the road was generally good, and a great part of the way nearly level, through valleys of small extent under cultivation, where it had been much frequented by the carts of the farmers. From 10 till 12 the hills also near the road, which were least steep, were ploughed and perfectly clear of weeds for dry cultivation, cotton, safflower, &c. &c. The hills in the distance were pointed, rugged, rocky, and broken. At 12, halted (for an altitude) at a well and zeat; from this to the town, a distance of about five or six miles, there is little cultivation, the soil of ferruginous clay, with the trap rock in all directions projecting through the surface. The guide of yesterday, and a brother-in-law of the Mok-mai Tsoboa, told us that the people of the village at which we halted last night, had orders to conduct us to the confines of the Mok-mai territory, where they said it was possible the Monay authorities would send some one to meet us; but should they not do so, they advised us to encamp in the Red Kyoung or Pounghee house. I was not met by anyone, and had to inquire my way through a part of the town, in at one of the gates and out at another, to the place they had named. Fortunately, near it we met one civil person, after many inquiries. The people, in passing through the town, appeared as if they had orders not to notice us; if it was so, curiosity or some other passion outweighed the orders; for before the tent was up we were surrounded by some hundreds of people, and subjected to the same indignities as at Mok-mai. I sent the Shan interpreter, and some of the most respectable of the traders, to notify our arrival to the Tsoboa or Tsetkay daughee, and claim protection from the mob. They were stopped by the latter chief, whose house was nearer us than the tsoboa's. He questioned them in a most arrogant manner as to who they were, where from, and what they wanted. They said they had been sent by me to the tsoboa, or himself, to notify my arrival; told him who I was, and that I had a letter and presents for the Tsoboa from the Commissioner of Maulmain, by whom I had been sent on a friendly mission to open the gold and silver road of trade. They also explained to him that we were not aware of the existence of his appointment till we reached Mok-mai, and at the same time begged that he would send some one to keep the people from crowding on the tent, as they were doing; with which request he at once complied, and sent a taung-hmoo, and some people armed with rattans to drive them out; to the first part of the message he replied that I should not see the Tsoboa until he was fully informed of our errand, that we had no right to enter the kingdom by this road, that Barney, as he called the Resident, was at the golden footstool, where we ought to have gone and begged permission before coming here. He gave them to understand that he was supreme here, and an officer of very high rank; asked them if they thought they were to talk to him on an equality, and much more in the same strain; he finally said that I should see the Tsoboa to-morrow. In the evening a seray, or secretary, came out to my tent; he mentioned to the people outside, though not to me, that he had been sent by the Tsetkay. He was dressed in a handsome and heavy fur jacket, with the hairy side in, though the thermometer in the tent was about 86°. I discovered afterwards that this was a sort of official dress with all the Government officers here, though I should think anything but pleasant in these latitudes. He questioned me as to what I wanted here, and wished to know why I had not brought letters to the Tsetkay, &c. I told him my visit was a disinterested one, for I wanted nothing but to open the gold and silver road, that the people here might exchange what they did not at present want with

our

Dr. Richardson's Journal.

our people for what they did, to get the protection of the Government here for our people, who might hereafter come on the same errand, to assure them of the good feeling towards them at Maulmain, and to promise protection and facilities for traders to their people visiting it, &c. I explained again the reason of my coming unprovided with letters to the Tsetkay by the fact of the Commissioner at Maulmain not being aware of the existence of such an officer, &c. My visitor had served in the late war; he had been a sort of aide-de-camp to the old general of the Shans, Maha nay myo, &c.; had taken part in the affair at Wattigam, and bore a part at Zimbike, when the old general was killed, with several of the Shan Tsoboas and two of the three wives of the Laygea Tsoboa who, dressed in male attire, were, for some superstitious cause, expected to have done good service against our troops at the seven stockades near Rangoon. The Burmans suffered most severely here; the Shans, who had not engaged us before, were not prepared to run away soon enough. He gave a sad description of their sufferings from cholera and starvation for many days after the storming of their stockades. His visit lasted about an hour and a half. We parted great friends, and he continued during my stay most attentive and friendly. I explained to him before leaving that it would be inconvenient to wait on the tsoboa to-morrow.

23rd February (Thursday), Monay.—This morning early Meng-nay myo yadza norata, my visitor of last night, sent to call the Shan interpreter, whom I desired to attend him. He found that the communication he had to make was, that I must, according to custom on visiting the chief, first go to the Yeum-dau, where there would be an assemblage of all the lesser chiefs; here, taking off my shoes, I must wait till he, Meng-nay myo, should report my arrival to the Tsetkay at his own house, and return to conduct me there, from whence I should proceed to the Tsoboa's palace. Scarcely was the cold of the morning moderated (which is here very unpleasant, the thermometer seldom rising above 50° or 52° till nine or ten o'clock) before the tent was surrounded by the mob, even in greater numbers than yesterday, using all manner of insulting language. I again sent in to complain, and after waiting nearly an hour a taung hmoo and some peons came and beat them off. I had been obliged to shut the door and windows, which was, however, no protection, for they held them open staring in and insulting me for the last half hour. Since the watch was set, they have been tolerably quiet; one of the peons is just now bawling out to some one claiming his acquaintance, and wishing to get a nearer view; that he is put here by the great chief, and knows nobody; if the Tsoboa should come he would beat him. In the evening I sent the Shan interpreter to Meng-nay myo to say that in Ava I had never taken off my shoes but in the palace, the houses of the princes, and at the Hloat-dau, where I sat side by side with the Woonghees, and to object to take them off at the tsetkays or the yeum, and also to say, that as the letter of which I was the bearer was for the Tsoboa, I wished to deliver it to him personally; but as the Tsetkay was of higher authority, I of course wished to see him, and be altogether guided by him. The fact of my having been in Ava and sat on an equality with the Woonghees has evidently told in my favour, for I had an exceedingly civil message complimenting me on my knowledge of the Burmese language and customs, and expressive of their regret that they were before ignorant that I was a person of any rank, and assuring me that everything would be satisfactory to me as soon as I had seen the Tsetkay, and that he (Meng-nay myo) would this evening ascertain all particulars of my reception, and let me know in the morning. He proposed to bring it about, if I approved the arrangement, that I should see the military chiefs with the tsoboa all at once in the yeum. I sent in immediately to accede to this plan, which is just what I wished, as it gets over the difficulty of having the letter to the inferior authority; he had, however, gone to the tsetkay's. The thooghee of Ban hoat, and some one who said he lived in the tsetkay's enclosure, called in the evening, and said I had taken them by surprise, otherwise it was intended I should have occupied a brick building on the other side of the town.

24th February (Friday), Monay.—This morning sent the Shan interpreter to Meng-nay myo, to approve of his proposal of yesterday, or to learn what determination they had come to regarding my seeing the chiefs; and whilst he was at his house the Tsetkay sent for him, and told him he did not understand my coming here about merchandise with nothing to sell. The man explained again that it was our custom to send an officer with traders to a new country to endeavour to procure them a friendly reception; he kept him some time and asked him the reason of the rapid rise of Maulmain, and tried to find out the secret motive of my being sent here. He then told him I must wait another day, and when he had consulted with the other chiefs he would let me know how they would receive me. Very little annoyance from the mob to day.

25th February (Saturday), Monay.—Sent the Shan interpreter this morning to the Tsetkay's, where he was told I should see all the chiefs at the yeum to-day. He asked whether the presents should be brought there; Meng-nay myo said "Yes, everything," and furnished him from his own house with trays and salvers to carry them on. About half-past 10, a person was sent from the yeum to say the chiefs waited for me, and rode into the town preceded by the presents. On passing the house of Meng-nay myo he called to the people. I however refused to stop, as I had before stipulated not to be dragged from one house to another, and he immediately joined and walked before me to the yeum. On the

Dr. Richardson's Journal.

way I asked him if the Tsoboa was there (not that I doubted his being so), and was answered in the affirmative. On arriving at the yeum, I proceeded upstairs without any notice being taken of my shoes, but was stopped outside the plank about a foot high (coon-tsen) which surrounds the centre pillars of the yeum, and requested to seat myself there. Close to me were all my own people and the people of the town; inside the plank before mentioned were the Tsetkay daughee, Meng myat boo's representative (and governor in his absence of all the Shan States); the royal Tsetkay, an old man whom I took for the Tsoboa, two Nakans, and two Bo-dha-ghees, Meng-nay-myo, seated himself by me. I begged now personally to explain to the assembled chiefs that my bringing a letter directly to the Tsoboa must be attributed entirely to the chief at Maulmain not being aware that any authority higher than the tsoboa was resident in the country, though perfectly aware that he was a vassal of the King of Ava, and hoped that a mistake so trivial as the mere wrong address would have no weight against our good intention, that of increasing and strengthening the friendship which has existed between the English and the King of Ava for so many years, by joining with the ruler in the Shan countries, whoever he might be, to open the gold and silver road by the nearest route, between this place and our possession on the coast. I then expressed a wish to deliver the letter to its address, and held it out towards the second tsetkay, a little fat old man I had mistaken for the tsoboa, when the Tsetkay daughee took it from my hand, told me the Tsoboa was not present, and commenced conversation in a most insulting and overbearing strain, which he kept up during the whole interview. He told me I had trespassed in coming here without an order from Meng myat boo; and the king, through Barney (the Resident), asked sneeringly and incredulously if the Maulmain Woonghee did not know the constitution of the force here; told me I knew nothing of Burman customs, or I would not have come here without authority. I told him he had deceived me with the promise of the tsoboa being at the yeum, otherwise I should not have come there. As for my right to come here, I referred to the treaties of Yandaboo and Ava, the latter particularly stipulating that traders, on whose behalf I was come here, should be allowed to enter the Burman dominions at any part, and proceed in any direction without let or hindrance. I explained to him that it was always a custom with us to send an officer with traders opening a new route, to ensure them protection, and as a surety to the people of the countries passed through or traded with, that they were fair traders and responsible people, coming with the knowledge and sanction of the British Government, not to mention the long friendship of the two countries, and the kind reception of their people on visiting Maulmain. He said he had never promised that I should see the tsoboa to-day; pretended he knew nothing of the Ava treaty, and said that of Yandaboo made no provision for my coming here. After a good deal more in this strain, I asked him, as he had received the Tsoboa's letter, whether I should be allowed, and when to proceed, as therein requested. He denied the Commissioner's letter contained such a request; when I begged him to show me the letter, and pointed out the paragraph, he said, "Oh, you may go; you may go." I said I was sorry that my reception had led me to think they did not wish to see me, and that the sooner I started for Ava the better. The senior nakan, who was seated opposite, now addressed me with much civility, and asked me whether I did not wish to see the Tsoboa. I said, most certainly, but that it depended on the Tsetkay daughee, to whom the king had given the chief authority here, and he did not appear to wish me to do so; this he seemed to take as flattery, for he said, "Ah, these are proper words." The nakan again said, "Why, you have just come here, and are already talking of leaving us; you must stay a little amongst us; it will be proper to get permission from Ava before you proceed." I replied, it was my wish, and the intention of the Commissioner, that I should cultivate the friendship of the chiefs here; that, had there appeared any wish to make my reception more pleasant, I should have had no wish to leave so soon, but I had as yet no reason to suppose I was welcome, though it was impossible for me to wait for permission from Ava, which, considering the friendship of the two countries, I could not see the necessity. I was, besides, afraid my people might suffer at the setting in of the rains, as they had no cover at night." The Tsetkay, laughing insultingly, said, "Oh, he calls himself Tsia woon (physician), and yet he is afraid of dying." Of which speech I took no notice, but asked him what was the proper course for our traders to take to dispose of their goods. He said no one prevented them from trading; that traders came here before my visit, and would continue to do so; that Burman boats went yearly to Bengal, and piece goods were brought here from Ava, but that there was little to get by them, as they brought no silver as the Chinese did. He said they might do as they pleased, sell where they were, or go into the bazar. After some undertoned conversation amongst themselves, the tsetkay told me that I should meet the tsoboa at the yeum, on Monday, and I requested him to take charge of the presents till that day. He said, "No, take them back again, they are not for me, you can bring them them again." I observed, that dragging them back and forward through the town was disrespectful to the Commissioner, who had sent the presents, as well as to myself. I told him that he had heard Meng nay myo tell the Shan interpreter to bring them, without giving any orders to the contrary, which he denied, though the man whom I had sent for the purpose of making the necessary inquiries in the morning confirmed what I had said; he still persisted in denying that he was aware of any instruction being given to bring them there; he, however, at last told taik-tso to take charge of them, and I took my leave. The whole tenor of tsetkay's conversation was exceedingly discourteous, to use the mildest term.

term. In the evening, Meng nay myo, and two of the tsetkay's sons, came out to my tent, apparently to see how I was satisfied. I told him I had conversation with Burmans of all ranks, from the king downwards, and had never been addressed as I had to-day. I felt exceedingly hurt; that I was not here as a private individual or insignificant person, and if the tsetkay did not think it right to receive me, he had only civilly to say so; at all events, if the tenor of the conversation on Monday was the same, I should believe that to be what he meant, and immediately return by the same route I had come here, and make a report of my reception, through Colonel Burney, to the king. Meng nay myo, who has throughout been most friendly, apologised, said "I have spoken to him, and it will not occur again; do not say anything more about it." I had then some desultory conversation with them for, perhaps, half an hour, when they departed. The young men in the worst taste attempted to depreciate the value of the presents. I told them that some of them were, like the friendship which they represented, not to be had here for money; that it was not their money price at which they were to be valued, but as marks of friendship, which was not to be bought. I have doubted whether I was right in going to the yeum, which is certainly not the proper place for my reception, but the tsetkay had declared I should not go to the Tsoboa's house without permission from Ava; and as I was anxious to get away before the time such permission could be obtained, and as I am out of order in bringing a letter to the Tsoboa, as he is situated, I could not foresee the tsetkay, with the inherent want of truth natural to a Burman, was meditating to deceive me.

26th February (Sunday), Monay.—Have been left entirely alone to-day, except 30 or 40 people constantly gazing into the tent, though at a less annoying distance than before. I have had, in fact, no intercourse with the people, their crowds and insolent behaviour precluded the possibility of it. The moment I address one of them the others crowd round, treading on and pulling the tent ropes and everything to pieces.

27th February (Monday), Monay.—I have sent the Shan interpreter to-day to the tsetkay to say I object to being seated outside the coon-tsen, with my own coolies and the people of the town within half a foot of me, convinced that with the disposition evinced by him, nothing is to be gained by concessions, indeed no Burman can have an idea even of a perfectly independent gentlemanly compliment. I desired him in the first instance to go to Meng nay myo, as he has been the channel of communication hitherto, to say I was sure he was anxious to promote the objects of my mission as I was; but as in the matter of the tsoboa's presence at the yeum, and bringing the presents there at once, the Tsetkay denied that such a promise and request had been made with his knowledge, I thought it better that I should communicate direct with himself. His reception was civil, both by the Meng nay myo and the tsetkay, who paid me some compliments, and told him that as they were situated here, a very few Burmans amongst a conquered and distinct people, the customs were necessarily different from what they were in Ava; that the tsoboa, whom I should meet to-day, was never allowed to come inside the coon-tsen; he told the man to say that he would send to let me know when they were ready; as the tsoboa was to sit outside, of course I could make no further objections. At half-past nine the person came to intimate that the military officers were assembled, and I started. Meng Nay Myo joined me on the road, and we rode together to the yeum, where I found the same chiefs I had met on my former visit, and seated myself as before after about half an hour's conversation, during which the tsetkay told me they heard of my intended visit here, a month ago, through some Shans who had seen me at Mein-lun-ghee. The Tsoboa came with four gold chattahs, and about 50 or 60 men armed with muskets, dhas, and spears, and a number carrying thanleats. When the old gentleman came in I bowed to him, which he returned, and seated himself close beside me. The morning was cold, and, either from that cause or agitation, he trembled considerably. I again explained the mistake of the letter (which had been returned to me by the tsetkay), and delivered it to him. The list of the presents was read over, and they were laid before him. He said the contents of the letter were already known to him, that they were good, and he was glad to see me here; but it would be best, he thought, for all parties that the presents and a copy of the letter should be sent to Ava, with a request for instructions from the king to allow me to proceed, to which an answer would be returned in about 20 days; in the meantime I must remain here. He was the king of Ava's slave, and afraid of rendering himself liable to punishment (yazawot) if he allowed me to proceed. I remonstrated, with all the arguments I could think of, against such delay, but in vain; there was a good deal of conversation on general subjects, particularly on geography (on which subject they are the most curious, and as ignorant as it is possible to be on any subject, believing in the Mee Mho Hill (Mount Meroo), and four large islands, &c.), in which the Tsoboa took a part. The whole conversation to-day was conducted in a mild and gentlemanly style, and so indeed were all the remarks of the tsetkay, whom it was difficult to believe the same person whom I had conversed with here only two days before. The Tsoboa is a man of, perhaps, 68 years of age, of the common height of Burmans, fair even for a Shan, though those on this side of the Salween are much darker than to the eastward, notwithstanding they are a few degrees further north; his manners are mild and gentlemanly; his son and son-in-law, the son of the Laygea Tsoboa, both fair and rather stout young men, were seated behind him; neither of them took any part in the conversation. I was requested to furnish a list of the people with me, to be sent to Ava to-

Dr. Richardson's Journal.

morrow, before I left. The tsetkay had the letter to Ava, which was to accompany the Commissioner's letter and presents, read to me; near the end of it the tsoboa's name and mine occurred in juxtaposition, and the term "the slave of the King of Ava" followed, so that there was some doubt as to which it applied. I stopped the person reading, and had the passage read again, much to the amusement of the tsetkay, who at once saw the ambiguity, and laughed heartily at my suspicion. By the messenger who took the Government letters I wrote also to the Resident at Ava.

28th February (Tuesday), Monay.—Had appointed to-day to visit the tsetkay, but just as I was about to start, he sent a person out to say he was indisposed, and requested me to put it off till to-morrow.

1st March (Wednesday), Monay.—Called on the Tsetkay daughee this morning about half-past nine, and remained till near 12 o'clock; there were a great many people at his house; his reception was kind and friendly beyond what I expected, notwithstanding his improved manner on Monday; the whole conversation was on geographical subjects, the fruit trees, and other natural productions of Europe and Western Asia, on which their information is extremely confused and limited. He looked on me with great commiseration when I told him we could grow no rice in England, and spoke of the severity of the winter's cold; and when I mentioned our cotton factories, in which one man by the aid of machinery can do the work of about 200 unassisted, our steam ships, men-of-war of 1,000 men and 120 guns, gas, lights, railroads, and coal pits, &c., he said we were a wonderful people, but still to be pitied, as we were driven by cold and hunger to all these shifts which the Burmans could do very well without. He believed, in common with everybody else here, that the king of England governs all the countries of Europe. There is some doubt of the independence of Rome, but all the hat-wearing kullah countries, which they suppose to amount to 12, they believe him to control. I met at the Tsetkay of Kien-taung, lately arrived, in 22 days from that place, on his way with the gold and silver flowers, and annual tribute from the tsoboa of that town to Ava. No reports regarding Captain McLeod's mission had reached when he left. On my former mission to Ava, the king had given me a title and gold chattahs, and as they are not very common here, I determined to use it, in hopes that it would procure me a little more respect from the people, and I sent back the Shan interpreter to the tsetkay in the evening to tell him so; he requested to see the title, which I sent him. He seemed quite pleased, found fault with me for not making it known before, and it was of so much importance in his eyes, that he opened his packets to Ava again, to tell the Government who I was.

2nd March (Thursday), Monay.—Have not visited the town to-day, but had a very civil message from the tsoboa by three of the myo-tserays, saying it was his wish to receive me hospitably, but he was a subject of Ava and subordinate to the military chiefs, to whom I had unfortunately not brought any letters. He wished me to come into the town and live in a zeat or caravansary near his palace, or, if I preferred it, he would build a place at our present encampment, and in the meantime sent me for current expenses 48½ tickals (called 50) of coarse silver, or *Rs.* 32. 4, and five baskets of rice. I promised to send some one to look at the zeat, and tried without effect to excuse myself from receiving the money. An elephant with white marks, bought by the Kien-taung Tsoboa from the Zimmay people, as a present to the king, in addition to the usual tribute, arrived here to-day on his way to Ava.

3rd March (Friday), Monay.—Sent the interpreter into the town to-day to look at the zeat; it was found to be too confined, and surrounded by sheds, in which it was proposed the traders should live; I therefore declined moving. Our present encamping place is a very pleasant one, in a beautiful grove of large bamboo, amongst the kyoungs, pagodas, and zeats, less than a quarter of a mile from the southern gate of the town, and less than half a mile from the tsoboa's hoa, or palace, the chief tsetkay's house being on the way to it. I also sent to propose calling on the second tsetkay, but he was engaged with business at the yeum with the Kien-taung people, and requested me to defer my visit till to-morrow. No one has been with me from the town to-day.

4th March (Saturday), Monay.—Paid an hour's visit to the second tsetkay to-day, an old man of about 65 years of age, who has held different appointments here, sometimes higher sometimes lower in rank, for the last 40 years; he is said to be the chief opposer to my proceeding at once to Ava. Nothing of an unfriendly nature could be gathered from his conversation to-day. A letter from Captain McLeod, dated from Hatay, a frontier station of Kien-taung, forwarding to the Kein-taung Tsoboa the Commissioner's letter, has been sent on here, and was received to-day; the tsetkay sent it out for my perusal. I have not heard whether he is detained; but as the tsoboa must obtain permission from the tsetkay here, ere he can give him leave to proceed, I fear he also will be detained for orders from Ava.

5th March (Sunday), Monay.—Called to-day on Meng-nay-myo, and met at his house the Kien-toung Tsetkay, a Burman of course, Panya Pan, and another Shan chief, who went from Kien-toung last year to Zimmay, with an intention, it is said, of coming to Maulmain; they did not, however, to-day allude to such an intention, and as the authorities here are said to disapprove of his having gone to Zimmay, I did not mention [redacted] re[redacted]

Dr. Richardson's Journal.

report. Captain McLeod arrived at Kien-taung on the 18th ultimo, and saw the tsoboa on the 20th. It does not clearly appear whether he has been detained there or not, but letters were dispatched by the tsetkay early this morning, with orders to detain him till the return of the messenger who is sent to Ava to report his arrival, and to furnish him with everything that he may want in the meantime. The messenger to Kien-taung was ordered to travel night and day. The distance of Kien-hun-ghee from Kien-taung is only nine days for an unincumbered man, and about 15 for elephants. The officers I met to-day expressed themselves in the most friendly terms, rejoiced in the prospect of a free and friendly intercourse, and spoke in the warmest terms of approval of the spirit that prompted the mission of Captain McLeod and myself to this part of the country. The house of the officer I visited to-day, which is just rebuilt after a very extensive fire which consumed most of the town last April, is the largest in the town, consisting of five different roofs, three parallel to each other, and two across these ends, with an open platform between the end and centre ranges, and also between the northernmost centre range and the other two; these ranges are all on the same floor, which cannot be less than 100 feet square; the materials and the workmanship as good as the Burman carpenters' work generally is. The houses in general are small, low, and mean; and the whole town, which is long and narrow, and so crowded with bamboos that only a very small portion of the houses can be seen at one time, may contain about 8,000 or 10,000 inhabitants; about 2,000 of these are Burmans. The tsoboa sent out people to-day to build tays (temporary houses) for myself and the people, but as there is little chance of rain for the month I am likely to be here, and delightful shade from the magnificent large bamboos, I preferred remaining in my tent, and the people have been comfortably halted in three houses, at each side and behind it. I have tied my chattah to the corner of my tent, and though I had made a considerable advance in the estimation of the people since my arrival, this has much increased my consequence; they are not yet accustomed to consider themselves at all an inferior people to us, either in power or civilisation. Before the war they considered themselves as infinitely superior to all the world; they have not lately sought to engage the Chinese, but they are all aware that they have always come off conquerors when they did engage them.

6th March (Monday), Monay.—On the way to the second tsetkay on Saturday, Meng nay myo asked if I did not intend to see the tsoboa, and though it was intimated positively to me that I should not see him in his house till the arrival of the royal order, I sent the Shan interpreter in to inquire again of Meng nay myo whether I was to consider myself precluded from visiting him. He promised to ask the tsetkay, but I have not yet received any answer. Have had no communication with the authorities to-day, except a message from the first nakan for medicine for his child; I, however, unfortunately had none to give likely to be useful. Wrote to Captain McLeod, and the tsetkay has kindly offered, if there is any answer, that it shall be brought to me.

7th March (Tuesday).—Meng nay myo sent out this morning, by desire of the tsetkay, to request me not to expect, for a day or two, his answer regarding my visit to the tsoboa. I therefore sent to the first nakan to propose visiting him to-day, but on plea of business at the yeum he requested me to wait till to-morrow.

8th March (Wednesday).—Called on the first nakan to-day; he is a man of about 50 years of age; he went to Ava with his father, who was of the royal family of Chandaporee or Wintian, the zenzen of the Burmans, when he was a child, and remained about the palace till six or seven years ago, when he got his present appointment. Nearly the whole of his family was destroyed by the Siamese when they took the town of Wintian, eight or nine years ago. He expressed himself as much pleased with my mission here, well disposed towards us, and anxious to facilitate the intercourse between Maulmain and this place. He congratulated himself on not having been employed during the war, which he says was of little advantage to anyone. From his house I went to that of the second nakan; he had just come from the yeum, where a royal order for the instalment of the Loye Lung Tsoboa, or myotsa, had been read; he was engaged at chess with some of his children and people. His house is small and mean, little better than a thooghee's of one of our small villages, and himself and everything in it in the same style, and miserably dirty. He had very little to say for himself; my visit was therefore short; he, however, told me the force of Burmans in the Shan states is about 10,000 men. In my way home I called on Meng nay myo; and in the evening he returned my visit, bringing two of his little children with him. He mentioned that on the day before our attack on Wet-yea-kan (or Wattigam) a large reinforcement of Shans were sent to it, who lost their way, and at nightfall bivouacked in the jungle close to the stockade, without being aware of its vicinity, and came up in the morning as unexpectedly to their own as our people. A report is current here to-day that a messenger arrived last night in six days from Ava, with a royal order telling the tsetkay not to be alarmed, but keep the country quiet; and intimating at the same time that the Sarawattee Prince had quarrelled with the Queen, and left Ava for Mauktsobo with 500 or 600 men.

9th March (Thursday), Monay.—At home all day; none of the townspeople have been at the tent except some Chinamen who have been here many years—one, the China auk, or superintendent of Chinese, and the other a thooghee of a village, who had formerly traded between Ava and Tale; he says the journey usually occupies 38 days, and from Tale to this place is easily done in 35; that the road is good, and villages at almost

Dr. Richardson's Journal.

every halting-place. He wanted to sell me a horse which the tsoboa is anxious to get, but he is so bad a paymaster there is no getting any money from him. Though money is exceedingly scarce here, still the necessaries of existence are dear; rice sells at 45 rupees per 100 baskets.

10th March (Friday).—Passed the day at home, but was visited by some people from the tsoboas, the only Shans I have yet been able to communicate with; they all spoke Burmese, as do most of the Shans in large towns here; they complain much of the oppression and insolence of their Burman rulers; the members of the tsoboas' family are frequently insulted in the streets if they go out without their gold chattahs or attendants.

The Burmans, who are very numerous here, live entirely on the natives, contribute nothing to the expenses of the country, or to the occasional royal exactions of money, the levying of which is the province of the tsoboa; many of them, styled keun-dau-myo, not even called soldiers, have no means of subsistence but preying on the natives, and many acts are committed with impunity by them, which are severely punished in the Shans, who complain they are looked on as little better than dogs. Much alarm is said to have been excited by the Prince of Sarawattee having left Ava, of which there is no doubt amongst the people, though the chiefs still endeavour to conceal the fact from me.

11th March (Saturday), Monay.—Went into the town this morning about 11 a.m.; called on the tsetkay, where I remained about two hours; the conversation was led by some means to balloons, which I was enabled to explain by soap bubbles and fire balloons, which are not an uncommon amusement here. The immense one which went up from Vauxhall was, of course, a matter of great astonishment to them, but their minds are in that state of progression wherein credulity and superstition are unbounded, and though far above their comprehension, I have no doubt they gave me credit for all the facts I told them. Met the Kien-taung Tsetkay, who mentioned the existence of a hill of salt, and two of charcoal or coal, in the Kien-hun-ghee district, near the road between Kien-taung and that place. To the use of the salt, unless refined (for which purpose the coal is used), they attribute the goître, which is common in the neighbourhood. He also mentioned the tsoboa of Thienee's golden chop of the Emperor of China, which they have possessed from a very remote age, and which gives a power and control over all Chinese, to which that active and independent race will not submit in any other country to which they resort for trade.

12th March (Monday).—At home to-day. No visit from anyone in authority. A scion of the royal family of Chandaporee called in the evening; he escaped at the time the town was taken by the Siamese, and fled by the way of Kien-hun-ghee to his relation the first nakan here. With him came a person professing to be in the confidence of the tsetkay, who told me he knew it was the wish of the chiefs here that I should return by the Taung-ngoo road, for which route they would furnish me with a guard, as the whole of the lower country was in the hands of robbers, and Government disorganised by the flight of the Prince of Sarawattee. Several of the people who accompanied them had served against us in the late war, on which subject they are always ready to talk. They were loud in praise of the clemency of the English, and humanity to the wounded, and extraordinary justice in paying for what they had already made their own by right of conquest.

14th March (Tuesday).—The tsetkay's son came out again to-day, and mentioned the fact of the disturbances at Ava, which are now talked of with less reserve. Report says that the Bohmoo meng had taken a part with the Prince. A report also had been brought by some merchants that the tsoboa of Thienee had been beaten to death with clubs by his Shan subjects at a poe, to which he had gone with a few followers. He was the son of the last tsoboa (a perfect savage) by a Burman woman he saw only for a few days at Neaung Eue. After his birth the woman married a Rangoon man, where the boy followed her, and was loose in the country for some years; he then came to Ava, and entered himself amongst the young Prince's followers; his father dying without other known children, he was raised to the tsoboaship about six years ago. He was a confirmed bad character, and living about the Palace in Ava had learned, with the vices of the capital, drinking and opium-smoking, to consider himself more as a Burman than a Shan, and had imbibed the Burman contempt for the latter, by his oppression of whom he had succeeded in making himself so detested that his death as related was the consequence. It is not at all known here who will succeed him. One of the family is said to be amongst the Kaktchens (the wild tribes between the Shan country, Ava, and China, so called), of whom many are subject to Thienee.

15th March (Wednesday).—Went into the town to-day and called on the two bodha-yeas, and on Meng nay myo on my way home; found the first bo with a large drum strapped round his shoulders, beating time to some of his people, who were playing all manner of discordant instruments. The music ceased on my entrance. He is said to be the most active member of the Government here—a careless, rough, open-handed, straightforward person: he told me he had now in and about Monay about 500 soldiers Burmans, exclusive of the contingent of the tsoboa, which he says is only 2 per cent. of t[illegible]

Dr. Richardson's Journal.

the number of males under their authority; he has himself, if he is to be believed, collected about 1,800 muskets, the largest number mustered by any officer in the Shan country; none of the others can command above 400, and, perhaps, on an average, not 100 each, and this of all countries, ages, and descriptions. He has three wives (and a number of other women), all of whom he told me were excellent shots; one of them, a year or two ago, beat the best shots in Thienee. The second bo, who always speaks with his mouth full of betel, and wears exceedingly dirty clothes, though given to sports and pleasures in their rough way, is less a favourite with the people; he seems a person of little natural intelligence, but was a good deal employed in the late war, and has evidently been a good deal in company with low Europeans, or half-castes, for whom he expresses much admiration; he has only been here a month or two. He expresses himself strongly in favour of free intercourse with us, and volunteered his aid and protection to our people coming here. At Meng nay myo I met several other officers who were engaged in the late war, one of whom gave an account of his wounds, and of the attack on the flotilla below Donabew, with great animation and honesty. I was amused with his account of the rapidity of our fire, amongst other instances of which he mentioned that in the attack on the gunboats it was pitch dark, and that as we had not a single light in the fleet, their first round was fired at random; they immediately heard the row-boats bring their bow round to the shore, and as soon as they blew the matches at the gun he assisted in serving for the second round, our boats fired, and before those guns had gone off, whilst the priming was shoo-shooing, as he termed, several of those who had loaded it were killed ; it did at last go off, and they fired again, but at the third round a shot from one of the boats capsized it, much to his satisfaction. From the conversation I have had here with those who were engaged in the war, and they have been more numerous than I ever had an opportunity of holding before, I am certain that, with a few intelligent men, who have had an opportunity of judging, the impression that they are incapable of meeting us in the field is general; there are, however, a much greater number, particularly young men, who believe we should now have no chance with them; our humanity, however, has not, I think, been shown to an ungrateful people; they contrast our kindness to wounded prisoners and defenceless people with their own and the Siamese barbarity. Met the Kien-taung Tsetkay at Meng nay myo; he told me Captain McLeod had started for Kien-hun-ghee before the order for his detention arrived from this; luckily for him, he had only Shans to deal with.

16th March (Thursday), Monay.—At home all day, and my only visitors from the town have been the two sons of the tsetkay. All the chiefs, and the tsetkay in particular, are busy with the new year's festival, and preparing offerings for the priests, so that I shall probably see no one for the next two or three days; our people have also contributed their mite in the shape of a Padaytha tree (a fabulous tree, said to grow in the North Island, said to produce every necessary of life), for an offering almost entirely composed of European cotton handkerchiefs and book muslin.

17th March (Friday); 18th (Saturday).—The chiefs have, as I anticipated, been so much engaged with the festival, that I have had no communication with them for two days, except a message to beg I would let some of the followers of the merchants, who happened to be actors, assist at their plays. The actors here are at the call of the chiefs, and must perform as often and as long as they please; they receive every year a new patso, or gaungbaung, according to their merits; they are theoretically a degraded class, but they do not appear to be particularly treated so.

19th March (Sunday); 20th (Monday).—Still engaged with their plays and devotions. I was invited to go this morning to hear a pounghee explain the law, but as it was very early, and nothing new to be seen or heard, I declined. The actors were on Saturday at the house of the first bo-dha-yea, where it appears they spent a riotous night, and if they have not had amusement enough for their labour, they are not likely to get anything else, for he declared to the Shan interpeter (who was invited to partake in the festival), and swore by the Shoe Dhagon, that he did not at that moment possess a patso but the one on his loins, and as for gold and silver, he had sold his tsuloe (gold chain of his rank), and all that he had was a small gold cup, pointing to it; told them they might rifle his house, and if they found anything, were welcome to it; the people had before told us he spends, or gives away, his money as fast as he gets it. They went to the second bo's house last night, and the tsetkay sent for them to-day, but they were too much knocked up to attend. They are very popular here, and as there are amongst them some of the best performers from the city of Maulmain, no doubt they must excel the provincial drudges of this country town.

21st March (Tuesday).—At home again to-day; was visited by the brother of the second bo-dha-yea on his behalf, begging me to make myself at home at his house, and to come and see him frequently. I told him it was for that purpose I had come this distance over hills, and through jungles, never before travelled by a European; that ours was a great and powerful country; we had nothing to beg; that I had made them, as I had been commissioned by the Woonghee at Maulmain, an offer of increasing friendship, of which I myself a strong feeling towards them; that I had called on each of the chiefs, and

Dr. Richardson's Journal.

till my visit was returned I could not think of calling again. He said it was true, and the custom of the country, but that the tsetkay had not given them any instructions to call; said that the tsetkay was supreme here, and I did not expect him to call on me; that my mission was to him, and I should continue to visit him of course, &c., &c.; by a concession of any of these little points to a Burman, the only effect is to raise him in his own estimation, and proportionally lower the person making it, is the individual's character, and a concentration of it, that of the nation. In the evening Meng nay myo came out, and remained about two hours; he told me the tsetkay was sorry he could not receive me as he wished, under the present circumstances; that his appointment was a precarious one, though he had so long held it, and till the royal order arrived he did not know how to act, and was afraid of doing something wrong; he gave me the following list of the 12 tsoboas, who are hereditary princes, and have a right to the umbrellas and zazabollens, and from the very important command of the Bo-hmoo-meng, the eight on this, and four on the eastern side of the Salween; of these Kien-hun-ghee has the most people, Thienee, the most extensive jurisdiction; he also gave me a copy of his route to Kien-taung, 17 days, about 12 miles a day.

The southernmost principality is Mobie, about half a day's march from Gnoe-daun, now in the country of Karean nee, by whom the Shans have been so plundered, that the tsoboa does not at present possess any territory beyond the walls of his town, which has been so harrassed for some years by the Kareans, by whom it is surrounded, without any protection or assistance from Ava, that the tsoboa has at last transferred his allegiance to them. The town is said not to contain more than 50 houses; about five or six days north, a little easterly from Mobie, is Mok mai, three or four days from the Karean nee frontier; this is also much reduced in power by the Kareans, with whom it marches to the southward; all the large villages in the principality pay a sort of black mail to them, more or less heavy, according to their size and accessibility to their inroads; even in the most unfavourable situations, however, it bears no proportion to the grinding exactions of the Burmans. The capital of the principality has not yet consented to an annual payment, though it is probable from constant alarm, and by no means groundless, in which they live, that they will be obliged to do so; in the meantime, the tsoboa has this year sent Pha pho a present of 500 tickals. As before mentioned, Mok mai may contain 350 houses. Two days northerly from Mok mai is Monay, the head quarters of the Burmans' deputed government, which may contain 1,600 houses, 300 or 320 of which are said to be inhabited by Burmans. Three days northward of Monay is Laygea, recently (during the time of the present tsoboa) raised to the dignity of a tsoboaship, and formerly mustering under the banner of Neaung Eue; it is said to contain the same number of houses as Monay, and is at present one of the best governed, and most prosperous, of the principalities. Six or eight days westerly of Monay is Neaung Eue, formerly one of the largest, now shorn of its ancient honours, and, reduced within very narrow limits, does not contain probably more than 150 houses; part of this principality also marches with the Kareans, from whom all the season, from December till June or July, they are under perpetual alarms, and are obliged to keep small military posts on that frontier; this is, however, done by themselves, without any assistance from the Burmans. From Monay to Mho meik is about 17 days, in a north little westerly direction; it is smaller than Monay, and is said to contain about half the number of houses. From Monay to Theebo is about 10 days northerly; this is also a small town, and from this three days, in the same direction, is Thienee, a large town, said to contain 500 or 600 houses; the jurisdiction of the tsoboa is the most extensive, though his district is not the most populous; many of his subjects are of the savages called Kaktchens, and a portion of his allegiance is due to China; all these pay their tribute twice a year to Ava. To the eastward of Salween are Kientaung, which, I believe, pays yearly tribute, Mien-len-ghee once in a year and a half, and Kien-hun-ghee once in three years; this last is said to be more in the Chinese than Burman interest, but as the eastern towns were visited by Captain McLeod, all the information regarding them will be found in his journal. All the tsoboas of these towns are entitled to the pyathat or spiral roof to their palaces, the white chattah, and all the insignia of royalty, with their Atwenwoons, Thandautsens, Nakans, and other Government officers, as at Ava; their poverty, in which it is the pleasure or policy of the Burman Government to keep them, prevents the most of them from assuming these honours and distinctions. The tsoboas of Monay and Laygea are the only two on the west side of the Salween who are able to do so. To the eastward of the river, the tsoboas of Kien-taung, Mien-len-ghee, and Kien-hun-ghee, all live in gilded palaces, with all the other insignia as those of Monay and Laygea do, and he of Kien-hun-ghee has more state than the others. From Monay to Kien-taung is 17 days' march, about 12 miles a day, in a north-easterly direction. The first halting place from Monay is at Moung pauk, hence to Ban-loe, hence to Kan-auk; close to Kan-auk the May-ting is crossed, a considerable stream. From Kan-auk the next stage is May-len, hence to Thay-kan, hence to Nathay, hence to Kien-loon; in the last stage the Been, a pretty large stream, is crossed. From Kien-loon the next stage is Ta kau, where the Salween is crossed. The next three stages are villages, which pay a tax in silver, and are under their own chiefs, viz., Mienlen, Thon-maung, and Ken-loon keung. The next stage is Mein peen, which commences the Kien-taung territory. Ka-quac, Tong-ta-mein, Poo, Loye-lung, are all in the territory of Kien-taung, which the next stage brings you. From Kien-taung to Kien-hun-ghee is 11 days;

Dr. Richardson's Journal.

first four days' halting places are in the Kien-taung territory, viz., Jungle halting place, May loye, Mein-ma, Mein pon. From this the road runs in the Kien-hun-ghee territory, viz., Dhalan-myo, Mein-pan, Mein-hoon, Mein-hay, Nam nan (Jungle), Katsay Kien-hun-ghee. This route is probably correct, for my informant had returned from Kien-hun-ghee, only a day or two before my arrival at Monay.

22nd March 1837 (Wednesday), Monay.—The second bo-dha-yea, Maung ko, sent his brother to me this morning, to say that he agreed with what I had said yesterday, and should, as soon as the festival was over, call on the tsetkay daughee, and speak to him on the subject. I called on the tsetkay; staid about an hour. In the course of conversation he mentioned a place a few days north-east of this, situated in a deep jungle, which appears to be the burying ground of a large, ancient town, in which are found, in stone sarcophagi, mummies, well preserved, of a race of men much larger than of the present day. No intelligence from Ava, but a report this evening that the people who were sent to report my arrival here, unable to make good their way from the disturbed state of the country between this and Ava, have returned some days ago. It is also reported here that the Prince demands the surrender of Meng-tha-ghee and the Myo lat-woon, ere he will again trust himself in Ava; and that he disclaims all intention of competing for the throne. He has taken up a position near Mauktsobo, and is cultivating some fields, the paternal property of Alompra. There were two poor lads executed here some days ago, for a trifling theft; it was their first offence, and they were condemned by Maung tso, the first bo, with the intention of reprieving them at the place of execution. The pounghees heard of their sentence without being aware of the intended reprieve, and sent a deputation to beg them off, with a promise of taking them into the priesthood. The priest sent to make the demand, in a haughty and overbearing manner, called to the bo, "Hai-toung hmoo (here gaoler), give me these men," which so enraged him that he ordered the execution on the spot, and it is said he gave an order to cut down the priests if they offered to interpose, of which there was some probability, as many of them were armed with clubs.

23rd March 1837 (Thursday), 24th (Friday), Monay.—Have been confined at home the last two days by a headache.

25th March 1837 (Saturday).—As I was starting into town this morning, on a visit to the tsetkay, received a message from him, requesting to see me at the yeum, as the royal orders and letters from the Resident had arrived. The orders desired him to allow me to proceed to Ava, and give me a suitable guard, if I wished to do so. The Resident's letter, after describing the dreadfully disturbed and dangerous state of the country, left it optional with me to go on to Ava, or return by the way I had come, if I thought it imprudent to do so.

26th March 1837 (Sunday).—After considering the matter, have determined, if possible, to make good my way to Ava, according to my original instructions; the only circumstance that has much weight with me against proceeding, is the fear that the Resident may have left Ava, as he intends doing so should the scene of action be shifted near the capital. I called on the tsetkay to-day, and intimated my resolution to proceed. He says, from his accounts, that our route as far as Nat-tike, that is within the Shan boundary, lies through one of the least disturbed parts of the country. He has promised to give me 20 muskets, two petty officers for my protection, and six or eight coolies, to enable us to make longer marches after descending the pass into the disturbed districts; they are to be ready in a day or two. In the meantime I am to wait on the tsoboa to-morrow. Near the end of my visit he read to me the khawai boung, a minute list of the number of troops forming the contingent of each of the Shan tsoboas, myo-tsa, &c., &c., west of the Salween. He would not, however, allow me to make a note of anything but the total number, which he stated to be 91,147, exclusive of 4,625 men furnished by Mein-tseik, Mein-leun, and Tong-ong. I strongly suspect he added one figure to the correct number, as I know Maha nay myo had with him only about 8,000 men when they were called out in the second campaign of the late war. P.M.—The tsetkay has just sent out a present of a horse, and was much surprised to hear that we were not at liberty to take presents; he, however, admired the principle when explained to him. One of the people, as the usual expedient, proposed that I should pay a few tickals for it.

27th March 1837 (Monday), Monay.—Waited on the tsoboa to-day; my reception was most friendly; his hoa or palace has a gilded roof of five stories, the pyathat or royal spire, surmounted by a tree (chattah), or gilded iron ornament so called; the hall, in which I was received, about 40 feet square exclusive of a large verandah, which surrounds it: the centre portion, a square of 30 feet, is raised about 18 inches, with four rows of pillars, which support the high roof, three in each row, and 10 feet apart; the innermost four of the two centre rows are gilded, and the yazabolen (throne), which is a very handsome one, is lower and of better proportions than those of the Siamese Shan tsoboas, I have seen; the gold appears burnished at the distance at which I sat, though the art of burnishing is not

Dr. Richardson's Journal.

known to the Burmans; at each side of the throne stood a large white muslin umbrella, furled, with two rows of gold plates attached to fringes near the outer edge; on it were a small gold crown a sceptre, a chowree, an ottar daun, and the royal red velvet slippers, forming the five ensigns of royalty (m[illegible]g-hmeauk tasa gna ba); the only other furniture in the room was a gilded chair, and a common clumsy Burman bedstead; there might be about 100 muskets ranged in different parts of the hall. The tsoboa sat on the raised part of the floor, on a common China carpet; his son Chow Kin Mouang (lord eater of the town, pronounced by the Burmans Keamyne) on his left, and his son-in-law, the son of the Laygea Tsoboa, on his right below, and I had a mat immediately in the front on the same level; his tsetkays, two officers placed here by the Burman Government, his own officers and people, a little behind me; he expressed himself glad to see me here, and hoped I was pleased with my visit, but evidently wished to avoid all conversation on my mission to himself; he introduced me to his sons, and soon changed the conversation to subjects entirely unconnected with Burmah; natural history and geography of Europe, and that part of Bengal mentioned in their sacred books, the 16 countries of Thela. On taking leave he gave me a pair of grey ponies, one of which is a fine large handsome animal; he agrees with everyone else in advising me to wait a day or two for the tribute party from Mien-len-ghee, which is said to have crossed the Salween seven days from this, some days ago. The poverty here is very great and general; theft, common robbery, and murder not unfrequent in this town; the tsoboa alone takes what he wants from the market people, in the bazar in Mok mai; there are five who have that privilege, for in the next seat in the bazar there was one of our people; a poor devil sat down with five eggs to sell; he had no customers for some time, when the tsoboa's people or servant came and took one of his eggs, the four others followed in the same way, and the poor creature rose up without having spoken a word and went away.

28th March 1837 (Tuesday), 29th (Wednesday), Monay.—Have waited with much impatience two days in hopes of hearing something further of the Mien-len-ghee party with the tribute, and shall wait on the tsetkay to-morrow, and urge my immediate departure, should they not be able to assure me of that party leaving this for Ava, at the furthest in three days; my greatest apprehension is that the Resident may have left Ava before my arrival, and that, unprotected by any recognised official situation or any guard, we should certainly be plundered; I do not apprehend there is the least danger, if once at head quarters, of imprisonment or ill-treatment, such as was suffered by European or American prisoners during the late war; should the Resident not have left, I may be useful to him and the service at the present crisis, as his assistant is absent on the Assam frontier. In my mission, so far, I have perfectly succeeded, as far as the feelings of the chiefs here are concerned, and my intercourse with all classes of the people since the first few days has been all I could wish, except that none of the Government officers but the secretary, Meng nay myo, have visited me at my tent.* An express arrived yesterday with orders for the tsoboa to proceed in person to Ava with 1,000 men of his contingent; the same number are ordered from Laygea, and 3,000 from Thienee; the feeling of the people here, however, seems to be all on the other side, and opinions are that they will not be able immediately to get the men off; whether this order indicates the approach of the Sarawattee's force to the vicinity of Ava I cannot learn; the people here are all anxious that I should return by the route I came, the wish always accompanied by a petition that I will not suppose they wish to stop me, but merely give their advice.

30th March 1837 (Thursday).—Called on the tsetkay this morning to urge the necessity of my immediate departure, as a few days more will throw us into the rains, should we ultimately not be able to go to Ava; and in some of the steep slippery earth hills between the Salween and the Men-sung-ghee we should have to dig steps for the elephants to ascend, if we succeeded in crossing the stream. I did not, however, hint at a return, though every one is anxious that I should not attempt, in the present state of the country, to go on; the tsetkay said he wished me to wait till the fifth day of the moon, when, in addition to the people furnished me, some of the troops from this would certainly commence their march to Ava, and starting on that day would give us the advantage of the moon to cross the (Laydau) plains near Ava, which were in a dreadfully disturbed state, he said; as to the property I had with me, even were I robbed, I could be indemnified, but in case of anything happening to one on a mission like mine, it would be disgrace to Ava all over the world; he added that as neither of the chiefs of the Nat-tike post were at their stations, there was no one in authority to apply to; I explained to him that though he had nothing nationally to do with the quarrel, yet that my presence in Ava might assist in saving the effusion of blood, and I knew the English Government would much wish me to proceed, should even the life of one human being be spared by my doing so; it was at last agreed that I should see him on Saturday for a final arrangement, as I wished not to be after Sunday in starting. A considerable number of people, Bramins and others, are waiting for my protection to Ava.

31st March 1837 (Friday), Monay.—No intelligence from Ava to-day except the arrival of some country people, who have fled here to escape the conscription of the Government,

* Subsequent to this the tsoboa's son and one or two others visited me.

Government, and the unrestrained robbery of the people taking the prince's name; there appears little zeal in the cause of the present Government, and an inclination only to comply with its requisitions as far as shall be necessary to avoid palpable cause of blame hereafter should they ultimately prove successful, and it is probable the tsoboa, though called on to do so, will not accompany the contingent from this. I had a long conversation to-day with an old Burman Bramin, who has travelled over a great deal of the Shan country, and who has promised to give me a sketch of the country between Mo-meik and Mobie, its extreme northern and southern points.

1st April 1837 (Saturday).—As I was preparing to visit the tsetkay this morning Meng nay myo came out to the tent to say another express, the son of the Yea woon of Rangoon, had arrived from Ava to hasten the tsoboa and his Shans; the tsetkay proposes that I should accompany them. The tsoboa has now decided on taking the command himself, and starts on the 7th. He also said that when the messenger left, on the 25th ultimo, Colonel Burney had been gone two days, with flags of truce, to endeavour to effect a reconciliation with the prince. In the evening a messenger brought me an answer to the Commissioner's letter from the tsoboa, but a mistake had occurred in supposing that traders were to receive special permission from Ava to visit the Shan States, whereas Colonel Burney had merely agreed that in case of wishing to send officers through this country, in future permission should be obtained from Ava.

2nd April 1837 (Sunday), Monay.—Called on the tsetkay this morning with the tsoboa's letter, and the first paragraph of the commercial treaty, pointing out that there was a mistake in the wording of the letter, as by the treaty traders were to pass without let or hinderance to any part of the country; he acknowledged the mistake, returned the letter, and promised to have it corrected. I intimated my intention of calling again on the tsoboa in the morning, to which he immediately assented, and requested Meng nay myo to accompany me in the evening. The junior bo-dha-yea called at the tent with 30 or 40 followers, which is the first visit I have received from any officer of influence here, except Meng nay myo, who has been very attentive. He brought two of his little daughters, one about nine years of age, with him. His acquaintance with the English costume had induced him to dress them in an extraordinary fashion; a sort of hussar jacket and trowsers of brown broadcloth, with large bright yellow buttons, a Madras handkerchief on their heads, and one or two small gold chains round the neck. He says he has from the first wished to visit me, but only yesterday obtained permission to do so, and begs me now to come often and see him. He is a great sportsman, and has taken a fancy to my greyhounds. The chief part of his conversation was about the prince of Sarawattee's dogs.

3rd April 1837 (Monday).—Called on the tsoboa to-day, and ascertained that he will positively start on the 6th, making a short march. I was received as kindly as before, and he invited me to accompany him, promising all the assistance in his power. By the way, I saw to-day some of the female members of the family, fair, good looking people, and much more like the Zimmay people than Shans of this side of the Salween. They did not, however, as at Zimmay, join in the conversation. On my way home I returned the visit of the bo-dha-yea; he had been up all night, and was asleep when I went in, but he had given orders to be awakened if I called. His house was full of women. His brother had called once or twice on his sister-in-law's behalf, to beg I would advise him to pay her more attention, and dismiss some of the young Shans. Some of the Burman officers appear to be behaving here in the same way towards the females of the natives, which was a principal cause of rebellion of the Zimmay people 40 or 50 years ago. The tsetkay sent out to tell me he was sending a despatch to Ava to-morrow, and I availed myself of the opportunity to write to the Resident.

4th April 1837 (Tuesday), Monay.—At home to-day; in the evening the bo-dha-yea and his two children repeated their visit.

5th April 1837 (Wednesday).—Called on the tsetkay to take leave, on the second bo-dha-yea and on Meng nay myo, all of whom were very friendly. The tsetkay told me that by late accounts from Kien-hun-ghee it is possible that Captain McLeod had also some difficulties and trouble, as the tsoboa of Kien-hun-ghee died about two months ago, and there has been a contested succession. The party of the tsoboa's son have, however, been victorious; the rebel has been killed, and the heir, who had retreated into China, to which kingdom Kien-hun-ghee is subject as well as to Ava, has been sent for to ascend the throne. There is not, perhaps, in the world a country which has been the scene of more bloodshed than these States; and though, since our war with Ava, they have enjoyed comparative peace, yet there are constantly recurring domestic feuds like the one spoken of. In the evening the tsetkay of Kien-taung and Panya Pan came out to the tent with Meng nay myo, and paid a farewell visit, bringing 50 tickals, or *Rs.* 33. 10., from the tsetkay for my expenses on the road, which, as I had accepted a like sum from the tsoboa, I was obliged to receive. He also sent 40 tickals for the Shan interpreter, who was robbed a few nights ago, notwithstanding a night guard furnished by the district for our special protection, and which I only to-day learned have been kept ever since our arrival; since which robbery we have set a watch at night, of our own people also. Though theft is invariably punished with death here, yet it is by far the most common crime, and is said generally to be perpetrated by Taung-thoos, though they are the least

Dr. Richardson's Journal.

numerous of the divisions of the people, which are composed of Shans, Burmans, Yeins, Dumoos, Dunos, and Taung-thoos, all apparently of the same race, though the Dumoos and Dunos do not speak Shans, but a kind of Burmese. There have been no less than six executions for theft during my stay here, besides the two young men mentioned in the 22nd March, one of whom had stolen a kamauk (sombrero).

6th April 1837 (Thursday), Nam tween, N. 15 W., 2, 4.1 hour.—After an anxious detention at Monay of one month and a-half (during the last month of which period I have been on the best terms with the chiefs and a few of the people), started this morning at 9.15; called on the tsetkay in passing, who, as a parting gift, gave me his own spear, and expressed a hope that we should meet again; I remained about half-an-hour with him, and came out to this place, where we halted at 11; the tsoboa who has halted about a quarter of a mile nearer the town at a large zeat which he has built near the Hmoie dau, a pagoda of great sanctity, was just leaving his palace as we passed. Monay is a long straggling town stretching north and south along the foot of the hills, on the west side of the valley in which it is situated, and may contain at a rough guess (comparing it with Maulmain) 8,000 or 10,000 people; the houses are poor and mean, and the ground on which it stands rocky and uneven; the valley is about five miles broad, east and west, and extends from a few miles south of the town to about 10 miles north, varying from one and a-half to three miles in width; the south end of it is fine paddy land and irrigated by the Nam tween, a small stream about knee deep, on the banks of which we are encamped as the brook runs along the lowest part of the valley; the water is raised about six feet by a water wheel of the rudest and most simple construction, a barbarous imitation of the Persian wheel, interwoven split bamboos being substituted for the boards which turn it, and joints of the large bamboos for the buckets, which instead of being turned over by any contrivance at the top, are fixed diagonally on the outer rim, so that when they come to the top their bottoms are raised and the water discharged into a bamboo trough which carries it off at once into the fields; the buckets being placed close to the outer edge of the wheel raise the water of course by its whole diameter, but a large portion of it is wasted by their position; a portion of the valley is also watered from the Nat yen kan, a remarkable perennial fountain which bursts from the side of the hill at a greater elevation than most of the town; it has been surrounded by a wall three or four feet high, and constantly supplies three large spouts of perhaps six or eight inches in diameter; it is difficult to account for so large a supply of water from the small elevation of the hills above it. Meng nay myo accompanied me to the halting place, which he chose for us as being some distance from the tsoboa's people; close to us is a raised causeway, about a mile in length, made by the tsetkay through a swamp at a cost of about 1,000 tickals; he is very liberal in public works of this kind; they say there is not a halting place between this and Ava which is not indebted to him. The junior bo-dha-yea came out with about 30 armed Burmans; and the tsoboa's son, the Keamyne, called in the evening accompanied by one of the Monay tsetkays; my party, now reduced to 30 people, is as much alone here as if we were in a desert, but in the present unsettled state of the country, when small armed parties are passing from every direction to join the Tsoboa, we are not quite so safe from thieves, and are obliged to keep constantly on the alert; two attempts were made last night to carry off some of the horses, but as we have kept watch ever since the Shan interpreter was robbed about a fortnight ago, they were frustrated, though we were unable to apprehend either of the offenders. The tsoboa has now determined, contrary to his original intention, to leave his son here in charge of the civil duties of the town.

7th April 1837.—Hay peck—4.30, N. 15 W., 12 miles, 7.20.—Course lay to-day northerly (N. 15 W.) between the high ridges of hills, which form the valley, if it may be so called, of the small stream of the Tone (it falls into the Nam tween, which discharges their united waters into the May ting); but after leaving the town a short way it is only a succession of undulating hills; between the higher ranges, which run here east and west, it is generally cultivated but in a very slovenly manner; at 10.10 cross an off-set from the eastern range which has never been cultivated, forming the boundary of the valley of Monay; 10.25, hills again recede, and the intervening small hills are lower and more brought under cultivation, with a good deal of water in small streamlets in the intervals, but not applicable to purposes of irrigation; 11.30, halt at Hay peck; the elephants came in, 12.30, and the Tsoboa, who started at the time I did, came in a few minutes after me; as he has only two elephants my five quite eclipse him; in the afternoon two royal messengers arrived from Ava with the Mauk to* in five days, with orders to the tsoboa to make the greatest possible dispatch; one of them says he accompanied Colonel Burney to Mauktsoho, and that on his return to Ava, where he still is, the bo hmoo meng tha retreated to Tset kyne where he remains. I waited on the Tsoboa in the evening, where I met the messenger, and he afterwards came out to the tent; he says the opinions in Ava are that the business is nearly at a close, that the Prince has only a few followers, and those leaving him, his being sent here to hasten on the Shans, which always is a last resource

* A small conical wicker work hat varnished red, looking exactly like leather, which denotes their office.

Dr. Richardson's Journal.

resource, contradicts his statement. Hay peck consists of two or three small villages on a rising ground nearly bare of trees, and consequently excessively hot at this season; thermometer 94 in a double-walled tent at noon; the whole of the first part of the march we were cheered by the song of the skylark and the monotonous notes of the cuckoo, which I have not heard for 20 years. The last of the troops (about 1,000 men), who march in a most disorderly manner, did not come up till dark; they were encamped on an open space, on the brow of a low hill, in a low square of sheds of boughs which had been previously prepared for them, the tsoboa and his immediate followers in the centre; and a place was assigned me outside, a little to their left, and forage provided for my horses and elephants.

8th April 1837 (Saturday).—Nam may-lean or Taing kegien, 6 miles north, little easterly of Mein-tseik, 6 hours 30 minutes, N. 15 W., 18 miles.—The camp was in a bustle this morning from 2.45 (thermometer 68°) till daybreak (5.20), when I started with the first; for the first 20 minutes marched N. 20 W. along the same sort of ground as yesterday; 5.40 N. 75 W. crossing the rugged western hills which have bounded the valley through a nearly level pass, and at 6.18 reach the cultivation on the western side of the range and continue a course west, a little northerly, till 8.45 passing a small well and temple; it tends more to the south (S. 80 W.) which continues to the halting place in the Mein-tseik territory, the town of that name distant about six miles south-west; ascend nearly all day; road over undulating hills without abrupt ascents; the country after crossing the rugged hills opens away to the northward on irregular undulations, scarcely amounting to hills, as smooth as drifted sand, with small abrupt rocky hills shooting up here and there from 30 to 100 feet high or more. A rugged range of hills continues to the southward till 7.30, when the country assumes the same character as on the north of the road; on both sides, as far as the eye can reach, nearly the whole of the country between the little abrupt hills is arable, but little of it can be irrigated, though there is no scarcity of water; the soil is exceedingly poor, either red ferruginous earth or grey sand, yielding in some places not more than six or eight fold, and the average of the whole district of Monay may be taken at 25, the best land not giving more than 40; we have passed four or five small villages to-day, the largest not more than 10 houses; the tsoboa's army is a most irregular body, about 1,000 men; one half of them are armed with muskets, some bad, some indifferent, which they carry in any way that suits them, generally fastened to the pole over their shoulder, to each end of which an open bamboo work-basket, lined with the pasteboard-looking substance from the joints of the large bamboo, and used for carrying their ammunition and provisions, is attached; they find their way from one halting place to another at any time of the day, and in any order the most convenient; a few of them started between 2 and 3 a.m.; none of them were at the ground before 11.30 when I halted, and they continued to drop in at intervals till six in the evening; they amused themselves by firing off their muskets on the line of march; the tsoboa has just ordered this to be put a stop to; every man who can muster a horse that can carry him may ride if he pleases, and a few have availed themselves of the privilege; their dress is nearly uniform, the kamauk, blue jacket and trousers; none but the tsoboa and a few of the followers affect the patso or goung boung, and all wear the kamauk. I made the march to-day with the tsoboa's brother-in-law, a Burman, and nephew of Menghee Maha Ouzana, but he has been so long in the Shan country, that he is more of a Shan than a Burman; we lost our way, which increased our distance about four miles.

9th April 1837 (Sunday).—Mein pon, N. 45 W., 4.15, 12 miles.—5.35 start, and immediately enter another range of the western hills, passing generally along the bottom of a narrow ravine about west between high hills till seven o'clock, when we climb an abrupt ascent and move to the northward; our ascent lay over rugged ridges for half an hour, when we cross the top of the pass, and enter the Mein pon territory. From this the road is winding, rocky, rugged, and bad till 8.45; when we come in sight of the paddy fields and halt at Mein pon at 9.45; in the early part of the morning pass some small silkworm gardens, and about 7.35 a small stream with ranges of troughs formed of the hollowed trunks of trees for steeping indigo, a particular kind of which, with large dark green leaf, grows wild in this part of the hills; have seen very little cultivation, and only one or two small villages, perhaps 20 houses, during the march; we have been joined here by the Mein-tsiek contingent of troops, 250 men under their tsoboa, or properly myotsa; one half armed with muskets, the other with spears, as the Monay men. Mein pon is rated to furnish 150, and the Monay tsoboa it is said now musters in all 1,500 men. Water plentiful, forage scarce, for the elephants particularly, which I fear will suffer from the heat and scarcity of food.

10th April (Monday).—Halt to-day at Mein pon, a small town of between 80 and 100 houses, the tsoboa of which was killed a few years ago by his brother, who stabbed him in the side whilst fishing; the town is under the Monay tsoboa, who appoints the officer in charge of it, the myo-ouk (literally, town cover), who is responsible to him; the valley of the Pon, in which it is situated, is about three miles wide east and west, and of some 10 or 12 miles extent north and south; it was formerly a walled city, but like all the other Shan towns now under Burman rule is prohibited from having fortifications, though gates and gateways are still allowed to those termed cities. I called on the tsoboa in the morning; he has been employed to-day marshalling his army, of which it has hitherto had

Dr. Richardson's Journal.

very little appearance; after to-morrow or the day following, we are to march in more regular array as we approach the enemy. I have been relieving the elephants of a portion of their loads and getting Chinese pack-saddles for some of the horses; the son of the Rangoon Yea-woon, Moung myat, who is a strong partizan of Meng tha-ghees, and has been sent to hasten the advance of the troops, is anxious to urge the Tsoboa (who makes a good show of haste, though evidently using all his endeavours to hold back till it is known which side is the stronger) to make long marches; I hope we shall be able to keep up; though the nights are cold and chilly, during the day the sun is excessively hot (shade 94°) and distressing to the elephants; the breeze is, however, always cool and delightful. The yea-woon's son came in the evening; expressed himself delighted to see a Rangoon acquaintance in this savage place; I had seen him once or twice at Rangoon.

11th April (Tuesday).—Nam-tso-ngan N. 65 W. 3, 7 miles.—Started at 4 a.m., and before daylight cross the Pon, about knee deep, amongst bunds and Persian wheels for irrigating the paddy fields; leave the valley and travel across the hills along a much frequented road, through a country of the same character as last march, but less rugged; pass two small patches of paddy and one village; about the middle of the march cross what is said to be the highest part of the route between Monay and Ava; about seven (watch stopped on the march) cross the Nam-tso-ngan, a small stream which divides the Mein pon from the Whopong district, and encamp in a patch of terraced paddy ground belonging to the latter town; this day there were no tays for the tsoboa, or sheds for the troops; they however put them up with great rapidity and finished the square as they came up. I offered one of my tents to the tsoboa, who, much to my surprise, declined it, and sat under the shade of his gold chattah, which, except mine, is the only one in the force; his tay was an oblong piece of coarse cloth, about 20 feet long by 12 wide, stretched over a ridge pole and fixed close to the ground by pegs on one side, and the other shorter and tied to posts, the edge about a man's height from the ground; a China satin curtain running across divided off his sleeping place, in which he had a bedstead with musquito curtains; the ends were closed with branches of trees and a flat shade erected in front for visitors.

12th April (Wednesday).—Nam-tsoo, S. 70 W. 5.20, 16 miles.—Starting at 5.10, ascend a trifling hill, and in 25 minutes come amongst hills with so small an acclivity as to admit of their being ploughed, which at one time or another lately they have been. 5.40.—Road rocky; hills more precipitous. 6.40.—Pass a valley of some extent, with a small village and cultivation. 7.30.—Country more open. 8.—A small village with pagodas; country cultivated on both sides of the road. 8.15.—Same, nearly level, undulating, and no trees. 8.25.—Extensive paddy fields, with the water let in preparatory to cultivation, which we cross by a raised path nearly half-a-mile in length, a mile or so above which the water starts out of the bottom of the hill in a large stream. 9.35.—Another village, and at 9.45 halt at the town of Whopong for two hours. It is a large town, perhaps 250 houses, and the territory more capable of affording subsistence to a large population than any we have yet crossed. 11.45.—The tsoboa came up, and at the instigation of the yea-woon, who came here last night, we continued our march, after crossing a small stream and ascending a rugged ascent, to an irregular table-land; leave the Whopong, and enter at 1.16 the Neaung Eue territory, and at 1.20 halt in the table land on soft ground. The elephants came up at 5 p.m., having made a distressing march of 12 hours. In the evening one of the tsoboa's scouts returned, bringing intelligence that the detachment of men placed at Yea-ngan by the Tsetkay of Monay had gone over to the prince; that none of the Shans had yet crossed Nat tike; that the Neaung Eue Tsoboa, with about 500 men, was waiting for him at Poehla; and that the prince's people, who are expected in force at Poehla to-morrow or next day, will either give us battle or receive our submission to the prince, as all the country to the westward has come over to him. The only men of any rank with the tsoboa are his brother-in-law, who is a volunteer, one other officer, and the Monay Tsetkay, a person of little intelligence or influence. The yea-woon of Rangoon's son, who is fairly committed by the active part he has taken, is anxious to push on. The Laygea Tsoboa, who is said to be a person of intelligence and decision, is two or three days' march on our right flank. The tsoboa feels sensibly the difficulty of his situation, and sent his brother-in-law this evening to ask what I advised him to do. I told him even if I were at liberty to give any advice, nothing could be more difficult, with our present scanty intelligence; as it was, to push on a day or two, and ascertain the truth or otherwise of his information.

13th April (Thursday).—Say-lay N. 75 W. 5.15, 16 miles.—5.35 start, the path continuing to lay along an irregular table land on the top of the hills; jungle thicker; ground moist and verdant, with here and there small streams; morning hazy, and very cold before the sun rose. At 7.50 the tsoboa halted to breakfast at a picquet-house of the Neaung Eue Tsoboa, placed here on account of the Kareans, who, though their country is 20 miles distant, frequently carry the people off whilst at labour in the fields. 8.35, continued our march, and in about 20 minutes descend, in a zigzag course, a steep difficult hill for a little more than half-an-hour, into the valley of Neaung Eue, wide five or six miles. East and west hills cannot be seen; north and south from the Haye, most of it may and has been cultivated, but little of it appears to have been irrigated though

Dr. Richardson's Journal.

though they have now a small watercourse down the face of the hills which we descended, and the green line of a river's course is seen towards the other side of the valley. The city of Neaung Eue is about 16 miles south of this; pass three tolerably large villages, and crossing a small stream at 11.25, halt on its banks, a patch of paddy ground, into which the water has not yet been turned. Elephants came up pretty fresh at 2.30, nine hours on the march. In some little huts in a mangoe tope, about a mile and a half from our ground, the market of this part of the valley is held every fifth day. The principal articles sold there are salt, gna-pie, rice, vegetable indigo, blue jackets and trousers, and a few betel boxes. Bamboos, which are scarce here, and common reed mats are also brought to the bazaar for sale. The tsoboa's information to-day leads him to think the force here too weak to oppose the prince's army; the Laygea and Neaung Eue are the only two other tsoboas who have turned out, with the three myotsas of Mein tsiek, Mein-pon, and Noung-moon, and the whole of the country west of Yea-ngan has gone over. He has sent a despatch to Monay to summon one of the nakans and one of the Bo-dha-yeas to join him, and use their influence in collecting the other tsoboas. Thenee, which furnishes as many men as all the others west of the Salween, is in a state of domestic warfare; no troops can be expected from thence, and the tsoboas east of the Salween have not been called on. The letter sent by the prince's chiefs to Yea-ngan and other villages, which have in consequence gone in, was in the name of the Atso-ya-tho-meng, from which it may be inferred that his views are less moderate than he at first gave out. Thirty men, two and two, have been dispatched by the tsoboa in the course of the day to endeavour, by different routes, to penetrate to Ava for intelligence. The force now here is said to be 1,100 men, with 250 from Mein tsiek, and 150 from Mein pon. Under all the circumstances, the tsoboa wished to leave me two days in his rear till he had ascertained the state of affairs in advance; he then proposes to send for me, or, if necessary, to retreat, and take me with him to Monay. I however told his brother-in-law, who brought the proposal, that I should much prefer going on at all hazards.

14th April (Friday).—Halt at Say-lay. The orders to march were counter-ordered late last night, and we remain here to-day waiting intelligence from Monay. The tsoboa has agreed to my accompanying him one march further in advance, and then be guided by circumstances. Vague reports have been brought in during the day which have caused him to make up his mind that he can advance no further. I went over to his tay at 3 p.m.; the old gentleman was as polite and attentive as usual; he told me the only thing I could do was to return with him to Monay, and either remain over the rains or till it was possible to advance. The whole of the Gnoe-goon (silver tax) villages, and (the Lay-dau) level country near Ava have gone over, and the prince's people; all the dhamias, robbers, and bad characters in the country, under sanction of his name, are in great force immediately on the other side of the hills at the foot of which we are encamped, and no one knows who is at the head of them. Were any respectable man there, I should not hesitate to push on; as it is, I proposed to send a servant of mine and one of my coolies, who have volunteered, to Colonel Burney, to endeavour to get the prince's order for me to proceed. It is, however, impossible to send anyone with them from this, and as they do not know the road the tsoboa disapproves of my doing so, and I have no alternative but to return. We, however, wait one day here for the officer from Monay, should he come on the Tsoboa's requisition forwarded a day or two ago. At 10 p.m. the bo-dha-yea's brother (Ougyne), who had pushed on two days ago to Meng-gu-dan, came to my tent with the tsoboa's brother-in-law. He had just returned with a memorandum from the head man of that village, that the prince has taken the town of Ava, that the queen and her brother are in prison, and 60 of the principal ministers and officers of the late government have been put to death. The story does not bear the appearance of authenticity; nevertheless the Tsoboa has determined to advance six or seven miles, close to the foot of the hills, there leave his elephants, and proceed to ascertain personally the state of affairs.

15th April, Saturday.—Nam-leeng, N. 70 W. 2. 30, 7 miles.—Leaving Say-lay at 6 a.m., and crossing the Nam-lack half way up the horse's flank, at 6.20 cross a bight in the western hills, N. 75, W. 7 miles. Soil better, perfectly level, and well irrigated, and encamp at the foot of the western hills, the boundary between the valley of Neaung Eue and the Gnoegoon towns or Myelat Shan country; from this to the valley of Irrawadee below Nat-tike, the whole of the cultivation is dry on the hills. In this day's march some of the watercourses were of considerable depth, and most of the fields under water, rendering the march cold, wet, and disagreeable, though the thermometer at 3 p.m. was 94° in my tent; the presence of the army has raised the price of rice here to 2 rupees and a half a basket, and a few days in advance it is said to be selling at 4 rupees per maund; the myo-thooghees of Yea-ngan, and Men gea dan have just come in and confirm the report brought by Ougyne.

16th April, Sunday.—Halt at Thantay or Nam-lon (Good-Water) so called from a spring of water about two feet in circumference, which bursts out at the foot of the hills, and is used to irrigate the western portion of this bight. The water is at all seasons red, from a mixture of a portion of the ferruginous soil, of which great part of the country and hills are composed; during the rains the portion held suspended is very great, and the colour deep in proportion. The report of the capture of Ava, and the death of the 60

Dr. Richardson's Journal.

chiefs, was contradicted in the night, and confirmed again this morning with particulars; they were said to have been pressed down with thick boards, with iron spikes in them, over which the Prince walked before they were led to execution. The Neaung Eue Tsoboa, who is one march in advance with 500 men, is to retreat on this in the course of to-day, the Mein-tsiek and Mein-pon myo-tsas are close on our left flank, with 250 and 150 men respectively, and the Laygea Tsoboa, about 10 miles on our right, with 600 or 700 men. The Tsoboa has now determined to wait here for official information of the above report, which is expected either to arrive here to-day, or pass to the northward by the Mein-tso road, which joins the road along which we came, about five or six miles west of Whapong, to Monay. The wind blowing strong from the north westward in the night, brought with it the down of innumerable cwitch creepers, near which the camp was pitched, which kept the whole army awake all night, and obliged the tsoboa to shift his quarters about a quarter of a mile this morning, where I followed in the evening. Soon after my tent was up, his brother-in-law came over and told me that messengers had come in from the tsoboa's daughter (one of the king's wives), confirming the reports of the capture of Ava without resistance. The Prince was at Tset kyne; the Myo-lat-woon, the Deberen-woon, and another, had been put to death; all the members of the late Government were in irons, except Kee-woonghee and Saygain woonghee. The Queen's brother was obliged, in heavy fetters of gold and silver (that he might have enough of the metals he was so fond of), to dance through the town begging rice, an official following him with a rattan; he is degraded from his rank as a Prince, to be called Nga O, his original name, and in a few days to be dragged by horses three times round the wall of Ava. The Queen is also degraded; to be called Mee-noo. The young Princess is with the late King, and the Setkea-meng is to marry one of the Sarrawattee's daughters. The tsoboa is to return to Monay and await a royal order for his appearance in Ava, where it is expected all the tsoboas will be summoned to appear with presents and congratulations on the solemnization of the marriage. He expects to be at this halting-place again 20 days or a month. The country between this and Ava is in the possession of bands of armed robbers, who, taking advantage of the disturbed state of the capital, in parties from 100 or 150, under the Prince's name, rob every passenger on the road. Eight or ten Bramins, who are held in nearly as much estimation as their own priests by the Burmans, who started from Monay a few days before us, have been completely plundered of the fruits of six or eight months' begging through the Shan countries. The messengers of the tsoboa, though they had on the cotton tsoloe, the badge of the Prince's party, were accused of being Nga-os men, and stripped of everything, including their patsoes. Since we have been on the march, I have seen a great deal of the gentlemanly old tsoboa, and his brother-in-law has spent almost every evening in my tent. They expressed themselves most friendly towards me personally, and favourable to the objects of my mission; on this account, and in consideration of the very unsafe state of the country, through which my attempting to push would be attended with the certain loss of my property at least, the latter invited me, in the tsoboa's name, to return with them to Monay, where he would have an opportunity of showing me more attention than he did whilst there before. I returned an answer, expressive of my thanks for his kindness hitherto, and stating that if he believed, from the information he had heard of the state of the country, that it would be impossible for me to reach Ava, I would avail myself of it still further, and return with him. At the same time I represented that we had now passed all the hilly and bad parts of the road; the near approach of the rains, and my anxiety to reach Ava, the probability of the elephants knocking up, &c. &c., and suggested that he should either furnish me with a guard, according to former instructions from Ava, or that he should leave me with the Neaung Eue Tsoboa till the possibility of proceeding was ascertained. After his brother-in-law had gone some time, the messenger from Ava came from the Tsoboa to say, the change of Government prevented his giving me a guard, but if I wished it he would introduce me to the Neaung Eue Tsoboa, and I could remain with him till an answer was received to a letter I proposed writing to the Resident at Ava, or till he returned on his way thither, when he would apprise me of his approach, and I could join him and proceed together to Ava. I gladly accepted the alternative, and proposed calling on the tsoboa to take leave, which I did about 11 p.m. After writing to the Resident, the old gentleman gave me a seat on the little raised platform he occupied himself, where I remained about a quarter of an hour, and took leave. He addressed me as his son, gave me for my expenses on the road 50 tickals of coarse silver, and hoped we should meet again. There is more mildness and real gentlemanly simplicity in his manner than that of any Burman I ever met with, reminding me forcibly of the kind old Chow-tchi Weet, Tsoboa of Labong. His brother-in-law returned with me to the tent, and remained till near one o'clock. He used a great deal of persuasion to induce me to return to Monay. A petty officer of the Neaung Eue Tsoboa came, about midnight, to say he was appointed to wait on me in the morning to show me the road. There will be little sleeping in the camp this night. The Tsoboa is overjoyed at his release from a hazardous and disagreeable duty, and the men at the prospect of returning to their homes; their quiet and generally orderly behaviour, without discipline, might be an example to more civilized nations.

17th April (Monday). Neaung Eue, S. 20 E., 5 hours, 15 miles.—At 4 a.m. the Tsoboa started to the northward, along the foot of the hills, to return by the Meintso road; his brother-in-law came to bid us a last good-bye, and in a few minutes afterwards the Neaung Eue's amat (officer), who was to show us the road, came and deputed another man, who

Dr. Richardson's Journal.

who, in a few minutes, came to his own house, when he went in to breakfast, and deputed another who soon left us to find the way by ourselves. Our route lay a little to the eastward of south, along the foot of the range of hills which bounds the valley of Neaung Eue to the west, with an occasional hummock between us and the plain of the valley, till nine o'clock, when we leave the hills and cross towards the eastern ones, where we were caught in a thunder-storm and piercing cold wind, and reached a village just in time to be completely wet; here we halted a little more than an hour till the rain was over, when the sun shone out with overpowering effulgence. From this village the road is a dead level, having all the appearance of the bottom of a lake, and the soil, which is a mixture of sand and clay, is in many places full of shells, something like the common periwinkle. At half-past 10 we cross the Neaung Eue or Bora-that river, about half-leg deep, and proceeding along a path rendered as slippery as ice by the rain, cross stream led here for the paddy fields, with a very deep muddy bottom; we overtook the rear of the Neaung Eue soldiers, straggling on as we have been accustomed to see the Monay men, and reach Neaung Eue at 2 p.m., five hours exclusive of halts. I sent the Shan interpreter to the Tsoboa to inquire where we were to encamp; he returned almost immediately with an old man, who pointed out a vile place on the north side of the town; we moved a little further out into a fallow paddy field; the poor old man got a beating for showing so bad a place, and we are promised a better to-morrow.

18th April (Tuesday). Neaung Eue.—It rained heavily nearly all night; fortunately our ground happened to be tolerably dry, and I had, in anticipation of the rain, bought some thatch, and got up sheds for the people just as it commenced; sent the Shan interpreter to the tsoboa to express my wish to wait on him to-day; he begged me to defer my visit till to-morrow, as our new encamping place lies nearer his hoa (palace).

19th April (Wednesday).—Shifted our berth last night into the town, or more properly village, for there are not above 150 or 200 houses of the same miserable appearance as those of Monay, or perhaps a little more so. There is not one good house in the town, and the country villages are worse; they are all very low, and from the walls of many of them being made of thatch, much of it old and discoloured, have a sad ruinous appearance. Many here, and indeed throughout the country, have the same low end as the houses of the Red Kareans. The site of the town is a dead level, and, as conjectured, was formerly the bed of the lake, which extended several miles up the valley to the northward of this; it has now shrunk away about three miles to the southward, and fills the end of the valley about 12 or 14 miles north and south, and reaching to the foot of the hills east and west, perhaps, on average of $2\frac{1}{2}$ or $3\frac{1}{2}$ miles; it is fed by the Bora-that, which falls into its northern end, and a few small rivulets from the hills; the only stream it gives rise to is the Mobie River, from its south end, which after penetrating the hills, and flowing underground for some miles, appears again a short way from Taung-ngoo, and then flows into the sea by the Setaung River, the waters east of this all falling into the Salween. Our encamping ground is a vacant space to N.W. of the han; between that and the houses of the tsoboa's lesser wives, of whom there are about 20 or 30 living in the houses of their parents, distinguished by the privilege of attaching planks in the shape of buffaloes' horns, to the end of the ridge pool. He is said to add two to the number annually, but unless they have children they receive absolutely nothing from him, and then only a bare subsistence. Even some who live in his house are said to to have their food carried to them by their friends. About 11 o'clock I visited the tsoboa, and remained about an hour; his house, enclosed in an old wooden fence, is mere bamboo; the floor, which is also of bamboos, covered in part with mis-shapen boards. Though of the same rank as the Monay Tsoboa, he has none of the insignia of royalty, except the gilded frame to the window behind his couch; even his betel apparatus is the same as the commonalty; he is about 45 years of age, very stout with rather a want of intelligence in his countenance. His three brothers were present, and three or four of his sons, of whom he told me he had 20 about 11 years of age and under. I explained the friendly nature of my visit to Monay, and begged him to consider the same sentiments towards himself existed with the Commissioner at Maulmain as I had been commissioned to communicate to the Monay Tsoboa, I solicited his protection and countenance to our traders who might come here, and promising the same to his people at Maulmain, gave him a musket, carpet, and three or four finger-glasses; apologised for the smallness of my present, as I had not anticipated seeing him, &c. &c. &c.; he has little to say, but was as friendly as I had reason to expect from the strong recommendation of the kind and gentlemanly old Tsoboa of Monay.

20th April (Thursday); 21st (Friday). Neaung Eue.—Visited the tsoboa's brother today, who seems a man of more intelligence and energy than the tsoboa. He was formerly exceedingly dissipated, a drunkard and opium smoker, but has for some years quite reformed. He gave some account of the feud between the Tsoboa and his uncle, who seized the throne on his father's death about 14 or 15 years ago. The war (for there were some pitched battles) lasted about two years, in which contest this brother was the principal supporter of the present tsoboa, but the principality has never recovered the waste and destruction, and though it was one of the four at one time embracing the whole of Cambosa-tyne, it is now said only to contain in all 500 houses in the district. They are so weak that the Kareans infest their marches all the dry weather, and carry off all unprotected persons into slavery, unless ransomed by their friends. This year they have been freer from their inroads than usual, which they attributed to my having passed through the Karean

Dr. Richardson's Journal.

country. A more legitimate cause may be found in the vicinity of the British possessions on the coast, where runaway slaves from the Shan countries are of course free, and finding their way thence, or remaining in Maulmain, are lost to their masters, this having gone on for seven or eight years. The Zimmay Shans, who are the chief purchasers, will only buy children, and that at a reduced rate, as cattle, when I first penetrated to Zimmay, which sold at two rupees and a-half, are now selling for 10 or 12 ; this rendering the slave trade much less certainly profitable, will probably ultimately put an end to it, thoughit is said there are still nearly 300 persons annually sold into the Siamese territory. Many of the people of this district have voluntarily gone to reside in the Karean territory, which at its nearest point is not more than 30 miles from this, to avoid the grinding oppression of the Burman Government. Since the troubles at the capital they have had a short respite, but there are generally from 80 to 100 Burmans here living on the natives.

22nd April (Saturday), 23rd (Sunday). Neaung Eue.—Called to-day on ChowShoe-nee (Lord Red Gold), the second brother of the tsoboa, and remained about an hour, being the market day here, which is held as at Monay once in five days; a crowd of 100 or 200 people followed me to his house, which was fortunately, however, at no great distance. My reception was friendly ; his whole family were present. Saw a good many of the Tavoyers to-day, who form the principal part of the inhabitants of En-lay, Enma, four villages of the lake (though they are not now confined to four) ; their dialect is so similar to that spoken at Tavoy at this day, that I could immediately detect a Tavoyer, though they must have been here about 662 years, if the tradition be correct that they accompanied Narapadi Say Thoo, or Shoo, King of Pagan, as he reigned there about the year 536 of the Burman, era (1175 A. D.) Many of the traditions of this town are connected with him; in Burman history he is said to have defeated an immense Chinese army which attacked the old city of Kau-tham-bee, formerly the capital of this valley, the extensive ruins of whose walls are still visible two or three miles north of this. It must at that time have stood just on the borders of the lake, and the wooden pillars of his palace are said still to be visible in a calm day at the bottom of the lake, with the chains and posts for fastening his elephants. Five days south-east of this is another considerable town, Thataung, inhabited by people from the old town of Thataung, one of the first capitals of the Pegu kingdom, situated about one day north-east of Martaban, and brought here by Norata meng tsoe, King of Pagan, at a still earlier period, viz., 379 of the Burman era. It is close on the borders of the Karean-nee country, to the chief of which people they are now tributary, as well as to Ava. A messenger from Ava yesterday states the town still to be surrounded by the Prince's army, the country dreadfully disturbed, all the Burman chiefs of the Shan country turned out, a new Bohmoo and Tsetkays appointed.

24th April (Monday); 25th (Tuesday). Neaung Eue.—Weather, for the last week, has been excessively hot. Yesterday, at noon, we had a heavy shower, which reduced the thermometer from 96°, at which it had been for many days at noon, to 76°, in half an hour. To-day it has not risen above 90°, and at six o'clock was only 60°. The atmosphere, which has been so hazy as to prevent any distinct view of the hills, is now so clear that they appear at their proper distance. About two miles east from my tent, which is in the middle of the town, is the Elephant Range, which would appear to be the highest range between this and the Salween, at least all the waters on the east of that range fall by that river into the sea, whilst those on the west fall by the Paung Laung or Setaung river, and west of us is the Four hill range, the western boundary of the valley about the same distance. By the boiling point of water (207°), I found this portion of the valley to be 2,556 feet above the sea, about 517 feet higher than Monay, but 254 feet lower than Namtso-ngan, the boundary between the Mein pon and Whopong districts. The cold seldom reaches the freezing point here, which the people attribute to the vicinity of the lake, but at Poehla, the next day to this, on the Ava road, and only 15 or 16 miles off, with only a low hill between them, ice is common, and last January was as thick on the shallow pools as common window-glass. The tsoboa's second brother sent to say he intended to call on me yesterday, but did not make his appearance; the rain, perhaps, is his excuse. I sent to intimate my intention to call on the youngest brother to-day, but he was not at home. Thermometer rose, 3 p.m., 94°.

26th April (Wednesday); 27th (Thursday).—The Tsoboa of Monay, on his return, reported to the tsetkay his having left me here with a probability of my waiting for his return on his way to Ava, and as that event is not now likely to take place, the Tsetkay (who appears not to have been aware of my having written to the Resident) wrote to me, through Meng-nay-myo, inviting me to return to Monay until I could proceed to Ava with safety, and sent a kind message by the bearer of the letter to the same effect, and advising me not to remain here, as the Neaung Eue people would not be so attentive to me as my old friends at Monay. The messenger had also instruction to dun the tsoboa (who appears to have several visitors on the same errand) for a sum of 2,000 tickals due to Meng nay myo, but on presenting the tsetkay's order to the tsoboa to furnish me with all necessaries, if I wished to return to Monay and the dun ; he said, I was going to Ava, and to the other communication, returned no answer, but left the house on an excursion for which he was in the act for preparing, and has not yet returned. I wrote to the tsetkay this evening, thanked him for his attention, but declining to return to Monay as I only waited an answer to my letter to the Resident, which I have every reason to expect by the 30th.

Dr. Richardson's Journal.

28th April (Friday); 29th (Saturday); 30th (Sunday). Neaung Eue.—Had been trying for the last three days to see the tsoboa, with a view to despatching a messenger to Ava, fearing my letter had not reached the Resident, and had just been put off again till to-morrow, when the Monay Tsoboa's amats (officers) returned from Ava with the expected letter, but which, to my surprise and disappointment, instead of a royal order to proceed to Ava, contained directions to wait here till the new king (the Resident's letter confirms the report we have had here for the last three days, that the Sarawattee Prince has assumed the reins of Government) had consulted his ministers, as he appears to think, and certainly says, that he is not bound by the treaties of the late Government. I have little communication with the people here; I have called on all the chiefs, that is, the tsoboa and his two brothers. Their children have returned my visits. Yesterday the tsoboa's only son by his first wife (his half sister), a nice little boy of about 10, came in for half an hour.

1st May (Monday); 2nd (Tuesday); 3rd (Wednesday). — This morning, first, the tsoboa again excused himself seeing me, saying he was going to mend the embankment of a tank which had burst, but on the second sent out to say he had put his house in order, if I would call to-day, and I went in for an hour or two; he told me he had not finished the bund; there was a great deal to be done, as it had been out of order for the last 100 years. From the abundance of water here, they are enabled in the first, fourth, or fifth months of the monsoon, to choose their seed-time, taking advantage of which, they have, at three different times in the year, what is called the first, middle, and good crop; they are put into the ground in the end of February, in the beginning of April, and in July; planted out in the end of March, the beginning of May, and in August; gathered in July, in September, in November, or December respectively; none of the land, however, yields two crops in the year; the average return is said to be only 26 fold, though the soil is very deep, appears and ought to be rich, being an alluvial deposit from the lake; the average price is about 65 tickals poe per 100 baskets. The hire of a field labourer for the whole season, from the first putting of one crop into the ground to the gathering in, threshing, and winnowing it, is 30 tickals of nga moogay, or 5 per cent. silver and his food; the duty is four, six, or 10 baskets per yoke of buffaloes, according to the goodness of the crop, or about four tickals poe per basket of seed. They cultivate besides a small quantity of chilum, Indian corn, sugar-cane, and near the villages a few yams, pumpkins, gourds, sweet potatoes, and a few varieties of pulse; all these last, however, in very limited quantities; one or two houses had little flower gardens in front, the first we have seen.

4th May (Thursday); 5th (Friday). Neaung Eue.—Have been some days in communication with Chow Kan leng (or Shoe nee), the tsoboa's second brother, about a boat for an excursion on the lake; sent this evening to beg I might have it to-morrow, but was put off on account of the Chandaporee nakan, or the first nakan of Monay, being here on his way to meet the new bo-keauk, the shoe hlanbo (officer of golden spears), who had been appointed by the new king in the place of his brother (Meng myat boo), and is expected to leave Ava after the king has taken possession of the palace (about the ninth or tenth). A Shan who left this place during the troubles between the present tsoboa and his uncle, and had lived some 14 years in the Karean country, came into the tent to-day; he told me that from this to Gnoe-daun is only four days, and may be done in six with elephants, the halting-places being Pong moo, Saga, Nam-tok, Mein-kain, Mobie and Gnoe-daun, from thence to Pha-phos village is only two days more. My informant fled a few months ago from Gnoe-daun. He was at Maulmain last year, and was said by the Kareans to have given some false information to Shoe-gheen myo-thooghee about a horse, for which some of the people about him had to refund payment, on which account he believed they wished to kill him. He reached this place in three days, one day to Tabek (about six or eight miles from Thataung) and thence in two days arrived here. He says he knows the Mobie river, or Nam may meyat, falls into the Salween by the Pon, and not into the Taung-ngoo river; it passes through the town of Mobic, then easterly to Sakoolay, within half a day of Gnoe-daun, where it is about a stone's throw wide; half a day beyond Soo-koolay, which is the landing-place for Gnoe-daun, it passes through a hill (Pontaung), about an hour's walk, and comes out about 150 yards from the Pon, which it joins one day and a half above Pha-phos village. It is navigable from Neaung Eue to Sakoolay; he asserts, contrary to some other information I have received, that there is no waterfall in that river. The distances between the following places are said to be the same, and may be travelled in one day by an unincumbered man: from the Salween to Pha-phos, thence to Tampheak, to Baneen, to Neaung Eue, giving five days from this place to the Salween. The Neaung Eue territory extends one day north and east, and less than half a day west and south from this place.

6th May (Saturday); 7th (Sunday); 8th (Monday). Neaung Eue.—The nakan-dau of Monay called at my tent this morning on his way to Yea ngan, where he awaits the arrival of the new bo-keauk. He says the country between Nat-tike and Ava is still impassable from the number of robbers, except by an armed force; I shall consequently probably not hear from the Resident till his (the bo-keauk) arrival. I yesterday succeeded in obtaining a boat, and went half a day down the lake; we started at six a.m., and in five minutes got into the boat on a watercourse cut from the Bora-that river to which it runs parallel at a short distance; in some places it was not much wider than the boat, and we were detained a short time in partially breaking down three or four dams across it for

Dr. Richardson's Journal.

raising the water into the paddy fields; in about one hour and 45 minutes we reached the beginning of the lake; the most of the country on the banks of the watercourse, which is recent acquisition from the lake, is a morass covered with strong reeds; near the town is a good deal of paddy, but the crop is unpromising; the whole is full of small shells, and the reedy portion will not be available for any useful purpose for some years to come; it is too soft and deep even for elephants to venture on any part of it, and near the lake it is evidently afloat; the lake almost immediately spreads out to the width of about a mile and a-half east and west, but for an hour and a quarter (9 a.m.) is full of floating islands (dyke), and not more than three feet and a-half deep, full of weeds which reach the surface, or within a few inches of it, and impede the progress of a boat, and in a few years will probably form a reedy bog like the present margin of the lake; from this, 9 a.m., it is free from weeds, the water beautifully clear, and about seven and a-half feet deep; the depth is nearly the same throughout, a foot or two deeper at south-west extremity, and would be clear of islands, but the inhabitants of the lake have anchored small floating ones of about 20 feet in circumference all across it, at a distance of 50 or 60 feet, for the facility of fishing; here it may be four miles across, which is the widest part of it; at 10.30, reached the place where the stumps of the posts of Narapadee Say Thoo's palace, and of the fence round it are to be seen; as the water was clear as a mirror and perfectly unruffled, we had no difficulty in seeing them; they are pretty numerous, some a foot and a-half in circumference, and reach within a foot or two of the surface; the posts of the fence are smaller, and in straight lines, they might be posts of a palace or any other house. I was warned by the tsoboa that the natts were very powerful, and he advised me not to allow any of the people to touch the posts, or we should certainly have a storm of wind and rain, and our faces would swell till our eyes closed for some days. I, however, told the boatmen that I would take the consequences, and try to break off a piece of one of them; it was too hard, and I only succeeded in separating a little of the moss with which it was covered, and we shoved off to see a place further south, where the water is said to escape through the bottom of the lake; unfortunately for the cause of philosophy, in less than five minutes a storm began to blow on the tops of the western hills, and we were caught in a squall with heavy rain, just as we reached the object of our search; the boatmen were somewhat alarmed, and pulled for the shore about half a mile off, which we reached just as the rain ceased, after we were completely wet, the boat having no cover; as the sun immediately burst out with a power that raised the thermometer to 130°, exposed to his rays in the bottom of the boat, by the time we regained our lost ground, we were nearly dry again. At the place they pointed out there is an extrication of gas which rises in bubbles to the surface, over a span of perhaps four or five feet square, but I am convinced there is no escape of water here, though the spot is somewhat deeper than the rest of the lake; from this we returned, and reached Neaung Eue at half-past four, and as my face was a good deal burned by the sun and reflection from the water, the tsoboa was quite satisfied that I had suffered the proper punishment for my rashness in interfering with the posts of the palace, and told me that the people of En-lay Enma, a year or two ago, fished up one of the elephants' chains of the old Pagan king, but that there was such a commotion in the lake for the several days they kept it that they were glad to return it. The whole extent of the lake, which is rapidly decreasing, is about three and a-half miles across from east to west at the widest part, and perhaps 12 or 14 miles long from north to south; the water may be said not to exceed seven and a-half feet in depth, and most beautifully clear and transparent; the bottom is soft sand and mud, about six or eight feet deep and easily perforated to that depth, when it seems to rest on a bed of rock or very hard till; the centre is clear of weeds and islands, but the sides, and particularly the north end (which is evidently filling up rapidly), is full of them; the islands are principally composed of the interlaced roots of the coarse grass with a small portion of soil, the roots of the grass shooting down to the bottom in the dry weather, but in the rains, many of them are lifted up and separated so as to be quite afloat; the inhabitants are very numerous on the banks of the lake, particularly on the western side; the posts of many of their houses are either in the water thrust through the soft mud down to the solid stratum, or on the floating islands, which they anchor to the bottom with a long post of bamboo; they undulate like a log at every step,* and it is said not to be uncommon for a man's house to change front half-a-dozen times from squalls during the rains; as the islands are small, there is seldom more than three or four houses on one island; all their communication with their neighbours is by means of boats; the inhabitants of the eastern side depend for their subsistence principally on fishing, in taking of which, however, they do not appear to be skilful; the lake was covered with canoes, in each of which was one man who stood at the head on his right foot, holding a long paddle in his left hand, round which he twisted the leg of the same side, so urging the boat forward; with the right hand he darted a small fin-pronged lister at random amongst the weeds. I did not, however, see above one or two fish taken. When tired standing they float lazily along, beating the bow of the canoe to frighten fish, striking in the lister when they see the weeds move. They also use nets and other means of taking the fish. From scarcity of salt they make very little gna-pie; what they consume comes principally from Rangoon and the coast; their boats are all bought

* A very fat old woman on an island where we landed for breakfast laughed heartily at some apprehension displayed by one of my people, who was about half her weight, that he might go through.

bought from the Red Kareans, there being no timber of any size in this part of the country. The hills on both sides of the lake are nearly destitute of trees of any description; the canoes are long and narrow, not being opened out as the Burman canoes are; they pay 150 tickals coarse silver for one that would not be worth 15 rupees at Maulmain; at the western side of the lake a succession of narrow villages straggle along, almost joining each other, nearly two-thirds the length of the lake; they are chiefly Ngoe-goon or royal domains, paying a tax in silver direct to the king, and many of them have only been separated from Neaung Eue, during the present tsoboa's time, after the broil between him and his uncle. The Shoe Meng dau Pagoda, about four miles down the lake, now forms his southern boundary; between the lake and the western hills is a strip of level ground from two to five miles in breadth, which is all cultivated and irrigated by the small streams from the hills. Me-ne-kong is the first large Ngoe goon village, and En-lay-enma, a large village, is situated at the south-western end of the lake; the inhabitants are principally Tavoyers, but few of them are aware of their forefathers ever having inhabited any place but this; they are ignorant and superstitious, their language scarcely intelligible, and little, or not at all, more civilised than the Kareans; they are called by the Shans, who are only one shade better, water Kareans. The Mobie is the only outlet to the lake; the Bora-that river which receives all the water from the hills in the northern part of the valley, is the principal source of supply.

Dr. Richardson's Journal.

9th May (Tuesday), 10th (Wednesday), 11th (Thursday).—At home, filling in some places in a map of the Shan country I have been attempting to make. A person, who came with me from Monay, told me seriously that at a debate, before our arrival, as to the course to be adopted towards us, it was proposed by the second, or King's Tsetkay, to intercept and cut us off.

12th May (Friday), 13th (Saturday), Neaung Eue.—Returned the visit of Chow Kam Leng (Shoe-nee, as it is rendered in Burmese), the tsoboa's brother; the first visit I have had from any of the chiefs here, and called on the tsoboa; the contingent of Neaung Eue is 1,565, but 500 is the utmost they can raise, and these they cannot keep in the field for any length of time; they were much pressed for subsistence, and suffered from want of provisions in the late war.

14th May (Sunday), 15th (Monday).—Was visited to-day by Chow Shoenee, the tsoboa's brother, who remained about an hour; he has for the last five years succeeded in getting rid of all the Government concerns of the principality, and lives by the trade and agriculture of his people. He proposes, if he can obtain permission, and everything is quiet, next year making a trading trip to Maulmain. He mentioned that a report has been current here for some days that three gun-boats had arrived at Ava, with a request on the part of the Governor General of India, to know who is to be King of Ava. I explained to him that our policy was in no ways to interfere with the internal affairs of this or any other friendly country, but continue our relations with the actual king, whoever he might be. I fear the rains have fairly set in; we have had rain every day for the last week, and heavy rain in the last two days; the town of Neaung Eue being situated in what was the bed of the lake, at a recent period, is very little above its present level; in the rains the whole is a swamp, and the people come in boats, over where my tent is now pitched, to the bazar. Though the tsoboa has sent several scouts for intelligence to the capital, with the exception of the above unauthenticated report, and another that the new king has put off taking possession of the palace till the 12th, we have not heard a word of what is going on in Ava for the last 15 days. I wrote to the Resident to-day by some Brahmins, who came under my protection from Monay, and are returning to Ava with the fruits of their summer's begging and fortune-telling in the Shan country; one of them was in his youth a great alchymist, and in search of roots and minerals has traversed the country from one end to the other, and was there connected by community of pursuits, with some of the influential men in the lower part of the country; as, however, he found he got nothing but sickness and labour for his pains, he took an oath at the Pagoda some years ago to renounce the pursuit.

16th May (Tuesday), Neaung Eue.—I, this evening, after an anxious detention here of one month, received the long expected order to proceed to Ava, of which I was not at all sorry to avail myself; I have had little intercourse with the chiefs, and little cordiality or friendship has been shown me here, though there is nothing positively to complain of. The tsoboa and his brothers have always received me perfectly civilly when I have called on them, but none of the warmth displayed I have met with from my friends on the Siamese side of the Salween, or by some very good friends in Monay. The uncertainty of the views of the Government towards us is, however, more than sufficient to account for this, and on considering the state of the kingdom, my reception in the Shan country has probably been as good as I had reason, though not quite coming up to what I did expect. The Resident's letters have by some means been sent on to head quarters, and I shall probably not receive them for some days. Received to-day, *viâ* Monay, letters from Lieutenant McLeod, announcing the success of his mission as far as Kien-hun-ghee, beyond which he was not allowed to proceed without permission from Pekin, but stating that the Zimmay chiefs had placed a ken (guard) five days in advance of that place, to stop all intercourse with the country to the north-eastward; should they persist in keeping it there, his mission will thereby be rendered vain, or a reference be necessary to Bankok, on the subject.

Dr. Richardson's Journal.

17th May (Wednesday).—Sent into the Tsoboa last evening, saying I should call at any time to-day he was disengaged, to take leave; he appointed this morning, but before breakfast sent a message to say he was busy with his fireworks, and should be glad to see me in the evening; he has unfortunately a taste for fireworks, and compels every householder to furnish one corresponding in dimension to his means, or pay a fine of five or six tickals. I called on his two brothers (the third excused himself on account of business) and his son: one of the former told me of three Poes, or festivals they have annually here, when they have music and dancing in the early part of the night, after which what the Welsh term bundling is performed till morning by the younger members of the community, in which the females are supposed to refuse only the last favour. In the evening, at dusk, called on the Tsoboa; he was as civil as usual, and told me the amount of the tribute required of him at the Kadau season, viz., the new year, and Watchoe, or end of the Monsoon, is 10 tickals of gold and two horses, which, with some other presents, makes his tribute about 30 tickals of gold, six horses and six pieces of China gold lace annually. I remained an hour, and we parted very good friends.

18th May (Thursday), Nay-gea, N. 45°, W. 6.30°; 18 miles.—We left Neaung Eue this morning at 7.15, the person who is to command our guard (which consists of 15 musqueteers) and point out the road for us, having started yesterday for Poehla; we were delayed an hour at a broken bridge, about two miles and a half from the town, by one of the elephants which is commencing to be "must," and hence rather unmanageable. Our course was nearly north till 9.15, thence to the foot of the hills west, across the perfectly level valley of Neaung Eue, passing within sight of eight or 10 villages, some cultivation and cattle; commenced ascending the hill, which is rather steep in some places, at 11, and continued our course sometimes a little to the southward of west till 12, when a descent of a few minutes brought us into a level bason 10 or 12 miles by five or six, with several large fields ready for the reception of seed, and some herds of cattle. Halting half an hour, we reach this village after a short abrupt ascent at 4 p.m. It consists of about 60 houses, is situated on the confines of Neaung Eue territory, which is here separated from the royal domains Mye-lat Ngoe-goon (middle land silver taxed) villages, by a narrow belt of tree jungle they have no water near the village, and are obliged to pay a tax to Neaung Eue for the privilege of drawing water in that district. I intended reaching Poehla to-day, but we were delayed in getting the elephants in the morning, and in crossing the Bora-that so long that I found it would have thrown us into the night. Met on the march to-day the ahmat-dau-yea, with whom I travelled from Ava to Munipore in 1831, on his way to administer the oath of allegiance to the Monay Tsoboa; six years had made little alteration in him, though he has had the honour, in that interval, to be sent as second ambassador to the court of China. At Poehla we are to overtake our guard and meet the Kientaung Tsetkay, who is proceeding to Ava with the royal elephants (8), the piebald one is said to be a leaper, and is consequently left at Monay. I found the boiling point of water here to be 204, giving an altitude of 4,131.

19th May (Friday), Poela, N. 50°, W. 2°; 57 miles.—Lost two of the horses last night, which we did not recover till after noon, the people having traced them back, by a different road from the one we came, six or seven miles. We left Nay-gea at 5.10 p.m., halted here at 7.15; we passed, about a mile west of the village Nay-gea, a much frequented path leading south-west through Ramay-then and Toung-ngoo to Rangoon. The road to this place gradually ascends all the way, amongst a succession of irregular hunmocks, perfectly bare of trees. The hills are all red ferruginous earth, and ready for seed in many places in large square patches. Poehla is a large village paying a duty in silver to the king and government, by a Ngoe-goon-hmoo; the inhabitants live almost entirely by trade or, my informant termed it, cheating each other and the public; little attention is consequently paid to agriculture. These villages are said to have some advantages over the proper Shan principalities; they have only one set of governors (there being no tsoboas), and the system of exaction is less minute and oppressive; this I had heard before, and the increased size and better appearance of their houses, which are the best I have seen since leaving Maulmain, confirms it. About half-a-mile from the town there are two little natural fountains, the only water between this and Nay-gea, to which a well-made road, with one or two neat bridges, leads. The Kien-taung people, viz., the Tsetkay, Panya Pan and Panya Kien Ham, with the elephants, tribute, and 120 men arrived here this morning; my party amounts to 30, and my escort to 16, making in all with the officers and myself about 200 people, besides perhaps 150 traders who have taken our protection; this being the re-opening of the communication with the country below the pass, which has been closed by the robbers since the beginning of the revolution. Though the man in charge of my guard arrived here yesterday, he had given himself no trouble about our accommodation, and arriving after dark we had some trouble in finding a place; the Kien-taung Tsetkay, however, shared his forage with us, much to our relief, as there was not a bit of standing forage for the elephants within sight of the place. It appears a pretty large village, but as we arrived after dark and started before daylight, we had little time for question or observation.

20th May (Saturday), Men-gea-dan, N. 70°, W. about four hours 12 miles, called four dains.

The first three-fourths of this day's march was through a country of the same character as

Dr. Richardson's Journal.

as yesterday, round-toped earth hills of a red and poor soil, with gentle declivities, bare of wood and destitute of water, a good deal of land prepared or preparing for paddy, and some large herds of cattle. Half-an-hour after leaving Poehla passed the much frequented road to Pendera, four or five miles north of that place, with only one small village near the road. The last fourth more rugged and rocky, with a good deal of wood and less cultivation. Pass a small stream, close to this village, which consists of about 100 houses, under the Ngoe-goon hmoo of Poehla, as are also the Ngoe-goon towns. South-east of this Paung-hmoo, Thataung, Tabet, and Ban-yen, all of which, as before stated, pay to the Kareans. One of the coolies, who went after the horses to Neaung Eue, left that place this morning at daylight and arrived here about 4 p.m. My watch stopped in this day's march, which makes the time and distance more uncertain from this time forward.

21st May (Sunday).—Lay Eue, N. 20°, W. about two hours six miles, called two dains. Country the same character as the last fourth of yesterday's march; pass one stream of water about a mile from this village; a ridge of rocky hills to the eastward, and some high hillsin the distance west; have passed no villages and little cultivation till close to this village. We expected to have found the Chandaporee nakan here, but he left this yesterday for Yea-ngan, which is distant six dains. The spring is well advanced here, though they have yet had no rain. This village is so called because it is the largest of four in this neighbourhood, which together have to furnish provisions, &c., &c., to Government officers travelling this road on duty; the other three are Yea-hla, Men-dain and Lay kam. Our present halting-place is believed by the Burmans to be higher than Men-gea-dan, but the thermometer gives the same height. The boiling point of water at both being 204.

22nd May (Monday), Yea-ngan, N. 32°, W. 18 miles, called six dains.

The character of the country the same to-day as yesterday, with abrupt hills. About six miles from Lay Eue we passed the large village of Myne, containing probably 80 or 90 houses on both sides of the road; about three miles further on that of Yea ngan, much smaller; and a few miles still nearer this place Pen-dzein, consisting of a few huts. Between Myne and Yea ngan, a small stream, called Yea-beaung-byean, from some strange idea that it runs up hill, is the only water on the march; immediately after passing which is an abrupt ascent, at the top of which, a mile or so east of the road, is an old silver mine, which 50 or 60 years ago fell in and killed 30 Chinese miners; since which it has been abandoned. This is a large village of about 200 houses, and the last in Mye-lat; we found here the nakan-ghee waiting the arrival of the Shoe-hlan-bo, the new governor, for whom a tay-dau or tan-man, as it is here called, has been built; he is expected here to-morrow, and as he is now the highest authority in the country we are to wait here one day to pay our respects. There is some scarcity of quarters here from the number of people collected; I have, however, been assigned a capital quarter in a new bamboo zeat, about half a mile west of the town. We had some heavy rain in the night, and everything looks beautifully green; the temperature is cool and delightfully invigorating; the pine, raspberry, and other European looking trees and shrubs, with the skylark springing from the short grass and soaring high over our heads, gives to this upland region all the pleasures of a climate much further north. The thermometer at 6 a.m. was 60 degrees for a few minutes, about half-past two it rose to 80 degrees, and is now, 8 p.m., about 70 degrees.

23rd May (Tuesday), Yea-ngan.—Halted here to-day, and some of my visitors from the village tell me it would have been impossible to proceed, as in many places in the pass between Nat-tike and Ken-lay the path is so narrow and precipitous that the elephants and horses could not pass each other. I sent in the morning to the nakan to inquire when would be the best time to call on the great man, and was told towards evening. I accordingly rode in, and was very civilly received. I explained the object of my mission, and said, as he was much respected by the Kareans (which I heard at Neaung Eue), that I hoped his appointment would ensure its success, &c., &c., &c. He does not appear more than 40 years of age, and had not a great deal to say; he, however, said he approved of the mission, and that it was good to live like brothers. The Keintaung officers were also present; they gave an account of their attempt last year to open a friendly communication with the Siamese, which was frustrated by their distrust of the Burmans. They showed him a plan of Zimmay and Laboung, and a map of the Zimmay country. He did not, however, seem very curious on the subject, and paid little atttention to a long speech of the tsetkay's. He told me he would send an officer with us for our protection, and that he had given orders for my reception at the military post of Ken-lay, on the frontiers of the Shan country. I stayed about an hour, received a present of a patsoe, and took my leave. He afterwards sent out requesting me to send the elephants for his inspection, which I did. I called in an old soldier who was loitering about my zeat; in the course of conversation he said he had heard of the good faith of the English, and the even hand with which justice was administered, and to instance the contrary in the Burmans he told me he had been employed during the war, near the close of which he had received 95 tickals of the coarsest silver bounty, and at the peace he was ordered to refund, as peace had been settled by treaty, not by his fighting. When he offered to return the same silver it was refused, and he was obliged to make it up to the dine standard, fit to be received into the royal treasury. Some who had received

Dr. Richardson's Journal.

33 tickals had to return about 50, and many families are still in slavery on that account; or to pay off the debts contracted at that time, they may take service at five tickals monthly, and before the month is out have Government demands for ten, which they are obliged to borrow from their masters, and are consequently hopeless of ever redeeming themselves and families. The bo-keauk sent for me at dark. I rode over to his tay, and found he wanted to buy the elephants; he has received a royal order for 40—that is, he is allowed to buy and use that number, and he has as yet only got three! It was impossible to sell them at this distance from Ava. I, however, at his particular request, sold one of them at 350 tickals, and in case the king does not want them, he is to take the other four at a price to be fixed by the Resident, myself, and a person on his part, the whole price to be paid in Ava, and furnish carriage to Ava for the load of the one I leave with him. As the Resident will leave eight or ten days after my arrival in Ava, I was glad to find a purchaser.

24th May (Wednesday), Ken-lay, 50° N., 6° 30′ W., 12 miles.—Left Yea-ngan about 4 a.m., and, passing through a country of the same character as the last two days for about two hours, arrived at the top of the Nat-tike Pass, which has the reputation of being the longest, roughest, and most laborious, if not dangerous descent in the Burman dominions, or any of the neighbouring countries, and we found it worthy of this character in every respect, except that there appears little danger in any part of it. We reached Ken-lay about 11.30 hours and a half, about 12 miles, without having passed a single village, only three small streams of water. Ken-lay is the military post dividing the proper Burman from the Shan (Myelat) territory, where a duty of a quarter of a tickal is levied on each bullock, and two annas on each man with a load passing from one to the other. It must be rather productive; we have met about 700 bullock loads of salt and gna-pie in the last two days. As the communication has for some time been stopped, this cannot be taken as a fair average. We here enter the troubled districts, and it is evident there is some little apprehension on the part of my Shan companions, in fact they say so, and it is with difficulty I can get them to consent to start before daylight, which is a matter of less consequence to them, as the royal elephants have nothing to carry but the mahout. I have not the least doubt our numbers will keep off all attempts upon us, though we are more formidable in appearance than in reality, for except the ammunition in the muskets of the guard (if they be loaded), I do not know where we have any. Even in the most quiet times this was a bad neighbourhood for travellers who had anything to lose. I have heard of one or two instances coming within the knowledge of my informant, and many others he had heard of where a party of two or three, having hired a guard from the post here to the next village, were invariably robbed, and no doubt left on the minds of the sufferers that the companions of their escort from this station were the robbers. There is close to the northward of the post a small projection of table-land about 400 feet high, about a mile and a half long and half a mile broad, of rich paddy soil, well watered, the site of an old town, Beloo-myo (Cannibal's town), to which there are said to be only two passes up, all the rest being nearly perpendicular.

25th May (Thursday), Yakine, 45° N., 5.30′ W.; 12 miles, 5 dains.—After a short descent, reached the large plain of the Irrawaddee called Lay-dwen ko karyne (or Nine Districts in the Fields); the whole of the march was a dead level, and the soil full of shells, and altogether the appearance of being a deposit from water; the road excellent; but as we are now in the most disturbed part of the country we did not wish to leave the elephants, and marched in what was called order; we were detained longer than usual on the road, crossed the Paung-laung little more than knee-deep, which rises near Pendera six or eight miles from Poehla, passes Toung-ngoo Shoe-Gheen and Setaung, receiving the name of the latter place, falls into the sea between the Salween and Irrawaddee; passed the villages Ken-dan and Dine, situated on this river, Noboo-nyo and Men enma, and halted a little after noon at Yakine, a large village, the inhabitants of which were formerly brought from Arracan here, hence its name; the change in the climate is most distressing to the elephants and coolies, the thermometer rising to 100° in the shade, and the nights are as hot nearly as the day.

26th May (Friday), En-ben-bo, 20° N., 5° W.; 14 miles, 5 dains.—The whole march to-day was through a country of the same character as that of the last part of yesterday's march; the whole country perfectly level, but the hills visible in all directions but to the southward; to the eastward are the Shan Hills we left yesterday, which stretch away south, trending a little east, as far as the eye can reach, and are said to form a continuous range as far south as the sea, running a little to the eastward of Maulmain and Martaban; from the Nat tike Pass to the northward they trend away westerly, and crossing the valley north of the city of Ava some distance, join the Tsetkyne or Sagine Hills, which run down south on the opposite side of the Irrawaddee. The whole of the plain between, as far as we can see to-day, is divided into paddy fields, part preparing for the seed, part with water turned into them, and some with the crops some inches above the ground; here and there are little knots of jungle, with numerous palm trees, tarra and taliput, betel and cocoa-nut. The country is also more populous; we have passed five or six villages, the largest of which were Theret Gong, Toung-ghe-goe, on the stream of Toung-ghe-bouk, by which small boats came up from Ava in five days, Lat-thee-ma, Yea-won, Yakine-gong, and En-ben-bo, the large village at which we halt.

27th May

Dr. Richardson's Journal.

27th May (Saturday).—Oaen-ghe, N. 25 W.; 12 miles, called 5 dains.—Route continues across the plain of the Lay-dwen ko karyne, palm trees less scattered over the country, a greater variety of other trees; a great part of the country during the last part of the march under water, preparing either to receive the seed, or with the early crop of paddy of a month or six weeks' growth; cross the Panlaung and Jogie rivers, each a little more than knee-deep at the fords at this, the driest season. They run in a north-westerly direction, join and fall into the Meyat ngay, thence into the Irrawaddee. The city of Keauktsay is situated on the banks of the latter river, and at the foot of an abrupt and rocky part of the hills, though of much less elevation than they are further south. The country has been more populous to-day; many villages and detached houses; the houses are still, however, smaller than those occupied by the same class of people in the lower parts of the kingdom; it has been better inclosed, a greater number of water courses, and altogether giving indications of the approach to, certainly, not the capital of an extensive kingdom, but a large country town. We met here an officer of the Court, on his way to Thience, to administer the oath of allegiance to the Tsoboa.

28th May (Sunday), Ava, N. 30 W.; 5 hours; 16 miles.—March as yesterday; some fields of sugar-cane, cotton, sessamon, safflower, Indian corn, and some wheat land, was pointed out in addition to the unchanging paddy to-day; passing several large villages and crossing Panlaung, up to the horses' saddle-flaps, and the Meyat-thee with no water at this season, by the late Men-tha-ghee's (now Moung O's) bridge, which is one of the finest public works in the kingdom; reached the Residency at 11.30 a.m.; find the alarm subsiding, and quietness returning at the capital. The ministers of the late Government in jail, and the new king at Tsetkyne.

29th May (Monday).—Cross the river to-day with the British Resident and his assistant, and had an audience of the king. As no business was transacted, we were very graciously received, promised every facility henceforth in traversing his dominion in all directions, and I was invited to come again next fine weather and to the Chinese frontier; the king was in good humour, and friendly in his conversation; he gave us each a small ruby ring, the first he had received since his usurpation, and we took our leave.

30th May (Tuesday).—I fear the king, when it comes to the point, will retract his promise of leave to traverse his kingdom. The Resident's writer was sent over to-day to Tsetkyne, where the Court is still held, and, amongst other business, was instructed to ask the king's permission for me to return to Maulmain by the Ramay-then and Toungngoo road, on account of the public elephants. He, however, refused his consent, on plea of the road being impassable at this season, and said the Woonghee of Toung-ngoo, who leaves this in a day or two for his government, will be obliged to go by Rangoon. As I made an unsuccessful attempt to obtain the permission of the late Government, in 1831, to return by that route, which was said to be the most populous and fertile part of the kingdom, I was certainly disappointed after his majesty's promise of yesterday. That part of the country has, however, been for some years in great disorder, overrun by bands of robbers, for whose suppression little or no exertion has apparently been made by the Government; and the eastern frontier, continually ravaged by the Karens, that there is probably a great falling-off both in the number of the population and the industry and resources of those who remain.

31st May (Wednesday), Ava.—Called to-day, with the assistant to the Resident, on the Prince of Mekara, the king's uncle. He has applied with considerable success to the cultivation of European sciences under the late Dr. Price, American Baptist Missionary, with assistance lately from Mr. Lane, a British merchant here, and is by far the best informed, and one of the most intelligent men in the kingdom. He has been appointed, since the revolution, one (I believe the president) of the Hloat-dau with Teik-ten-ghee, one of the present king's sons, and the Woondauk-gyan, or rough, coarse Woon-dauk. He is, however, unfortunately, timid and un-energetic. He took no share in the Government under the late king, and many people suppose he is now not particularly anxious for the honour. His mild and more civilized policy has but little influence with his colleagues. We asked and obtained leave to go over the palace, from which the old king has been removed some days. The prince made some inquiries about my route, and requested a copy of the latitudes I had taken.

1st June (Thursday).—Went over the palace to-day, and was a good deal disappointed; it covers an immense space of ground, but the rooms are small and filled with pillars, which, though large and handsome posts of teak timber and splendidly gilt, take up much too large a portion of the rooms; they are very lofty, many of them richly gilt throughout. The inferior ladies' apartments, of which there are several ranges, are small, dark, and dirty. The king's, queen's, and young princes' apartments are everywhere covered with gilding, except the floor. There are nine thrones in different parts of the palace, all apparently ascended, by small and insignificant steps, from behind. The whole is delightfully cool from the length of the passages and extent of the roofs. Saw also the royal stud of 10 horses, none of them remarkable for their beauty; they have, however, been looted, of course, since the revolution. There are said to be about 300 guns, of all calibres, in the palace, not one of which was fired in the late revolution; indeed, from all accounts, it is difficult to imagine a scene of more despicable cowardice and stupidity than the whole affair, more particularly on the part of the late Government.

Dr. Richardson's Journal.

4th June (Sunday); 5th (Monday); 6th (Tuesday); Ava.—Employed these three days in unsuccessfully endeavouring to obtain boats. Rode through the town, to the small river, to look at one; but found the bottom had been destroyed by worms, so as to be unsafe. An officer of the old Government was killed to-day, apparently from no other fault than having done his duty to his late master.

7th June (Wednesday).—Crossed to Tset-kyne, and had an interview with the king, who refuses, most positively and unconditionally, to acknowledge the Treaty of Yandaboo, or to treat with the Governor General, who, he says, must write to the Woonghee of Rangoon, who is of his own rank. He wishes the late reign to be sunk in oblivion; says the war was a mistake, and wishes our intercourse to be on the same footing as before it took place, when there had been nothing but friendship between the two States. He will not ask the Resident to stay, nor will he order him away; he would rather send for more (English); and, if he wants their services, he will make use of them (Seetsa); that we conquered the late Government, and frightened them into signing whatever we pleased; that he had never been conquered, and was not like the old Government; if it should come to war, he never would ask for peace; says he does not wish for war; but knows that our officers would be glad of it. All this, and much more, was said in consequence of the Resident's wishing to impress upon him that the old treaty was in force till a new one was concluded. He refused to send anyone to Bengal. If he sends, he will send to the King of England, not to the Governor General, who is hired at a monthly salary. He has no objection to talk with the present Resident, his assistant, or myself, or people whom he knows; but let any "green man," who does not know the language and customs of the Burmese, and assumes a higher tone, be sent here, he will look to it as a warning to prepare his troops; if Mr. Crawford were here now, it would be war directly. The whole of the foregoing remarks were made with firmness and decision, but without any appearance of rage or irritation. On my mentioning, near the end of our interview, that I had sold my elephants to the Bo-keauk of the Shan Tsoboas, he said he would take them, and send people to take charge of them.

8th June (Thursday).—The king sent for the elephants to-day, but as I had been obliged, from scarcity of forage, to send them some way from the town, they did not come in time, and the people sent over in the morning to take charge of them, went away without them, promising to return to-morrow; the king repeated the substance of yesterday's conversation to-day before Mr. Kincaid, the American missionary, and, in addition, told the writer to tell Colonel Burney, that he would kill the prisoners, if an accusation which had been brought against them of secreting arms was proved. Three unfortunate officers were killed to-day for having done their duty to the late king.

9th June (Friday), Ava.—Crossed to Tset-kyne to take leave of the king, who starts for Keauk-meaung to-morrow, where he proposes to reside one year, and then remove to Mouktsobo, where the capital is to be fixed; his manner was as affable as usual, and during the whole time of our stay, scarcely a word was spoken either to or by any of his own officers; he still firmly refuses to acknowledge the treaty, or to allow the Governor General to correspond with him; he invited the assistant to the Resident to remain with him; told him he should have a place to live with the merchants in the Kala dan, and if he wanted his services, he would employ him; that he might have sepoys if he liked, but that he must not presume on a right to bring them there by the treaty; said he knew the English had people in all countries to prevent disputes between their merchants and the people of the country; said the Rangoon Woonghee (to which topic he constantly refers) was a greater man than the Governor General, for he was his representative, had the power of life and death, was responsible to him alone, and had a state not allowed even to members of the royal family.

10th June (Saturday).—Confined at home all day with head-ache; went in the morning to see the State prisoners, but found they had been removed to the other side of the river; much less bustle and confusion in the town than might have been expected from the king's orders to move; indeed, I only saw one or two cartloads of things coming out of one of the gates, and a few Muniporees pulling down their mat houses on the river side. The king started this morning.

11th June (Sunday); 12th (Monday).—So many boats have gone up the river with the Court, it is scarcely possible to hear of one, and the prices exorbitant; a good deal of robbery in the town last night.

13th June.—The king has left the Pagee-woon in military charge of the town, with a nominal force of 3,000 men; there are, however, fortunately, only about 200, as he has always been a noted robber. The Myo-woon has privately advised the foreign merchants to leave the town, as he professes himself unable to protect them, or make restitution should they be robbed; some extensive robberies have been committed on the Tset-kyne side, and also several in the town of Ava already, and the people are looking forward with some anxiety to the dark nights; all those who can afford it will leave Ava; the principal part of the people will follow the king to Keauk meaung. Seeing no prospect of procuring a boat here, and having no assistance from the authorities, I have sent my servant to-day to endeavour to procure one lower down the river.

15th June

Dr. Richardson's Journal.

EAST INDIA (DESPATCH No. 30).

COPY of DESPATCH, No. 30, of the 17th day of June 1864, from the Secretary of State for *India* in Council to the Viceroy and Governor General of *India* in Council.

(Political, No. 30.)

To His Excellency the Right Honourable the Governor General of *India* in Council.

India Office, 17 June 1864.

1. THE Letters of the late Governor General and Viceroy, dated 24th September, No. 66A and 66B, 1863,* terminate a long series of official papers, received from your Government during the last two years, relating to the affairs of the Nawab Nazim of Bengal.

* Also Foreign Letters,—
8th May (No. 40) 1861.
22nd January (No. 19) 1862.
22nd February (No. 29) 1862.

2. All the correspondence necessary to the formation of a correct opinion with respect to the several questions which they illustrate having now been received, I proceed to communicate to you the views of Her Majesty's Government.

3. The Nawab Nazim having addressed to me more than one memorial, in which he claims the recognition by the British Government of certain rights, powers, and privileges, which he alleges to belong to him and to his family under treaty or other engagements, it is necessary that I should review all the circumstances of his Highness's position.

4. The present Nawab, Munsoor Ali Khan, styled the Nawab Nazim of Bengal, is admitted to be a decendent of Meer Jaffier Ali, who when the East India Company were first invested with the Dewanee of Bengal, Behar, and Orissa, was at the head of the Nizamut of those Provinces, which he had attained through the influence and assistance of the British Government. A firman of the Emperor of Delhi made it one of the conditions of the grant of the Dewanee that provision should be made "for the expenses of the Nizamut," that is, that a part of the revenues of those provinces should be appropriated to the payment of the department of the administration distinguished by that official name. But subsequently, by special arrangements, the Company undertook to perform the duties of the Nizamut, and made provision for its expenses by paying their own servants to do the work which had before been done by the servants of the Nazim. The office of the Nizamut being thus practically abolished, and its duties merged into the general administration of the country, the stipulation of the Imperial Firman ceased with the objects for which it was intended to provide. I am of opinion, therefore, that the family of the Nawab Nazim of Bengal have, under the Firman of Shah Allum, no claim upon the British Government.

5. But the administrative duties of the Nizamut having been transferred to the Company, a personal provision was made for the family of the Nazim. It was right that every consideration should be shown to the sons of Meer Jaffier Ali, though they were not called upon, after the death of the eldest Nujum-ood-Dowlah, to discharge the high official duties of the Soobadar or Viceroy of Bengal, Behar, and Orissa. Accordingly, treaties were entered into with the younger princes, Syef-ul-Dowlah and Moobaruk-ul-Dowlah successively, by which the Company undertook to secure to them the Soobardaree of the Provinces of Bengal, &c., and to pay them a certain "annual stipend." In each of

these treaties,* the Nawab expressly indicated himself as the person to whom these advantages are to accrue, and I cannot perceive that, in either case, the Nawab who was party to the treaty had any regard to other interests than his own. It is true that, at the end of the Treaty of 1766, the Nawab Syef-ul-Dowlah says, "this agreement (by the blessing of God) I hope will be inviolably observed as long as the English factories continue in Bengal;" and that the Nawab Moobarak-ul-Dowlah says, "that this agreement (by the blessing of God) shall be inviolably observed." But as the agreement in both cases was of a specifically personal character, it appears to me that the intention was to secure the strict observance of the treaties during the lives of the persons interested, that is to say, that they should last as long as the objects for which they were intended to provide. The treaty obligations, therefore, of the British Government ceased in both instances with the life of the other party to the treaty; and that this was practically acknowledged at the time is evident from the fact that the amount of stipend payable to the Nawab was revised upon the death of Syef-ul-Dowlah, with the full consent of his successor, a proof that the previous treaty was not considered to confer any hereditary rights. And if the Treaty of 1766 was not an hereditary treaty, that character cannot be claimed for the Treaty of 1770, which was couched in the same general terms. I concur, therefore, in opinion with your Excelleney's Government, that under these treaties, the Nawab Nazim of Bengal has no acquired rights.

* Treaty of 1766. To me, Syef-ul-Dowlah, the annual stipend, &c. Treaty of 1770. To me, Moobaruk-ul-Dowlah, the annual stipend, &c.

6. In 1772, by an order of the Court of Directors of the East India Company, passed on a review of the proceedings of the Bengal Government upon the accession of Moobaruk-ul-Dowlah, and of the treaty concluded with him by the Indian Government, the stipend of the Nawab Nazim was fixed at the annual amount of 16 lacs of rupees. No treaties of a later date than 1770 were entered into with the descendants of Meer Jaffier, but, on the occasion of each succession, the member of the house entitled to succeed by Mahomedan Law has been recognised by the British Government as Nawab Nazim, and the stipend of 16 lacs of rupees has continued to be appropriated to the benefit of the Nazim and other members of the family. By whatsoever terms, strictly defined, the Nawab Nazim may hold the titles and privileges which he now enjoys, it is obvious to me that they could not be interfered with or altered, during good conduct, without a violation of the spirit, at least, of the assurances which have been given to him by our Government, and a departure from the whole tenure of our transactions with him during a long course of years. I perceive with satisfaction, therefore, that your Government have no intention of disturbing subsisting arrangements for the pecuniary provision of the Nawab Nazim and his family, and the maintenance of the titular dignity of his Highness.

7. It appears that the personal allowance of the Nawab Nazim himself is about seven lacs of rupees, that, from the remaining nine lacs, provision is made for other members of the family, and that the balance goes to the formation of an accumulating fund, known as the "Nizomut Deposit Fund." It is unnecessary to trace further the history of this fund. Its accumulations, representing, as they do, the unappropriated portions from year to year of the 16 lacs stipend, unquestionably belong to the Nazim and his family, and can properly be expended only for their benefit. But this does not confer upon the Nazim himself any right to dispose, or to superintend the disposal, of these balances. This right belongs to the Government, under the conditions upon which the fund was constituted. It was assumed, in the first instance, mainly for the benefit and protection of the Nazim and his family; and I am of opinion that it is to the advantage of his Highness and his family that this system should be maintained. At the same time, it would seem to be desirable, and I believe, that, to some extent, it has been the practice, in past time, for your Government, through the Agent at Moorshedabad, occasionally to consult the Nazim with respect to any extraordinary expenditure from the Nizamut Fund.

8. It has always been the desire of Her Majesty's Government that a liberal view should be taken of the claims of the family of the Nazim, in respect to the appropriation of the accumulations in the Deposit Fund to objects calculated to advance their happiness and to support their dignity. To this end, in my Despatch of the 7th of July 1859, I authorised an advance of four lacs of rupees from

from the Deposit Fund for the payment of the Nawab Nazim's debts, leaving it to the discretion of the Government whether this sum should be a loan, to be repaid by instalments, or a substantive grant for the above purpose. In the same Despatch I requested that the decision upon this point might be communicated to Her Majesty's Government at the earliest convenience of the Governor General in Council, and that the money might be paid to the Nawab Nazim without any further delay. But I regret that I have not received from your Government any communication whatsoever on the subject, and I cannot ascertain that the money has ever been advanced in any shape; I desire, therefore, to be informed whether anything was done in consequence of these instructions.

9. In connection with this question of the administration of the Nizamut Funds, I may here consider the object of the claim advanced by the Nawab Nazim to appoint and dismiss his Dewan at pleasure. If the Dewan, over whom this absolute authority has been claimed, were charged with the administration only of his Highness's own share of the stipend, or if the Nawab Nizam had established his right to exercise control over the Deposit Fund, his claim with respect to the appointment and dismissal of the Dewan might be tenable. But the Dewan has hitherto administered both his Highness's personal stipend and the general financial affairs of the Nizamut, including both the distribution of the separate stipends of other members of the family and the management of the Deposit Fund, which has been ruled to be under Government control. It was necessary, therefore, that the Government which was responsible for the administration of the Fund, and was bound to maintain the rights and interests of those in whose favour it had deemed it necessary to interfere, should have authority over the appointment of the minister charged with the executive details. Practically, it appears to have been the custom for the Government and the Nawab Nazim, in communication with each other, to appoint or dismiss a Dewan, and as the official salary was paid from his Highness's stipend, it was doubtless right that he should be consulted. But inconvenience has resulted from this arrangement. The Nawab, presuming upon the fact that the Dewan has been officially styled the "Dewan of the Nawab Nazim," took upon himself summarily to dismiss the Dewan, Rajah Prosunno Narain Deb, and to place the financial administration in the hands of his own sons. In consequence of this act, you have appointed the Rajah Dewan of the Nizamut, and charged the Deposit Fund with the payment of his salary, and you have communicated to the Nazim that the Government have no desire to interfere between him and his servants, or with his manner of expending his own personal share of the Nizamut allowances, and that he may appoint a Dewan for the management of his own personal affairs. This very obvious arrangement is well calculated to meet the existing difficulty, and to prevent the recurrence of similar conflicts; but it is worthy of the consideration of your Excellency's Government whether, for the more effectual prevention of future misunderstanding, it might not be desirable to confer upon the officer acting upon the part of the Government a wholly different official designation.

10. But although the Nawab Nazim, apparently influenced by evil advisers, both European and Native, has, in summarily dismissing his Dewan, acted in a disrespectful manner towards your Government, I am not without hope that, by the exertions of your present Agent at Moorshedabad, he may yet be brought to a better state of mind, and express regret for his past conduct. It is not to be forgotten that, during the period of the mutiny of the Bengal Army, the conduct of his Highness was marked by loyalty and fidelity to the British Government, and that, as far as lay in his power, he rendered assistance to the authorities of the district. I would not, therefore, on account of what I hope may be regarded as an exceptional departure from his ordinary behaviour towards your Government, deprive him of any of the dignities or privileges of his position, among the most highly prized of which is the appointment of a British officer of rank to be the channel of his communications with your Government.

11. But whilst Her Majesty's Government are desirous that, unless the future conduct of the Nawab Nazim should call for such a measure upon your part, his Highness should not be deprived of any of the honours and privileges of

which he is now in the enjoyment, they are, at the same time, of opinion that it would be inexpedient to restore to him those of which he was deprived in 1854, by a special legislative enactment, in consequence of an outrage which was considered at the time by the Government, both in India and in England, to have been attended with a large amonnt of culpability on the part of the Nazim. Her Majesty's Government cannot consent to the restoration of exclusive privileges of this description, the existence of which has been found, from experience, to be inconvenient and liable to abuse. His Highness's salute, which was at the same time reduced, has now been again replaced on its original footing, in consequence of his loyalty and good conduct during the mutiny; but he must be informed that Act No. XXVII. of 1854 can on no account be repealed.

12. It appears to have been the intention of your Government to leave the adjustment of future relations with the family of the Nawab Nazim until the necessity shall actually arise. But I am of opinion that it is advisable that the future position of the Nawab Nazim's sons should be fixed and defined with as little delay as possible, in order that the young men may be made acquainted with the status which they are to hold after the death of the present Nawab whilst they are yet sufficiently young to form habits adapted to the circumstances in which they may be placed. With reference to this consideration, Her Majesty's Government desire to be put in possession of the views of your Excellency in Council with respect to the future provision to be made for the Nazim's family. Your Excellency is aware that this Government are fully sensible of the inconvenience of perpetuating, in this or in any other family, a line of titled stipendaries, without power and responsibility, and without salutary employment conducive to their happiness and their respectability. It would seem to be the desire of the Nazim that his sons should be trained to useful occupations, and I should be glad, therefore, to learn from your Excellency's Government whether, in your opinion, any arrangements can be made to place these young noblemen in an honourable position, enabling them to become useful members of society, before they are so moulded to habits of idleness as to render it difficult, if not impossible, to make a favourable impression upon them. It is possible that the accumulations in the Deposit Fund may, in some manner, be so employed as to form, to a certain extent, a permanent endowment for some members of the family, and, at the same time, to supply those incentives to exertion which cannot exist in the case of mere Government stipendaries.

13. In conclusion, I have only to observe that I concur in opinion with your Excellency's Government, that the extent of this correspondence is out of all proportion to the magnitude of the interests involved. Much of it relates to matters of a vexatious, and in some respects frivolous, character, and I cannot but regret that so much of the time of the Government, both of India and Bengal, has been expended in such unprofitable discussions. I trust, however, that your Excellency, by endeavouring to remove, as far as can be done consistently with the public interests, all causes of irritation, especially in connection with small matters, from the mind of the Nawab Nazim, will soon be able to place your relations with his Highness on a more satisfactory footing.

14. I cannot close this Despatch without referring to the terms in which the Nawab Nazim has adverted to the circumstances under which the arrears, accumulated during his minority, were dissipated upon his becoming of age. The statement of those circumstances in the Despatch of the Government of India, dated 5th May 1854, has not satisfied me that his Highness had not good ground of complaint against the Agent, by whose proceedings so large a sum was placed in jeopardy and ultimately lost. Had those circumstances been more early known to your Government, they would, as observed in the Despatch referred to, have called for a strict and searching inquiry, but the decease of Mr. Torrens, the Agent in question, having precluded such an inquiry at the time, I am reluctantly driven to the conclusion at which you have arrived, that no benefit will arise from reopening the consideration of that subject.

I have, &c.

EAST INDIA (TREATIES, &c.)

COPIES of TRANSLATION of the TREATY made with Admiral *Watson*, Colonel *Clive*, Mr. *Drake*, Mr. *Watts*, Major *Kilpatrick*, and Mr. *Beecher*, and signed by Meer Jaffir Ali Khan, dated June 1757; of TREATY between the Governor and Council of Fort William, on the part of the English East India Company, and the Nabob Sujah-ul-Mulk, Hossain-o-Dowlah, Meer Mahomed Jaffier Khan Bahadur, Mahabut Jung, dated the 10th day of July 1763; of DEMANDS made on the part of the Nabob Meer Mahomed Jaffier Cawn to the Governor and Council at the time of signing the above Treaty, dated the 10th day of July 1763; of Nawab Meer Mahomed Jaffier Ally Khan's Note for the Expenses of the Army, dated the 16th day of September 1764; of TREATY concluded between the Governor and Council of Fort William, on the part of the English East India Company, and Nabob Nudjum-ul-Dowlah, dated the 20th and 25th days of February 1765; of AGREEMENT between the Nabob Nudjum-ul-Dowlah and the English East India Company, dated the 30th day of September 1765; of TREATY between the Governor and Council of Fort William, on the part of the English East India Company, and the Nabob Syef-ul-Dowlah; and, of TREATY between the Governor and Council of Fort William, on the part of the East India Company, and Nawab Mobarruk-ul-Dowlah, dated the 21st day of March 1770.

TREATY with JAFFIER ALLY KHAN.

* *I swear by God, and the Prophet of God, to abide by the Terms of this Treaty whilst I have life.*

Meer Mahomed
Jaffier Khan Behauder,
servant of
King Aalum Geer.

TREATY made with the Admiral and Colonel *Clive* (Sabut Jung Behauder), Governor *Drake*, and Mr. *Watts*.

Article 1. Whatever articles were agreed upon in the time of peace with the Nabob Serajah Dowla Moonsoor-ul-Mulck Shah Kuly Khan Behauder, Hybut Jung, I agree to comply with.

Article 2. The enemies of the English are my enemies, whether they be Indians or Europeans.

Article 3. All the effects and factories belonging to the French, in the provinces of Bengal (the paradise of nations), Behar and Orissa, shall remain in the possession of the English, nor will I ever allow them any more to settle in the three Provinces.

Article 4.

* These words were written in his own hand.

Article 4. In consideration of the losses which the English Company have sustained by the capture and plunder of Calcutta, by the Nabob, and the charges occasioned by the maintenance of the forces, I will give them one crore of rupees.

Article 5. For the effects plundered from the English inhabitants of Calcutta, I agree to give 50 lakhs of rupees.

Article 6. For the effects plundered from the Gentoos, Mussulmans, and other subjects of Calcutta, 20 lakhs of rupees shall be given.

Article 7. For the effects plundered from the Armenian inhabitants of Calcutta, I will give the sum of seven lakhs of rupees. The distribution of the sums allotted the natives, English inhabitants, Gentoos, and Mussulmans, shall be left to the Admiral, and Colonel Clive (Sabut Jung Behauder), and the rest of the council, to be disposed of by them to whom they think proper.

Article 8. Within the ditch, which surrounds the borders of Calcutta, are tracts of land belonging to several zemindars; besides this I will grant the English company 600 yards without the ditch.

Article 9. All the land lying to the south of Calcutta, as far as Culpee, shall be under the zemindary of the English company; and all the officers of those parts shall be under their jurisdiction. The revenues to be paid by them (the company) in the same manner with other zemindars.

Article 10. Whenever I demand the English assistance, I will be at the charge of the maintenance of them.

Article 11. I will not erect any new fortifications below the Hooghly, near the River Ganges.

Article 12. As soon as I am established in the Government of the three provinces, the aforesaid sums shall be faithfully paid.

Dated the 15th Ramzan, in the fourth year of the reign.

ADDITIONAL ARTICLE.

Article 13. On condition that Meer Jaffier Khan Behauder shall solemnly ratify, confirm by oath, and execute all the above Articles, which the underwritten, on behalf of the honourable East India Company, do, declaring on the Holy Gospels and before God, that we will assist Meer Jaffier Khan Behauder with all our force, to obtain the Soubahship of the Provinces of Bengal, Behar, and Orissa, and further, that we will assist him to the utmost against all his enemies whatever, as soon as he calls upon us for that end; provided that he, on his coming to be Nabob, shall fulfil the aforesaid Articles.*

ARTICLES of a TREATY and AGREEMENT between the Governor and Council of Fort William, on the part of the English East India Company and the Nabob Sujah-ul-Mulck, Hossam-ô-Dowla, Meer Mahomed Jaffier Khan Behauder, Mahabut Jung, 1763.

Company's large Seal.	The Seal of the Nabob Meer Mahomed Jaffier Khan Behauder, Mahabut Jung, &c.

On the part of the Company.

We engage to reinstate the Nabob Meer Mahomed Jaffier Khan Behauder in the

* This article was not transmitted from India to the Company, but is to be found in the 12th page of the Appendix to the Dutch Memoria, and as there is no reason to doubt the authenticity of it, it is subjoined to the Treaty with the Nabob Meer Jaffier.

the Soubahdarry of the Provinces of Bengal, Behar, and Orissa, by the disposal of Meer Mahomed Kossim Khan; and the effects, treasure, and jewels, &c. belonging to Meer Mahomed Kossim Khan, which shall fall into our hands, shall be delivered up to the Nabob aforenamed.

On the part of the Nabob.

Article 1. The Treaty which I formerly concluded with the Company upon my accession to the Nizamut, engaging to regard the honour and reputation of the Company, their Governor and Council, as my own, granting perwannahs for the currency of the Company's business; the same treaty I now confirm and ratify.

Article 2. I do grant and confirm to the Company for defraying the expenses of their troops, the Chucklas of Burdwan, Midnapore, and Chittagong, which were before ceded for the same purpose.

Article 3. I do ratify and confirm to the English the privilege granted them by their Firmaund and several Husbulhookums, of carrying on their trade by the means of their own dustuck, free from all duties, taxes, or impositions, in all parts of the country, excepting the article of salt, on which a duty of 2½ per cent. is to be levied on the rowana, or Hooghly market price.

Article 4. I give to the Company half the saltpetre which is produced in the country of Purnea, which their Gomastahs shall send to Calcutta. The other half shall be collected by my Fouzdar, for the use of my offices; and I will suffer no other person to make purchases of this article in that country.

Article 5. In the Chuckla of Sylhet, for the space of five years, commencing with the Bengal year 1170, my Fouzdar and the Company's Gomastah shall jointly prepare chunam, of which each shall defray half the expenses; and half the chunam so made shall be given to the Company, and the other half shall be for my use.

Article 6. I will maintain 12,000 horse and 12,000 foot in the three Provinces. If there should be occasion for any more, the number shall be increased by consent of the Governor and Council, proportionably to the emergency: besides these, the force of the English Company shall always attend me when they are wanted.

Article 7. Wherever I shall fix my court, either at Moorshedabad or elsewhere, I will advise the Governor and Council; and what number of English forces I may have occasion for in the management of my affairs, I will demand them, and they shall be allowed me, and an English gentleman shall reside with me, to transact all affiairs between me and the Company, and a person shall also reside on my part at Calcutta to negotiate with the Governor and Council.

Article 8. The late Perwannahs issued by Kossim Ally Khan, granting to all merchants the exemption of all duties for the space of two years, shall be reversed and called in, and the duties collected as before.

Article 9. I will cause the rupees coined in Calcutta to pass in every respect equal to the siccas of Moorshedabad, without any deduction of batta; and whosoever shall demand batta shall be punished.

Article 10. I will give 30 lakhs of rupees to defray all the expenses and loss accruing to the Company from the war and stoppage of their investment; and I will reimburse to all private persons the amount of such losses, proved before the Governor and Council, as they may sustain in their trade in the country. If I should not be able to discharge this in ready money, I will give assignments of land for the amount.

Article 11. I will confirm and renew the treaty which I formerly made with the Dutch.

Article 12. If the French come into the country, I will not allow them to

erect any fortifications, maintain forces, hold lands, zemindarries, &c., but they shall pay tribute, and carry on their trade as in former times.

Article 13. Some regulations shall be hereafter settled between us for deciding all disputes which may arise between the English agents and Gomastahs, in the different parts of the country, and my officers.

In testimony whereof, we, the said Governor and Council, have set our hands and affixed the seal of the Company to one part hereof; and the Nabob aforenamed hath set his hand and seal to another part hereof; which were mutually done and interchanged at Fort William, the 10th day of July 1763.

DEMANDS made on the part of the Nabob Meer Mahomed Jaffier Khan, and agreed to by the Council, at the time of signing the Treaty.

Article 1. I formely acquainted the Company with the particulars of my own affairs, and received from them repeated letters of encouragement and kindness, with presents; I now make this request, that you will write in a proper manner to the Company, and also to the King of England, the particulars of our friendship and union, and procure for me writings and encouragement, that my mind may be assured from that quarter, that no breach may ever happen between me and the English, and that every Governor, Counsellor, and Chiefs of the English that are here, or may hereafter come, may be well disposed and attached to me.

Article 2. Since all the English gentlemen, assured of my friendly disposition to the Company, confirm me in the Nizamut, I request that to whatever I may at any time write, they will give their credit and assent, nor regard the stories of designing men to my prejudice, that all my affairs may go on with success, and no occasion may arise for jealousy or ill-will between us.

Article 3. Let no protection be given by any of the English gentlemen to any of my dependents, who may fly for shelter to Calcutta, or other of your districts, but let them be delivered up to me on demand. I shall strictly enjoin all my Fouzdars and Aumils, on all accounts to afford assistance and countenance to such of the Gomastahs of the Company as attend to the lawful trade of their factories; and if any of the said Gomastahs shall act otherwise, let them be checked in such a manner as may be an example to others.

Article 4. From the neighbourhood of Calcutta to Hooghly, and many of their Pergunnahs bordering upon each other, it happens, that, on complaints being made, people go against the talookdars, ryots, and tenants of my town, to the prejudice of the business of the Circar; wherefore let strict orders be given that no peons be sent from Calcutta, on the complaints of any one, upon my talookdars or tenants; but on such occasions let application be made to me, or to the Naibs of the Fouzdarry of Hooghly, that the country may be subject to no loss or devastations; and if any of the traders, which belong to the Bucksbunder and Azimgunge, and have settled in Calcutta, should be desirous of returning to Hooghly, and carrying on their business there as formerly, let no one molest them. Changernagore and the French factory were presented to me by Colonel Clive, and given by me in charge to Ameer Beg Khan; for this reason let strict orders be given that no English gentleman exercise any authority therein, but that it remain, as formerly, under the jurisdiction of my people.

Article 5.

Article 5. Whenever I may demand any forces from the Governor and Council for my assistance, let them be immediately sent to me, and no demand made on me for their expenses.

The demands of Nabob Shujah-ul-Mulck, Hossam-ô-Dowla, Meer Mahomed Jaffier Khan Behauder, Mahabut Jung, written in five Articles, We, the President and Council of the English Company, do agree and set our hands to, in Fort William, the 10th of July 1763.

Nabob Meer Mahomed Jaffier Ally Khan's Note for Five Lakhs of Rupees per month, for the expenses of the Army, 1764.

Account of money settled for the expenses of the Europeans and Sepoys, the Artillery, and raising of the Cavalry, which shall be paid a month sooner or later, according to the particulars undermentioned, from the beginning of the month Sophar (31st of July 1764) of the 5th year of the reign, till the removal of the troubles with the Vizier, viz :

In the Province of Bengal, at Moorshedabad -	3,00,000
In the Province of Behar, at Patna - - -	2,00,000
Total, *Rs.* - -	5,00,000

Written the 19th of Rabbi-ul-Awul, the 5th Year of the Jaloos, 16th September 1764.

N.B.—I will include in the aforesaid sum whatever balance may be due from me on account of my former agreement with the Company.

Articles of a Treaty and Agreement concluded between the Governor and Council of Fort William, on the part of the English East India Company and the Nabob Nudjum-ul-Dowla.

On the part of the Company.

We, the Governor and Council, do engage to secure to the Nabob Nudjum-ul-Dowla, the Soubahdarry of the Provinces of Bengal, Behar, and Orissa; and to support him therein in the Company's forces against all his enemies. We will also, at all times, keep up such force as may be necessary effectually to assist and support him in the defence of the Provinces; and as our troops will be more to be depended on than any the Nabob can have, and less expensive to him, he need therefore entertain none but such as are requisite for the support of the civil officers of his government, and the business of his collections through the different districts.

We do further promise, that in consideration the Nabob shall continue to assist in defraying the extraordinary expenses of the war, now carrying on against Shujah-ul-Dowla, with five lakhs of rupees per month, which was agreed to by his father; whatever sums may be hereafter received of the King, on account of our assistance afforded him in the war, shall be repaid to the Nabob.

On the part of the Nabob.

In consideration of the assistance the Governor and Council have agreed to afford, in securing to me the succession in the Soubahdarry of Bengal, Behar, and Orissa, heretofore held by my father, the late Nabob Meer Jaffier Ally Khan,

and supporting me in it against all my enemies, I do agree and bind myself to the faithful performance of the following Articles:

Article 1. The Treaty which my father formerly concluded with the Company upon his first accession to the Nizamut, engaging to regard the honour and reputation of the Company and of their Governor and Council as his own, and granting perwannahs for the currency of the Company's trade, the same Treaty, as far as is consistent with the Articles hereafter agreed to, I do hereby ratify and confirm.

Article 2. Considering the weighty charge of Government, and how essential it is for myself, for the welfare of the country, and for the Company's business, that I should have a person who has had experience therein to advise and assist me, I do agree to have one fixed with me, with the advice of the Governor and Council, in the station of Naib Soubah, who shall accordingly have immediately under me the chief management of all affairs: and as Mahomed Reza Khan, the Naib of Dacca, has in every respect my approbation and that of the Governor and Council, I do further agree that this trust shall be conferred on him, and I will not displace him without the acquiescence of those gentlemen; and in case any alteration in this appointment should hereafter appear advisable, that Mahomed Reza Khan, provided he has acquitted himself with fidelity in his administration, shall in such case be reinstated in the Naibship of Dacca, with the same authority as heretofore.

Article 3. The business of the collection of the revenues shall, under the Naib Soubah, be divided into two or more branches, as may appear proper; and as I have the fullest dependence and confidence on the attachment of the English and their regard to my interest and dignity, and am desirous of giving them every testimony thereof, I do further consent, with the appointment and dismission of the Muttaseddees of those branches, and the allotment of their several districts, shall be with the approbation of the Governor and Council; and, considering how much men of my rank and station are obliged to trust to the eyes and recommendations of the servants about them, and how liable to be deceived, it is my further will that the Governor and Council shall be at liberty to object and point out to me when improper people are entrusted, or where my officers and subjects are oppressed, and I will pay proper regard to such representations, that my affairs may be conducted with honour, my people every where be happy, and their grievances be redressed.

Atrticle 4. I do confirm to the Company, as a fixed resource, for defraying the ordinary expenses of their troops, the Chucklas of Burdwan, Midnapore, and Chittagong, in as full a manner as heretofore ceded by my father. The sum of five lakhs of sicca rupees per month for their maintenance was further agreed to be paid by my father; I agree to pay the same out of my treasury, while the exigency for keeping up so large an army continues. When the Company's occasions will admit of a diminution of the expenses they are put to on account of those troops, the Governor and Council will then relieve me from such a proportion of this assignment, as the increased expenses incurred by keeping up the whole force necessary for the defence of the Provinces will admit of; and as I esteem the Company's troops entirely equal thereto and as my own, I will only maintain such as are immediately necessary for the dignity of my person and government, and the business of my collections throughout the Provinces.

Article 5. I do ratify and confirm to the English the privilege granted to them by their Firmaund and several Husbulhookums of carrying on their trade by means of their own dustuck, free from all duties, taxes, or impositions, in all parts of the country, excepting in the article of salt, on which a duty of 2½ per cent. is to be levied on the rowana or Hooghly market price.

Article 6. I give to the Company the liberty of perchasing half the saltpetre produced in the country of Purnea, which their Gomastahs shall send to Calcutta; the other half shall be collected by my Fouzdar for the use of my offices; and I will suffer no other persons to make purchases of this article in that country.

Article 7. In the Chuckla of Sylhet, for the space of five years, commencing with

with the Bengal year 1171, my Fouzdar and a Gomastah on the part of the Company shall jointly provide chunam, of which each shall defray half the expense, and half the chunam so made shall be given to the Company.

Article 8. Although I should occasionally remove to other places in the Provinces, I agree that the books of the Circar shall be always kept, and the business conducted at Moorshedabad, and that shall, as heretofore, be the seat of my government; and wherever I am, I consent that an English gentleman shall reside with me to transact all affairs between me and the Company, and that a person of high rank shall also reside on my part at Calcutta to negotiate with the Governor and Council.

Article 9. I will cause the rupees coined in Calcutta to pass in every respect equal to the siccas of Moorshedabad, without any deduction of batta; and whosoever shall demand batta shall be punished. The annual loss on coinage, by the fall of batta on the issuing of the new siccas, is a very heavy grievance to the country; and, after mature consideration, I will, in concert with the Governor and Council, pursue whatever may appear the best method for remedying it.

Article 10. I will allow no Europeans whatever to be entertained in my service, and if there already be any, they shall be immediately dismissed.

Article 11. The kistbundee for payment of the restitution to the sufferers in the late troubles, as executed by my father, I will see faithfully paid. No delays shall be made in this business.

Article 12. I confirm and will abide by the Treaty which my father formerly made with the Dutch.

Article 13. If the French come into the country, I will not allow them to erect any fortifications, maintain forces, or hold lands, zemindarries, &c., but they shall pay tribute, and carry on their trade as in former times.

Article 14. Some regulations shall be hereafter settled between us for deciding all disputes which may arise between the English Gomastahs and my officers, in the different parts of the country.

In testimony whereof, we, the said Governor and Council, have set our hands, and affixed the seal of the Company to one part hereof; and the Nabob before-named hath set his hand and seal to another part.

(A true copy).

(signed) *W. Majendie*, Secretary.

Mem.—This Treaty was executed by the President and Council of Fort William, on the 20th February 1765, and by the Nabob, on the 25th of the same month.

AGREEMENT between the Nabob Nudjum-ul-Dowlah and the Company.

THE King having been graciously pleased to grant to the English Company the Dewanny of Bengal, Behar, and Orissa, with the revenues thereof, as a free gift for ever, on certain conditions, whereof one is, that there shall be a sufficient allowance out of the said revenues for supporting the expenses of the Nizamut; be it known to all whom it may concern, that I do agree to accept of the annual sum of sicca *Rs.* 53,86,131. 9, as an adequate allowance for the support of the Nizamut, which is to be regularly paid as follows; viz., the sum of *Rs.* 17,78,854. 1, for all my household expenses, servants, &c., and the remaining sum of *Rs.* 36,07,277. 8, for the maintenance of such horse, Sepoys, peons, bercandauzes, &c., as may be thought necessary for my suwarry and the support

of my dignity only, should such an expense hereafter be found necessary to be kept up, but on no account ever to exceed that amount: and having a perfect reliance on ul-Mean-Dowla, I desire he may have the disbursing of the above sum of *Rs.* 36,07,277. 8, for the purposes before mentioned. This Agreement, (by the blessing of God) I hope will be inviolably observed, as long as the English Company's factories continue in Bengal.

Fort William, 30th September 1765.

(A true copy).

(signed) *Alexander Campbell*, s.s.c.

ARTICLES of a TREATY and AGREEMENT concluded between the Governor and Council of Fort William, on the part of the English East India Company and the Nabob Syef-ul-Dowla.

On the part of the Company.

We, the Governor and Council, do engage to secure to the Nabob Syef-ul-Dowla, the Soubahdarry of the Provinces of Bengal, Behar, and Orissa, and to support him therein with the Company's forces against all his enemies.

On the part of the Nabob.

Article 1. The Treaty which my father formerly concluded with the Company upon his first accession to the Nizamut, engaging to regard the honour and reputation of the Company and of the Governor and Council as his own, and that entered into with my brother, Nabob Nazim-ul-Dowla, the same Treaties, as far as is consistent with the true spirit, intent, and meaning, thereof, I do hereby ratify and confirm.

Article 2. The King has been graciously pleased to grant unto the English East India Company the Dewannyship of Bengal, Behar, and Orissa, as a free gift for ever; and I, having an entire confidence in them, and in their servants settled in this country, that nothing whatever be proposed or carried into execution by them, derogating from my honour, dignity, interest, and the good of my country, do therefore, for the better conducting the affairs of the Soubahdarry, and promoting my honour and interest, and that of the Company, in the best manner, agree that the protecting the Provinces of Bengal, Behar, and Orissa, and the force sufficient for that purpose, be entirely left to their discretion and good management, in consideration of their paying the King Shah Aalum, by monthly payments, as by treaty agreed on, the sum of *Rs.* 2,16,666. 10. 9.; and to me, Syef-ul-Dowla the annual stipend of *Rs.* 41,86,131. 9, viz., the sum of *Rs.* 17,78,854. 1., for my house, servants, and other expenses indispensably necessary; and the remaining sum of *Rs.* 24,07,277. 8. for the support of such sepoys, peons, and bercundauzes as may be thought proper for my suwarry only; but on no account ever to exceed that amount.

Article 3. The Nabob Minauh Dowla, who was, at the instance of the Governor and Gentlemen of the Council, appointed Naib of the Provinces, and invested with the management of affairs, in conjuction with Maha Rajah Doolubram, and Juggat Seat, shall continue in the same post and with the same authority; and having a perfect confidence in him, I moreover agree to let

let him have the disbursing of the above sum of *Rs.* 24,07,277. 8. for the purposes above mentioned.

This agreement (by the blessing of God) I hope will be inviolably observed, as long as the English Company's factories continue in Bengal.

Dated this 19th day of May, in the year of our Lord 1766.

TREATY with MOBAREK-UL-DOWLA.

The Company's Seal.

(Signed) *E. Baber*, Secretary.

ARTICLES of a TREATY and AGREEMENT between the Governor and Council of Fort William, on the part of the English East India Company and the Nabob Mobarek-ul-Dowla, dated 21st March 1770.

On the part of the Company.

We, the Governor and Council, do engage to secure to the Nabob Mobarek-ul-Dowla the Soubahdarry of the Provinces of Bengal, Behar, and Orissa, and to support him therein with the Company's forces against all his enemies.

On the part of the Nabob.

Article 1. The Treaty which my father formerly concluded with the Company upon his first accession to the Nizamut, engaging to regard the honour and reputation of the Company, and of the Governor and Council as his own, and that entered into with my brothers, the Nabobs Nazim-ul-Dowla and Syef-ul-Dowla, the same Treaties, as far as is consistent with the true spirit, intent, and meaning thereof, I do hereby ratify and confirm.

Article 2. The King has been graciously pleased to grant unto the English East India Company the Dewannyship of Bengal, Behar, and Orissa, as a free gift for ever; and I, having an entire confidence in them and in their servants settled in this country, that nothing whatever be proposed or carried into execution by them derogating from my honour, interest, and the good of my country, do therefore, for the better conducting the affairs of the Soubahdarry, and promoting my honour and interest and that of the Company, in the best manner, agree that the protecting the Provinces of Bengal, Behar, and Orissa, and the force sufficient for that purpose, be entirely left to their discretion and good management, in consideration of their paying the King Shah Aalum, by monthly payments, as by treaty agreed on, the sum of two lakhs, sixteen thousand six hundred and sixty-six rupees, ten annas, and nine pice (*Rs.* 2,16,666. 10. 9.); and to me, Mobarek-ul-Dowla, the annual stipend of thirty-one lakhs, eighty-one thousand, nine hundred and ninety-one rupees, nine annas (*Rs.* 31,81,991. 9.), viz., the sum of fifteen lakhs, eighty-one thousand nine hundred and ninety-one rupees, nine annas (*Rs.* 15,81,991. 9.), for my house, servants, and other expenses, indispensably necessary; and the remaining sum of sixteen lakhs rupees (16,00,000 rupees), for the support of such sepoys, peons,

and bercundauzes as may be thought proper for my suwarry only; but on no account ever to exceed that amount.

Article 3. The Nabob Minauh Dowla, who was, at the instance of the Governor and Gentlemen of the Council, appointed Naib of the Provinces, and invested with the management of affairs, in conjunction with Maha Rajah Doolubram and Juggat Seat, shall continue in the same post, and with the same authority; and, having a perfect confidence in him, I moreover agree to to let him have the disbursing of the above sum of 16 lakhs rupees, for the purposes above mentioned.

This agreement (by the blessing of God) shall be inviolably observed for ever.

Dated this 21st day of March, in the year of our Lord 1770.

EAST INDIA (NAWAB NAZIM).

COPY or EXTRACTS from the DESPATCH forwarded by the Court of Directors of the late East India Company to the Governor of *Calcutta*, Mr. *Cartier*, dated the 10th day of April 1771, so far as the same Despatch relates to the Family or Affairs of the NAWAB NAZIM; and, of Mr. *Cartier's* Letter to which such Despatch was a Reply.

EXTRACT of DESPATCH from the Directors of the East India Company to the Governor of Bengal, dated 16th March 1868.

10. WE heard with concern the death of the Nabob Nudjum-ul-Dowlah, and direct you to tender our compliments of condolence to the present Nabob, Syf-a-Dowlah, and our congratulations on his accession and on his confirmation by the King, with assurance of our approbation of the Treaty entered into with him, and of our inviolable attachment to him and his family.

11. You should have been more minute in the detail of the circumstances attending the Nabob's death, it having been publicly asserted here that he was poisoned. You should also have informed us what family he left, and all the facts relative to his death or the succession of his brother should have been on your records. All the forms of proclamation, and the acknowledgment of his successor should also be recorded, as examples to future times, the observance of such forms being very essential to the stability of Government.

12. As the reduction of the stipend to the Nabob arises from striking off the pay of an unnecessary number of his sepoys, and does not affect the allowance for support of his dignity in the Government, we approve what you have done in it, but we direct you never to reduce the stipend lower, being extremely desirous that he should have sufficient to support his public character, and appear respectable to his subjects and to foreigners.

13. We approve the agreement you made jointly with the Nabob to discharge the debt due from the Government to the Seats. That family, who have suffered so much in our cause, are peculiarly entitled to our protection.

EXTRACT of LETTER from the Select Committee to the Court of Directors of the Honourable East India Company, dated 18th March 1770.

THE sudden demise of the Nabob Syful Dowla, which happened a few days ago, is an event we deem our duty to communicate by the earliest conveyance. A malignant small-pox, which has raged and continues to rage with great violence at Moorshedabad, was the occasion of his death, and the grossness of his habit, joined to the exercise of some intemperence, gave double force to the disorder, and hastened his fate. Mobarek-ul-Dowlah, his younger brother, who is in about the tenth year of his age, being the next in the line of succession, has, by the President and Council, been recognised, and orders have been transmitted to the Resident at the Durbar to assist the Ministers in seating him with the usual formalities on the musnud, which is a measure we hope will

prove the most consistent with your intentions, as well as with the meaning of the 10th paragraph of your general letter of the 16th March 1768, and is also a popular election in the eyes of the Natives.

We are, &c.
(signed) *John Cartier.*
Claud Russell.
Charles Floyer.

EXTRACT of LETTER from the Governor and Council of Bengal to the Directors of the East India Company, dated 25th August 1770.

47. THE Nabob Syful Dowla was, after a few days' illness, carried off by the malignant small-pox, on the 10th March last, about 3 o'clock in the afternoon.

48. The Resident at the durbar immediately informed us of it, and we ordered minute guns to be fired, and every other ceremony to be solemnised, usual on such occasions.

49. As the right of succession had been established by you in the present line of the family, we sent immediate directions for setting the late Nabob's brother, Mobaruk-ul-Dowla, on the musnud. We proclaimed him in Calcutta, and we directed Messrs. Bedur and Aldersey to attend the ceremony at the city, and to assure his Excellency of our support and attachment.

50. The allowances received by his brother were, according to your orders of 16th March 1768, continued to the new Nabob.

51. We likewise drew out a new Treaty to the same purport as that entered into by the late Nabob, and after it was executed, we delivered one copy to his Excellency, another was put into the hands of the Ministers, a third is deposited amongst our archives, and the fourth we send you in this packet.

I have, &c.
(signed) *John Cartier*, &c. &c.

EXTRACT of DESPATCH from the Directors of the East India Company to the Governor and Council of Bengal, dated 10th April 1771.

36. WHEN we advert to the encomiums you have passed on your own abilities and prudence, and on your attention to the Company's interest (in the expostulations you have thought proper to make on our appointment of Commissioners to superintend our general affairs in India), we cannot but observe with astonishment that an event of so much importance as the death of the Nabob Syful Dowlah, and the establishment of a successor in so great a degree of nonage, should not have been attended with those advantages for the Company which such a circumstance offered to your view.

37. We mean not here to disapprove the preserving the succession in the family of Meer Jaffier; on the contrary, both justice and policy recommend a measure which at once corresponds with the customs and inclinations of the people of Bengal; but when we consider the state of the new Soubah, we know not on what grounds it could have been thought necessary to continue to him the stipend allotted to his adult predecessor.

38. Convinced as we are, that an allowance of 16 lacs per annum will be sufficient for the support of the Nabob's state and rank, while yet a minor, we must consider every addition thereto as so much to be wasted on a herd of parasites and sycophants who will continually surround him, or at least to be hoarded up, a consequence still more pernicious to the Company. You are, therefore, during the nonage of the Nabob, to reduce his annual stipend to 16 lacs of rupees; and this we have the greater reason to require, as we find ourselves subjected to the payment of large sums, due from the revenues of the Dewanny

Dewanny before the Company became possessed thereof, on account of the Navy donation, and the arrears of that to the Army; the balance due for restitution to Europeans; Colonel Munro's demand of two lacs, the debt due to Bolackidass; and the annual sum of one lac, for 10 years, which we have agreed to pay to Juggat Seat, all which press on us with such united force that our Treasury will be unable to satisfy these several demands without wounding our commercial interests, and endangering our possessions in Bengal. Being once relieved from this load of incumbrances, the savings we may expect from this reduction will properly become a fund for military exigencies; which fund being solely applicable to the defence of the Provinces, will contribute no less to the Nabob's future benefit than to that of the Company.

39. At a time when every justifiable measure should be adopted for availing the public and the Company of all the advantage we had in prospect from our possession of the Dewanny, we cannot but reflect on the dissipation of a considerable part thereof by the allowances to the Nabob's Ministers.

40. And here we must observe that, how great soever the application of Mahomet Reza Cawn, and his adherence to the Company's interest may have been, his rewards have been more than adequate thereto, and as the business of the collections of our revenues, when they shall have been thoroughly investigated by the supervisors appointed for that purpose, will require little or no assistance from that Minister, we must deem the continuance of his present salary as a waste of those resourses which are become so essentially necessary both for the security of our possessions, and the extension of your investments. It is, therefore, our pleasure that the annual allowance of nine lacs which he has hitherto enjoyed, be no longer continued to him; but as the minority of the Nabob will make it requisite for you to appoint as his guardian a person of experience in the affairs of Government, and of approved attachment to the Company's interests, your choice must rest on Mahomed Reza Cawn; and you are to allow him whilst in that station, a salary of five lacs per annum, which we consider not only as suitable to such station, but as a munificent reward for the services he may render the Company in the execution of his office.

41. The annual allowance to Juggat Seat as assistant to Mahomed Reza Cawn has been a drain on our revenues without the least benefit from his administration, for we are well assured that he has never afforded us a single instance of service. His allowance, therefore, must be immediately struck off. But with regard to Roydoolub, although we cannot expect from him any services equal to his present appointment, yet in consideration of the part he has long held in the affairs of Government, and to his advanced age, we are disposed to continue the salary he now enjoys, but on his death this allowance is not to be given to any person whatever.

42. As the reduction of the Nabob's stipend is adventitious and temporary, we by no means intend, that the commission of 2½ per cent. granted to our servants on our nett territorial revenues should be increased by this alteration, and therefore the former stipend of 36 lacs must still be deducted from the gross amount of those revenues. In like manner, no commission must be drawn on the sums which may be retrenched from the appointments to the Nabob's Ministers.

43. Having already apprised you of the purposes to which we mean to appropriate the savings above mentioned, we have only to direct that when the Navy and Army donations, the debt due to Bolackidass and the stipulated payment to Juggat Seat, shall have been wholly satisfied and reimbursed to us out of the aggregate reductions before mentioned, such further sums as shall arise therefrom are to be applied from time to time to clear the balance unpaid to the claimants of the restitution fund, and the donation of two lacs to Colonel Munro, in such proportions as the respective claims may bear to each other, until the whole shall be discharged, but you are to take notice that the principal only of the sums due from the Circar are to be considered and allowed in the payments here ordered.

From *T. D. Forsyth*, Esq., C.B., on Special Duty, to the Secretary to the Government of Punjab, dated 2nd December 1870.

Sir,

WHEN Mirza Mohamad Shadee, Envoy from the Atalik Ghazee, Ruler of Kashgar and the country known as Eastern Turkestan, had an interview with the Viceroy of India at Calcutta, on the 28th March 1870, he preferred a request, on behalf of his master, that a British Officer might be sent back with him, on a friendly visit to the Court of the Atalik Ghazee, as an evidence of the friendship existing between the two Governments, and with a view to strengthen and cement it.

2. Accordingly, the Foreign Secretary, Mr. C. U. Aitchison, C.S.I., in his No. 5 AP, dated 22nd April 1870, informed you that his Excellency the Viceroy had been pleased to agree to this request, and to appoint me to be employed on the proposed visit, and in accordance with the instructions forwarded for my guidance, I have now the honour to submit a report of my proceedings.

3. My instructions were to go to Yarkund merely on a friendly visit to the Atalik Ghazee, and for the purpose of opening up and giving impulse to the trade with that country. The visit was not in any sense a mission, and had no political objects. I was ordered so to arrange my stay in the country that I should run no risk of finding the passes closed by the winter's snows, and thus of being detained in Yarkund till next year. I was, however, to endeavour to obtain the fullest and most reliable information possible regarding the prospects of trade, the Indian staples that are most in demand, the nature and resources of Yarkund and neighbouring countries, their past and present history, and generally any information of any kind which might be considered of interest.

4. To assist in collecting and recording such information, a staff of officers and native subordinates was placed at my disposal, and a sum of 17,500 rupees was allowed for the general expenses of the expedition, the distribution of which was left to my discretion, a detailed and classified account being submitted by me, on my return, for the information and sanction of Government.

5. The following persons formed the expedition to Yarkund :—

Mr. R. B. Shaw, the first Englishman who ever went to Yarkund, and who may be called the pioneer of Central Asian trade with India.

Dr. Henderson, medical and scientific officer, subordinate to whom were—

Native Doctor Mohamad Yasseen.

One bird collector.

One plant collector.

Mir Akbar Ali Khan Bahadoor, C.S.I., of Abyssinian celebrity, who acted as native secretary.

Tara Singh, an enterprising and intelligent Punjab merchant, who having been to Yarkund, and being well acquainted with the country and people, offered the services of himself and two brothers, and was appointed by me in charge of the toshakhana and treasure chest.

Mullik Kutubud-din, appointed by the Maharaja of Cashmere to the charge of my camp as it passed through his territory.

Ibrahim Khan, deputy inspector of police, in charge of eight policemen, of whom, however, only four went with the camp beyond Cashmere.

Dewan Buksh, native writer, formerly a Moonshee in Mr. Shaw's service during his visit to Yarkund.

Major Montgomerie, R.E., deputy superintendent, Great Trigonometrical Survey, very kindly placed at my disposal the services of his chief pundit, who was to join our party at the Pangong Lake. He also gave us useful maps and instruments.

Huree Chund, son of Thakoor Tara Chund, the head-man of Lahoul, joined my camp in Ladakh; and Faiz Buksh Moonshee went round by way of Afghanistan, Budakhshan, and over the Pamir to meet me in Yarkund.

6. My instructions were to join the Envoy at Leh, in Ladakh, at the end of June; and as Mr. Shaw, who was in England till the 20th May, could not join us before the beginning of July, the expedition could not be considered to be fairly started till we reached Leh. Up to this point, also, the road has been so frequently traversed and so fully described, that only a very cursory account of the journey so far need be given here.

7. Leaving Jullundur on the 26th April, I proceeded to Jummoo, and there formed my camp. The Maharaja having undertaken to furnish carriage, provisions, &c., on payment, Mullik Kutubud-din was appointed by his Highness to accompany me in charge of the camp. He took from me, from time to time, a list of requirements, and made out an indent on the local officials for the amount. Knowing the difficult and inhospitable character of the country beyond Leh, I sent early intimation to the Wuzeer of Ladakh to lay out supplies of grain, grass, and fuel along the road beyond the Changchenmo Valley, and also at a point on the old or Karakorum route, and to have good baggage ponies ready for the camp. To this indent I received the Wuzeer's reply that everything should be ready as desired.

8. From Jummoo my camp took the route over the Bunihál Pass to Cashmere, and reached Sreenuggur on the 28th May, where I remained some days awaiting the approach of the Yarkund Envoy, who, instead of preceding me to Leh,

Leh, as he intended, lingered at Lahore for the receipt of some muskets which he ad purchased in Calcutta for his master.

9. During my halt at Sreenuggur, I received a copy of the Foreign Secretary's letter, dated 7th June, alluding to rumours of disturbances having broken out in the territories of the Atalik Ghazee, and directing me immediately to make every exertion, both at Leh and elsewhere, to find out from the travellers from Yarkund, whom I should certainly meet on the road, from letters, and from other sources of information, the exact position of affairs in that country. I then received the following peremptory instructions: first, that unless I were satisfied that a general state of peace similar to that which was said to have prevailed in Yarkund up to the date of my departure still existed, I was to abandon at once my intended journey; and, second, that I should, in that case, make preparations for my immediate return to India.

10. In accordance with these instructions, I took the following steps to gain information :—

11. There are three routes to Yarkund from India; one, through Afghanistan and Budakhshan; another, from Cashmere, through Gilghit, Yasseen, and over the Pamir; the third, through Ladakh, and over the Karakorum Mountains. By the first route Faiz-Buksh had already gone; and any information that he could pick up on the road, he would, I knew, transmit to me. I despatched Ibrahim Khan by the Gilghit route, with instructions to proceed rapidly to Yarkund, and thence, round by Sanju and Shadulla, to join my camp, which I calculated he ought to do by the time I reached the Yarkund frontier. I was fortunate in falling in with Mr. Hayward, the Central Asian explorer, and from him picked up much valuable information, and sent another man with him, who was to make his way across from Yasseen. This man was, however, murdered with Mr. Hayward. I also had the advantage of conversing with Colonel Gardiner, to whom I was indebted for sound counsel based on unrivalled experience and knowledge of Asiatic character. Lastly, Tara Singh volunteered to go ahead to Leh, and thence, in company of Huree Chund, to proceed to Shadulla, where he expected to meet the caravans on their way to India from Hindostan, and to learn from them and from the Kirghiz tribes, who wander about the valley of the Karakash, the truth of the rumours which had reached the Government of India. And as Leh was evidently the point to make for at once, as being the town where the first authentic news from the countries beyond the mountains could be obtained, I determined not to wait for the loitering envoy any longer, but to start at once. Mir Akbar Ali Khan Bahadoor was despatched on the road to Jummoo to bring up Mirza Shadee as fast as possible, and on the 14th June Dr. Henderson and I left Sreenuggur for Leh.

12. Our march was enlivened by the company of two men, one of whom was destined to take an important part in our future proceedings in Yarkund. Kazee Syad Mahamad Yakoob, nephew of the Atalik Ghazee, went some years ago from Kokand to Constantinople to lay the state of affairs in his native country before the Head of the Faithful.

13. But on arrival at Constantinople he heard that his country was disturbed, and he resolved to remain quietly there for about four years, and then, having heard of the success of his uncle in Eastern Turkestan, took the route of India and Cashmere to join his fortunes with Yakoob Beg in Kashgar.

14. Mahamad Yakoob, being a Syud, and having performed the pilgrimage to Mecca, had, of course, a high reputation for sanctity, and being otherwise a man of character, had acquired great respect from all good Mahammadans. I found him at Sreenugger a guest of the Maharaja, as he had been a guest of the British Government, and lodged in the house of one Khwaja Ghuffoor Shah Nuksh-bundee, a person of note in Cashmere, of whom more may perhaps be said hereafter. Mahamad Yakoob, besides considering himself a very holy man, prided himself on being an accomplished author; and as we sat down together on a carpet under some wide-spreading plane trees to escape a shower of rain; he ordered his servants to produce two well-bound and neatly-written volumes, which he said he had composed whilst halting at Sreenugger. In his

train was an Arab priest, who had come from Medina on a visit to Yarkund. This man, named Khuleel, could scarcely speak a word of Persian, and knew nothing of any languages current in Hindostan, yet had made his way by steamer up the Indus, and by way of Lahore, to Sreenuggur, where he placed himself under the charge of Kazee Mahamad Yakoob. From his companions I learnt that this Arab had been attracted to Kashgar by the fame of the Atalik's liberality to all good Mahamadans, that ruler having made himself known at Mecca by establishing and endowing a caravanserai there. Khuleel, in the hope of obtaining a good sum of money, and possibly the endowment of a school at Medina, brought some wonderful specimens of Arab books, Korans, &c.; but, unfortunately for human plans, in an evil moment the pony which carried the precious load stumbled in crossing a ricketty bridge over the Dras river on the road to Ladakh, and was precipitated into the torrent below. We saw Khuleel standing on the bank, a perfect picture of despair at the loss of his books and the ruin of his hopes.

15. Our march to Leh was accomplished with comfort and expedition, the Cashmere officials being particularly attentive and active on this part of the road. We reached the capital of Ladakh on the 2nd July, having been overtaken on the road by the envoy, Mirza Shadee.

16. This man, like his master, is a native of Piskat, in Kokund, and has followed the fortunes of Yakoob Beg during his contests with the Russians, and in his conquest of Eastern Turkestan. His office is that of moonshee or secretary, and in this capacity was sent as the bearer of a letter to the Russian General at Tashkend two years ago, and afterwards he went on to St. Petersburgh, and immediately on his return to Kashgar was deputed to Calcutta. One of the objects of his journey to India was to purchase arms, the delay in procuring which apparently caused him to loiter, and was productive of trouble to this expedition, as will be seen hereafter. He also brought with him 15 skilled artificers from the Punjab, to whom he promised employment on liberal terms under the Atalik Ghazee.

17. Arrived at Leh, my first care was to make every inquiry into the truth of the rumours of disturbances in Yarkund. During the winter months, or from January till June, it is next to impossible for traders or travellers to cross the snowy passes between Leh and Yarkund, and communication is therefore quite at a standstill. Two or three messengers had been sent off from Cashmere in May and June; but the only arrival in Leh from Turkestan was that of one Moolla Baki, a messenger sent by the Dadkhwah of Yarkund, with a letter to Dr. Cayley. This man had left Yarkund in March or April, but had been obliged to wait two months in Sanju till the passes were opened. Moolla Baki was closely questioned, and reported everything perfectly quiet in Turkestan. He totally denied the existence of any disturbance anywhere within the Atalik Ghazee's dominions, and the merchants in Leh, who were preparing their goods for despatch across the mountains, joined in declaring their belief that the story of disturbance was a fabrication. Dr. Cayley, who had come to Leh from the Punjab by Kullu and Lahoul, had arrived at the same conclusion.

18. In order to impress upon the envoy, to the fullest extent, the responsibility which devolved upon him in taking British officers into his country, I addressed him a letter in Persian, in the terms of the one I had received from the Government of India, and said that unless he could assure me that perfect peace prevailed in the Atalik's territories, I could not proceed on my journey. I added that it would be also necessary for him to assure me that in my movements in Yarkund, and also as regards the date of my return, I should be left wholly unfettered. I found it necessary to make this stipulation, because I knew that Messrs. Shaw and Hayward had been kept close prisoners within their house the whole time of their sojourn in the country. Mirza Shadee ridiculed the idea of our being subjected to the same treatment, pointing out the difference between solitary adventurers and invited guests from a great power. As regards our return, he frequently expressed the readiness of his master to let us come and go just as we liked. At my request he sent a letter to the Foreign Secretary, giving the most ample assurance on these points.

19. Mr.

19. Mr. R. B. Shaw joined the expedition at Leh on the 3rd July, having left England only on the 20th May; and our party being thus complete, and we being already somewhat late in making our start, if we hoped to return the same season, I did not think it wise to remain at Leh till Tara Singh and Huree Chund should return from Shadulla with the latest news from Yarkund, as I knew we should meet them on the road.

20. The preparations for our onward march required great care. The road from Leh to Yarkund by the new or Chang-chenmo route passes for 27 marches over completely uninhabited country, and for seven of these not a stick of fuel or a blade of green grass is to be found. Provisions, therefore, for ourselves, our followers, and baggage animals had to be taken, or laid out on the road. Our party numbered altogether about 60 souls, including camp followers, &c., and 130 baggage animals. Then there was the envoy's party, with his train of 400 muskets and ammunition, packed in wooden boxes containing four or five apiece; they were found to be too long and too heavy to be carried on the backs of ponies; porters, therefore, had to be employed, and two men were told off to each box. The number of mouths to be fed was thus increased to a great extent. But due notice of our requirements was given to Wuzeer Ali Akbar, the Maharaja's chief officer in Ladakh, and we were assured by him that every arrangement had been made, evidence of which was visible in the troops of ponies and yaks laden with grain, &c., which accompanied our camp.

21. When the baggage ponies intended for our own and the envoy's camp were brought out to be laden, their very lean and weak condition excited our attention. I was assured by the Wuzeer that he had collected all the best animals, and as he had assembled many more than we actually required, and there was no time for us to delay till other arrangements could be made, I determined to start with them, weeding out day by day such as showed signs of distress. The custom with traders in these parts is to engage with a carrier for the transport of his goods at an uniform rate of *Rs.* 32. 10 = about 3 *l.* 5 *s.*, for a load of three maunds, or 240 pounds from Leh to Shadulla, a distance of 20 marches.

22. As a strong Yarkundee pony carries with ease three maunds' weight, and can be purchased for about 40 rupees or 50 rupees, *i. e.*, 4 *l.* or 5 *l.*, the rate of hire thus paid is profitable to the carrier, who for this sum undertakes all risks; and it is an understood thing that, for his own sake, as well as to secure the merchant from delay or loss in transit, for every three or four laden animals one spare poney is to be taken.

23. This arrangement I also entered into with the Wuzeer; but as his animals were so very inferior, I agreed to make no load more than two maunds' weight, and in most instances they rarely exceeded one and a-half maunds.

24. Having completed our preparations, on the 7th July the expedition started from Leh. For the first two marches, our road lay along the right bank of the Indus, till we came to the village of Chimrí, with its picturesque Buddhist monastery. Here I was joined by Major Montgomerie's pundit, whose stay in our camp was destined to be of brief duration. However desirous the Atalik might be for the friendship of the British Government, and however enlightened he individually might be, the Yarkund Government is as yet not sufficiently imbued with European ideas to view without alarm the presence of "a chield among them takin' notes," or to believe that surveys and inquiries, conducted with the object of adding to general science, are not also intended to be the precursor of invading armies. When, therefore, Pundit ———'s arrival in my camp was heralded by one of his followers, wearing a Government badge, and announcing that a Government official was coming to survey the whole country of Eastern Turkestan. the utmost alarm was created in the envoy's camp, to allay which I was reluctantly obliged to abandon my hopes of solving many interesting geographical problems put before us by Marco Polo, and to postpone the pundit's visit till a more convenient season.

25. Leaving the bed of the Indus at Chimrí we took a day's journey up a valley tolerably well supplied with wood in the shape of willow and poplar trees and with plenty of grass for 12 miles to the foot of the Chang La or North Pass. The ascent to the summit, 17,600 feet, is very easy, and the road having been

lately repaired, all our baggage animals passed over without any difficulty. The height was ascertained by observing the temperature of boiling water and of the air, and the following comparison of beats of the human pulse may be considered of sufficient general interest to be given here :—

Dr. Henderson, who had walked to top of Pass - -	80	per minute.
Mr. Shaw, who rode - - - - - - - -	94	„
Mine, who rode - - - - - - - -	100	„
Mullik Kutubud-din, a native of Punjab, who rode -	92	„
A Bhot servant, native of Ladakh, who walked - -	78	„

26. On the north side of the pass the road was somewhat more rugged; but care had been taken to remove the larger boulders, and to fill up the rough parts with clods of earth, so that not the slightest difficulty was experienced in the whole passage, and I may here notice that, on our return, we found the road still more improved, and saw laden camels crossing the pass with perfect ease. As this, though not quite that highest, is the most difficult pass between Ladakh and Shadulla, I have given all these details.

27. An easy descent of 14 miles brought us to the village of Durgoh, on the branch of the Shyok river, where grass, water, and fuel were to be had in abundance. Here I commenced the process of weeding out inefficient baggage cattle, and 40 ponies were ordered to be got rid of. From Durgoh the road lies along a well-grassed valley past the village of Tanksè to Muglib. Tanksè is the last village deserving that name between Ladakh and Yarkund. For one or two marches we saw stones put together to form walls of roofless huts, and then for the next three weeks all was desert waste.

28. About 10 miles beyond Muglib we reached the Pangong Lake, of which Dr. Henderson took a photograph. From the west end of this lake, the new road to Yarkund by the Chang-chenmo Valley branches off to the north, and for a distance of about eight miles passes along a succession of valleys well covered with grass, and abundance of wild lavender and tamarisk for fuel is to be found. On the morning of the 15th July we commenced our ascent of the Marsimik Pass, marked by Mr. Hayward on his map as 18,457 feet high, though Dr. Henderson, on our return journey, by observing the temperature of boiling water, and by the aneroid barometer, made the height much lower. The ascent from the south side is gradual and easy, and was accomplished on horseback without the slightest fatigue. But the difficulty of breathing, as we approached within 2,000 feet of the summit, was felt by all.

29. The Schlagentweit Brothers have thus recorded the result of their experience of high altitudes.

The influence which height exercises upon man, varies with the individual; a man in good health having the chance of less suffering. The difference of race has apparently no appreciable importance. Our Hindu servants suffered far more from the cold than our Tibetan companions, though not more from the diminished pressure. For the generality of people the influence of height begins at 16,500 feet, a height nearly coinciding with that of the highest pasture grounds visited by shepherds.

The complaints produced by diminished pressure are, headache, difficulty of respiration, and affection of the lungs, the latter even proceeding so far as to occasion blood-spitting, want of appetite and even sickness, muscular weakness, and a general depression and lowness of spirits. Bleeding of the nose we experienced ourselves, though very rarely, the loss of blood on such occasions being insignificant; but bleeding of the ears and lips we neither experienced personally, nor observed in others during our travels in High Asia. Humbolt, however, states, that on the Antisana, at a height of 18,141 feet, his companion, Don Carlos Montufar, bleeded heavily from the lips, and that during the ascent of the Chimborazo every one suffered from bleeding of the lips and even the gums.

The effects here mentioned, which disappear in a healthy man almost simultaneously with his return to lower regions, are not sensibly increased by cold, but the wind has a most decided influence for the worse upon the feelings. As this was a phenomenon we had not hitherto found mentioned by former observers, we directed our particular attention to it, and remarked instances where fatigue had absolutely nothing to do with it. In the plateaux of the Karakorum, it was a common occurrence, even for the sleepers in the tents, where they might be considered as somewhat protected, to be waked up in the night with a heavy feeling of oppression, the entire, disturbance being traceable to a breeze which had sprung up during the hours of rest.

The effects of diminished atmospheric pressure are considerably aggravated by fatigue. It is surprising to what a degree it is possible for exhaustion to supervene; even the act of speaking is felt to be a labour, and one gets as careless of comfort as of danger.

30. I observe

30. I observe in an extract from Baron Osten Sacken's account of his expedition to the Trans-Naryn country, published by the Royal Geographical Society, that the Cossacks and Kirghizes, who accompanied Captain Chaldeyeff to the Suuk Pass on the Kashgardaban Chain, suffered much inconvenience from the rarity of the atmosphere, at an elevation of only 12,740 feet.

31. My own experience was that, at any height above 16,000 feet, a good breath, even when the body was in a state of rest, was a luxury seldom enjoyed; but below that elevation I only felt distressed when I exerted myself. In the great heights a feeling of exhaustion and severe nausea were continuous, and did not leave me for the 10 or 12 days that we remained at elevations above 16,000 feet. On the return trip, however, this unpleasant feeling wore off to a great extent.

32. Not a particle of snow was to be seen on our path, and the whole mountain side presented a curious brown barren appearance. As little or no rain ever falls in these regions, the hills are not cut up into deep ravines, but are rounded into large gravelly slopes, off which the melted snow trickles down into rivulets. Here and there, in the course of what had been these snow-fed rivulets, small yellow patches of coarse grass were to be seen, but generally, the scene presented a singularly arid, desert appearance. Behind us, and across the large gorge which contained the Pangong Lake, a splendid wall of mountains rose to our view, with snow-clad peaks, and glaciers in every ravine. Descending on the north side by very gradual slopes across wide barren valleys, and entering a stony ravine, we came to the wide Chang-chenmo Valley, 16,000 feet above the level of the sea.

33. This Chang-chenmo, or "Great Northern," is a long, broad valley, perfectly bare and gravelly, with plateaux ranging tier above tier, betokening, perhaps, the gradual subsidence, at some distant period, of a huge lake; or, judging from the present appearance of a smaller but similar valley in the upper Karakash, I incline to the opinion that these plateaux were at one time enormous ice-fields which gradually melted away. The turbid river flows through many deep and rapid channels, rendering the passage of animals at this season of the year a matter of some difficulty. Above, and on all sides, the mountains rise to a height of 19,000 feet, here and there capped with snow, but generally presenting a remarkable sameness of round disintegrated rock. The eye wanders in vain search for some grand distinguishing peaks, and longs to find relief in some soft vegetation, or some forest tract. Except a few tamarisk bushes on the banks of the river, no sign of vegetable life is visible, and a sense of weariness comes over the whole frame from the dull monotony of these desert hills.

34. This is the farthest point to which the Maharaja of Cashmere has extended any sign of his authority, as he has erected small storehouses for grain at the different marches as far as Gogra, at the head of this valley. All traces of the Buddhist religion, in the erections of marus or heaps of stones, with the mystical words "Om mani padmi hun" carved on them by Llamas, ceased on the south side of the Marsimik Pass.

35. Here we made a halt to overhaul all our camp arrangements, and prepare for crossing the plain, which literally is on the top of the world, and separates Central Asia from Hindostan.

36. When the muster of baggage animals was taken, our first impulse was to reject every one as unfit to stand the severe journey before us. A more sorry lot it would be difficult to collect.

37. But as it was impossible to supply their places, and had we halted till fresh animals could be procured from Leh, a delay of more than a fortnight would have occurred, and our stores of provisions would have been exhausted, we only rejected the worst, and these amounted to 70. We learnt some time afterwards, that a process of weeding had been secretly carried on by the subordinate Ladakh officials, by which their pockets were filled, and we were deprived of the services of some of the best animals.

38. All superfluous followers and Cashmere guards were here dispensed with, and having calculated the exact quantity of grain and provisions requisite for the

camp, the Wuzeer was informed by me of our wants, and declared that every kind of supply was ready. He also announced his intention of remaining in the Chang-chenmo Valley, till he should hear of our reaching the Karakash river, so as to be at hand to send us help if required.

39. On the 19th July, we parted company with Wuzeer Ali Akbar, and commenced the most difficult part of our march. The grain required for our baggage animals was laden on some 60 yaks, and placed in charge of the Wuzeer's subordinates, who were to deal it out to our and the Yarkundee's camp day by day. Our road lay up a red clayey ravine for eight miles to some remarkable hot soda springs, jutting out of the river bed. Large cones of a kind of soda are formed, from the top and sides of which the hot spring emits its jets.

40. Dr. Cayley, who had accompanied our camp from Leh, preceded us from the Chang-chenmo, and guided our steps to an easier pass than the one marked out for us by the Cashmere officials. In fact, though the Chang Leng La is not less than 19,000 feet above the level of the sea, the ascent was so gradual as to be scarcely noticed. From thence, on the north side, the high table-land which connects the Karakorum and Kuen Luen Ranges may be said to commence. The Pamir has hitherto been called the Bam-i-dunya, or roof of the world, being an extensive plateau 15,000 feet or more above the sea. But it is covered with grass, and is frequented during the summer months by shepherds with their flocks. But the Aksai Chin, as it is sometimes called, or White Chinese Plain, of which the Linzi Thung, Dipsi Kol, and Thaldat are only different parts, ranges from 16,000 feet to 19,000 feet, and being destitute of anything deserving the name of vegetation, is, as compared to the Pamir, very much what the outside of the dome is to the roof of St. Paul's.

41. Though we were fortunate in finding so easy a pass as I have described, still both man and beast were fairly exhausted when we reached our halting-place at Nischu. Here very scanty roots of the Boortse plant were all that could be got for fuel, and not a blade of grass was to be had for the animals, and we looked anxiously for the arrival of the grain which we had seen being carried on yaks the day before. It was a remarkable and significant fact, that though every other particle of baggage arrived safe and punctually, not a single load of grain made its appearance. Urgent messages and letters were sent back to the Wuzeer to forward the missing grain, but only five loads were brought up the next day, and no answer came from the Wuzeer. As the misconduct of this official has formed the subject of separate correspondence, and he has been dismissed for his offences, I need only remark here, that it has been satisfactorily proved that Wuzeer Ali Akbar knew that the whole of our grain was kept back, and instead of sending assistance on receipt of our urgent applications, he hurried away from the Chang-chenmo towards Leh, and then excused himself from giving aid because he was too far off.

42. Meanwhile we, in our lofty encampment at Nischu, were placed in a dilemma. If we wished to do so, we could not halt there, for there was no fuel and no fodder. If we went back to the Chang-chenmo it was very doubtful whether our animals, weak and starved, could cross and re-cross the Chang Leng La three times; and if we halted at Gogra, either to recruit our ponies, or to get fresh animals from Leh, the season would slip away, and the expedition must fail. If we went on, we should have one more march without grass, and at the end of the third day, we hoped to find a grazing ground. The decision, therefore, was manifestly in favour of an advance.

43. The road from Nischu to the commencement of the Linzi Thung Plain follows the course of the stream for about six miles, and then crosses a high plateau for three more miles, at the end of which we came to an abrupt descent of about 500 feet. From the brink of this descent a very grand and extraordinary view presented itself. On the extreme left, or west, a row of jagged peaks shooting up into the sky marked the line of the Karakorum Range; thence along our left, and losing themselves in a high range to the north, round knolls, sharp peaks, and undulating walls of mountains bounded the Linzi Thung Plain. Far away to the north, and forming a barrier wall across the horizon, spread the Kuen Luen Range, whose snowy peaks rivalled in height and grandeur the highest points of the Karakorum. Beneath us lay a vast barren desert, extending

ing from the Karakorum Range to the far east. The breadth of this plain was apparently but a few miles, though in reality not less than 25 miles, and was bounded to the north by a range of comparatively low fantastic-shaped hills, which formed themselves into domes, towers, and minaret-shaped craggs. Wherever the eye roamed, nought but desolation met the view, a dreary desert filled with gloom.

44. We descended to the plain, and after about two hours' hard march reached our encampment, in the dry bed of a stream. Fuel was procured by plucking up the roots of the Boortse plant; but there was no fodder for horses, and water of a muddy kind could only be obtained by digging holes in the ground.

45. Our next day's march brought us, past the dome-shaped hills, into the Lok Zang valley, where we found a small quantity of coarse grass. This our animals, who had been now for three days without any sustenance, eagerly devoured. Many had died on the road, and all the survivors were in a most exhausted state. It will be easily understood that at this point our position was most critical. All hope of further aid from the Wuzeer was out of the question. We were quite 100 miles from human help, and were perched, as it were, on the top of the world. It was impossible to halt beyond a day or two, for delay would have proved fatal to the whole camp, for which we had only a certain number of days' supply. We determined, therefore, to select as many animals as seemed fit, after a day or two's rest and grazing, and to take just as much of our camp as could be carried by them, and the porters we had. The rest of the camp was left in charge of Mir Akbar Ali Khan and Mullik Kutubuddin, who were supplied with provisions and told to wait till fresh carriage could be procured from Ladakh. They followed us to Shadulla, in the course of a week after.

46. Mirza Shadee and Kazee Mahamad Yakoob, leaving the chief portion of their camp, with their ladies behind, started off by double marches for Shadulla, whence they promised to send help of all kinds.

47. Whilst halting at Lok Zang we were met by Tara Singh and Huree Chund on their return from Shadulla, where they had fallen in with the Kirghiz shepherds, from whom, as well as from the Yarkund soldiers who guarded the Fort of Kinghan, they heard that perfect peace reigned throughout the Atalik's dominions. This appeard such a complete corroboration of the news brought by Moolla Baki to us at Leh, that we were all the more encouraged and anxious to push on our way.

48. On the 25th July we prepared to resume our march; but found to our dismay that, out of the small number of serviceable ponies which we had selected and made over to the Bhot captain in charge of our camp, 26 had been made away with during the night. After some delay and trouble, we were once more on the road, and reached Thaldat plain (26th), where we encamped near some ice-beds. The heat during the day on these plains was intense, the rarity of the air causing the sun's rays to strike with great force, whilst at night the thermometer fell to 7°. Close by the ice-beds on the undulating plain we found quantities of a kind of topaz, which glittered like diamonds in the sun, and attracted our attention from a long distance.

49. From Thaldat we took a north-western direction, and crossing a low pass in the hollows, finding a very scanty supply of coarse, withered grass, which was eagerly devoured by the animals, we came to the large soda plain. This plain is the dry bed of three salt or soda lakes, the waters of which subsiding have left a thick deposit of crystals of salt and soda, and the whole place is one vast bed of Glauber's salt. The crust is from six inches to a foot thick, and the ponies' feet sank in with a crackling sound, as if they were going over ice.

50. The glare from this soda is just as bad as from the snow, and the fine particles which fly up fill the eyes, nostrils, and mouth, and give a most unpleasant taste. Fortunately we crossed this inhospitable plain before noon, though we did not escape entirely without the loss of some baggage animals. Later in the day, when the wind usually blows with great violence, a thick

cloud or soda dust is raised, which would be fatal to animal life. We saw the remains of a portion of some former kafila, which must have been overtaken and suffocated by the storm. We encamped at the north end of this valley (27th), where we found coarse grass in abundance. Water of the usual brackish, muddy description was procured here, as elsewhere on the plain, only by digging holes in the ground.

51. We had now crossed the great high desert, and were within one march of the Karakash river. In front of us rose the snowy wall of the Kuen Luen, along the south of which the Karakash river flows. A march of 10 miles brought us to this water, which, though brackish, was clear and abundant, and afforded an agreeable change from the muddy liquid we had subsisted on for the last week. Following the course of this river for about 15 miles further, and through as bleak and desolate a valley as any part of the desert we had just left, we came to a good supply of tamarisk bushes and abundant grass.

52. I must mention an incident here, which shows the contrast between the ponies of Ladakh and of Yarkund, and perhaps something else. Just as we arrived at our encamping ground, our animals completely wearied and worn out with the long march, we disturbed a herd of wild horses, which were quietly grazing, ignorant of our approach. Immediately the ladies, whom Kazee Mahamad Yakoob had left behind in our camp, as I have already mentioned, mounted their Yarkund ponies and started off in pursuit, and soon the whole Yarkundee camp was flying all over the plain; whilst we with only worn out, weak Ladakh ponies had to content ourselves with looking on. At this point we were joined by Dr. Cayley, who had taken the route across the Linzi Thung plain, westward to the upper Karakash river, whose waters he followed till they joined the main stream, and brought him to our camp.

53. We then marched together down the Karakash valley. High snowy peaks tower above the valley on both sides, and from countless ravines rivulets of water pour down to swell the main stream, the waters of which were rising rapidly every day, rendering it difficult at times to find a ford. Patches of grass were to be found after long stretches of completely barren ground. The sky was filled with a very fine dust, which appeared more like haze than palpable substance, and the heat by day was intense. A more uninteresting journey than that down the Karakash for five days it would be difficult to find.

54. On our third day's journey, we received a letter from Mirza Shadee and Kazee Mahamad Yakoob, written from Shadulla, and telling us that some 200 yaks, horses, sheep, besides fruits, melons, and other good things, were on their way to us. Moreover, he added, that the Atalik Ghazee was at Kashgar awaiting our arrival with the utmost pleasure. Soon after 40 yaks, some of them laden with grain, made their welcome appearance. Not a day too soon did they arrive, for we were then reduced to great straits, as our limited stock of provisions had been heavily indented upon, not merely by our own camp, but by the parties who ought to have brought their own food, but whose provisions ran short many days before. Not content with the small allowance which was doled out with an equal hand to all our followers, these Bhots took to stealing flour from the bags as they were carried on the road.

55. At Goolbashar, the fourth march down the Karakash river, we came to the celebrated jade quarries, which supplied the Chinese in former days with this precious stone; but, since their expulsion from Turkestan, the quarries have been closed. There is one other quarry in the Yurangásh Valley, from which jade to a small extent was taken out. Nowhere else, I believe, is jade to be found. The Chinese never claimed any property in this Karakash Valley, though they are supposed to have first discovered the quarries; and as they took possession of Yarkund and Khoten only as late as A.D. 1740, the existence of this precious stone would appear to have been known for little more than a century and a quarter. I merely give this information as I have received it, and doubt not that any one who cares to pursue the inquiry may be able to throw more light than I can on the subject. I understand that large quantities of serpentine and another kind of jade come from the hills north of Burmah.

56. Here

56. Here we made our first acquaintance with the Kirghiz, of whom the chief, or akskal (whitebeard), Islam Beg, came to pay his respects. These Kirghiz are a branch of the great nomad tribe which inhabit or wander over the chain of mountains extending from the Alai and Tian Shan range to the Pamir. This particular branch used to graze their flocks and herds on the Pamir and around Sirikul, but migrated eastward about 70 years ago. At present they occupy the mountain slopes above Sanju, and during the summer months frequent the Karakash valley. A branch of the Wakhi tribe, who, as their name denotes, came originally from Wakhan, have for the present settled on the Kilian Passes and hills west of the Sanju Pass. The akskal of this tribe also made his appearance with his followers and their yaks in our camp. There was a marked difference in the features of these two tribes. The Kirghiz had the broad flat face belonging to the Mongolian type, whilst the high-bridged nose and sharp features of the Wakhis told their connection with the Aryan family of the human race. The difference in features was not more marked than the difference in the manners of the two tribes.

57. In the good-humoured, open faces of the Kirghiz we could read the friendly hospitality and hearty sociability of their character, and in spite of the difficulty in communicating with a people who could speak nothing but a Turki patois, our servants and camp-followers soon became fast friends with the Kirghiz, who seemed to delight in giving every help to the guests of their master, the Atalik Ghazee. On the other hand, the surly, ill-tempered countenances of the Wakhi Chief and his followers did not belie their dispositions, quick to take offence and slow to render any service; and we came to the unanimous conclusion that, should difficulty arise regarding our return, it would be better to trust to the tender mercies of the Kirghiz than to fall into the cruel hands of the Wakhis.

58. It was pleasing to see the evident delight with which the Kirghiz welcomed Mr. Shaw's re-appearance amongst them, and the first day or two was spent in perpetual tea-drinking and stroking of beards in his tent.

59. One day's journey from Goolbashar brought us to Balakchi, near the fort of Shadulla, where the envoy, Mirza Shadee, and Kazee Mahamad Yakoob were encamped ready as hosts to receive us. The river had risen greatly during the last few days, and we had some difficulty in crossing. On arrival at Balakchi, the envoy sent a tent for us to rest in till our own camp arrived, and soon after came to receive us, bringing melons, Russian sugarcandy, rasins, &c. He bid us welcome to Yarkund territory, and declared that the Atalik Ghazee was all impatience to see us. He then disclosed the news, which he professed only to have heard the day before, that the Atalik Ghazee had been absent for seven months on an expedition as far as Oorumtsi, where he had experienced much fighting and had completely conquered all the country between Kuldja and Oorumtsi. He had appointed a Turra Khoja to be ruler of Kuldja and Kalmakistan and was now returning to Kashgar with 1,000 prisoners and much treasure. The envoy assured us that perfect peace prevailed throughout the territories of the Atalik.

60. This news caused us considerable anxiety, for though, if true, it accounted satisfactorily for the rumours of disturbance which had reached the Viceroy's ears, still it was difficult to believe that Molla Baki, whom we had seen at Leh, knew nothing about the king's absence; and it was remarkable that neither Tara Sing nor Huree Chand should have gleaned intelligence of the truth when they came to Shadulla. It was impossible, however, to test the truth of the envoy's statement, as no traders had yet met us from Yarkund, and it was out of our power to halt till we could get further information, for we were wholly dependent on the Yarkund envoy for supplies which were limited. Shadulla being the point where the old or Karakorum route joins the new road, and being the boundary of the Yarkund territory, we discharged all our Ladakh carriers and porters, to whom Mirza Shadee gave from his stores enough provisions to take them back to their homes. Dr. Cayley also arranged to leave us here, and to take a new route back to the Chang-chenmo, so as to explore the country thoroughly. Being still seven days' journey from Sanju, the nearest village in Yarkund, it was difficult for the envoy to meet all these demands on his store of provisions, and he urged upon me the necessity for our pushing on into more civilized parts.

61. On the 7th August we commenced our march as guests of the Atalik Ghazee in Yarkund territory. Our course still lay down the Karakash river, which we had to cross twice in one day, a matter of difficulty and danger in consequence of the height of the water.

62. Passing on the left bank the Fort of Shadulla, a small inclosure built of stone some years ago and manned by Cashmere soldiers, but now entirely deserted, we halted for the night by the side of a hill torrent called the Toghra-su, which was impassable except at an early hour, before the melting snows on the hill above had swelled the stream below. The scenery in this part of the valley is wild in the extreme, the overhanging precipices and bold rocks giving a weird appearance to the valley. Our passage of the Toghra-su was effected with safety, but not without great difficulty, owing to the rapidity of the torrent, and the rocky nature of the river bed. Here again the Yarkund ladies distinguished themselves as skilful and plucky horsewomen.

63. In this and the next day's journey we met some traders coming from Yarkund. They gave the same story regarding the Atalik's movements as had been told by the envoy, but subsequently we fell in with a Punjabee trader from whom we learnt that affairs in Yarkund were not quite as Mirza Shadee had described; for though perfect peace reigned in Kashgar and Yarkund, the Atalik was supposed to be still absent at the seat of war. The merchants bound for India had not been allowed to leave Yarkund until news arrived of our approach to Shadulla, and the strictest orders were given prohibiting the communication of any news likely to induce us to abandon our visit.

64. Leaving the valley of the Karakash river at Mazar Abu Bekr, we took a day's march up a narrow rocky ravine, and crossed the Grim Pass, 16,612 feet high. The assent was stiff and tedious, and had to be performed on yaks. On reaching the top, we expected to have a fine panorama of the Yarkund plains, but the thick haze which filled the atmosphere prevented all view, and we afterwards found that for four more marches no sign of the plain could be seen. The descent on the north side was exceedingly precipitous and tedious, rendering the pass, as is well known to all traders, impracticable for laden horses or camels, and thus placing merchants and travellers in the hands of the Kirghis, who derive a thriving trade by hiring out their yaks for the transport of goods over the pass. Their charges vary from one to two rupees per yak for each trip, and the traders have often to await the convenience or excite the cupidity of these nomad carriers.

65. After a descent of two hours from the summit of the pass, we came to Kichik Yilak, or, as its name implies, the summer encampment of the Kirghiz. Here for the first time I saw the Yoort or Akooee, *i.e.*, white round tents which form the home of these people. The tent is constructed of lattice work, round which felt pieces are wrapped. The top is rounded into the form of a dome, with a large hole in the centre, to allow of the smoke to escape, and also to give light. There is one small door. No poles or ropes are required, and the lattice frame is so constructed that it easily folds up when the tent has to be struck for a move. The floor of the tent is covered with felt rugs, and looking into one, I saw a screen put up to make an inner apartment for the women, the rest of the tent being shared by children, men, sheep, dogs, and any visitors who may choose to enter and sit round the fire, on which the never-failing teapot stands. Twenty of these Yoorts form the Aoul or encampment at Kichik Tilak, and from them a yearly tribute of three Yambu or silver ingots, each worth 170 rupees is taken by the Atalik Ghazee.

66. Here we met more Indian traders who fully corroborated the story given on the other side of the pass; and as there was no longer doubt of the absence of the Atalik, and very great doubt as to the date of his return, I had no option left me but to act on the instructions received from the Government of India, and to defer the prosecution of the expedition till another season. When, however, I announced to Mirza Shadee my intention of returning, he pointed out the impossibility of my doing so without going as far as Yarkund to refit my camp for the journey. It was of course as impossible to traverse the high desert we had just left without proper baggage, animals, and provisions, as it would be to cross the ocean without ships and stores; and as Mirza Shadee assured me

(very

(very correctly as I found by experience) that neither carriage nor supplies could be got without the orders of the Dadkhwah, and not in fact without our going into Yarkund itself to make our arrangement in person, it was agreed that I should delay my return for 25 days, within which time the Envoy promised to furnish me with everything necessary to take me back to Leh. Letters were written at once to the Dadkhwah in Yarkund, and Mirza Shadee dispatched a messenger with letters to the Atalik Ghazee.

67. Our march down the Sanju river to Tam was over grassy meadows or hillside. The banks of the river all the way down are fringed with wood. Below Tam the valley contracts into a narrow defile, across which the Chinese in former days had thrown a wall to protect themselves from the invasions of Kirghiz and other mountain robbers. The stream below this being too deep for our horses to ford, we had to take a circuitous route across the Chuchu Pass, 11,000 feet, and descended the Arpalak river. In the valleys we found an abundance of partridge and chikor, and the snow pheasant, of which we saw countless coveys on the higher Sanju Pass, was seen and shot on the Chuchu Pass. There too flocks of ibex and burrul wandered close by our path, and showed no alarm at our approach.

68. The mountain sides were bare and covered with a thick coat of dust, the white clayey surface having been pulverised by the action of the atmosphere; but as no rain ever falls in those parts, the dust is only disturbed by traveller's feet, and then suffocating clouds are raised, such as I have never seen elsewhere. On the banks of the Arpalak river, it was a relief to find good grass, and a profusion of bushes covered with the yellow China rose.

69. We halted for several days at a pleasant spot on the valley to await the reply from the Dadkhwah. Here we were introduced to the Asiatic custom of the dusterkhan, literally table cloth. Kasim Akhoond Begi, of Zungia, a town about 20 miles on the road between Gooma and Khoten, arrived in camp with fruits, &c., and presented himself before us. Having received him at the door of my tent, we seated ourselves on the ground, *more Usbeco*, and then a coloured table cloth was spread before us, and melons, pears, grapes, apricots, nectarines, sugared almonds, and biscuits were displayed. The custom is for the guest to break a piece of bread or biscuit, and then invite his host and companions to join in the feast. He also offers them cups of green tea, of which, unmixed with milk or sugar, a true Yarkundee or Andijani will drink a considerable number. Conversation on the part of the host at the first meal is not considered polite. After a little while the fruit is removed, any crumbs of bread which may have fallen are carefully placed on the table cloth, which is taken away, beards are stroked, and every one says Allah Akbar, and then the host suddenly gets up and runs out of the tent. The reason of this being, as I am told, that he is supposed to be anxious to get away without putting his guest to the trouble of getting up to bid him good-bye.

70. Mirza Shadee grew very impatient at our halting; but I did not feel justified in making any advance until I had some reliable information to go upon. It was evident that Mirza Shadee had either been deceived himself, or had wilfully deceived us as to the movements of the Atalik Ghazee, and therefore I had to seek more trustworthy intelligence. Kazee Mahamad Yakoob here left our camp for Yarkund. We had found him a pleasant and valuable companion; his near relationship to the Atalik, his evident influence, and his intelligence and experience rendering his advice to, and control over, the somewhat impetuous envoy a matter of importance to the expedition. Mirza Shadee also took his departure, hoping thereby to force me to change my determination, but I remained firm. At last on the 15th August a letter came from the Dadkhwah informing me that the Atalik Ghazee had completed the subjugation of the provinces which he had gone to conquer, and there was hope that he would return speedily to the capital. I was further informed that every preparation had been made for our proper reception, and that an officer of rank had been sent to Sanjee to meet and escort us in.

71. So far as regarded the probability of the Atalik returning soon to Kashgar, I might be excused for having considerable doubts whether the wish might not be father to the Dadkhwah's hopes; and as my instructions were peremptory, I could

could make no pledge, nor hold out any hope of our remaining in the country a day beyond the time agreed upon for the supply of carriage and provisions. But peace being known to prevail in Yarkund itself, and there being a manifest necessity for visiting that place in order to get the requisites for our return journey, I determined to accept the Dadkhwah's urgent invitation, and go on to Yarkund.

72. At Kizil Lungur, about 15 miles from Sanju, we came to a pretty cultivated and wooded spot, a small oasis in a long desert, such as we subsequently became accustomed to look for with avidity. Here leaving the Arpalak valley, we crossed a low sandy ridge and descended to the plains of Yarkund. A few miles from Sanju we were met by Tash Khoja Yuzbashee or centurion, who had been sent by the Dadkhwah to act as our Mihmandar or host. Tash Khoja is a Tajik, and speaks Persian with a broad, rough accent. He has a peculiarly frank, pleasant face and manner, and like most of the Kohkundi, or, as they prefer calling themselves, the Andijani officers, is of a very jovial turn of mind. He was mounted on a handsome black Andijani horse, and followed by soldiers well mounted, and carrying matchlocks, to which are attached pronged supports on which to rest the gun when taking aim. Soon after noon we dropped, as it were, from the desert upon a richly wooded green ravine, along which lay a succession of hamlets, gardens, and groves, all which put together constitutes Sanju. We passed through fields of wheat, wild oats, hemp, Indian corn, and skirted gardens full of apples, pears, peaches, and walnuts, and found ourselves suddenly in front of Mirza Shadee's tent, pitched on an earthen platform in front of a wide meadow, through which canals of water flowed. The sight of so much green turf and large shady trees, giving the appearance of an English village to the scene, was indeed a refreshing relief after the weeks we had endured of rocks and desert desolation.

73. Mirza Shadee received us in a tent spread with Khoten carpets and felt rugs. The usual dusterkhan was spread, and fruits of all kinds put before us. After we had taken what might be considered a substantial lunch, to our surprise dishes of meat began to arrive, and this we were told was the correct Andijani custom, first fruit and sweets, then meat, and last of all soup. The *entreé* consisted of minced meat very delicately seasoned, done up in paste and cooked in steam. Then followed the ash or pillau of well boiled mutton and rice with shredded carrots;* the whole wound up with a basin of thick mutton broth with rice or barley and flavoured with a slight acid. In front of us stood a boy with teapot in hand, from which he supplied perpetual cups of weak green tea to the guests. The cuisine of a Yarkund host would commend itself to the most fastidious Englishman's palate. Everything in the kitchen is kept most scrupulously clean. The cooks wear neat aprons and are particular in using clean vessels. They cook with good butter and by steam, and can serve up a variety of *entrées* and *entrêmets* that would render a dinner à la Yarkundee popular even in London.

74. Following the custom of the country, we bestowed Khillats or dresses of honour on Kasim Akhoond and Roza Beg, who had thus far discharged the duty of hosts to us; as well as on Tash Khoja, who was to assume this office for the future. For Tash Khoja, as highest in rank, I had prepared a green satin robe, made after the fashion of Yarkund Chogas; for Kasim Akhoond a white shawl, and for Roza Beg a valuable turban were selected. When, however, I came to bestow these on them, Tash Khoja made a show of refusal which lasted for a long time. This, however, is nothing more than the Yarkund custom of enhancing as it were the value of the present, and Mr. Shaw informed me that he has known a man go through this form for more than an hour, nothing being in reality further from their intention than that they should be taken at their word, and I subsequently found that nothing offended an official more than to send him empty-handed away. On one occasion, when, owing to the baggage having gone on ahead, I had no garment to bestow, Mirza Shadee took off his own robe and lent it for the occasion, rather than that the custom should be infringed.

75. In

* Monsieur Vambery describes this dish in his interesting Book of Travels in Central Asia, and alludes to the many dishes peculiar to Yarkund cookery.

75. In the evening we saw what constitutes a village bazaar in Yarkund. The peasants collected in the meadow, bringing cattle, fowls, or articles of clothing for sale. Then the greybeards slowly joined the scene, and seating themselves on the ground, began probably to discuss the late stranger's arrival, or passed an opinion on the animals for sale. When an official mingled in the throng, he was received with respectful salutation, but there was an easy freedom in their manner, and an absence of all Hindostani cringing, which was pleasant to observe. Our hosts and almost all the officers of the Atalik's Government are quite alien to the country, having only lately come from Kokhund, and I found them often ignorant of the names and situations of the different villages; but being all of one religion, the conqueror and conquered mix together in terms of friendly equality. They eat and drink together, and with Englishmen likewise, affording a striking contrast to the relations which exist between ourselves and the people of India.

76. On the morning of the 17th August we took our departure from Sanju for Yarkund. For a mile or two the road lay, as it had done the day before, through orchards and cornfields, under shady trees and over meadows. Then crossing the main stream of the river, whose waters spread over the valley had converted a waste into this glorious garden, we ascended a sandy hill and plunged into the great desert, which stretches from the foot of the Kuen Luen range far away to the north, where it is known as the Great Desert of Gobi. For the first five or six miles our road lay over hillocks and through ravines, and then we came upon the broad expanse of waste. Here and there a stream finds its way from the mountains for a little distance, fringing the sides in its course with grass and shrubs. Sometimes a larger river forces its way across the plain and cuts a deep valley for itself, in which a string of hamlets with richly cultivated fields is generally to be found.

77. All these oases in the great desert form convenient halting places for travellers, as we found to our comfort day by day; and it is difficult to conceive a more grateful relief to the weary voyager, parched with the heat and scorching sandstorms of the plains, than to come suddenly upon one of these sylvan valleys, and find himself seated under the shade of a large mulberry tree, and ministered to by a Yarkundee Mihmandar with a plentiful supply of melons, grapes, nectarines, and peaches.

78. The houses in these villages resemble the mud huts to be seen in any village in Upper India. The walls are built of sun-dried bricks with flat roofs. The gardens are generally surrounded with mud walls, or fenced in by stout hedges, which are also frequently put round the cornfields. As we passed along we found maize, wheat, barley, millet, turnips, carrots, and French beans, all ripening at the same time. There is but one harvest season in the year, and all the crops are dependent on irrigation. The willow and poplar trees grow to a large size on the banks of canals.

79. The costume of the villagers is extremely simple, consisting generally of a neatly-worked skull cap, or perhaps a white cap trimmed with sheepskin on the head, a long white choga or robe, which justifies the remark made by Vambery, that Central Asiatics appear to be always going about in their night clothes. Sometimes this white robe is fastened at the waist by a string or rope, giving a monkish appearance to the wearer. Long felt stockings, and top-boots of untanned brown leather complete their attire. In winter warmer clothes and more gaudy colours are adopted, but at the season when we entered Yarkund all the population seemed to have just got out of bed.

80. The more well-to-do classes, the Kazees, Moollahs, and all Government servants, wear chogas or cloaks of variegated colour, and of superior material, either of silk or cloth, or more generally, of mushroo, a mixture of silk and cotton dyed with bright colours intermingled, after the pattern of marble-stained papers on our walls at home. The women are dressed in a kind of white night-gown, with a high round cap, which looks at a distance like a white China bowl. Their hair gathered into two large plaits, to increase and add beauty to which Yarkundee ladies are not behind European fashions, falls down the back. No sign of ornament is to be seen on man or woman, and the only weapon carried is a knife hanging from the girdle, and is made to serve for every purpose.

81. The language spoken by these villagers is Toorkee, and scarcely any of the more educated agriculturists know Persian. Fortunately for us, several members of our party, especially Mr. Shaw, knew this language, so that we had free communication with the people, and were not under the necessity of calling in an interpreter. All the higher Government officers spoke Persian, in which language I carried on all my conversations.

82. One misses with satisfaction in Yarkund the high humped cattle of India, instead of which, cows and bullocks, more resembling the English type, are to be seen. But the cattle are not so large or fine looking as the superior kind to be seen in India. Bullocks are used not only as beasts of burden, but also as riding animals, and are taught the 'yulga' or ambling pace. The sheep are of good size, and have the broad fat tail considered in Central Asia such a luxury. Amongst other uses to which this tail is turned, the fat of it is converted into tallow candles. Fowls in Yarkund differ little from fowls elsewhere, except that like their owners, they seem to feed better than their brethren in India, and consequently make a more palatable dish on the table.

83. Being anxious to introduce to the Yarkundees the advantage of European medical science, Dr. Henderson persuaded the Kazee of Gumah, who visited our camp at Kostâk, to submit to treatment for goitre, which afflicts the people, I might almost say universally. The example set by this man was followed by a few others, but our hopes of extending this medical practice were soon after checked. Fevers and dysenteric or choleraic diseases were pronounced to be unknown. Smallpox, however, was declared to be a scourge, and produced the utmost alarm in the minds of some Bhot porters, whom we had brought with us.

84. No vaccine matter having been brought they could not be vaccinated, but one of their number proposed that the body of a Bhot, who had died a short time before and was buried in a village near, should be exhumed and vaccine matter should be taken from the corpse!

85. At Boora we entered the jurisdiction of the Dadkhwah, and found ourselves treated even more hospitably than before. The heat now was excessive, the thermometer inside our tents under shade being near 90° during the day and 65° at night. From Boora we took our fourth and last march across the desert, starting at 2 a.m. to escape the great heat of the day. At daybreak our devout companions dismounted like good Mahomedans to say their prayers, when their horses took the opportunity of scampering off over the plain, some of them refusing to be caught till we reached Besharik, 20 miles off. I had heard much before I entered Yarkund of the severe ritualism enforced by the Atalik, but with this single exception I saw nothing of it.

86. Besharik is another of the oases skirting the desert. Here we halted for the inevitable dusterkhan of fruit and soup, brought by the Begi of Karghalik, a large village five miles further on. As we crossed the last strip of stony desert we saw in front a long low white building inclosed on all sides by fine poplar trees. This on nearer approach proved to be an old Chinese fort which since the expulsion of that people had been allowed to fall to ruin. It is built of sun-dried bricks with parapets loopholed for musketry, and with square bastions at each corner. It had all the appearance of a dilapidated Punjab jail. Soon after passing this, we entered Karghalik, and rode through the main street. This is about 15 feet wide, and in many parts covered over. On the roofs of the houses, overhanging the street, small gardens of flowers, China aster, balsam, &c., were to be seen. We passed bakers', butchers', shops, now and then finding a small tobacconist and greengrocer's stall. All the other shops were closed, and the inhabitants evidently had made holiday to see the first importation of European officials into their country. On our left, half-way through the town, we saw the entrance to a college, and a little further on a school. At the end of the street we came to the gallows, fitted up with pulleys to accommodate two criminals at once. The punishment of hanging is reserved for thieves, whilst political offenders are entitled to the honour of having their throats cut.

87. Leaving

87. Leaving the gallows we turned sharp to the right up a lane shaded by willow and poplar trees, and were brought into a garden where everything had been prepared for our reception. A large earthen platform raised under some magnificent walnut trees was covered with felt rugs and Khoten carpets, and at one end three chairs were placed in front of a long table covered with a kind of Persian carpet. These chairs were a curious specimen of Yarkundeé carpentry, and the first that had ever been made in the country. Of course the usual dusterkhan was laid out, and all the population of Karghalik collected to see how Europeans ate and drank.

88. From Karghalik to Yarkund, a distance of 35 miles, we passed through an entirely different kind of country. Instead of the dreary desert and sandy hills over which we had travelled for the last four days, we found ourselves in the midst of luxuriant cultivation and rode along well-made roads lined with fine shady trees.

89. The rich verdure of the meadows and the thick vegetation on the slopes, with here and there well-wooded copses, and the constant streams of water, now running freely in meandering brooks, and now restrained in carefully preserved canals, imparted a civilised and English look which reminded one of scenes at home. Farmsteads, too, scattered in pleasing irregularity over the plain, with cattle, commending themselves to English eyes by the absence of the Indian hump, flocks of fine sheep with thick white fleece, and well-fattened poultry, added greatly to the scene.

90. The road from Karghalik is a continuation of the highway from Khoten to Yarkund, along which mile posts, or more correctly posts at each tâsh, or fifth mile, are erected, with the distance written legibly in Persian. The canals and streams are well bridged with wooden beams and planks, and on the low marshy ground some engineering skill has been displayed in raising the road. In all directions the signs of a progressive vigorous government are observable, in the construction of new canals, and in the care bestowed on the roads. If we might judge from this portion of the country, or in fact from any of the inhabited parts which we saw, the impression I received was that the Yarkund territory is to a very great degree flourishing. The houses, though built of mud or of sun-dried bricks, look fresh and tidy, and the mosques and serais, or places of public resort, are kept clean and in good order. The dry-earth system of conservancy is carried out in the houses of the upper classes. Rows of poplars and willows are planted by the side of watercourses and along all lanes, and the surface of the country presented a variegated mass of green or yellow colour, according as the crops were fresh springing up or just ripening to the harvest. The cotton plant was to be seen in abundauce. The plant is small, but the bolls are plentiful, and the staple is longer than that found in Northern India. Flax too is grown for the oil; the plant is too small for using the fibre. Wheat of the finest quality is produced, and Yarkund is justly famous for its beautiful white bread. Barley, rice, maize, millet, and vegetables are to be seen. But we noticed that the cereal crops were excessively dirty; weeding seems to be quite unknown, and rank vegetation too often chokes the more valuable crop.

91. Leaving Karghalik some hours before daylight, we rode at a quick pace till we reached the river Tisnaf, whose waters were sufficiently low to enable us to ford it. From thence a ride of five miles brought us to the village of Ek Shumba Bazaar, where, as its name imports, a market is held once a week; and as we happened to arrive on the proper day, we witnessed the novel sight of a Yarkundee market. We were met about a mile outside the town by the village elders, who insisted on our partaking of their hospitality, so we had to go through all the courses from melons to soup at the early hour of 7 a.m. As we continued our march towards Pushgam, our halting place for the day, we met on the road the countrymen and women flocking to market. Donkeys weighed down with pannier loads of melons, fowls, sheep driven by rosy-faced but rather dirty boys passed in succession. Then some country cobbler offered as he passed us boots for sale, and immediately a pantomime scene was got up between one of our Hindostani followers and the cobbler, who held up three fingers to express that the price was three, something which the foreigner could not understand, and the bargain was off. Then came a man mounted on a neat-looking pony, driving before him half-a-dozen other ponies, which he intended to sell;

then two or three donkey loads of leather, of foreign importation. Presently a party of farmer-looking men came jogging along, chatting together pleasantly till they approached our party, when one and all dismounted quickly, and bent in respectful salutation till our party passed. Their salute and this act of respect in dismounting, so common in the East towards superiors, was evidently intended for our Mihmandar Tashkhoja, though on our return journey, as will be seen, it was offered freely to us. More cosmopolitan, or it may be with a keener eye to their own profit, was the hearty salutation we received from three high-capped religious mendicants, who fell on their knees, and stroking their beards, shouted out their "Huk Allah," &c., and looked wistfully for a return in the shape of a shower of coppers. According to custom, or as we saw in reluctant obedience to the orders of their husbands, all the women at the sight of our party turned out of the road to escape observation, but having satisfied the wishes of their masters, they usually took care to satisfy their curiosity also by having a sly look at the strange passers-by. In watching this curious and interesting procession, we beguiled the time till we reached Pushgam, the last usual halting place to Yarkund.

92. Here we were housed in rooms set apart for us in the travellers' resting place, a large court-yard, on three sides of which were little rooms. In the garden adjoining vines trellissed on frames were laden with bunches of long white grapes of delicious flavour. In the evening a messenger or Mahrambashee arrived from the Dadkhwah, with a present of dresses, and a request that we would honour him by wearing the Yarkundee costume as we entered the town. These garments consisted of a suit of under clothes of plain chintz, over which a gown of fine China silk was to be worn. Broad trousers of silk padded with cotton were added, and a pair of long black leather boots. Over all, a large choga or cloak with sleeves of Kokund silk, very gorgeous in colour, was to be thrown. The question of wearing Mahomedan costume had been debated amongst us, the argument against abandoning our national garb being very strong, but fortunately it had been decided for us by the Yarkundee tailor, who had made the clothes without taking our measure; so we compromised the matter by merely wearing the choga.

93. Next morning, finding the river at the point where the high road crosses it too deep to be forded, we followed its right bank till we reached Yungi Bazaar, and there halted for the day, so as to send part of our baggage across the stream in a boat, we following the next day. Yungi Bazaar is an instance of the progressive character of the present rule. A few years ago the country round was a swampy wilderness. But last year the Dadkhwah cut a canal through the tract, and draining the swamp, brought the whole under cultivation. Agriculturists were induced to settle by liberal grants of land, and a large bazaar was built in which weekly markets are now held. Thus peaceful industry thrives in Yarkund.

94. On Tuesday, the 23rd August, we made our entry into the city of Yarkund. Leaving Yungi Bazaar at 6 a.m., we rode for about a mile to the bank of the Yarkund River, which at that time of the year was about the size of the River Ravee with a more rapid stream. Three boats of rude construction, like long punts, plied at the ferry. They were large enough to take 15 horses with their loads at a time, but the passage was much delayed by the want of skill on the part of the boatmen, who frequently missed the proper current and were swept far down the river. We sat on the bank for some time till our turn came, and occupied ourselves with reading English newspapers just received. This was the first post which had ever been sent from England to Yarkund, and all things, distance and difficult roads, being considered, it is worthy of record that in the heart of Yarkund, where not only no Englishman had ever entered till Messrs. Shaw and Hayward made their venturesome journey last year, but the very idea of such a visit was pronounced to be madness, we in 1870 were quietly seated on the river bank, surrounded by listening and understanding Yarkundees, whilst we read out and translated articles from the "Mail" and "Saturday Review," which had been penned in London only two months before.

95. Having crossed the river, we were met by Munsoor Khoja, the Sirkar or Superintendent of Yarkund, with a small retinue followed by parties of citizens, who

who fell in and helped to swell the procession. In this way we continued to increase our ranks, till, as we approached the city, our numbers presented the appearance of a respectable body of cavalry.

96. For about five miles our road lay along the marshes of the river and richly-clothed meadows. Suddenly, as we rounded a point in the road, we saw before us the object of our weary four months' journey. A long white line, here and there partially hid by tall trees, showed us the walls of the city of Yarkund.

97. As we drew near we found the sides of the road lined with eager spectators, and our entrance to the gates of the town was through a thick row of men. A few rose up to salute the Mirza and officials who rode on ahead, but the majority sat down in proper Yarkund fashion and eyed with evident curiosity the features and appearance of the first European officials who had ever entered their city. Cashmerees, Chinese, Kalmaks, Tajiks, and Hindostanees were discernible by their distinctive features in the citizen throng, and more than once we exclaimed to each other, "Surely this or that man must be a European," from the fair Aryan features which the owner had.

98. Passing through spacious melon gardens, which reached quite close to the very foot of the low white mud walls of the town, we reached the western gate of the city. From the crenellated battlements women, neither fair nor young, looked down upon the gay passing scene, but no nearer were any females allowed by custom to approach the crowd of men. Crossing by a wooden bridge over a very narrow ditch, we entered the gateway, nominally guarded by a dozen or two of villagers, who in the absence of the regular army, which had gone forth to fight under the Atalik Ghazee, did duty as soldiers with a collection of sticks, pikes, and old axes, which might have been taken from some Chinese museum, and made them look for all the world like the rows of janissaries one sees in the museum at Stamboul. We rode through a portion of the chief bazaar, which differs little in appearance from other bazaars, whether in India, Cairo, or Constantinople, except that here no minarets or lofty buildings are to be found to give an imposing effect to the scene, or to break the low level line of single-storied houses. The passage through the street was too rapid, and the crowd was too great to permit our examining the bazaar minutely. After threading bye-streets and passing sundry colleges or large schools, we emerged from the city, and at a distance of 500 yards came to the gate of the Yungi Shahr, or new city as it is called, which was built by the Chinese to overawe the larger city close by. The passage between the two towns was marked by ruins of houses formerly devoted to the pursuit of unlawful pleasure, and destroyed with their inmates by order of the Atalik Ghazee. On a small eminence on our left, a human head fixed on the top of a long pole told its own tale of the character of the present rule.

99. To our right the wall of the Yungi Shahr extended till it joined a bastion, the scene of a bloody struggle between the Kokund troops, under the Atalik Ghazee and the Chinese garrison, the commander of which, finding all hope of further defence in vain, sprang a mine and blew himself and followers into the air. This Yungi Shahr is now kept as the cantonment of the dominant Kokundee army, and is the abode of the Dadkhwah and chief officers. As we entered the gateway, we were saluted by a guard a little more military in appearance than that we had seen in Yarkund proper, but still very far from having the warlike look which should belong to a body of men who in a few years have conquered a country twice the size of Great Britain. Some of them wore red chogas, fastened at the waist by a leather belt from which hung pouches, a bullet mould, a knife, &c. They wore swords, and a few had pistols, but this latter weapon, I found, was not much prized by these soldiers. On showing my own revolver to Mirza Shadee one day, and asking him if he had brought many with him from Calcutta, he replied, "No, I don't care for these weapons. When fighting comes to such close quarters as that, it is time to give up!"

100. The matchlocks used by these soldiers have very thick barrels with small four-groved bore, the bullets for which are cast in neatly cut slate moulds. Each gun has a two-pronged rest, which, when the gun is slung over the shoulder, gives it the appearance of having a double bayonet.

101. Passing by this guard and penetrating the streets of the town for about 200 yards, we arrived at the residence set apart for us. Entering a narrow passage, we passed through a gateway on the right of which was a courtyard, on all sides of which were small rooms. This court was intended for our followers; on the opposite side was a yard, leading to a stable, fitted up with rocks and posts for tying up the horses, and other arrangements, betokening a care for horses which would not be surpassed even in an English stable. This is quite in keeping with the Yarkund, or rather the Turkee custom everywhere. Dependent as these people are on their horses for locomotion, these animals receive from them as much care and attention as any member of their family would have.

102. Passing by this stable-yard we came to a small garden, in the centre of which was a tank filled with water from one of the numerous canals, and lined with young poplar trees. On the left were rooms newly built, and well carpeted with woollen carpets and felt rugs, and on the right a door let us into a small court, where we found a suite of three rooms which had been built expressly for our use. In the centre of this building was an open kind of hall, in which queer fashioned but richly covered chairs and painted tables told of a successful attempt to introduce English habits into Yarkund. A high wall surrounded the whole courtyard, and the only view we could obtain was of the battlements, from the top of which a sentry pacing up and down could command a view of our movements.

103. The usual dusterkhan of fruits, food, &c., was brought, and then we were left to rest ourselves after our long journey.

104. Mr. Shaw had found on his first visit to this country that it was considered correct for the visitor to hasten to present himself before the authorities, and this custom quite accorded with our views, for we were desirous to lose no time in seeing the Dadkhwah and arrange for our return journey, unless indeed we could be assured that the Atalik's speedy return justified our departing from the instruction I had received. When, however, we proposed to pay our respects to the Dadkhwah, various excuses were made, and I learned that it was the wish and intention of the authorities to do all in their power to induce us to remain till the pleasure of the Atalik regarding our disposal should be known. Amongst these Asiatic nations, an ambassador, when once he arrives in the country to which he is accredited, becomes the guest of the ruler of that country, and is supposed to submit himself completely to that ruler's wishes. The idea of an ambassador exercising any volition of his own regarding his movements or his departure is one which they cannot comprehend. When, therefore, I found myself compelled, in the circumstances stated, to return to India at once, I perceived that my doing so might give great offence, and that I could only get away by assuming a very firm demeanour, at the same time giving no handle for just offence, which might be turned into an excuse for detaining us.

105. On the morning after our arrival, hearing that Ibrahim Khan, whom I had sent through Yasseen and over the Pamir Steppes to Yarkund, had arrived, and was kept in confinement by the Dadkhwah. I sent a message requesting that he might be sent to me. In a short time Mirza Shadee brought Ibrahim Khan, and apologised for his having been kept in confinement. I had instructed Ibrahim Khan to maintain his concealed character only until he reached the confines of the Atalik's territory, and then at once to make himself known. This he did, and thus any suspicion which his appearance by another route might have caused was dispelled. Ibrahim Khan's account of a very interesting journey over a line of country almost entirely unknown, except, I believe, through the writings of Fa Hian, a traveller of the fourth century, of which I pretend to no knowledge, but regarding which we may hope to be enlightened by our greatest living Oriental authority, Sir H. Rawlinson, will be given hereafter.

106. Our first interview with the Dadkhwah took place on the afternoon of the 24th August. At the hour appointed, Mirza Shadee came to escort us to the palace. According to the agreement made with him at Leh, we all three wore our proper costume, and not Yarkundee garments. He asked us to walk to the palace, which was only about 300 yards distant. But knowing that with these

these people to go on foot is a marked sign of degradation, Hindoos and all "infidels" being prohibited from riding or wearing a turban in Yarkund, I insisted on riding, and having selected suitable presents of guns, gunpowder, English clocks, velvets, brocades, &c., we started off in procession through a crowded street, and passed a small park of artillery, if a few old guns of curious shape deserve to be dignified with such a title, till we reached the palace. Dismounting at the gateway, we entered a large inclosure in which soldiers dressed in red, yellow, and other gay colours, were seated on the ground in no regular order, and quite at their ease. Then turning to the right we passed under a second gateway, and entered a courtyard in which were larger empty halls. From this we passed into an inner courtyard, at the entrance to which soldiers armed with matchlocks were drawn up, At the further end, we ascended two steps, and were ushered by a side door into a spacious hall, at the threshold of which we were met by a little man, plainly dressed in a white turban, and the usual parti-coloured choga. This was the Dadkhwah Mahomed Yoonus, Governor of Yarkund, and second in rank to the Atalik Ghazee. He, like his master, is a native of Kokund, and, unlike him, has risen to distinction by the use of his pen, rather than by the use of the sword, After the usual salutations, he led us to a doorway towards the end of the room, and seated us on cushioned carpets. With the exception of Mirza Shadee and my Moonshee Dewan Buksh, no other person was allowed to enter the hall. The Dadkhwah commenced conversation by asking after our health, &c., and expressed his distress at hearing of the fatigues and troubles we had undergone. The conversation was altogether of a friendly and mutually complimentary character, for which the Persian language is specially suited. On asking him what news he had of the Atalik Ghazee, he merely replied with "Alhumdullila," "Praise be to God," which was a signal for us to offer our congratulations on the victories he had gained. Shortly afterwards, at a sign given by the Dadkhwah, 16 mahrum bashees or pages entered the room, bearing trays of fruit, sweetmeats, &c., and, as a matter of course, the teapot made its appearance. I then displayed my presents, and the ceremony ended by robes of honour being thrown across the shoulders of each of us, after which we went back to our quarters.

107. The next day or two was spent by us in anxious deliberation what course we should pursue for it was very evident that nothing was further from the Dadkhwah's wish than that we should leave the country without seeing the Atalik. In fact he was bound to obey the orders of his master, and disobedience of the Atalik's orders might lead to the forfeiture of his life. We were given therefore to understand that until the Atalik sent orders for our disposal, he could do nothing. At first the mode in which this endeavour to detain us was made, was such as would probably be adopted by all Oriental despots. The Dadkhwah ridiculed the idea of our going away, and some of his actions were doubtless intended to intimidate us into acquiescence. Finding this fail, he had recourse to earnest and incessant supplication, sending deputation after deputation, with letters and presents to coax us into remaining. At this juncture we had recourse to the good offices of Kazee Mahomed Yakoob, who having left us near Sanjû, as I have already mentioned, had come to Yarkund and taken up his abode near the Dadkhwah's palace. Visits and friendly messages and presents had been interchanged between us, and I observed that the Dadkhwah paid the utmost outward respect to this nephew of the Atalik. The Kazee has shown in his frequent conversations with us a degree of liberality and enlightenment which was the result of his long residence at Constantinople, and his contact with European civilisation. He could understand what was palpably beyond the comprehension of a man like the Dadkhwah, wholly unacquainted with any but his own despotic customs, the importance of offering no hindrance to the execution by me of the orders given by my own Goverment, and in this light I addressed myself to the Kazee, and found that I had not made a mistake. He at once told the truth that the Atalik was engaged upon a campaign which would probably last for a long time, and it would be in vain for us to expect to see him for some time. He expatiated on the frequent victories of his uncle, and gave the reins to his imagination by describing the slaughter in one battle as so great that it took a man two days and a night to walk over the dead bodies of the enemy. This tone of exaggeration regarding the prowess of the Atalik is adopted with favour by his followers, and Mirza

Shadee one day gravely assured us that the Atalik's strength was so great that one day, being angry with one of his courtiers, he gave him a box on the ear, and the force of the blow was such that the man made six sommersaults and then fell dead.

108. The Kazee then told me that the Dadkhwah wished by every means in his power short of violence or ill-treatment to induce us to remain till the orders of the king arrived, when we should either be asked to go to his camp at Turfan, a distance of some 300 miles, or should be kept at Yarkund or Kashgar till the king returned from his campaign. The opportunity thus held out of being the first Europeans who had ever visited the countries north of Yarkund, and of opening out a tract so little known to geographers, was indeed most tempting, but my orders were peremptory and must be obeyed, and this the Kazee fully understood and helped me to carry out, thus affording a pleasant contrast to Mirza Shadee, who, for some reason or other, had quite changed his demeanour from the moment of our entering Yarkund territory, one possible solution of which may be that Mirza Shadee, being ambitious and vain-glorious, had built sundry castles in the air for his own advancement, in consequence of his success in bringing an embassy from a great European power to his master. When, therefore, he found us determined to carry out our orders, and to return to India without seeing the Atalik, his hopes were at once dashed to the ground, and this caused him to give vent to ill-humour, which a more astute politician would have concealed.

109. Previous to leaving Ladakh or Yarkund I stipulated, as I have stated, with Mirza Shadee that we should be left completely unfettered in our movements in Yarkund, and that no confinement of our person should be attempted. This stipulation I strictly enforced, and we were enabled to see something of the surrounding country.

110. A quiet ride on a summer afternoon in the suburbs of Yarkund was a novel sensation and full of interest. Leaving the gate of the Yungi Shahr, we passed through gardens of melons and vegetables, in which small arbours, truly answering to the lodge in a garden of cucumbers, gave shelter to the owners from the heat of the sun. During the whole time of our visit to Yarkund, we found the air filled with a dusty mist, which somewhat veiled the rays of the sun; but the temperature in daytime was warm, considering the elevation of Yarkund, 4,000 feet above the level of the sea. Passing these gardens which encircle the city, we rode along a broad well-defined road, on each side of which fields of millet and wheat were ripening for the harvest. Our Hindostanee followers were astonished to see the spring and autumn crops of their own country growing here side by side and ripening at the same time. Canals of water crossed our path perpetually. Along this road, which led to the north, one might see every day couriers hastening with despatches to or from the Atalik's camp. These men have to ride right through the journey, changing their horses at each stage of 15 or 20 miles. They travel at a steady yulga or amble of six miles an hour, and seem to know no fatigue. Just before our arrival a band of 100 captive Tunganis, old men, boys, and some women amongst them, was brought from Turfan to be exhibited in Yarkund before their final fate should be determined. I fear the chances of their escaping the scaffold were but small.

111. On the south, and in fact almost all round Yarkund, suburban villages, and detached houses with orchards and gardens, present a pleasing view. The traveller rides along pretty lanes well shaded with large poplar trees, or follows the course of a canal or branch of the river, whose banks are covered with the weeping willow. Here and there wooden bridges of rude construction have to be crossed. Everywhere there were signs of peaceful active industry, and the peasants would look up from their work with pleased inquisitive eyes at the strange appearance we must have presented to them. The Yarkund fashion for the higher classes of ladies is to leave their houses during the day and spend some hours in the gardens outside the walls. The lower class of women occupy their time in embroidery, at which they are skilful hands, and wander about with perfect freedom. Though it is said that women are not allowed to go about unveiled in Yarkund, and a very thick leather strap was shown me as the instrument used for enforcing obedience, I cannot say that I found the ladies of Yarkund

Yarkund less curious than ladies elsewhere, and ruddy faces, with eyebrows well blackened by some dye to add to their beauty, peered at us from all sides as we rode through the streets.

112. Owing to the tortuous conduct of Mirza Shadee some difficulties arose for a time, which however we got over. But I thought it advisable to avoid the possibility of offence being taken where none was intended to be given, so that when the Dadkhwah sent subsequent invitations to us to visit the gardens and other places of public resort, we excused ourselves and remained in our quarters till the day came for our departure.

113. When the Dadkhwah, who was in a very difficult position as regards us in the absence of the Atalik, found that all hope of our remaining was at an end, he with true Oriental politeness sent messenger after messenger to ascertain our wants for the journey, and was almost offended because we would not avail ourselves of his offers. Dresses for all our followers and fur cloaks for ourselves were sent in abundance, and one morning two men came carrying on a pole suspended between them 40 pairs of top boots, for the manufacture of which Yarkund is famous.

114. One very necessary item for our journey, however, he apparently dared not supply. Baggage animals had been promised to be given, and would doubtless have been supplied had we left with the Atalik's permission, but in the present circumstances he not only did not supply them, but begged me to write a certificate that he had done nothing to facilitate my departure, and that my departure was my own act.

115. This certificate I of course gave, and then by the aid of Tara Singh proceeded to purchase and fit out about 70 ponies. Mirza Shadee at this juncture behaved very ill, and would probably have prevented our getting away at all, had it not been for the energy and fertility of resource of Tara Singh, whose unsparing activity and good-tempered tact extricated us from what appeared at one time a formidable difficulty.

116. On the morning of the 5th September, which was the day fixed from the first for our departure, having sent off all our baggage, we went to take leave of the Dadkhwah. We were received much in the same manner as on our former visit, and had a friendly talk when he gave the usual parting presents, and we took our leave. We then bid a farewell visit to Kazee Mahamad Yakoob, whom we thanked heartily for the good offices he had exerted on our behalf, and then mounting our horses, and followed by a Yarkundee escort, we rode out of Yarkund. It is not necessary to give a detailed account of our journey homewards to Shadulla, as we traversed the same ground as we took going.

117. But I must record the good treatment we received on our return. It might have been supposed, and in fact I was at one time warned, that if we went away without seeing the Atalik, we should find scant honour shown us on the road. The contrary was the fact, and nothing could exceed the civility of all the officials we met. Each day special messengers arrived from the Dadkhwah bringing a silver ornament or a present of horses, or some little token of friendship, and a letter asking after our welfare, to which I replied by sending some English articles in return. Nor must I forget to notice the behaviour of the people. It had been said that the respect paid to us, as we neared and entered the city of Yarkund, was due to the partial adoption by us of the Mahomedan costume. On leaving Yarkund, I determined to wear nothing but our own clothes. I was strongly dissuaded from this, the argument used being that, if the people saw us without the usual honorary garments, it would be supposed that we left in disgrace, and we should therefore receive no respect. But I felt that we ought not to filch, as it were, a false respect from the people, given under the erroneous impression that it was offered to Mahomedans, and that whether we met with honour or dishonour, we ought to receive it as Englishmen. The result proved the correctness of these views, for it was impossible not to be struck with the very marked respect shown us by the villagers and travellers whom we met on the road. Riders dismounted from their horses as we passed, and, as a rule, the spectators bowed, crossed their arms, and uttered the salutatory *salaam aleikum*.

 118. From

118. From Shadulla we took a new route back to Ladakh, following the line indicated to us by Dr. Cayley, who, when he left our camp on the 2nd August, made a tour of exploration to see if a more favourable route than that over the Linzì Thung Plains could be found. A reference to the map, which accompanies the report, is necessary in order to understand these routes. Leaving the valley of the Karakash a few miles above Shadulla, we followed the old or Karakorum route over the Suget Pass, 18,237 feet high. The ascent is very gradual and easy, except just at the summit, where fresh snow having fallen, the labour of crossing the pass was somewhat severe. At a distance of 12 miles from this pass on the south side, we reached an encamping ground known as Mullik Shah, where no grass or sign of vegetation is found to mark the spot. From this point, leaving the old road, we crossed the Dipsi Kol Plain, a large bare plateau at an elevation of 17,000 feet. Here the cold began to be severe, the thermometer not rising above freezing point during the day, and falling below zero at night; the lowest point to which it fell on our return journey being 12 degrees below zero. Having crossed this Dipsi Kol Plain and surmounted an easy pass, we entered a valley leading us to the Upper Karakash river, along the bed of which our course was taken for five days. When Dr. Cayley travelled over this line two months previously, he found grass in more or less abundance at nearly every stage. But by the time we passed over the same ground, this grass had disappeared, partly having been grazed away, and in many places being hid by the snow which had fallen early in the season. Whatever was the cause, the result was that for seven days our animals did not taste a blade of grass; but such is the hardy nature of the Yarkund ponies that none of them died from exhaustion, though in the course of 24 hours we lost six ponies from internal inflammation, caused by the mixture of dâl pulse with the barley, of which we had run short.

119. Leaving the Upper Karakash river, near its source, we crossed by a low pass on to the head of the Linzì Thung plain, and thence making two marches, for the most part of the time through stony and narrow ravines, we came to the Chang Lung La range, crossing which we entered the Changchenmo valley, and found ourselves once more in Cashmere territory. Dr. Cayley, whose exertions to send us out supplies and assistance of all kinds, placed every member of this expedition under deep obligations to him, came as far as Gogra to meet us. From this point we traversed the same route by the Pangong lake, which we had taken on the outward journey, and reached Leh on the 12th October. Here the expedition was considered virtually at an end, and it was no longer necessary for us to keep together. I came on ahead, with a light camp, by double marches to Sreenuggur, and arrived at Murree on the 29th October. Mr. Shaw left the camp just before we crossed the Chang Lung La, to explore the head of the Shyok stream, or of its tributaries. Dr. Henderson, whose valuable collection of birds and plants had increased day by day, journeyed slowly down from Leh, in order to loose no chance of adding to his contribution to Natural History. The total estimated distance from Lahore to Yarkund is 1,000 miles, so that the expedition travelled 2,000 miles in six months, over the highest tract of country in the world, and, I am glad to add, without losing a single follower, or having to part with a load of baggage. Though some of our servants had never seen a mountain before, not one failed in the long marches, or grumbled at the hardships they had to undergo.

120. Having given a narrative of our daily proceedings, I will now endeavour to comply with the instructions conveyed in the Foreign Secretary's letter, which I have quoted at the commencement of this report.

121. But it will be easily understood, from what has been already told, that circumstances were very adverse to acquiring as much information as under other conditions we might have gained.

122. The absence of the Atalik Ghazee from the seat of his government put an end to all our projects at an early stage after entering Yarkund boundaries, and my attention was devoted to arranging for our speedy return, and could not be diverted to seeking general information on topics of public interest, which, to be of any value, must be gathered with care and deliberation, and be well sifted and weighed; all this requires time and leisure; whereas from the time of our entering

entering the Atalik's dominions, till we left them, only one month and 19 days elapsed, of which more than a month was occupied in travelling, chiefly over uninhabited tracts.

123. I purpose, at a later stage in this report, giving more fully all the information I have gathered regarding the Atalik Ghazee, but I may remark here, that his absence from Yarkund was by no means a matter of choice, but of necessity. The disturbances which broke out in Aksû, Turfan, and Oorumtsi, required to be quelled vigorously and promptly, and this could only be done by himself in person. He therefore left his capital some time in March, and has been busily engaged ever since. At the time of our reaching Yarkund, he was distant from that city at least 500 and probably 700 miles, and the post carried, by hard-riding horsemen, took from 13 to 15 days in transit.

124. Anxiously expecting our arrival, however, not only had he ordered a completely new residence for us and our followers to be built, as I have already described, but the Atalik had also evidently instructed the Dadkhwah to use every endeavour to keep us in the country till he could return to meet us.

125. But though the desire of his Excellency the Viceroy, that I should express in person to the Atalik Ghazee the friendly sentiments of Her Majesty's Indian Government towards him, could not be accomplished, still the second, and what perhaps may be considered the main object of the visit was fortunately independent of the presence of the Atalik, and I trust it may be found that, for the promotion and facilitation of trade between India and Eastern Turkestan, this expedition has not been without success.

126. The first point to which attention may be drawn is the road. Until a few years ago all communication with Eastern Turkestan was carried over the Karakorum range, by a most difficult and dangerous route, on which 30 per cent. of the baggage animals invariably died. Other difficulties, caused by Nomad robbers and plundering officials, were complained of and finally removed, and this year the last political obstacle seemed to be overcome by the abandonment, on the part of the Maharaja of Cashmere, of all transit duties formerly levied on the Central Asian trade.

127. It only remained then for this expedition to proceed along the new line of road to the Yarkund territory, and examine the route and see what further facilities are required, and whether the trade is of sufficient importance to justify the adoption of other measures, or the outlay of money.

128. The first thing which must strike any traveller over the new route between Ladakh and Yarkund is the remarkably easy character of the road. Though two very high passes have to be crossed, yet the ascent is so gradual and easy that laden animals experience no difficulty whatever, except from the rarity of the atmosphere. From Chang Lung La to the Karakash, a distance of about 100 miles, there is a gradual descent, broken here and there by small ridges and crests.

129. Looking at it then as a question of gradients, this route has not been at all unduly praised. But there are great drawbacks to this praise; and sundry difficulties, which have hitherto rendered the route unpopular, have to be overcome.

130. The great elevation at which travellers have to live for many days is a most serious drawback, but it is common to all routes passing over the Karakorum range.

131. The severe exertion and exhaustion which baggage animals have to undergo is an important consideration. We found that the Ladakh ponies, even when in good condition, were unequal to this work, and none but the hardy animals from Central Asian steppes could survive. This is important, and helps to strengthen an opinion which I have frequently expressed, that this trade is much more to be sought by the inhabitants of Eastern Turkestan than by the people of Hindostan.

132. Another drawback is the scarcity of grass and want of good water for seven or eight marches. Grass, in small patches and of a coarse kind, is found

here and there, and might suffice for a caravan of moderate size; but traders travelling in large numbers would have to carry enough grain for their animals, so as to be independent of these scanty grazing grounds. This, however, the merchants are accustomed to do. The want of good water is another serious drawback, but one which a little attention and labour will speedily remove.

133. All that is required to render the new road popular appears to be to construct places of refuge at each stage, with store pits or inclosures, and to dig wells or make reservoirs for water, the prime cost of which would be the only expenses necessary, and would not exceed a few hundred rupees.

134. For this road, especially in its present arid state, we found that camels were admirably adapted. Fifteen of these animals, heavily laden with merchandise, met us as we were entering Yarkund. As we crossed the Chang La Pass on our return, and within a day's march of Leh, we overtook these same camels, carrying their full loads and looking just as stout and well as when we first saw them. Their owner told us that not one camel had died or fallen ill, and when heavy snow fell on the Linzi Thung, rendering the road somewhat impracticable for horses, these camels went ahead and made a path through the snow.

135. Two camels presented to me by the Dadkhwah accompanied my return. In some parts of the Upper Karakash we had to traverse large ice fields full of awkward chasms, up and down which our ponies clambered with much difficulty; over these rough places, as well as through the stony ravines to which I have already alluded, the camels travelled without any inconvenience. The result of this experiment has been to convince the Yarkund merchants in Leh, whom I saw, that camels are by far the best description of baggage animals for this journey. These remarks apply, however, only to the double-humped Bactrian camel, of which quantities are to be found in Eastern Turkestan. I know not how far the Indian camel would be suited to those high regions.

136. As Dr. Cayley, the commissioner specially appointed to superintend the traffic on this frontier, has very carefully examined the various routes, I will not discuss here their respective merits, but the remarks I have just made will apply to any line taken over those great heights.

137. Mr. Hayward suggested opening out a more direct route over the Kogyar Pass into Yarkund, thus effecting a saving of some four or five days. I had no opportunity of personally examining this line, but was given to understand by several traders that the Kogyar Pass is easier than that which we crossed to Sanjû, and perhaps as trade increases, the Kashgar authorities may see fit to open out that route. But this matter may be viewed with patient indifference for the present. It is enough to know that by either of the routes from the Changchenmo to Shadulla, and thence by the Kilian, or by the Sanjû Pass, there are no physical difficulties to the passage of any number of laden animals except over the last pass into Yarkund, for which yaks alone can be used, and for this the Kirghiz and Wakhi tribes are only too happy to increase their profit as carriers. There is at times difficulty in crossing some of the rivers, as this report shows, but this is only experienced by persons situated as we were and compelled to push on our way at all hazards. The merchants travel more leisurely, and can afford to wait for the subsidence of the waters. It is not with them, as the Roman poet tells us it was in his country, that

> Rusticus expectat dum defluat amnis, at ille
> Labitur et labetur in omne volubilis ævum.

On the contrary, we found traders waiting patiently on the river bank, whilst the river, swollen by the melting snows on the mountain tops, gradually decreased in volume and velocity, till in many instances they dried up altogether.

138. A short résumé of the growth of trade with Eastern Turkestan may be appropriately given here.

139. In

139. In 1863, when Mr. Davies submitted his report to Government, the total amount of trade *viâ* Ladakh with Turkestan amounted to 23,604*l.*=2,36,040 rupees. At that time the Chinese held possession of the country, and one great article of trade was opium, which was smuggled into the towns, and its export increased in spite of the Imperial prohibition of 1839. Goat skins dyed red from Noorpore were sent to Leh, where they are manufactured into boots; otter skins, piecegoods, cloths, spices, and drugs. Indigo and saffron formed the staple of commerce. Small as the figures are, they fell in a year or two to scarcely 1,00,000 rupees=10,000*l.*, owing to the expulsion of the Chinese, and the consequent cessation of the demand for opium. The extortions also of the Maharaja's officials in Ladakh were so excessive that few traders ventured by that route. But the attention of the British Government being directed to this quarter, orders were given for the abolition of all illegal exactions and the stoppage of oppression by the Cashmere officials. A British officer was appointed to reside each summer at Leh to watch and protect trade; and the good effect of these measures will be seen from the following figures:—

The trade with Turkestan was—

	Rs.	£.
In 1867 - - - - -	5,54,945 =	55,494
„ 1868 - - - - -	10,38,401 =	103,840

140. At the beginning of this year the Maharaja of Cashmere agreed by treaty to abolish all transit duty on goods passing between Turkestan and India, and the British Government has also relinquished the duties on seaborne goods intended for exports to Cashmere or Turkestan, so that we may reasonably expect to see the trade returns to show a further steady increase.

141. This year, on entering the Atalik's territories, we were greeted with the intelligence that passes had been given to traders for the export of 2,300 horse-loads of merchandise. Assuming the value of the merchandise to be about the same as in former years, this statement implies that the trade had increased from one lakh, or 10,000 *l.* in 1866, to 13 lakhs, or 130,000 *l.* Another encouraging feature was, that all the traders from Hindostan whom we met on the road expressed satisfaction with the result of their commercial transactions. These people generally in former years spoke doubtfully regarding their gains, and rather paraded their losses. But this year one and all confessed to having made considerable profit, and what was most satisfactory for us to hear, they expressed much gratitude to the Dadkhwah of Yarkund for the very liberal treatment they had received at his hands.

142. The truth is, that Kashgar, Yarkund, Khoten, and all the cities and towns of Eastern Turkestan being thickly populated, and having scarcely any manufactories of their own, are entirely dependent on foreign imports for every thing except food. Cotton is grown to a small extent, but of a good quality, and a few coarse kinds of cloth are made up. But this is a very infinitesimal item of supply to meet the great demand there is for garments of all kinds, and the inhabitants of that country look to the caravans which yearly come from Kokand or Budakshan, and latterly from India, to replenish their markets.

143. The former trade with China is now entirely at a standstill, so that tea, so essential to the existence of these Asiatics, can no longer be got from that country direct. Green tea alone is used by them, and this finds its way into the Turkestan market by various routes. Some goes from Bombay or Calcutta through Afghanistan, Bokhara, and Kokand; some takes the still more circuitous route through Kiakhta and Siberia, and thence southwards from Semipalatinsk, or even from Irbit to Yarkund, and then across the Terek Pass to Kashgar. Some crosses the Himalayan Passes by the route which we traversed. The Yarkundees pretended to be great connoisseurs in tea, and for some reason or other it was the fashion to despise every other kind but the best China green, though I observed with satisfaction that green tea grown in the Kangra Valley, and passed into the country under the name of China tea, was pronounced by the drinkers to possess a delicate flavour such as they delared no Himalayan production could equal.

144. Just at the time when we were in Yarkund the price of tea had fallen considerably, owing to the large supplies which had lately been received. Stocks which had been lying in the Oorumtsi store-houses had found their way further west, and large quantities had been sent in from all sides. Brick tea is not touched by any native of this country. But I was told that a curious kind was sold and much relished in Yarkund. This tea is dug out from the remains of an old city, about seven days' journey east of Khoten, which many years ago was overwhelmed and destroyed by the sands drifted from the great desert of Gobi.

145. Sugar, in small white cones, and sugar-candy in wooden boxes, bearing Russian characters outside, are imported from Orenberg through Yarkund. Indian sugar when imported finds a ready and profitable market. Russian bon-bons, with mottoes in that language, are to be seen frequently on a Yarkund dusterkhan.

146. Chintzes of all kinds and colours, long cloth, broad cloths, furs, otter skins, are of course in great demand. The profit to be derived from this branch of the trade varies considerably in different years. This year the Russian caravans not having penetrated so far as Kashgar, the supplies sent from India fetched good prices.

147. Arms of all kinds and ammunition are eagerly sought, the preference being given to English manufactures. Guns are, however, appropriated by the State, private individuals not being allowed to buy these weapons without the permission of the Dadkhwah. This officer told me that the percussion caps supplied by Russia were of very inferior quality and constantly missed fire, whereas the English caps were all good. On the arrival of the artificers whom Mirza Shadee brought with him from Hindostan and Cashmere, the Dadkhwah set them to make caps, and showed us a few which had been made, but he found to his dismay that he could not manufacture the detonating powder.

148. The exports from Yarkund to India are confined to three or four items, the most important of which this year, at all events, was churrus, known to all Englishmen as "Hashish." This intoxicating or rather exhilarating drug is extracted from a very fine quality of hemp which is grown on the borders of every field in Yarkund, and when sent to Hindostan yields to the importer a profit varying from 50 to 200 per cent.

149. Silk is cultivated in Gooma and Khoten and exported to India. But the process of winding the silk from the cocoons is clumsy, and the threads are not sufficiently carefully separated, in consequence of which it has a coarse appearance, which completely spoils its value in the Indian market.

150. Shawl wool of the very finest quality is brought from Oosh and Turfan, and usually is exported to Cashmere. This year, however, owing to the war on the frontier, trade with Aksû and Turfan has been interrupted, and little or no wool came to Cashmere. In this item of trade, however, the cessation of the supply has saved the merchants from heavy loss, for the outbreak of the war in Europe has stopped the shawl looms in Cashmere, and consequently there is no demand for the wool.

151. The remainder of the export trade from Yarkund is divided between gold-dust, felt rugs, carpets, ponies, &c. I give in an appendix a list of prices and cost of carriage.

152. Taking a general view of the trade question, I may say that Eastern Turkestan has to come to us or other civilised countries for almost everything, and, with the exception of a few staples such as I have enumerated, has nothing to offer us in return. It is therefore for them to seek us, rather than for our merchants to go there to seek them. Bearing this in view, our object has been to remove all obstacles in the way of their intercourse with us, and to encourage them to come over freely and frequently. With this object a fair was established at Palumpore in the heart of the tea-growing district of Kangra, and has answered its purpose well. In future, now that the Yarkund merchants have found their way to our Indian markets, and have seen, in the presence of English officers amongst them, a proof of our earnest desire to promote commercial and friendly intercourse with them, the necessity for securing their attendance

attendance at the fair is no longer so urgent, though its continuance is on every account most desirable.

153. For a full account of the country known as Eastern Turkestan, Chinese Tartary, and, as it is called, Dzungaria, I would refer to Williams' "Middle Kingdom," and to the papers written by the late Mr. Wyllie and Mr. R. Michell. But a very brief description of the country and review of its history may not be out of place here.

154. The whole tract of country between the parallels of 73° and 95° East longitude and of 45° and 36° North latitude, which, having now become more or less subject to the sway of Yakoob Beg, is loosely called Eastern Turkestan, comprises three distinct districts, which in the days of the Chinese rule were separate jurisdictions.

155. The first, which includes Khamil, and Oorumtsi, the Chinese Tihua-chow almost its westernmost point, is merely, so far as its civil and military establishments are concerned, the westernmost division of Kan-suh, the North-Western Provinces of China Proper.

156. The second jurisdiction, of which I'li or Kulja, the Chinese Hwui-yuan is the capital, is an enormous district extending west from the frontier of Kan-suh nearly to the Lake Balkash, and bounded on the south by what are known to the Mongols as the Tengiri Range, and to the Chinese as the Tien Shan, or Celestial Mountains. This region is otherwise called the Pei Lu, "the road north," that is north of these mountains. This tract was ruled by a military governor of the highest rank, whose authority extended northerly over the outer provinces of Tarbagatai, Kurun, Uliasutai, and Kobdo, and southerly to the cities in the Nan Lu. The Nan Lu itself, *i.e.*, road south of the Celestial Mountains, or what is more properly Eastern Turkestan or Kashgaria, is the third division. This tract is the heart of the kingdom formed by Yakoob Beg on the ruins of the Chinese power in these parts, and may be more minutely described.

157. Eastern Turkestan Proper lies between the Tien Shan Mountains and the Kuen Luen and the northern watershed of the Karakorum Range. To the west it is bounded by the Pamir steppes and the range known as the Belor Tagh and Alai Mountains, and eastward the line is gradually shaded off into the great desert of Gobi.

158. The whole area of this tract has been computed to be 80,000 square miles, the greater part of which, however, is desert waste, the cultivated parts being chiefly on the northern and western slopes, and along the course of the various affluents of the river Tarim.

159. Roughly calculated, the distance from east to west is about 400 miles, and from north to south 750 miles.*

160. If the heights given by the Russian geographers are measured by the same scale used by us, the mountains and passes on the north and west of Kashgaria are for the most part very much lower than the Kuen Luen and Karakorum ranges.

161. The elevations given are as follows:—

Peak of Tengri Khan	21,000
Ridge	17,000
Height in vicinity of Issyk Kul	15,000
Average heights in the Tien Shan range about Issyk Kul	12,000

162. The principal passes in the Tien Shan Range by the Chatyr Keul and Sonkul Lakes are from 10,000 to 11,500, one only, the Muzart Pass, being 16,000.

163. The passes on the road to Ladakh range from 11,000 Zoji-Lâ in Cashmere, to 18,000 and 19,000 feet in and out of the Chang-chenmo Valley.

164. The

* *Note*—Williams makes the whole tract reach nearly 1,250 miles from east to west, and vary from 300 to 500 miles in breadth.

164. The principal towns in Kashgaria are Kashgar the capital, Yangi Hissar, Yarkund, Kurghalib, Gooma, Ilchi, and six other towns which constitute Khoten, Aksû, Bai, Sairam, Oosh, Turfan, Karashahr, Kucha.

165. The rivers are the Kashgar, the Yarkund, Tisnaf, Sanjû, Arpalak, and Karakash, which unite to form the Tarim. It is said that this river flows into the Lake Lob or Lok-nor, but the general opinion expressed by all whom I asked was that it flowed into the great desert, and is lost there.

166. The distance of Kashgar from Kokund is said to be 400 miles. The Russian outpost on the river Naryn is not more than eight days' journey, or 134 miles, from Kashgar.

167. I have been able to gather some information which may throw light on sundry passages in the narrative of travels given by Marco Polo. After describing the city of Khoten, he speaks of the province named Peyn, which was said to be of five days' journey in extent, in the direction of east-north-east, and contained many cities and strong places, the principal one of which was called Peyn. Further to the east-north-east, Marco Polo speaks of the province of Charchan, which in former times was flourishing and productive, but had been laid waste by the Tartars. Its chief city was called Charchan. Through this province run several large streams in which are found chalcedonies and jaspers, which are carried for sale to Cathay, and such is their abundance that they form a considerable article of commerce.

168. Neither of these provinces is marked on our maps, and hitherto no successful attempt has been made to identify the names of the towns or to fix their position. The only effort to do this, as regards Peyn, seems to have been made by D'Anville, who places it seven degrees of longitude from Khoten. Peyn is also written Poim or Poin, and this small piece of information helped me to identify the places, as I shall show.

Charchan is supposed to correspond with Schachan, and De Guignes speaks of a district named Chen-Chen to the south of Hami and near Lake Lop.

169. I made many inquiries regarding these provinces, and for a long time without success, till one day I met a very intelligent Tajik officer who had formerly been a merchant, and only lately had come into the service of the Atalik. This man had travelled backwards and forwards between Moscow and the various towns of Central Asia for the last 15 years, and was, if I may so call him, a living Central Asian gazetteer. I asked him about the mines of gold and precious stones said to exist near Khoten, when he told me that these really came from a place called Charchand, which he said is a large town at the foot of the range of mountains which run from the south of Khoten to China. Charchand is 40 days' journey from Khoten, and the road skirts the foot of the mountains the whole way, and traverses 12 streams of considerable size, which unite to form one river that flows into Lake Lop. Charchand is inhabited by Tartar Mahomedans. Manufactures are carried on there, and a trade between it and China exists. The route to China from Khoten used to pass by this town. Judging from the data given by my informant, I should say Charchand might be placed somewhere about the 97th degree of east longitude, and perhaps about 36th degree north latitude. It is evident from my informant's statement about the 12 rivers and the grassy slopes along which the road passes, that the high range of the Kuen Luen, instead of ending, as some of our geographers make it do, not far east of Khoten, extends the whole way till it joins the mountain system of China. My Tajik friend spoke Persian with the very broad accent peculiar to the dialect of Andijan, the letter *a* being made to sound like *o*. He told me that these rivers flowed into the lowland, Paeen-mulk, which he pronounced *Poin*-mulk, and this gave me a clue to identifying Marco Polo's Peyn province. Colonel Gardiner, whom I met in Sreenuggur, and whose extensive acquaintance with the countries of Central Asia, over which he travelled nearly half a century ago, is well known, threw light on the discussion which is carried on in geographers' circles regarding the Bolor country, by saying the word "Bolor" is in truth bâlâ, or high. My Tajik friend pronounced bâlâ in his broad dialect Bolor, and thus, I believe, the Bolor tract and the Peyn Province of Marco Polo are really the Persian translation of highland and lowland.

170. He

170. He said that in this Peyn or lowland province large cities formerly existed, which have been overwhelmed and buried in the sand. Mr. Johnson alludes to the same story in the report of his visit to Khoten; and from several sources we heard of the large town called Tukla Makan in the desert of the same name, which has been partially restored to light, possibly by excavation, but more probably by the drifting sands having shifted their position.

171. Tales of the strange noises heard by persons venturing on the great desert of Gobi, and of the spirits who infest the place and molest travellers, similar to those told by Marco Polo nearly 600 years ago, were recounted to us by my informant.

172. No trace of the Nestorian Christians could be found, and any buildings they erected have long since perished. Nor in the customs or habits of the people is there any sign of a purer faith than that of Mahamed.

173. Concerning the position of Yarkund there has been much diversity of opinion, Colonel Yule, in his "Cathay," giving no less than six different valuations of the longitude, ranging between 76° 3′, fixed by the Chinese missionary surveyors, to 77° 30′. Mr. Shaw, who took careful observations all through our journey, fixes the position of Yarkund at 76°.

174. Similarly, regarding the size and population of Yarkund, conflicting accounts have been given. Atkinson says there are 14,000 houses, and perhaps 100,000 inhabitants. Michell says Yarkund has 32,000 houses. The town is surrounded by a wall, eight fathoms in height, and 17 miles in circumference, with four gates.

175. Williams says the stone walls are three miles in circumference, and the population doubtless exceeds 200,000. Other writers, I believe, put the population at 120,000. Mr. Davies says Yarkund contains a population probably exceeding 50,000. It has five gates and a mud wall all round, on the top of which a cart might be driven. It is loopholed, and has no ditch.

176. Huree Chund, a most intelligent observer, undertook, at my request, to make a rough plan of the city, a copy of which is given in the Appendix. He paced the outside of the walls, and found the circumference to be 9,100 paces. This would give an area of little more than a square mile. Inside the city, near the wall, are gardens attached to the houses, and in the parts which we visited we saw much space given up to courtyards, thick walls, &c., so that probably the habitations, except in the main bazaars, are not very closely packed together. Judging from similar towns in India, I should put the population at a more moderate figure than those generally given. The bazaars are crowded during the day with villagers from the suburbs, who return to their houses at night. These would, perhaps, give the appearance of a larger multitude. The Cashmeeree Akskal gave the following distribution of the population :—

People from	Badakshan	2,000
„	Baltistan	2,000
„	Cashmere	1,000
„	Andijan or Kokund	3,000
„	Tunganis	500
„	Yarkundees	50,000

Of these Yarkundees about 5,000 are merchants, and as many more are menials or beggars, and the rest either own land which they cultivate themselves, or till the ground for others.

177. I should say from the foregoing data that 60,000 would be the outside figure at which to put the population of Yarkund, and this calculation may perhaps be some guide in enabling us to arrive at an idea of the whole population of the country. The Russian authorities vary their estimate from 3,000,000 to 20,000,000, and even 30,000,000. Williams only gives the population of the chief towns. Now the greater part of Eastern Turkestan is desert steppe, cultivation and habitation existing only where rivers make their way. According to Mr. Michell there are about 70 towns and large villages. Taking Yarkund as the largest, at, say, 60,000, we should perhaps find that M. Valikhanof has not been very far wrong in reducing the total figure to 580,000 souls.

 178. The

178. The stone walls eight fathoms high, on the top of which a cart might be driven, is not quite a correct description. There are no stones at all in Yarkund; all the houses are built of sun-dried bricks, which acquire a remarkable degree of hardness; the walls are of mud, and about 18 feet high, with crenellated battlements. There are five gates to this town. The citadel of Yungishahr is 700 paces distant from the town, and is built in the form of a square, each side being 1,000 paces long. There is only one gate leading to the town of Yarkund.

179. There are 120 Mohullas or wards in Yarkund, of which the Cashmeeree quarter is said to be the largest. In each ward is a school where the Koran is taught, and little else. The number of colleges has been given as 60, but I believe this to be a great exaggeration. My informant said there were only three or four colleges where education of a superior kind was given. As we rode through the streets we saw two of these colleges. The streets are wide enough to admit of the passage of carts, and the bazaars resemble very much the streets in Cairo, but the absence of second stories, except here and there a low upper room being visible, gives a very unimposing character to the town.

180. The population of Eastern Turkestan, or Kashgaria, is Mahomedan, and chiefly of the straitest orthodox or Sunni faith. The few Chinese who escaped massacre had to cut off their pig-tails and become Mussulmans. Shia Mahomedans are held in great disrepute. The population is said to consist chiefly of Uzbeg Turks, and speak the Jagathai dialect of the Turki language. Hindoo merchants are tolerated for the wealth they bring into the country, but they are not allowed to ride or wear turbans. In the time of the Chinese rule the Mahomedans fell into lax habits, and have only been restored to a strict observance of the rites of their faith by the adoption of stern measures by the Atalik. Some of them, in talking to one of our party, secretly dwelt with fond regret on the good old days when roast pork was indulged in by them, and liquor was freely taken. Kazee Mahomed Yakoob, when speaking of the Atalik's strict rule, acknowledged that one advantage to be derived from travelling was the relaxation from prejudices which resulted from contact with other people, and he confessed that his uncle would be none the worse for adopting more liberal ideas on the subject of ritualism. It appears that the Atalik aims at framing his kingdom on the model of Bokhara, the true support of Islamism; and in the arrangement of his court, as well as in the maintenance of the true faith, he adopts all customs which are popular in Bokhara. Imitating the same model, he is now styled in all correspondence the "Badowlut," or the Prosperous One.

181. I do not attempt, in this report, to give a full description of the manners and customs of these people, because, in the first place, our stay was too short to enable me to make those minute inquiries which alone would enable me to put forth statements to be fully relied on. Moreover, Mr. Shaw, whose lengthened residence in the country, and great aptitude for acquiring information, render his writings of peculiar interest and value, has lately published an account of his first visit to Yarkund and Kashgar, and has therein chronicled, in an abler manner than I could pretend to, all the facts that he could glean; and further, the similarity between the people of Kashgaria and the Khanats being very great, the general reader will derive all possible information from the lively pen of Mons. Vambery, in his "Travels in Central Asia."

182. The history of Kashgaria goes back to the earliest ages,* when Cambyses received as the dower of his bride, the daughter of Afrasiab, and mother of Cyrus, the province of Khoten, and fixed his capital at Kung, which perhaps is a corruption of the word Yarkund. In the 14th century this province fell under the rule of the Khojas, or saintly descendants of Mahomed, who came across the Alai mountains from Bokhara. For three centuries these Khojas held sway over the country, but dissensions having lasted for some time, the weaker party, in an evil moment, applied to China for aid, and in the year 1765 the whole country passed under the Chinese yoke. The representatives of the Khoja dynasty then fled to Kokhund, whence they made perpetual attempts to recover their kingdom,

* *See* Malcolm's "History of Persia," vol. i, pp. 40 and 224.

dom, the most formidable insurrection being headed by Jehangir, in 1826, when he was treacherously seized and sent to Pekin, and beheaded there. The trouble and expense of quelling this insurrection was made an excuse for upwards of 20 years after for levying an extraordinary taxation on the empire.

183. In 1864-65 the general disorder of the Chinese empire, caused by the rising of the Tunganis, presented a favourable opportunity to the Khojas for making another, and this time successful, attempt to recover their kingdom. But, as is well known, though Yakoob Beg was sent from Kokhund to conquer Kashgar and the surrounding country, under the standard of the Khoja chief, Buzurg Khan, he merely made a show, and that only for a few years, of serving him as master. Buzurg Khan was utterly unfit to assert his own rights, and had rendered himself unpopular by his vices, so that Yakoob Beg had no political party to fear when he determined to set him aside, and openly assume the government in his own name. As an act of extraordinary clemency, Buzurg Khan, instead of being put to death, was sent across the mountains to India, with an order to make a pilgrimage to Mecca, and to remain there. I met him at Leh, two years ago, on his journey, but afterwards heard that he had changed his mind when he reached India, and returned to Kokhund, by way of Cabul and Bokhara.

184. Yakoob Beg having expelled or massacred all the Chinese, and having, by an act of gross treachery, made himself master of Khoten, lost no time in establishing a firm rule over the whole of Kashgaria, and during the few years he has governed the country, has shown himself to be "profoundly politic, wonderfully clever, and of great strength of mind." Messrs. Hayward and Shaw, who resided for six months at Yarkund and Kashgar, have described the vigour of his administration, signs of which were very plain wherever we went through the country. All the chief offices under him being kept in the hands of his fellow countrymen, Yakoob Beg has nothing to fear from internal insurrection so long as he is in power. According to his system of government, his lieutenants, such as the Dadkhwah of Yarkund, the Begs of Khoten, Aksû, &c., are responsible for the administration of their respective provinces; keep up their own armies, and defray all expenses from the revenues collected, paying the surplus to the Atalik of Kashgar. The power of life and death is reserved as a royal prerogative. During his absence from the capital, Alum Kulee, or Beg Bucha as he is called, assumes charge of that district, but the Atalik's first lieutenant is decidedly the Dadkhwah Mahamad Yoonus.

185. What the revenues of the country are it is difficult to find out, owing to the system just described, by which only the surplus, after all expenses are paid, is made known. In the days of Chinese rule, the customs at Yarkund were stated to yield over 45,000 dollars annually. The taxes were 35,400 sacks of grain, 57,569 pieces of linen, 15,000 lbs. of copper, besides gold, silk, varnish, and hemp.

186. On assuming the reins of government, Yakoob Beg abolished all taxes, except those sanctioned by the Koran, 1-40th of all produce being taken from the cultivators, and in special cases, such as orchards, vegetable gardens, &c., seven tungas=one rupee per tunâb, a measure of land. In customs 1-40th is levied from all Mahomedans, and 1-20th from everybody else. A strict guard is kept on all the roads and city gates, so that smuggling is next to impossible, and severe punishments are dealt to offenders; but honest traders have little or nothing to fear in Eastern Turkestan. The Dadkhwah has shown marked favour to those merchants who came from Hindostan, and does his best to encourage them. A pressing emergency arose this year for money, and the Dadkhwah took loans from the chief merchants in his city. Soon after, when the revenue collections were received, or when the monetary crisis had passed, the Dadkhwah repaid these loans, thus displaying a promptitude in discharging his obligations which even western nations might imitate.

187. When there was a demand for horses to be sent to the Atalik's army, the citizens received fair prices for any animals taken from them. It has been said that labour is always paid for, and that the villagers are treated with the same justice and liberality as I have described; but I am afraid, from the stories we

heard, that this good policy does not extend, just at the present time, beyond the merchants.

188. A few words may now be said regarding the war in which the Atalik is engaged against the Tungens or Tunganis. Who these Tunganis are has provoked much discussion, some maintaining that the Tungen is a name derived from the Turk word "remnant" applied to the late rebellious subjects of China, because they are supposed to be descendants of the Turks who followed Alexander the Great on his eastward expeditions, and remained to settle in the countries they conquered. Others say that the word is derived from the Chinese *tun-jen* or *tun-yen*, military colonists, and was given to these people because they were sent to colonise the country in the western extremity of the empire and all the land beyond the province of Kan-Suh. Whatever the derivation of their name, these Tungans were Mahomedans when they were first removed to China by the government, and though they have insensibly fallen into Chinese habits and customs, they to this day adhere to the laws of the Prophet, and observe strict rules of life, abstaining from drink, opium, and even from tobacco. Forbidden by the Chinese to fill high offices of state, these Tunganis were enlisted as soldiers, and, according to some authorities, were conspicuous for their bravery and martial spirit.

189. In 1862 the Tunganis had increased to 30,000,000 of people, spread over all the interior provinces of China, and in large numbers in Kan-Suh.

190. The cause of the rebellion has never been explained, but the fact is that, in 1862, 100,000 Tunganis broke out into insurrection in the provinces of Shensi, Kan Suh, Se-chuen, and Yunnan. After considerable fighting the insurgents were expelled from Kan-Suh, and forced to retire to the western district of Urumtsi (Oorumchee), which they took, and have ever since held.

191. In 1864 the Tunganis had possessed themselves of Aksû, and cut out the Chinese garrisons of Turfan, Kucha, Karashahr, Khamil, and other towns. They would have doubtless spread their power over the whole of Eastern Turkestan, had not Yakoob Beg appeared on the scene, and possessed himself of Kashgar. He soon after took Askû, and drove the Tunganis out of the towns south of the Tien Shan range, massacring Tunganis just as he had done Chinese.

192. The spirit of insurrection roused by these people spread itself to the farthest corner of the Chinese Empire, and infected the Kulmaks and Taranchi inhabitants of Kuldja For the following description of the Taranchis, I am indebted to Mr. R. Michell:—

193. In 1829, the rising of the Khojas in Kashgaria suggested to the Chinese the propriety of adopting the customary measure for providing against any further insubordination by deporting a large body of Kashgarians to the neighbourhood of Kuldja. From 8,000, to 12,000 people are said to have been thus removed after the expulsion of the Khojas. These people were put upon the soil, and were made to perform, under surveillance, servile duties for the Chinese military colonists. Being made slaves, and groaning under their many heavy burdens, these wretched people obtained the name of Taranchis, or "people of the bloody sweat."*

194. The news of the rising of the Hoi-hoi-tsi, or Tungans of Kan-Suh, does not seem to have stirred the inhabitants of I'lí to rebellion for some time. And the insurrection may not have excited the bulk of the population of Dzungaria, too busily occupied in agriculture and trade, had it not been for incidental circumstances which worked on the minds of the Tungans and Taranchis.

195. The incidental circumstances were these: The hostile fronts presented to the Russians by the Bokharians and Kokkandians; the warfare along the whole of the line from Kuldja to Tashkend, *i. e.*, along the whole extent of the northern trade route from China into Central Asia; the consequent collapse of trade, which threw most of the people out of their occupations; the gathering together in Kashgar of numerous fugitives from Bokhara and Kokand, which added to the fanatic element in all the countries to the east of the scene of Russia

* This name is also said to be derived from "taran," millet.

sian operations; the revolution in Kashgar; the sudden and easy deliverence of that place and of others from China; the impunity with which these defections were suffered to pass; the closing of the southern trade route, and lastly, the exaggerated accounts of the successes of the Tungans in Kan-Suh.

196. All these circumstances ripened the Taranchis for revolt. The appearance on the scene of the northern body of Tungans was the signal for the instantaneous rising of the Mahomedan Taranchis, who required no persuasion. The neighbouring Kirghizes, ever ready to plunder, were easily induced to side with them, under a promise of rich booty.

197. The result was a simultaneous massacre of the Chinese and Manchurs, the destruction of Chuguchak, the sacking of Urumptsi, Manassy, and Kur-Kara-Usu, and other small towns and villages, the appropriation, wrecking, and burning of all the Chinese stores, and the investment of Kuldja, its seizure, and the subsequent fate of its citadal and garrison.

198. Fifteen thousand of the inhabitants of Kuldja took refuge in the Russian dominions, but 90,000 remained to be enslaved. The Kulmaks, who remained true to the Chinese Government, decamped, some into the heart of the steppes, some into the Russian limits

199. Next came a division of the spoils among the confederates; and over this they quarrelled. The Tungans, boastful of their Chinese cultivation, asserted their own rights over the conquered country. The ruder Taranchis objected to a fresh subordination, and being the most numerous in Dzungaria, fell upon their allies, massacred the Tungans in Kuldja, and drove the rest beyond the limits of the I'li Valley, through Talk Pass. The Kirghizes, having enriched themselves with plunder, and fearing lest the Taranchis should make them disgorge, moved their encampments into the deserts and steppes, whence some of them were afterwards chased by the Kulmaks and obliged to take refuge in Southern Siberia.

200. Dzungaria Proper is now divided between the Taranchis and Kulmaks, thus: the Tarbagatai or Chuguchak district is in the hands of the latter, while Kuldja and the neighbouring towns are held by the former. They are both separated by the district of Kur-Kar-Usu, which, laid waste and abandoned, forms a neutral zone scattered with the rotting bodies of the victims of the rebellion, and freely roamed over by voracious wild beasts.

201. Of the form of Government among the Taranchis, the whileome slaves of the Chinese, we have no information. Russian traders and caravans are strictly excluded from Kuldja, so that what is enacting therein, although that place is only 67 miles distant from the Russian frontier, remains a mystery. The country is known to be peopled from the fact of the constant appearance of armed bands on the Russian lines, and from repeated incursions of marauding parties over the borders.

202. It has, however, been ascertained by the Russians, that the Kalmaks, who had retired beyond the Yuldus Mountains, have returned to their fields in the neighbourhood of Kuldja, These Kulmaks are ruled by an elderly woman.

203. A Tartar, who had returned from Kuldja, related at Fort Vernoë that he had seen this Kulmak ruler proceeding to an interview with the chief of the Taranchis. Her hair, he said, hung in long tresses down her back; they were so heavy with golden coins and other precious ornaments that they had to be supported by two men as she walked.

204. At the present time the Taranchis in and around Kuldja are said to number about 12,000.

205. After quarrelling with the Tunganis, the Taranchis became apprehensive of the danger of their isolated position, and sent emissaries to Yakoob Beg, requesting to be taken under his protection. This he was not able at once to afford them, though, from his conversations with Mr. Shaw in 1869, it appeared that he only waited for a fitting opportunity to move to their aid. This year the Tunganis seem to have become more troublesome, and through fear of them a second deputation was sent to Kashgar to ask for aid. It is also said that disturbances broke out in Aksû, and in consequence the Atalik left his capital in

March 1870 and moved with all his forces against the enemy. It was very difficult to obtain reliable information of the progress of the war, but the fact seems undoubted that the Kulmâks are fighting in company with the Atalik, and they and the Taranchis have accepted from him a prince of the Khoja House as their chief at Kuldja. The Atalik was said to have gone as far as Oorumchee, where he defeated the whole force of the Tunganis. But as he was also reported to be building a fort at Turfan, and could not leave the place to return to his capital, it is probable that the expulsion or extinction of the Tunganis will be a work of time, if it be accomplished at all.

206. I have said nothing in this report of scientific observations and explorations, because the credit of making them does not belong to me; but the reports of Messrs. Shaw and Henderson will give all the desired information, and will probably be considered to offer the greatest interest to the general public.

207. In concluding this report, I would draw attention to the great services rendered by Mr. Shaw. It is not merely because I found him an invaluable companion that I now write of him. Having experienced the difficulties and trouble of a journey to Yarkund, even when backed up with all the prestige of being accredited agents of the British Government and the invited guests of the Atalik Ghazee, I cannot sufficiently express my admiration at the enterprising energy and patient endurance which prompted Messrs. Shaw and Hayward to undertake their perilous journey, and to sustain them during a dreary period of confinement. To the tact displayed by Mr. Shaw, and to the friendly feeling which he inspired the Atalik and his officers to entertain towards the British nation, we are mainly indebted for the safety of the present expedition.

208. The value of Dr. Henderson's services will be apparent from a perusal of his own reports, and from inspection of the rare collection of plants and birds which he so indefatigably made. Not only in his capacity of medical officer did he earn our thanks, but in times of difficulty I was indebted to him for sound advice, which I now have much pleasure in acknowledging.

209. I have already alluded to the arrangements made by Dr. Cayley: had his instructions been more carefully followed by the Ladakh officials, we should have been spared much inconvenience.

210. I beg to notice the service rendered by Mir Akbar Ali, Khan Bahadoor, C.S.I. He was in charge of the portion of the camp which I left behind at Lokzay, and brought it on to Yarkund, joining me at the town of Karghalik. Of Tara Singh I am bound to speak in the highest terms of gratitude, for to his admirable conduct, his fertility of resource, his untiring energy and activity, we owe our departure from Yarkund, on the date fixed. His knowledge of the people, and the advice he gave based on that knowledge, proved of the greatest service to me. Throughout the journey he and his brothers spared themselves from no fatigue to ensure the comfort and safety of our camp, whilst his hearty good temper proved invaluable in cheering the spirits of our followers in time of difficulty or weary exhaustion.

211. I would next notice the service rendered by Faiz Buksh. Having travelled through Afghanistan, Budakhshan, and across the Pamir to Yarkund, he arrived in time to take the place of my Moonshee Dewan Buksh, whose conduct was so very suspicious that I was obliged to dismiss him summarily, and bring him back to India under surveillance.

212. Ibrahim Khan undertook at my request a rather hazardous journey from Cashmere through Gilghit and Yaseen and across the Pamir to Yarkund, and displayed great tact and acuteness in avoiding all difficulties by the way. Both his and Faiz Buksh's account of their travels are being translated, and will be submitted to Government hereafter.

213. Mullik Kutubud-din, the vakeel attached to my camp during our march through Cashmere, was most attentive and active in supplying our wants.

214. Mr. Shaw's and Dr. Henderson's report will be forwarded when received.

APPENDIX I.

LIST of GOODS purchased at *Yarkund* and sold in *Hindostan*.

No.	Name of Commodity.	Average Quantity.	Average Price.	Hire.	Duty.	Total Expenses.	Average Selling Price in India.	Average Profit.	REMARKS.
			Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	
1	Silk of all kinds -	per seer -	4 – –	– 10 –	– 2 –	4 12 –	6 12 –	2 – –	Product of Khoten.
2	Tilla - - -	per tola -	13 – –	– –	– –	13 – –	15 8 –	2 8 –	- - ditto.
3	Silver (kurus) - -	per 100 tolas	100 – –	– 2 –	- nil -	100 2 –	108 2 –	8 – –	- - ditto.
4	Charas (first quality)	per maund	50 – –	30 – –	5 – –	85 – –	125 – –	40 – –	Produced in Yarkund and prepared from bhang.
„	Charas (inferior) -	„	10 – –	30 – –	2 – –	42 – –	50 – –	8 – –	- - ditto - - ditto.
5	Carpets - - -	per yard -	2 – –	– 12 –	– 4 –	3 – –	4 8 –	1 8 –	Brought from Khoten and Yarkund.
6	Namda (a coarse woollen cloth).	per piece	– 12 –	– 8 –	– 2 –	1 6 –	2 – –	– 10 –	- - ditto - - ditto.
7	Silk - Daryaee and Shahee (a kind of flowered silk).	„	5 – –	– 8 –	– 8 –	6 – –	7 8 –	1 8 –	From Khoten.
8	Mushroo (silk striped cloth).	„	3 – –	– 8 –	– 4 –	3 12 –	5 – –	1 4 –	- - ditto.
9	Pushm - - -	per maund	25 – –	30 – –	2 – –	57 – –	80 – –	23 – –	From Yarkund, Khoten, and Turfan.
10	Ponies - - -	per animal	100 – –	– –	– –	100 – –	125 – –	25 – –	These are brought from Yarkund and Khoten. The speculation is not very profitable. But the animals being used as beasts of burden, the saving of carriage is counted towards the price, and the animals are sold, accordingly, at a little over the cost price, which includes the cost of feeding on the way.

APPENDIX II.

LIST of GOODS exported from *India* and sold in *Yarkund*.

No.	Name of Commodity.	Average Quantity.	Average Price.	Hire.	Duty.	Total Expenses.	Average Selling Price at Yarkund.	Average Profit.	REMARKS.
			Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*

Appendix III.

Detailed Estimate of Sale in Eastern Turkestan Bazars of Printed Calico per Piece of 21 Yards (= 28 arschines) weighing 5 lbs.

	Rs.	*a.*	*p.*
Cost in Bombay at 4 annas per yard	5	4	–
Carriage and other charges, Bombay to Yarkund (at 5 *l.* 12 *s.* per cwt., or 8 annas per pound)	2	8	–
Duty in Ladakh (4 per cent. on prime cost)	*–	3	6
Duty in Yarkund (1 in 40 in kind)	–	3	6
	8	3	–
Profit	5	3	–
Selling price in Yarkund (80 tangas† per piece of 28 arschines)	13	6	–

N.B.—The above is a low average to take, as many samples are at a price of 150 tangas for 50 arschines, 125 tangas for 40 arschines, 175 tangas for 50 arschines, and (from Kashgar) 4 tillas for 40 arschines, or, in other words, *Rs.* 14., *Rs.* 14. 10., *Rs.* 20. 6. 6., and *Rs.* 16. 12. respectively for a piece of 28 arschines (as above).

The profits on the articles detailed on the last page have been calculated in a similar manner.

The above prices are all those given for Russian goods. English manufactures are practically unknown in Eastern Turkestan owing to the smallness of the supply. But Mr. Shaw reports that in Kashgar some English chintz had arrived there shortly before his arrival, and had been eagerly bought up at 5 and 6 tillas the piece, instead of 4 tillas, which the Russian fetches.

Selling Prices of various Articles in Yarkund.

	Rs.	*a.*	*p.*
1. Chintz for printed calico, large pattern, "Goolanar," per piece of 28 yards	22	–	–
2. Chintz (coarse)	12	–	–
3. Chintz, sort called "dress," 12 yards	6	–	–
4. Chintz, „ "dress gown," 40 „	25	–	–
5. White shirting "lutta," 40 „	20	–	–
6. White shirting (coarse), 40 „	16	–	–
7. White shirting (coarser), 40 „	14	–	–
8. Muslin for turbans 20 „	8	–	–
9. Coloured shirting "Hulvan," 40 „	20	–	–
10. Dimity, red, "Goomtee," 28 „	14	–	–
11. Dimity, white, „ 40 „	20	–	–
12. Women's veil, red	4	–	–
13. Silk stuff, "Atwar," per yard	8	–	–
14. Brocade, "Kinkhab," per piece, *Rs.* 150. to	200	–	–
15. Black tea, Pekoe, "Zira cha," per pound	6	4	–
16. Green tea, ordinary	4	8	–
17. Green tea, fine, "Kara Kokla"	7	8	–
18. Common sugar, per pound	–	8	–
19. Raw silk from Khoten (100 tangas per charak), 5 lbs. = per lb. *Rs.* 3. 6.	6 *s.*	8 *d.*	

Appendix IV.

Comparative Prices in the Bombay and Yarkund Markets of several Articles.

Number.	Names.	Bombay. Per Yard.	Yarkund. Per Yard.	Remarks.
		Rs. a. p.	*Rs. a. p.*	
1	Chintz (print)	– 4 4	– 12 6	
2, 3, & 4	Chintz	– 1 4 to – 3 –	– 6 10 to – 10 0	
5, 6, & 7	White shirtings	– 2 5 to – 4 10	– 5 6 to – 8 –	
8	Muslin, per piece of 20 yards	1 3 – to 2 – –	8 – –	
9	Dyed cotton cloth, per yard	– 2 – to – 2 4	Per yard – 8 –	
10	Dimity	2 – 3 to 2 – 5	– 8 –	

* This will be remitted in future.

† On an average 6 tangas = 1 rupee.

Appendix V.

Current Market Prices of the Yarkund Bazar for 1868, and of the Jalandar Bazar for 1870.

No.	Name of Commodity.	Weight.	Price at Yarkund.	Price at Jalandar.	Remarks.
				Rs. a. p.	
1	Rice	2 seers, Eng.	1¼ tangas	– 2 6	1 tanga = from 2 annas 6 pie to 2 annas 9 pie.
2	Indian corn (makkee)	ditto	3 paisah	– 2 8	1 tanga = 25 paisahs, and 1 paisah = 2 pools.
3	Moong (a kind of pulse)	ditto	15 ditto	– 4 –	
4	Small baked bread	3 chitaks	1 ditto	– – 9	Atta (flour) is not generally sold; cooked food is generally sold and bread is often bartered for other articles.
5	Large baked bread	5 and 6 chitaks	2 ditto.		
6	Indian corn bread	3 chitaks	1 ditto.		
7	Mutton	2 seers	2¼ tangas	– 5 6	Well-to-do people use mutton; others use horse-flesh or beef, which is cheaper.
8	Turmeric (Huldee)	ditto	12 ditto	– 8 –	
9	Sugar-candy	ditto	15 ditto	– 15 –	
10	Green tea	ditto	12 to 14 tangas	4 or 5 – –	Sold well, if the colour and flavour be good, and the leaves easily boiled.
11	Bombay tea (Gola)	ditto	8 to 12 ditto.		
12	Sonth Zingeberis	ditto	3 T.—8 paisah	– 11 –	
13	Pepper	ditto	18 tangas	1 4 –	
14	Cardamoms, white	1 tola	10 ditto.		
15	Cinnamon	ditto	6 ditto	– – 4	
16	Cloves	ditto	1 tanga	– – 4	
17	Nutmeg	Each	2 tangas	– – 4	
18	Mâshroo (silk cloth)	1 piece of 7½ yards	16 to 30 tangas	– –	Not used in the Punjab; used in colder climates.
19	Doria (cloth)	Enough for a choga.	35 to 40 ditto	– –	Not used in the Punjab; half silk and half cotton like the former.
20	Shàhee	Piece of 7½ yards	35 to 40 ditto	– –	This is a kind of flowered silk, not brought here, but it is liked by wealthy persons.
21	Atlas satin	Piece of 7½ yards	40 to 50 ditto	– –	Ditto - ditto.
22	Cotton cloth, white	– – –	– – –	– –	Out of these, Malmal (muslin) is much used for turbans; but in Yarkund, people use coloured clothes. Kinkhab is used by those who can afford it.

Further Remarks.

One kurus of silver, weighing 2 seers, English weight, which is equal to 160 rupees in weight, is sold at Yarkund for 168 to 170 rupees, according to the current price. In the Punjab, the person selling gets 1 anna profit for every rupee weight. At Delhi, the profit allowed is more. At Yarkund, the same is valued at from 30 tillas to 33 tillas. And every kurus is valued at from 1,000 to 1,100 tangas. Tillas (new), which weigh from 4 to 4¼ mashas, can be had at Yarkund, and in the Punjab are sold at *Rs.* 5. 8. or *Rs.* 5. 12.

APPENDIX VI.

COMPARATIVE COST of TRANSPORT of One Cwt. to *Yarkund*, from *England*, and from *Russia*.

	£.	s.	d.
Moscow to Tashkend, at 4 roubles per pood of 36 lbs.	1	19	8
Tashkend to Yarkund, at 8 tillas per horseload of 2 cwts.	2	8	–
£.	4	7	8

P. S.—Taking Kurrachee as the port of entry, the rates would be, with a distance by rail, when all is open, of 800 miles to Lahore,—

	£.	s.	d.
Cotton goods	–	9	–
Woollen	–	11	–
Cutlery	–	13	–

	£.	s.	d.
England to Bombay or *Calcutta*, at 2*l.* a ton	–	2	–
Calcutta to Lahore, 1,277 miles (Chord line), for *Cotton piece goods* *	–	9	5
Terminal charge, &c.	–	1	–
Lahore to Yarkund, at 65 rupees per horseload of 2 cwt.	3	5	–
£.	3	17	5

* For *Woollens*, the freight would be, Calcutta to Lahore	–	12	6
And for *Cutlery*	–	15	6

ROUTES.

From *Leh* to *Yarkund*.—Route taken by Yarkund Expedition in 1870.

No.	Name of Stage or Halting Place.	Distance in Miles.	REMARKS.
1	Tiksè	10	On banks of Indus.
2	Chimrè	11	The valley of the Indus is left about 2 miles before reaching Chimrè village and monastery.
3	Sakti	6	Up a ravine well covered with wood and grass. Village at Sakti.
4	Tso lâk	12	Cross Chang Là Pass; ascent steep for 6 miles, but road good. Encamp near lake on north side.
5	Durgoh	10	Easy descent to bed of river; village at Durgoh; water, fuel, and grass abundant.
6	Muglib	12	Road passes along bed of river; plenty of grass and fuel; village of Tanktsè passed about half way.
7	Lukong	14	Soon after leaving Muglib, a small lake of fresh water is passed, and a few miles further on, the river which flows into this lake suddenly disappears. The Pangong Lake is reached at the 15th mile; its waters are quite brackish. Lukong is a collection of huts or habitations half buried in the ground.
8	Chagra	7	The last traces of the Buddhist religion are seen here. A few roofless enclosures afford shelter to the Bhot shepherds; grass and fuel procurable in abundance; a storehouse has been built by the Maharaja here.
9	Rimdee	12	Cross Masimik Pass, 18,457 feet high (according to Hayward); Johnstone makes it 19,400 feet. Ascent to the summit easy, except for the last 2 miles. Descent on north side very gradual.
10	Pumsul	14	Road stony and rough for 4 miles, afterwards descent easy to bed of Changchenmo River; tamarisk bushes give fuel; grass to be found about 2 miles lower down the stream.
11	Gogra	11	Road for 4 or 5 miles along left bank of river; stream difficult to ford in summer; cross a low spur to Kugrang Valley.
12	Camp Chang Chenmo Valley.	14	Road to hot springs, about 6 miles, tolerably easy; there is one bad descent and ascent, from hot springs; road is over steep, short ascents and descents. Scarcely any grass or fuel to be had at the encamping ground.

ROUTES.—From *Leh* to *Yarkund*.—Route taken by Yarkund Expedition in 1870—*continued*.

No.	Name of Stage or Halting-place.	Distance in Miles.	REMARKS.
13	Camp Nischû - - -	12	Road leaves main valley at last halting-place, and passes up a ravine on west to Chang Lang La. Ascent easy, scarcely any descent on north side. Frozen bed of river followed to point of junction with another stream. Nischû means two streams. No fuel or grass.
14	Camp Linzi Thung Plain	16	Road follows river course for 6 or 7 miles, and then crosses a sandy plain for 4 miles more; a steep descent of 500 feet takes the traveller to the Linzi Thung Plain. Camp in sandy bed of dry river bed; a muddy liquid can be obtained by digging holes. No grass, and very scanty fuel is collected from the Boortse plant.
15	Lok zang - - -	25	Long tedious march over sandy desert to a remarkable dome-like peak in range, running east and west. Pass under this peak and over two ridges into a valley where a little water and fuel and some grass is found; a very trying march.
16	Thaldat - - - -	14	A frozen lake; road very easy, over undulating desert plains; no grass, and scarcely any fuel. A very little grass about a mile off.
17	Patsalang - - -	18	Road good, over open plain, for 12 or 13 miles; grass in small quantities to be found on both sides of a low pass. At Patsalang water obtained by digging.
18	Camp north of Soda Plain	14	Cross three dried-up salt lakes. Camp in a valley on left of plain; grass abundant, but water only obtainable by digging.
19	Camp in Karakash Valley	24	The Karakash river is struck after a march of 12 miles, to Brungsa, where deserted huts are seen; the road follows the course of the stream for 12 miles, and then brushwood and grass are found.
20	Kaffirdurrah - - -	20	Plenty of grass and fuel.
21	Camp in valley - -	16	Grass and fuel.
22	Kyang Maidan; wild horse plain.	12	An easy march. Grass and fuel abound.
23	Gulbashar - - -	17	Kirghiz encampment passed on the road. Near this place are the celebrated jade quarries.
24	Balakchee - - -	11	Cross the river Karakash; difficult passage in summer; fine pasture ground at Balakchee.
25	Toghra Su - - -	22	Fort of Shadulla passed about the 10th mile. River Karakash has to be crossed twice with great difficulty. Plenty of wood and grass. Camp on south side of Toghra Su. A mountain torrent, deep and rapid and scarcely fordable, except in the forenoon.
26	Tilartargâsh - - -	10	Cross Toghra Su and pass the fort called Ali Nuzr Kurgham. This is manned by soldiers from Yarkund. From the Kurghan a road goes up the valley to the Killian Pass.
27	Camp south of Sanjû Pass	11	Road along Karakash for 5 miles to Ali Mazar Abu Bukr, where in summer the river can be crossed with great difficulty. Laden animals have to cross a steep pass which caused a detour of 3 miles. Road here leaves Karakash Valley and goes up a narrow stony ravine, crossing a hill torrent every hundred yards.
28	Kichik yilak - - -	10	Cross Gerim Pass 16,612 feet; very steep ascent and descent. The pass is impracticable for laden horses, whose loads have to be carried on yaks. Horses and camels unladen can cross the pass. Kirchik yilak is the summer encampment of the Kirghiz.
29	Tâm - - - -	12	Road down Sanjû Valley, crossing stream; easy march, plenty of wood and grass.
30	Chûchû Pass - - -	15	In spring and autumn, when the water is low, the road follows the river to Sanjû about 30 miles. In summer a detour has to be made over the Chûchû Pass.
31	Mazar - - - -	12	Cross a pass 11,847 feet, into the Arpalâk river, to Mazar; abundant grass, shrubs and large trees; game very plentiful in this valley.
32	Kizil Lungur - - -	10	Down Arpalâk river.
33	Sanjû - - - -	14	Road leaves Arpalâk Valley, and crossing a low sandy ridge, slopes down to Sanjû, a cluster of villages.
34	Koshtâk - - -	25	Road crosses the Sanjû river and ascends a low range of sand hills, across which it descends to the small hamlet of Langur 15 miles from Sanjû. Hence it crosses the desert to Koshtak, a village dependent on the Killian stream for its cultivation.
35	Oi-Togrâk - - -	20	Road across desert to village in a valley.
36	Borah - - - -	12	Ascend low range of sand hills, and across desert to Borah. Here the Killian route joins in.

ROUTES.—From *Leh* to *Yarkund.*—Route taken by Yarkund Expedition in 1870—*continued.*

No.	Name of Stage or Halting-place.	Distance in Miles.	REMARKS.
37	Karghalik - - -	24	At 8 miles from Borah, the road leaves the low hills, and descends to an arm of the great desert of Gobi. Distance across about 12 miles to village of Beshârik, from which place to Kargalik is about 4 miles. Here the direct road from Khoten through Gooma and the road from the Kogyar Pass join in, to Yarkund.
38	Pushgam - - -	21	At 11 miles from Karghalik the Tisnaf river is crossed; it is scarcely fordable in summer; 5 miles beyond is Yakshumba bazaar.
39	Yungi Bazaar - -	14	The direct road to Yarkund crosses the Yarkund river, not far from Pushgam, but in summer, owing to the size of the river, a detour has to be made to Yungi bazaar, some 10 miles lower down the bank, where a ferry is plied with three large punts.
40	Yarkund - - -	8	Cross the river in boats, and then a ride through meadow, fields, and suburban villages to Yarkund.

ROUTE from *Yarkund* to *Khoten.*

1	Pushgam - - - - -	Total distance, 37 tâsh=185 miles.
2	Kurghalik - - - - -	
3	Lokchulâk - - - - -	
4	Goomah - - - - -	
5	Moji - - - - - -	
6	Choda - - - - - -	
7	Pyalma - - - - -	
8	Zowa - - - - - -	
9	Khoten - - - - -	

ROUTE from *Yarkund* to *Kashgar,* given by Mr. *Hayward.*

MAIN ROAD FROM YARKUND TO KASHGAR.

The road is regularly traversed by two-wheeled carts and conveyances.

No.	Name of Stage or Halting-place.	Distance in Miles.	REMARKS.
	Yarkund		
1	Kokrubat - - -	22½	Road conducts along north wall of the fort, and, at 4½ miles from the city, crosses the Urpi canal by a wooden bridge. Passing the villages of Kara Koour and Bigil, it skirts some marshy ground to Kokrubat, a village of 200 houses, with a caravan serai.
2	Kizil - - - -	27½	Road skirts the "Hamed-i-Dusht," a large barren tract of country extending up to the Kiziltâh range on the west. At 14 miles from Kokrubat is a halting-place called Ak-Langur, where is a musjid and two wells of water. Kizil is a village of 500 houses, with a large tank and caravan serai.
3	Yanghissar - - -	32	The road passes the villages of Chamalung, Khoduk, Koshimbash, and Toblok to Kelpun, an old Chinese "urtang" or police station, now in ruins; at 2½ miles before reaching Yanghissar it crosses the Largrah river by bridge. Yanghissar is a commercial town of some 11,000 houses situated 82 miles north-west of Yarkund, and 43½ south of Kashgar. The fort lies at a distance of 600 yards to the north of the town.

ROUTE from *Yarkund* to *Kashgar*, given by Mr. *Hayward*—continued

No.	Name of Stage or Halting-place.	Distance in Miles.	REMARKS.
4	Yupchan - - -	22½	Road passes villages of Koomlok and Togloh, and crosses the Hosun river by bridge. Then continues up left bank of river to Supchan, a village of some 700 houses.
5	Kashgar (old city) - -	21	At 2½ miles from Supchan cross Khanarik river by bridge; and, passing the the village of Tasgam, cross a canal from the Khanarik river, and a branch of the Kashgar river, to the fort of Kashgar, which lies some three miles south of the city. Cross Kizil Daria, or the Kashgar river, midway between the fort and city. Kashgar contains about 28,000 houses, and from 60 to 70,000 inhabitants.
	TOTAL - -	125½	Miles.

ROUTE from *Yarkund* to *Aksû*.

1	Yutkoh - - - - - -	*Remarks.* In the time of the Chinese there were 18 stages which now are reduced to 10.
2	Lilâk - - - - - -	
3	Minal - - - - - -	
4	Aksmaràl - - - - -	
5	Murâl bashi - - - - -	
6	Chudri kûl - - - - -	
7	Shamâl - - - - - -	
8	Yaku kudok - - - - -	
9	Eikûl - - - - - -	
10	Aksû - - - - - -	

ROUTE from *Shadula* to *Gogra*, taken by the Yarkund Expedition returning.

No.	Name of Stage or Halting Place.	Distance in Miles.	REMARKS.
	Shadula to—		
1	Sooget - - - -	8	Road for 4 miles along the Kara Kash, and then turns south up a ravine; plenty of grass and fuel.
2	Chibra - - - -	19	Ascent gradual till within a mile from the summit; height of pass 18,237 feet; camp at Chibra 4 miles beyond summit; no grass or fuel.
3	Maliksha - - -	8	An easy march; no grass or fuel at encampment, but some is obtainable on the west valleys not very far off.
4	Karatagh Lake - -	24 or 25	Direction *S. E.* across plain to a depression in *S. E.* angle of Karatagh range; road nearly level, wood plentiful on plain, and water at one place 6 or 7 miles short of camp. At Lake abundant good fuel (Burtsi) and water and grass 1 mile off, up mountain S.W.
5	Shorjilga - - -	17	Cross valley and ascend gravel ravine *S. E.* for 3 miles, turn to right (south) up an easy pass, ascent 400 to 500 feet. From top descend by a long winding ravine, 9 or 10 miles, to a wide sloping gravel valley. Cross this 4 miles to Shorjilga at its lower end, where is water and a little grass but no fuel, though plenty 4 miles lower down. Where the stream enters broad valley 4 miles above Shorjilga is also fuel.

Route from *Shadula* to *Gogra*, taken by the Yarkund Expedition returning—*continued.*

No.	Name of Stage or Halting Place.	Distance in Miles.	Remarks.
6	Shadula to— Khushmaidan - -	14	Easy march 7 or 8 miles down the Shorjilga Ravine to the Kárápash River, then up that river 6 miles to Khushmaidan, which is on left *S. E.* side of valley. Plenty of fuel in lower part of Shorjilga Valley, and again at its junction with Kara Kash. One mile above junction is "Chungtash," a lofty rock on right bank, behind which is grass; 1½ miles above Chungtash, round a rocky spur on left bank, is most *abundant excellent* grass and fuel. At Khushmaidan also, on left bank behind a spur, is abundant fuel (Myricaria), and grass along the side.
*7	Kiziljilga - - -	17 or 18	March up broad valley (generally left bank) of Kara Kash. At 13 miles pass under a conical black mountain, where is abundant fuel. At Kiziljilga Camp under lee E. side of a rocky spur round which river turns. Abundant fuel and a little grass. Much grass 1 mile off to *East*, and again in all ravine to *S. E.*
8	Shinglung - - -	13 to 14	Easy march nearly south up main stream, the smaller (now dry) stream from east come from "Kizil Diwan." Fuel everywhere, grass abundant in all side valley, as well as frequently in main valley. Cross occasional firm level snow beds. At camp abundant grass and fuel.
9	Sumdo - - - -	11	Easy level march up right side of valley. Plenty of grass and fuel for first 3 miles, after turning S. E. under a stupendous limestone cliff; they then cease for a few miles. At Sumdo a wide plain or basin into which the river or main valley come from west, with large valleys leading through rocky defiles from east. At Sumdo, on west side of valley, abundant fuel and pasture.
10	Camp in valley north slope of the Changchenmo Range.	20*	Keep west up Kara Kash for 1½ miles, then turn *S.* up a ravine, with small stream, for 4 miles to foot of easy pass nearly due *south*, and just *west* of a vast irregular domelike mountain. There is a second pass to the east of this crag, which is higher and less direct. The pass takes 15 minutes to ascend. *N.B.*—It would be well to go beyond Sumdo, and camp near foot of pass, where is water but no grass or fuel, but some is to be stored and some can be carried from Sumdo. From top keep down the valley *S.* by *E.* for 4 miles, then across wide valley, a plain (which is the western corner of the Lingzi-thang), for 6 miles, passing three black rocks standing up apart in this plain, down the valley and on the opposite side of plain, where the southern ascent begins, is water, but no grass or fuel. (Can camp here or continue 4 or 5 miles up southern slope, and camp in one of the shallow valleys running north; the latter preferable. No fuel anywhere).
11	Valley south of Changchenmo Range, and running down to hot spring.	16†	A very gradual easy ascent over undulating slope, and up wide shallow valleys; direction generally *S. by E.* (compass) to the top of the ridge, which is high, but the ascent is very slight; 3 miles north of the main ridge a low rounded ridge has to be crossed beyond, *S.* of which is a broad sloping plain leading right up to main pass, and crossed from *E.* to *W.* by a deep ravine, containing a tolerable stream of water. Descent from top of pass nearly *W.* for 4 or 5 miles, at first rather steep, then gradual down valley to camp, a place where stream turns round to *S.* and *E.* At camp abundant grass and some fuel; plenty of fuel 2 miles lower down. Road very easy.
12	Gogra - - - -	20 to 21	Road very good and easy down valley. At 12 miles join road from "Chunglung-la," at 14 the hot springs, and at 20 Gogra. Grass and fuel very abundant the whole way down valley to junction with old road, beyond which only fuel, no grass.

* This distance is reckoned from Sumdo.

† This distance is counted from about 4 miles up the slope on the south side of the plain, or 3 miles south of the *pond* in map.

(No. 413—1370.)

From *T. H. Thornton*, Esq., D.C.L., Secretary to the Government of Punjab, to the Secretary to the Government of India, Foreign Department, dated 13th December 1870.

Sir,

IT was stated in your telegram of the 2nd current, that his Excellency the Viceroy hoped to receive, by an early date, the honourable the Lieutenant Governor's comments on the report of Mr. Forsyth's visit to the court of the Atalik Ghazi, and on matters connected with that officer's journey to and from Yarkund.

2. This report was received by his Honor on the 10th current, and as it appears that a copy has been submitted to his Excellency by Mr. Forsyth in person in Calcutta, it seems unnecessary for the Lieutenant Governor to offer any remarks on the details of this special deputation of a British official to Yarkund; he will, therefore, confine himself to stating his opinion that, considering that Mr. Forsyth's visit "was not in any sense a mission, and had no political objects," it speaks well for the influence of the British Gocernment, and for the intelligence of the Atalik Ghazi, that the visitors were so well received, and so courteously treated.

3. His Excellency the Governor General having organised the deputation, the meritorious conduct of the officers concerned can be best left by his Honor to the consideration of his Lordship in Council, and the Lieutenant Governor desires me to conclude with the remark that missions with more pomp and greater exhibition of symbols of power have sometimes resulted in disappointment, while it admits of no question that the march to Yarkund, the stay there, and the return from Yarkund by so unpretentious a body of English and native officials is, in itself, a success creditable to them, alike as enterprising travellers and as public servants who have ably sustained the honour and reputation of the Government which sent them.

(No. 31. P.)

From *C. U. Aitchison*, Esq., Secretary to the Government of India, Foreign Department, to the Secretary to the Government of Punjab.

Sir, Fort William, 6 January 1871.

I AM directed by His Excellency the Viceroy and Governor General in Council to reply to your letter of 13th December, submitting the remarks of his honour the Lieutenant Governor on Mr. Forsyth's report of his expedition to Yarkund.

2. In December 1869 you reported by telegraph that an envoy from the Kushbegi had arrived at Leh on his way to British territory. His arrival at Lahore with letters to the Lieutenant Governor, the Viceroy, and Her Majesty the Queen was reported on 29th January. He was honourably received by the Lieutenant Governor, Sir D. Macleod, and after a short stay at Lahore, he arrived in Calcutta towards the end of March, and at an interview with his Excellency the Viceroy, having produced letters from the Kushbegi giving him powers to discuss and arrange various matters with his Excellency, he stated that he had been instructed by his Government to request that a British officer should be sent back with him on a friendly visit to the court of his highness the Atalik Ghazi. In my letters marginally noted, the Punjab Government were informed of the preliminary arrangements proposed with a view to comply with the wishes of the Atalik Ghazi, and of the instructions issued to Mr. Forsyth, who was requested to submit through the Lieutenant Governor any additional points on which he might deem it desirable to procure further directions. In your Under Secretary's letter, No. 134, dated 28th April, proposals regarding the organization and equipment of the expedition were submitted, and these proposals were all sanctioned in my letter No. 9 A.P., dated 4th May, with exception of a proposed increase to Mr. Forsyth's allowances.

No. 630 P, dated 6th April.
No. 5 A P, dated 14th April.

3. Early in June information reached his Excellency in Council from various quarters that disturbances, the exact nature of which was unknown, had broken out in the territories of the Atalik Ghazi. His Excellency in Council, therefore, deemed it necessary, as you were informed in my letter No. 936 P., dated 7th June, that Mr. Forsyth should make every exertion to find out the exact position of affairs in Yarkund, and that he should receive additional instructions as follows; "*first*, that, unless he is satisfied that a general state of peace similar to that which is said to have prevailed in Yarkund up to the date of his departure still exists, he is to abandon at once his intended journey; and, *secondly*, that he should in that case make preparations for his immediate return to India."

4. Mr. Forsyth, it was added, is fully aware that his deputation to Yarkund would never have been undertaken by his Excellency in Council had he not been fully persuaded that a state of complete peace existed throughout the territories ruled by the Atalik Ghazi.

5. In his original instructions Mr. Forsyth had been told that he was to go to Yarkund merely on a friendly visit to the Atalik Ghazi, and for the sole purpose of opening up and giving impulse to the trade with that country. He was therefore to be careful to abstain from taking any part in the political questions that might be agitated, or disputes that might arise further than conveying to the Atalik Ghazi the general advice already given to him by the Viceroy; viz., that the Atalik Ghazi would best consult the interests of his kingdom by a watchful, just, and vigorous Government, by strengthening the defences of his frontier, and, above all, by abstaining from interference in the political affairs of other states, or from mixing in the quarrels of chiefs or tribes which did not directly concern his own interests. Mr. Forsyth, was, however, to endeavour to obtain the fullest and most reliable information possible regarding the prospects of trade, the Indian staples that are most in demand, the nature and resources of Yarkund and neighbouring countries, their past and present history, and generally information of any kind which he considered of interest.

6. The instructions of 7th June reached Mr. Forsyth at Srinuggur in Cashmere, and on the 14th June he commenced his march towards Leh. The narrative of the expedition is contained in the interesting and valuable report now received, which will be published in the "*Gazette of India*"* for general information.

7. His Excellency in Council fully approves of Mr. Forsyth's proceedings. The steps which he took both at Srinuggur and at Leh to ascertain the real state of affairs in Yarkund are entirely in accordance with the spirit of his instructions. The difficulties in the way of obtaining reliable information were in reality insurmountable. Nothing was known either at Srinuggur or Leh of the existence of disturbances in Yarkund. It was not indeed likely that anything definite could be known at Leh, as it appears that the Atalik Ghazi left his capital in March, and the only traveller who had reached Leh was Moolla Baki, who left Yarkund about the same time. Dr. Cayley, who had gone to Leh from the Punjab by Kullu and Lahoul, had heard no unfavourable rumours. The two messengers who had been sent on to Shadoolla met Mr. Forsyth in the Lokzang valley with the report that all was quiet. It was not until he reached Balakchi close to Shadoolla that Mr. Forsyth first heard that the Atalik Ghazi had left his capital many months before, and had gone on a warlike expedition to Oorumtis, about 700 miles distant from Yarkund.

8. Considering the difficulties in which Mr. Forsyth was placed by the failure of the local Cashmere authorities to furnish sufficient supplies and carriage for the desert journey which now lay between him and British territory, the urgency of the Yarkund authorities that he should advance, and the assurances given him that the Atalik Ghazi had returned to Kashgar from the war, his Excellency in Council considers that Mr. Forsyth exercised a wise discretion in going to Yarkund. His proceedings while there, and his determination to return in obedience to his instructions, have the full approval of his Excellency in Council. Due allowance must be made for the great difficulties in which the Dadkhwah of Yarkund was placed by the absence of his sovereign, and for the great

* *See* Supplement to "Gazette of India," 7 January 1871, pp. 13–63.

great responsibility which he took upon himself in permitting the return of the expedition without effecting the interview with the Atalik Ghazi for which it had been sent. To the delicacy and difficulty of the Dadkhwah's position are chiefly to be ascribed the obstacles which were at first thrown in the way of the departure of Mr. Forsyth and his party. His Excellency in Council is not surprised at the efforts made by the Governor of Yarkund to induce the party to remain, but there is nothing to indicate that the expedition was unwelcome or that its object was misunderstood.

9. His Excellency in Council regrets that, owing to the necessary and protracted absence of the Atalik Ghazi on a distant frontier, the expedition had to return without effecting the main purpose for which it was sent. But he has no reason to be dissatisfied with the measure of success which attended Mr. Forsyth's journey, and he desires that the cordial thanks of Government may be communicated to that officer and to those whose services he has brought to notice in his report for their courage and perseverance under difficulties of no ordinary kind and for the good judgment displayed under trying circumstances.

10. His Excellency in Council has learnt with satisfaction from your letter No. 385-1293, dated 19th November 1870, that the Maharaja of Cashmere has severely punished the Wuzeer of Ladakh to whose culpable negligence the misfortunes which overtook the party in the desert journey are attributable, and has sentenced him to fine, to a year's imprisonment, and to expulsion from Cashmere territories.

COPIES of MEMORIAL of the Nawab *Nazim* of *Bengal* to the Secretary of State for *India* in Council, dated the 28th day of July 1869:—Of LETTER or LETTERS from the Secretary of State for *India* in Council to the Governor General of *India*, notifying the Despatch of such Memorial, and requiring a Report thereon:—Of LETTER or LETTERS from the Governor General of *India* to the Secretary of State for *India* in Council, reporting upon the Memorial:—And, of LETTER, dated the 23rd day of December 1870, from the Secretary of State for *India* to the Nawab *Nazim* of *Bengal*.

India Office,
20 February 1871.

J. W. KAYE, Secretary,
Political and Secret Department.

Political Department, India Office, 28 October (No. 229) 1869.

The Secretary of State for India to the Governor General of India.

* Dated 28th July 1869.

1. I FORWARD to you herewith five printed copies of a memorial * addressed to me by the Nawab Nazim of Bengal, which reviews all the several questions which for a number of years have been agitated by his Highness in India, and regarding some of which the views of Her Majesty's Government were expressed at considerable length in Sir C. Wood's Despatch of the 17th June 1864 (No. 30).

2. Although the Nawab Nazim is at present in England, and has expressed his anxiety to remain in this country until he has received a reply to his memorial, I have declined to take an unusual course in this matter, and have caused his Highness to be informed that his memorial has been referred to your Excellency in Council.

3. It is desirable, however, that as little time as possible should be lost in conveying to me your Excellency's views on the several points to which the Nawab Nazim has invited my attention in the enclosed memorial.

(signed) *Argyll.*

(No. 148 of 1870.)

Government of India—Foreign Department—Political.

To his Grace the Duke of *Argyll*, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Simla, 29 July 1870.

WE have now the honour to reply to your Grace's Despatch, No. 229, dated 20th October 1869, forwarding for our consideration a memorial from his Highness the Nawab Nazim of Bengal.

2. We have very carefully considered this memorial, but have failed to discover any facts, arguments, or claims which have not already been repeatedly disposed of in previous correspondence with Her Majesty's Government.

3. As respects the Nawab Nazim's alleged treaty claims, we would observe that they have more than once been rejected. The Government of Lord Dalhousie, after full deliberation, came to the conclusion in 1853 that the Nawab has no right

right or title whatever to any allowance by treaty or compact; that the three treaties which are upon record are purely personal agreements which expired with the individual with whom each was concluded; and that they were not renewed after the death of Mobaruck-ood-Dowlah in 1796. The Court of Directors also decided that "it is perfectly true that the present assignment of 16 lakhs of sicca rupees does not rest on the stipulation of any formal agreement."

4. Again, in 1862, the Government of Lord Canning, after an elaborate review of all the arguments urged in the present memorial, directed the Government of Bengal clearly to explain to his Highness that "the Governor General in Council entirely rejects his claims so far as they are founded on the assertion of any treaty rights, or of any sovereign or hereditary title;" that the continued payment of the 16 lakhs "is guaranteed by no treaty, and that it has hitherto been paid of the free grace and favour of the British Government."

5. All the arguments now advanced by the Nawab Nazim were further reviewed in the Despatch* of Her Majesty's Government, No. 30, dated 17th June 1864, and the conclusion arrived at was that neither under the firman of Shah Alum, nor under the treaties, has the Nawab Nazim of Bengal, or his family, any claim upon the British Government, or any acquired rights.

* *See* Parliamentary Paper, No. 371, Session 1870.

6. After the most careful consideration that we have been able to give to all that the Nawab Nazim has again urged, we can see no reason whatever to question the soundness of the conclusions arrived at by successive Governors General and by Her Majesty's Government. We need scarcely remind your Grace that the appointment of Soubadar of Bengal, or of Nawab Nazim, was purely personal, and that the arrangements made with successive holders of the office could not in the nature of things be permanent or hereditary. Notwithstanding the clauses in the treaties on which the Nawab Nazim relies to prove their perpetual obligation, the terms granted to each successive Nawab were changed for the worse; the last treaty of the series (the treaty with Mobaruck-ood-Dowlah) became a dead letter from the very first, and was never acted upon by either party; and on the next succession, treaties having already ceased to be appropriate to the altered state of affairs, no agreement was made, and Government continued to deal with the case of each successor as was deemed fit at the time. It appears to us idle to dwell on the particular phrases in which the treaties are concluded. The broad facts of the case and the relative position of the parties appear to us to prove, in the clearest possible manner, that the treaties were and must have been personal, and were so understood by the parties who contracted them.

7. The treaties appealed to by the Nawab Nazim were made between 1757 and 1770 with Meer Jaffier and his three sons, Nujm-ood-Dowlah, Syuf-ood-Dowlah, and Mobaruck-ood-Dowlah, who succeeded his second brother in 1770, and died in 1793. Now, Meer Jaffier was, if not a sovereign prince, at all events a person whom the East India Company treated as such in many respects. But in the hands of his three sons his power gradually declined, and though some degree of real power was still attached to the position of the Nawab at the accession of Mobaruck-ood-Dowlah in 1770, he was entirely deprived of it by the policy adopted by the Company between 1772 and 1781. This change in his position differed from that which might be effected by an ordinary conquest by force of arms, simply in the fact that he was too weak to resist the changes which the Company made. He sank, therefore, during this interval from the anomalous position which he had previously occupied, and which was neither that of an independent prince, nor that of a mere officer of the Emperor of Delhi, to the position of a subject of the Company. At the beginning of this period, viz., in 1770, the Company made with him one of the treaties, to which the present Nawab refers, by which they engaged to pay him 32 lakhs a year. This, by the letter of 1771, they reduced "during his minority" to about 16 lakhs. In 1772, commenced the series of changes by which his real power was taken away, and which were in substance and fact as much a case of conquest and deposition as the conquest of the Punjab. The fact that the conquest was effected peaceably, because the force of the Company was irresistible, no

more prevented it from being a conquest, than the fact that the Danes offered no resistance to the occupation of Serampore prevented that occupation from being a conquest; and the conquest, however effected, put an end to all independence on the part of the Nawab, and, therefore, according to one of the most familiar principles of international law, to all treaties between him and his conquerors.

8. It appears clear to us that both parties looked at the matter in this light. The Company having, in the first instance, reduced the Nawab Nazim's stipend during his minority, continued to pay the reduced amount for the rest of his life, and long after his minority ceased. The reason of this is obvious. He had ceased to be an independent prince, and their payment had become a compassionate allowance to a subject. The Nawab Nazim on his part quietly accepted his altered position, and the present Nawab Nazim's father, his grandfather, his grand-uncle, and his great grandfather, received the reduced payment for a period of 45 years, apparently without complaint; and the present Nawab Nazim himself acquiesced in the arrangement for a period of 10 years after he attained his majority. We cannot imagine that several successive generations of Nawabs, who were in constant relations with the Government of India, and whose money affairs were, on several occasions, the subject of discussion and arrangement, should have silently submitted to a real grievance.

9. With respect to the various documents quoted by the Nawab Nazim as containing admissions that his ancestors were independent princes, we must observe that most of them are merely expressions of opinion, based on imperfect acquaintance with the facts, which could not by any possibility have the effect of changing the status of the Nawab Nazim from that of a subject to that of an independent or feudatory prince. The very fact that it was necessary to pass Acts of the legislature to secure to the Nawab Nazim certain privileges which the Executive Government desired that he should enjoy, is conclusive evidence of his position as a subject, a view which was, in our opinion, correctly taken by the Supreme Court in 1834. But even if we were to give to these documents all the force which the Nawab Nazim would wish to attach to them, we would point out the inference which he entirely overlooks, that the higher he raises their position, the more weight does he attach to the acquiescence of himself and his ancestors in the arrangement under which they lived.

10. But in truth it appears to us useless to discuss now the morality or policy of these proceedings. They were in substance a conquest of Bengal by the Company, in trust for the Crown of England, and according to common sense and legal analogy, they must, in our opinion, be held to have had all the effects of a conquest. They have put an end to the old state of things and to the treaties which belonged to it, and have produced a new one. Even if an injustice were committed, which we by no means admit, it is impossible for the Government of the present day to give a remedy. No one would assert that Her Majesty in the year 1870 ought to re-consider the justice and propriety of the policy of Warren Hastings in 1770, with the view, if it should appear to have been unjust or impolitic, of re-establishing the representative of Meer Jaffier as hereditary Soubadar of Bengal, and of reducing herself to the position of Dewan. But it appears to us that, unless this absurd conclusion is adopted, the present Nawab Nazim possesses no treaty-right. His right to be Soubadar of Bengal is neither better nor worse than his right to receive the 32 lakhs a year, which were to be paid to his ancestors under the treaty of 1770.

11. For these reasons we desire to express our entire concurrence in the decisions already repeatedly given both by the Government of India and by Her Majesty's Government that, while it is our duty to treat the Nawab Nazim in the same way as we would deal with any other pensioner, that is to say, with liberality, with a scrupulous regard to all promises made to him, and to such reasonable expectations as the past treatment of the family may fairly have raised, the Nawab Nazim has no claim or right whatever under treaty in any form or to any degree.

12. With respect to the Moorshedabad murder case, we cannot consent to re-open discussion, or to re-consider the decision expressed in paragraph 11 of the Secretary of State's Despatch, No 30 of 17th June 1864. The case was most

most fully considered by Lord Dalhousie's Government at the time; every point that could be advanced on the question is to be found in the papers on which a verdict was then given, and we can see no reason, after the lapse of so many years, for questioning the decision at which Lord Dalhousie's Government arrived.

13. The penalties which, after careful deliberation, were inflicted upon the Nawab Nazim by Lord Dalhousie were four, (1) his salute was reduced by six guns; (2) it was declared that the expenses of his hunting tours should be paid from his personal allowance, and not from the Deposit Fund; (3) that on these tours a special officer should accompany his camp; and (4) certain special privileges and immunities which he enjoyed were abolished by Act XXVII. of 1854.

14. With exception of the 4th, which still remains in force, all these penalties have been removed as a reward for subsequent services rendered by the Nawab Nazim; and as to the 4th, we believe that even if the measure had not been determined on as a punishment, the repeal of the regulations of 1793, 1805, 1806, and 1823 would have been necessary as a matter of public policy. We are strongly of opinion that the Act XXVII. of 1854 ought to be maintained, and that the regulations repealed by it should on no account be revived. They appear to us to have conferred privileges likely to be, and which actually have been, misunderstood, dangerous, and objectionable in themselves, and quite unsuitable to the Nawab Nazim's position. They have now been abolished for 16 years, and we cannot consent to introduce, nor could the Legislative Council be induced to pass, any Bill for their revival.

15. The Nawab Nazim's complaints in regard to the Nizamut Deposit Fund appears to us to be two, 1st, that it is not allowed to bear interest; and 2nd, that his control over it is unnecessarily and improperly restricted. To show the groundless nature of these complaints, we give a brief sketch of the history of this fund.

The Nizamut Deposit Fund is an amalgamated fund, consisting of—

(I.)—The Agency Fund;
(II.)—The Munnee Begum's Fund;
(III.)—The Nizamut Stipend Fund; and
(IV.)—The Pension Deposit Fund, which has never been really kept up under that name, but into which all the others merged under the mame of Nizamut Deposit Fund.

(I.)—*The Agency Fund* was formed in 1816 from the following assets:

	Sicca Rs.
Accumulations of Munnee Begum's lapsed stipend -	2,63,703 10 -
Her treasure under agreement with Nawab Nazim -	4,36,296 6 -
Total - - - *Rs.*	7,00,000 - -

With these assets, Government Six Per Cent. Securities to the value of 7,10,600 rupees, and yielding 42,636 rupees interest, were purchased, of which 42,060 rupees were set apart for agency establishment, and 576 rupees for the expenses of the Begum's tomb. In 1824, when Government interest was reduced from 6 per cent. to 5 per cent., the income of this fund fell to 38,019 rupees, upon which the allowance for the Begum's tomb was transferred to the Begum's fund, and from the same fund, money was transferred to meet deficiencies accruing in the agency fund. In this way, 89,155 rupees were paid into the agency fund in 1829 to save it from bankruptcy.

(II.)—*The Begum's Fund* was formed from the investment of the accumulations of her lapsed stipend up to 1823. From that date it was intended to devote a sum of two lakhs only to form a Deposit Fund, viz.:—

	Rs.
Begum's lapsed stipend - - - - -	1,44,000
Other lapsed stipends to be paid by Nawab Nazim into Collector's treasury - - -	56,000
Total - - - *Rs.*	2,00,000

The Begum's stipend was regularly retained in the Collector's treasury; but the Nawab Nazim continued to have control of the other stipends, and he never paid the lapsed 56,000 rupees into the Collector's treasury, so that the arrangement fell through, or rather was never acted on, and the Begum's stipend merged in.

(III.)—*The Nizamut Stipend Fund*, which was first opened on the books of the Accountant General to the Government of India in 1826-27, consisting of the lapses from pensions and other miscellaneous items. Had the arrangement of 1823 been carried out, this fund would have been quite unnecessary. But, with the exception of the Munnee Begum's stipend, which was regularly held in deposit by the Collector, the Nawab Nazim continued to appropriate to himself the lapses which should, by rule, have gone to the fund, and in 1836, when accounts were adjusted, the demands upon the Nawab Nazim for lapses were compromised by his paying 90,000 sicca rupees, Government 96,000 rupees, in full satisfaction of all the claims of Government for lapses which had accumulated in his hands from July 1833. The original investment in this fund was 5,50,200 sicca rupees, making, with the agency fund of 7,10,600 rupees, a total investment of 12,60,800 rupees. But of this, a certain portion of the securities was sold out to provide for the marriage expenses of three daughters of one of the Nawabs. The total invested funds in 1836 was therefore 11,92,745 rupees. The total amount of interest on this investment, together with the accumulations of the Begum's lapsed stipend up to 1836, amounted to 10,21,577 rupees, and this, together with the 90,000 rupees paid up by the Nawab Nazim, formed the nucleus of the pension deposit fund, which is identical with the Nizamut Deposit Fund.

16. In consequence of the new arrangements made in 1834, it was intended that all lapses from the balance of the 16 lakhs, after deducting the Nawab Nazim's personal share, should be credited to this fund. This intention, however, was never carried out, and the difference between the sum of 16,00,000 sicca rupees a year, and the sums actually disbursed amounted, as reported in our separate Despatch, No. 149 of this date, to *Rs.* 55,33,261. 7. 3. on 31st March 1868.

17. The Nawab Nazim states that Lord Dalhousie wrongfully converted the Deposit Fund into a book debt bearing no interest; that the several funds were created by his ancestors for special purposes, and ought to bear and have borne interest; that the orders of the Government were, that interest should be re-invested as received; that, in reality, the funds have been created (1) from lapsed stipends arbitrarily diverted for that purpose; (2) from family property to which the Nawab Nazim would have fallen heir; and (3) from a sum of two lakhs a year paid by the Nawab Nazim.

18. Now, the facts are, that the fund consists of two parts,—(1) invested, and (2) uninvested. The invested funds to which the Nawab Nazim never contributed anything, but which, with exception of a portion of Munnee Begum's treasure invested with consent of the Nazim of the day, consists exclusively of lapsed stipends, over which the Nawab Nazim had no control whatever, have always borne interest, and bear interest to this day. Part of the interest is devoted to the purpose for which the corresponding portion of the investment was originally made, viz., the agency establishments, although it is insufficient to meet the expenditure, and has had to be supplemented with grants from the other portions of the fund; and the remainder goes for Nizamut purposes over and above the payments made from the Government Treasury. If the interest of the Begum's Fund has not been reinvested as directed in 1823, it is because that fund never really came into existence, and the Nawab Nazim himself failed to carry out the arrangement by which he was to credit 56,000 rupees a year to the fund. He himself wrongfully appropriated the lapses, and, so far from his having any claim, Government had actually to forgive him a debt of 2,70,137 rupees on account of misappropriated lapses, and for this the Government of India incurred the censure of the Court of Directors.

19. In regard to the uninvested portion, not only was it never intended that it should bear interest, but it would be contrary to all the Government rules regarding deposits, if interest were granted upon it. Deposits in the Government Treasuries do not bear interest, except under specific arrangements made with the

the depositors. Since the first day of its formation, the deposit has borne no interest. It was not Lord Dalhousie who made it a book-debt; the uninvested portion of the Deposit Fund has never been anything else than a book-debt ever since its formation in 1836. What Lord Dalhousie wanted to do was to abolish the fund altogether, and to re-credit the uninvested balance to Government; but to this the Court of Directors objected. If the fund had been invested it would at one time have been bankrupt. The demands upon it are heavy and fluctuating. A reference to the report on the fund, which is enclosed in a separate Despatch, No. 149, of this date, will show that it has not always been able to meet its liabilities. Between 1842 and 1851, for instance, there was a cumulative deficit varying from a quarter of a lakh to nearly two lakhs. Much confusion, indeed, has arisen from styling the balance of the 16 lakhs a fund. The uninvested portion of the so-called fund is a mere account of certain liabilities which the Government of India may, at some indefinite time in the future, be called upon to meet. There is no obligation, expressed or implied, to give interest on this account; and on two occasions on which the present Nawab Nazim has brought forward his grievances, although apparently assisted by persons fully acquainted with all the facts of the case, he has not been able to adduce anything which implies a promise on the part of Government that interest would be allowed. This appears to us to have been the view of Her Majesty's Government in 1864. At that time interest had never been paid on the uninvested part of the fund. The Nawab Nazim complains that the fund was converted into a book-debt by Lord Dalhousie in 1854. The Despatch of June 1864, however, says not a word about interest, but merely decides that "the unappropriated portions from year to year of the 16 lakhs stipend unquestionably belong to the Nazim and his family, and can properly be expended only for their benefit." This is precisely the principle on which the fund has been administered. The Nazim's interest in it consists of his right to have certain expenses defrayed out of it (subject to the approval of Government) which would otherwise have to be paid by himself out of his personal allowance. His family's interest in it consists in their right to have a provision out of it at his death, as Government may then consider proper. It is true that the balance is now large, but there can be no doubt that at the death of the present Nazim, which may of course occur at any time, very heavy claims will come upon it.

20. We need scarcely remind your Grace that no portion of this fund is formed from the Nawab Nazim's personal allowances; that it consists of lapsed stipends of other members of the family, and is maintained for the benefit of the members of the Nawab Nazim's family and for Nizamut purposes generally; that it is to be expended on such objects as Government may sanction from time to time; and that the Nawab Nazim has no right to it, and least of all can he claim to have his debts paid from it. Until 1834, indeed, the only portion of the annual payment of 16 lakhs, in the disbursement of which the Nawab Nazim was uncontrolled, was a monthly allowance of 12,000 rupees for his privy purse, and a provision for the women's apartments. When in 1823 the Government of India forgave the Nawab Nazim a sum of 2,70,137 rupees which he had appropriated to his own purposes from the accumulations, the Court of Directors* observed: "The deposit fund is the property of the Nizamut generally, and if the Nazim has thought fit to misapply a portion of it, this is no ground for exempting him from the obligation of reimbursing what he has so misapplied to the prejudice of other members of the establishment, whose necessities are greater, and who, if it is to be devoted to the relief of individuals, have so much more valid a claim." The same principle has been repeatedly laid down, more particularly in the Despatch from the Court of Directors, dated 17th May 1854, and in Lord Canning's Despatch of 20th December 1859.

* Despatch of 11 March 1829.

21. While, therefore, we admit that the accumulations of this fund are to be held by us for the benefit of the family and the purposes of the Nizamut generally, we must absolutely reject the claim on the part of the Nawab Nazim to interfere in the management of the fund in any way whatsoever. The object of the proceedings of Lord Canning's Government in respect to the appointment of Dewan Nizamut, of which the Nawab Nazim complains, was to separate the public and official duties of the administration of the fund from the management of the Nawab Nazim's personal allowances, and to leave the Nawab Nazim to dispose of his personal allowances in any way he may think proper. These

arrangements were fully approved in the Secretary of State's Despatch of 17th June 1864, and, as the Nawab Nazim has no personal claims whatever on the fund, or any right to a voice in its management, we cannot see that he has any grounds for complaint in connection with the arrangements made by Lord Canning. We may remark that we have recently received information of the death of the Dewan Nizamut, Raja Prosunno Narain Deb, Bahadoor, and it is our intention to take the opportunity of abolishing the office.

22. With respect to the Nawab Nazim's complaint regarding the proceedings of Mr. Torrens, we think that sufficient answer has been given in paragraph 14 of Sir C. Wood's Despatch of 17th June 1864. So far as concerns any claims for accounts during the Nawab Nazim's minority, the matter has been settled, as reported in our Despatch, No. 119, dated 24th June 1870; and as to what took place after the Nawab Nazim came of age, we would simply refer to the decision given in 1864. The Nawab Nazim's statements are put forward so vaguely that they call for no remark from us in any way, and it would be impossible, even if desirable, to enter on a discussion of them.

We have, &c.

The Secretary of State for India to the Nawab Nazim of Bengal.

My Friend, India Office, 23 December 1870.

In my letter of the 23rd October 1869, I informed your Highness that the memorial which you did me the honour to address to me on the 28th July 1869, had, in accordance with established precedent, been sent to his Excellency the Viceroy, for such observations as he might have to make upon it; and I have now to acquaint you that, having received the opinion of his Excellency in Council on the several points of complaint which you have brought before me, I have taken them into deliberate consideration in Council, and I have now to communicate to you the result of our deliberations.

It will be for the convenience of your Highness that I should adopt the arrangement of your memorial, and reply to the several questions in succession, according to the order in which you have placed them.

The *first* question which you bring before me relates to the nature of the several treaties, which, from time to time, have been entered into between your Highness's predecessors on the one side, and the British Government in India on the other. Your Highness has read the Despatch of the 17th of June 1864, in which the views of Her Majesty's Government on this subject were communicated to the Government of India. I regret that I can find nothing in your Highness's memorial to cause me to consider that the views then taken were erroneous.

Having deliberately considered the circumstances of these treaties and engagements, as fully set forth in the records of this Government, I can come to no other conclusion than that they were not of an "hereditary nature."

On the *second* point to which your Highness has called my attention, being a matter of a personal character, and of a painful and delicate nature, I enter with much reluctance. You complain that there was, as far back as the year 1854, some misconception "of your being in some way connected with a base outrage committed by some menial servants," an outrage of which you were not even cognizant at the time. I cannot but regret that, after the lapse of so many years, you should have revived this painful discussion. I have had before me the records relating to it, and I have read the final decision of the Home Government of the time, the Court of Directors of the East India Company, and I do not see that it was judged that your Highness was "connected with the outrage" to which you refer. It was the opinion of the Court that, by subsequently bestowing marks of favour on some of your servants, who had been connected with

with that outrage, you had not marked your abhorrence of the offence, but had, on the other hand, appeared to evince sympathy with the offenders. The adverse judgment of the Court of Directors, I am happy to inform your Highness, went no further than this reflection on your subsequent behaviour; and I need not remind you that, with one single exception, the privileges which were withdrawn from you shortly after the occurrence of these transactions, have been since restored in a manner honourable to your Highness.

Of this exception, to which you invite my attention under the third head of complaint, I have now to speak. Your Highness refers to the abrogation of certain special regulations by which you were exempted from the ordinary jurisdiction of the law courts; and you seek the restoration of these exceptional privileges. But it is with no especial reference to the events of 1854 that the Government, both in India and in England, feel themselves compelled to refuse compliance with your Highness's request. You must be aware that the whole tendency of recent legislation in the Indian Empire has been opposed to the grant of these privileges and exemptions, and it would be contrary to the principles upon which India is now governed to restore such enactments to the Statute Book.

The *fourth* and *fifth* subjects of complaint which you bring to my notice, relate to the administration of the several accumulations of money in the hands of the Indian Government, generally described as the "Nizamut Deposit Funds." It is the opinion of your Highness that you ought to have a more direct control over these "Funds," and that the entire amount should be invested, and the interest added yearly to the aggregate accretions. The first question was fully considered by Her Majesty's Government in 1864, and I can see no reason to differ from the opinion then expressed as to the full right of the Government to administer these "Funds" in such manner as they might think fit, for the benefit of the Nizamut family. With respect to the question of interest, I can only inform you, at present, that I am in communication with the Government of India, as to whether the interest might not advantageously be added to the accumulations in the fund for the general benefit of the family.

One further point remains for consideration; that which your Highness describes as "Extraordinary transactions of Mr. Torrens, Agent to the Governor General." These transactions occurred more than 20 years ago. I have read the correspondence contained in your Highness's Memorial with extreme regret; but I cannot help entertaining the opinion expressed in Sir Charles Wood's Despatch of 17th June 1864, that although your Highness may have had good ground of complaint against Mr. Torrens, as the death of that gentleman arrested inquiry at the time, no benefit would now arise from re-opening the discussion of the question.

I may take this opportunity of informing your Highness, and I do it with much pleasure, that having taken into consideration the circumstances of the advance of three lakhs of rupees, promised to your Highness in my letter of the 15th July 1869, Her Majesty's Government have determined that it shall not be considered as a loan to be repaid by your Highness, but as an absolute payment out of the Deposit Fund, in fulfilment of an intention which seems to have been entertained by Government, after the disturbances attending the mutiny of a portion of the Bengal army in 1857.

I am, &c.
(signed) *Argyll.*

His Highness
the Nawab Nazim of Bengal.

COPIES of LETTER, dated the 14th day of January 1862, of No. 28, from the Officiating Secretary of the Government of *India*, Foreign Department, to the Secretary to the Government of *Bengal*:—Of LETTER, dated the 23rd day of May 1859, from Major *Colin Mackenzie*, Acting Agent of the Governor General at *Moorshedabad*, to *A. R. Young*, Esquire, Secretary to the Government of *Bengal*:—Of LETTER, dated the 28th day of February 1823, from *H. T. Prinsep*, Esquire, Persian Secretary to the Government of *India*, to the Agent of the Governor General at *Moorshedabad*:—And, of DESPATCH, No. 17, dated the 24th day of April 1840, from the Honourable the Court of Directors of the East India Company to the Governor General of *India* in Council.

India Office,
14 March 1871.

J. W. KAYE,
Secretary in Political and
Secret Departments.

From Colonel *H. M. Durand*, C.B., Officiating Secretary to the Government of India, Foreign Department, to the Secretary to the Government of Bengal (No. 28), dated the 14th January 1862.

Sir,

No. 420, dated 5th July 1861.
No. 441, dated 23rd July 1861.
No. 457, dated 1st August 1861.
No. 461, dated 6th August 1861.
No. 483, dated 31st August 1861.

I AM directed by the Governor General in Council to acknowledge the receipt of your letter noted in the margin, relative to the recent dismissal of the Dewan by the Nawab Nazim of Bengal, and to the conduct of his Highness towards the Governor General's agent, Lieutenant Colonel Mackenzie.

2. On the first point I am directed to express the general concurrence of his Excellency in Council in the view taken by the Lieutenant Governor, both as to the constitution of the office of Dewan, and as to the course which the Nawab Nazim's proceedings towards the present Dewan impose upon the Government.

3. Heretofore no Dewan has ever been appointed or removed by the Nawab Nazim without the concurrence and approval of the Government or of its agent. And although the Government has always assumed the power of appointing and removing the Dewan in opposition to the wishes of the Nawab, yet that power has in no case been exercised, except after previous communication with the Nawab, and a full consideration of his objections.

4. Therefore, in summarily dismissing the Dewan without inquiry, and without any just cause in opposition to the remonstrances of the agent, and in violation of his own promise; in abolishing the office of Dewan; and in appointing his two sons to "conduct the affairs of the Nizamut," aided by another functionary under the title of Madar-ul-Mahan, the present Nawab Nazim has not only departed from a long established usage, but has usurped an authority which does not belong to him, and was never even claimed by any of his predecessors. The proceeding is one which, to say the least of it, is not respectful to the Government.

5. The Governor General in Council is not in the least disposed to interfere with the Nawab's management of his own private affairs, nor does his Excellency desire any longer to have a voice in the appointment of the persons by whom the expenditure of the Nawab's personal stipend is to be controlled. His Highness is at liberty to spend his income as he pleases so long as he keeps out of debt, and he is equally free to choose his own servants, to dismiss them, and to designate them by any names that he deems appropriate. But the Governor General in Council will not allow his Highness another opportunity of treating with

with injustice and contumely a high native officer appointed with the sanction of Government and still possessing its confidence; nor will the Nawab in future be consulted as to the appointment of the officer by whom the general business of the Nizamut is managed under the superintendence of the agent.

6. The Nawab Nazim, therefore, should be informed that the Government will take no cognisance of the arrangement he has made for the management of the affairs of his own household, and that the expense of it must be defrayed from the funds at the disposal of his Highness. The Nawab should also be told that the Dewan will not be allowed in future to interfere in the private affairs of his Highness, but that he is the only officer whom the Government will recognise as the Dewan of the Nizamut, and through whom the business of the Nizamut generally will be transacted. The Dewan will continue to receive the salary he has hitherto drawn, but it will be paid to him from the Nizamut Fund. The office will be maintained on this footing so long as it is held by Rajah Prosunno Narain Deb, but when a vacancy occurs it will have to be considered whether the duties are not such as may be performed by a less expensive agency.

The Nawab Nazim's stipend, together with all arrears that may due to him, should be paid at once to his own receipt; if this has not been already done, consequent upon a communication which lately passed between the Governor General and the Lieutenant Governor. With regard to the affront offered by the Nawab Nazim to the agent, on the occasion of his visiting the palace in May last, the Governor General in Council agrees with the Lieutenant Governor in thinking that it has by no means been atoned for by the very unsatisfactory explanation which has been accepted by Lieutenant Colonel Mackenzie as an apology to himself. For that affront offered to the Government, in the person of its agent, his Excellency in Council will not be satisfied with imperfect excuses. Nothing short of a full admission of error, and an unreserved expression of regret can be received by the Government as a sufficient apology, and the Nawab should be told that until such an apology has been forwarded by him and accepted by the Lieutenant Governor, neither will the request which his Highness has made for permission to visit the Governor General be considered, nor will the letters which he addressed to his Excellency on the 16th and 25th October be answered. The agent also will be withdrawn for the present, and all official communications between the Government and the Nawab will be made through the Collector of Moorshedabad, until an agent regularly appointed can with propriety resume his functions.

7. I am directed to take this opportunity of referring to the Nawab Nizam's Memorial to the Secretary of State, and to the correspondence ending with your letter, No. 421, dated the 6th July last, relative to the accounts of the minority, and to the allegations made by his Highness in respect to the late Mr. Torrens.

8. The Nawab should be informed that his Memorial, though expressed in language far from respectful, will be forwarded to the Secretary of State, for the consideration of Her Majesty's Government, together with such remarks as the unfounded pretensions it sets forth, and the erroneous statements and inferences it contains have rendered necessary.

9. At the same time it should be clearly explained to his Highness that the Governor General in Council entirely rejects his claims, so far as they are founded on the assertion of any treaty rights, or of any sovereign or hereditary title, and that his recognised position in regard to the sum of 16 lakhs of sicca rupees, now annually set apart for Nizamut purposes, and to the accumulations thereof, is as follows:—

1st. Since 1771, 16 lakhs of rupees have been granted for Nizamut purposes. The continued payment of this sum is guaranteed by no treaty, and it has hitherto been paid of the free grace and favour of the British Government. It may cease, or may be diminished, whenever the Government shall so determine; but there is no intention of making any change in the present arrangement during the lifetime of the present Nawab.

2nd. Though there is no guarantee for the continuance of the above payment in whole or in part, yet certain pensions now charged upon it were declared by Lord Cornwallis in 1790 to be, and are therefore, hereditary.

3rd. Out of the above-mentioned sum of 16 lakhs, somewhat less than seven lakhs of sicca rupees a year are now paid to the Nawab for his own purposes. This money is at the Nawab's disposal without control, unless he falls into debt, in which case the Government may step in and take the management of it. Any pension granted out of this annual sum reverts to the Nawab on its discontinuance. This arrangement, however, is only for the lifetime of the present Nawab, and will be re-considered at his death.

4th. The rest of the 16 lakhs, after deducting the amount paid to the Nawab, is carried to the credit of the deposit fund.

5th. Everything once paid into the deposit fund is held at the disposal of the Government, as a means of providing for the collateral branches of the Nizamut family (exclusive of the Rajmehal branch), and for other purposes connected with the Nizamut.

10. The only other point in the Nawab Nazim's Memorial which it is necessary to notice now, is that which relates to the charges brought by his Highness against the late Mr. H. Torrens. It is alleged by the Nawab that Mr. Torrens, in his capacity of agent of the Governor General prevailed on his Highness, on his coming of age, to agree to the sale of certain Government securities, amounting to upwards of 19 lakhs of rupees, the invested savings of his personal stipend during his minority, that he caused the securities to be sold, and held for some time in his own name by the Calcutta firm of Mackenzie, Lyall & Co., and that he was, at least, a consenting party to the reckless plunder and dissipation of nearly the whole amount. The statements of the Nawab and of Lieutenant Colonel Mackenzie on this subject, as contained in the enclosures of your letter, No, 421, dated the 6th July last, reflect most painfully on the character and conduct of Mr. Torrens; and if that gentleman were now alive it would have been obviously imperative on the Government to make a strict and searching inquiry into the whole facts and bearings of the case. There certainly are, as the Lieutenant Governor observes, grounds for presuming that he acted on good faith for the Nawab's benefit, though altogether without authority, and with the most culpable imprudence and disregard of all official propriety; that he was imposed on by others, and that, notwithstanding the suspicion that necessarily attaches to some of his acts, he himself derived no personal advantage from the transactions in question. But at the best, the appearance of the case as regards him, judged by his own letters to Mackenzie, Lyall & Co., is most discreditable. Still, under the circumstances, it does not appear to the Governor General in Council that any good object can be gained by further inquiry.

Mr. Torrens has been dead for more than eight years; and, so far as the Nawab is concerned, it is clear from his own admission that after he became of age he gave Mr. Torrens full authority* to deal with the accumulated savings; that he made no objection or complaint in Mr. Torrens' lifetime as to the way in which the money was being disposed† of, though his Highness might, in such a case, as he has recently done, have addressed the Governor General direct; that he allowed several years to elapse after Mr. Torrens' death before he accused that officer of having aided to pillage him, or otherwise brought his proceedings to the knowledge of the Government; and that the statements in regard to Mr. Torrens, made by his Highness in his Memorial to the Secretary of State, were not brought forward in the way of complaint, but were merely incidental to the subject matter of the Memorial, and intended to illustrate the manner in which his interests were injuriously affected by the action of the law of 1854. The matter may therefore be allowed to drop.

11. With reference to your letter, No. 490, dated the 17th September last, I am

---

* "Mr. Torrens required me to sign, which I did in compliance with his requisition, the letter of that date before alluded to, addressed to the Government Agent, directing the endorsement to him as Officiating Agent to the Governor General at Moorshedabad, or order, of the Government securities remaining in the Government Agent's possession belonging to me, holding them subject to his, Mr. Torrens', instructions." —*Nawab Nazim's Letter to Lieutenant Colonel Mackenzie.*

† "Mr. Torrens continued to be the agent of the Governor General up to the time of his death, and any representation or complaint that I might have desired to make in his lifetime must have been made through him. There was no other course open to me. Moreover, although I was sensible, while Mr. Torrens held the office of Agent, of his general oppressive conduct towards me, I was not cognisant of the particular acts which, after the institution of my suits against Mackenzie, Lyall & Co., and Mr. Macarthur, came to my knowledge."—*Ibid.*

I am directed to request that the Nawab Nazim may be urged to give a discharge for the minority accounts, the correctness of which in no way depends upon circumstances which occurred after his Highness came of age.

12. In a preceding paragraph it has been directed that the Agent should be withdrawn. The Governor General in Council will not entertain the question of any Agent residing at Moorshedabad until the Nawab Nazim shall have apologized in a way that shall be satisfactory to the Lieutenant Governor for the affront offered by his Highness to the representative of the British Government. Lieutenant Colonel Mackenzie should therefore be directed to leave Moorshedabad directly, and repair to Calcutta. He should make overcharge of his office to the Collector of Moorshedabad, who, with the assistance of the Dewan, will make the usual payments to stipendiaries and others, and discharge the current duties of the Agent's office, but will hold no communication with the Nawab except such as may be required by law.

13. As it is not the intention of the Governor General in Council that Lieutenant Colonel Mackenzie should resume charge of the office of Agent, he should be so informed, and directed to abstain from all further interference with Nizamut affairs. The grave doubts of his Excellency in Council, as to Colonel Mackenzie's unfitness for the position he now holds, have already been recorded, and the present correspondence clearly shows that any hope of his ever obtaining a salutary influence over the Nawab is out of the question. He will remain in Calcutta until he can be otherwise provided for, but when the time comes for the Agent to resume his functions, another officer will be appointed in his room.

14. In conclusion I am desired to state that the instructions conveyed to the Agent in the Junior Secretary's letter, No. 156, dated the 3rd December, are entirely approved by the Governor General in Council. Whatever may have been the practice in former years, Lieutenant Colonel Mackenzie's proposal, as regards English gentlemen not in the service of Government, is quite untenable. It is by influence and tact alone, not by commands, that the Nawab can be kept from intercourse with any persons of that kind with whom such intercourse is objectionable.

From Major *Colin Mackenzie*, Acting Agent to the Governor General at Moorshedabad, to *A. R. Young*, Esq., Secretary to the Government of Bengal, dated Fort William, the 23rd May 1859.

Sir,

I HAVE the honour to acknowledge your letter, No. 119, dated 2nd April 1859, calling for my opinion on Nizamut affairs, together with the enclosures, as per margin.

Note by Secretary to Government of Bengal. Minute by Government of Bengal, dated 9th November 1853. Letter from Secretary to Government of India, Foreign Department, No. 2889, dated 7th July 1854, with one Enclosure.

2. The force of the first two documents is considerably neutralised by their rejection in the third and last; but as his Honor the Lieutenant Governor has invited me "to make any remarks upon them which they may seem to require," I have the honour to forward, for the consideration of Government, a narrative of the principal facts connected with Nizamut affairs, which I have for months past been engaged in compiling from a mass of ill-arranged records, and in anticipation of a desire on the part of my superiors to have fuller information as to the facts of the case than has hitherto been afforded them.

3. I beg to premise that in offering this detail I earnestly disclaim all intention of thrusting my opinion on the attention of Government, or of presumptuously dictating the course which ought to be pursued. If, in my endeavour to put the merits of the case clearly before the eyes of the deciding authorities, I have used little circumlocution, I trust that my plainness of speech may be viewed in a favourable light, and that it will be seen that my sole motives are concern for the honour, and consequently for the real interests of my country and of the Government which I have the honour to serve, and the necessity of putting aside all selfish considerations in the performance of so sacred a duty.

4. The papers sent and referred to in the first paragraph of this letter consist of a note signed by the Secretary to the Government of Bengal, and a Minute

based upon it by Lord Dalhousie, dated 9th November 1853. The Governor General speaks of the note as "having given him for the first time a full view of the arrangements of the Nizamut." It was, therefore, the more to be regretted that the note itself was incomplete, and made no allusion to several most important documents and facts which must have materially altered the conclusions arrived at. This incompleteness could scarcely have been avoided unless the drawing up of the memorandum had been confided to the Agent of the Governor General at Moorshedabad, or to some one who could command the leisure to peruse the mass of documents relating to Nizamut affairs which are dispersed in the offices of the Agent of the Nizamut and of the Bengal Government, and which I may safely say require the labour of months to become fully acquainted with.

5. After giving an outline of the three treaties between the East India Company and the three sons and successors of the Nawab Jaffer Ali Khan, the writer of the note came to the conclusions—

First, That "no treaties or agreement had been made with any of the five Nawabs who have since ascended the musnud."

Second, That "none of the above engagements were otherwise than personal," and that therefore "there never was any guarantee, express or implied, to continue the payment of 16,00,000 sicca rupees to the Nawab and his family for ever;" while the late Governor General states that "it is beyond question that the Nawab has *no right or title whatever to any allowance* by treaty or compact, or by virtue of any agreement," but that he and his predecessors have received the stipend of 16 lacs of "the free grace and favour of the British Government in the same manner as the King of Delhi." He supports this opinion by the remark that the amount of the allowance was changed for the worse from 56 to 43, and subsequently to 31 lacs; but although, on a cursory glance, these conclusions may appear well founded, they were apparently formed in unconsciousness of the grand fundamental treaty of all; *i. e.*, the tenure on which the British hold the vast provinces of Bengal, Behar, and Orissa.

6. This is the basis of all our relations "with the Nazim. It is the firman of Shah Alun granting to the East India Company the Dewanee or Civil Government of Bengal, Behar, and Orissa," as a free gift, and Altumgah with the *conditional "jagheer" of "whatsoever may remain* out of the revenues thereof" after the payment of 26 lacs per annum (by the Nawab) to the royal revenue," and "*after providing for the expenses of the Nizamut*," securing "them from dismissal, and granting the said office to the Company *from generation to generation for ever and ever.*"

Blue Book, pp. 46, 7.

7. Upon this firman two supplementary agreements were based, carrying out its provisions, one between the Nawab Nazim-ool-Dowla and the Company, and the other between Shah Alum and the Company. The former runs thus:—

Blue Book, p. 36.

"The King having been graciously pleased to grant to the English Company the Dewanee of Bengal, Behar, and Orissa, with the revenues thereof, as a free gift for ever, on certain conditions, whereof *one is* that there *shall be a sufficient allowance out of the said revenues* for supporting the expenses of the *Nizamut:* Be it known that I do agree to accept of the annual sum of 53 lacs of sicca rupees *as an adequate allowance.* This agreement, by the blessing of God, I hope will be inviolably observed as long as the English Company's factories continue in Bengal."

In the second agreement between the Shah and the Company the latter, "in consideration of his Majesty having been graciously pleased to grant them the dewanees of Bengal, &c., do engage to be security for the regular payment of the sum of 26 lacs per annum, which the Nawab has agreed to pay to the King." This engagement having lapsed, owing to the downfall of the sovereignty of Delhi, does by no means affect the separate agreement between the Nazim and the Company, the former having fulfilled all his engagements, and the Company having enjoyed all the benefits contemplated therein.

8. From this it appears evident—

Jagheer conditional.

First. That Bengal, Behar, and Orissa were granted to the Company as a conditional jagheer, the full force of which term may be gathered from the fact that the jagheer granted to Lord Clive is expressly styled an "unconditional

ditional jagheer;" and the grant to the Company of the northern Circars in the same year is stated to be "by way of inám or free gift." Blue Book, p. 49.

Second. That which was granted was *not* the whole revenue of these provinces, but "whatsoever may remain" after remitting the annual tribute (which the Nawab Nazim, or Viceroy, was bound to pay to the Imperial Court), and providing for the "expenses of the Nizamut." These were the first charges upon the revenues of Bengal, and the Company were entitled to "what remained." Had the treaty been purely personal and applicable only to the reigning Nazim, the expression used would have been the expenses of the Nawab Nazim Nadjim-ool-Dowla; but the phrase "expenses of the Nizamut," is a generic one, and has always been employed to include those who should inherit or appertain to the Nizamut; the Nizamut exists, though Nadjim-ool-Dowla has been long dead. What the grant consisted of.

3rdly. The grant being made "for ever and ever," the conditions of it are evidently perpetual also.

4thly. The stipulation was a "sufficient" or "adequate allowance" for the expenses of the Nizamut, and the amount was settled by mutual agreement. To annul, modify, or in anywise change a treaty so carefully worded, and on which such great interests depend as the annexation of three provinces (which might be styled kingdoms), must obviously require the consent of both the contracting parties. The contracting parties were equal; they are so in theory still. The Nazim is now weak, but what made him so? this very treaty. Shall we, therefore, break it? Who is to decide what is "suitable" or "adequate"? Evidently not only the paramount power, but both.

9. Accordingly this has been the invariable practice, with one marked exception. The Nawab Syef-ool-Dowla "ratified and confirmed" the treaties entered into with his father and brother, "as far as is consistent with the true spirit, intent, and meaning thereof," which is, if I mistake not, the custom whenever a supplementary article or modification is added to a treaty or agreement between contracting parties in Europe, and by no means implies that the treaty would not have been binding on the successors of the prince who made it without such confirmation. A further article was added, to the effect that "having entire confidence in them (*i. e.*, the English) that nothing whatever be proposed or carried into execution by the Company derogating from his honour, dignity, interest, and the good of his country," he made over the military defence of the country to the Company; and in consequence, while receiving the same sum as his predecessor, viz., 1,77,800 rupees, for his household expenses, he agreed to diminish the portion for his sowaree to 24 lacs instead of 36, as he no longer had to maintain the same number of horse and foot. This latter sum had never been considered fixed, the expression used in the agreement with Nadjim-ool-Dowla being, "*should such an expense hereafter be found necessary to be kept up.*" The change, therefore, cannot be said to be "for the worse," neither does it prove anything but that it was lawful to modify the former treaty by the consent of both parties.

10. The terms of both agreements denote their permanency, "so long as the English factories continue in Bengal." The treaty, in 1770, with the minor, Nawab Mobaruck-ool-Dowla, was still more solemnly confirmed. Owing, probably, to the infancy of the Nazim, his stipend was reduced still further; but this agreement, which the Governor General in Council affirmed, "shall, by the blessing of God, be *invariably observed for ever*," was, about two years after, broken by the Court of Directors, and the allowance of the Nazim reduced to 16 lacs. To use Lord Dalhousie's words, "it was set aside by their sole authority, without any acquiescence, signified or asked, from the Nazim;" but this transaction, which his Lordship, apparently not being aware of the solemn fundamental Treaty of Shah Alum, was thus led to adduce as a proof of right, was one of those instances of wrong which causes our early Indian history to be adduced as rather a chart of shoals than as an armoury of precedents. I think his Honor will agree with me, that in order to act in accordance with the higher political morality of the present day, and especially with the pledge for "the strict observance of treaties and engagements" so recently given by Her Majesty, we 1770. 1772.

must refer to the compact made by our predecessors rather than to their mode of observing them.

11. The result of long and careful researches into voluminous ill-arranged records has been the establishment of the following facts: that although the engagements with the five subsequent Nazims were not in the shape of formal "Treaties," yet there have been several solemn "agreements and compacts," especially in 1790, 1823, and 1834; and each successive Governor General, on assuming the reins of government, as also on the accession of a new Nazim, has "confirmed the existing treaties and engagements," and reiterated the assurance of a "scrupulous adherence to existing engagements, and to the obligations of public faith and honour."

Governor General, 5th January 1823. Governor General to present Nazim, 1838.

The late Governor General solemnly promised on his arrival to "promote the interests and establish the authority of all the native princes by strict observance and enduring fulfilment of compact and treaty in terms of existing conditions, stipulations, and articles arranged and concerted."

In fact, with slight variations of expression, every successive Governor General has publicly assured each successive Nazim that "the honour and dignities due to your hereditary rank, and the prescriptive privileges of your high station, guaranteed by the stipulations of *subsisting treaties and long-established relations*, observed and cherished by former Governors General, will, on the part also of this sincere friend, be fervently fostered and punctually fulfilled."

12. The 16 lacs to which the Nazim's stipend was reduced in 1772 have been repeatedly recognised as "belonging to him by treaty."

The frequent promises "not to derogate from the honour, dignity, or interest of the Nawab Nazim certainly include not diminishing his income, since both his dignity and interest would suffer by the curtailment of it."

Lord Cornwallis, after "inquiring of the Nazim the names of those whose pensions he wished to discontinue," declared the stipends of the relations of the Nazim "hereditary." If the stipends were to be hereditary, the funds from which they were paid must be hereditary also.

But express pledges abound.

Lord Minto, on the accession of Nawab Nazim Ali Jah, "assures him that the stipend, fixed on the accession of your august father by the Honourable East India Company, will be continued to your Highness without any difference, viz., the annual allowance of 16 lacs, in monthly issues, as usual." The same pledge is reiterated by the Marquis of Hastings in 1821, and by Lord Amherst in 1825. Lord Amherst says, "Your Highness may be assured that the regular fixed allowance, and the other mutually settled points, will remain and continue as approved and sanctioned by the Home Authorities, viz., 16 lacs of rupees per annum."

Governor General to Nawab Nazim, 15 July 1807.

Lord Moira gave a formal assurance that the agency deposit fund would "ever be considered as the inalienable property of his Highness' family over and above the 16 lacs of rupees assigned for its support."

In 1836 the Government instructed the Accountant of the Revenue Department, "That the stipend of the Nawab Nazim, and the Nizamut pensioners, having *formed matter of express engagement in a treaty*," &c.

12 January 1836.

In 1840 the Court of Directors corrected the Deputy Governor, who had styled the deposit fund "public money," and affirmed that "the deposit fund is not public money, but a part of the assignment by treaty of the family." *See* Narrative, *passim*.

Even had there been no treaties the 16 lacs are sufficiently secured by "long-established relations," and Government has repeatedly pledged itself "to the strict observance and enduring fulfilment of existing conditions, stipulations, and articles arranged and concerted."

No change in the amount of the allowance has been made since 1772, and no change of any importance has ever been made even in the allotment of it, without a formal agreement with the reigning Nazim.

13. The principal agreements, omitting several which proved abortive, have been three in number.

By the first, seven lacs, chiefly arising from Munnee Begum's stipends, were invested for the payment of the Agent of the Governor General and his establishment; his Highness gave his consent on receiving from the Governor General

1816.

General " an assurance that this fund is, and will be considered the inalienable property of his Highness' family over and above the 16 lacs assigned for its support."

1823.

In 1823 the Governor General proposed that two lacs of rupees, per annum, should be invested for the benefit of the Nizamut; his Highness consented, on the British Government " relinquishing all desire to increase the fund beyond one-eighth of the entire Nizamut stipend." Governor General in Council, 28th February 1823.

The third and latest agreement which has been entered into between the " two Sirkars," is that of Captain Thoresby in 1834, which stipulates that " all *perquisites*, Mamoolats, &c., *as well as present or future* pensions should *revert to* and *be at the entire disposal of his Highness.*"

That the stipends of relations and dependents should be distributed by the Agent, although the entire 16 lacs are still paid to his Highness' receipt, the treasurer being answerable henceforward to the Agent, as well as to the Nawab Nazim; that his Highness should have full control over his own household and his own expenditure, " without the obligation of giving any account of either." 23rd May 1836.

This was acknowledged by Government as " the rule under which Nizamut affairs are to be henceforward administered."

14.—I. To sum up the subject as a mere matter of account, it seems clear that " an adequate allowance " for the Nizamut is secured by treaty as the first charge on the revenues of Bengal, Behar, and Orissa.

II. That the right of his Highness to at least 16 lacs, per annum, rests not only on ancient usage, " long established relations," and prescriptive right, since 1772, but on many formal stipulations and agreements.

III. That two lacs, per annum, and no more, are by contract to be deducted from his Highness' stipend, the accumulations and balance of interest to be invested in the securities of the British Government, who is the trustee responsible for disposing of the money " for the benefit of the family," especially for buildings, travelling expenses, and dowries; this is admitted in Lord Dalhousie's orders, for he styles it " a debt," although he would not allow it to bear interest.

IV. That the remaining 14 lacs, with all lapses and accumulations therefrom, from 1836 (only deducting such pensions as he and his ancestors have allotted to their relations and dependents), belong to the Nazim for the time being, whoever that may be, and should be made over to him. It appears that if a portion of this money, properly belonging to the Nazim, has been withheld from his Highness and made use of by Government, he has a claim not only to the principal but also to the usual rate of interest.

15. The foregoing remarks and the subjoined narrative will, I venture to hope, enable Government to discern and weigh the merits of this important case, and to arrive at a conclusion befitting the magnitude of the interests debated, and the enduring influence of the principles involved. I will not dwell on the impression likely to be produced by this and similar decisions upon the native mind, and it may be on that of the public at home.

16. I cannot conclude without remarking that it is impossible to disconnect the interests of the Nawab Nazim from the proceedings adopted in connection with the famous murder case in the year 1853-54. But I am not authorised to enter upon this subject, although if called upon to do so, I believe I could throw some additional light on it.

17. I beg permission to add, lastly, that my position is one of peculiar difficulty and delicacy. As Governor General's Agent my first duty is to the Government, and I heartily desire to avoid even the appearance of opposition to their acts or policy. Of course I mean the Government which I have at present the honour to serve, as no man would be considered blameable if openly disapproving bygone measures, such as the abolition of flogging in the native

army, or the invasion of Afghanistan; at the same time I believe that his Excellency the Viceroy placed me in my present appointment, with a view to my carrying out the very object for which the office was instituted, viz., the protection of the interests of the Nawab Nazim as inseparably connected with the honour of the British name. Indeed, the Governor General in Council, in 1816, fully coincided with Mr. Edmonstone in declaring that "the exclusive object of the Governor General's agency at Moorshedabad" is "the prosperity and pecuniary benefit of the Nizamut," and it is on this ground alone that the Nazim consented to the formation of the Agency Deposit Fund, out of his own revenue, for the payment of the Government Agent at his establishment.

It is therefore with perfect confidence that I ask the indulgence of his Honor, the Lieutenant Governor, for having entered so fully into the subject, as also for every imperfection in the manner of doing so.

From *H. T. Prinsep,* Esq., Persian Secretary to the Government of *India,* to the Agent of the Governor General at Moorshedabad, dated 28th February 1823.

Sir,

I AM now directed to convey to you the orders of Government on the accounts of the Nizamut for the years 1226, 1227, and 1228, and likewise to furnish you with instructions on the several propositions contained in your predecessor's letters, dated respectively the 19th and 31st of December last. As connected with the subject of the accounts, I take the same opportunity of acknowledging the receipt of Mr. Rickett's letter, dated the 23rd December, forwarding the Collector's statement of the amount in deposit in his treasury.

2. The Governor General in Council is concerned to observe that, although improved in former and apparently more correct than when last forwarded, the accounts are yet not wholly free from error, besides being still somewhat confused, and not exhibiting so clearly as might be all the particulars called for in my letter to the acting Agent, dated 3rd February of last year. There is, moreover, no detailed statement of the appropriation of the several large sums allotted to the head noted in the 11th paragraph of the letter in question, the same plan having still been adopted of giving only a particular statement of the amount charged by the accounts in *excess* of the appropriations, which without a knowledge of the manner of distributing the allowed amount can, as before observed, afford little or no check. The detail is promised for the present year, and being essential as a record of the claims of the several members of the family, I am desired to call your particular attention to this point.

3. Again, although the accounts of the Deposit Fund for each of the three years under review, have been made up with some reference to the accounts of the general expenditure, and purport to correspond with them, the principle on which the balance is struck between the two is not clearly explained; besides that, it is not stated with sufficient precision from which treasury each of the disbursements charged *per contra* against the fund has been defrayed; neither is the date of the authority for any of the payments cited, which, as there must have been a Government Order to sanction each, should have been entered to facilitate the account.

4. It seems, indeed, from the statement of deposits obtained from the Collector, and sent up with the separate letter of the 23rd December, that no payment has been made by him from the Munee Begum's accumulated stipend since 1817; thence it follows that the Nazim's treasury has furnished the whole of the charges set against the Deposit Fund. This assumption has accordingly been adopted throughout the following paragraphs.

5. The

5. The balance at the close of 1225 is stated to have been three lacs ninety-six thousand one hundred and five rupees two annas and eight pies, whereof seventy-eight thousand five hundred and thirty-two rupees two annas and eight pies were in the Nizamut treasury, and three lacs seventeen thousand five-hundred and seventy-three rupees* in that of the Collector, it remains to bring on the accumulations and strike the annual balance from that time. The fund of accumulations for 1226 seems to have been two lacs fifty-eight thousand rupees twenty eight annas and nineteen pies, arising from savings annually accruing from before 1224. Against this is set the allowance to the Munee Begum's establishment for the year, twenty-six thousand five hundred and sixty five rupees, sundry augmentations of stipends amounting to thirty-six thousand rupees per annum, and the incidental charges noted in the margin, amounting to the aggregate to fifteen thousand six hundred and fifty-four rupees. The total charges on the fund for the year would thus appear to be seventy eight thousand two hundred and nineteen rupees, and the increment to the Deposit Fund, one lac seventy-nine thousand eight hundred and one rupees. From the above calculation the stipends of Khuleeloolah and others are entirely omitted, since, although from accidental circumstances they have come to be in deposit with the Collector, they seem to be totally distinct from the fund formed from stipends which have actually lapsed, or in the distribution of which amongst heirs and claimants a permanent saving has been effected.

	Rs.
Wages to Manjees, not stated whether sanctioned or not, as a charge against the Deposit Fund - - - -	54
Marriage Expenses of Shurfoonessa -	1,600
Buildings for the Valida Begum - -	14,000
Rs.	15,654

6. Of the above sum of one lac seventy-nine thousand eight hundred and one rupees, one lac forty-four thousand rupees, the Munee Begum's stipend, is forthcoming at the Collector's treasury, the remainder, viz., thirty-five thousand eight hundred and one rupees should be in the Nizamut treasury. It is necessary, however, to examine the account of receipts and disbursements of that treasury for one thousand two hundred and twenty-six rupees before determining the amount forthcoming there; the Nazim draws monthly the sum of one lac sixteen thousand three hundred and thirty-three rupees five annas and six pies, and with the sum paid to Moostufa Khan's family, the total payment to the Nazimut is sixteen lacks, minus the retained pension of the Munee Begum, or fourteen lacks and fifty-six thousand rupees of this sum, thirty-five thousand eight hundred and one rupees for the year, as above shown, unappropriated assets of the Deposit Fund for which the Nawab was accountable. The amount applicable to the expenses of the different branches of the Nizamut, including the charges on the fund, all of which were paid from his treasury, was only fourteen lacs twenty thousand one hundred and ninety-nine rupees. It seems, however, that the Nazim produces accounts showing an expenditure of fourteen lacs thirty-five thousand one hundred and fifty-one rupees, independently of several payments to be made for his treasury, on account of the fund; thus his charges are considerably beyond the funds available.

	Rs.
	16,00,000
Deduct -	1,44,000
Rs.	14,56,000

The charges not included are Munee	Rs.
Begum's establishment - -	26,565
Buildings, &c. - - - - -	15,654
Rs.	42,219

7. The general accounts are made upon the principle of disallowing all the charges which are in excess of the aggregate amount appropriated for the different departments, including that for contingencies as settled by the committee, of one thousand eight hundred and two rupees, and a few other available items from casual savings. In this manner a deduction of fifty-seven thousand one hundred and seventy-one rupees being made from the above amount, a difference is shown which corresponds with the deposit account, and leaves the precise sum of one lac forty-four thousand rupees to swell the accumulation in the Collector's treasury, besides yielding an increment in that of the Nizamut of thirty-five thousand eight hundred and one rupees, which, as before observed, ought to be forthcoming there. The following detail will explain this more clearly.

* This includes a sum in deposit on account of Khuleel Oollah's stipend, which cannot be considered part of the fund. The Munee Begum's stipend of twelve thousand per mensem is the only item falling under this description which accumulates in the Government Treasury, and, confining the statement to this, the Collector's balance was three lacs fourteen thousand five hundred at the close of 1225. The accounts transmitted assume the entire amount of the collections and deposits to be available to the fund.

Authorised expenses under different heads					13,01,791	7 18 –
Contingencies charged in excess*					1,33,359	11 9 3
But there being certain funds to meet contingencies, deduct, to be disallowed, the excess of contingencies above them, viz.					14,35,151	3 7 3
					*57,171	12 6 3
Remains to be passed					13,77,979	7 1 –
Complement of 16 lacs					2,22,020	8 19 –
Equal to aggregate of					16,00,000	– – –
Deposit fund			2,58,020	8 19		
Minus augmentation already carried to account			36,000	– –		
					2,22,020	8 9 –
* The Munee Begum's kitchen allowance is not included amonst these contingencies, but, on the contrary, is specially deducted from them; on the other hand, in calculating the amount to be disallowed, it is added to the larger sum, and therefore makes part of the 57,171 rupees. This item is thus twice subtracted from the total amount charged by the Newab, which is a mistake; its amount is 3,242 rupees per annum					2,22,020	– – –
Munee Begum's establishment			26,565	– –		
Sharfoonissa's marriage, building, and manjee			15,654	– –		
					42,219	– – –
Remains increment to fund					1,79,801	– – –
Distributed as follows:						
Collector's treasury			1,44,000	– –		
Nazamut treasury			35,801	– –		
		Rs.	1,79,801	– –		

From two lacs twenty two thousand and twenty deduct the Munee Begum's establishment and other expenses authorised as charges on the fund, but not included in the general account, like the Valeda Begum's and other increased stipends allowed for, and there remains the sum brought to account as increment to the fund distributed as above noticed.

8. It will be seen that in the balance struck between the general account of expenditure for the year and the Deposit Fund account, Mr. Ricketts has not included Khuleeloolah's stipend which is perfectly right; but that item should have been equally excluded from the deposit account, where its introduction has only led to confusion.

9. Having prefaced the above detail for the year 1226, the accounts of 1227 and 1228 may be disposed of in a similar manner.

10. The stoppage fund, which yielded two lacs fifty-eight thousand rupees twenty-eight annas and nineteen pies in 1226, was increased by the death of the Walida Begum and by the annexation of the salary of Raee Girdharee Mul with arrears, and also that of Moobarukoonessa to three lacs seven hundred and fifty-five rupees fourteen annas and fifteen gandas. The two last items, however, are not included in the balance struck, which assumes the Deposit Fund of the year at two lacs eighty-two thousand three hundred and sixty rupees. The reason of this is not sufficiently apparent; indeed the whole account for this year is very confused, the items being mixed up both in the general account and in that of the Deposit Fund, so as to render it extremely difficult to cast a balance; to proceed, however, for 1227, as was done above for 1226, let two lacs eighty-two thousand three hundred and sixty rupees three annas and twelve gandas be assumed as the available fund, against this

this must of course be set the establishment of the Munee Begum, also the allowed augmentations and the sum expended in buildings. The Valeda Begum's establishment, and the expense of her fatiha upon her decease, were likewise fairly chargeable to the fund, credit having been taken for her whole allowances in the above two lacs and eighty-two thousand rupees; making these deductions there will remain available for that amount an increment to the fund of one lac seventy-nine thousand two hundred and sixty-nine rupees for one thousand two hundred and twenty-seven. It is to be remarked that the payments to Jynath Ghose and Gungadhur are not included in the above statement of charges against the deposit fund, the reason for which is that those charges were not met from the lapsed salary of Raee Girdharee Mul, as explained in Mr. Russell's letter, dated the 20th February 1822, paragraph 9; and as that salary has been excluded from the above estimate of the available fund for the year, it must necessarily follow that these charges can have no place amongst the demands for the year. The inclusion of this item in Mr. Ricketts' account of the deposit fund for 1227, has contributed mainly to the confusion which appears.

I am not aware that it will be necessary to notice any particular item of expenditure in the year 1226, as I was not in charge of the office. In like manner, I do not know if I am called upon to notice any item in 1227 but one, and that I am not aware may not have been authorised, but I am unable to state it beyond the fact that it is asserted that it was verbally sanctioned by Mr. Ricketts. It is the item of 9,750 rupees paid to Jynath Ghose for performing the duty of Nail Dewan after the death of Girdharee Mull, and Gunga Jhur Baboo, after that of Jynath Ghose. Mr. Ricketts most probably considered it just that the person who did the duty should receive the salary attached to the office, although in a reduced scale, for Girdharee Mull (whose salary has been credited to the accounts) received 500 rupees per mensem, while the sum admitted to Jynath Ghose and Gungadheer is but 300 rupees.

11. To proceed with the calculation commenced above, there appears, independently of the stipends noticed in the margin, to have been an available saving for the fund of one lac seventy-nine thousand two hundred and sixty-nine. It remains to show how this tallies with the general account for 1227 of the appropriation of the sixteen lacs allowed by Government to the Nizamut. In consequence of the Walida Begum's death, the fixed charge for the several heads was considerably reduced from the year 1226, and stood at twelve lacs seventy-two thousand and forty-one. This amount, it is to be observed, includes the authorized augmentations, and likewise the expense for the Valida Begum's fathiha and kitchen, charged against the deposits. The accounts proceed to state the excess of expenditure for the year at one lac fifteen thousand two hundred and ninety-eight rupees, six annas, and thirteen and a half gandas; from this they deduct the Munee Begum's kitchen allowance, stated by Mr. Russell to be an impracticable saving, and likewise the expense of a journey to Beerbhom, which it is proposed to pay from the deposits; the excess thus stands at ninety-nine thousand four hundred and eighty-two; the account then disallows as much of this as equals its difference compared with the fund provided for contingencies, plus the kitchen allowance of the Munee Begum, which amounts to the same thing as if the contingent fund were at once added to the allowance appropriations, and the kitchen allowance deducted therefrom, as is done in the margin; thus the kitchen allowance, which being asserted to be an impracticable saving, should apparently be added to the authorized charges, becomes on the contrary not only an item of which audit is refused, but a deduction from the sum actually appropriated for contingencies. This cannot but be an error, yet as it is one which pervades the accounts for all

three years, while the motive and origin of it is not very intelligible, it must be left for separate correction. Assuming thirteen lacs forty-eight thousand and two hundred and forty-six to be the rate at which the account is to be passed, there is a complement of two lacs fifty-one thousand seven hundred and fifty-three, which balances with the deposit fund assumed at two lacs eighty-two thousand two hundred and sixty, after deducting the items already brought to account.

12. The Governor General in Council remarks that, independently of the charges on the fund above noted, by which the available asset of the year is reduced to one lac seventy-nine thousand two hundred and sixty-nine, the item of twelve thousand five hundred and seventy-four, on account of the expenses of a journey to Barbhoom, should likewise have been credited against the fund, making the increment of the year stand at one lac sixty-six thousand six hundred and ninety-five; in other words, reducing the amount for which the Nizamut treasure is to be accountable from thirty-four thousand two hundred and sixty-nine to twenty-two thousand six hundred and ninety-five.

13. It cannot be necessary to pursue the same detail in receiving the accounts of 1228. It may suffice to observe, that by the annexation of the entire stipend of the Valida Begum the available fund was raised in that year to three lacs twenty-eight thousand seven hundred and twelve rupees twelve annas. The charges on it are stated at sixty-one thousand six hundred and four rupees; but this includes an item of seven thousand rupees expended in salary to Ghaleb Ulee Khan and Raee Gungadhur, which, as the asset for it in the pay of Girdharee Mul is not included in the fund, cannot be set against the above sum. The increment of the year should thus be two lacs seventy-eight thousand one hundred and eight rupees, of which the Nizamut is accountable for one lac thirty-four thousand one hundred and eight rupees.

14. The general account of the appropriation of the stipend in 1228 is made up exactly on the same principles as those above reviewed, and by disallowing one lac fifty-five thousand and eighty-five rupees, out of a surplus charge of two lacs thirty-four thousand two hundred and eighty-three rupees, it exhibits an available fund of the same amount as the above. The same peculiarity appears in the manner of bringing the Munee Begum's kitchen allowance to account, viz., that it assumes the shape of a deduction from the amount set apart for contingencies.

15. The accounts and correspondence of previous years have been in vain referred to, in the hope that they would afford the means of ascertaining the correction which ought to be made in the accounts. With a view to rectify the error Mr. Russell, in the 9th paragraph of this letter, dated 29th November 1821, stated it to have been his intention to have "*added* the amount to the sum available for extra and contingent expenses," so as to prevent its swelling the excess of expenditure. In the present accounts the exact contrary of this course seems to have been followed.

16. Amongst the items composing the Deposit Fund as an allowance described as saleeana and kitchen of the Munee Begum, and stated at three thousand eight eight hundred and four rupees ten annas and nineteen gandas, whether this amount includes the three thousand two hundred and forty-two rupees, which constitutes the difficulty in the present instance, does not clearly appear; and in order to preserve the balance between the deposit account and that of the general appropriation of the Nizamut stipend, it is of some importance to know this. The probability seems to be that the correction would be in favour of the Nizamut treasury; but how the balance will be affected, and by what counter alterations in the deposit account the error will require to be met, it is impossible to ascertain without further inquiry of the Nizamut officers. You will be pleased, at your earliest leisure, to direct your attention to the subject, unless the instructions about to be furnished to you should supersede the necessity for so doing.

17. Upon

17. Upon the supposition that the balance of each year as now cast is not incorrect, the following abstract will explain the result of the accounts :—

	1226.	1227.	1228.	Total.
	Rs.	*Rs.*	*Rs.*	*Rs.*
Total Deposit Fund to be accounted for in the appropriation of the sixteen lacs - -	2,58,020	2,82,360	3,28,712	8,69,092
Authorised appropriations from the fund -	78,219	12,574 / 1,03,090	54,604	2,48,487
In Collector's office - - - - - -	35,801	22,696	1,30,108	1,88,605
But in order to balance the deposit and general accounts, there has been an excess of charge disallowed equal to - - -	57,171	23,276	1,55,085	2,35,532
Moreover, independent of the amount accounted for in the general Nizamut account, there are deposits in the Collector's treasury	2,258	1,369	11,740	15,367
And appropriations from these - - -	1,456	- -	2,509	3,965
Ditto - - ditto - - Nizamut Treasury, Gerdharee Mul's salary, &c. - - -	- -	18,385	10,390	28,775
Appropriations from ditto - - - -	- -	9,750	7,000	16,750

18. From the above abstract it is quite clear that if the settlement of the accounts for the three years 1226, 1227, and 1228 were to be made on the same footing as those of 1225, his present Highness would be liable to be called upon to make good the sum of one lac ninety-one thousand six hundred and four, as an asset of the Deposit Fund, besides what was stated to be in deposit at the close of 1225 ; viz., seventy-eight thousand five hundred and thirty-three, making altogether a sum of two lacs seventy thousand one hundred and thirty-seven. In point of fact, unless it could be assumed that the accounts were wholly factitious, in so far as they show an excess of charge, very little, if any, of this large sum will be forthcoming. There is, indeed, a sum of sixty-two thousand two hundred and seventy-one, which has been actually reserved for his Highness out of the privy purse savings of the late Nawab, bequeathed to the Doolhin Begum ; consequently thus much may be assumed to be disposable ; but the whole of the remainder, as well as the balance in hand at close of 1225, as the subsequent accumulations must, it is to be feared, be regarded as a retrenchment on the Government audit of the accounts, realization of which might or might not be enforced from other funds belonging to the Nazim.

	Rs.
1224 - -	19,338
1225 - -	42,933
Rs.	62,271

19. The above considerations, combined with the promise given in my letter dated the 3rd February 1222 to deal literally with his Highness in the adjustment of the accounts of his predecessor, suggests to the Governor General in Council that the following shall be the plan adopted for settling the accounts of the three years under review.

20. The total excess of charges for the three years, beyond the funds assigned from them out of the Nizamut stipend of sixteen lacs seems, from the above abstract, to have been two lacs thirty-five thousand five hundred and thirty-two, including a sum of upwards of a lac and thirty thousand spent on his Highness's accession, or in the funeral of his brother, and in the instalment of Raja Oodwunt Singh as Dewan, which occurred four days before his late Highness's death. Assume that these charges are passed, and that the savings which ought to have been accumulating in the Nizamut treasury as increment to the fund have been appropriated to their liquidation,—

	Rs.
Expenses of elevation to the Musnud	97,968
Funeral of late Nazim - - -	24,927
Khelut to Oodwunt Singh - -	10,200
Rs.	1,33,095

21. The above abstract shows these to have amounted for the three years to one lac ninety-one thousand six hundred and four ; add thereto the sixty-two thousand two hundred and seventy-one withheld from the Doolhin Begum, and there will be a considerable excess applicable to the purpose of renewing any

part of the establishment of his Highness, which may be defective. Whatever remaining part of the balance of one thousand two hundred and twenty-five, which is stated at seventy-eight thousand five hundred and thirty-three, may likewise be forthcoming in the Nizamut coffers is likewise abandoned to the same purpose, it being the intention of Government to give up the whole accumulation of the deposits in the Nizamut treasury to meet the above charges.

Rs.	
1,91,604	Accumulation of 12,261,718.
78,533	Balance at close of 1225.
2,70,137	
2,35,532	
34,605	Excess, besides 62,271 rupees stopped from the Doolhin Begum.

22. It remains to notice the proposition contained in the 5th paragraph of Mr. Rickett's letter of the 19th December, viz., that certain charges incurred by his Highness, amounting in the aggregate to eighty thousand one hundred and thirty-eight, should similarly be defrayed from the deposit fund.

23. Upon examining the items, it appears to the Governor General in Council that they are all of a personal nature, that must have been actually defrayed before the accession of his present Highness; none of them remain as debts now due by the Nizamut; and as none of them are entered in the Nizamut accounts, the reason is apparent, viz., that his late Highness conceived them to be of that description of charges to be paid by himself personally, either from his allowance under the head of privy purse, or from the wealth that had come to him in heritance.

24. It seems to the Governor General in Council that Government might, with equal propriety, be called upon to replace every item expended by his late Highness from his privy purse allowance, and to make over the accumulation of that allowance untouched as a sacred inheritance of the Nizamut, as to sanction the payment of the particular charges claimed in this instance. Had debt been incurred to meet them, and had the Nizamut been made over to his present Highness with an empty treasury in consequence, or otherwise embarrassed by the extravagance of his predecessor, the claim to relief from the fund provided for such exigencies might have been deserving of consideration; but in the present instance his Highness succeeded to an accumulated treasury from which his predecessor might have appropriated, shows him to have done tens of thousands, and Government would neither have felt itself interested in the expenditure, nor called upon to replace the amount. You will be pleased to take an opportunity of explaining to his Highness the light in which these charges have been regarded by Government.

25. You will have gathered from the above observations and orders, that the Governor General in Council is not disposed to grant the lac of rupees solicited for the Nizamut in the 6th paragraph of Mr. Rickett's letter above alluded to, for the purpose of enabling his Highness to renew his establishments. The plan of reserving this fund was adopted with a view to place in the hands of Government a means of relieving any exigencies in which the family might be involved, as well as of portioning the daughters, and providing buildings or other operations of the kind, involving a present sacrifice of capital.

26. If the Nizamut were destitute of other resources, the claim to assistance for an outlay of the kind now suggested might be admissible; but while it enjoys the advantage of inheriting the wealth of its dependents, and thus becomes enriched from means in which other branches of the family are debarred from participating, it seems just that the aid of the fund shall rather be extended to assist those who have otherwise nothing but their monthly stipend to look to. This principle it will be right to explain to his Highness, in order that he may not consider the refusal as an ungracious act, dictated by desire to avoid contributing to the restoration of the splendour of the Court of Moorshedabad, than which nothing can be further from the intention of Government.

27. It may at the same time be hinted that the wealth inherited by his Highness from his brother could not possibly be better bestowed than in restoring the equipages and other establishments of the Nizamut to a creditable state. Considering the amount already known by Government to have come into his Highness's hands, it is, in the judgment of the Governor General in Council, quite impossible that the whole should have been expended; and could he suppose this to be the case, the circumstance would lead to his withholding from his Highness that confidence in his discretion and prudence which alone would justify an advance of the kind solicited in the present instance.

28. It

28. It is to be remarked, moreover, that his Highness has very recently come into possession of the wealth of the late Valida Begum, and though the debt due the Nizamut by the Seits may not, perhaps, have been actually recovered, there can it is presumed be no doubt of its ultimate realization.

29. The above instructions leave the accumulation of the Munee Begum's stipend in the treasury of the Collector entirely untouched; the whole will consequently be open to be appropriated in the manner Government may deem most equitable and proper for the benefit of the Nizamut.

30. At the close of 1225 the fund is stated to have amounted to three lacs seventeen thousand five hundred and seventy-three, but in this sundry deposits are included on account of the pension of Khuleel-oollah and the like, which cannot be considered as forming part of the fund. The accumulation of the Munee Begum's stipend alone up to that date, seems to have been three lacs fourteen thousand and five hundred. Add to that amount the accumulation during the three years 1226, 1227, and 1228, and there is a fund of seven lacs forty-six thousand and five hundred actually forthcoming in the Collector's treasury. It remains to determine the mode of appropriating this sum.

	Rs.
	3,14,500
	4,32,000
Rs.	7,46,500

31. You are of course aware that Government are in a manner pledged to provide a suitable palace for his Highness, and that a large portion of the above sum will be required for this purpose. As the advances for the building will, however, require to be made gradually, and the same fund will go on accumulating as heretofore, it cannot be necessary to reserve the large floating balance suggested in the 8th paragraph of Mr. Rickett's letter; but of the seven lacks and a-half, six lacks may safely be invested in public securities for the benefit of the Nizamut; the Governor General in Council accordingly desires that that amount may be forthwith remitted to the Government Agents at the Presidency, for the purpose of being invested to the best advantage. The requisite instructions will be sent to the Collector and other officers of the territorial department, and the paper will be held in deposit in the same manner as that provided for the payment of the expense of the establishment of your office.

32. It remains now to point out to you the views of Government for the future regulation of the control to be exercised by you over the expenses of the Nizamut, and the footing on which it is proposed to place his Highness in this respect.

33 Nothing can be more vexatious and unsatisfactory than the present system, under which his Highness is compelled to furnish annual accounts for Government to audit. The system owed its origin to the embarrassed state of the Nizamut, and to the desire of Government to lend the weight of its authority to enforce certain economical reforms deemed at the time necessary for its relief. Now, however, that the same motive does not exist for interference, it seems to the Governor General in Council that it would be very desirable to withdraw from any minute supervision, and to confine the Agent's duty to that of ascertaining that every member of the family receives his due. It might, perhaps, be sufficient for this purpose that the Agent should be ready to receive and inquire into all complaints under a declaration to his Highness, that in case the payment of any one's stipend should be delayed, or of any legitimate perquisite being withheld, the Government would separate the allowance, or a fair equivalent for it, if not a money allowance, and pay it from the public treasury direct. It seems, however, desirable that your office should possess the means of settling the dues of all the members of the Nizamut in case of dispute, and, therefore, that a register of the present authorised distribution of the several heads of charge should be formed as expeditiously as possible, with a due regard to correctness. The preparation of this record is stated to be already in progress, and in case of any difficulty in procuring the information required to form it from the officers of the Nizam, the Governor General in Council is aware of no objection to your calling on the parties in each instance to state their respective rights.

34. Upon the formation of the register in question, the Governor General in Council is of opinion that the requisition of annual accounts in detail may be wholly discontinued, and an arrangement being made for the adjustment and withholding of the amount appropriated to the deposit fund, that the remainder may safely be delivered to his Highness to be disbursed according to his pleasure,

under the responsibility above described. It will then suffice to require his Highness to deliver in a statement of the gross expenditure arranged under its general heads according to the register, as an assurance that the appropriation has been made according to it, or is reserved for the purpose, but without exhibiting any detail. This will be of use to prevent the matter from falling wholly out of view, and will further enable Government to revive the requisition of more exact accounts, should circumstances render it expedient to do so.

	Gross Savings.	Appropriations in the Way of Stipends, &c.	Net Fund.
	Rs.	*Rs.*	*Rs.*
1226 - -	2,58,020	62,565	1,95,455
1227 - -	2,82,360	59,483	*2,22,877
1228 - - -	3,28,712	23,604	*3,05,108

* The sums included the entire allowance of the Valida Begum, amounting to 24,339 in 1227, and 61,019 in 1228; the promotion of the Doolhen Begum to the situation of Valida will involve an appropriation of near 60,000 rupees per annum, which is allowed for in assuming the fund at two lack.

35. It is by no means the desire of Government to increase indefinitely the appropriations for the benefit of the deposit fund. Their net amount seems at present to exceed two lack of rupees, after allowing for all the augmentations and appropriations sanctioned. This is one-eighth of the entire Nizamut stipend, and the Governor General in Council would not wish to make it larger. At the same time he conceives it will be unadvisable ever to reduce the fund below one lac and a-half, or at any rate to trench on the amount of the Munee Begum's stipend, one lac forty-four thousand, which has for so long a time been set apart for the purpose.

36. Mr. Ricketts, in his letter, dated the 31st December, proposes to make the following permanent allowances out of the existing fund :—

	Per Mensem.	Per Annum.
	Rs.	*Rs.*
To his Highness' son - - - - - - - -	1,500	18,000
„ his Mother, the Begum - - - - - - -	2,300	27,600
„ his late Highness' three daughters, 250 each - -	750	9,000
„ seven concubines of his late Highness, 100 rupees each	700	8,400
Rs.	5,250	63,000
		27,000
Rs.		35,400

37. Of these the only one deserving special notice is that proposed for the Begum of his present Highness. It is quite unusual to make any public provision for the wife of the reigning Nazim, and though this was done in the case of the Doolhin Begum, as a special indulgence to his late Highness, the Governor General thinks, nevertheless, that the point cannot be conceded, in the present instance, without establishing a very inconvenient precedent. His Highness will be free to make any appropriation in the Begum's favour that he may desire, and it will be better that she should feel indebted to his Highness' bounty, and subject to his pleasure in regard to her provision, rather than that it should be guaranteed to her independently of his will.

38. Deducting this stipend, therefore, the proposed annual appropriations will stand at (thirty-five thousand four hundred), which the Governor General in Council has no hesitation in sanctioning.

39. It remains to ascertain the actual amount that will remain disposable. In this, however, there is a difficulty from the want of any distinct report on the subject of the late Valida Begum and her establishments. Putting wholly out of the question any advantage to the fund that may eventually arise from the promotion of Ameer oon Nissa to that dignity, it would seem from the accounts of 1228 that there exists a fund of two lacs fifty-seven thousand seven hundred and thirteen, which by the additional of the stipend enjoyed by his Highness, as presumptive heir, becomes two lacs seventy-five thousand seven hundred and thirteen. This again being charged with the payment of the Munee Begum's establishment (twenty-five thousand and seventy-four), and with sundry authorised augmentations (nine thousand eight hundred and thirty) is reduced to (two lacs forty thousand eight hundred and nine), from which amount the stipends above authorised being deducted, the available fund will stand at two lacs five thousand and four hundred and nine.

	Rs.
	2,75,713
	34,904
	2,40,809
Deduct -	35,400
Rs.	2,05,409

40. In

40. In consideration of the British Government withdrawing from the interference now exercised in auditing the accounts of his Highness, the Governor General in Council thinks it will be necessary, and not too much to expect that his Highness should consent to allow the above entire sum of two lacs five thousand and four hundred and nine, or say two lacs of rupees, to accumulate in the collector's treasury.

41. The British Government will, in that case, undertake the payment in future from that fund at all charges for new buildings, or other expenses legitimately claimable from it, and further will relinquish all desire to increase the fund,* pledging itself on the lapse of any future stipend, to consider the suggestions of his Highness as to its allotment, and, except under special circumstances, which may demand a different appropriation, to assign the whole for the family and its dependents.

42. You will be pleased to take an early opportunity of ascertaining the sentiments of his Highness on the subject of the above proposition. Should the plan be adopted, his Highness will no longer have any interest in withholding information of the decease of any stipendiary from the fear that the occasion will be taken to effect a saving in the distribution of his allowances, and his patronage and influence amongst the members of the Nizamut will be strengthened by the knowledge that his recommendations in behalf of individuals will be sure of due attention. On the other hand, a security will be given to the fund, which it did not possess, while the accumulation of a large proportion of it was allowed to be made in the Nizamut treasury, and the confinement of the control of the Agent to the investigation of complaints of the non-payment of authorised stipends or other advantages, will remove the chief motive of difference between that officer and the Nazim. The arrangement will thus promote a better understanding between them, besides saving an infinity of trouble to all parties.

43. You will be pleased to subject your own sentiments on the above propositions along with those of his Highness.

44. It only remains to notice a few suggestions of inferior importance. In the 11th paragraph of Mr. Ricketts's letter, dated 31st December, it is proposed to pay to the Bhow Begum from the deposit fund ten thousand rupees in part of the accumulated arrears of an allowance of three hundred rupees for Meer Samane's expenses, which it is said was never paid.

45. On this point the Governor General in Council remarks that the Bhow Begum, if she did not receive the advantage provided for her, either in the money allowance or in some other shape, was at liberty to have applied to the Governor General's Agent, who would, of course, have taken measures in the lifetime of his late Highness to enforce the provision made in her favour. If she has neglected to do so for so many years, that circumstance will give her no claim on the deposit fund; but, on the other hand, if she can show that the allowance has been actually accumulating in the Nizamut treasury, Government will be prepared to enforce its restoration.

46. With respect to the suggestion contained in the 12th and following paragraphs of Mr. Ricketts' letter above alluded to, the Governor General in Council is of opinion that it will be the most advantageous plan in every respect to maintain the existing arrangement under which Meer Ghalib Ulee Khan is vested with the charge of the treasuries of the Nizamut, and Raee Gungadhur controls the offices of account as Naeb Dewan. In confirmation of these appointments, you will be pleased to confer Kheluts on both the above individuals, and to charge the same in your contingent bill.

47. The Governor General in Council does not think that the proposition for raising Meer Ghalib Ulee to the permanent situation of Dewan should be encouraged; on the contrary, in conferring the Kheluts above sanctioned, it may be advisable to be careful that both are of precisely the same degree.

48. With

* The new house for the Valida Begum seems to have been built entirely from funds provided from the deposits of the Nizamut treasury.

48. With respect to the matter stated in the 15th paragraph of Mr. Ricketts' letter, the Governor General in Council conceives it by no means improbable that the opposition and jealousies excited by the elevation of Ameer-oon-Nissa Begum may be fomented underhand by the party heretofore so decidedly opposed to her. She trusts they will disappear when the parties are convinced of the inefficacy of such intrigues to affect the determination of Government in regard to this arrangement. It will, of course, be your duty to avoid encouraging the existing disunion by too readily listening to the disparaging communications regarding each other which will for a time be eagerly obtruded on your attention.

49. The report promised by Mr. Ricketts on the arrangement of the Deorhees, consequent on the promotion of Ameer-oon-Nissa, will, of course, be anxiously expected.

50. It is the intention of the Governor General to address a letter direct to his Highness on the subject of the arrangements proposed above. This will be prepared and forwarded to you for delivery in the course of a few days. In the meantime you will have the opportunity of making yourself fully master of the intention of Government, and it has, hence, not been thought necessary to delay the dispatch of this letter until the preparation of that document. It will, of course, be proper to delay any direct communication with his Highness on the subject until its arrival.

I have, &c.
(signed) *H. T. Prinsep*,
Persian Secretary to Government.

Fort William,
28 February 1823.

EXTRACT POLITICAL DESPATCH from the Court of Directors of the East India Company to the Governor General of India in Council, dated 24th April (No. 17) 1840.

4 to 33, also letter, dated 12 June (No. 4) 1839, paras. 24 to 31.
Political letter from the Government of India, dated 21 August (No. 61) 1839.
Moorshedabad Nizamut.

4. THE palace which had been so long constructing for the Nazim, at the expense of the deposit fund, is now completed, and although it is to be regretted that an edifice on so great a scale, and so little suited to the present position of the Nawab of Bengal, has been erected, we are glad to find that in the opinion of the Special Committee, who were appointed to inspect the work, its plan, and execution, are highly honourable to the professional abilities of Colonel M'Leod.

5. The credit due to that officer is the greater, as with the exception of one young officer, Lieutenant Cunningham (who was placed at his disposal during a small portion of the time, in consequence of his own unadvoidable absence); he had no European assistance, and the building was, as he says, designed and executed by himself, "entirely through the agency of natives." We consider it a circumstance of no little importance, that the possibility of executing work of such a description by native agency has been established, and we trust that the experiment, so successfully made, will be a source of much saving of expense hereafter in the department of public buildings, as well as of permanent benefit to India, by training the native workmen to the highest description of skilled labour in this important branch of industry.

6. With reference to the conclusive testimony afforded in favour of Colonel M'Leod's exertions, by the report of the committee, that officer has, in a Memorial addressed to us, requested re-consideration of our orders (issued at an early period in the progress of the work), reducing the allowance assigned to him, from 1,500 rupees per month (the rate fixed by Government) to 1,000 rupees.

7. The principal motive which induced us to issue this order was a disapprobation, not so much of the amount of the allowance as of the principle on which it was given. The Bengal Government of the time had departed from the usual practice of leaving a part of the remuneration of the officer entrusted with a public work to be received after its completion, and had assigned to Colonel M'Leod his whole remuneration, in the form of a fixed allowance, thereby giving him an interest, not in expediting, but in delaying its termination. This principle we, from no distrust of Colonel M'Leod's integrity or activity, but from a sense

sense of public duty, felt bound to discountenance. But it was far from our intention to deprive Colonel M'Leod of any part of his just reward, and the papers now before us, as well as the correspondence of the intermediate period, has satisfied us that the amount which will be received by him, if his present request be acceded to, will not be excessive, while the protraction of the work beyond the time originally allowed has been the effect of circumstances beyond his control. We have much satisfaction, therefore, in complying with the prayer of his Memorial, by sanctioning the grant to him of the full allowance of 1,500 rupees per mensem from the date from which it was reduced by our orders, being the 1st of April 1833, to that of his succeeding to the office of chief engineer, namely, the 24th November 1836.

8. The report of the Committee has, moreover, set at rest the question respecting the Emambarat. It appears that, from its extremely dilapidated state, this building cannot be repaired nor suffered to remain as it is without imminent danger to human life. That its contiguous and obtrusive position, with respect to the new palace, renders its removal particularly desirable, and that there is no reason to apprehend serious objection from any portion of the family to the removal of the old building, and the construction of a new one. We accordingly approve of your having sanctioned this measure, in the execution of which we need hardly point out the necessity of a strict regard to an economical expenditure of the funds from whence this disbursement will be made.

9. The construction of this, and the other buildings which remain to be executed, has, we observe, been entrusted to the Executive Engineer at Berhampoor, to whom a salary of 300 rupees a month has been granted from the deposit fund. On the same principle which dictated our former orders in the case of Colonel M'Leod, we object to this salary, and desire that it be discontinued, and that any extra remuneration which may be assigned to Lieutenant Goldie from the deposit fund, be deferred until the completion of the work, or his removal to another situation.

10. To prevent the repetition of the gross neglect which appears to have occurred for many years in respect to the condition of the buildings belonging to the Nizamut, we sanction the appointment of a native Darogah to take charge of the buildings, and be responsible for their due preservation, under the supervision of the Executive Engineer. The salary proposed by Colonel M'Leod, of 150 rupees per month, though high, may not be excessive.

11. The principles which have been laid down by the Deputy Governor for the disposal of stipends, on the death of the stipendiaries, have our concurrence. We think, with him, that the stipends of mere dependants should never, without strong special reasons, be continued to their descendants; and that when members of the family itself die without direct heirs, their stipends should lapse to the deposit fund, rather than pass to their nearest relations, unless they have left dependants whose support would naturally devolve upon some other members of the family, to whom, in that case, an increase might be granted adequate to the burden so imposed upon them. It is very correctly stated by the Deputy Governor, in Mr. Prinsep's letter to Colonel Caulfield, dated 18th July 1838, that "through the deposit fund, and by occasional grants in the manner usual, more good will result to the members of the Nizamut than if the whole amount set apart for that family were frittered away in petty allowances to impoverished dependents."

12. It appears, however, to us that these views require a more liberal application of the deposit fund to the relief of individuals whose distresses are not produced by misconduct than is at present practised. For example, when an inundation laid a great part of the city of Moorshedabad, and of the surrounding country, under water, and the agent reported that among the sufferers were many of the Nizamut family, who would "require assistance to enable them to repair the damage their houses have sustained by the inundation,"* the Deputy Governor returned for answer, that he did not think "the public money could advantageously be employed in relieving the distress occasioned by the inundation."† The deposit fund, however, is not "public money," but a part of the assignment secured by treaty to the family, which part is allowed to accumulate for

* Letter of 5th September 1838.

† Letter of 12th September 1838.

for its general benefit. The accumulation already proceeds at a more rapid rate than the demands on it, and will proceed still more rapidly now that the fund is to derive the benefit of all lapses which may take place. We think, therefore, that not only grants in favour of the dependents on the Nizamut should be freely made from the fund in cases of general calamity like that just alluded to, but that a revision of the general allowances of the family should occasionally take place, with a view of increasing the provision for those of its members whose stipends from subdivision or other cause are not adequate to their rank, or to the claims on them, or whose conduct entitles them to a mark of approbation from Government. Thus administered, the fund might be made in some measure an instrument of moral discipline, which appears tobe much required, and for which no other obvious expedient presents itself. [The paragraphs of this Despatch not inserted in this Return relate to other subjects.]

COPIES of the FIRMAUN OR SUMNUD of 1765 of the Emperor of *Delhi*, Shah *Aalum*; conferring the Nizamut of *Bengal*, *Behar*, and *Orissa*, on the Nabob *Nudzam ul Dowlah*:—Of LETTER dated the 21st day of July 1786, from the Honourable Court of Directors of the East India Company to the Governor General of *India* in Council:—Of LETTER dated the 20th day of February 1834, from *C. E. Trevelyan*, Deputy Secretary to the Government of *Bengal*, to *H. Paulin*, Esq., Attorney to the Honourable the East India Company:—And, of a PROCLAMATION of the Deputy Governor of *Bengal*, dated the 19th day of December 1838, and published in the 'Calcutta Gazette' of the same day.

India Office,
16 March 1871.

J. W. KAYE,
Secretary in Political and
Secret Departments.

FIRMAUND from the King Shah *Aalum*, granting the Dewanny of *Bengal*, *Behar*, and *Orissa* to the Company, 1765.

AT this happy time our royal Firmaun indispensably requiring obedience, issued; that whereas, in consideration of the attachment and services of the high and mighty, the noblest of exalted nobles, the chief of illustrious warriors, our faithful servants and sincere well-wishers, worthy of our royal favours, the English Company, we have granted them the Dewanny of the Provinces of Bengal, Behar, and Orissa, from the beginning of the Fussel Rubby of the Bengal, year 1172, as a free gift and ultumgau, without the association of any other person, and with an exemption from the payment of the customs of the Dewanny, which used to be paid by the court. It is requisite that the said Company engage to be security for the sum of 26 lakhs of rupees a year, for our royal revenue, which sum has been appointed from the Nabob Nudjum ul Dowla Behauder, and regularly remit the same to the royal Circar; and in this case, as the said Company are obliged to keep up a large army for the protection of the Provinces of Bengal, &c., we have granted to them whatsoever may remain out of the revenues of the said Provinces, after remitting the sum of 26 lakhs of rupees to the royal Circar, and providing for the expenses of the Nizamut. It is requisite that our royal descendants, the viziers, the bestowers of dignity, the Omrahs high in rank, the great officers, the Muttaseddees of the Dewanny, the managers of the business of the Sultanut, the Jaghirdars and Croories, as well the future as the present, using their constant endeavours for the establishment of this our royal command, leave the said office in possession of the said Company, from generation to generation, for ever and ever. Looking upon them to be assured from dismission or removal, they must, on no account whatsoever, give them any interruption, and they mnst regard them as excused and exempted from the payment of all the customs of the Dewanny and royal demands. Knowing our orders on the subject to be most strict and positive, let them not deviate therefrom.

Written the 24th of Sophar, of the 6th year of the Jaloos, the 12th of August 1765.

Contents of the Zimmun.

Agreeably to the paper which has received our sign manual, our royal commands are issued, that in consideration of the attachment and services of the high and mighty, the noblest of exalted nobles, the chief of illustrious warriors, our faithful servants and sincere well-wishers, worthy of our royal favours, the

English Company, we have granted them the Dewanny of the Provinces of Bengal, Behar, and Orissa, from the beginning of the Fussul Rubby of the Bengal, year 1172, as free gift and ultumgau, without the association of any other person, and with an exception from the customs of the Dewanny, which used to be paid to the court, on condition of their being security for the sum of 26 lakhs of rupees a year, for our royal revenue, which sum has been appointed from the Nabob Nudjum ul Dowla Behauder; and after remitting the royal revenue and providing for the expenses of the Nizamut, whatsoever may remain we have granted to the said Company.

The Dewanny of the Province of Behar.
The Dewanny of the Province of Orissa.

SECRET DESPATCH from Court of Directors of the East India Company to the Governor General in Council, *Bengal*; dated 21 July 1786.

Nabob of Bengal's stipend. Munny Begum.

19. We have lately received a letter from the Nabob Mobareck ul Dowlah, a copy of which is enclosed, requesting an addition to his stipend. This letter was delivered to us by Sir John D'Oyley. By its not having been conveyed to us through the usual channel of the Governor General and Council, we are deprived of the benefit of your opinion to assist us in our final determinations thereon, and therefore can only, for the present, direct you to pay every favourable attention to his representations. As we have reason to believe his disposition is pliable, and his attachment to our interest steady; you will take care to provide for his support and dignity, either by efficacious checks, which may secure to his Excellency the clear and undiminished receipt of the real stipend allotted to him, or by an economical arrangement of his household, dependents, and other expenses, or even by an immediate augmentation of his stipend, having a due consideration of his real necessities, and at the same time an attention to the embarrassments of our own affairs.

20. You will represent to His Highness, that from a regard to the amity and firm union which subsisted between his father Meer Jaffier Ally Cawn and the English Company, and the friendly dispositions which have happily subsisted with his several successors in the Subadarry, and particularly the present Nabob Mobareck ul Dowlah, we have the most sincere desire to contribute to his ease, honour, and happiness. But, whilst we are actuated by these sentiments of respect and friendship for his Excellency, we are obliged to regret that the incumbrances left upon the revenues of Bengal, by the great exertions we made to protect our own possessions and those of our allies, must at present disable us from maintaining the dignity of the Subadar to the full extent of our wishes, and in a manner suitable to his high descent and situation.

21. In the conduct of this business you will adopt such measures as shall seem expedient, in order to examine into the real state of the Nabob's finances, and to ascertain with precision the number and rank of the relations of the three former Nabobs, who from the custom of the country, look up to the present Nabob for their support. It will at the same time be necessary to ascertain as accurately as possible the real expense of the Nabob's household, and the exact amount to which these expenses might, with consistency, be confined under proper regulation and without unnecessary parade. The report on this investigation you will communicate to us, with your opinion thereon, that we may be enabled finally to determine on the nature and extent of the connection to be established and maintained between us and the Nabob of Bengal. You will always keep in view the claims he has upon us by treaty, and necessity will dictate to you a due consideration to the present state of our own affairs.

22. We observe from the 68th paragraph of your inspection letter by the "Rodney," dated 9th January 1786, that you have made an alteration in the situation of the Resident at the Durbar, by substituting a commission of 5 per cent., to be charged upon the stipends paid through his office, in lieu of all the established allowances heretofore drawn by the Resident. We are sorry to observe, in the motive you assign for this arrangement, a doubt of your being able to reduce your

your revenue establishment within the sum of 72 lakhs of rupees. Nor can we approve of so considerable a charge being imposed upon the Nabob, whilst he is representing the inadequacy of his stipend to his necessary expenses; and to produce a salary to an office of small importance, greater than is enjoyed by many of the most consequential offices in our service.

23. Indeed, we do not perceive any necessity for continuing one of our covenanted servants as resident at the Nabob's Durbar, at least not with the distinct and expensive establishment hitherto allotted to it, and if you should think it expedient to keep up an office under that name, we apprehend it might very properly be united in the person of the Collector of the Moorshedabad District, or in that of the gentleman who presides in the Duwany Adawlut of Moorshedabad, in case you should have judged a separate Adawlut for the city of Moorshedabad advisable in pursuance of the 86th paragraph of our revenue letter of the 12th of April 1786. But as the Nabob must be certainly competent to the discreet direction of all those matters which can fall under his cognizance, and all the departments of Government, as well judicial as revenue are transferred to Calcutta, there can be no proper functions for a resident at the Durbar as an active officer.

24. You will observe that there are other points in the Nabob's letter submitted to our consideration, particularly as to the re-establishment of his authority in the city of Moorshedabad; upon which we have to observe to you that no material objection occurs to us against allowing the Nabob to hold the exclusive administration of criminal justice, according to the Mahomedan Laws over the inhabitants of the city of Moorshedabad, subject to the general regulations of justice as established throughout the provinces. Moreover, we consider it but as a suitable appendage of that dignity which, under all the existing circumstances of the British Possessions in India, it is just and politic to sustain in the person of the Subadar of Bengal.

25. An application has been made to us by Mr. Hastings in behalf of Munny Begum, the widow of the late Meer Jaffier, a copy of whose letters we likewise enclose. It is our wish to alleviate, as far as all the circumstances of our affairs will permit us, the distresses of all the relations of Meer Jaffier, and enable the present Nabob and his family, under an economical system to be adjusted by you, to live comfortably and happy. But as the real situation of Munny Begum will of course be included in your inquiries, and in the report upon the general subject of the Nabob's family and expenses, we shall forbear, for the present, to make any further observations thereon, than to direct that an independent stipend be allotted for her support; subject, as in the other case to our future consideration and approval.

26. We cannot conclude this subject without expressing our dissatisfaction at the mode adopted by several of the Princes of India in corresponding with us in any other way than through the medium of the respective Governments, and employing our servants to be their agents in Great Britain. The Nabob of Oude, the Nabob of Bengal, and the Rajah of Tanjore have at this time persons who call themselves agents, residents in London, in the persons of three of our own servants; Mr. Halhed for the first, Sir John D'Oyley for the second, and Mr. Ross for the third.

27. You will take every opportunity of conveying to all the Princes of India the earnest wish we have so often repeated, that their communications to us should be made through the channel of our regular Governments in India, and that we can pay no regard to communications made in any other way. And we strictly prohibit our servants from accepting any such agency for the Princes of the country, declaring at the same time that we shall consider it as a forfeiture of all future claims to our favour.

28. We positively direct that you do, on no account, withhold from us any letters which any of those Princes shall think proper to write to us, and whatever letters you may receive from them, addressed to yourselves, must be regularly entered in your book of country correspondence, and transmitted to Europe by the first opportunity.

[The paragraphs of this Despatch not included in this Return relate to other subjects.]

From *C. E. Trevelyan*, Esq., Deputy Secretary to the Government of Bengal, to *H. Paulin*, Esq., Attorney to the Honourable the East India Company, dated 20th February 1834.

Sir,

I AM directed to acknowledge the receipt of your letter of the 17th instant, forwarding copy of the Advocate General's opinion regarding the question of the liability of the Nawab Nazim to the jurisdiction of the Supreme Court.

2. In reply, I am desired to transmit, for the information of the Advocate General, copy of a communication which has been received on the same subject from the Governor General's Agent at Moorshedabad, and to state as follows:

His Honor in Council is decidedly of opinion that the Supreme Court has no right to exercise jurisdiction over the Nawab Nazim of Bengal, and should the attempt to move the court to adopt this course of proceeding be persisted in, it is requested that the Advocate General will adopt every necessary legal means for resisting it.

4. It will be observed, from the Treaty, of which a copy is annexed, that his Highness the Nawab has been recognised by the British Government as an independent prince, and that the national faith is pledged "for nothing being proposed or carried into execution derogating from his honour." In order to prevent his being liable to any indignity from subjecting his person or property to the processes of the zidub courts, Regulation 19 of 1825 was passed, prescribing certain rules under which alone he could sue or be sued in those courts. With regard to the Supreme Court, the case is very different. As the Government has no power to regulate the proceedings of the court towards persons acknowledged to come within its jurisdiction, if the liability of the Nazim were to be admitted there is no degree of indignity which might not be inflicted upon him by its ordinary processes, in contravention of the pledged national faith, and of the respect which is obviously due to the representative of our oldest ally on this side of India.

5. Without intending to limit the discretion of the Advocate General as to the grounds of objection which should be taken up, his Honor in Council would wish every possible exertion to be made to establish the right of the Nawab Nazim to be exempted from the jurisdiction of the Supreme Court. Any further information which can be procured from the Government records here or at Moorshedabad, shall be furnished to you on your requisition, and the vakeel of his Highness the Nizam, stationed at the Presidency, will likewise be directed to place himself in communication with you.

6. The case of Rajah Hurrinath Rai, referred to by the Advocate General, does not appear to his Honor in Council to bear any analogy to the present. Rajah Hurrinath Rai was a subject of the Government from whose gift he derived his title, while the Nawab Nazim of Moorshedabad is a prince whose independence has been recognised by a treaty with one of his predecessors.

I have, &c.

Council Chamber,
20 February 1834.

(signed) *C. E. Trevelyan*,
Deputy Secretary to Government.

Fort William, Political Department, 19th December 1838.

PROCLAMATION.

BY order of the Government of India, the Deputy Governor of Bengal notifies to the public, and to the Allies of the British Government, and to all friendly Powers, that the Nuwab Shooja-ool-Moolk, Itisham-ood-Dowlah, Humayoon Jah Seyud Mubaruk Ulee Khan Buhadoor Feeroz Jung, having departed this life at Moorshedabad, on the 3rd October 1838, his son, the Nuwab Syyud Munsoor Alee Khan, has succeeded to the hereditary honours and dignities of the Nizamut and Subadaree of Bengal, Behar, and Orissa; and his Highness is hereby

hereby declared, under the authority of the Government of India, to be the Nazim and Soobadar of Bengal, Behar, and Orissa, and to have assumed and to exercise the authority, dignities, and privileges thereof, under the style and title of Moontizum-ool-Moolk Mohsen-ood-Dowlah Fureedoon Jah Syyud Munsoor Alee Khan Buhadur Nusrut Jung.

Published and proclaimed by his Honor the Deputy Governor of Bengal.

(signed) *H. T. Prinsep,*
Secretary to Government of Bengal.

GENERAL ORDER by the Honourable the Deputy Governor of Bengal, under date the 19th December 1838.

THE Honourable the Deputy Governor of Bengal has been pleased to direct that a salute of 19 guns be fired from the ramparts of Fort William at 12 o'clock this day, in honour of the accession of his Highness Syyud Munsoor Ali Khan to the Musnud of the Provinces of Bengal, Behar, and Orissa, and that the above Proclamation be read at the head of all the troops in garrison at sunset this evening, under a salute of three volleys of musketry.

COPY of PAPERS relating to the MEMORIAL of the Ex-Nawab of *Tonk*; and, COPY of or EXTRACTS from any other CORRESPONDENC relating to his Affairs.

(Foreign Department.—Political.—No. 148.)

The Governor General of India in Council to the Secretary of State for India.

Simla, 23 September 1867.

WE have the honour to forward for your consideration copies of the papers regarding a treacherous and cold-blooded murder perpetrated in the house of Hukeem Surwur Shah, one of the ministers of the Nawab of Tonk, on the persons of Thakoor Rewut Singh, the uncle, and 14 other relatives and followers of the Chief of Lawa, a dependency of Tonk.

2. The facts connected with this painful tragedy, as ascertained after a careful inquiry on the spot by the Political Agent of Harowtee, Captain Bruce, are as follows:—

3. There have for a long period existed disputes between the Chief of Lawa, who is a tributary of Tonk, and the Nawab's Durbar. Towards the end of July, the Chief of Lawa received letters from Hukeem Surwur Shah, couched in conciliatory language, and inviting him to come to Tonk, where he would be honourably received and the pending claims adjusted.

4. It may be premised that the Chief, being himself weak and incompetent for the management of his estate, leant for support and guidance on his uncle Thakoor Rewut Singh, who was the real manager of the chiefship, and as such, obnoxious to the Tonk authorities.

5. Accompanied by his uncle, and a body of his relatives and retainers, the Chief, according to the invitation, proceeded to Tonk, which he reached on the 29th July. Either on the following day, or on the 31st July, the Thakoor Rewut Singh visited the Hukeem, and is said to have returned satisfied with the interview.

6. On the evening of the 1st August, about nine o'clock, a messenger came from the Hukeem to summon the Lawa Chief to his house. The reason assigned for so unseasonable a summons seems to have been that the Nawab was about to set out on a tour for Seronje, and that arrangements required at once to be made for the proceedings of the following day, on which (as the Lawa witnesses affirm) the Nawab pretended that he would confer a Khillut on the Chief.

7. The Chief did not go himself; but deputed his uncle, Rewut Singh, and his cousin, Bijey Singh, with certain of his officers and retainers, in all 16 persons, to visit the Hukeem. It should be stated that the Hukeem discharges the business connected with the Dacoitee and Thuggee Department, and that a considerable body of sepoys is quartered in his house.

8. Of the Lawa party which went to the house of the Hukeem, there is but one survivor, and he, though giving his statement in a straightforward manner, cannot throw much light upon the incidents which followed. Thus much appears certain, that on reaching the Hukeem's house, Thakoors Rewut Singh and Bijey Singh, with two of the Kamdars, or Lawa officials, were conducted up a staircase to the apartments of the Hukeem, from which they never returned alive. The remainder of the party stayed in the court-

yard of the house below; after a short interval they were set upon by an armed band, and apparently shot down. One man alone escaped. He was arrested, and kept by the Nawab in confinement, until liberated at the call of the Political Officer. On the side of Tonk, one Mussulman was killed, and (apparently) one Hindoo, while several were wounded; the wounds of the Tonk party being all sword cuts.

9. Meanwhile, a force had surrounded the house in which the Chief and his followers were residing, and which, on hearing the firing at the Hukeem's house, they had closed; desultory firing was kept up between the troops and the Chief's followers for two days, when the assailing party was called off.

10. A body of troops also started from Tonk the same night, with scaling ladders, for the investment of the fort of Lawa.

11. Such are the facts, taken mainly from the evidence on the Lawa side. It will be seen that they are traversed by the witnesses brought forward by Tonk. These endeavour to prove that Rewut Singh's party spontaneously went to the Hukeem's house during the day of the 1st of August, and demanded an interview; that the Hukeem, being sick, refused to see the Thakoor, who accordingly went away in anger; that the same evening he returned with a body of armed followers, who forced their way into the Hukeem's courtyard; that high words ensued between them and the guard; that the turban of one of the Thakoor's men was accidentally knocked off, when a general melée ensued, in which the Thakoor and nine others of the Lawa party, and a Mussulman and six Hindoos on the Tonk side, were killed; that the Nawab, fearing the Chief might create further mischief, had his house surrounded, and also despatched to Lawa some troops, which, being fired upon, returned to Tonk.

12. Our Agent, Colonel Eden, has carefully analysed the evidence brought to the support of these assertions, and has fully shown that it is contradictory and palpably fabricated; while the counter-statement is consistent, and in every sense to be in the main relied upon.

13. The reports of Captain Bruce, who conducted the inquiry on the spot, are to the same effect; but these officers differ in the view they take of the intentions of the Hukeem, and the complicity of the Nawab.

14. Captain Bruce acquits both the Nawab and the Hukeem of any predetermination to sacrifice the lives of the Thakoor and his party. He thinks the Hukeem's object was treacherously to arrest the persons most obnoxious to his authority; and then, by surrounding the Chief in the house in which he resided, and by occupying the fort of Lawa, to bring this troublesome vassal to terms; this treachery he thinks was perpetrated with the connivance of the Nawab himself. The loss of life he attributes to the indiscretion and "bungling" with which the plan was carried out.

15. The conclusion of our Agent, Colonel Eden, is very different. He holds that, "whilst there is no evidence to support the conclusion that a massacre was not intended, there is very strong reason to believe it was;" and that a sufficient motive existed in the desire to get rid of the able manager on whom the young, weak, and inexperienced Chief relied. The impression of Captain Roberts, the assistant Agent, who made a preliminary investigation, appears to lie in the same direction: "From all I have heard" (he writes from Tonk, within little more than a week after the tragedy), "I have no doubt in my own mind that the Lawa party were treacherously inveigled and attacked. At first I thought the Nawab was not cognisant of the affair, but I have since changed my mind, for it could not have been done without his knowledge."

16. We have read and considered with care and anxious deliberation all the evidence in this case: and it is with pain that we have come to the conclusion that the view taken by our Agent is fully substantiated; that the uncle and cousin of the Lawa Chief with their followers were basely and treacherously murdered by Hukeem Surwur Shah; and that this was done at the instigation of the Nawab himself.

17. We are unanimous in the opinion that it was for this purpose the Chief and his followers were summoned from Lawa to present themselves at Tonk.

We

We do not credit that the Chief's uncle repaired of his own motion on the night of the tragedy to Surwur Shah's house; it seems certain that he was summoned. Nor do we believe that it was intended simply to seize him and his followers; on the contrary, we feel convinced that it was intended to murder him. Had this not been the case, it would have been easy for Surwur Shah, with the men at his disposal, to have seized the Thakoor and his followers even had they resisted. The whole probabilities of the case, to our mind, are against the Nawab and Surwur Shah. The letters of Surwur Shah to the Lawa Chief are quite inconsistent with the relations formerly subsisting between them, and were evidently intended to lure the Chief and his people into the power of the Nawab. And we fully agree with our Agent that Surwur Shah would never have acted as he did, excepting under the direct orders of the Nawab.

18. Such being our conviction, we proceed to consider what course of action the conduct of the Nawab has rendered necessary.

19. It is the opinion of Colonel Eden that what has passed proves conclusively that the Nawab is utterly unfit to be entrusted with the lives of others, and that both on this ground, and also as a signal punishment for the outrage, he should be removed from authority. In these views we fully concur, and also in the proposal that the Nawab's son, now a boy of 10 years of age, be nominated to the Government, the administration being conducted during his minority by Sahibzada Ibadoollah Khan, the present Nawab's uncle. A stipend would be assigned for the Nawab, and his residence appointed elsewhere.

20. Under any circumstances, Lawa must be altogether detached from Tonk, and the tribute of 3,000 rupees, hitherto discharged, be no longer paid to that State. We are of opinion that Lawa might then be placed under the direct control of the political Agent at Jeypore; suitable pensions for the heirs of the deceased will also be determined, chargeable to the Tonk State.

21. The surrender of Hukeem Surwur Shah will be demanded; and he will be retained as a political prisoner. We also propose to demand that all the sepoys attached to the Hukeem's office shall be discharged, as being implicated in the murderous attack.

22. Finally, we propose to reduce the salute of the ruler of Tonk from 17 guns to 11.

23. We are satisfied that these measures are not only required to satisfy the ends of justice, but that they will be received with approval throughout Rajpootana, the people of which are appalled at the treachery and audacity of the Nawab's action.

24. In all these views we are unanimous. Our only doubt has been whether it was expedient at once to carry them into effect, or to wait until we have ascertained whether they meet with the approval of Her Majesty's Government. Upon the whole, we have thought that it will be best to wait. No serious injury will arise from a postponement of our action, while there may be some advantage. A couple of months hence will be a better season for the advance of the troops, the presence of which will be required at the deposition of the Nawab. The possibility of any difference of opinion between Her Majesty's Government and ourselves will also be avoided.

25. Under these circumstances, we beg that we may be favoured with an expression, by telegraph, of your views upon the course to be adopted; and that this communication may be made at the earliest possible date.

We have, &c.

(No. 186—Political.)

The Secretary of State for India to the Governor General of India in Council.

India Office, 15 November 1867.

1. I HAVE considered in Council the painful circumstances connected with the barbarous murder of Rewut Singh, uncle of the Chief of Lawa, and his followers, by Hukeem Surwur Shah, in the city of Tonk, on the evening of the 1st August last, as reported in your foreign letter, dated 23rd September, No. 148, 1867.

2. Whether, as Colonel Eden believes, the murder was contemplated from the first, or whether, as Captain Bruce supposes, the original intention was to arrest the Thakoor and his followers, and to seize Lawa, it is plain that a deliberate act of gross treachery, which resulted in the assassination of 15 persons, has been committed, and that the Nawab must have been himself a party to it. You are unanimously of opinion that the view taken by Colonel Eden is fully substantiated, and I see no reason to doubt that you have arrived at a right conclusion.

3. You have, in these circumstances most rightly, considered it incumbent on you to mark your sense of the Nawab's conduct, in such a manner as make a permanent impression on the native chiefs.

4. You propose:—

To depose the Nawab (assigning him an allowance and a place of residence) and to nominate to the Government his youthful son, during whose minority the administration will be in the hands of the present Nawab's uncle, Ibadoolla Khan.

To confine Surwur Shah, as a political prisoner, for life, dismissing from employ all others concerned in the massacre.

To release Lawa from its subjection and tribute to the Tonk State, placing it under the control of the Political Agency of Jeypore; pensions to be granted to heirs of the murdered people of Lawa from Tonk revenues.

To reduce the salute of the Tonk ruler from 17 to 11 guns.

5. Her Majesty's Government approve of these measures. They trust that the Political Agent will use his influence to secure for the people of Tonk, during the minority, an efficient administration, free from the admixture of foreigners, whose ascendancy has proved so disastrous to the Nawab. You will, no doubt, adopt measures to ensure the dismantling of the Fort of Goordhanpoora, and the disbandment and dispersion of the large number of Wullaitees hitherto entertained by the State.

9. I shall await with interest the report of your proceedings consequent on this Despatch, and on my telegraphic message of the 31st October.

I have, &c.
(signed) *Stafford H. Northcote.*

(No. 84.—Political).

The Secretary of State for India to the Governor General of India in Council.

India Office, 21 May 1868.

1. I HAVE read, with much interest, the correspondence forwarded with the letter of your Excellency's Government, No. 24, of the 7th of February 1868, relating to the measures taken for the deposition and removal of the Nawab of Tonk, and the subsequent arrangements for the administration of the country, until it can be confided to the hands of the Ex-Nawab's son, as sanctioned in my Despatch of 15th November last.

2. The

2. The papers now before me relate how the duty of interposition has been performed. It is a source of much gratification to Her Majesty's Government that the removal of the Nawab was effected without bloodshed, and that the tranquillity of the country has not been in any way disturbed. A liberal provision is to be made for the Nawab from the revenues of the country, and he is to reside, with a limited retinue, at Benares. These arrangements Her Majesty's Government approve.

3. On the removal of the Nawab, your Excellency's representative in Rajpootana proceeded to make arrangements for the administration of the State. It appears that the young chief, who had been at first stated to be a boy of tender years, was asserted to be not less than 16 or 18 years of age, and afterwards it was reported by Colonel Keatinge that "the Nawab elect was apparently a youth of 20 or 21 years of age." The Ex-Nawab stated that his son was of age, but that he had had no training in affairs of State, and he requested, therefore, that some British officer might be appointed to superintend the administration of the country, until the young chief should have attained sufficient experience. The same request was advanced by the uncle, Ibadoollah Khan; and, though your Excellency would have "preferred that the administration should be entrusted to one or more of the leading men of the State, enjoying a freedom of action, and feeling a sense of responsibility, such as is hardly possible so long as they are accustomed to lean on the advice of a British officer resident on the spot," you yielded to the solicitations of the elder members of the young Nawab's family, and consented to the appointment of Lieutenant Blair to superintend, for a time, the affairs of the Tonk State. A Council of Regency was, however, ordered to be appointed under Ibadoollah Khan, each member being entrusted with the management of a particular department of the State.

4. Her Majesty's Government approve these arrangements, and trust that, at no distant period, the young Nawab will become sufficiently acquainted with the administrative business of his territory to take the management into his own hands.

5. These proceedings appear to have been carried out, from first to last, in a manner very creditable to your newly appointed Agent, Lieutenant Colonel Keatinge.

I have, &c.

(No. 105.—Political).

The Secretary of State for India to the Governor General of India in Council.

India Office, 25 June 1868.

In continuation of my Despatch of the 21st ultimo, I write to inform your Excellency's Government that, having considered in Council your Foreign Letter of the 28th April, No. 70, respecting the future maintenance of the deposed Nawab of Tonk, I approve the arrangement whereby his annual allowance is fixed, for the present, at 60,000 rupees. I gather from the papers, that you reserve it for future consideration whether, in the event of the increased revenues of Tonk authorizing such an augmentation, you may raise the stipend to a higher amount.

I have, &c.

(No. 83 of 1869).

Government of India.—Foreign Department.—Political.

To his Grace the Duke of *Argyll*, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, 13 March 1869.

WE have the honour to refer you to the correspondence noted on the margin, especially to Sir S. Northcote's Despatch of 15 November 1867, relative to the deposition of the Nawab of Tonk for his complicity in the murder of Thakoor Rewut Singh and his followers, and to transmit herewith a Memorial, in original, to your Grace's address from the Ex-Nawab, in which he appeals against the decision of the Government of India in his case.

To Her Majesty's Secretary of State for India, dated 23 September 1867, No. 148.
From Her Majesty's Secretary of State for India, dated 15 November 1867, No. 186.

2. We also forward a copy of a letter, with enclosure, from our Agent in Rajpootana, dated 15 February last, No. 26 P., under cover of which the Memorial was received.

3. We need hardly say that there is nothing in the Memorial which should lead us in any way to modify the opinion of the Government of India already expressed on this case.

We have, &c.
(signed) *Mayo.*
H. M. Durand.
H. S. Maine.

R. Temple.

No. 26 P., dated 15 February 1869.

From Lieut. Colonel *R. H. Keatinge*, C.S.I., V.C., Agent, Governor General, Rajpootana, to *W. S. Seton-Karr*, Esquire, Secretary to Government of India, Foreign Department.

I HAVE the honour to forward a Memorial, with enclosures, from the Ex-Nawab of Tonk, to the address of Her Majesty's Secretary of State for India.

Government is already in possession of the details of this case; I will therefore confine my remarks to three points which I think require comment.

The allegation contained in paragraph 68 is incorrect. This will be apparent from the perusal of a copy of a letter No. 20-7P., from the Political Agent, Harowtee, to my address, and my reply thereto (herewith enclosed), which explains the circumstances under which a Memorial from the Ex-Nawab was brought to my notice.

With reference to paragraph 66, I would draw attention to Captain Blair's report on the Tonk State for 1867–68, and my remarks thereon, which will convey a correct impression of the administration of the Ex-Nawab.

I enclose copy of a letter from Captain Blair, detailing certain circumstances which incidentally came to his knowledge in the month of July; this is, I presume, what is alluded to in the concluding portion, or paragraph 61, of the Memorial.

No. 20-7 P., dated 10th February 1868.

From Captain *A. N. Bruce*, Political Agent, Harowtee, to Lieut. Colonel *R. H. Keatinge*, C.S.I., V.C., Agent, Governor General, Rajpootana.

I HAVE the honour to submit, for your orders, a Memorial prepared by the Ex-Nawab, and addressed to Her Majesty in Council, setting forth, as though from the nobles and people of Tonk, an appeal for the reinstatement of Mahomed Ali Khan in the chiefship, on grounds which are detailed at length therein, and to state, for your information, that this document has been placed officially before me by the Council of Regency, who received it with a request, as contained in the covering letters herewith enclosed, calling upon them to affix their seals to the paper; and they have begged very earnestly for my advice as to what course they should, under the circumstances, pursue.

2. Pending the receipt of your reply, the favour of which I would solicit by return if possible, I have, for obvious reasons, declined to offer any opinion, one way or the other; for

for, whilst I would desire studiously to avoid the semblance of personally discountenancing any spontaneous expression of the feelings of the people in a matter so nearly affecting their own interests, it appears to me my duty to Government to point out that this memorial, as dictated by the Ex-Nawab, and, if signed, subscribed under pressure of apprehension for the future, is no real indication of their wishes.

3. There is much contained in this paper which the supposed memorialists would undoubtedly be very glad if their signatures could restore, but there is possibly more which, of their own free will, they would not endorse; and the inclinations of the members of the regency in the matter may be taken as a fair criterion of what the popular feeling would be.

4. The Council acknowledged before Mr. Blair and myself, that the views expressed in this appeal were not their views, but that, if such a document as that to which they were called upon to affix their seals were submitted, and by possibility proved successful, and it were subsequently to transpire that they had declined to sign it, the consequences would be most serious to them; and that they, by a refusal, would incur this risk without any counterbalancing contingency advantageous to them, inasmuch as they bear no malice to the deposed Nawab; and if their voices could be of service to him, it would do no harm to them, possibly the reverse.

In other words, it is evident to me that they would rather not sign the paper, but, unless discouraged so to do, dare not refuse to sign it.

5. That this should be so is, after all, not to be wondered at; but it becomes a question how far we can interfere in such a matter. Personally, I should be entirely averse to dissuade them from any appeal against a decision arrived at on my own investigation; but the Government would, I venture to think, be placed in a false position in having to deal with a memorial which is avowedly dictated and signed under quasi-compulsion; for there can be but one opinion, if the officers of influence and status here are thus actuated by fear, so much more will their inferiors be, and pressure will be unsparingly used to make the prayer appear an universal one.

6. If the people really desire what the Ex-Nawab would take it for granted is desired, it is competent for them to prepare an appeal in their own words, expressive of their own wishes. The document herewith submitted is not such an one; and I would put it to your consideration whether some steps should not be at once taken to restrain Mahomed Ali Khan from openly corresponding on State affairs save through the prescribed channel of communication.

7. The subject being an important one, I would, in conclusion, again solicit the favour of early instructions in the matter, which I shall here await. The return of the enclosures is begged.

No. 47 P., dated 14th February 1868.

From Lieutenant Colonel *R. H. Keatinge*, C.S.I., V.C., Agent, Governor General, Rajpootana, to Captain *A. N. Bruce*, Political Agent, Harowtee.

I HAVE the honour to acknowledge your letter, No. 20-7 P., of 10th instant, giving cover to a petition to Her Majesty's Principal Secretary of State, prepared and sent by the Ex-Nawab of Tonk to certain members of the executive council of Tonk for their signature and that of the people generally.

2. I beg of you to state to the Council that, in placing this document before you, they have but performed their duty.

3. You must impress upon them that they must on no account continue to communicate with the Ex-Nawab, and that they are, under no circumstances, to affix their signatures to papers prepared by him, or to induce others to do so.

4. Such a course, if permitted, would embarrass the whole government of the State; would render the position of the young Nawab most difficult; and would continue to Mahomed Ali Khan in a great degree the powers of a ruler without its responsibility.

5. If any of the nobles or people of Tonk, unemployed under the present Government, desire of their own free will to petition for the restoration of the Ex-Nawab, they are at perfect liberty to do so, and no steps should be taken to prevent them; but such documents must not be prepared or signed by members of the Executive Council or Officers of the State now in employment; any person wishing to see an end of the present ministry has no business to continue in service under it.

6. I enclose the vernacular papers sent for my perusal.

No. 109, dated 26th June 1868.

From Captain *J. Blair*, Assistant Agent, Governor General, on Special Duty, at Tonk, to Lieut. Colonel *R. H. Keatinge*, C.S.I., V.C., Agent, Governor General, for the States of Rajpootana.

Copy received on 2nd instant, under your office docket, No. 210, of 13 May 1868.

I LEARN from the Memorial of the Ex-Nawab of Tonk, dated 27th February last, to the address of his Excellency the Viceroy, that he appeals against the decision arrived at in his case, reiterating the statement originally preferred, that Rewut Singh and his followers fell in open fight, and were not entrapped and murdered. Under the circumstances, I think it right to report to you the following circumstances, which have incidentally come to my knowledge:—

2. A question having arisen as to the rightful owner of the house in which the tragedy occurred, I was asked by the Regency Council to visit the building, which, I may mention, I had never visited before. I did so on the 23rd instant, in company with Sahibzadah Ahmed Yar Khan and the Durbar Vakeel. In walking over the building the conversation naturally turned to the unhappy event of last August: stains of blood on the floor, where Rewut Singh was said to have fallen, were pointed out to me. I also observed in a small side room the marks of three bullets having pierced the walls.

3. Had other evidence been wanting, the locality of these indisputable signs of strife would alone have gone far to throw doubt on the veracity of the story set forth in defence; and I will therefore endeavour to explain to you their position in the building.

The building is a large native house, with the upper story partially finished; outside there is a spacious open yard or compound surrounded by a high wall. From this yard the house has three entrances, one in the centre, and one on either side, all of which are closed with doors. The side entrances lead to the private apartments. After passing through the central door, one steps into an oblong-shaped, unpaved, open court, at the end of which is an open "Dewankhana," or a kind of verandah supported on a double line of pillars, with a blank wall at the back and sides. The court itself, as well as the "Dewankhana," is commanded from the flat roof of the wings of the building. It was into the court that Rewut Singh and his followers were first ushered on their arrival at the house.

4. On the right hand side of the court, near the upper end, two or three steps lead up to a door, and passing through this, and, if I remember right, through a second door, one finds oneself in another court, also with a "Dewankhana" at the end. Both this court and "Dewankhana" are on a small scale, and are commanded from above.

On either flank of the "Dewankhana" are small closets; a blank wall forms the back.

It was in this "Dewankhana" and in the side closets that the stains of blood were pointed out to me, and I also observed three bullet marks on the walls of one of the closets. They had been clearly shots fired from the "Dewankhana" through the open doorway.

5. I may mention that Rewut Singh's bravery when he was set upon is openly talked of in Tonk. He is said to have cut down several of his assailants, and the others, not daring to approach the desperate man, had resort to fire-arms. The blood in the different closets would seem to indicate that the Thakoor and three others murdered immediately with him ran into the closets to escape the fire, and were there slain.

6. Be this as it may, it is manifestly in the highest degree improbable, had a fracas occurred at the gate of the outer Court, as represented by the Ex-Nawab, that Rewut Singh or any of his followers, who were vastly overpowered in number by their opponents, could have succeeded in getting so far into the house, putting aside the absurdity of the idea of their attempting to place themselves in a situation from which escape was impossible.

7. It had also come to my notice that the deceased Goolab Khan was no relation whatever or connection of the Tonk family; he was simply a Jemadar of Wulaitees. I think the Ex-Nawab called him a relation or a Sahibzadah in his khureeta to the Agent of the Governor General, with the view, it is said here, of making his death a matter of importance.

8. I may mention that it is notorious in Tonk, and is openly stated by every one here, that Goolab Khan was the only individual on the part of the assailants who was killed on the occasion, instead of seven, as set forth by the Ex-Nawab. This can be most conclusively proved now, though, when Captain Bruce made his investigation, it was a different matter; no one then dared to speak the truth. A terrible example of the danger of opposing the Ex-Nawab was still blood-red before all eyes.

A simple examination of the muster rolls of the troops in the service of this State at the time would establish this point, for those said to have been killed were also said to have been in the service of the Durbar. I could do this if you desire it, in which event I beg I may be informed of the names of the men reported to have been killed.

9. Residing at Tonk I have necessarily heard many particulars of the manner and circumstances under which the treachery was planned and the massacre transacted, for the matter is generally spoken of. The very exclamations of Thakoor Rewut Singh when being butchered are made a matter of conversation; and it seems to me, therefore, little short of marvellous that the Ex-Nawab should still attempt by hard swearing to foist on the Government a story so utterly false and incredible.

I enclose a rough plan of the building drawn from memory. It will convey a fairly correct idea of the place where I found the stains of blood, &c.

PETITION, dated 18th January 1869.

From *Mahomed Ali Khan*, the deposed Nawab of Tonk, to Right Honourable Her Majesty's Secretary of State for India, India Office, London.

1. THAT your petitioner was ordered by a letter from the Government of India, dated 14th November 1867 (Appendix A.), to abandon his throne and country and to take up his abode at Benares, where your Petitioner now is.

2. This measure of severity was dealt out for alleged complicity in the death of the uncle and several followers of the Chief or Thakoor of Lawa, a crime of which your Petitioner avers his complete innocence.

3. Your Petitioner having complied at once with the order of the Government of India, then petitioned the Government to be allowed to have copies of the reports and proceedings upon which the action of the Government had been based, for up to that time your Petitioner had never so much as seen a single report, and consequently had been debarred from replying to the arguments by which the Governor General's Agent attempted to prove his guilt, and your Petitioner, being thus condemned as it were on an *ex parte* statement, was forced to succumb to his fate, and to trust to the sense of justice which he has been taught to believe lies near the heart of every English ruler, although it may be temporarily obscured by the arts of designing persons and the machinations of political cabals.

4. Your Petitioner, in answer to his prayer for copies of papers, has received those specified in the margin, and he is now, for the first time since his misfortune, in a position to reply to the charge brought against him by the Governor General's Agent and the Political Agent of Harowtee, and he humbly prays that this appeal, being, as it is, the first defence he has been able to make, may be laid at the foot of Her Majesty's Throne, and that that which under the British constitution is not denied to the humblest and meanest criminal, a fair and impartial enquiry, where both sides are represented, may be accorded to him.

1. No. 1085-59 P., dated 6 September 1867, from Colonel Eden, Governor General's Agent for the States of Rajpootana, to the Secretary to the Government of India, Foreign Department, with copies of depositions taken by Captain Bruce, the Political Agent of Harowtee.

2. No. 97-16 P., dated 26 August 1867, from the Political Agent, Harowtee, to the Governor General's Agent.

3. No. 148, from the Viceroy in Council, to the Secretary of State for India, dated Simla, 23 September 1867.

4. No. 186, from the Secretary of State for India, to his Excellency the Governor General of India in Council, dated 15 November 1867.

5. No. 158 E., dated 14 September 1867, from the Political Agent, Harowtee, to the Secretary to Government of India, Foreign Department, with depositions.

5. The facts which are undisputed are that, on the 1st August 1867, Thakoor Rewut Singh, the uncle of the Lawa Chief, Dheerut Singh, accompanied by several followers, proceeded to the house of Hakeem Surwur Shah, one of your Petitioner's late Ministers, and Superintendent of the establishment for the suppression of Thuggee, where the Thakoor and several of his followers were slain.

It is alleged by the Lawa party that sixteen men accompanied the Thakoor Rewut Singh, he having proceeded by invitation conveyed from the Hakeem Surwur Shah by one Lutchmuna, a chuprasee or messenger; that on arrival Rewut Singh the Thakoor and three others were conducted upstairs to an upper room, the remainder of his followers being in the court-yard below; that after the lapse of half an hour, the whole party were set upon by the sepoys belonging to the Thuggee Department and killed, with the exception of one Megh Singh, who escaped with a wound, the Thakoor and the three men who accompanied him having meantime been slaughtered in the upper room by order of the Hakeem Surwur Shah.

On your petitioner's side it is shown that the Thakoor having visited the Hakeem's Office during the day, where he could not see him on account of his illness, had left with angry words and threats; that after nightfall the Thakoor accompanied by a large party of armed men, repaired to the Hakeem Surwur Shah's house uninvited, and being stopped at the outer gate and refused admittance, they resorted to violence; the gate was pushed open or knocked down, and in the scuffle which ensued a Thakoor's turban was knocked off, upon which swords were drawn, and in the mêlée, the guard, being the stronger party and fighting in defence of their post, overpowered the Rajpoots, who were driven away with the loss of ten killed, the wounded being carried off; the loss on the Tonk side being seven killed and several wounded. Among the slain were the Thakoor Rewut Singh, of Lawa, and Sahebzadah Golaub Khan, the officer in command of the guard.

6. From the report of Colonel Eden, the Governor General's Agent, dated 6th September 1867, and the letters of the Political Agent, Harowtee, Captain Bruce, dated 26th August 1867 and 14th September 1867, now for the first time shown to your Petitioner, it is clear that while Captain Bruce, who was the officer deputed to carry out the investigation on the spot, came to the conclusion that an attempt had been made by the Hakeem Surwur Shah to seize by treachery the persons or the arms, of the Thakoors which resulted in bloodshed, and that there had been no premeditated design at violence on his part, the Governor General's Agent concluded from the report submitted by Captain Bruce that the death of the Thakoor and his followers was the result of a premeditated plan formed by your Petitioner and carried out by Surwur Shah. A perusal of the papers and your Petitioner's reply to the accusation will convince Her Majesty's Government that neither of these conclusions is warranted by the facts of the case.

7. A candid consideration of the subject and a perusal of the papers will also show, as your petitioner believes, a very marked bias on the part of the Governor General's Agent

against your petitioner and in favour of his enemies, a bias also shared in by Captain Bruce, and exhibited in both instances by the rejection of all evidence as untrustworthy which is favourable to your petitioner, and by the acceptance of all evidence, even loose, vague statements and hearsay, when it tells against your petitioner.

8. The extent to which the Governor General's Agent was under the influence of designing and self-interested men, your petitioner's enemies, and thereby biassed against your petitioner, is apparent from the fact that although Captain Bruce, who conducted the enquiry and beheld the demeanour of the witnesses, states his belief that the whole tragedy was the result of an attempt to seize the arms of the Thakoors, and that there was no intention of murder (and even this conclusion your petitioner could have disproved if he had been allowed an opportunity), yet the Governor General's Agent having nothing to go upon besides Captain Bruce's report, adopts a conclusion totally different, and accuses your petitioner of the crime of a deliberate assassination.

Also by the fact that immediately after the report of the affray reached him, he dismissed from the court of the Agency your petitioner's vakeel or representative*, which can be proved by his khurreeta, dated 12th August 1867, herewith annexed in original, with its translation (Appendix B.), and admitted a representative from Lawa, a thing unheard up to that time, so that, in effect, he closed up all channels of information except one.

Also by the fact that he represented your petitioner's son and heir to be a boy 10 years of age, the result of which has been the transference of the power and authority in the State to Ibadoolah Khan, who has been appointed, under the orders of the Government, head of the Regency, he being badly disposed towards your petitioner and one of the prime movers of the cabal against him; whereas your petitioner's son and heir is 22 years of age and fully capable of conducting his own affairs; he, moreover, attended the Governor General's Durbar in 1866 at Agra, at which time his beard was grown, and he had, moreover, a son born to him three years ago. Notwithstanding which your petitioner understands that very recently, on the occasion of the birth of a second child, it has been intimated to the Government of India that the child now born is the eldest son, the Governor General himself having sent a letter of congratulation, and a salute of 105 guns having been fired at Tonk, agreeable to the orders of the Governor General's Agent.

9. Both the Governor General's Agent and the Political Agent, Captain Bruce, give great weight to the assumed probability that evidence in your Petitioner's favour would be easily produced, while that in favour of the Lawa Chief would be furnished with hesitation, inasmuch as at the time your Petitioner was seated on the throne. But in effect the tendency was the other way, for your Petitioner, the representative of a race of Mahomedan conquerors, surrounded by Rajpoot Hindoo States, who have for the past two generations looked upon the existence of the Tonk Principality with the utmost jealousy and hatred, was an object of class enmity to every Rajpoot Chief in Rajpootana, while the Lawa Chief is connected with many of the most powerful and the oldest houses, and has the support and countenance and sympathy of the other Hindoo Chiefs, and of late years of the Governor General's Agent. And even Captain Bruce, the Political Agent of Harowtee, who is unwilling to admit anything that tends to the favour of your Petitioner, yet at paragraph 15 of his letter, dated 14th September 1867, admits that, "if he may believe public report, the Lawa party were well supported from without."

10. Your Petitioner submits that it is utterly inconceivable that any man in his senses would concoct a plot having for its object the assassination of a number of men whose death could be no possible object to your Petitioner or anyone else, and had your Petitioner harboured the murderous design of destroying the uncle of the Lawa Chief, the crime might have been consummated in a thousand ways with infinitely more certainty and infinitely less chance of detection than by the clumsy process attributed to him.

11. Your Petitioner is aware that it is not safe to argue on probabilities in a case of life and death, and that criminals often in the commission of crime exhibit carelessness of consequences, and still more overlook in their calculations some one link in the chain of circumstantial evidence which tends to their detection. But in your Petitioner's case his guilt has been concluded from presumption, and it is therefore but just that the probabilities of the case should be allowed as much weight in his favour as is accorded to them when arrayed against him.

12. No valid motive has been assigned to account for your Petitioner's action on the theory of his guilt, for as he had nothing to gain by the slaughter, so had he nothing to gain by the seizure of the Thakoor's uncle, in whose behalf he must have known the authority of the Governor General's Agent would have at once been exercised, whereas the action of the Rajpoots in attacking the guard at the gateway is in accordance with the turbulent habits of the race, and such affrays may occur at any time.

13. If, instead of your Petitioner's guilt being assumed, the fact of the Lawa party being the assailant is admitted, it will be found that the conclusion is not only borne out by the evidence, but is in accord with all the probabilities of the case; whereas, on the other hand, the story told by the Lawa witnesses can only be credited by doing violence to the ordinarily recognised principles of human action, and adopting conclusions from premises that are themselves assumed.

14. The tendency of the turbulent Rajpoots to acts of rapine, violence, and bloodshed is well known, but the readiness of the Lawa men to resort to violence with the utmost disregard

* It is the custom for a vakeel or representative from each independent Sovereign of Rajpootana, but never for a subordinate Thakoor, to remain always in attendance on the Governor General's Agent for the purpose of forming a channel of communication between the Government and each independent State.

gard of life has been shown in very recent times, for, to go no further back that 1840, they plundered 5,200 rupees from certain tradesmen, and in 1844 they harboured Sawunt Singh and other rebels concerned in a dacoitee with loss of life in Marwar, and refused to give them up; again in 1845 they harboured and protected other murderers and assassins, and in 1855 plundered certain Multanee travellers and killed them and refused to surrender the assassins, and in 1864 they attacked and plundered the resting house at Goordhunpoora, where 13 lives were lost, the records relating to which occurrences are all in the office of the Governor General's Agent; and when such deeds of lawlessness and violence were committed by them, is it to be received as a statement incredible and improbable that they should have attempted similar violence in the present instance?

15. The readiness of the Wulaitees (Pathans, Stipendiaries) to resort to violence when attacked, is also fully admitted by Captain Bruce in paragraphs 77 and 78 of his letter (No. 97-16 P.), 26th August 1867, and with such elements of strife at hand, it cannot be wondered at that the violence on the part of Rajpoots should have been met by violence on that of the Wulaitees, and although your Petitioner, as ruler of the Tonk principality, was doubtless under every obligation to maintain peace in his own capital as far as he could, yet when the peace was broken by the Lawa Thakoor and others who fought in their own defence, the guilt of premeditated assassination ought not to be laid to your Petitioner's door, without strong proof that that which is the most probable explanation of the affair, was, in effect, not the true one.

16. That your Petitioner was anxious for a full and free investigation is shown by the fact that immediately on Captain Bruce's arrival to conduct the inquiry, he suspended and arrested Surwur Shah, lest it should be supposed his influence had been exerted to prevent the truth from transpiring. And immediately on the occurrence of the affray, the very next day a full and searching inquiry was instituted by your Petitioner's own officers.

17. The chief witness on the Lawa side is Megh Singh, who says he was the only survivor, and great stress has been laid and the utmost credence placed on all he says. But it ought not to be forgotten that he is himself a criminal and an accomplice in the crime of murder, and every way interested in procuring the exoneration of the Lawa party, and laying the blame upon your Petitioner, for it is only by establishing this that he escapes the punishment due for taking part in a murderous assault. His evidence therefore ought to be subjected to the strictest scrutiny, instead of having been received, as it has been, unquestioned.

18. It is not in accordance with the recognised principles of the law of evidence that the statement of an accomplice should be held of more weight than that of 24 eye-witnesses, amongst whom were three independent witnesses, residents of Jeypore and elsewhere; nor is there any valid reason why the evidence of the men who were wounded in the affray, and must therefore have been present, should be rejected as trustworthy. Under any circumstances, their evidence is entitled to at any rate as much credit as that of Megh Singh.

19. Megh Singh, No. 8, himself admits that the party were stopped by a sentry, and this not only corroborates the statement of the wounded men, but it shows that the story told by the Lawa men that the Thakoor had been summoned by a messenger who accompanied them to Surwur Shah's house (*vide* depositions of Sheo Nath, No. 7, and Dhan Singh, No. 4) was false, for had it been the case, and had there been a premeditated plot to lure the Rajpoots to destruction, they would have been received with every mark of courtesy and prompt attention, and not denied admittance.

20. Megh Singh also declares that he was the sole survivor. It will be shown further on that there were a great many other survivors of the Lawa party. But if it were a premeditated plan to slaughter the whole party, it is impossible to believe that a witness like Megh Singh would have been allowed to escape. He himself alleges he owed his escape his being mistaken for a Wulaitee by reason of the shape of his turban, which is manifestly false, for he states that his sword was snatched from him and he was wounded in the head and ran away, yet that he escaped with his life because he was mistaken for a Wulaitee. Again, if he had been so mistaken, he would not have been attacked at all, and if he was attacked in pursuance of a predetermined plot to slaughter the whole party, his assailants would assuredly not have permitted him to escape alive and tell the tale. Moreover, it is incredible that he should have been mistaken for a Wulaitee on account of his head dress, and yet he was wounded by a sword cut on the head. He admits he was captured on the road as he was running away, and if there had been a premeditated plan to slaughter the whole party, there was nothing in the world to prevent the Tonk sepoys from putting him to death then.

21. The story that the message inviting the Thakoor at that hour of the night was taken by Lutchmuna, chuprasee, is not entitled to credit, because if he had gone, he would assuredly have been recognised by the Thakoor himself, Dheerut Singh, with whom he is stated to have had an interview, and by the guards who admitted him, viz., Dhan Singh, No. 4, Rewut Singh, No. 5, and Sheo Nath, No. 7; whereas the only persons who profess to recognise him are, Pope Singh and Veejay Singh, who were not on duty at the Thakoor's house as the others were, and had therefore no such opportunity of seeing Lutchmuna, as the guard who conversed with and admitted him. Moreover, it is shown by the evidence of the two Potails (petty officers), Baz Khan and Jeewun, of the village of Yousoofpoora, that two days prior to the event, and on the evening of the affray, Lutchmuna, chuprasee, was at the village of Yousoofpoora.

Your Petitioner earnestly solicits attention to the following reply to the most important paragraphs of the Report of Colonel Eden, the Governor General's Agent, No. 1085-59 P., dated

dated the 6th September 1867, to the Secretary to the Government of India, Foreign Department, this being the first opportunity he has had of replying to it:—

Colonel Eden's Letter.

Reply.

Vide Enclosure C. Witness No. 1.

Paragraph 5. "In support of this statement, we have first the evidence of Hakeem Surwur Shah, who deposes to effect that Rewut Singh, accompanied by a party of attendants, came to his office and residence during the day of the 1st August; that, as deponent was unwell, he sent the verbal message above alluded to, on receipt of which, Rewut Singh went away in a rage; that he (Surwur Shah) became insensible about 5 P.M., and so remained till next morning, when he learnt that Rewut Singh had presented himself the preceding evening, and that on being refused admittance, a *fracas* had ensued, as before related.

22. The evidence of Surwur Shah and Ameen Mahomed, No. 2, is confirmed by that of Moojeebollah, while the depositions of Abdool Hakeem Khan and Moula Bux to the same effect, which were taken, have been altogether omitted.

Vide Enclosure C. Witness No. 2.

6. "The second witness, Ameen Mahomed, corroborates in almost the same words, the statement of Surwur Shah: regarding the mid-day visit of Rewut Singh, and of the Thakoor having gone away in a passion after receiving the verbal message of the evening visit, and of the *fracas* which then ensued, deponent knew nothing.

Vide Enclosure C. Witness No. 5.

Vide Yacoob Ahmed Khan's statement, who states he was ordered *next morning*.

9. "The fifth witness, Faiz Mahomed, deposed to having gone to the Hakeem's house on hearing of the disturbance, and to having there met Yacoob Ahmed Khan (witness No. 3), and to having ordered him immediately to go and apprehend such of Rewut Singh's men as had escaped. Deponent further stated, that 16 Hindoos were killed, and one Mahomedan; that the bodies of the former were burnt next morning by Shahab Khan; that the names of the six Hindoo sepoys of Tonk that were killed, were Luchmun Singh, Ram Singh, Shewloll, Kulloo Ram, Bhageerut, and Hurree Ram; on being questioned as to the places of residence of these men, he stated he knew nothing about them, and further, on being asked whether it was or was not the custom to send the bodies of persons meeting a violent death to the native doctor of the dispensary for examination; deponent replied in a prevaricating manner, which may be held, however, as admitting that such is the custom in Tonk, and that in the present instance, it was not acted up to.

23. The discrepancy between this witness and No. 3, has been here misrepresented, because witness No. 3, did not state that he was directed in the morning to go and apprehend the fugitives, but that *in the morning* it became known that Lawa had lost 10, and Tonk seven. This reference to the next morning has no connection with the order to apprehend the fugitives.

24. It was not the custom of Tonk to send corpses to the native doctor for examination. A reference to the native doctor's books would have made this clear if there were reasons to doubt the question. But it was the law in Tonk, that bodies of criminals should not be given to their relatives. That of Sahebzada Golaub Khan, a relative of your petitioner, and the officer of the guard, was given to his relatives, but without any orders.

Vide Enclosure C. Witness No. 6.

10. "Sixth witness, Abdool Humeed, narrates having heard firing, and that, on going to the locality, he saw some dead bodies, and that he heard a *fracas* had taken place owing to a 'puggree,' having been knocked off.

25. The evidence of this witness, an independent man, unconnected with either party, is of much value, and in this paragraph of the Report but scant justice has been done to it. On being aroused by the noise of the disturbance, he went to the spot, but was not allowed inside the gate, but he saw the bodies lying *on the threshold and opposite the gateway*

Colonel Eden's Letter.

18. "Such, then, is the evidence in support of the Tonk version of the case; the witnesses all hold together, and tell the same tale, with almost suspicious exactitude. Of its kind, the evidence is very perfect; I would now proceed to analyse it.

19. "To commence with the causes which led to the summons of the Thakoor to Tonk, I would invite attention to the Nawab's reasons assigned in the papers marginally noted to my address;* therein it is stated that the Thakoor was called to be reproved for his insubordination, for the non-payment of his tribute, for oppressing the villagers near Lawa, &c. Compare this with the letters from Surwur Shah to the Lawa Thakoor, desiring him to come to Tonk. In these the Nawab is represented as anxious to honour and reward the Thakoor, as desirous of granting him a jagheer, urging the Thakoor to come to Tonk quickly as the Nawab was going to Seronge. Here there is a palpable falsehood at starting; and bearing in mind the persistent manner in which the Nawab has endeavoured to ruin the Thakoor, the sudden wish to honour and reward him would, had nothing happened, have been very singular, but, regarded in the light of the tragedy which has occurred, cannot fail to leave the strongest suspicions that Surwur Shah's letters of invitation were the first steps of the snare into which the Thakoor was cunningly duped.

Reply.

gateway of the Thuggee Office, which was the spot where the affray took place, according to the Tonk statement.

26. The evidence which is briefly detailed in the seven preceding paragraphs is passed over lightly and discarded, because the witnesses all *hold together.* But their statements are remarkably straightforward, and the inference to be drawn from the Governor General's Agent's remark is, that if their account had contained discrepancies, it would have been more worthy of credit. Unless such evidence is disproved, it assuredly ought to be received, at any rate, with as much attention as that of the Lawa witnesses.

27. It is sufficiently clear that the reason why the witnesses Nos. 19, 20, and 21, Girdharee, Roor, and Nanoo, were induced to join the Thakoor's party, was, that the Thakoor was meditating either violence or the possibility of an affray, and so collected as many followers as he could.

28. The tone of this paragraph is excessively unfair towards your petitioner, because it is notorious that the Thakoors of Lawa have always been turbulent and unruly subjects, and as the Thakoor was now opposing the introduction of various measures designed for the good of the State, such as schools, police, &c., your petitioner endeavoured to conciliate him, and offered compensation if he would withdraw his opposition to the tax your petitioner was desirous of imposing for these purposes, because his opposition encouraged others, and it was at the instance, in the first place, of Hakeem Surwur Shah that your petitioner attempted the plan of conciliation.

29. In 1865, your petitioner had, in accordance with an order, dated 24th July 1865, from the Governor General's Agent, erected earthworks at an expense of three lakhs of rupees opposite the fort of Lawa, whose Thakoor was then in arms against him, and the batteries were ready to open, when Captain Blair arrived with a khurreeta from the Governor General's Agent, dated 26th January 1866, and, contrary to existing treaties, interfered, so as to cause the recall of your petitioner's troops, leaving the fort of Lawa standing, and without even calling on the Thakoor to pay the expenses of the expedition. After this, your petitioner surely

* 1. Khureeta from the Nawab of Tonk, dated 2nd August 1867.
2. A note from Tonk Vakeel, enclosing perwanna from Nawab of Tonk, dated 6th August, translations of which were submitted to Government with this Office Despatch No. 970-52, dated 12th August 1867, *vide* Enclosure A., letters dated 22nd July and 27th July 1867.

Colonel Eden's Letter.

20. "The next point we have to consider is, whether Rewut Singh did or did not visit the Hakeem's office during the day of the 1st, as stated, and whether, if he did, any quarrel then occurred.

"That Rewut Singh did visit the office either on the 31st July or 1st August is admitted on all sides; it cannot, however, be shown so clearly whether any high words did pass on that occasion. Surwur Shah and Ameen Mahomed (1st and 2nd Tonk witnesses) state that Rewut Singh got in a passion and went away after using harsh or abusive language. On the other hand, there is the evidence of Thakoor Dheerut Singh, as well as of Dhan Singh and Rewut Singh, to show that Thakoor Rewut Singh came back very pleased with his interview, which would scarcely have been the case had there been a quarrel; and if we remember the tenor of the Hakeem's letters of invitation to the Thakoor dated but a few days previously, the most natural conclusion is that, as stated by the deceased Rewut Singh to Thakoor Dheerut Singh, the promises made in them were verbally reiterated. I may here remark that the value of Surwur Shah's evidence can be in some manner tested by referring to the stated date of the interview. He has deposed that it took place 10 days subsequent to the Thakoor's arrival at Tonk, whereas his letter of invitation pressing the Thakoor to come, and with which the latter complied, is dated 27th July, so that the truth of the unanimous statement of the Lawa witnesses, that they reached Tonk on the 29th July, can scarcely be doubted, and hence the interview must have taken place two or three days after their arrival, most probably the former, instead of 10 as affirmed by Surwur Shah.

Vide Enclosure C. Witnesses Nos. 1 and 2.

Vide Enclosure B. Witnesses Nos. 1, 4, and 5.

Vide Enclosure A.

21. "We now come to the visit of Rewut Singh to the Hakeem's office about 9 p.m. on the 1st August. The Tonk witnesses seek to establish that Rewut Singh proceeded there uninvited, and brought on the collision by his own violence.

"But, on the other hand, there is the concurrent testimony of the witnesses marginally cited to prove that, on the evening in question, a chobdar came from Hakeem Surwur Shah to call Thakoor Dheerut Singh, who sent his uncle, Rewut Singh, accompanied by Beejay Singh, the two Lawa Kamdars, and some attendants. This of itself would be sufficient to throw grave doubts on the statements put forth by the Tonk witnesses; but coupling it with other concomitant circumstances attaching to the case, the Durbar's version of the story becomes so improbable as to be utterly unworthy of credence.

No. 1. Dheerut Singh.
„ 2. Pope Singh.
„ 3. Beejay Lall.
„ 4. Dhan Singh.

„ 6. Ghasee Singh.
„ 7. Sheo Nath Singh and others.

Reply.

surely ought not to be blamed, or suspected of sinister motives, because he adopted conciliatory measures.

30. The statement is corroborated by the evidence of three other witnesses, two of whose depositions, though taken, have not been attached, viz., Abdool Hakeem Khan and Moula Bux. The mistake made by Surwur Shah in the date of the interview is urged as an argument for discrediting his statement, while at paragraph 18, the accord in the story of the witnesses on the Tonk side generally is put forward also as a reason for rejecting their testimony. The Hakeem at the time was ill, and his illness was of such a nature as to affect his memory, viz., paralysis, and a medical examination now would show this. The Hakeem's illness has, indeed, been denied, but it will be shown incontestably below.

31. There are very grave discrepancies in the story told by these witnesses to which the Governor General's Agent makes no allusion whatever, and this evidence only requires to be critically examined with some attention to show that the witnesses could not possibly have been telling the truth. Pope Singh, No. 2, says that the cause of the invitation was the presentation of a "khillut" (honorary distinction, dress, &c.). The next witness, Beejay Lall, No. 3, perceiving the absurdity of a "khillut" at that time of night, mends the story, and says they were invited because a "khillut" was to be given in the morning. The Thakoor himself, Dheerut Singh, No. 1, says it was to "confer about a khillut;" yet Beejay Lall was deputed at that time of night to a banker to get the money for a "Nuzzur" (offering from an inferior)! If invited in a friendly way to confer about the presentation of a "khillut," it is incredible that the Thakoor would have gone with a *posse comitatus* of 16 armed men. It is equally incredible that, as Dheerut Singh, No. 1, says, the Thakoors would have gone in state with so large a party, they being on foot. That Rewut Singh *did* go with a large following, is certain, and it is equally certain he would have gone on horseback, and this accounts for the presence of the syces who ran away, and of Byree Lall, who was near the horses "and wounded by a bullet in the thigh," he being palpably in the street, and wounded there by a stray shot, which shows that the conflict took place *near the gateway* and in the street, and not inside the court-yard, as stated by the Tonk witnesses. Moreover, the attempt made by the syces to describe what occurred, (though they describe what they could not have seen if it had occurred, witness No. 15, Goupaul Singh) shows that they were of the party and anxious to exonerate themselves and their master from all blame.

32. The

Colonel Eden's Letter. *Reply*

32. The reasons for disbelieving the story of the summons being conveyed by Lutchmuna chuprasee, have been fully detailed above, at paragraph 21, reasons which it does not occur to the Governor General's Agent to notice at all.

33. There is the utmost possible discrepancy in the different statements as to the number of men who accompanied the Thakoor Rewut Singh. Dheerut Singh, No. 1, and Beejay Lall, No. 3, give the names of 16 men in exactly the same order. Dhan Singh, No. 4, gives the names of two other men, Golaub Singh and Gobind Singh, which makes 18, and Megh Singh, the alleged sole survivor, particularly mentions Siree Lall, who went upstairs, and this makes 19. Dhan Singh also mentions another, Byree Lall, who escaped, and this makes 20. Girdharee, Roor, and Nanoo (Nos. 19, 20, and 21), whose evidence is rejected without any good reason, and who all say they went, make 23, and if the three syces who returned to Lawa the next day, and said they had escaped, and told circumstantially the whole story as detailed by the other witnesses, be reckoned, they make 26. But of these, the three syces, Girdharee, Roor, Nanoo, Megh Shing, and Byree Lall, are alive, and this leaves 18 said to be slain, whereas there were only 16 Hindoo bodies found.

34. Captain Bruce, the Political Agent, in his letter of the 14th September 1867, paragraphs 8, 9, 10, 11, though totally unable to account for the discrepancy in the statements, yet, without alleging any valid reason, rejects the Tonk statement and accepts that of Lawa. But even he finds it necessary to admit one Hindoo body as belonging to Tonk, so that the Lawa witnesses make out 18 Hindoos slain, which, with the one Captain Bruce credits to the Tonk side, makes 19.

35. But while it is quite certain that if the Lawa witnesses had been telling the truth, there would be no discrepancy upon so important a point as the number and identity of those slain, we find, if we take the enumeration of Dheerut Singh, No. 1, and that of Beejay Lall, No. 3, and compare it with that of Dhan Singh, No. 4, who gives the names of three men, Gobind Singh, Golaub Singh, and Byree Lall, not mentioned at all by Dheerut Singh and Beejay Lall, while the two other witnesses, one of whom, Dheerut Singh, is the Takoor himself, name four men, Beejay Singh, Gooljee, Ummurbhajun, and Hunwunt Singh, not mentioned at all by Dhan Singh, No. 4, we shall find that the statements are inconsistent and irreconcileable. Whereas, that there were six Thuggee sepoys killed on the Tonk side is supported by infinitely stronger testimony than that adduced to sustain the Lawa story, for the names of the six Thuggee sepoys killed on the Tonk side were found duly enrolled in the muster roll of the Buksheekhana books, and three of their bodies were seen and *recognised* by their next of kin (which was the case with none of the Lawa men). Out of the whole six Hindoos killed on the Tonk side, the next of kin of four deposed to their death, and the absence of the next of kin of the other two was satisfactorily accounted for. (*Vide* Captain Bruce's letter, 14th September, paragraph 7, and depositions attached thereto, No. 3, C. I.)

The following witnesses of the Lawa party profess to give a list of the names of the men who were killed. Dheerut Singh, Thakoor, No. 1, Beejay Lall, No. 3, Dhan Singh, No. 4 (second deposition), Rewut Singh (second deposition), Sheo Nath (second deposition), Ghasee (second deposition), but their lists do not agree, some being mentioned by one witness and others by another.

The second depositions were taken by Captain Bruce about the 13th September, and if the men had really been killed, there could surely have been no doubt after that lapse of time who they were who fell.

36. It will be obvious, from an impartial examination of this part of the case, that, in order to make their story consistent, the Lawa witnesses have resorted to different statements as to the killed, and it is equally obvious that, endorsing their story, both the Governor General's Agent and the Political Agent have been obliged to resort to many suggestions and suppositions, neither Colonel Eden nor Captain Bruce adopting the same theory to account for the singular discrepancies; whereas, if the matter be viewed in a perfectly impartial manner, it will be seen that, by the explanation given by Tonk, the whole difficulties disappear, and the pieces take up their proper position on the board in a perfectly rational and consistent manner, *viz.*, that violence was first offered by the Lawa party; on the cry being raised to defend the gate, the Lawa party were, after a sharp conflict, defeated, and fled, taking care to carry off their wounded, lest their evidence should tell against them, but leaving their dead on the ground.

37. There is no reason for surprise or incredulity in the fact that the wounded on the Tonk side were all Mahomedans, while of the slain one was a

Colonel Eden's Letter. *Reply.*

Mahomedan officer, and the other six Hindoos; although this has been represented as telling heavily against the truth of the Tonk story, for in the Thuggee department by far the greater majority of the sepoys are Hindoos, and at the outset of the encounter, when the alarm was suddenly raised, the men would naturally have rushed to arms, and the majority of those engaged would have been Hindoos, and nothing is more likely than that they should have fallen.

It appears that none carried fire-arms, except, perhaps, Rewut Singh himself, *vide* enclosure.

22. "It is quite certain that had Rewut Singh been silly and hardy enough to attempt to insult or attack Surwur Shah at Tonk itself, he would have taken a stronger party with him and better armed, and he would not have been accompanied by the kamdars Moonna Lall and Lalljee, elderly infirm men, unused to carry arms.

23. "Nor does it appear at all likely that the collision was brought on gradually arising from a brawl, for, had such been the case, the wounded would have formed a far greater portion to the number killed. As it was, every man in the Lawa side appears to have been killed outright then and there, excepting Megh Singh, who attributes his own escape to the circumstance of his having had his turban fortunately tied like an Affghan.

Vide Native Doctor's evidence, Enclosure D.

24. "I am very sceptical as to the number of the casualties which are stated to have occurred on the Tonk side. One Mahomedan and six Hindoos are said to have been killed and nine Mahomedans wounded; of the latter, four were only scratched, reducing the number of those really hurt to five.

"The bodies of the six Hindoos in Tonk employ, stated to have fallen, are said to have been burnt next morning, so that the Political Agent was unable to ascertain beyond all doubt by seeing the corpses whether they ever had any real existence. There are grave doubts on this point. It is most extraordinary that all the six Hindoos should have been killed, whilst their Mahomedan comrades should have escaped with the proportion of one killed to five wounded. *These six Hindoos, too, appear to have been singularly friendless; no one even seems to know their homes, and there was no one even in Tonk of their own religion who would perform the last funeral rites,* for, according to the showing of the Tonk witnesses, their bodies were burnt by a Mahomedan, one Shabab Khan.

38. It is clear, as shown above, that a very large party accompanied the Thakoor; and the argument that two of the party were elderly and infirm, and unused to carry arms, as the Governor General's Agent says, though in effect it is well known all Rajpoots are accustomed to carry arms and to the use of them from childhood, is of no weight against the irresistible evidence we have as to the great strength of the party. As it is, *upon their own showing*, they were attacked unawares, their leader having been decoyed away with three attendants, yet they managed to kill the officer of the sepoys and severely wounded several others. The fact of there being no wounded men captured (save Megh Singh) is easily accounted for by the certainty that they would carry off their wounded. Besides we have evidence (Dhan Singh, No. 4) that another escaped, Byree Lall, who, in spite of a bullet wound in the thigh, ran all the way to Lawa by a circuitous route, the direct route being 20 miles from Tonk.

39. That the wounds of the Tonk sepoys were not slight is amply shown by the Report of the Native Doctor (Appendix C.), who 35 days after the affray, wrote to say that the four wounded men were only then just recovering, and their wounds had had to be sewn up, and the Political Agent says in paragraph 42 of his letter of the 26th August: "That very serious fighting did take place, there can be no question from the nature of the wounds received by some of the Tonk sepoys, several of whom had six or seven sword cuts; one, indeed, though twice brought to me to give evidence, was unable to speak, the whole of his face, nose, mouth, and chin, having been sliced off.* The Governor General's Agent in the face of this argues at paragraph 22, that the Thakoor could not have intended violence, because he took so weak a party. And it must be recollected that, besides these wounded, there was the Mahomedan officer, a relative of your petitioner, killed; one Hindoo sepoy killed, admitted by the Political Agent at paragraph 10, of his Second Report, dated 14th September, not to mention the six Hindoos, according to the Tonk version, killed outright.

40. The Political Agent was not on the spot till 15 days after the occurrence; it is therefore impossible he could have seen the bodies. The bodies of the Hindoos *were burnt in strict accordance with the custom at Tonk, by Mokundah, Sheonarain, and Gunput, Brahmins, whose regular occupation was that of burners of the dead,* and whose depositions are recorded in Captain Bruce's Second Report of the 14th September. No other course could have been taken. The bodies of Rewut Singh and Beejay Singh were not demanded by their relatives, but they were burnt apart in one spot; those of their followers, eight in number, in another spot; and the bodies of the six Hindoo

* This man has since died.

Colonel Eden's Letter. *Reply.*

Hindoo sepoys of the Tonk side, apart by themselves in another spot, and in the presence of the next of kin of some of the deceased. The deceased on the Tonk side were not the *friendless beings* the Governor General's Agent represents, for out of the six, the relatives of three were present, and recognized the deceased (*vide* depositions of Davi Singh, Sham Singh, and Buldeo Singh, in Captain Bruce's Second Report, 14th September), while the next of kin of the fourth, Duljee, gave his evidence as to the loss of his deceased son. The absence of the next of kin of the other two was satisfactorily accounted for (*vide* paragraph 7 of the Second Report), while their names and descriptive rolls were all duly entered in the muster rolls of the establishment, as appears in the same depositions, Captain Bruce having on the spot, *and without any previous notice*, sent for the book to examine it. And their female heirs prayed Captain Bruce to request the Nawab to fix pensions for them. The representation, therefore, by the Governor General's Agent in paragraph 24, is wholly contradicted by the best possible evidence that could be adduced in any like case. That the relatives of the deceased Tonk sepoys should be present, while those of the Lawa men were absent, is precisely what we might have expected. It is true that the next of kin of several of the Lawa killed did appear, but none of them saw the deceased, nor recognised the bodies.

25. * * * * *

I "entertain a very strong conviction that 16 Hindoos were killed, but instead of 10 belonging to Lawa and six to Tonk, the whole were of the Lawa party.

"On referring to the evidence of Dheerut Singh*, we find he gives the names of 15 persons as having accompanied Rewut Singh, and in a subsequent part of his deposition, he states, all except Megh Singh were slain. Here we can at once account for 15 Hindoo corpses, leaving a discrepancy of but one.

"But on turning to the evidence of Megh Singh †, the only surviving eye-witness on the part of Lawa, it will be observed that one Siree Lall ascended the fatal staircase, in Surwur Shah's house, together with Rewut Singh and Moona Lall, and this statement is repeated in the memorandum attached to the plan of the building.

26. "We may, therefore suppose that he too was slain. Siree Lall's name is, however, not amongst those mentioned by Thakoor Dheerut Singh; *probably it was an oversight:* and if, therefore, I am correct in this surmise, we have the full number of 16 corpses. I have telegraphed to Mr. Bruce to make enquiry on this point without delay; his answer may be received ere I close this Despatch: should it confirm my supposition, I need hardly add that more conclusive evidence against the statements put forward by Tonk could not possibly be forthcoming. It establishes that the whole of the Tonk eye-witnesses have perjured themselves, and that not a word of reliance can be placed on what has been urged by the Durbar.

27. "It will be observed that amongst the Tonk witnesses there are two individuals ‡, from whom, as being unconnected with Tonk, valuable information might be looked for. I refer to Girdharee, No. 19 and Roor, No. 20. They profess, on the casual acquaintance of one of the Lawa kamdars, to have accompanied Rewut Singh on the evening of his fatal visit to Surwur Shah's house. The kamdar no longer lives to disprove the statement, but it is extraordinary that neither of these witnesses can recognise, or be recognised by, any person attached to the

41. The Governor General's Agent makes up the number of Lawa men slain by adding Siree Lall to Rewut Singh's party of 16, according to Thakoor Dheerut Singh, out of whom one, Megh Singh, escaped, that is to say, by accepting every word spoken by the Lawa witnesses and rejecting all the Tonk evidence. But your petitioner has shown in paragraph 33, that the total names recorded by the Lawa witnesses as having accompanied Rewut Singh, amount to at least 19, because Dheerut Singh enumerated by name 16, Dhan Singh, No. 4, adds, three, Gobind Singh, Golaub Singh, and Byree Lall, and Megh Singh adds Siree Lall, in all 20, but including Buldeo and the other three syces and Girdharee, Roor, and Nanoo, who say they were there, in all 27 !

* *Vide* Evidence B., Witness No. I.

† *Vide* Enclosure B., Witness No. 8.

42. The Governor General's Agent rejects the evidence of Roor, Girdharee, and Nanoo, who *said they were present* because *no one recognised them.* But the fact that two only of the Lawa party, and not even those with whom he is said to have conversed and the Thakoor himself included, could recognise the chuprasee, Lutchmuna, is not held to invalidate the evidence as to the fact of Lutchmuna being sent to decoy the Thakoor's party to destruction. Surely a principle observed in one case ought to be held applicable in another. Another reason for

‡ *Vide* Enclosure C.

Colonel Eden's Letter.

Lawa Thakoor, although by their own showing they were at the Lawa Thakoor's house before starting with Rewut Singh. The improbability of their being asked by Purohit Lalljee to accompany Rewut Singh for no ostensible purpose is apparent, and the utter failure of Roor to prove the circumstances under which he met and made the Purohit's acquaintance, as recorded by the Political Agent at the foot of this witness's deposition, is sufficient to cause us to reject their testimony, nor must we overlook the fact that these two witnesses had been in confinement in the Tonk kotwalee, seemingly without any cause whatever, where doubtless threats and bribes were not wanting to secure their silence or co-operation.

Vide foot-note by Political Agent on Roor's deposition, No. 20 of Enclosure C.

29. "I now proceed to the reasons which have been assigned for despatching troops to Lawa and for surrounding the Thakoor's house at Tonk for some days. It seems unnecessary to do more than express my entire concurrence in the conclusions arrived at by the Political Agent, Harowtee, in his 32nd paragraph, and again in his 51st and 52nd paragraphs.

"There can be no doubt that the surrounding of the Thakoor's house and the despatch of troops to Lawa were part of a preconcerted plan.

Reply.

discrediting Roor, No. 20, is that he could not point out the tobacconist's shop or stall, where he said he purchased tobacco (*vide* deposition and Captain Bruce's note in his First Report dated 26th August, where he records that on sending a chuprasee with Roor to identify the shop, there was nothing of the kind to be seen).

It is stated that it was at a "fair" that this took place, and it is perfectly well known that it is the custom in India in all fairs for tobacconists and other dealers to erect temporary stalls for the sale of their commodities during the day, and when the fair is over they remove them. It is therefore not to be wondered at that no stall was found, but it would have been most extraordinary if it had been there.

43. The Governor General's Agent also, and without any grounds, boldly assumes that these men, *viz.*, Girdharee, Roor, and Nanoo, had been tampered with, because they had been in confinement in the Tonk kotwalee. But Megh Singh also had been in the Tonk kotwalee all the time, and if the three were bribed, surely it may be supposed the fourth would have been similarly dealt with, and if he was not, there is no ground for assuming the other three were.

44. The Governor General's Agent has again hastily adopted a conclusion unfavourable to Tonk, because it is obvious that, if your Petitioner had designed to capture the fort of Lawa, he would not have sent troops without guns. Gopal Singh, No. 15, is clear on this point that no guns were sent.

Mendhi Ally, the Naib Moonshee of the agency, states that, on the morning, the 2nd August, at Dotana, he heard guns, and that villagers told him of a force of 300 or 400 Wullyatees having been sent against Lawa; now, Dotana is to the north-east of Tonk, and Lawa is 20 miles to the west of it. If the villagers, therefore, did make such a statement, it must have been some vague report they had heard, and the movements of bodies of men are always much exaggerated by villagers in India, and if the Moonshee's story is true that he heard guns firing at Lawa, they must have been Lawa guns, because Gopal Singh the Thakoor in charge of the fort said there were none with the Tonk troops. Gopal Singh says, "if guns were brought on this occasion, they must have been left at Goordhunpoora," and the fact of your Petitioner not despatching any, shows that there were no preparations made to capture the place.

Bundee Ally, the compounder, states he saw elephants with ladders proceeding to Lawa, but does not mention guns.

Jawahur Lall, the Naib Moonshee, Harrowtee agency, in his letter dated 7th August, (*vide* Captain Bruce's First Report, dated 26th August), and who writes from Lawa, where he was sent to make inquiries, implies that the Tonk troops had no guns.

The story, therefore, of the predetermined design of capturing Lawa, is wholly unsupported.

45. The conclusion adopted by the Political Agent in his 52nd paragraph, 26th August, and endorsed by the Governor General's Agent in paragraph 29, is wholly at varience with the experience of other officers in India, who know that as a rule, it takes much less time to get native troops under way than it does British troops, with their elaborate commissariat and camp arrangements. This is patent to every one who has ever seen or heard anything of Indian campaigning. Besides which, if Byree Lall, with a bullet wound in the thigh, could yet reach Lawa during the night by a circuitous route, is there anything extraordinary in the statement, that the Tonk sepoys marching by the direct route, could reach it during the night? Moreover, it is a mistake to say that troops were despatched in the sense of a military expedition; only as many armed men as could be collected on the spur of the moment, were sent after the fugitives.

Colonel Eden's Letter.

31. "I would now advert to the evidence on the part of Lawa. We have first cordial invitations from Surwur Shah* to Thakoor Dheerut Singh to visit Tonk, which the Thakoor complied with, reaching Tonk on the 29th July. On or about the 31st, Rewut Singh, uncle and manager of the young Thakoor, visits Surwur Shah, and returns home well pleased, informing him that their grievances are to be settled. On the evening of the 1st August, a messenger comes from Surwur Shah to the Thakoor, saying that, as the Nawab† was about to start for Seronje, the Thakoor would be presented with a khillut the following day, and requesting the immediate attendance of the Thakoor at the Hakeem's house, in order that suitable arrangements might be made. Dheerut Singh at once deputes his uncle, Rewut Singh, his cousin, Beejey Singh, with his kamdars and some attendants, whilst at the same time Beejey Lall, one of the kamdars, proceeds to a banker's house to obtain money for a suitable "nuzzur."‡ Of the party started for Hakeem Surwur Shah's house, there is but one witness living to tell the tale.

"On arriving at the gate the party was challenged by a sentry, who remarked that the hour was an unusual one for a visit,§ but goes to announce them, whilst they themselves sit down and await his return.

"He returns and conducts Rewut Singh, Beejey Singh, and two kamdars up a staircase, the attendants remaining below; after an interval of about half an hour, they were suddenly set upon and cut down by a number of Wullaitees, all being slain outright but the deponent Megh Singh.

"The noise of firing had no sooner reached the ears of Dheerut Singh, and those who had stopped with him,‖ than they found the house in which they were residing, the doors of which they had promptly closed, fearing treachery, surrounded by troops, demanding them to yield, and early next morning a considerable body of Tonk troops appeared before Lawa, and kept up a little desultory fighting for two days before they were recalled.

34. "His Excellency in Council will not fail to observe that the Nawab's own uncle and his own brother secretly admitted to Mr. Bruce the truth of the conclusion arrived at; they only endeavoured to palliate¶ the conduct of the Nawab and Hakeem Surwur Shah in so far that they deny there was any intention of butchering Rewut Singh and those who accompanied him, and declare that the arrest of the party was all that was desired; that through failure or bungling in execution such deplorable results ensued.

Reply.

46. The statement that Rewut Singh returned pleased from the interview with the Hakeem, as here relied upon, is wholly opposed to two things, 1st, to the fact related by Gopal Singh, Thakoor at Lawa, that a *chumar* arrived there on the evening of the 1st, whose statement was corroborated by another messenger on the 2nd, who "left prior to the affray," to the effect that sentries were placed over the Thakoor's house in the city, and that the aspect of affairs was "not encouraging;" and 2ndly, to the fact that, when firing was first heard, Dheerut Singh said at once—"It looks like treachery; arrange for our defence quickly" (*vide* Dhan Singh, No. 4). Witnesses Nos. 5 and 7 also say that, on hearing the firing, they prepared for defence and closed the door.

47. Your Petitioner deprecates most strongly weight being given to statements made by his relatives. His uncle, Ibadoolla Khan, had been displaced from his office for embezzlement and oppression by your Petitioner, and the villages he had seized and forfeited. The "own brother" here alluded to is Obedoolla Khan, your Petitioner's brother by another mother, who was dismissed from his office of Naib eight months previous to the occurrence for misconduct: he complained against the dismissal to Captain Bruce, who himself gave the letter to your Petitioner; the letter of complaint ought to be now in the office of the Tonk Durbar, and if it has been made away with, the facts are perfectly well known in Tonk. Another brother, Abdoolla Khan, since deceased, claimed the throne on the demise of your Petitioner's father, Wuzeeroodowla, and the papers relating to this case are all in the Agent's office, or that of the Tonk Durbar. The statements, therefore, of many of your Petitioner's relatives are the very last that should have been attended to. These are the very people who have benefitted by your Petitioner's misfortune, and the designs of Ibadoollah Khan are patent from the means he has used to persuade the Governor General's Agent to place him at the head of the regency, and to represent your Petitioner's eldest son as a minor, whereas he is 22 years of age, and fully competent to manage his own affairs, notwithstanding which, he is kept in a state of pupilage. In addition to which the statements of these people are a repetition of vague reports and mere idle tales, which are accepted only when they are unfavourable to your Petitioner. The hypocritical attempts of these men to "palliate," as the Agent says, the conduct of Surwur Shah and your Petitioner, are easily seen to be nothing but the result of deep design and self-interested motives to ensure his ruin by poisoning the ear of the Agent with false estimates of your Petitioner's character.

¶ *Vide* Paragraphs 57, 58, 59, and 60 of Political Agent's Report.

Colonel Eden's Letter.

35. "The Political Agent, leaning chiefly on what he heard from native gentlemen at Tonk, has accepted this view of the case, though he considers Surwur Shah must be held answerable for the wanton sacrifice of life that occurred, since he failed to take such precautionary steps for effecting the arrest of the party as the peculiar circumstances of the cases demanded; it being almost a matter of certainty that without due precautions bloodshed would assuredly ensue.

Vide Paragraphs 72, 73, and 74 of Political Agent's Report.

38. "Again, the circumstances of the massacre, as detailed by Megh Singh, preclude us from believing that anything short of wholesale butchery was intended. The party were not summoned to surrender, or directed to throw down their arms, or even overawed by superior force, but they were suddenly set upon and cut down without any warning whatever. Further, had Golab Khan and his Wullyatees received orders to arrest, not to massacre, the party, and admitting that the Rajpoots fought to a man rather than be captured, I look upon it as a matter of certainty that some few whilst cut down, and placed *hors de combat*, would have survived the conflict a few hours; all were, however, killed outright, but Megh Singh, and his escape I attribute to providential good fortune, rather than to the mercy of his assailants; probably he was not observed as being alive until the noise of the disturbance drew people to the locality, when to have killed him in cold blood would certainly have been noticed, and would have upset the story put forward by the Tonk Durbar.

39. "In short, it appears to me that, whilst there is no evidence whatever to support the conclusion that a massacre was not intended, there is very strong reason to believe it was, and I am of opinion that Captain Roberts in his demi-official letter of the 9th ultimo, submitted to Government on the 14th idem, correctly estimated the causes and arguments which induced the perpetration of so foul an outrage on humanity.

40.—"Thakoor Deerut Singh is young, weak, and inexperienced, and has been entirely guided by his uncle, Rewut Singh, a stout old soldier, who was until 1865 employed in the Ulwar State as commander of abody of cavalry; when, however, the Nawab threatened his nephew, the head of the family, he resigned the Ulwur service and proceeded to Lawa, where he has been the most vigorous and able advocate in support of the young Thakoor's rights; I believe, therefore, that the Tonk Durbar trusted, by cutting him off, together with Beejey Singh and the Lawa kamdars, to sweep all those of sufficient weight and influence to offer any opposition.

Reply.

48. Captain Bruce in paragraphs 59 to 62 of his letter of 26th August records a mass of vague reports and hearsay evidence, upon which the Governor General's Agent relies. Of the authorities quoted by Captain Bruce, one, the Agent of the banking house of Muthra, was defeated in a claim for a lakh of rupees he raised against your Petitioner, and your Petitioner was forced to take measures of severity against the firm on account of their dishonest conduct, and therefore this witness, who only repeats vague reports, is ill-disposed towards him. Another, Zhor Ally, was dismissed by your Petitioner for fraud, and for assisting the rebels in 1857, and other offences, and yet he is relied upon as a gentleman of respectability! And Zhor Ally's son, Mahomed Naeem, was punished severely by your Petitioner for theft of stamps, and forgery and embezzlement in 1866. And the Lawa Chief and his family have for generations past been heavily indebted to the Muthra firm.

49. The Governor General's Agent here starts with assuming the whole case against your Petitioner. There was no reason why the Rajpoots should have been called on to surrender or lay down their arms, because they were the attacking party. It was *they* who attempted to take your Petitioner's people by surprise, and give no quarter, but they were happily overpowered, otherwise there is no doubt they would have slain every one in the place.

50. The Governor General's Agent looks upon it as a "matter of certainty" that there must have been some wounded survivors, and beyond a doubt he is correct in this conclusion, and therefore it is clear that your Petitioner's explanation is the true one, *viz.*, that they carried off their wounded, except Megh Singh, who says he *offered no resistance and ran away directly, and was subsequently* captured. The theory set up by the Governor General's Agent is totally contradicted by Megh Singh's own statement, which the Agent *could scarcely have read*, as he (Megh Singh) says he ran away and was "caught on the road," when, if the Tonk people had been very anxious to leave no surviving witness, it is quite certain they might very easily have killed him.

51. That four men should have ascended a staircase, leaving Megh Singh and some ten or more seated below; that after half an hour, no sound having reached the ears of those below to lead them to suppose there was anything amiss up-stairs, they should have been set upon suddenly by a number of men who tried to kill them, is altogether such an utterly improbable story, that it ought to be at once rejected, unless supported by the strongest evidence. It is contrary to all experience of human nature, and to the instincts of the races concerned, and not to be accounted for by any possible motive. There was no call for aid from the Thakoor, no suspicion that he was in jeopardy, nothing to arouse the passions! What was to be gained by slaughtering these men?

Again, whose assassination is it your Petitioner is accused of designing? The Governor General's Agent says Rewut Singh's, and at paragraph 40 of his report he enters into various

Colonel Eden's Letter. *Reply.*

various reasons why your Petitioner should have desired the death of Rewut Singh. But the messenger was sent to summon Dheerut Singh, as Dheerut Singh himself says; could your Petitioner certainly know that though Dheerut Singh was summoned, Rewut Singh would go?

Again, if your Petitioner's design was directed against the life or liberty of Rewut Singh, why should the letter of invitation sent to Lawa not have been confined to Rewut Singh, and especially when Dheerut Singh postponed his journey for several days owing to sickness, and every excuse was thereby offered for inducing Rewut Singh to come in his place? Would not your Petitioner have availed himself of it, and solicited Rewut Singh's attendance (*vide* paragraphs 21, 31, and 33 of Colonel Eden's letter)?

Again, if it be endeavoured to show that the design were to seize the person of Rewut Singh owing to his being, as it is stated, the mainstay and support of his nephew, the Thakoor Deerut Singh, while the fort was captured, there is the same question to be answered; could your Petitioner certainly know that though one was summoned the other would go? Moreover, the Thakoor Dheerut Singh is not by any means the inexperienced youth he is represented. He is upwards of 30 years of age, active, intelligent, and well able to look after his own affairs; but the theory is so ill-supported by the evidence, that it is not worthy of attention; for a compounder is brought forward to state that he saw elephants and scaling ladders going with the Tonk troops! Your Petitioner ventures to assert that, in the experience of the oldest political officer in Rajpootana, no one ever heard of a force being sent against a force without guns. The story of the compounder about elephants and ladders is just such a tale as a man ill-informed on such matters would make up. Is scaling the walls of fortresses (and the Lawa fort, be it recollected, was strong enough to resist a regular siege of many months in 1865–66), so common in Rajpoot warfare, that scaling ladders would have been part of the equipment of an army proceeding against it, and not guns?

Some stress has been laid upon Captain Roberts's report in paragraph 27, Captain Bruce's letter, 26th August, and in paragraph 15 of letter from the Government of India, No. 148, 23rd September 1867, but Captain Roberts was at Tonk on his way through for a few hours in the evening only; he made no investigation, and the information he picked up was from vague reports sedulously circulated by your Petitioner's enemies, and the designing men who conspired against him to blacken his character, and to seize his throne.

And at paragraph 15 of the letter from the Government of India, No. 148, 23rd September 1867, it is stated that Captain Roberts, writing from Tonk a little more than a week after the event, states that at first he held your Petitioner blameless, but afterwards changed his mind. There is no reason alleged for this change of opinion, but it is known that Captain Roberts was then on his way to Jeypore and Ulwur, and it is more than probable that he changed his mind in consequence of influence exercised upon him by the chiefs, who, being Hindoos and Rajpoots, were all disposed to favour the Lawa Thakoor.

42.—"The author and prime mover in this tragedy has been undoubtedly Hakeem Surwur Shah; from the first he has been the instigator of the Nawab in his uncalled-for action against Lawa.

"He is notoriously a bad and wicked man,* and his attempts to prove he was ill during the night of the massacre by suborning the native doctor, only further tend to establish his connection with the crime.

52. Now your Petitioner begs particular attention to the evidence of Bheekoo Singh, the native doctor, who is represented as one of the principal witnesses against your Petitioner, from his reputed respectability and assumed impartiality. All that he states regarding the affray is mere hearsay; but it will be observed that he deposed that an attempt was made to suborn him, that he produced certain perwannas or written orders from your Petitioner which he said were brought to him after the affray, but antedated, and that he was solicited to state that he had attended the Hakeem Surwur Shah, but would not tell an untruth, &c. (*vide* his deposition). To show how false this statement is, your Petitioner appends (Appendix D.), a letter from Bheekoo Singh, in original, with a translation, dated 28th July, which shows that *he had then visited the Hakeem* three times, that he thought him seriously ill, but could do little, because he, the Hakeem, would not follow his advice. It was in answer to this letter that the perwanna which he said was antedated, and which he adds he was solicited fraudulently to produce, was written, and a copy of that perwanna is annexed with a translation (Appendix E.). And lest it should be said that this letter is not genuine, three other letters of Bheekoo Singh are annexed, taken at random out of a large number which your Petitioner had at various times received from him, so that the signature may be compared (Appendix F.). And to show further how

* *Vide* Native Doctor's evidence, also of Political Agent's Report.

Colonel Eden's Letter. *Reply.*

how all the subordinates of the Political Agent's offices are in league against your Petitioner, Captain Bruce, in his paragraph 65 of his letter, dated 26th August, states that these perwannas had been made over to him, "but had been abstracted somehow from his bundle of papers." They were abstracted, there can be no sort of doubt, by Bheekoo Singh, aided by the subordinates of the office, who had found out that your Petitioner had the means of exposing his falsehood by the production of the letter (Appendix D.).

Fortunately, and it is strange how little fortuitous circumstances sometimes aid the cause of justice and innocence, Captain Bruce adds that the abstraction of the papers was of little consequence, "as he had mastered their purport, and there was little harm done."

Bheekoo Singh therefore not only has given false evidence, but has been guilty of bringing a false and very serious charge against your Petitioner's officers; he has taken advantage of his position and of his influence as a man of education, of the favour of his superior officers, to poison their minds with falsehoods against your Petitioner. His subordinate, the compounder, is a willing tool in his hands, and the exposure of this fraud ought to show the character of the evidence which has been adduced against your Petitioner,

Beekhoo Singh describes the events most particularly. If Megh Singh, as stated, was the only survivor, and he was in confinement, from whom did Bheekoo learn all the particulars?

53. It is thus shown that Bheekoo Singh, native doctor, was in the plot against your Petitioner, and his officiousness in going unsolicited to Captain Bruce (*vide* that officers note to his deposition) is a further proof of his inimical disposition towards your Petitioner, and of the use which the conspirators thought to make of his position and influence with the officials.

It will not be overlooked that, unfavourably disposed as is Bheekoo Singh and his subordinate, the compounder, to your Petitioner, yet the latter states (so far as anything stated by them after this exposure is worthy of attention) that the conflict was in the street.

43. "It is somewhat difficult to determine how far the Nawab has been implicated in this disgraceful affair. If he were weak and indolent, it might be imagined that the treacherous plot was concocted without his connivance and wish; but he is, on the contrary, the most vigorous ruler in Rajpootana, and jealous of the power of his ministers. Surwur Shah has certainly great influence over him, but I feel convinced the Hakeem would never have attempted to carry out the plot without the consent and approval of his master; and we may further rest satisfied that this deed of blood would never have been committed unless all the actors had been assured of their chief's tacit consent, and were promised his full support whatever happened. The Nawab's subsequent conduct and action fully support this belief; not the slightest regret has been expressed for what occurred, but, on the contrary, witnesses have been suborned and false statements set forth, and Surwur Shah and his myrmidons backed to the fullest extent.

"The Nawab's connivance in the scheme to entrap the Lawa party by treachery has been admitted by his nearest relations, and is fully borne out by the evidence; and the mind that can approve of one kind of foul play has not far to step when acceding to another.

54. The statement that your Petitioner felt no regret for the fearful occurrence is calculated to lower him in the opinion of all right-thinking men, but the imputation is most undeserved, and shows how ready the Governor General's Agent was to adopt any conclusion unfavourable to your Petitioner, for Captain Bruce, at paragraph 3 of his letter, 26th August, states that your Petitioner "expressed deep regret for what had occurred, and assured me (Captain Bruce) he would abide by my advice, &c." Moreover, your Petitioner had taken all the steps he could to apprehend and punish those concerned in the affray, but when Captain Bruce came and took up the matter, he, of course, left all in his hands.

Your Petitioner has plainly shown, in the matter of Bheekoo Singh, that so far from suborned evidence being set forth by him, the very contrary is the case, and the assertion that the whole tragedy was the result of a plot on his part rests on nothing but bare assumption, and the statement of certain members of your Petitioner's family, who were actuated by the basest designs and the most self-interested motives.

51. "However marked our action may be in this case, we shall receive the full approval of public feeling in Rajpootana. The news of the massacre sent a thrill of horror throughout these States, and the deed is compared to the diabolical tragedy perpetrated by the Nawab of Tonk's grandfather, the freebooter Ameer Khan, at Nagon, in A. D. 1808, when the Maharaja of Jeypore

Vide page 149, vol. 2, Tod's Rajasthan.

55. In this paragraph the Governor General's Agent has recorded an event which did not occur, viz., the murder of the Maharaja of Jeypore, but this being altogether foreign to the present case, your Petitioner only alludes to it to show how even facts which never took place are adduced to strengthen the case, and raise ill-feeling against your Petitioner.

56. The

Colonel Eden's Letter.

and many nobles were treacherously butcheted.

Reply.

56. The Governor General's Agent remarks, and his Excellency the Governor General in Council endorses the remark, that the punishment meted out to your Petitioner will have a wholesome effect, and be warmly approved throughout Rajpootana. But, in effect, however the chiefs and princes may disguise their real feelings, the occurrence has filled them with dismay and distrust, for there is not a reigning chief in Rajpootana, or throughout India generally, whom the story of your Petitioner's fall has reached, but feels that his throne and his liberty are at the mercy of any cabal about the Court, who may easily gain over the subordinates about the Agency, and then get up an affray in the precincts of the Palace or the Court, when loss of life will ensue, and then, by means of tutored witnesses and other arts well known to political intriguers, the guilt will be laid at the door of the reigning chief, as the guilt has in this case been at your Petitioner's.

57. Your Petitioner will only further allude to paragraphs 63 to 66 of Captain Bruce's letter of the 26th August, by which it is clear how much influence the statement of Bheekoo Singh, the native doctor and the compounder, had upon the mind of the Political Agent and the Governor General's Agent, and your Petitioner submits, that in a case of this kind private examinations and private interviews ought as much as possible to have been avoided, as being unjust to him.

58. The connection between your Petitioner and the commission of the alleged crime rests upon two presumptions: 1st, that the slaughter was the premeditated act of Hakeem Surwur Shah, carried out in pursuance of a plot; and 2nd, that he, Hakeem Surwur Shah, was acting under instructions from your Petitioner; and neither the one nor the other conclusion is supported by any trustworthy evidence.

59. Admitting, for the sake of argument, the guilt of the Hakeem Surwuh Shah, to make your Petitioner responsible for the crime of a subordinate officer is to act on a principle hitherto unknown and unrecognised in any civilised country in the world.

60. And, not content with misrepresenting your Petitioner's conduct and motives in this affair, his enemies, the further to bring him into discredit with the British Government and the public, circulated reports and statements which induced the British Government to set troops in motion against his capital,—a movement so utterly uncalled for as to excite the astonishment of all who witnessed it. Your Petitioner promptly obeyed the summons to leave his capital, and surrendered himself at Deolee many days prior to the date fixed. And when his son, whose hereditary rights have been considerably curtailed owing to his father's supposed guilt, who, though 22 years of age, is still strangely treated as a minor, alarmed at the reports which were abroad, fled to your Petitioner's camp *en route* to Benares, your Petitioner at once advised him to return, and to rely on the favour and protection of the Agent.

61. To show how active and fertile in resources are your Petitioner's enemies, your Petitioner draws attention to the report made by Captain Bruce in his letter, 26th August, as to the condition in which he found the premises where the tragedy is said to have occurred. "I could discover no marks of conflict on the walls, either in the inner enclosure or the outer, *but ample time had been given to remove or renovate all such traces.*"

It does not appear conclusively from this whether the Political Agent means to say he inspected the upper room, where the slaughter of the Thakoors and his three attendants is said to have taken place. If he did not, it is to be presumed he did not consider it necessary to do so, and whatever conclusion may be drawn from that, your Petitioner is entitled to it, for the absence of proof is always in favour of an accused person. But your Petitioner, who has been kept informed by private letters of all that has transpired in Tonk since his departure, has heard that two or three persons attached to the present Regency, and parties to the cabal against him, shut themselves up in the room where the assassination is said to have taken place, and, by means of firing pistols against the walls, hacking them with their swords, and sprinkling blood on the floor, have succeeded in imparting such an appearance to the place as would suggest the commission there of some tragedy, and that, after having thus prepared the place, it was inspected by British officers.

But 15 days had elapsed before Captain Bruce visited the place, and that was ample time for all traces to be removed, if there had been any traces which it was an object to conceal; nor is it at all probable that if such a crime had been committed the originators and instigators of it would not have taken the very simple step of removing all such traces. Should the apartment therefore be in the condition which it has been represented to be to your Petitioner, it will go a long way to show the depth of design and malignity with which your Petitioner's enemies have compassed his ruin and their own temporary triumph.

62. Your Petitioner next begs attention to Appendix G., which is a letter from Captain Bruce, political agent, to your petitioner, dated 5th August, and refers to a petition which had been sent to him from Tonk or Lawa by one of the Lawa followers, who professes to have accompanied the Thakoor and to describe minutely what occurred. The writer

professes to have been the *only survivor* of the party. But according to Lawa, Megh Singh was the only survivor. But Megh Singh was captured on the night of the affray, and kept in confinement till investigation. If Megh Singh was the informant, it will be seen that he gave a different account of the affair at two different times. If the informant was not Megh Singh, who was he? for Megh Singh was said to be the only survivor. From the letter of Captain Bruce repeating the contents of the letter relating the circumstances to him, it will be clear to any impartial mind that the narrator was relating facts, of which he could not have been cognisant according to his own account, and the letter goes very far to show that the outlines of the story were made up and communicated immediately to Captain Bruce, in order to make the first impression on his mind favourable towards Lawa.

The most implicit confidence has been placed on the evidence of Megh Singh, "the only survivor;" yet here is another "only survivor" writing so shortly after the event that his letter was received by Captain Bruce on the 5th August, giving an account irreconcilable with that of Megh Singh!

63. In the letter from the Government of India to the address of Her Majesty's Secretary of State, No. 148, dated Simla, 23rd September 1867, it is stated at paragraph 9 that "desultory firing was kept up between the troops and the (Lawa) Chief's followers for two days" in Tonk. Your Petitioner is unaware how this error could have crept into the report, for there is nothing to substantiate it on the record, nor did the occurrence take place.

64. Your Petitioner at paragraph 8, has alluded to the extraordinary circumstance that Colonel Eden, at a distance, with nothing to go upon beyond the evidence collected by Captain Bruce, and that officer's report, nevertheless adopts conclusions at variance with those of Captain Bruce. The report of Captain Bruce was not transmitted with the letters of the Government of India, 23rd September 1867, No. 148, but your Petitioner begs attention to paragraphs 72, 74, and 82 of that letter in which Captain Bruce concludes that Surwur Shah, and not your Petitioner, ought to be held responsible for what occurred, and at paragraphs 48 and 81, he acquits your Petitioner of any murderous design, and at paragraphs 77 and 78, he states what should have exonerated your Petitioner, showing that the unruly Walayates were under the control of Surwar Shah, and not your Petitioner.

65. Your Petitioner is well aware that so terrible a crime as that imputed to him, had he really been guilty of it, is one which the British Government would be bound to take notice of in the interests of the Princes and people of British India; but in deposing your Petitioner from his throne upon a presumption of his complicity with an alleged crime, is, your Petitioner would urge, a breach of the treaty ratified between the British Government and your Petitioner's ancestors, in common with other independent sovereigns of Rajpootana, and of the provisions of the proclamation under Lord Amherst, dated 10th January 1825, paragraphs IV., XIV. (Appendix H.), and opposed to the Circular Letter of Lord Ellenborough, 26th April 1842, and contrary to the terms of the provisions of the letter of Lord Elgin to your Petitioner, dated 28th January 1862, in which loyalty to the British Government is the only condition alluded to upon which your Petitioner's throne and independence is secured to him.

Your Petitioner does not urge these treaties and provisions as justifying the commission of a crime abhorred in the sight of God and man, of which he has been so unjustly accused, but to show that your Petitioner, innocent as he is of the charge of which he is accused, has, contrary to treaty and many repeated promises, all ratified by Her Majesty's Proclamation of the 1st November 1858, been deposed.

66. And although the general administration of your Petitioner's Government is a matter apart from his guilt or innocence of the crime of which he is accused, yet as so many attempts have been made to blacken your Petitioner's character as a ruler, and to bring him into disrepute with the Government, your Petitioner, in conclusion, begs to annex a very brief statement of some of those measures which he has carried out in his territories. Your Petitioner, on succeeding to the throne, found the state in debt about 200,000*l*. He immediately introduced measures of economy, paid off the debt, provided for the regular payment of the troops, constructed wells, tanks, roads, and other public works that conduced to the welfare of the people, and increased the revenues; he opened a market at Allygunge, in the time of famine, and by low rents populated it; he established charitable dispensaries, village schools, and libraries; he established efficient police, and put down highway robbery; he introduced a good administration of law, and used to hold office himself once a week to hear complaints and check abuses, and effected many other improvements, so that the fame of his administration attracted many thousands to settle in his territories.

67. In conclusion, your Petitioner earnestly hopes that a careful consideration will be accorded to this appeal. He regrets that it has been necessary to enter so much into detail, but a deep and dangerous plot in which so many are concerned in concealing the truth, and within whose meshes even the highest officials have become unwittingly involved, is not easily, though your Petitioner trusts it is now effectually, unravelled. Such plots are common in the past History of India, and many innocent men besides your Petitioner have fallen victims to them. But your Petitioner confidently relies upon that love of justice which distinguishes the Government of Her Most Gracious Majesty, and would urge that, if it be supposed that a reversal of the sentence passed upon him is calculated to weaken

the

the hands of the Executive, it should be recollected that nothing can more strengthen the attachment of the princes and people of India to Her Majesty's throne than an indication that an appeal for justice is never uttered in vain.

68. Many of your Petitioner's relatives of his late officers and principal subjects drew up a petition praying for an inquiry into the charges made against him, and forwarded it to the Governor General's Agent, Colonel Keatinge, v.c., for transmission to the Government of India and Her Majesty's Secretary of State in February 1868, but the Governor General's Agent refused to forward it. This petition is annexed in original (Appendix K.), in order that Her Majesty's Government may see that the belief in your Petitioner's guilt was not by any means general in Tonk, as has been represented among those who had the best opportunities of forming an opinion, who would not have signed a petition praying for his restoration had they not known your Petitioner was innocent of the crime imputed to him.

69. Out of the six Tonk Hindoo sepoys killed, the next of kin of four have already recorded their evidence. There were two whose next of kin at the time of the investigation could not be traced. Of these two, your Petitioner has just heard, since the appeal was put in the printer's hands, that one has been found, the next of kin of Shewlall, as appears from a letter from Captain Bruce, Appendix I., although Captain Bruce did not consider it worth while to examine him, having, as he said, then closed the case. The only remaining one, the sixth Hindoo Tonk sepoy, was entered in the books as belonging to Oude merely, and the entry was not explicit enough to enable your Petitioner to trace him.

70. Your Petitioner having applied for permission to repair to England to prefer this appeal in person, and having been refused, prays that the advocate whom he has authorised to urge it for him may be recognised as his counsel and representative, and if it shall be found, as your Petitioner believes it will be when his defence has been heard, that he has been hastily convicted of a crime he never committed, the sentence passed upon him may be annulled, and that he may be restored to his former position, and the order for the dismemberment of his territory and the reduction of the salutes reversed.

And your Petitioner will ever pray.

APPENDIX.

List of Documents and Translations forwarded herewith.

(A.)—Letter from the Government of India, dated Lucknow, 14th November 1867, intimating to the Nawab that he was deposed.

(B.)—Letter and translation from the Governor General's Agent, dated 12th August 1867, intimating the dismissal of the Tonk Vakeel from the Agency.

(C.)—Letter and translation from Bheekoo Singh, native doctor, relating to the treatment of the wounded Tonk sepoys.

(D.)—Letter and translation from Bheekoo Singh, native doctor, dated 28th July 1867, intimating the illness of Hakeem Surwur Shah.

(E.)—Copy of written order and translation from the Nawab to Bheekoo Singh, native doctor, directing him to attend professionally Hakeem Surwur Shah, to which (D) is the reply.

(F.)—Letters in original from Bheekoo Singh, native doctor, to the address of the Nawab, filed in order to allow of the native doctor's signature being compared with that to letter D.

(G.)—Letter and translation from Captain Bruce, dated 5th August 1867, to the Nawab, intimating that the affray had been reported to him by one styling himself "the sole survivor."

(H.)—Translation of extracts from a proclamation dated 10th January 1825, from Lord Amherst, to the independent Chiefs of Rajpootana.

(I.)—Letter from Captain Bruce, to the Tonk Vakeel, intimating that as the next of kin of Shewlall, one of the six Hindoos slain on the Tonk side, was present, he was to be sent to him.

(K.)—Petition in original with the seals and signatures of certain persons, the relatives, late officers, and principal subjects of the deposed Nawab on his behalf, filed for the purpose of showing the signatures, a list of which is attached.

(A.)

Dated 14th November 1867.

From Viceroy and Governor General of India (demi-official) to His Highness the Nawab of Tonk.

I HAVE received your communications regarding the murder of the uncle of the Lawa Chief and a party of his followers.

It is with pain that I have come to the conclusion that this atrocity could not have been perpetrated without your Highness's knowledge, and, indeed, without your Highness's direct instigation.

It would not consist with the obligations and duties of the British Government towards Rajusthan at large, and towards Tonk in particular, to permit your Highness to retain the reins of Government after the stigma of so heinous a crime had attached itself to your name.

The Governor General in Council has accordingly resolved to depose you from the Government of Tonk, as the only adequate punishment for your offence, and to separate the Chiefship of Lawa now and for ever from the State of Tonk.

Your Highness's son will be proclaimed Nawab in your Highness's stead, and arrangements will be made for the administration of the country during his minority.

Your Highness will for the future reside at Benares, and my Agent will make arrangements with the Tonk State for supplying your Highness and such members of your family as your Highness may desire to accompany you with the means of a suitable maintenance.

(B.)

TRANSLATION of a Khureeta (Letter) from Colonel *Eden*, Agent to Governor General for the States of Rajpootana, to Nawab Mahomed *Ally Khan*, Nawab of Tonk, dated 12th August 1867.

I HAVE received your Khureeta of the 6th Rubee-ool-sanee (corresponding to 7th August 1867), regarding the affray in which Thakoor Reewut Singh, Beejay Singh with others met their death in the Tonk capital. In reply, I am to inform you that I am much distressed at this occurrence, and therefore I have dismissed your Vakeel, who was in attendance in the agency, until the particulars be ascertained. Captain Bruce, the Political Agent of Harrowtee, has been directed to investigate the case.

(C.)

Dated 5th September 1867.

From *Bheekoo Singh*, Native Doctor, Mohamadabad, to his Highness the Nawab of Tonk.

I MOST respectfully beg to inform your Highness that (through the mercy of God) four of the wounded persons have been cured, but they are very weak and reduced, therefore your Highness should permit them a week's leave to proceed to their homes and apply oil to their limbs.

The other five wounded persons are still under treatment, and I hope they will also soon recover. I need say no more.

List of the four wounded sepoys who have recovered their health is as follows :—

1. Ally Bahadoor Khan.
2. Mouladad Khan.
3. Mahomed Sayud Khan.
4. Mahomed Jaun Khan.

(D.)

Translation of a Letter from *Bheekoo Singh*, Native Doctor of Tonk Dispensary, to the Address of the Nawab, dated 28th July 1867.

ON receipt of your Highness's Purwannah, dated 21st Rubee-ool-awul, 1284 Hijree, corresponding to 24th July 1867, and the verbal messages sent by a chobdar to me to see the Hakeem, I went three times to Hakeem Surwur Shah and saw that his disease was without doubt serious: he is satisfied with the treatment of native physicians, and he has no confidence in my treatment, therefore I treated him with very little attention, and could not treat him as was necessary, because, unless a patient has confidence in the treatment of a doctor, how can he treat him as required.

(E.)

Translation of a Purwannah from the Nawab of Tonk, to the address of *Bheekoo Singh*, Native Doctor, dated 21st Rubee-ool-awul 1284, corresponding to 24th July 1867.

PRIOR to this a Purwannah was sent to you directing you to undertake the medical treatment of Hakeem Surwur Shah, who is seriously ill with the disease of paralysis, and cannot be cured by native physicians, therefore you are again directed to treat him to the best of your knowledge according to the English treatment, and further to visit him once every day.

(G.)

Translation of a Khureeta from Captain *A. N. Bruce*, Political Agent, Harowtee, to Nawab *Mahomed Ally Khan*, Nawab of Tonk, dated 5th August 1867.

To-day I received a petition sent by one of the Lawa Thakoor's attendants, from the contents of which it appears that you had summoned the Thakoor of Lawa to Tonk for a settlement, and that he went accordingly. That Hakeem Surwur Shah invited him on the 1st August to his quarters with his attendants. That the Thakoor himself with a few followers remained in the house where he lodged, and that Thakoor Reewut Singh, the uncle of the Thakoor, with some followers went to the Hakeem's house. The Hakeem invited Reewut Singh alone to an upper story, while the others remained below in the kutchery. The Hakeem said some words in the Pushtoo language to the Wullaitee Pathans, upon which they killed Reewut Singh. To assassinate the others, the Hakeem had assembled about 400 Wullaitees—the sepoys discharged a volley and killed the attendants, amongst whom only the writer of this escaped. The house in which the Thakoor lodges has been surrounded by a regiment of cavalry and one of infantry. He is now in confinement, food and water disallowed, and he has been called on to surrender his arms. The Thakoor Dheerut Singh is the only Thakoor who has escaped, and he also is in danger of his life. Troops with guns and munitions of war for capturing Lawa have also been sent. In short, having invited the Thakoor to the Tonk capital, he used violence against him

On receiving the above information I became very sorry, and I have to inform you that I shall report this to superior authority.

(H.)

Extract from a Letter from His Excellency the Governor General of India, Lord *Amherst*, to the Chiefs of Rajpootana, dated 10th January 1825. Letter No. 28.—Central India Treaties.

Paragraph 4.—If any jageerdar should be guilty of rebellion or treason, or should resist your authority, or die without heirs, you are at liberty to confiscate his jageers. The British Government will maintain your rank and dignity as it was maintained in former times. It will attend to any of your representations, and will decide equitably upon them; you shall in no respect suffer injury.

Paragraph 14.—As long as you may continue in friendship with the British Government, there will be no interruption to you and to your heirs from generation to generation, and a grant to this effect, confirmed by the Supreme Government, will be delivered to you, which will be renewed at every succession to your estate when required. Be assured that nothing shall disturb the engagement thus made to you as long as your house is loyal to the Crown and faithful to the conditions of the Treaties, Grants, or Engagements which record its obligations to the British Government.

(I.)

Memorandum, dated 11th October 1867.

From Captain *A. N. Bruce*, Political Agent, Harowtee, to *Syed Fuzal Hosein*, Vakeel of Tonk.

Your report, informing me that from among the Tonk people killed in the Lawa affray, the next of kin of Shewlall killed on the Tonk side has presented himself at Tonk, and, if directed, will be produced; you are accordingly directed to send him here.

(K.)

LIST of SEALS and SIGNATURES attached to the original PETITION marked (K.).

1. Seal of Nawab Sooltan Jahan Begum.
2. Seal of Khasool Oomra Etmad-ool-Moolk, Shahebzadah Mahomed Khan Shumsher Jung, General of the Army.
3. Seal of Shaheb Muhel Begum Sahaba.
4. Seal of Nawab Padsha Jahan Begum.
5. Seal of Eyadool Oomra Mauzool Moolk, Shahebzadah Amed Khan, Bahadoor Sowkut Singh, Nazim of all Departments.
6. Seal of Shahebzadah Bukht Bulund Khan, son of Nawab Ameer-ood-dowlah Bahadoor.
7. Seal of Shahebzadah Mooneer Khan.
8. Seal of Shahebzadah Abdul Mujeed Khan.
9. Seal of Shahebzadah Hafiz Mahomed Akrum Khan, son of late Nawab Ameer Khan.
10. Seal of Shahebzadah Hafiz Mahomed Enaetoollah Khan, son of Hafiz Mahomed Jumal Khan.
11. Seal of Shahebzadah Abdool Hakim Khan, son of Shahebzadah Jullal Khan.
12. Seal of Shahebzadah Abdool Ruheem Khan.
13. Seal of Shumsool Oomra Nijomool Moolk, Shahebzadah Mahomed Khan Bahadoor, Juhwur Jung, late Dewan of Tonk State.

(Political—No. 165.)

'To His Excellency the Right Honourable the Governor General of India in Council.

My Lord, India Office, 10 August 1869.

1. HER Majesty's Government have had under their consideration the Memorial of the Ex-Newab of Tonk, with the documentary evidence appended to it, which your Excellency has forwarded with your Letter, No. 83, of the 13th of March, in the Foreign Department.

2. After a careful examination of all the evidence advanced upon both sides' I cannot discern any sufficient grounds for departing from the opinion which your Excellency's Government has expressed with respect to the guilty complicity of the Newab in the murderous outrage, which resulted in his banishment to Benares.

I have, &c.
(signed) *Argyll.*

J. T. Prichard and *David Nasmith*, Esqrs., Barristers-at-Law, to *Herman Merivale*, Esq., Under Secretary of State for India.

Sir, 4, Garden Court, Temple, 4 August 1869.

As Counsel for Mahomed Ally Khan, the Ex-Nawab of Tonk, in his appeal to Her Majesty, through the Secretary of State for India, we should esteem it a great favour if you would, under sanction of the Secretary of State, cause the decision in the above case to be communicated to us, at the above address, so soon as it may be deemed not inconsistent with the interests of the public service that the decision should be promulgated.

The Under Secretary of State for *India* to *J. T. Prichard* and *David Nasmith*, Esqrs., Barristers-at-Law.

Gentlemen, India Office, 30 September 1869.

WITH reference to your letter of the 4th ultimo, requesting to be made acquainted with the decision arrived at by the Secretary of State for India in Council, relative to the Memorial of Mahomed Ally Khan, Ex-Nawab of Tonk, I am now directed by the Duke of Argyll to inform you, that he has, on a full consideration of all the circumstances of the case, and of the evidence adduced on both sides, failed to discover any sufficient reason for dissenting from the opinion recorded by the Government of India, as to the guilty complicity of the Nawab in the murderous outrage which resulted in his deposal and banishment to Benares.

I have, &c.
(signed) *Herman Merivale.*

OFFICIAL NARRATIVE of the EXPEDITION to Explore the TRADE ROUTES to CHINA *viâ* BHAMO, under the Guidance of Major *E. B. Sladen*, Political Agent, Mandalay; with connected PAPERS.

MEMORANDUM by the CHIEF COMMISSIONER of BRITISH BURMAH.

From Major General *Albert Fytche*, C. S. I., Chief Commissioner, British Burmah, and Agent to His Excellency the Viceroy and Governor General, to *W. S. Seton-Karr*, Esq., Secretary to the Government of India, Foreign Department,—Foreign (Political) Department, dated Rangoon, 30th June 1869.

I HAVE the honour to submit, to be laid before the Right Honourable the Viceroy and Governor General of India in Council, Major Sladen's Report of his expedition to explore the old trade routes between South Western China and Burmah, *viâ* Bhamo, together with its appendices, and 10 plans of towns and remarkable buildings visited by the expedition, and two manuscript maps. A report by Mr. Robert Gordon, C. E., attached as engineer officer to the expedition, is also annexed, together with a lithographed map of the routes surveyed by the party between Bhamo and Momein, drawn up by Mr. Gordon, and containing information regarding the country beyond the latter city and in other directions, compiled from all reliable sources that were available. The delay in the submission of the report is to be regretted; it has been caused by Major Sladen's illness since his return to Mandalay, and the delay in getting Mr. Gordon's map lithographed in Calcutta. Major Sladen's report reached me on 15th April last.

2. I have, in my several letters to the Government of India (contained in the appendices), described the progress of the expedition from time to time as reports reached me from Major Sladen; and as the accompanying report of Major Sladen speaks for itself, there is no occasion for my going into the subject at length, and little more than a brief *résumé* of what I have already written is required.

3. There are three principal routes from Bhamo, which, leaving the town of that name on the Irrawaddy, run in a north-easterly direction to Talifoo, the present capital of Western Yunan, passing over the Kakhyen hills, then through a narrow belt of Shan States, and, joining together at Nantin, proceed on to Momein, the border town of Yunan, whence by Yunchan (the centre of the trade in Western Yunan) the route passes on to Talifoo. Major Sladen succeeded in reaching Momein, and I consider, under the circumstances described by him, that he was right in not proceeding beyond that town.

4. The chief object for which the expedition was sent was to discover the cause of the cessation of the trade formerly existing by these routes, the exact position held by the Kakhyens, Shans, and Panthays with reference to that traffic, and their disposition or otherwise to resuscitate it; as also to examine the physical conditions of the routes. All these have, I consider, been satisfactorily obtained. Considerable delay occurred in the Kakhyen hills prolonging the period of absence of the expedition beyond that which was anticipated; but this is, I think, not to be regretted, as it has enabled Major Sladen to obtain considerable information regarding the Kakhyens, who, holding the hills, must always form an important element in any scheme for reopening the route, and has given them an opportunity of learning our real intentions, regarding which they would appear to have been falsely imbued by designing persons. Major

Sladen, throughout the difficulties he experienced from these people, showed great tact and command of temper, and wisely chose to wait patiently at Ponsee, despite the disadvantages in some respects of the delay thereby necessitated, until he received a reply to a communication he had, with much judgment, dispatched to the Panthay Governor at Momein, and which, when obtained, enabled him to advance with all the prestige of the direct support and encouragement of the Panthay Government, whose predominance was at once manifested by their rapid occupation of the route up to the base of the Kakhyen hills, and the altered tone towards Major Sladen of the Kakhyen and Shan chiefs as soon as they became aware of his friendly relations with the Panthay Government.

5. The trade by the Bhamo route as late as the year 1855 (the commencement of the rebellion of the Panthays against the Chinese authorities) was nearly half a million of pounds sterling, and all previous history of this line of commerce with which we are acquainted proves beyond doubt that there exists an important field for trade in these localities. The knowledge, too, acquired by the present mission, assures us that the parties most interested in this commerce desire a revival of the trade. It is, of course, useless for the Kakhyens to hold trade routes through which no trade flows, and they are quite alive to this fact. The Shan chiefs also, apart from some local jealousies caused by a wish to secure for themselves the advantages of having the route through their individual territories, would gladly see the old interchange of commodities renewed. The Shans are an enterprising race, and the unsatisfactory position they have occupied for the last few years, disunited and preyed upon both by Chinese and Panthays, and all the trade stopped, make them anxious for any arrangement which would be likely to lead to a more satisfactory state of affairs, and enable them to develope their natural industry. It would, doubtless, have been very interesting from some points of view had the party succeeded in reaching Talifoo, the head quarters of the Panthay Government; but it certainly appears that the Panthay authorities whom Major Sladen met at Momein were of sufficient importance and position to render their views and opinions a safe criterion of the favourable feeling of the Panthay Government towards the resuscitation of trade.

6. The Panthay rebellion was, no doubt, the primary cause of the cessation of trade by the Bhamo routes, but Major Sladen considers that there is some reason to believe that during the last five or six years, or since the comparative consolidation of Mahomedan rule within the province of Yunan, the non-resuscitation of trade by these routes is due to the King of Burmah, who, for political reasons, has restricted the trade to a long overland journey of two months, *viâ* Theinnee to Mandalay. He states: "What Burmah has always dreaded" (from our occupation of Pegu) "is that British interests would not be confined to British possessions, but that contingencies might arise which would give the foreigner the right of extending his influence to Upper Burmah, and to a point above and beyond the limits of the present Burmese capital. Such a contingency was always imminent as long as it could be made demonstrable in any way that Bhamo might again become the natural emporium of a direct overland trade between Burmah and China. The same objection did not hold good provided Mandalay could be made the mart for that trade instead of Bhamo, for in that case the intrusive foreigner would still be somewhat under control, and his operations for good or evil would not probably extend themselves in the same dangerous degree or direction as they seemed destined to do if allowed to ramify from an emporium on the extreme confines of the empire, and in direct contiguity with races which did not owe allegiance to his Majesty of Burmah. On this account the Chinese or Panthay caravans have been encouraged to come to Mandalay to the exclusion of Bhamo, and I most unhesitatingly conclude, from careful observation and from experience gained during the late expedition to Momein, that the causes which have actuated the Burmese Government in its deliberate discouragement of all communication with China *viâ* Bhamo have arisen in a great measure out of an instinctive and almost superstitious fear that the extension of British influence beyond the capital of Burmah would prove fatal to Burmese supremacy, and destroy the vaunted exclusiveness of the Burmese Government. Other predisposing causes have not been wanting in inclining the King of Burmah to hug this political conservatism,

conservatism, and to enforce it, to the detriment of his subjects and at an enormous loss to his own private and public exchequer. One of these reasons is, that he knows that the vast increase of commerce, which would be created by a resuscitation of the Bhamo route, would necessitate the presence of a fleet of English steamers on the Irrawaddy above or to the north of his capital. His own avowed objection to such a contingency is, that the steamer, being English, would come into collision with hostile influences, and that differences and complications would necessarily follow between the British Government and his own. The real cause for kingly apprehension and anxiety is, that the advent of the steamers above the capital would afford to crowds of oppressed and disaffected subjects the same opportunities of fleeing his country as those of which they have so largely availed themselves of late years, by means of steamer traffic between the capital and the British frontier."

7. This possibly may have been the case formerly. A studied exclusiveness has been the characteristic of the Burmese Government, but this must gradually wear out, as it has done and is doing elsewhere. There are now at Mandalay many Burmese who have been to Europe and India. There are, of course, great numbers who can compare the state of the province of Pegu under Burmese and under British rule. The comparative prosperity of the towns, and wealth of the peasantry, the stimulus given to cultivation and manufactures, and the great activity of our export and import trade, all are exercising an influence in favour of the administration which has produced such results. The Court, previous to the last treaty, had shown great distrust of and thwarted all our attempts to send an expedition *viâ* Bhamo, as also great jealousy of English steamers plying between Rangoon and Mandalay; but since the ratification of that treaty, at least *outwardly*, his Majesty the King of Burmah seems fully aware of the advantages that must ensue from a re-establishment of the extinct trade which formerly existed with Burmah in that direction; and as far as our steam communication on the Irrawaddy is concerned, the Burmese Government have become accustomed to it, and found from experience its great advantages. Before the beginning of 1867 only four English steamers with merchandise had ever been up to Mandalay from Rangoon, but now there is a regular communication every 10 days to and fro by the vessels of the Irrawaddy Flotilla Steam Company, and the trade has so rapidly increased, that steps are being taken for very shortly establishing a weekly line of communication. That great obstructions have been thrown in the way of the present expedition, there is, however, no doubt; but the King has shown by *his own acts* that he has endeavoured to further the interests of the expedition to the best of his powers, and that the difficulties that have been met with have more probably emanated from the underhand and crooked proceedings of Burmese officials and their satellites, from an apprehension that their perquisites will cease if foreigners engage in the traffic, and from the intrigues, too, of Chinese merchants and others, both at Bhamo and Mandalay, who are naturally indisposed to welcome foreign competition in a trade which is now all their own, and whose opposition to the expedition had been fully anticipated.

8. The Government have sanctioned an Assistant Political Agent being stationed at Bhamo, and I hope shortly a subsidy will be granted to the above-mentioned company to induce them to extend the voyage of their steamers on to Bhamo. The open navigation of the Irrawaddy river has been held in view by the Supreme Government since 1862, and the treaties of that year and of 1867 will be largely inoperative if the Government do not take every opportunity of pushing on the commercial policy which promises so much both for the King's territories and for British Burmah. If we aim at binding up the interests of the two countries by the free interchange of commodities, and by the impetus thus given to the producing power of the territories, rather than by political compacts, which, from the constitution of the Burmese Court, cannot have, at least for a far distant period, that complete and substantial security which attaches to treaties with European powers, we should use our best endeavours rapidly to extend trade with Upper Burmah, and especially in the shape which will appeal most forcibly to a comparatively backward nationality. Our trade with Burmah proper is already two-and-a-half millions sterling; what need to hesitate in adopting the most liberal view of any scheme which will develope trade that has doubled in four years? The vast political importance of all

means of rapid locomotion is now practically conceded. They break down prejudices; they create new wants; they quicken and liberalise the national opinion; they lead to a peaceful rather than a warlike phase of thought; and all these useful objects are precisely what we should desire to see having effect in Upper Burmah.

9. The expedition having only reached the frontier town of Momein, Major Sladen has been precluded from speaking with any authority regarding the trade statistics of Yunan, and I think he has acted wisely in refraining from any attempt to do so. The great mineral wealth of the country is, however, known, as also the enormous wealth of the neighbouring provinces of Sechuen and Kwei-chow, the most populous in China, and their gigantic trade in tea, silk, rhubarb, tobacco, sugar, hemp, oil, varnish, and other commodities, and that vast capacity of all those provinces to consume European manufactures, a large proportion of the whole of which trade we shall gain when once the route by Bhamo is fully re-opened. Mr. T. T. Cooper, in his late endeavour to traverse the through route from China *viâ* Thibet to India, in a letter to the "North China Daily News" from a place named Tai-tsian-loo, on the extreme western frontier of China, fully corroborates the importance I have attached to the resuscitation of the trade by Bhamo. In it he states that the "present trade between Chung-king and Yunan and Kwei chow is only temporary" (with Hankow) "on account of the closure of the Bhamo and Tali route, and as sure as this route is opened, so sure will Burmah take to herself the trade of these two provinces, and if, as is probable, British merchants establish themselves at Ava" (this has already been done), "then a rivalship for the trade of Sechuen between China and Burmah merchants seems almost certain, the result telling probably in favour of the latter both in exports and imports. Trade by this route has flourished before without European enterprize, and as soon as it is re-opened, the trade between Hankow and Chung-king will be lessened one-third."

10. The good effects of the visit of Major Sladen and his party should be promptly and vigorously followed up, and the Assistant Agent (whose appointmen has been sanctioned) be dispatched to Bhamo without delay, to strengthen the belief in the reality of our intentions, and to maintain communication with the Shan Chiefs and Panthay Government, and continue also to influence the Kakhyens towards giving facilities for save transit of goods. I feel certain that on the prompt action of Government depends a question of the very highest Imperial importance. Our sea-borne trade with China is being actively competed for by America. The hot haste with which the Government of Washington have pushed on the completion of the Atlantic and Pacific railroad, and the dominance they have lately advanced in China's diplomatic relations with other courts, all point to a determination on the part of America to secure, if possible, the command of the Chinese market. The present obstacles of difficult communication they have solved, or are in a fair way of solving, and the necessity now remains only of adapting their exports to the Chinese requirements. Will this be possible without vitally affecting our commercial superiority?—Further, will America long submit to our holding the commanding position we derive from our opium exports, and the hold we thus have on the exchange? It is here that the question touches India in a tender point. The derangement of our opium revenue means a most serious crisis in Indian finance, and were American interference to affect our sea-borne opium, the routes through this province would become, on this account alone, of the highest importance. In the case of such a contingency, and for obvious collateral reasons in themselves, I consider it highly prudent on Imperial grounds that we should be in a position to substitute a western ingress to China for the present sea-board approach, destined to be disproportionately shared, if not entirely absorbed by America. I observe, also, that the American Government, not content with the Pacific railroad, has officially recommended to the European States the great enterprise of a ship canal to be constructed across the Isthmus of Darien.

11. The Engineer officer originally attached to the expedition was Captain J. M. Williams, of the Madras Army, who thought fit to return from Ponsee, or

or after the expedition had proceeded a distance of only 40 miles from Bhamo. His report on the northern route as far as Ponsee has already been submitted to Government, with my letter No. 39–37, dated 11th July 1868. It contains a very meagre report on a portion only of one route, and any importance which it might have possessed has been nullified by the accompanying report of Mr. Robert Gordon, C.E., Executive Engineer of the Upper Pegu and Arakan roads, an officer of well-known active habits and great personal energy, to whom, immediately on information reaching me from Mandalay of Captain Williams's abandonment of the expedition, I telegraphed to proceed as rapidly as possible to Bhamo and follow the track of Major Sladen's party. Every assistance was given by the Burmese Government (whom I addressed on the subject) to facilitate Mr. Gordon's advance, and he came up in an extraordinarily short period with Major Sladen at Muangla or Maingla, on the return of the expedition from Momein. His report is succinct and clear, and is as full as can be expected under the circumstances: his journey, being a hurried one throughout, did not admit of careful surveys being made. Had Captain Williams remained with the expedition, his opportunities would have been far greater, and during the stay of the party at Momein (which Mr. Gordon did not reach) he would have had the advantage of making full inquiries regarding the through routes from Momein to Talifoo, eastward to China proper, as well as westward to India; as also regarding any east and west routes from China to India to the north of Talifoo, and which, according to the written instructions issued to him, formed one of his principal duties, apart from the report on the physical condition of the routes actually traversed by the party.

12. Mr. Gordon explains in his report that between Bhamo and Momein lies a range of hills, lying in a north and south direction, and forming a spur from the Himalayan range of mountains. Bhamo is on the west of the spur and Momein on the east. In travelling between the two places it is obligatory to cross this range, which is pierced by three valleys, through which traffic has been conducted between the two towns. The northern, Sanda valley or Ponlyne route, is formed by the Taping river, a tributary of the Irrawaddy, into which it flows a few miles above Bhamo; the general direction of the rivers being from north-east to south-west. On its north side it is bounded by high hills, and on the south by the Shamaloung range, which separates it from the centre valley. The centre, Hotha valley or embassy route, is formed by the Namsa river, a tributary of the Taping, into which it flows at a point about 45 miles east of Bhamo. Its northern boundary is the southern boundary of the Sanda valley, and its southern boundary is a spur of hills from the Shamaloung renge, which spur forms also the northern boundary of the Muangwan valley, southern or Sawuddy route. Through this last-named valley runs the Nam-wan river, which apparently takes its rise in the Shamaloung range. The southern boundary of this valley is formed by the Myne-wun mountain range. The three rivers running through the valleys have all one general direction, that is, from north-east to south-west.

13. Mr. Gordon, in the first instance, marched from Bhamo, through the northern or Sanda valley, as far as Muangla or Maingla, a distance of 90 miles from Bhamo. Leaving Bhamo, he crossed the Taping river near its junction with the Irrawaddy, and kept along its right bank for a distance of about 20 miles. The road then left the river, the distance between them varying until the village of Ponlyne was reached, distant 30 miles from Bhamo, and about four miles from the Taping. The elevation reached was 1,814 feet, being at the rate of a little more than 60 feet per mile from Bhamo. The next place reached was Ponsee, 40 miles from Bhamo, and not far from the river, the elevation being 2,719 feet. About half-way between the two villages, the Nampoung stream, an affluent of the Taping, was crossed, necessitating a descent from Ponlyne of 1,241 feet, and an ascent to Ponsee of 2,127 feet. Three miles beyond Ponsee the Sanda valley commences, and at a distance of 11 miles Manwyne, with an elevation of 1,900 feet, was reached. The route lay apparently near the river up to this point, and was still on its right bank. The next place reached was Sanda, situate about six miles north of the Taping river. It stands upon an affluent bearing its name, and which flows into the Taping river at a distance of 10 miles from the town. The affluent is crossed

close to the town. This town may be presumed to be the central town of the valley. Its elevation is 2,912 feet, or about 100 feet above the elevation of Manwyne. Beyond Sanda, and at a distance of about 16 miles, Muangla is reached with an elevation of 2,091 feet. Beyond this point Mr. Gordon did not go, as he was met by Major Sladen returning from Momein.

14. The general impression derived from Mr. Gordon's report on the Sanda valley is not an unfavourable one. With the exception of the steep descent and ascent from the Nampoung stream between Ponlyne and Ponsee, there seem to be no difficulties of any magnitude, and what difficulties there are appear to be within the first 40 miles from Bhamo. Mr. Gordon points out that, by removing the line of road from its present crossing of the Nampoung stream, the steep gradients would be avoided by passing over the affluent some miles higher up.

15. The line of road marched over by Mr. Gordon apparently runs, for the greater part of its length, over high ground adjoining the Taping river, and, after leaving Ponsee, would seem to pass over fairly level ground. He states that dry-weather roads follow each bank, and he would recommend any new line of road, if narrow, to follow the course of the river. The length of such a line would possibly be much greater and the cost of bridging for the purpose would be heavier than on the high ground, but then the rise throughout would be gradual. The relative merits of a line along the foot of the hills, and bordering the river, and of a line carried on the existing track, are not easily determined in the absence of more data than are available, though Mr. Gordon seems to think a road running on the high ground could be constructed for 1,000 *l.* a mile, or between Bhamo and Momein for 90,000 *l.* The cost of a road on the river's edge would probably be greater, as much blasting would be necessary, together with extensive bridging. Perhaps the Government of India, from the experience gained in the construction of the Simla and Thibet road, might be able to approximate to the probable cost. One advantage of the high level road would be in the opening out of the country it would lead to, tending to increase cultivation and population. These results would directly affect the extent of the merchandise carried along it. On the whole, I am disposed to think that the advantages are in favour of the high line road. There seems to be abundance of material for the bridges and metalling of the road.

16. On his return from Muangla to Bhamo, Mr. Gordon came through a portion of the Hotha valley. He appears to have marched from the former place back to Manwyne, and then to have crossed the Shamaloung hills to Hotha, 3,749 feet above the town of Bhamo, and 1,749 feet above Manwyne. Between Hotha, which from the map appears to be about the centre of the valley, and his next halting-place, Namboke, both of which have nearly the same altitude, the distance is about 12 miles. The exact character of the country passed over is not clear from Mr. Gordon's description. Between Namboke and the next halting-place, Ashan, a distance of about seven miles, the country appears to be very mountainous. One point of the road was recorded as 4,650 feet above Nantin, which is equivalent to 7,218 above Bhamo. Between Ashan and the Nampoung stream, a distance of about five or six miles, there is a descent of 958 feet, and from this there is no record of the intermediate places reached until arrival at Hotone, the elevation of which is 2,450 feet. This place appears to be in nearly the same parallel of longitude with Ponlyne in the Sanda valley, which is less in elevation by about 600 feet than Hotone. Between the Nampoung stream and Hotone the ground is described as hilly, though easier than the ground over which the usual journey is made. From Hotone the descent towards the Taping is described as rapid and difficult.

17. It seems clear from this description of the portion of the Hotha valley marched through that the advantages for traffic purpose are all on the side of the Sanda valley. The elevations to be crossed in the Hotha valley far exceed the elevations met with in the Sanda valley, and furthermore, it seems certain that ground higher than that in the vicinity of Momein would have to be passed over. The population also is much less, and, owing to the rugged nature of the country, is not likely to increase. Mr Gordon has summed up the demerits

demerits of the Hotha valley route very carefully in the 36th paragraph of his report, and also, as far as can be judged, he shows fully why this route is not an advisable one.

18. Of the third, or Muangwan valley, Mr. Gordon reports but little, and that only on hearsay. I doubt the expediency of dwelling upon his remarks.

19. The remaining paragraphs of the report are taken up with the consideration of the country lying between Momein and Yunchan. The existing traffic crosses the Salween river by an iron bridge, which testifies to the commercial activity that must have formerly prevailed. Even now Mr. Gordon is able to report that 30,000 mules pass yearly between the two cities. Of course no engineering opinion can be formed on the country lying to the east of Momein, as nothing as yet is known regarding it.

20. From Mr. Gordon's report it appears that he considers the northern route along the Sanda valley to be the most advisable one, as far as physical difficulties are concerned, and that the central, Hotha valley, or embassy route, for the purposes of a road constructed on scientific principles, cannot compete with either the northern or southern routes. He does not speak so confidently of the latter as of the former route, as he had not the same opportunities for observing it; but on the whole he is of opinion "that a good road with easy gradients can be made without great expense through either the Sanda or the Muangwan valley." No difficulties greater than are ordinarily met with in constructing hill-roads exist in the Kakhyen hills, and the country compares favourably with the Arakan mountains opposite Prome, over which a 12-foot road has been constructed 100 miles long, 90 of which are in the mountains. Mr. Gordon has had this road under his charge for three years, and can affirm that in the 30 or 40 miles of hilly ground necessary to pass over to reach the Sanda valley from the plains, there are no greater difficulties than are met with on the Prome and Tounghoo road.

21. Major Sladen, in his remarks regarding these routes, states that "it would be immature to puzzle ourselves which is the most practicable in an engineering point of view, until we are prepared to entertain a definite scheme of road improvement, or even railroad communication—that trade to an almost unlimited extent is now possible by any of the present existing routes without reference to their engineering capabilities, and that the determination of either of these three routes as a thorough route for general traffic must depend for some time to come on questions of policy and general expedience, rather than of special adaptability or physical disqualification;" and prefers the Hotha valley, central or embassy route, to the other two, for all present purposes of commerce and communication.

22. From both the reports of Major Sladen and Mr. Gordon we gather, therefore, that the present routes are available for traffic by means of mules as formerly; that between Bhamo and Momein no physical difficulties of any kind exist to the construction, by one or other of these valleys, of either a road built on scientific principles for wheeled carriages, of a tramway, or of a railway; that the length of such would only be 130 miles, or probably less; and that labour and good material for road making are available in the country to any extent that may be required.

23. The vitality of the Bhamo route for traffic, which it maintained for centuries among all the disturbing influences of the flow and ebb of the Chinese and Burmese power, indicated that, somehow or other, the line in that direction possessed some practical advantages over other through routes, and induced me to press the subject of its exploration on the Government of India. So much, however, has been written regarding the route, proposed by Captain Sprye from Rangoon to Canton *viâ* Kyang-hung, that the present papers might, perhaps, be considered incomplete if all mention of it was omitted.

24. When I proposed the expedition to Bhamo, a survey had just been completed from Rangoon as far as the borders of our own territory for a line of railway from Rangoon to Kyang-hung, and thence on through the mythical city of Esmok to Canton. It was with no intention of interfering with this survey that that proposal was made. My proposition to re-open traffic by the

Bhamo route with the provinces of South Western China stands upon a different footing altogether,—in fact, the two schemes are perfectly distinct. The object of the Bhamo expedition is to re-open a temporarily closed trade by a line of country already known, and from which, if successful, the most advantageous results must *at once* flow; whereas the object of the survey is to discover a route by which a railway *might* be constructed, and even if pronounced feasible and advisable, it would take at least a generation to complete. I have myself always looked on the Kyang-hung line as a most quixotic scheme as a route for trade; but as the survey of the country from Takau ferry on the Salween river *viâ* Kyang-tung on to Kyang-hung on the Cambodia river, a distance of about 200 miles, would be of great scientific and political value, I would still advocate its continuation, at any rate as far as that city. We have already a fair general knowledge of the country from the British frontier through the Shan States tributary to Burmah up to the Takau ferry, but the tract of country lying between the Salween and Cambodia rivers is unknown.

25. When Captain Sprye's scheme was *first* proposed, there was something in it both plausible and attractive. To connect Rangoon with Canton by a railway running through a country with, as it was supposed, no insuperable obstacles, very naturally commended itself to notice. Canton was then, and had been for many years, the great centre of foreign trade with China. From that port nearly all the tea, silk, and other valuable produce was shipped, and there all the European goods were imported. It was naturally believed in consequence, that Quangtung and Quangsi were the great producing and consuming districts of the empire; but on the opening of Shanghai to foreign trade this fallacy was exposed, and it was completely dispelled by the opening, in 1860-61, of Hankow and the other ports on the Yangtse river, which showed that the foreign trade that had centred in Canton had been flowing, not in its *natural but in a forced or artificial* channel, and that the great bulk of what was shipped from Canton was really produced in Sechuen, Kwei-chow, and other provinces drained by the Yangtse, and that this produce had actually been carried up that river in boats to a point where it is separated from the Canton river, or one of its affluents, by a steep range of hills, through a pass in which the produce was carried by porters down to the southern stream, and from thence to Canton in boats. By the same route also imports found their way to the place of consumption. So soon as the Yangtse ports were opened, all was changed; trade began to flow down the Yangtse, and nearly the whole trade of Canton ceased, except what may be considered its legitimate trade, that is, exporting the productions of Quangtung and Quangsi, and the supplying of these provinces with European goods. The trade of Canton at one time sunk so low, that it was, I believe, seriously proposed to abandon it altogether as a place of European trade.

26. I will now glance rapidly at the bearing which these facts have upon the routes *viâ* Kyang-hung and Bhamo. First, then, as regards connecting Rangoon and China by a railway *viâ* Kyang-hung and Esmok, the only Chinese markets of importance that would be reached by such a line of railway would be those in the extreme south of Yunan, in Quangsi and Quangtung; but as has been shown, the foreign trade of the last two named provinces is comparatively small, and as they are well known to have already such easy and cheap communication with Canton, it would be in vain to hope that commerce could be diverted to what must be a much more expensive outlet. The southern portion of Yunan, too, is very poor compared with the central and north-western portion of the province; and the trade with the Shan States, also by this route, would be less than by the Bhamo route, the states to the northward being wealthier than those to the southward. Turning now to the route *viâ* Bhamo, Momein, and Tali, we find that there is a commercial highway used by Burmese and Chinese merchants from time immemorial, leading through the richest part of Yunan, and tapping Sechuen and Kwei-chow, which, as has been said before, are the wealthiest and most populous provinces in China. Although Sechuen is bordered by the Yangtse, still the difficulties of the route towards Chung Ching, the great central mart on its banks, are said to be great, and the mouth of the river is so far distant that the carriage of goods is very costly. The navigation of the river between Chung Ching and Hankow is moreover extremely disastrous to trade on account of the total loss of many junks and their

their cargoes in the dangerous rapids and whirlpools, and besides which, goods passing through such a great number of separate districts (in each of which heavy taxes are levied), the cost of the produce is greatly enhanced before it finally quits the country, and we may very reasonably suppose with Mr. Cooper that we may share at least one-third of this vast trade when the Bhamo route is fairly re-opened.

27. Dr. J. Anderson, Conservator, Indian Museum, whose services as surgeon and naturalist to the expedition were placed at my disposal by the trustees of the museum, is highly spoken of by Major Sladen. Dr. Anderson has, it is understood, made a large collection of valuable specimens of natural history, and of the products and manufactures of the several localities visited, the whole of which were sent to Calcutta, as I was unwilling that his cases of specimens should be opened at Rangoon, for they might have been injured in re-packing, and the different specimens were not then arranged. They have, however, no doubt, been all classified by this time, and I would suggest that a complete series of his collections may be sent me for deposit in the Phayre Museum at Rangoon. I have not yet received Dr. Anderson's official report. On its receipt it will be immediately dispatched to your address.

28. Lieutenant Bowers, R.N.R., attached to the party as commercial agent, appears to have been of great assistance to Major Sladen, and his varied knowledge and experience of special utility to the expedition.

29. Major Sladen himself is deserving of the highest commendation for his skilful conduct of the expedition. He has shown throughout sound judgment and discrimination in his intercourse with the various authorities with whom he had to deal, and in the many novel and delicate positions in which he was placed; and it is owing to his great tact and judgment that the expedition was brought to the successful termination it has been.

CAPTAIN SLADEN'S REPORT.

From Captain *E. B. Sladen*, Political Agent, *Mandalay*, to Major General *A. Fytche*, C.S.I., Chief Commissioner, *British Burmah*, and Agent to His Excellency the Viceroy and Governor General; dated 24th February 1869.

I DO myself the honour of informing you, with reference to your letter, No. 12 M, of November 1867, that the exploring party which was ordered to proceed under my command *viâ* Bhamo to the borders of South-Western China, commenced its journey from Mandalay on the 13th January 1868.

Captain E. B. Sladen, Leader.
Captain J. M. Williams, Engineer.
Dr. John Anderson, Medical Officer and Naturalist.
Captain A. Bowers } Mercantile Representatives.
T. Stewart, Esq. - } Mercantile Representatives.
F. N. Burn, Esq. - } Mercantile Representatives.
One Native Doctor, one Police Inspector, 50 armed Police

2. The narrative of the expedition has already been told, in a somewhat fragmentary form, in my several letters (as per margin), private and demi-official, which were dispatched from time to time, as opportunities offered, during our protracted absence beyond British territory. I shall endeavour, in the present official report, to beat out the whole of the material at my disposal into the form of a simple and consecutive record, by which to reveal the objects of the expedition, and to trace out its progress and results in the order they occurred, without any studied attempt at classification, and with a seeming disregard, perhaps, of the mere conventional restraints of ordinary official correspondence.

3. It will be necessary too, as the narrative proceeds, to quote to some extent from my rough diaries; and in many places I may be led to adopt the diary system altogether. But all matters of a purely evidential or explanatory character will be submitted in the form of an appendix, so as to interfere as little as possible with the consecutive nature of the report itself.

4. I may further state, once for all, by way of introduction, that I have carefully abstained from all scientific and statistical details which did not appear to come within the scope of my duties or relationship to the expedition. All such information may be looked forward to with confidence in the reports of those members of our party to whom the scientific details of the journey have been happily entrusted.

5. It has long been a matter of special notoriety to those acquainted with the affairs of Upper Burmah that its commercial prosperity has depended for many generations past on the means afforded of prosecuting overland trade with the southern and western provinces of the Chinese empire.

6. Most of the gold that for centuries past has been lavishly expended in the decorative arts of this country and in the adornment of its interminable pagodas, and all the silk which from time immemorial has helped to feed the looms of its principal industry, found its way from China to Burmah by an overland route from Yunan, which struck the Irrawaddy at the old central mart of Bhamo.

7. In return for this wealth, Burmah exported raw cotton from amongst her indigenous products, and supplied woollen cloths and piece-goods, imported, yet sparingly, from a British market.

8. But for more than a dozen years past, or from a time which is somewhat remarkably coincident with the British occupation of Pegu, internal trade with China had either entirely ceased, or was prosecuted only to an extent which was inappreciable in estimating the wealth, the capabilities, or the requirements of the countries to which that trade naturally belonged.

9. It is no new theory at the present time, as regards the origin or design of the present expedition, to have ventured upon a solution of causes which from their very apparency (it would seem) have hitherto baffled or deterred every attempt to account for the cessation of trade by the old caravan route between Bhamo and the Chinese province of Yunan.

10. Every merchant who has ever been led to speculate on establishing himself in Burmah since the British occupation of Pegu in 1852, has had his attention keenly fixed for several years past on vast fields for commercial enterprise in the fertile openings of Upper Burmah, the Shan States, and Western China.

11. But when a substantial scheme had been set on foot for penetrating this same Western China by a route or railway which was to be projected from a Rangoon terminus, it became a matter of very significant import to consider whether the direct route from Rangoon, so energetically advocated by Captain Sprye, was the route *par excellence*—which was to be made practicable at any cost—or whether special means were not available for arriving at precise data upon which to justify and consummate the idea of reviving an old overland trade route, which had always been recognised as the natural outlet, by which the commerce of China had hitherto worked a channel for itself into the provinces of Burmah.

12. Hence originated the expedition of 1868, which, involving as it did the exploration of unknown territory lying within and beyond the northern confines of Upper Burmah, could only have been prudently undertaken by a party of British officers, under a full assurance that they enjoyed the confidence of the Burmese Government, and would profit by its active support in removing the primary difficulties of a somewhat hazardous and tentative undertaking.

13. Having concluded a second treaty with the British Government, the time seemed to have come when the King of Burmah and his ministers had been led by experience to renounce for ever the primitive state of exclusiveness by which they had hitherto hedged in their country and denied themselves the benefits of free commercial intercourse with neighbouring states. It was, therefore, an opportune moment for making known the requirements of the British Government, and of obtaining the consent of the King of Burmah to the dispatch of a party of British officers to explore the old caravan route between the upper waters of the Irrawaddy and south-western confines of Yunan. This consent

was

was given with a cordiality which called forth the thanks and acknowledgments of his excellency the Viceroy and Governor General of India, and afforded an indubitable ground for belief that that cordiality would be continued, and that those acknowledgments would not be too lightly esteemed.

14. For several weeks before the expedition left Mandalay, the King, the chief minister, and other officials of the Burmese Government, had been repeatedly urged to bear in mind the great importance of the expedition; and, at my special solicitation, written orders were despatched to the Governor of Bhamo, and to the heads of the several towns and villages which lay in our route, to anticipate our arrival and make provision for several known requirements.

But irrespective of these outward assurances of support, held out by the officials themselves, other indirect evidence was not wanting of an apparent desire on the part of the Burmese Government to place no direct obstacles in the way of our progress, as long at least as that progress lay within Burmese territory.

15. In my several interviews with the King previous to my departure for Bhamo, the subject of the approaching expedition was always referred to in a way which was intended to convince his Majesty that the eyes of the world were then directed towards Burmah; and that the ultimate success of the expedition, depending as it did in a great measure on the guaranteed support of the Burmese Government, had connected itself very intimately with his Majesty's interests, and probably also with the permanence and stability of his Majesty's dominions.

16. There were times when the King wavered so far as to yield temporarily to certain jealous influences, which were secretly fomented with the object of proving to him that he had acted unwisely in giving his consent to a British expedition which was to penetrate China through Burmah, and produce an objectionable influx of foreign intruders into Burmese territory. The King himself made known to me the existence of this secret opposition, and spoke in particular of a petition presented by an European resident of Mandalay, which warned him that, if the expedition started and succeeded in its object, a death-blow would have been levelled against Burman supremacy and the perfect independence of his Majesty's Government.

17. But, knowing as I did that the King felt his interests in this undertaking to be bound up with our own, and relying upon this fact with more confidence than all the other outward evidences of royal support and co-operation, I had persuaded myself into a belief that Burmese opposition, beyond the ordinary petty restrictions of travel in any half-civilized country, would not have been seriously attempted so long as the expedition remained within Burmese limits, or was subjected to Burmese influences.

18. In this as in other instances of misconception in our estimate of the facilities attending this expedition we are now proved to have erred; and I simply instance this one fact in particular, at the present stage of my narrative, because it shows, I think, that no provision, however complete, could have warded off a diffieulty which not only defied anticipation, but grew, as it were, out of what we were bound, in our friendly relations and intercourse with the Burmese Government, to rely upon as a chief fundamental element of success and encouragement.

19. It can hardly be wondered at, then, that the expedition took its departure from British territory under a very erroneous idea of coming events, and with a dispatch which would have indicated undue haste and an absence of all effective preparation, had the realities of the adventure or the political difficulties which everywhere encompassed it been recognised as conditions or contingencies which had not already been amply provided against by the cordial assent and guarranteed patronage of the Burmese Government.

20. In arranging for the dispatch of the expedition from Mandalay to Bhamo, his Majesty the King of Burmah had volunteered the services of one of his river steamers; and in spite of much conflicting testimony to the contrary, there was every prospect of our reaching a starting point on the Irrawaddy without any of the delays incidental to boat transit during a somewhat unfavourable and uncertain period of the year.

21. On no former occasion had it been deemed prudent or advisable to dispatch steamers beyond a well-defined distance above the capital at Mandalay. Those whose experience entitled them to be heard on a matter of so much general import openly affirmed, with a great deal of assurance and ingenuity, that no steamers then available on the Irrawaddy could possibly proceed as far north as Bhamo during the months of January, February, or March. Others, whose opinions were equally entitled to consideration, had expressed themselves in favour of steam traffic on a river which they declared to be as navigable at all seasons above the capital as it was between Mandalay and the British frontier.

22. The King, taking advantage of this conflict of opinion, and being swayed, moreover, from time to time to a variety of beliefs, which appeared to him to interfere injuriously with his own interests if he admitted the feasibility of steamer traffic above the capital, withdrew temporarily from his engagements, and gave me to understand that he did not think it advisable to risk a royal steamer in the cause of the expedition.

23. Neither the King nor his government could have been in any real doubt as to the capabilities of the river for steam navigation above the capital; but the policy of the government has always been jealously opposed to the spread of British influence, and nothing, it was believed, would tend more directly to extend that influence than the fact that English steamers had passed up beyond the capital, and come into direct commercial contact with races and people over whom the Burmese Government had often pleaded its inability to exercise efficient authority or control.

24. It became necessary, therefore, that I should make known to his Majesty my own belief in the possibility of reaching Bhamo with a steamer of moderate draft under skilful superintendence. I thought it right, moreover, to notify my intention of procuring the service of such a vessel in which I hoped to make a successful survey of the river, and prove its navigability for all practical purposes of trade, as far at least as the frontier station of Bhamo.

25. This was a contingency little expected. The King had now worked himself, so to speak, into a political corner from which there was no retreat. However great may have been his desire to restrict British steamers to the lower waters of the Irrawaddy, it was an undoubted fact that the right of navigating that river throughout its whole course had been already guaranteed and secured to us by treaty stipulations. The Government had been led to infer, from my avowed intention of employing a British steamer above the capital, that the question had resolved itself from one of policy into one of right. No reference was now made to the capabilities of the river for steam navigation, but the simple point for consideration was, shall a Burman or a British steamer be the first to reach Bhamo?

26. The King did not hesitate in selecting what appeared to him to be the least of two evils. British steamers had not as yet passed beyond the capital. The policy of exclusiveness would not be infringed by dispatching his own steamer to attempt the passage to Bhamo; on the contrary, his doing so would secure for himself honourable recognition, not only as a pioneer of trade, but as a sovereign who had exerted his power and his resources in furthering the special interest of the British Government. A royal steamer, the "Yaynan-Sekia," better known as the "Honesty," was immediately placed at my disposal.

27. There is, perhaps, an appearance of undue adventure in having attempted at the outset of an undertaking (although that undertaking had been devised for exploration purposes) to arrive at the solution of a question which, if unfavourable, would have involved the whole party in a serious complication of delays and difficulty. But I accepted the King's steamer without hesitation. I knew her draft of water to be only three feet; her engines were powerful, and she would be lightly laden.

28. The "Honesty," with the expedition party on board, left Mandalay on 13th January, and arrived at Bhamo on 21st of the same month. Her passage up the river was signalised by an absence of everything like difficulty in ordinary

nary river navigation. On one occasion only was it necessary to make any serious effort to discover a navigable channel. A steamer of greater draft than the "Honesty" might at this point have been subjected to prolonged detention, but, though the channel through which the royal steamer found a way did not exceed a depth of three feet, it was by no means certain that deeper water might not have been discovered had search been made with that skill and diligence which would have guided Europeans, but which could not be looked for in a slovenly crew of uninterested Burmese.

29. It may, however, be laid down as a general deduction, from our experiences on the Irrawaddy between Mandalay and Bhamo, that no steamer is justified in attempting the passage during those months of the year, when the water is at its lowest, whose draft of water exceeds four feet. Captain Bowers, who accompanied the expedition as mercantile representative, and whose nautical and professional experiences have been of great value, has been at some pains to complete a chart of the river, which cannot fail to be practically useful to British steamers as soon as they elect to make Bhamo their terminus, instead of Mandalay. Captain Bowers has promised to place his chart at my disposal for the information of Government, and a copy of the same, if received in sufficient time, will be appended to this report.

30. On 22nd January, the day after our arrival at Bhamo, the two Tsitkays, or head-men of the town and district, paid us a visit on board the steamer. They were courteous, but exceedingly reserved as regarded the subject of the expedition. They professed an entire ignorance of all orders from the capital, which directed that preparation should be made for our reception at Bhamo.

31. No expedient could have been more opportunely contrived to meet the circumstances of the time and the natural proclivity of a Burman in power, with or without reason, to make himself recklessly obstructive in his dealings with foreigners, than the reality which presented itself in the recent murder of the old Governor of Bhamo and the late Shan disturbances at the town of Momeit. Both events were unfortunately facts which had immediately preceded our own arrival at Bhamo.

32. The old Governor of Bhamo had held also the title of Governor of Myadoung, an important district south of and adjoining the district of Bhamo. The Shan town and district of Momeit, which had always been under the immediate government of its own chiefs, was now placed under the Bhamo governorship, so far as to give the latter the power of collecting and remitting the annual revenues of the district to head-quarters at Mandalay.

Shans and Kakhyens joined to resist such an innovation on national rule and custom. The Governor of Bhamo proceeded to Momeit with 300 armed men and tried to restore order; but his force was surrounded by the insurgents; and cut off himself from all his reserves, the Governor was compelled, after several days of helpless endurance, to attempt to retreat by cutting a way through his implacable opponents. In this attempt he lost his life, and a large number of the gallant 300 who had originally accompanied him from Bhamo became victims to the hatred which Burman oppression had naturally inspired in the minds of despised Kakhyens.

33. These were events which had occurred within a few weeks previous to our arrival at Bhamo; and it required a well-studied gravity and control of temper to listen to the disheartening but plausible and hypocritical utterances of the Tsitkays, as they dwelt pathetically upon the recent murder of the Governor (making it a reason for inattention to instructions from Mandalay), and quietly informed me that no effective preparations could then be made for the prosecution of our journey onward across the Kakhyen Hills towards Yunan.

34. It was not less discouraging to be informed further by these officers of the Burmese Government that the principal routes eastward across the Kakhyen Hills were effectually closed against transit of every kind, or to learn two days later, after notices had been sent to the chief Saubwa of the only supposed practicable line *viâ* Ponlyne, that the chiefs refused to recognise the summons of the Burmese Tsitkays, and required written orders from the Governor himself before they consented to come to Bhamo, or enter into preliminary engage-

ments relating to our journey across their hills. The old Governor having been killed, the advent of a new one, depending, as it did, on Burmese caprice, became a matter of very great uncertainty, and was especially awkward as regarded ourselves, whilst assured that the Kakhyens required the direct orders of a veritable Burmese Governor before they could be induced to bestir themselves in our expeditionary interests.

35. There was cause also for discouragement in the fact that, owing to the unsettled state of the country, and severe retaliatory measures which Kakhyens and Burmans were mutually inflicting on each other, whenever the opportunity occurred for doing so, Kakhyens were positively interdicted, by order of the Burmese authorities, from entering Bhamo; and that thus the very people whom we had come to conciliate, and by whose friendly assistance alone it was possible to carry out the purposes of the expedition, had been induced, by our unfortunate connectionship with Burman officials, to look upon us as something akin to national or natural enemies.

36. On the 23rd January I returned the official visit of the two Tsitkays or magistrates, who were appropriately designated or distinguished by the prefix to their official title of north or south, according to the position and extent of their respected jurisdictions. It was during one of their visits that I made the acquaintance of an old Chinaman, who was allowed by the Burmese Government to exercise special jurisdiction over his Chinese brethren located in Bhamo.

The officials were kind, and received me with as great a display of dignified hospitality as the impromptu nature of the occasion admitted. But however impressive this may have been in one sense, the interviews disclosed with painful apparency that no effect was being spared by which to discourage and destroy, if possible, by plausible arguments, every hope we might already have entertained of succeeding in the undertaking we were then committed to.

37. The Kakhyens were described as treacherous, and disinclined to allow transit of any kind across their hills. Though nominally subject to Burmah, they professed an independence of their own, and lived principally, it was said, in a state of indiscriminate conflict amongst themselves, and by general depredations on the villages or property of their immediate neighbours.

38. The country beyond the Kakhyen hills, as well as the whole Chinese frontier in the direction we proposed travelling, had lapsed into a state of dangerous disorganisation, and was preyed upon by large bodies of marauders, who, having first submitted, during a state of anarchy, to being despoiled themselves, were now compelled in turn to seek retaliation and livelihood by a reckless spoliation of others. The head Chinaman asked repeatedly with bitter significance, "How do you expect to succeed when Kings even have tried and failed?"

39. But in the midst of many vexatious and discouraging statements, which were suggestive of everything evil if we attempted to advance, the Tsitkays, when directly urged to action, were careful for their own sakes to make certain vague promises of assistance, which results have proved it was never their will or intention to fulfil. On them, however, depended for a time my only means of settling certain preliminaries, which were indispensable before a single step could be taken in prosecuting the journey beyond Bhamo.

References to Mandalay were virtually forbidden on account of the delay which would have been involved in making them. The Tsitkays were on the spot, and it was necessary to keep up a friendly bearing and intercourse with them in spite of all that was harassing and disagreeable in their secret opposition and forced reserve.

40. A point of primary and essential importance, as connected with my instructions, related to the possibility of effecting a safe and liberal understanding with the Kakhyen chiefs, who occupied the mountain route through which the xpedition would pass, whilst yet within what is nominally termed "Burmese territory."

41. I have already stated that the chiefs on the Ponlyne route, to which we had been committed by the advice of the burmese officials at Bhamo, had refused to attend to orders which were not transmitted to them by the Governor himself.

The

The written instructions of the Tsitkays had been forwarded by their own Burmese messengers, and I also dispatched along with them a half Chinese, half Burman scribe (Moung Shwè Yah) who had journeyed to Momein more than once, and whose services had been given over to me by the King, as a man who was to prove eminently useful on account of his local and varied experiences.

42. I desired Moung Shwè Yah to mention privately to the Kakhyen Saubwas the true reasons which made me long for their acquaintance and friendship. On the 29th January he had returned from his mission to Ponlyne (the head-quarters of the Kakhyen chief of that name), and brought word that, although the Saubwa had declared he would not attend to Burmese orders, he was willing nevertheless to visit me privately if a meeting could be arranged without Burmese interference.

43. The fact was, I afterwards learned, that these same Burmese officials (although they had gone through the form of dispatching written orders to the chiefs to come and confer with me at Bhamo) had indirectly expressed, through their own private messengers, that the presence of the chiefs was not really desired; on the contrary, a ready means had been actually improvised for these chiefs whereby to excuse, and even justify, their absence.

44. But although the chiefs had promised in anticipation to award me a private interview, it was necessary, they said, to hold a consultation with the *nats*, or minor deities, who rule over the destinies of Kakhyen land, and obtain their previous sanction to the proposed interview. Thus the fate of the expedition was made for a time to depend on the eventualities of a ceremonial, in which the blood of bulls and the peculiar markings on chicken's bones would play a prominent and perhaps a decisive part.

45. On the same day (29th January) that Moung Shwè Yah returned from Ponlyne the Tsitkays also appeared, and entered into a string of particulars, by which to convince me that the absence of the Kakhyen Saubwas was a natural proceeding, which could be easily explained. The orders in force were, they said, that no Kakhyen should enter Bhamo. The Nŭkhandaw, a very lively official, subordinate only in name to the Tsitkays, but more active in his obstructiveness than any of his brethren in office, acted as spokesman on this occasion, and publicly declared that, if any Kakhyen was caught by Burmans inside the stockade, he was liable to be shot down as an enemy.

He concluded as follows:—

"The Saubwas will think that we are sending for them for the sole purpose of getting them into our power. It is not likely that they will come with the certainty, in their own belief, of being put to death; but even supposing the Ponlyne Saubwa and others in his vicinity come and agree to escort you into their hills, this will be no real help to you, since there are numerous chiefs at a distance who are independent of our power altogether, and who will never consent to allow you a free passage into the Shan States. In some places in the hills your route will lay through narrow defiles, above which means are taken to command and prevent all chance of approach unless with previous consent."

46. It can hardly be deemed a mere coincidence, after these several attempts to thwart and deter us from further enterprise, that the principal Chinese inhabitants of Bhamo should have selected this day to invite us to take part in an entertainment specially provided for the members of the expedition. Nothing could have exceeded the hospitality of our new Chinese friends. We sat round a table on which a very complete dessert of 25 dishes had been previously arranged. Tea was handed round, and each guest, in addition, found a veritable teapot at his side filled with the strongest *shamshoo*. The dessert being removed, fresh and substantial signs of hospitality evinced themselves in the appearance of nine separate dishes of cooked meats and vegetables, which we were forced by good breeding to attack with chopsticks.

47. In my diary of the day previous I find the following entry:—"I am informed on good authority that the Chinamen of this place are much opposed to the expedition. They believe, it is said, that we are leagued by caste or race with the Panthays, and are about to make common cause with them, to

the detriment of the Chinese Government. The Chinese residents here are in active correspondence with their brethren at Mandalay. The Panthays of Yunan have only partially subjugated that portion of the province of Yunan which is in their possession. There are still, it is said, several towns and villages this side of Momein which do not acknowledge any master, and in some instances the malcontents are confederated into large bands of dacoits, who are ready at any time to act against the Panthay Government. These are the decoits who block up the way between Bhamo and the Chinese frontier, and it is with them, I hear, that the Chinamen of this place are in correspondence, with a view to obstruct our passage to Momein. They think only of their own petty interests, and would neutralise the objects and success of our present undertaking for the sole purpose, if no other existed, of keeping to themselves their present petty earnings, instead of allowing themselves to be entirely swamped, as they suppose, by opening out to all the overland route between Bhamo and South-Western China."

48. It soon became evident that the object of the Chinamen in awarding us so much good cheer was about to be disclosed in a plausible attempt to second the obstructive and deterrent pleas already insinuated by Burmese officialism. With all the courtesy in the world I was definitely given to understand that the expedition was proceeding on a wild goose chase. The old argument was again adduced:—" How can you possibly succeed in accomplishing that which even kings have striven for, but failed to attain?"

49. This state of affairs lasted until the 31st January, when the Kakhyen chief of Ponlyne arrived and paid me his promised visit. He was dressed as a Chinese mandarin, and carried a golden umbrella, which had been presented to him by the King of Burmah. Contrary to Burmese etiquette in *their* dealings with Kakhyens, I received the chief with the respect due to his position, and the police escort was drawn up under arms for his peculiar benefit and edification. But, half Burman, half Chinaman, as regarded his externals, the hang-dog expression of his countenance (different in every respect from the Kakhyen type, or from any type I had ever seen), was an ugly feature in the proceeding, which did not auger well for the results of our proposed conference.

50. The whole of the Burmese officials at Bhamo attended in full strength, and the interpretation in the Kakhyen language was conducted by a Burman Tamon of the village of Nanlyaw. The Kakhyen chief and his followers were stern and obstinately silent. They hardly condescended to answer the few questions of greeting and salutation by which I tried to enlist their sympathies and pave the way to business communications. But as soon as I commenced to make inquiries regarding our route and the practicability of transit, the interpreter above referred to suddenly warmed with the subject, and became so demonstrative in his over-eagerness to communicate all that boded difficulty or evil, that I saw at once he was improvising statements of his own, and was obliged, therefore, after a time, to disown his services *in toto*, and to ask rather energetically for a man who would take less interest in the subject matter of the conference, and confine himself simply to truthful interpretation.

51. The Saubwa remained intractable, but I could see that the position he had assumed was in a measure forced on account of the presence of the Burmese officials. After a time I was enabled to speak to him a little more privately and with more promising results. He was able to guarantee safe transit through his portion of the hill route, but would not be answerable for the conduct of other chiefs beyond the range of his authority. I distinctly asked whether it was his real wish, or the wish of the Kakhyen people generally, that we should pass through their country?

He answered at once: "Yes; and we will take care of you."

"Then why did you say just now that supplies were not procurable, that mules would be charged for at treble their usual cost, and that you would not be answerable for the conduct of other chiefs?"

He was significantly silent, and I was not slow to see that he secretly desired a more private interview.

52. On the following day Ponlyne again presented himself; and after a good deal

deal of haggling conversation in the presence of several Burmese officials, an arrangement was entered into for the supply of one hundred mules to convey us from a point on the Tahpen river, above Bhamo, to Manwyne, the first Shan town of importance met with on descending the hills which slope into the Sanda valley at its western extremity.

53. The Kakhyen chief subsequently accompanied me into a private room, and Moung Shwè Yah acted as interpreter in Chinese, a language with which most Kakhyens seem to be familiar, more so, at least, than with either Shan or Burmese. The sullen stupidity of the savage at once merged into a genuine expression of reason and intelligence. He acknowledged that his backwardness in coming to see me, or to provide facilities for our journey, had been prompted by a disinclination on his part to offend the scruples of his Chinese friends in Bhamo, who had written and advised him to keep out of the way altogether.

He, too, had Chinese friends, he said, in the countries eastward, and it would ruin him if they believed that he alone of all the Kakhyen chiefs had been instrumental in affording a European expedition the means of entering their country. He made it a *sine quâ non* on this account that I would insist on Burman support and co-operation, so far at least as to ensure the attendance of a small Burmese party, who would accompany the expedition from Bhamo for appearance sake only, and thus relieve him of the onus of being considered our sole conductor.

54. Nothing could more clearly indicate the state of the chief's feelings, and his knowledge of the obstacles which Burmese officials were insidiously and persistently throwing in our way than this simple desire, when all chance of active interference on their part was at an end, that these same Burman officials should be asked to take a demonstrative part only in our proceedings, and act as dummies, in a way which openly belied their own wishes and the very limited scope of their real intentions. Had Ponlyne openly accused them of downright hostility to our undertaking, his words would not have been so innocently effective or naturally convincing as the simple and consistent requisition that Burmese officials should contribute, by a mock show of reality, to a proceeding which it was well known from the first they had indirectly thwarted, and were even then opposing.

55. It required but little explanation on my part to give the chief a comprehensive idea of the object of the expedition, or to convince him of the advantages which it offered to the inhabitants of the countries through which the Bhamo trade route would eventually pass. I had not at the time discovered the peculiarities of the Kakhyen mind, or realised to its full extent the avaricious greed of this chief in particular. There could be no harm, however, in promising rewards for faithful services, or in making a show of certain finery which it was my wish to present to the chief as an earnest of present gain and future emoluments.

The chief viewed the gifts with inexpressible delight, but requested me to keep them till I reached his village. Much as he coveted them, their acceptance by him at the present time, he said, would give offence to the Burmese officials of Bhamo, and interfere, moreover, with his own arrangements to serve me as effectually as he desired.

56. The next day (2nd February) Ponlyne took his departure from Bhamo with the promise to procure mule carriage and make all other requisite preparations for a start in 10 days from date. There was no longer any difficulty as regarded the consent of the Kakhyen chiefs. He (Ponlyne) boasted of his relationship with, and superiority over, all the Saubwas on the route we were to take. He was in a position, by his own statement, to guarantee safe transit through Kakhyen land as far as Manwyne, the first Shan town met with on the Yunan side of the Kakhyen hills *viâ* Ponlyne.

57. The same afternoon the Nanlyaw Tamon (the man whom I had so summarily got rid of for false interpretation on the occasion of Ponlyne's first visit) came to me in a very abject condition, and confessed that he had purposely exaggerated difficulties, and raised imaginary sources of

opposition to our intended journey, having been advised to do so by those whom it would have been a crime in him to disobey. He was faithfully attached, he said, to Moung Shwè Yah, my Chinese interpreter, and supposed that I would perceive the awkwardness of his position, and make allowance for obligations he was under to his Burmese masters.

58. He further stated to me that he was present with the Ponlyne Saubwa at the time letters were brought to him from the Chinese residents at Bhamo, who wrote to dissuade the chief against visiting that town, or from giving us his assistance. The Tamon, though cunning and shrewd in his duplicity, was truthful, I believe, in the present instance, because he knew that I found him out; but his subsequent dealings prove that the excuses made for false interpretation and hostility to our cause on the 31st January were mere attempts to gain my confidence, and acquire greater facilities for working out the ruinous designs of his Burmese superiors.

59. But to continue the account of Burmese petty obstructiveness, I may mention, even at the risk of extending my narrative indefinitely, that the embarrassments of our position were not improved by a forced and unnatural restraint on the part of the Burmese inhabitants of the place, which compelled them to be silent and uncommunicative on all points in which it was essential to procure truthful or reliable information.

This reserve on the part of the people contrasted very unmistakeably with their true instincts. Their real disposition we knew to be friendly and unobstructive. They had repeatedly assured us that the presence of the English expedition at Bhamo gave confidence and secured them against the frequent raids of hostile Kakhyens. For months past, previous to our arrival, their nights had been spent in fear and watching. But the protection afforded by our presence had given relief, and placed them under obligations which, in the ordinary course of human nature, would certainly not have resulted in unfriendliness of disposition, or a desire to be uncommunicative on matters of general and social interest.

60. The population generally had been terrified into a belief that any familiarity with members of the expedition, or information afforded relative to existing trade routes between Burmah and the south-western provinces of China, would subject informers to a government prosecution,—a mode of proceeding which had terrific signification in its practical application to the non-official masses of an outlying Burmese province.

61. Numerous proofs were soon given of this official interdiction to friendly intercourse between ourselves and the people of Bhamo. The officials themselves evaded all such causes of complaint until forced into a conviction of their reality. Extenuation was then sought in the announcement that the officials themselves were at loggerheads with each other, and could not be held individually responsible in the absence of a Governor or other chief controlling power. The consequence was that, whether by design or otherwise, the part taken by the officers of government at this time had assumed a course which coincided exactly with the well-known Burmese policy of exclusiveness, by which it was intended to bar for ever the right of way beyond the Burmese capital to foreign traders or intruders, whatever their claims or the introduction under which those claims were presented.

62. Thus the officials from whom alone real assistance was due, had become our steadiest opponents. Redress could hardly be expected from those who were principally concerned in instigating the several wrongs complained against. My frequent reference to the patronage under which the expedition originated, and the direful consequences of offending against royal promises of support given by the King of Burmah to Her Majesty's Government, and confidently acknowledged by that government, were not likely to be regarded by men who drew their inspiration and belief from Burmese head-quarters at Mandalay.

63. I will illustrate the above remarks by another passage taken at random from my rough diary under date 9th February :—

"Other instances have occurred of Burmese little mindedness and cruelty. An old Munipooree woman, who had occasionally interpreted for me in the Kakhyen

Kakhyen language, was yesterday dragged out of her house into the public streets and severely beaten at the instance of the Nŭkhandaw, a petty officer under the Tsitkay. The reason given for thus publicly chastising this poor female is, that she had burned a light in her house the previous evening after hours. The real cause of her offence happens to be that she assisted us to be kind towards a small party of despised Kakhyens. The woman has complained to me privately, but begs that I will not invite further trouble and suffering by making a direct grievance of her case. Many others have come forward and complained of the restraint put upon them, and the fear of punishment which precludes the proffer of their services. Amongst the crowd of candidates who are eager for employ if left to their natural inclinations, I find it is impossible to procure the services of a Kakhyen or Shan interpreter. To day a common shikaree, who had promised to show us game, has been obliged to excuse himself on the plea that he was in danger of provoking official censure by contributing in any way to our wants, &c., &c. The North Tsitkay called this evening whilst we were at dinner, and I explained to him our detestation of the Nŭkhandaw's behaviour in having publicly chastised a poor woman, whose only offence was that she had helped us in our communications with inoffensive Kakhyens. The Tsitkay did not attempt to refute my complaints, but excused them on the ground of misunderstanding and disagreement amongst the officials with whom he was associated. The orders of one were nullified or exaggerated, he said, by the envy or design of another. This could not be helped, as the officials acted independently of each other, and Bhamo was without a controlling governor. I mentioned the circumstance of the Burman shikaree."

"*Tsitkay.*—"Never mind, I will give you a man."

"So I suppose he would. It simply amounts to this, that we are forced into an unnatural dependence on these officials for every want, however trivial, and even then with very little chance of success, because the officials pretend to be divided amongst themselves, and submit to the disgrace of openly admitting the treacherous cancelment of each other's orders.

"They are stupid enough to think that this nonsense is believed in, and that I fail to perceive that the alleged disagreement amongst themselves is a mere pretext, by which they rely on their ability to continue a policy of obstructiveness with credit to themselves and to the complete satisfaction of their Mandalay masters," &c., &c.

64. On the 13th February the Tsitkays called upon me with letters from a Burman official at Tahpen, which reported several recent attacks on villages in his neighbourhood, by large numbers of marauding Kakhyens, who were said to have taken up a position on the direct route by which the expedition would pass in its progress towards the Shan States.

65. These letters and the reports they contained were anything but veritable or genuine in themselves, but the emphasis and enthusiasm with which the Tsitkays dwelt upon their contents, as a means of giving additional zest to the many other deterrent stories in circulation at Bhamo, which related to the dangerous opposition which the expedition would of a certainty encounter, made it at length inevitable that I should come to a complete understanding with them in this and other instances of official interference in the affairs of the expedition.

66. As a further reason for plain speaking, I may mention that my information at this time made it evident that the Tsitkays had cognizance of certain communications from the robber chief Lees-hee-ta-hee, who, in reply either to their requisitions or the requisitions of the Chinese residents of Bhamo, had signified to them his readiness to co-operate in our extermination by threats of armed opposition as soon as we appeared within the limits of his supposed jurisdiction.

Moung Shwè Yah, my Chinese interpreter, saw one of these letters and entered the Burmese *Yon* or court of justice at a time when a discussion was being held regarding it; but the letter was folded up, and the discussion ceased as soon as it was known that my interpreter, or a person then supposed to be in my confidence, formed one of their assembly.

67. Subsequently a writer of the court, in conversation with a Burman clerk

in my employ, not only admitted the receipt of letters from Lees-hee-ta-hee, but declared that they were favourable to the cause of the British expedition. Lees-hee-ta-hee had merely stipulated, he said, that the English party should advance alone without any Burmese accompaniments.

This stipulation is hardly intelligible unless we bear in mind the ambiguous style of writing which would naturally be adopted in a secret correspondence carried on between officers of the Burmese Government and a friendly robber chieftain of a foreign state!

68. The following has been suggested to me as the correct interpretation of that portion of Lees-hee-ta-hee's letter which provides that the English party should proceed on its journey without a Burmese escort:—

The Chinese dacoit bands which were pledged to annihilate the British expedition felt scruples of conscience which did not allow of their acting on the offensive towards Burmese subjects. They therefore intimated to the Tsitkays, in polite and suggestive terms, that it would be as well if Burmans did not form a portion of our party. The truth is, that the presence of a Burmese guard would have implied that we were under Burmese official protection, and this fact alone, considering the nature of Lees-hee-ta-hee's relationship with, and confessed subservience to, the court of Mandalay, must have secured us against much active opposition.

69. It was now late in February. More than the alloted ten days had elapsed since Ponlyne's last visit, and still there was no news of the Kakhyen chief or of his promised succour. Rumours had reached Bhamo in the meantime that the new Governor had left Mandalay by boat, and might be expected daily.

By degrees I realised what might have been apparent from the first, viz., that the officials then in power at Bhamo had never intended that we should leave that place before the new Governor's arrival. I had worried the officials and myself for nearly a month to no purpose. Their impassiveness was now accounted for, for to all intents and purposes they had simply been acting within the scope of their instructions, and felt secure against all prospect of censure or rebuke at Mandalay head-quarters.

70. With the full conviction that the Tsitkays had given up every idea of furthering the cause of our expedition at Bhamo, my only chance of success was to push our interests with the Kakhyens and disregard all prohibitory orders which made it penal on the part of Burmese subjects to afford us their assistance.

71. It had been necessary, from the date of Ponlyne's last departure from Bhamo, to keep up communication with that chief by means of my own messengers, and I was thus enabled to disprove the false reports relating to raids and disturbances in and about the vicinity of our proposed route through the Kakhyen hills.

72. My messengers were further enabled, in their intercourse with Ponlyne, to learn and note the endeavours which were being made by adverse interests to bring ruin on the expedition, even though it might eventually succeed in making a fair start from Bhamo. The opposition most likely to be effectual, and even dangerous, in its results was that which related to a correspondence which I have already referred to between certain Chinese residents of Bhamo and the famous robber chief Lees-hee-ta-hee. It was not within my means at the time to obtain direct proofs by which to test the real nature of this correspondence, but the Chinese themselves spoke openly of their confederate Lees-hee-ta-hee, and frequently alluded to him as an irresistible barrier to any attempt we might make to reach Momein.

73 Ponlyne, too, was reported to be wavering in his fidelity. He could not help recognizing the fact of formidable Chinese influences, which were the more dangerous to himself from the fact that the Chinese were seconded in their hostility to the expedition by the support and countenance of the Burmese Government.

At the same time, the Tsitkays, taking advantage of the state of helplessness to which they themselves had mainly contributed, advised me, with well-feigned earnestness,

earnestness, to await the Governor's arrival, and be guided by his counsel in determining upon a further prosecution of my journey.

74. The position then at this time may be briefly recapitulated as follows :—

The Kakhyen chief was supposed to await the expedition with mule carriage at Tahpen. I was disposed to trust his services in spite of calumnious reports of bad faith, and an insidious rumour to the effect that he was known to have leagued himself with those who were then engaged in conspiring our discomfiture.

The Bhamo officials had been persevering in their efforts to discountenance the expedition, to make it unpopular throughout the province, and to discourage every attempt to advance beyond the cordon of Bhamo.

If I proceeded and met with reverses, the Burmese Government would have it in its power to declare, with some show of reality and truth, that I had neglected advice, or disregarded consequences, as foretold by its own officers. My instructions were distinct and imperative. The government would "*prefer to see the expedition return, without accomplishing the object for which it was undertaken, than learn that the safety of the party had in any degree been compromised.*"

75. It had thus become an unavoidable necessity, under all circumstances, to abide by my instructions, and submit to the further delay of awaiting the new Governor's arrival, rather than allow the Burmese Government the power of making it appear that I had acted with undue haste, or without a just regard to official admonition.

These disclosures were for the time a grave contradiction to all the imaginary facilities of opening out the old overland trade route through Burmah to China. Plans which had all along appeared practicable and facile in theory presented in practice a series of obstacles, which were not only perplexing at the time, but promised to be eventually insurmountable.

76. It was not until I had fully comprehended the magnitude of the dangers to which a British expedition would be exposed in consequence of the Chinese confederacy at Bhamo, and the professed inability of the Burmese Government to be of any service to us beyond Burmese territory, that an expedient presented itself of counteracting the intended evil by a direct appeal for assistance to a power over which the Burmese Government was then supposed to possess no controlling influence.

77. The city of Momein was well known at the time to be the head-quarters of a Panthay Governor, who exercised sovereignty also over the Shan States bordering on Upper Burmah. The Panthays themselves have shown an inclination of late years to revive the old caravan trade with Burmah, and there was reasonable ground for presuming that their interests would lead them to disfavour the pretensions of a Chinese freebooter like Lees-hee-ta-hee, whose very existence and means of livelihood were persistently opposed to every legitimate effort to promote either friendly intercourse with neighbouring states, or commercial freedom within their own possessions.

The Chinese of Bhamo were confederated with this Lees-hee-ta-hee for the purpose of keeping to themselves the profits arising out of a petty trade, as it then existed, between that place and the states and provinces lying eastward in the direction of China.

The cessation of trade between Burmah and China had become dependent rather on a system of recognised freebooting on the frontiers of Burmah, than on disorganisation produced by a period of devastating civil war within the province of Yunan.

78. In 1866, Lees-hee-ta-hee had gained so far on Burman credulity as to head a deputation to the King of Burmah, in which he passed himself off as the representative of certain Shan chiefs who were desirous, he said, to make over their country to the Burmese Government. His deputation was successful so far as to have been well received by the King of Burmah; but his Majesty, in referring to the supposed Shan deputation in his conversation with me before the expedition started from Mandalay, had made it appear that the late rebellion in his own country prevented active interference on his part in the affairs of the Shan States. Lees-hee-ta-hee nevertheless received two gold umbrellas

as a mark of vassalage, and in appreciation of the disinterestedness with which he had acted on behalf of certain Shan States, with a view to their becoming a component part of his Majesty's dominions.

With these distinctions he returned to his stronghold on the Mauphoo Hills, where for years past he had so far controlled the caravan route between Bhamo and South Western China as to put an effectual stop to all legitimate traffic.

79. It will be seen from the above that there was a sufficient connectionship between this robber chieftain and the authorities in Burmah (Chinese or Burmese) to make him an useful tool in effecting either the ruin or the accomplishment of any proposed object which had in view the opening up of trade between Bhamo and Momein.

Had his services been utilised by the Burmese Government (as they most assuredly might have been) for the purpose of opening out the old overland trade route with Momein, or had they even been enlisted in our behalf as a means of furthering an advance towards the Chinese frontier, the success of the expedition, as regards exploration within the Shan States, must have been considerably expedited, and we should in all probability have avoided detention on the Kakhyen Hills. But inasmuch as that it had been openly announced and declared at Bhamo that Lees-hee-ta-hee was himself hostile, and had been made the tool of our enemies to oppose British influences beyond Burmese territory, it became a matter of very serious moment to frustrate designs which set at naught every reasonable hope of successful enterprise in the direction of our proposed exploration.

80. Hence originated the idea or expedient of making application to the Governor of Momein by the dispatch of letters which, whilst they stated the true object of our mission, and were intended at the same time to escape the action of our supposed friends in Burmah, were designed also to further our own interests and invite the assistance of the Panthay Government.

I was particular, however, in affording some sort of proof that although we had met with opposition at Bhamo, the Burmese Government was with us in our undertaking, and had recorded its assent to the same in a royal proclamation, a copy of which, together with printed copies of our treaties with the Burmese Government, were forwarded with my letters to the Momein Government. (*Vide* Appendix.)

81. The letters were forwarded from Bhamo by private Kakhyen scouts on the 19th February; and their concoction and dispatch were contrived with a secrecy which, either by chance or miracle, defied the surveillance of even Burmese detectives.

I subsequently learned beyond all doubt that the Bhamo Governor, when informed of the means thus successfully used to secure Panthay assistance and defeat the designs of his own subordinates, was savage beyond measure, and commented on their supineness and want of vigilance with an animosity and force which resulted in the subsequent dispatch of those officials in irons and in disgrace to Mandalay.

82. It is only fair, perhaps, to mention that the alleged reason for the dismissal of the Bhamo officials was their infamous treatment of the British expedition. But to give credence to such an announcement appears to me to outrage alike justice and common sense. The officials were retained in office for months after my own letters condemning their conduct had been delivered to his Majesty. Their removal from office took place only after the return of Captain Williams and Mr. Stewart from Ponsee, and after it had become manifest that we had outwitted our opponents by the dispatch of letters to Momein. It is, moreover, an offence against justice to assume that men should have been ignominiously dismissed from office and kept in irons for an indefinite period for a faithful discharge of duty in carrying out the orders and policy of their immediate superiors in government employ.

83. But the new Governor of Bhamo is now himself on the scene. He arrived by boat on the 20th February, and sent to tell me the same evening that it was not his intention to land until the 23rd, as the intervening days were unpropitious and unsuited to so momentous an undertaking.

This

This determination he stuck to in spite of my written protest and entreaties that he would not allow private considerations of convenience to delay, for even one day, matters of great urgency, which could not be disposed of until after he had landed and installed himself in office as Governor of Bhamo.

84. The following is a short account of my first interview with the Governor, as extracted from my rough diary of 23rd February 1868: "Greetings over, I referred with surprise to the Governor's protracted stay at Mandalay in excess of the time which had been stipulated for by himself and allowed by the king. I spoke of the unwonted time occupied *en route*, and my own difficulties, during the interval of his absence, in combating the obstructiveness of his subordinate officers at Bhamo.

"The Governor tried to justify the delay as well as the other annoyances I had experienced, on the ground that the officials at Bhamo had not fully comprehended the orders issued at Mandalay, and were moreover, he said, at variance amongst themselves. Supposing such to be the case, it is not satisfactory, I said, after having waited a month in vain attempts to rouse the officials to energy and a sense of their duty, to find that the Governor himself had allowed four days to elapse since his arrival without evincing any desire to avoid further procrastination, and make up for the miserable shortcomings of his blundering subordinates. The Governor said that, being a '*new man*,' he was ignorant of local customs. He professed to be actuated by a zealous interest in our undertaking, and promised to facilitate our departure by every means in his power. But 'take my advice,' he said, 'and do not start until I have time to superintend all your arrangements and satisfy myself personally that there is nothing amiss.'"

85. The Kakhyen chief, Ponlyne, arrived the next day, and paid me an early visit before proceeding to see the Governor. He particularly begged that I would not forget his former reasons for urging upon the Governor's notice the advisability of sending a small Burmese escort with the party as far as the Shan town of Manwyne. I accompanied Ponlyne on a visit to the Governor, and the whole day was spent in conferences and explanation. As soon as the subject of the Burmese escort was touched upon, the Governor turned to the Kakhyen chief, and asked him in rather brow-beating style, "Why do you want a Burmese guard?"

Ponlyne.—"A guard was allowed when the king's cotton was sent for sale a year or two ago."

Governor.—"Yes, that was a different matter altogether: (angrily) no guard is required now!"

Ponlyne (rather staggered).—"Oh! I understand."

86. What Ponlyne understood, or was intended to understand, was that the sale of the cotton was a matter in which the Burmese Government had an intimate concern, but that the Bhamo expedition was a British undertaking, and might therefore be allowed to take care of itself.

I interfered peremptorily, and begged the Governor to explain matters clearly. I also called the Kakhyen chief near me (he had been hustled into an inferior position at a distance amongst the Governor's menials) and told him not to be afraid, but speak out his mind. The King of Burmah (I continued to the Governor) had formally recognised and supported the present enterprise. He had encouraged the English Government to embark in it, in a full and confident reliance on that support. Did the Governor wish the Kakhyen chiefs and others to understand that the royal commercial speculation, in the matter of a few bales of cotton, was of greater political importance than the well-being of an undertaking on which the king had staked his reputation and word?

87. This sensational outburst had its effect, and raised me at once in the estimation of the Kakhyen chief. To speak so authoritatively and without fear to the Governor of Bhamo evidenced to his mind the fact of my being a person of influence and position But Ponlyne had already been so unmercifully badgered by the Governor because he had dared to make mention of a Burmese guard, and had, moreover, been so clearly made to understand that he was condemned solely on account of this unpalatable requisition, that he elected to forego the guard altogether, and told the Governor, under evident compulsion,

that he would undertake to conduct us in safety to Manwyne without Burmese aid or intervention of any sort.

88. I came to the rescue at this crisis of affairs, and said that Ponlyne's reasons for specially requiring a Burmese guard were good, and would be explained by and by, or as soon as the Governor would allow the chief to confer with him in private.

Shortly afterwards the Governor dismissed his numerous attendants, and I sent away mine; we were therefore alone.

The Kakhyen chief now spoke out, and said that it was his fear of Chinese influences at Bhamo and on the frontier which caused him to ask for a Burmese guard, to save appearances only, so that mischief-makers might not have it in their power to say that *he* alone was to blame for having brought English interlopers into a foreign state.

89. I too had all along complained of these same Chinese influences, and was glad of the open testimony thus vouchsafed to the Governor by a comparatively disinterested Kakhyen chief, who had himself only recently been bound to Chinese interests, and was even then inclined to abandon us to serve their cause.

The Governor said that he was aware of the Chinese opposition, but could not as yet discover whether the mischief arose at Bhamo or at Mandalay, where the merchants were desirious for their own sakes to keep the Bhamo route closed, so as to profit to the full extent by the southern route *viâ* Theebo and Theinee. He promised that the head Chinaman should be called upon for an explanation. He would himself make full nquiries, &c. &c.

90. Ponlyne called again the same afternoon, and seemed ill at ease and disheartened.

He was evidently much hurt at the Governor's refusal to give tangible proof of a willingness to assist the expedition. I could see that he was personally anxious on his own account. The drift of his remarks was as follows: —

"Both the Chinese and Burmese are against you: but never mind, leave this place quickly and depend on me. The Chinese give out that you are going to join the Panthays against them. They really would not care if you did. This is not their real grievance. Their chief reason for wishing you evil is, that they may monopolise trade themselves and keep all outsiders at a distance."

91. The Kakhyen chief had openly announced in the presence of the Governor his ability to conduct the expedition as far as the Shan town of Manwyne. He had been forced into abandoning a point which affected his private interests very considerably, viz., the desire that Burmese officials should enter an appearance in the affairs of the expedition, and not withdraw themselves as unconcerned spectators only.

Nevertheless Ponlyne agreed to conduct us himself as far as Manwyne without Burman aid or support. He had formally guaranteed the good will and co-operation of all other Kakhyen chiefs, and I saw reason at the time to confide in his powers, rather than abandon ourselves to the procrastination of the Burmese Government.

92. I was still, however, dependent on the Governor for the services of interpreters in the Kakhyen and Shan languages. Numbers of men were available for the work, and would accompany me anywhere, but the fear of offending by disobeying Government orders, which placed us beyond the pale of communication with Burmese subjects, overcame their own instincts, and paralysed every effort I had hitherto made to procure assistance of any kind by a recourse to ordinary expedients.

93. When I explained my difficulties in this respect to the Governor in person, an order was given to the Tahpen Cheoung-oke to accompany the expedition himself, or make over to me two of his subordinate peons, or tamons of villages, who spoke either the Shan or Kakhyen languages. The Cheoung-oke in my presence openly told the Governor that he would rather forfeit his position as Cheoung-oke than be under the necessity of obeying orders which compelled him to accompany the expedition on so perilous an undertaking. The Governor smiled instead of rebuking the official and enforcing his own orders;

orders; but two tamons were afterwards told off, and directed to place themselves under my orders as interpreters to our party. The tamons belonged to the villages of Manlyaw and Hentha, and the understanding was, that they should join me on our arrival at Tahpen.

94. Only one more slight hitch, and we shall have turned our backs on Bhamo.

All the money in my possession consisted of India coined rupees, which, it was said, would not pass current among Kakhyens, or within the Shan states. The rupees must be changed for silver bullion of peculiar standard, readily procurable at Bhamo, and current everywhere. Such at least was the information tendered at Mandalay; and yet on arrival at Bhamo silver had become, for some unaccountable reason, an unknown commodity altogether. I would gladly have changed 5,000 rupees. It was our all, but no amount of solicitation was of any avail in procuring as many hundreds in bullion. I importuned every one The Chinese said they were poor, and did not possess silver. The officials excused the emptiness of their treasury by assuring me that remittances had only just been made to the capital on account of the previous year's tax collections.

95. The South Tsitkay sent his wife to me, who said that, if I would give her time and pay out rupees in advance, she might possibly get me (200) two hundred rupees-worth of change in the indefinite Burmese period of four or five days.

The Tsitkay's wife was a garrulous old lady of 60, who boasted of her near relationship to a Woongyee at the capital. She had evidently assumed the privileges of a Burmese Woongadaw (Governor's wife), and to all appearances conducted a large per-centage of his official duties. The alleged inability of such a woman, backed as she was by so much official status and authority, to procure a small amount only of what on an ordinary occasion would have been forthcoming in abundance, was a convincing argument against the futility of my attempting a bullion business on a large scale, and I persevered in the work so far only as to let the Governor know my wants and receive his stereotyped reply in this, as in all other petty emergencies, that being a *new man* he found it out of his power to afford me any assistance.

96. There was no help for it; we must start with *rupees* or not at all. Had bullion been procurable, the exchange would have involved, by Burmese calculation, an estimated loss of (30) thirty per cent. My own idea was that rupees would not be valueless even in the Shan states, and that, as a last resource, if the coin was refused, the rupees might be melted down as required, at less cost and trouble than the labour and vexation of making Burmese give in when once the determination had been come to of sending us on our journey minus cash, and, as they supposed, minus everything.

97. No silver, no interpreters, the evil influence arising out of strenuous Burmese opposition, and yet a British expedition was about to advance through a country which even Burmese missions had failed to penetrate.

Well might the officials chuckle over the utter state of helplessness to which they conceived the expedition had been reduced by a wanton disregard to royal promises and international obligations.

98. It was evidently beyond their powers of calculation to take into account that our wordly shortcomings were more than outbalanced by the possession of qualities which, however alien to Burmese conceptions, would probably gain for us a larger amount of success than was procurable by wealth or its more material accompaniments. Honesty of purpose, a good cause, friendly conciliation, and perfect truthfulness, were likely, in the long run, to be steadier allies and more certain aids to success than all the resources of Bhamo, tinged, as they must have been, by elements of deceit.

99. But it is time to start. The 26th of February is a day to be remembered in the annals of the expedition. On the 25th our baggage had been dispatched by boat, and would be conveyed up the Tahpen river to a village where mules were in waiting to convey it across the hills to Manwyne.

The land-journey from Bhamo to this said village was the most convenient to travellers relieved of their baggage, but as the route led through jungle, and was intersected at short intervals by branch roads, which diverged in all direc-

tions, and led no one knew where, a guide was an absolute necessity. It was necessary, too, to provide against other contingencies, as implied by the fact that a broad, rapid, unfordable river would be encountered on our first march, and that the means for crossing it could not be depended on without contrivance, and a certain amount of Burmese pre-arrangement.

100. On the 25th the officials (I was still made to depend on them for every want) had assured me that efficient arrangements had been made for our start the next morning, and that guides, with the requisite number of porters, should be in early attendance to accompany us on the first march out of Bhamo. They failed in their promises to the last, and it was with difficulty that we got off at 10 a.m., with very incomplete attendance, and no guides.

It would have been more baneful to our proceeding to have remained on this account, and hazarded the delay of obtaining a guide, than to have started without one, and trusted to accident. I chose the latter alternative, and was right. A petty Burmese official, known as the Toung-mhoo, met me as I rode through the town, and was persuaded into accompanying the party, after carefully stipulating that I would use my interest at Burmese head quarters in screening him from the liability he incurred by giving his services to the British expedition. The man, in fact, was pressed into our service, and it is right, perhaps, that I should admit (on the principle only of giving the devil his due) that the Toung-mhoo, though a Burman official, proved, on this occasion, an essential aid in forcing the start from Bhamo, and providing the means which were otherwise unavailable of reaching a destination on the proper (right) bank of the river Tahpen.

101. We arrived at the village of Tahmeylon at 2 p.m., and occupied a deserted Shan phongyee house on the bank of that river. The priest had fled or become defunct, but the paraphernalia of his office were everywhere in abundance. We settled down into comfortable quarters, amongst model shrines richly carved in wood and inlaid with coloured glasses, a library of religious books, sacred alms-bowls, and complacent images of Gaudama in every variety of shape and profusion. They remained intact, for it would have been sacrilege to have disturbed aught before the advent of a new incumbent.

The baggage boats, which left Bhamo the day previous, passed up the river during the afternoon towards our proposed destination at the village of Sitkaw, which we reached ourselves on the following morning (27th February).

102. Our mules and mule-men were assembled at Sitkaw, and at this starting point had also arrived a few Kakhyen chiefs (with their paw-mynes or deputies), who were afraid to trust themseves within the dangerous precincts of Burman Bhamo.

The Ponsee and Thalon Saubwas were present in person. The Saray Saubwa was represented by his two grown-up sons and several paw-mynes or deputies. The route, *viâ* Ponlyne to Manwyne, was virtually in the hands of these three Saubwas, Ponlyne, Ponsee, and Saray. They had all contributed mules and men for the expedition, and their willingness to serve and allow free transit through their respective hill tracts was signified without hesitation, now that no further occasion existed for fearing or being influenced by Burmese restraints.

103. It is true that the Tahpen Cheoung-oke and a few tamons or heads of villages on the banks of that river were still present; but the villagers referred to are a hybrid race, known as Shan Burmese, who pay taxes, but receive no protection from the local government at Bhamo. Their head men find it necessary, therefore, to come to a private understanding with the Kakhyen chiefs who occupy the adjacent hills to be mutually forbearing to each other, and purchase exemption from kidnapping raids, to which Kakhyens and hybrid Shans, as a rule, are by no means (by nature) indisposed.

The villagers thus become subservient rather to the Kakhyen chiefs than to their more lawful masters at Bahmo; and the presence of their head man at Sitkaw, even in a Burman capacity, could no longer act with undue restraint on the relations of these chiefs towards the expedition party.

104. Mule-men are as intractable and far more restive than mules themselves, unless properly understood or under well-trained management. First experiences at Sitkaw verified this fact to an insufferable extent.

The

The mules generally belong to petty proprietors, whose stock may consist of from one to a dozen animals. Each proprietor is a sort of irresponsible agent, and though his mules may be herded in a caravan, with the mules of other proprietors, he will not be regarded as a collective whole, but looks for and demands separate recognition in all that relates to the hire and use of his particular property.

105. As soon as our baggage had been made over to the Kakhyen chiefs, and passed in review by the several mule proprietors assembled at Sitkaw, an incessant clamour was raised as to its apportionment into parcels, for allotment to the several claimants for carrier employ.

I was obliged to depend a great deal, at this time, on the Ponlyne chief and my Chinese interpreter, Moung-Shwè-Yah. Both were occasionally drunk; but this seemed to be of no consequence, as drunkenness is the normal condition of Kakhyens when on duty, and is not regarded by them as any real interruption to love or business.

106. I find the following note in my diary of 29th February :—

Diary.—" Ponlyne visited me at 12; a volley of muskets on entering the village.

" He is suffering from a night of drunken debauchery.

" I offered him brandy as a sedative; it was nectar as compared with his native shamshoo. He evidently thought so, and seized the cup, but vomited in the attempt to gulp down its contents. He looks vacant and woe-begone, but talks *business* nevertheless. Moung-Shwè-Yah has been drinking too, and is useless; little or nothing can be done with either in their present state. Orders are given for mules to be brought, to try their loads. Panniers come first, and each muleteer seizes upon an allotment of boxes, and binds them securely to the panniers. All is noise and confusion; but order comes out of it after a time. The panniers with their loads are subdivided again into lots, and arranged in front of our residence. But there is a superfluity of mules, and the surplus proprietors quarrel amongst themselves, and fight with those who have already secured a baggage allotment. Panniers are unslung, and there is much angry dispute about their re-adjustment.

" Ponlyne has recovered a little, and says I must leave all to him, and not interfere. The panniers must be re-arranged to-morrow morning, and a fresh apportionment of baggage made before we can start. The mule-men are principally Shans, with a sprinkling only of Kakyens. They are inclined to be quarrelsome and discontented on account of their long detention at this place. Every little dispute calls for an appeal to arms; the hand is instinctively led to grasp the sword handle on the slightest provocation, but the weapon is not often drawn; the act is demonstrative rather than real. There is a good deal of cowardly bluster, but it very rarely happens that blows are struck or that actual damage is the result.

" The Tahlon Saubwa promises to take us anywhere if I will only pay him well; but he is not to be trusted. I am told that he suggested to his brother, Ponlyne, the advisability of levying an arbitrary customs-duty on our baggage, on account of mule demurrage.

" Ponlyne replied very staunchly that I was his friend, and threatened his brother, Tahlon, with immediate extermination if anything was done to cause me annoyance. There was an earnestness in the threat which must have been irresistible, for Tahlon has now become affable again, and is both friendly and useful."

107. We were to have left Sitkaw on the morning of the 1st (March), but the Burmese Cheoung-oke reappeared on the scene with certain of the Kakhyen chiefs, and all affirmed that the day (being the 9th of some imaginary Kakhyen month) is altogether unpropitious as a day on which to set out on a journey, or commence any other important undertaking. Other trivial causes were assigned for delay. The mule-men were said to be dissatisfied and quarrelsome, but the cause of their dissatisfaction was not explained or explainable. I expostulated strongly, though determined not to provoke a quarrel. There seemed greater need than ever for conciliation and forbearance. No other line of action would have been possible in the present state of our dependence on Kakhyen friendship. Up to that very moment Burmese officialism was doing all it could to make itself obnoxious and obstructive; but we shall get off after all. The Cheoung-oke tried to discourage me by saying that the Kakhyen chiefs were at variance with the mule-men, and that there would be open strife before long. I warned him against interference, and at the same time sent for the chiefs, and said that I would abide by any arrangements they might choose to make as to the distribution of mules or carriage generally. They were satisfied. I praised them openly for friendly assistance, and they as unreservedly declared that we were their relatives and friends, and that they would be true to us for ever.

108. Demands for money were pressing and continuous. Phoongyees even seemed to have turned beggars. A Shan priest called upon us at Sitkaw, and as I treated him with becoming respect, he became communicative. Shan phoongyees are admitted to be very lax and unorthodox in their religious observances. Our guest on this occasion appeared to be an exception to the general rule. He possessed a large comfortable monastery at this village, but his missionary duties take him, he says, to rude villages in the interior, where he hoped in time to convert the half-Shan population into civilised conformity with Budhist teachings.

109. The Phoongyee was wonderfully shrewd, and gave us the following good advice at parting. These are almost his own words :—

"We have met before in a former existence; and it is by virtue of meritorious acts then done that I am privileged to meet you again in the present existence and advise you for your welfare.

"Let me tell you then that wisdom and prudence are necessary ingredients in the performance of all worldly undertakings. Use special care and circumspection in your present expedition. Your enemies are numerous and powerful, but do not believe that they are either Shans or Kakhyens. Do your best. We shall all hail the re-opening of overland trade with China. The happiness and prosperity of the priesthood depend on the wealth and condition of the country and its inhabitants. What is good for the country is good also for religion," &c. &c.

110. The expedition did not get away from Sitkaw until 2 p.m. on 2nd March.

Late at night, on 1st, the Ponlyne chief came to tell me that Moung-Shwè-Yah, my Chinese interpreter, had colluded with the Chinese, and was as much our enemy as any Burman of Bhamo. I sent for the man, but found him too drunk to be intelligent or intelligible.

111. On the 2nd a delay arose in taking lists of our mule-men, and in ascertaining who they belonged to, and what particular chiefs were responsible for safe conduct and protection *en route*.

In the midst of this confusion the Ponsee and Tahlon Saubwas discovered, in an interval of sobriety, that the Ponlyne chief had received a present of a musket whilst in attendance on us at Bhamo. Moung-Shwè-Yah had urged them to claim similar consideration and reward as independent chiefs, who were as powerful as, if not more so than, the Ponlyne himself. It was not in my power to satisfy them. They were under evil influences, and the musket difficulty was a mere prelude to further obstructiveness. At the last moment they refused their services, and prowled about in sneaking silence, taking lists of ourselves and of our baggage, and implying, or intending to imply, thereby that they were measuring our strength and resources with a view to opposition as soon as we commenced the march into their hills.

112. It was long after mid-day, therefore, before mules were brought and finally loaded. The arrangements were, that the first day's march should take us to Ponlyne's village, which was said to be not more than four koss (or eight miles) from Sitkaw. Although, therefore, the day was already far advanced, and our arrangements for the journey by no means so effective as they might have been; the necessity of making a start was imperative, and could not have been delayed without endangering our enterprise. It would have been prejudicial to every hope of success at this time to have allowed mere considerations of time or distance to stand in our way, when the opportunity of an actual advance of any kind had at last become, even remotely, practicable.

113. Up to the last moment I was not sure that secret influences might not yet prevail to cause the desertion of our mule-men, and make our advance from Sitkaw as remote and impossible as it had been for a whole month of harassing inaction within the hated precincts of Bhamo.

114. But we are all off by 2 p.m. Three Kakhyen Saubwas lead the way, the mules follow, and certain men of the police escort are told off to ammunition and cash-chest.

There was something outrageously wild, even to romance, in the manner of our

our start. The Kakhyens, on the contrary, from *their* point of view, might probably have been discussing the completeness of the arrangements, whilst we, in our ignorance of their peculiarities and in the absence of interpreters, or of a single Burmese adherent who either possessed the requisite knowledge himself, or dared to volunteer information as to the correct mode of marching at the head or bringing up the tail of a Kakhyen convoy, were unable to enforce order ourselves, or to distinguish any sign of arrangement in the irregular programme of our exodus from Sitkaw.

115. The route lay in a northerly direction, through paddy or grassfields for a distance of three miles, as far as the small village of Sehek, from which point the ascent commences rather abruptly at the base of the Ponlyne hills. We had here headed our baggage, and a temporary halt took place.

The three Kakhyen chiefs, who had preceded us from Sitkaw, were seated by themselves at a point where the road branched off almost at right angles from the village of Sehek towards the base of the Ponlyne hills.

They were evidently in deep council, and much excited; but as I came up, the Ponlyne ran towards me and pointed out the road up the hill, exclaiming at the same time, as if to excuse himself for not leading the advance, "All right! Go on; don't be afraid!"

116. It puzzled me at first to know what he meant by the expression "*Don't be afraid,*" for hitherto there had been no cause to apprehend danger at all.

But on we went; my pony was a good climber, and was ahead, After ascending the hills some two miles, a shot was fired a long way in advance. The mule-men shouted like fiends, and urged me to fire off my guns. I waited until Dr. Anderson had joined me. A second shot, then four shots all at once, but no sound of a bullet. Captain Bowers and Mr. Stewart came up almost immediately, and we went on as if nothing had occurred. At least 50 of our mules were ahead. The Kakhyens of our party were many of them in liquor, and though they vociferated frantically, they did not exhibit the slightest sense of fear or misgiving.

117. One of them was mounted on a mule, and became more dangerous at close quarters as a friend, than any number of our jungle enemies in the bush. In his excitement he occasionally flourished a long sword, in reckless disregard of everything and everyone but himself. He became a still more formidable animal when the sword was sheathed and his matchlock brought into earnest operation. Drunkenness seemed only to steady his movements, for although the road was rough and a steep incline in most places, the matchlock was nevertheless loaded and fired with wonderful precision as regards time, but with utter recklessness as regarded direction. The man was both friendly and quarrelsome at the same time. A word or suggestion out of place would have converted him on the instant into a foe, and the only means of keeping him in good humour with himself and with us was to praise his dexterity, and promise to renew his exhausted powder-flask as soon as we arrived at the village of Ponlyne.

118. Soon after the firing commenced Mr. Stewart picked up a spear, which is supposed to have been hurled against some of our party with hostile intent. But the evidence on this point is not very convincing, as it rests solely on the testimony of a Burmese horse-keeper, who said he saw the spear alight in the ground when first thrown from the jungle. My belief is that the spear incident, as well as the shots which were fired in advance of us as we ascended the first projections of the Ponlyne range, had no real purpose beyond a mere *show* of hostility, contrived most probably, on the one hand, with the object of terrifying us into a return to Bhamo, and assisted, on the other, by certain of our own Kakhyen party, who no doubt required very little pressing in a matter which promised to make them masters of our baggage and property.

119. But as we are now on the march, it is advisable, I think, for the sake of more concise elucidation, to confine my narrative for the present to a selection of quotations from my rough notes and journal.

3rd MARCH 1868.

"Did not reach Ponlyne village until nearly dark last evening. The Paw-myne conducted us to a Kakhyen house, which had been swept and set apart for our accommodation. The building, like all Kakhyen houses, consists of an elongated bamboo shed, the front portion of which is open and forms a portico, in which the live stock of the proprietor (pigs, fowls, ponies, and buffaloes) are fed by day and herded at night. The remainder of the house is floored with bamboos, and is divided longitudinally down the centre, with transverse partitions on one side only, so as to form rooms or cells in which the separate members of one or many families find a habitation. The other side is open throughout, and is used as a general lounge; but the whole exterior of the building is closely matted in, with a single opening or doorway at the back, through which it is a sin for any one who is not a member of the family to enter, although egress is allowed through it to all alike.

"Very few of our mules had arrived last night, but there is a novelty about the scene and occasion which atoned in some measure for the absence of bed and supper.

"We stroll out and admire Kakhyen women pounding paddy by moonlight. An old lady of the party beckoned me to follow her, and I was conducted, with a thrill of ambiguity as to results, to a house at a little distance, where I found Ponlyne himself in the midst of his family.

"The old lady was his wife, and I was most hospitably entertained. The chief made me sit down by him on his own carpet, and the family attended on us with successive relays of Kakhyen beer, a very good substitute for an English original, provided of course nothing better is to be had.

"This morning there is a report that a portion of our mules and baggage have been looted by the Tahlon Saubwa. As the day wears on matters improve. We find that numbers of our mule-men, who were supposed at first to have decamped altogether, had simply herded for the night in small groups at their own pet halting places in and around Ponlyne. Missing baggage turns up most opportunely in various out-of-the-way localities.

"The jemadar with the escort arrived at 1 p.m., and reports that he remained for the night in charge of the ammunition and cash-chest at a village some three miles distant from Ponlyne; a number of our mules are also congregated there, with my Chinese interpreter, Moung-Shwè-Yah. The Paw-myne of the village, for some unaccountable reason, refused to let them come on. The Ponlyne chief has sent his own son to bring them. When they arrive we shall have lost nothing of any consequence.

"The chief's wife has paid us a visit in great state with her family, and a retinue of female attendants. She brings presents of geese, boiled rice, eggs, and Kakhyen beer.

"She is a fine, intelligent, matronly-looking woman; her get-up is perfect in its way, and, though a little *outré* at first sight, is by no means unbecoming.

"The head-dress consists of a black cotton scarf, which is wound round the head so as to ascend a foot or more above it in the shape of an inverted pyramid. The upper garment is a loose black-velvet jacket, ornamented with large silver button embossments, which encircle the neck from behind, and are brought forward towards the breast. Circular plates of chased and enamelled silver, each three inches in diameter, are arranged in lines down the front seam of the jacket on either side, and a similar line down the centre of the back and continued all round the skirt. The lower garment is a single dark-blue cotton cloth, about a yard and a half in length, which passes once round the body from the waist to the knees, and is fastened in front with a simple tuck. It is edged with a red woollen border, one end being tastefully worked with silk embroidery a foot in depth. This attempt at decoration is not lost sight of, but dangles on one side with a captivating effect, which is as much a study amongst the women of the Kakhyen hills as it is the right and privilege of the female sex everywhere.

"Sounds of Kakhyen music are heard in the distance, and going in search, we arrive at a house full of men, women, and children, who are dancing vigorously to a rattling accompaniment of gongs and sticks, played by themselves. They do not object to our presence, and Anderson and I enter the house and take an active part in the festive proceedings. The dance is a measured side step with side movement, crab-fashion. We go round in our proper places and are enjoying a certain wild novelty in the arrangements, when suddenly the male dancers become more than usually excited, and rush madly out of the house like demons. We remain inside with the women.

"The scene of rejoicing has turned into one of mourning and lamentation. Two of the women retire and cry piteously over the corpse of a child which has been carefully concealed in an out-of-the-way corner of a side apartment. *Horribile dictu!* We too have joined in the death-dance, and contributed our aid in the propitiation of nats, and in driving from its late tenement the hovering spirit of the departed! Other women bring us logs of wood to be used as stools, and sit down for a time, whilst our hosts hand round Kakhyen beer in conical cups of plantain leaves, which have been ingeniously improvised for our especial benefit.

"If our object is to familiarise ourselves with Kakhyen manners and customs, we shall soon become proficients with a vengeance! We paid our footing in rupees, and left the house with feelings not altogether unpleasurable, but shadowed, perhaps, by a tinge of sadness, and a sense that death-dances do not add to the personal dignity or moral elevation of European adventurers who have unconsciously indulged in them in the wilds of Kakhyen land.

land. The Saubwa's wife has come again with her suite whilst we are at dinner, and brings more fresh brewed beer.

"A number of our muleteers also congregate round us, and are inclined to be rude, and even insolent, but quiet down when properly spoken to.

"They ask whether our country is a hot or cold one. 'Cold.'

"'Oh! That is why you are good people like ourselves; but you must pay well as you go along, and there will be no difficulty. There are three chiefs who have still to be conciliated; one of them is your friend, but two promise to oppose you. We cannot mention names.'"

4TH MARCH 1868.

The cash-chest arrived at 12 o'clock, mid-day. The mule-men have commenced to filch out of our cases in earnest.

They are considerate too, in some respects. In one of Stewart's cases they discovered a bottle of port wine, and got at its contents by pushing in the cork, but the liquor proving unpalatable, they made a wooden cork, and replaced the bottle in its original place, with a very innocent and laudable desire to prevent waste.

I have assembled the chiefs and Ponlyne to-day, and made them all suitable presents of clothes, &c.

The Ponlyne makes a speech, and exhorts all to faithful service.

He informed me, however, privately, that the nats look unfavourably upon us, and will require propitiation. This communication was followed during the evening by an announcement that he was about to consult the spirits of good and evil, and obtain their consent or dissent to a continuance of our journey on the morrow. I am invited to attend.

This implies another demand for rupees. We proceed to the Saubwa's new house. The Kakhyen priest (Meetway) separates himself from the rest of his companions and occupies a dark corner at one end of the house. Here he crouches down and works himself into a fury of attitudinising, strokes his head and face with both hands, tears his hair, sighs, moans, groans, and finally his legs from the knee downwards quiver with a reverberation which repeats itself on the bamboo flooring with a sharp castanet commotion of sound, which is kept up throughout the ceremony. We now know that the man is possessed or beyond self-control. His utterances are henceforth those of demons and nats. There is anger and fury in his voice.

The chief whispers and asks me if I have brought a propitiation. I am prepared for the worst, but bargain to be let off for 15 rupees.

The money is laid on a new cloth and offered on a platter of plaintain leaves, but in a moment platter and rupees are kicked to a distance in scorn. The chief approaches with reverence and supplication, and begs that the offering may not be rejected. No reply, but deeper groans and more piercing shrieks. I am appealed to, and add five rupees to the offering, which now finds favour, and is duly brought to account. Benedictions follow, and all that is good is prognosticated in our future travels.

The effect of all this would be ludicrous and uninteresting in the extreme, were it not for the reverence and devotional earnestness with which the chiefs and people regard the ceremonial from beginning to end. There is no doubt that their faith is firmly bound up in the prognostications for good or evil which emanate from the being who, to their ideas, becomes thus miraculously inspired or possessed.

No work of importance, or even necessity, is ever undertaken without his approval, or rather the approval of the minor deities, who speak through him.

But the respect and dignity due to his office cease with the moment of inspiration. When unpossessed, the Meetway sinks into the common-place reality of an ordinary Kakhyen layman. The man to whom chiefs bent in reverence, and upon whom, perhaps, the fate of the expedition principally depended whilst under spiritual influence in the recent ceremonial, was in ordinary life a common labourer, and carried one of my boxes on the march from Sitkaw to Ponlyne.

The embryo Meetway in early life, or as soon as he begins to evince evident signs of a connectionship with the world of spirits, is subjected to an infallible test, which passes him at once into the recognised status of a full-blown Kakhyen priest.

The test is simple, but awkward; a ladder is provided (the steps of which consist of sword blades with the sharp edge turned upwards), and leads on to a small platform, which is thick set with the sharpest spikes. The novitiate takes his degree and becomes forthwith ordained to the office of a Kakhyen Meetway by climbing this ladder and seating himself upon the spiked platform, not only without personal inconvenience to his nether parts at the time, but with freedom from all after traces of visible or apparent injury.

The faculty of becoming possessed has thus been proved, and whether such faculty has any real existence beyond mere momentary frenzy and excitement, it is certain that the Meetway becomes a recognised medium, and possesses a kind of inspiration which, for want of peculiar training, perhaps, our limited ideas fail either to conceive or comprehend.

After the ceremony the Ponlyne spoke to me in confidence, and said that, if I wished to succeed in my travels, no help would be so powerful as a large expenditure of the precious metal.

He says that the Shans and Kakhyengalays have fraternised for the purpose of

opposing us, and that conciliation will be a difficult matter in the face of all the evil reports which have already been circulated with the avowed object of putting an end to the expedition.

5TH MARCH 1868.

Up at daylight. The mule-men come early and ask for their loads. We are prepared to start, but now comes the inevitable hitch, the Saubwa (Ponlyne) will not show himself.

I am told he is asleep or at breakfast, but in reality he has assumed a fit of diplomatic sulks, and obstinately refuses to leave his house or afford explanation.

I understand the indisposition and go to him. More rupees! This system of silent extortion is ruinous. It is a repetition of last night's story.

"Unless you are prepared to pay well you had better go back."

Six hundred rupees are demanded, and I pay down 300, which are accepted. I had already given him and his wife rich cloths and carpets, as well as a flint musket, a valuable present in itself. The 300 rupees now given are intended as a further advance to the mule-men, who had already received 500 rupees before we left Sitkaw.

It is far more probable, I think, that the money will find its way into the chief's own private hoard.

The cash-chest is another difficulty; 300 rupees are demanded as the sum to be paid for its conveyance as far as Manwyne.

I offer one rupee each, per diem, to 20 men as long as they are employed.

No.

Then I must break up the chest altogether; this involves delay; if the money is distributed and placed in our boxes, they will of a certainty be looted.

We eventually count it out in allotments of 300 rupees each, to be carried alternately by men of the police escort.

Did not get off till half-past nine. Our route to-day lay along the valley of the Tahpen. The view now and then is glorious. On either side hills tower up into mountains, and range after range succeed each other indefinitely till lost in the blue distance.

Ponlyne itself (the village) is about 2,500 feet above sea level. The immediate descent, from Ponlyne to the bed of the Nambouk river, is steep and difficult for a distance of about three miles; but the next four miles is occupied in crossing a succession of lofty spurs which abut into the valley from the main ranges.

Kakhyens keep to the high ground as much as possible, and their roads seem to be purposely designed with a view to reaching the most elevated points on any given route. My theory is, that the first trace is made in ignorance of locality, and that high points are selected as places from which to look out and espy a way to any desired destination.

The track once made may be anything but a direct route; but it serves as a guide, and is, perhaps, rigidly adhered to ever after. The Tahpen river is constantly in sight. At times we descend nearly to its bed, and anon it is roaring 2,000 feet below us; it is a broad rapid torrent, or rather a continuation of rapids down which the water rushes with unceasing roar, and with a force which nothing could withstand, if we except prodigious boulders of granite, which lie occasionally across its bed, or hang suspended on its immediate banks, with an inclination which suggests a gradual but inevitable downfall.

Halted at 2 p.m. The mules are fagged and cannot go further, although "the wheel" has only registered eight miles in six hours!

I have no faith in "the wheel" over this kind of ground.

The "wheeler" is obliged to carry it over a great portion of the road, which remains accordingly unregistered or unaccounted for.

We encamp in the jungle and call the spot Lăkhon, which is the name of the largest range of hills in our immediate vicinity.

6TH MARCH 1868.

The Ponlyne Saubwa says that we must proceed with caution to-day, as the Ponsee Saubwa is offended with me for not having presented him with a musket.

The Kakhyen deities had spoken, he said, through the Meetway, and ordered us always on commencing a march to fire a volley.

He inserted a slight amendment, however, to the effect that double charges of powder were advisable, so as to make as great a report as possible.

Started from Lăkhon at 8.45 a.m., and reached Ponsee village at 11.30, the wheel only registering four miles. Road comparatively easy and good the whole way.

The Ponsee Saubwa has not provided us with accommodation, and we encamp in a hollow at the foot of the village.

A Paw-myne, with his wife and female relatives, paid us a visit this evening with presents of beer and vegetables. One of the young women was inclined to be merry and communicative, in the hope of attracting attention and securing beads. Her hair was cut straight across the forehead, and allowed to hang down mop-fashion behind.

She was married nevertheless, although the *puggery*, or headdress which Kakhyen married women ought by right to wear, was absent. I offered to supply the deficiency, and raised a burst of modest merriment, which took the Paw-myne quite by surprise. He reproved the levity of his young relative, and evinced dislike to innocent flirtations.

One

One of my Burmese followers was struck this evening by a Kakhyen in the employ of the Ponsee chief.

Ponlyne interfered, and said that he would resent an insult offered to any of my people as if offered to himself. He has shown himself our friend thus far, but it would suit the reduced state of my finances better if he was less covetous and exacting in his pecuniary requirements.

7TH MARCH 1868.

The Ponlyne Saubwa has come to me early this morning to say that a small army of Shans and Kakhyens have collected on the road we intend proceeding by, and threaten opposition. He thinks they may be bought over for 2,000 rupees!

I do not mince matters, but say at once that I must give up all idea of proceeding further unless Ponlyne can let me off at a cheaper rate of blackmail than that which he now advises.

It is necessary to be particular on this point, for I have already been twice asked since we ascended the hills, what pecuniary arrangements I had made for our return journey homewards.

The Ponlyne rather significantly remarks that the Panthays have lots of money, and will be glad to accommodate me.

This is another instance of an unvarying belief in our connection with the Panthay cause, and our determination to assist it to the exclusion and confusion of all other interests in Yunan.

But a more serious difficulty is at hand, and threatens to be an obstacle to our further progress, at all events for some days to come.

Our muleteers, without a word of complaint, or even misunderstanding, have suddenly struck work, and I see them streaming out of camp with their animals and empty panniers. I appeal to the Saubwa (Ponlyne), but he merely sends back word to say, "All right; let them go; they will come back by-and-by."

He will not come to me, so I go and find him seated in the Ponsee Saubwa's house, in as complacent and collected a state of mind (though in liquor) as if nothing particular had occurred.

The muleteers, he informs me, have left on account of private messages which have been conveyed to them from the Saubwas of Sanda and Mynela, who threaten death and extermination if they afford us the means of entering the Shan States.

Ponlyne advises me to write to these Shan chiefs and warn them that, if they object to my visiting the Shan States, *we* too will close the roads leading towards Burmah, and prevent Shans from attending the annual fairs at Bhamo.

I stop him rather rudely by saying that my object is to conciliate strife rather than foment new causes of misunderstanding.

I have no objection, I add, to write to the Shan chiefs in the same friendly and explanatory sense in which I have lately addressed the Governor of Momein.

Ponlyne becomes very communicative in his cups, and volunteers to tell me the truth about my Chinese interpreter, Moung Shwĕ Yah, who is accused of having deserted us at Ponlyne (village) as soon as he found that he could not succeed in making the Kakhyen chiefs take part against the expedition.

His advice all along had been to murder me at a convenient season, and take possession of the cash chest and other Government presents of which I had charge.

This story is not improbable (*in vino veritas*), and bears out my own suspicions. Shwĕ Yah had behaved like a villain ever since we left Bhamo, and even there I began to suspect him. It was on this account that I did not take him into my confidence in despatching letters to Momein.

His private efforts to thwart and confound my plans having failed at Bhamo, he bethought him of the dastardly expedient of robbery and bloodshed (so Ponlyne says), but in this too he missed his mark, and, fearing exposure, chose rather to return in confusion to Bhamo, than let it be supposed by the Burmese Government that after all he might have been secretly aiding in the fulfilment of our undertaking. This is Ponlyne's opinion, and it agrees in all respects with my own observations.

So much for a man who was specially told off to our assistance by the King of Burmah.

Ponlyne informs me that the chief of Saray, who occupies the next range of hills in our advance, has been sent for, and refuses to come in. It is out of the question, he says, to think of moving without his previous sanction.

Political Agent.—Very true, but provided we get sanction, what about mules for our baggage?

Ponlyne.—I have a few mules of my own. We will take what baggage we can with them, and send back for the remainder.

Ponlyne is inconsistent. The mule difficulty may turn out after all to be a ruse of his own for the purpose of covering another extortionate demand.

It is whispered in private quarters that the muleteers left because they objected to being kept in inaction with their animals.

They were willing, it was said, to take on our baggage, and did not fear Shan threats of extermination; but it was unreasonable to expect them to remain at Ponsee after their stock of provisions had been consumed, and when they found that they were being uselessly detained, with the sole object of serving Kakhyen purposes.

Rumour is very conflicting, but it would have been dangerous to move without the Saubwa's concurrence or contrary to his advice.

I do not agree with Sir Samuel Baker in the pleasure he finds at being in a downright difficulty.

This is now my position, and I should regret it the less on my own account were it not for the incubus of responsibility to others, and, in a more remote degree, to my own Government. We have impatient spirits, too, amongst our number. A. has boils, B. is not in good spirits, C. is silent and anxious, D. is jolly under all circumstances, and regards difficulties as things to be overcome rather than growled at in languid inactivity.

The sky above is gloomy and overcast; clouds pregnant with rain threaten a discharge which will damp the little ardour or romance that might otherwise attach itself to a residence on the far-famed Kakhyen hills at Ponsee.

We are now encamped on the upper terrace of a tumulus-shaped hill, which has been cultivated to its base in a succession of terraces, generally regular and equidistant in their gradations of descent. The camp consists of three small sepoys' pals or tents, which are sufficient to give cover to the Europeans of our party. The escort and followers are busy hutting themselves on the several ridges which surround the encampment. There is little to grumble at beyond the anxieties of delay, and our own impatient eagerness to be again on the move.

Ponlyne has just come into camp, and sits himself down in my tent. He is in liquor, but, seizing me by both hands, swears fidelity and friendship. I fire off my guns and revolvers at his request. The bullets will not hit a particular bamboo which is an eyesore to him in his drunkenness. He becomes a savage instanter, and abuses me in foul Burmese. Forbearance is necessary, otherwise he is sure to commit himself to some reckless act of violence. I quiet him down by degrees, and he assumes his old show of friendly familiarity. But the animal is not to be trusted. He is true to his savage instincts, and treachery underlies every look and action.

The chiefs of Ponwa, Nyoungen, and Wacheoon have come in with small presents, for which I make a suitable return in cloths. They occupy separate hill tracts on the route between this place and the Shan town of Manwyne.

The Ponsee Saubwa's mother called during the afternoon with a number of female attendants. They are bearers of Kakhyen delicacies—beer, cooked rice, eggs, and vegetables. I made a general distribution of beads, but they beg for rupees, which are in greater demand, I find, and more acceptable in these parts than any other presentable commodity. So much for Burman duplicity or ignorance, which made it appear that coined silver would not pass current or be accepted as an article of exchange when once we had left the vicinity of Bhamo.

Ponlyne tells me, with a look of serious reality, to make up my mind to the payment of two baskets (bushels) of rupees before I quit Ponsee.

8TH MARCH 1868.

It rained heavily all last night; the single fly tents afford but a poor protection against either wind or rain; so violent were the gusts of wind that it became necessary to hold on to the poles to prevent the tents being blown away altogether. As the wind abated I got snatches of sleep, but in the absence of a bed, my mattress, which was on the ground, had become clammy and wet; we are better off after all than some of our followers, who are without shelter of any sort.

I have just heard of the arrival of the Nanlyaw Tamon, with written orders from the governor of Bhamo, directing both the chiefs of Ponlyne and Ponsee to return forthwith to Bhamo for consultation on the subject of the Ponsee silver mines.

This is mysterious! What reason is there for such urgent haste in ordering the immediate return of these chiefs, whilst it is known that they are our only guarantee of protection in these wild unknown regions? The pretence, too, for requiring their services at this particular juncture is palpably and ridiculously false. The Ponsee silver mines have been worked for many years past by Burmese and Chinese, and their condition and circumstances are already well known.

I suspect this Nanlyaw official. He is always selected when dirty work has to be done. He denies now that orders were ever given to him to accompany me on the present expedition. Yesterday I was informed that five houses had been accidentally burned by a jungle fire which is said to have originated at our last encamping ground. I was in no way held responsible, and the matter was satisfactorily settled for a bottle of whiskey. To-day (since the Burman official's arrival) a serious demand is made for 300 rupees. The Tamon chuckles. He knows that the demand is false and will be resisted, but this is just what he wants, as it affords a pretext for our detention until a compromise of some sort can be effected. I am afraid to yield to this claim, as compliance to-day would lead to double demands to-morrow, or be supplemented, without loss of time, by other equally false and unjust means of extortion.

The Saubwa refuses a compromise and predicts difficulties. He begins to find out that I am not to be squeezed to the extent he at first imagined, and talks about returning to Bhamo and leaving only his Paw-mynes with me. I remonstrate, but he says the Governor's orders are imperative, and he cannot afford to disobey them, &c., &c.

9TH MARCH 1868.

The Ponlyne Saubwa is both sulky and angry. He has become really obstructive and insolent since the arrival of the Nanlyaw Tamon with orders from Bhamo. I am given distinctly to understand that, unless I at once pay down 600 rupees as black mail, and 300 rupees as compensation for the village fire, he will no longer be answerable for our safety, but return forthwith to his native village.

Of course he knows that I cannot and will not pay. He will thus have a ready excuse for breaking off connectionship with us, and absolve himself from the danger of open rupture with the Burmese Government for having thus far contributed to our advance.

I argue at length against the unreasonable nature of the demands now made, and conclude my interview in the following strain:—

"The village fire did not originate with me any more than it did with you. The houses which are said to have been burnt lay at a very considerable distance from our line of march. I do not believe that our march had anything to do with their destruction further, perhaps, than the simple idea that any evil which takes place at present will be connected in the Kakhyen mind with our presence in their hill, and be ascribed to us accordingly. Having come as a friend, it is far from my wish to offend against Kakhyen scruples or custom. I will pay all reasonable demands, and am even willing to make reparation in the present case to the full extent of the damage done. But if the Kakhyens wish us to be their friends, they must deal fairly, and believe that we will do the same by them. Neither can I pay you the 600 rupees which you have just asked for, but I agree to send on valuable presents to the chiefs through whose territories we are to pass, and will pay them the customary dues as soon as we arrive at their respective places of residence. I shall regret your departure very much, for on some occasions you have been a true friend to us. It is not in my power either to detain you by force, but remember that you are under an engagement to conduct the expedition in safety as far as Manwyne, and although the Governor of Bhamo has sent (with what intent I cannot say) and ordered your immediate return, I still beg of you to remain, and rely upon my assurance of support against any oppressive acts to which the Governor may try and subject you as a consequence of your compliance."

This speech had its effect; the Saubwa did not again allude to his intention of leaving me, but simply asked for 100 rupees as a means of settling the village fire dispute. This I agreed to pay partly in money and partly in cloths.

It was at this stage of our interview that I was suddenly made aware of the presence of three men dressed up in all the wonderful apparel of Chinese officers of rank.

I knew their faces at once, and they recognised me; but beyond this, I was as much mystified as Ponlyne himself in trying to imagine who the men were, and how I could ever before have held communication with Chinese officers of their stamp and appearance.

The mystery is soon solved: Lauloo strips off a portion of his trappings and discloses himself as the Kakhyen scout whom I sent from Bhamo with letters to Momein. He takes from his waist a small bundle, which, when unrolled, reveals a letter and envelope of prodigious dimensions scored over with Chinese superscriptions and a variety of Chinese seals in red and blue devices. Ponlyne is silent and uneasy; he is seized with anything but pleasurable feelings at the style of the new comers, and appears hurt at their friendly recognition of all our party without a word of explanation or acknowledgment in recognition of his own presence and authority.

The envelope contains two letters; one in Chinese, the other in Arabic. Our native doctor is able to interpret a portion of the latter very imperfectly. The Chinese epistle cannot be read for the present; Lauloo explains its contents as but favourable, and in the highest degree encouraging.

The Governor of Momein, he said, expected us by the central or ambassador's route (which leads direct from Bhamo into the Shan state of Hotha), and had arranged accordingly to assist and co-operate with us on the march.

I am advised not to advance for the present *viâ* Manwyne, unless we are strong enough to fight our way through the blockade established by Lees-hee-ta-hee at Mauphoo.

The Governor of Momein received my Kakhyen scouts with every mark of friendly respect, and has sent them back as an embassy in the costly dresses which have just contributed to our amusement and surprise. Each man has a silk cap of blue satin embroidered with gold, a thick padded superfine cloth jacket highly ornamented, a long silk coat, and Chinese gold embroidered shoes. They are Kakhyens of the Rowlee tribe, and carry their new honours with wonderful self-composure. Altogether seven men have come in from Momein; one of them, Khatoodoo, is a (Kakhyen) Panthay officer of some rank, and recommends himself to our notice by a display of good breeding and gentlemanly attainments, which are far in advance of any preconceived ideas of semi-barbarous civilization.

The arrival of letters from Momein and the manner of their delivery by our own messengers, who had met with so much favour at Panthay head-quarters, is an event in the fate of the expedition which not only promises well for the future, but is pregnant also with encouraging influences in our present emergencies, &c. &c.

The Shans of Manwyne are coming in and establishing a small bazaar in our lines; rice is selling at eight measures for the rupee. Yesterday it was only three; an empty

bottle was bartered for 14 to-day, and attained therefore to an estimated money value of nearly two rupees.

But when gain or game offers, Kakhyens are insolently exacting on their own hills, and openly persecute our Shan bazaarmen with an overbearing amount of injustice, which is ridiculously irritating to unpractised observers.

The Shans are too mild or too much afraid to retaliate. They will either forsake us, or the bazaar prices must rise considerably, so as to cover extraordinary loss caused by Kakhyen excesses. It is out of my power to interfere much with the customary rapacity of these Kakhyen hill tribes. Other considerations, too, are pressing just at present to justify the risk of dispute on points which, though they sadly try our power of endurance, are not so absolutely urgent as to require an immediate remedy.

10TH MARCH 1868.

Ponlyne is savage with my Kakhyen scouts for having handed me letters from Momein direct, without previous consultation with himself. I cannot afford to make advances to him or try other means of conciliation as long as he remains in his present temper, otherwise he will at once fancy himself in the ascendant, and fall back upon the old demand for 600 rupees.

The Nanlyaw Tamon has gone off to Bhamo without leave or intimation of his intentions. Ponlyne assured him, in my presence yesterday, that his villany had become notorious, and that I had found him out. He was undoubtedly sent here as a fit agent to add, if possible, to our difficulties, and has returned in haste to Bhamo, to report the arrival of letters from Momein.

It is now an undeniable fact, that this said Tamon incited the Kakhyens to re-open the village fire question after it had once been settled. We cannot blame the Kakhyens for having become unruly and extortionate when they thus found themselves backed up by powerful Burmese influences at Bhamo.

But, under all circumstances, it is desirable to show that we are not over anxious or disconcerted at the unavoidable detention at Ponsee. I therefore send to tell the Ponlyne, with feigned unconcern, that having made up my mind to an indefinite stay on the Kakhyen hills, it is as well that we should pass the time pleasantly, and I am in favour, therefore, of an excursion to the silver mines on the opposite bank of the river, if he will accompany me or supply guides. He is astonished, but not outwitted. His message was, "*Wait a little, and I will come and see you.*"

That is all I wanted, as, combined with whiskey, it will afford the means of a temporary reconciliation.

11TH MARCH 1868.

A few mules belonging to Ponlyne, which had been kept in reserve for a start as far as Saray, if all other supplies failed, have left camp this morning.

The Saubwa presented himself shortly afterwards, looking very foolish. He asked, with an assumed air of effrontery, and in a taking-the-bull-by-the-horns-style, "What I intend to do?"

"How did I intend to get on?" &c. &c. &c.

I replied by a ferocious *tu quoque*, placing as much emphasis as possible on the *tu*. How, I asked, did he reconcile the unnecessary delay here with the promises of safe conduct as far as Manwyne? Of what avail was it to make the village fire a pretence for opposition, when it was *patent* to all that our mules had been taken away with his knowledge and approval, and that the possibilities of our further advance had been effectually destroyed (for a time at least), without any reference to the fire question at all?

Ponlyne was at last hard up for a reply, but fell back as usual on his old craving demand for rupees. "You must pay me down 900 rupees at once, or I cannot undertake to assist you further; of this sum I will pay 300 rupees towards the village fire, and send 600 for distribution amongst the chiefs in our advance."

I firmly refuse both demands. *First*, because I have not the funds to spare; *secondly*, I know that the money if paid will be simply appropriated by Ponlyne to his own uses; and *thirdly*, I feel certain that a compliance with unjust exactions of this kind, without assisting our advance, will give me so notorious a reputation amongst Kakhyens as a fit subject for squeezing, that other unjust demands will be made and pressed with an urgency which must lead either to riot, insolvency, or inevitable failure, &c. &c. &c.

12TH MARCH 1868.

Money difficulties do not cease, but the Kakhyens are pleased at hearing that I regard their love for rupees as a good omen in our future dealings and intercourse.

Hitherto we have all believed, I said, that a few beads or pieces of red cloth were more precious in their sight than any amount of silver and gold. Had I understood their real wants before I left Mandalay, I might have provided myself with money in abundance, and more than satisfied all reasonable demands. It was my wish, I added, and the wish of the Government I served, to give freely and concede liberally to the wants of a new people, whom we wished to reconcile as friends rather than irritate into enemies by resisting any demand which had the slightest semblance even of reason or justice. But however

however liberally inclined, they might rest assured that I would never yield to pressure, when once convinced that the demands made were neither reasonable in themselves nor consistent with justice. Even now, in reference to the village fire, it was not my intention to act in opposition to the advice of those chiefs who had asked me to award suitable compensation, although I was still of opinion that the demands made were exorbitant, and that the origin of the fire could not be justly set down to me at all.

The Ponlyne retired for a short time to consult with other chiefs, and afterwards came to tell me that 100 rupees had been agreed upon as a sufficient sum to cover all losses and allay further dispute.

The money was then and there paid and accepted, but returned the next evening, with an insolent intimation to the following effect :—

"Pay the original demand, or stand the consequences."

There is mischief in all this; and if I could spare the money I would pay up at once, and defeat one of the schemes of our Burmese oppositionists. As it is, I am obliged to appear unconcerned; and having done all that reasonably lay in my power, with the approval of the chiefs, to come to a settlement, matters under this head must now be left to take care of themselves.

Yesterday I dispatched messengers with presents and letters to the chiefs of Saray and Poogens, or head men of Manwyne and Manhleo. Ponlyne not only advised this course, but took part in it by dispatching two of his own Paw-mynes with my messengers, &c. &c.

Ponlyne is sober to-day, and makes some shrewd observations, as follow :—The only effectual means by which the old trade can be revived between Burmah and China depends upon a reconciliation of Chinese and Panthay interests in Yunan. He asks me to concentrate all my best efforts towards this one point in preference to all others.

He also begged I would speak well of him to the chiefs of the Shan States, and dispel any evil effects arising out of an impression that *he* alone was to blame for having conducted the British expedition so far on its journey.

I said that the English and all other Governments which had any interest in our present undertaking, would owe Ponlyne a debt of gratitude if he faithfully carried out the promise which had bound him to our service at Bhamo.

He was flattered by this and other allusions to his personal merits, and informed me openly without any reserve that he was giving us his assistance at the present time in direct opposition to the wishes and injunctions of the Burmese Governor. The Tamon of Nanlyaw (the official who conveyed to him certain messages and letters from Bhamo) had not ceased, he said, from the time of his arrival to the time of his departure, to persuade and even order him in the name of the Governor to desert the expedition and return with the Ponsee Suabwa to Bhamo: all that Burmans desired, he said, was that we might be lost or made away with so effectually as to prevent the possibility of our return to Burmese territory.

I felt convinced, from the earnestness with which the chief spoke, and from my own general observations of facts, that he had in no way exaggerated the tenor of the instructions conveyed to him in the letters or messages from the Burmese officials at Bhamo.

Those letters, however, were not forthcoming. They were only shown to him, he said, and retained by the officials who brought them. He laughs at the shallowness of the pretext for requiring his return to Bhamo, and alludes to it only as another proof of the unscrupulous action of the Burmese Government in its endeavour to frustrate our purposes and progress.

He adds:—You did wrong, Ayeybyne,* in sending your Burmese clerk with the letters and presents to Manwyne. Don't you know that all Burmans have been against you from the first? Even your own Burmese servants are not to be trusted, as it is in their power to work infinite mischief by misrepresentations, which may seriously retard your further advance."

The Burman clerk was sent by me as a check on the Kakhyen Paw-mynes, who would otherwise have helped themselves to the presents, and made distribution of them as they pleased, without reference either to justice or my wishes.

I note the circumstance in my diary, because Ponlyne's remarks are an apt illustration of the readiness with which even Kakhyen instincts have grasped, and are able to account for the petty designs of our obstructive Burmese associates at Bhamo.

14th MARCH 1868.

The messengers who were dispatched with presents to Manwyne returned to-day, and report that none of the presents have been accepted. The chiefs are not hostile, but they have been induced by evil report to doubt the character and intention of the expedition: I am advised by them to put myself in direct communication with the Shan Saubwa of Sanda.

The Saray Saubwa too has arrived, and called upon me to-day with a large following of Paw-mynes and other Kakhyen attendants. He is repectable in manner and address, and sensible in his remarks, when he makes any; but his curiosity in all our foreign appurtenances, guns, dress, saddlery, and general equipment, is too great for the present to admit of ordinary attention being given to mere matters of business.

The

* *Ayeybyne*,—my Burmese title.

The Ponlyne is present, and has altered his tone again to one of downright hostility. This is a sample of his delightful conversation.

"What do you intend to do now, Ayeybyne? All are against you; you cannot go back, and the Shans will not allow you to go forward. You *must* listen to me, and pay 500 rupees on account of the fire, and 600 rupees to be distributed *as I like* in presents; I speak for your good. Shans, Burmese, and Chinese are all leagued against you. For one man who would dare to assist you there are hundreds who are ready to cut off your head." (Here he suited the action to the word, by holding an imaginary head by imaginary hair in his left hand, and drawing his right hand backwards and forwards, with a sawing motion at an imaginary neck.)

My reply is, that I do not believe that the Chinese and Shans are against us.

The Chinese petty traders of Mandalay and Bhamo do not certainly wish us well, because they are afraid our success at an expedition will interfere with their own profits and livelihood.

The Shans will be our friends as soon as I can make them comprehend the true objects of our mission; all will yet find that we are present amongst them as friends, however much they may now fancy that we are separated by race, religion, or national interests.

Ponlyne. "True, the big Chinese are not against you, but it will be difficult to overcome all the evil which Burmans and Chinamen of Bhamo have done by misrepresentation, and more especially by making it so apparent that the Burmese Government is against you. Why did the Shans send back your presents? They are ready to oppose you if you go on. Lees-hee-ta-hee has received letters from Bhamo, and is determined to stop you. You ought to have given me the money I asked for. The Panthays may be your friends, but Lees-hee-ta-hee is very powerful, and is not only guided by Burmese advice, but receives supplies in money and arms from Bhamo. He visits that town sometimes, and his mother resides there. The Panthays are his enemies; but he is strong enough to be independent and to altogether disregard them."

The Saray Saubwa listened to this conversation with great attention, but as I spoke to Ponlyne in Burmese, he could only understand a portion of what was said.

The village fire question was again brought up. My object was to let the Saray Saubwa see that I had acted throughout in this matter in fairness and with reason.

He said that, if I would come quickly to a settlement in this matter, he would conduct me by a direct hill route to Momein, without any necessity for entering Manwyne or the Sanda Shan States.

I said that the affair had already been settled *three times*, with the approval of the Ponlyne and Ponsee chiefs. The villagers were satisfied themselves, and only feigned disaffection because they were under Burmese influences. The Ponlyne Saubwa had already made me pay him 480 rupees on account of mule hire, and not a fraction of that sum had been honestly distributed. What security was there now if I paid the present demand that other claims of the same kind would not at once be urged against me?

The chiefs all leave, but make their appearance again in full force at 7 p.m. The Ponlyne is spokesman. He commences by insisting on the payment of the balance of mule-hire from Sitkaw to Manwyne.

"Yes," I say. "If you will take me on to Manwyne according to my original agreement, I am willing to pay this balance, although the mule-men of our party have forfeited all honest claims by desertion and breach of contract.

"The sum of 900 rupees, which I have already paid in hard cash, is far in excess of the usual rates, and had the money actually reached the pockets of mule-men, they would be more than compensated for their labours."

The conversation was then carried on as follows:—

Political Agent.—Where are the mule men? Whom shall I pay the money to? Will you hold to your engagement of taking me to Manwyne if I *do* pay?

Ponlyne.—Don't talk of Manwyne; you cannot go there.

Political Agent.—Then why did you promise to take me there?

Ponlyne.—The Manhleo Poogen is your enemy, and his people have conspired to murder you all.

Political Agent.—We are not afraid!

Ponlyne (angrily.)—Don't be a fool, but listen to *me*; you know as well as I do that Burmans, Chinese and Shans are at present opposed to your proceeding.

Political Agent.—I am proceeding under the patronage and protection of the Burmese Government, and have a royal proclamation in my pocket to that effect.

Ponlyne (angrily, and in derision at my apparent want of gumption).—True, but you know that the Burmese Government never intended that you should profit by it. We have all been secretly ordered to oppose you by every means; even to the extent of murder or assassination, if other means failed, to deter you from proceeding beyond Burmese territory. I have remained your friend throughout. Three written summonses have reached me since I left Sitkaw to desert you and return to Bhamo.

Political Agent.—The Bhamo Governor cannot reasonably expect you to return until your duties are first fulfilled to the expedition.

Ponlyne.—

Ponlyne.—Yes, the orders are to return at once. Your Burmese clerk has seen them. I have taken care to keep the last letter, and will show it to you.—(*Diary ends.*)

120—(*a*). This written order was sent to me the same day by Ponlyne, and after I had convinced myself that it was a genuine document, that it bore the seal of the Governor of Bhamo, and that it really did contain an order to the Kakhyen chiefs to desert the expedition, and to proceed themselves without delay to Bhamo, I delivered it to my Burmese clerk and directed him not to return it to Ponlyne without my express orders. My intention was to have obtained Ponlyne's permission to retain the document and exhibit it at some future time as one of the proofs of unfair dealing on the part of the Burmese Government. My plans were defeated by this very clerk, who himself turned traitor and deserted me a few days afterwards, under circumstances which verified Ponlyne's suspicion of bad faith amongst my own Burmese followers. The box of records of which he had charge remained in my possession, but on examining its contents the Governor's letter to Polynine was nowhere visible. I have not the slightest doubt that it was designedly removed or made away with, and it is not at all improbable that the desertion of the clerk was prompted as the readiest means of depriving me of this letter, and of avoiding on his part the responsibility of its loss. On our return from Momein I learned for a certainty that this same Burmese clerk, after he had deserted us at Ponsee, was well received by the Governor of Bhamo, and treated with even kindness and familiarity. On reaching Mandalay he was immediately taken into the King's private employ, and promoted to the position of a royal detective,—a reward no doubt for meritorious services whilst attached to the British expedition!

120—(*b*). The probabilities are that he was in the pay of the Burmese, and had leagued himself against us from the first. Such an admission suggests the question, "Why were men of this stamp employed by the leader of the expedition?" and I reply once for all, for the benefit of those who may never have resided at an Asiatic, or more especially a Burmese court, that no Burman subject in Upper Burmah dares to have a will of his own as opposed to that of his Government. The indirect mode of reaching him offensively for slights or offences which the Government could not possibly resent at the time of committal are too numerous and too certain, both as regards himself and probably also his whole family, to obscure the consequences of free and independent action, as opposed to Government wishes or policy. His training, too, from infancy has been so abject and servile that Government bondage becomes a second nature, and marks every man as an instrument to its own purposes, either for good or evil.

120—(*c*). Under these circumstances, the fidelity to our cause of any Burman dependant, who had once recognised the position and contrary action of his own Government as regarded ourselves, would have been much more a matter for surprise and bewilderment than the natural play of infidelity to which his training, his instincts, and possibly his (supposed) duties to his own Government must almost of necessity have inclined him.

120—(*d*). It is this unseen power in the hands of the Burmese Government that intensifies the difficulties of diplomatic contact, and gives it the vantage ground in all contests which are not at once reducible by honest, straightforward, plain speaking. A recourse to extraordinary argument or diplomatic subtleties of expression is fatal, for then the unseen powers come in as aids, and outnumber or overmatch all honest opposition. A Burman diplomatist, right or wrong, concedes only to fear. This will continue to be his distinguishing characteristic *ad infinitum*, or *ad æternum!*

Diary (continued) 14 March.

The Saubwas take their leave, and we are some of us sullen, and perhaps a little dejected. Visions of treachery and throat cutting, as designed by Burman intrigue, present themselves too palpably to certain imaginations to produce a healthy or pleasant train of ideas, &c. &c.

15TH MARCH.

I have determined to dispatch messengers to Momein, and let the authorities there know the true state of our present situation. My messengers are the men who arrived lately from Momein, and they are well provided with money and presents, and may be expected to return in about 10 days. In the meantime the position here is one of disagreeable helplessness. I can neither advance nor retreat without sacrificing all our baggage. The Kakhyens have cut off the usual rice supplies from Manwyne, and common necessaries are at a premium. The Ponlyne exults in having got me into a fix. I am obliged to put up for a time with his taunts and extortion, but he knows my mind.

He became furious last evening, because I told him we were not afraid of the murderous reports which predicted our speedy annihilation. He is evidently disheartened as well as discomfited at having failed to carry out with effect the mercenary purposes which first drew him into our meshes (or us into his) at Bhamo. He has been at times sanguine and earnest in his professions, but alway lukewarm and reserved in real action.

I have now the use of his Burmese and Kakhyen interpreter, Moung Mo. He is a Cheoung Zau or Tamon of Hentha, a village on the Tahpen. The man wishes to serve me, but is afraid at present to let it be openly known that he is one of my employés.

Manhelo is a Shan township beyond Manwyne. The Poogen or head man, who is referred to by Ponlyne as our greatest enemy, is known to be a man of great influence and authority in the Shan State of Sanda. About five years ago he attacked a Panthay caravan and committed indiscriminate slaughter. The Panthays, it is said, have never been able to retaliate with effect. It is believed that the Poogen will not be superior to the attractions of presents and rupees when he once realises the fact that we have come as friends, and that he has no real cause to regard us as enemies.

The fire question is at last settled. I bound myself to abide by the Saray Saubwa's decision; and he has advised me to pay 260 rupees. This is not extortionate, but my reasons for holding out were imperative. The claim had at one time risen to 500. All parties are now satisfied, and it is thoroughly understood that the onus of further dissatisfaction, should any arise on this account, rests with the chiefs and not with me.

Notwithstanding this settlement, I am warned at 9 p.m., both by Ponlyne and Saray, to be on the alert during the night and look out for an attack, as a number of malcontents are known to have assembled, and intend mischief.

The Saubwas declared that they had done all they could to quell the unruly feelings of these obstreperous Kakhyens, but to no purpose. Finally, they confess to having incited them to action with taunts and encouragement of rather a negative kind, which implied that they (the Saubwas) would look on from a distance and see how many of the attacking party fell to our bullets and became victims to their own folly.

16TH MARCH.

I did not neglect the Saubwa's warning, but we passed a quiet night and are still unmolested.

Threats of injury and molestation used to be unpleasant at first, but they naturally lose much of their effect as the various intimations of danger remain unfulfilled. The only anxiety they cause now is the evidence of secret opposition and enmity instead of hearty friendship and good will, which would have been secured to us if freed from the trammels of Burman interference.

The Saray Saubwa has asked me how many mules I require, and promises to secure 80 animals without loss of time.

Wrote and dispatched letters to the Manhleo Poogen and the Saubwa of Sanda. Enclosed also copies of treaty with Burmah, along with other general information which may assist in furthering our expeditionary prospects. There is something suggestive in the fact that the Governor of Momein should have selected the embassy or central route as the one by which to expect and assist our advance. This is the route by which all political missions to and from China have hitherto travelled, and it may be almost inferred from this fact that the object of the Burmese officials at Bhamo in denying us the embassy route was purposely contrived as a means of ignoring our ambassadorial character, and thereby detracting from the honourable notice which the mission might otherwise have profited by in its travels beyond the Burmese frontier.

One thing is pretty evident, and that is, to all appearances we have been consigned to a route which is most impracticable, and under Burman superintendence the most inhospitable of all known routes in existence.

Ponlyne has informed me this morning of his intention to return forthwith to his own Saubwaship. He asked for the balance of mule hire. I say that he has already received 630 rupees irrespective of 300 rupees paid as demurrage at Sitkaw. The engagement was that the mule men hired at Sitkaw, were to convey me as far as Manwyne. They had deserted, and forfeited any balance of mule hire, even supposing that such balance was a reality. The amount already paid is in excess of the average rate of hire between Sitkaw and Ponsee.

Nevertheless, I tell the Saubwa that if he will make up his accounts, they shall be duly considered and attended to. He left, but returned shortly afterwards to say that all advances already made on account of mule hire ought to be regarded as *subsistence* only

and

and not *hire*. An account was provided in which 200 mules were charged for at the rate of 20 rupees per mule.

I could only laugh at this barefaced attempt at imposition. Ponlyne looked grave, and had recourse once more to the old system of intimidation (murder and stoppage of supplies). When this failed, he got up in a huff and swore that he would leave Ponsee instanter and consign us to certain destruction.

The Saray Saubwa is accompanied by a Chinese interpreter who speaks the Kakhyen language. He reads and interprets my letters from Momein, and promises to be generally useful, but having friends at Bhamo, he is not at present to be depended on. From his conversation and remarks he evidently believes our expedition is a military demonstration in favour of the Mussulman population of Yunan as opposed to Chinese interests everywhere.

17TH MARCH.

Difficulties increase. The Saubwas come early and pass several hours in small talk. The demand for old mule-hire has risen from 20 to 25 rupees per head. The Saubwas would be glad, they say, to come to any terms, but their followers have cast an avaricious eye on our cases, and would hail with delight a crisis or collision which would give them a pretext for the acquisition of loot.

I offer 500 rupees in addition to the hire already paid if carriage is procured as far as Manwyne.

Chiefs.—You cannot go to Manwyne. The roads are guarded by armed men who have been sent to oppose you.

Political Agent.—This is not true. My own messengers travelled by this road a few days ago, and saw no one.

Chiefs.—It is generally believed that you have got 16 baskets of rupees.

Political Agent.—This is mere idle report. The Shan chiefs will protect me against robbers in search of loot.

Chiefs.—They will have nothing to say to you.

Political Agent.—You are wrong again. The Momein authorities are already on my side. The chief of Manwyne is anxious to receive me, but wishes first to consult with the chiefs of Sanda and Mynela.

Chiefs.—True; but Lees-hee-ta-hee holds the passes at Mauphoo He has sent orders to the Sanda chiefs, and told them on no account to let you pass. The Sanda Saubwa is in doubt, and cannot act without offending the Panthays or Lees-hee-ta-hee. He is afraid of both.

Political Agent.—I shall await the reply of my letters to Sanda and Momein. The Panthays may be induced to send a guard to escort us through the passes at Mauphoo. I shall not advance beyond Manwyne without the full consent of all the Shan chiefs. (The Chinese interpreter here suggested that I should write to Lees-hee-ta-hee, who could be restrained to any extent in his conduct towards us by a threat of retaliation on his mother, who was a Burman, and resided at Bhamo under the protection of the Burmese Government.)

This is very true, but we are not Burmans. There is no doubt, however, that the Burmese Government, which considers itself privileged to visit the sins of the father or other male or female relatives upon any number of present or succeeding generations, and to the remotest degree of consanguinity (if necessary or rather expedient), has perfect control over Lees-hee-ta-hee, and can mould him at will into any course of action or inaction.

But whilst engaged in conversation alternately grave and humourous, a shot was fired from a house in the village which almost overhung our encampment, and whilst one bullet or slug was heard to whiz over the tent we were sitting in, another struck the head of a camp-cot inside the tent. We were surprised, but no one believed that the firing was in earnest, until after the lapse of a few moments, when a second shot was fired, and this time also the bullet whizzed close over the tent.

Ponlyne got up and vociferated like a madman. The Saray chief was perplexed, but showed no signs of alarm. The state of his feelings may be presumed, however, from the fact of his having informed me, not five minutes after the firing, that it was his intention to return forthwith to his own dominion, and take leave for ever of Ponsee and its uncertainties.

The shots hurt nobody, and were traced to nobody. It is not improbable that Ponlyne may have innocently designed them as an aid to this pecuniary negotiation. The ruse was without effect. I promised to abide by my engagements faithfully, and even liberally, but it was now evident to all that I would never submit to wrongful extortion.—(*Diary ends.*)

121. But the inordinate length to which this report is growing, and the endless matter which has still to be touched upon, warn me that I must drop the diary system for a time, and confine myself to a more concise form of abridged narration.

122. True to his word, the Saray chief left Ponsee on the 18th, the day succeeding that on which the two shots had been fired into our camp. His message to me on leaving was, that he would probably return as soon as I was relieved of the Ponlyne incubus. It was impossible, he said, to come to any fair settlement, or make provision for our onward journey, so long as Ponlyne himself or his rapacious Paw-mynes possessed any influence in the conduct of our affairs.

123. On the same afternoon it was announced to me that Ponlyne too had left without any intimation of his intentions, and had taken away with him the only man upon whom I was dependent as an interpreter in the Shan and Kakhyen languages. He had further appropriated and carried off all the presents which had been entrusted to him for delivery to the officials at Manwyne and Manhleo.

124. A Ponlyne Paw-myne who remained behind assured me the next day that the Ponlyne and Ponsee chiefs had quarrelled violently, and that the latter had used threats which were dangerous and unmistakeable to Kakhyen comprehensions. Ponlyne had, therefore, deemed it prudent to beat a retreat and seek ease and safety within his own territory.

125. It was now time for the Ponsee Saubwa to come to the front and explain the new state of affairs which had deprived us of Ponlyne's aid, and made him (Ponsee) chief arbiter in our (exploration) destinies. Ponlyne had not only robbed me, he said, but had interfered, moreover, with the rights of all concerned, by appropriating to his own purposes the several advances which had been made on account of mule hire, as well as presents which were intended for general distribution. Before his departure he had suggested and made arrangements that our supplies of provisions from Manwyne should be stopped, and that the Kakhyens of the neighbourhood should cease to hold any kind of communication with us.

126. The Ponlyne has been actuated throughout by an inordinate greed for rupees. *Avarice* is his ruling passion. He had occasionally rendered valuable service in the certainty (as he thought) of securing an exorbitant recompense. But, beyond this, there has never been any real sincerity in his feelings or actions. His object was to bleed me as effectually as he could; then throw me over at all risks, and fall back on the Burmese officials at Bhamo, whose friendship could easily have been regained if only he could show that we had been reduced to a state of inextricable difficulty.

127. But with all his avarice, I feel positively convinced that, had Ponlyne been quite free from the ties or the fears of Burmese influences, he would have aided us to the last, not without haggling and extortion, but in a spirit which would have been above cowardly meanness and treacherous desertion.

128. Several days passed in the consideration of a variety of plans, by which the Saray and Ponsee Saubwas had mutually engaged to afford us aid in pushing on towards our destination. The Saray Saubwa had made his appearance again on 21st March, and brought letters addressed to himself and other Kakhyen chiefs from the Governor of Momein, who solicited assistance in our cause, and guaranteed to pay the expenses of our journey. Our prospects brightened. The chances of an onward move seemed in a fair way of being realised, as the Saray chief, under Panthay persuasion, had himself agreed to become our escort, and to provide the necessary requirements in porters and mule carriage. A settlement had been come to as regarded mule hire, past and present, and the chief left Ponsee for Saray under promise to return in two days and conduct us onward in triumph to Manwyne.

129. It was unfortunate, however, that he should at the particular time have dispatched his Chinese interpreter to Bhamo under a plea of effecting a settlement of accounts between himself and some Chinese merchants of that place. His real object was to learn the true state of affairs at Bhamo and realise the consequences for good or evil, in which he might be involving himself by aiding an expedition which was being undertaken, to all appearances, in direct opposition to the wishes of the Burmese Government. The proofs which I was able

to

to produce in the King of Burmah's written proclamation, and the letters* given to me by the Burmese Government previous to my departure from Mandalay, were as waste paper compared with facts as disclosed by Burmese officials themselves in our immediate neighbourhood. A hitch had certainly occurred somewhere, for the Saray chief not only failed in his agreement to return to us with mule carriage in *two* days, but had not made any appearance himself or explained his absence or intentions up to the 29th March.

130. Early on the morning of that day it was known in our camp that two Chinamen from Bhamo, with a party of armed Burmese soldiers, had passed through Ponsee and were making their way to Saray, distant only four miles from our own encampment. On the same evening the Saray Saubwa's Chinese writer arrived and informed me with well-feigned regret that his master was deeply concerned at having to state that he could no longer be bound to his agreement of providing carriage for our onward journey.

131. The Saray chief appeared himself the next morning (30th), and assured me that with all the best intentions in the world he was precluded from serving us in consequence of a dispute with the Ponsee Saubwa, who had quarrelled with him in particular, and threatened destruction to any neighbouring chiefs who either interfered with us whilst in his territory, or helped us to quit our encampment at Ponsee.

It was in vain that I proved to him that the Ponsee Saubwa had been working with him throughout, and that the agreement to provide mules had been shared in by Ponsee as well as by himself. Expostulation was useless. I recognised the chief's difficulties, and he nodded an assent when I attributed them to private messages and secret instructions which had been sent to him from Bhamo.

132. But if the advent of these messages had been productive of difficulties in alienating the offices or the good will of the Saray chief, a much more serious evil threatened us in the arrival of a party of fifty (50) armed Burmans under a Tsayay-daugyee (secretary) from Bhamo, who had been dispatched, it was said, with the ostensible object of working certain silver mines on the part of the Burmese Government.

These far-famed silver mines had been worked at fitful intervals for several generations past by Shans, Burmans, and Chinese alike, until finally abandoned some years since, when the precious ore had become exhausted beyond all hope of remunerative production.

133. Was it a *mere* coincidence that the Burmese Government, after so long an interval of tardy inaction, should have *now* sent an armed party of 50 men to renew mining operations at Ponsee at the precise time of our own unfortunate detention within Ponsee bondage? From the time of its arrival, the Tsayay-daugyee in charge never came himself or allowed any of his party to visit me. Everything was done to convince the Kakhyen mind that Burman and British interests conflicted, and that the party was hostile to us both in purpose and interests.

On one occasion proof was afforded of a bribe having been given by the Burmese secretary to certain Kakhyens to induce them to steal and carry off our ponies.

Parties of three and four of the armed party were constantly being dispatched into the Shan states with damnatory reports of our mission and intentions. The Tsayay-daugyee terrified the only Kakhyen interpreter we had with threats of Burman vengeance, and when other means failed to deprive me of his services, he

* The Burmese Government had given me two letters addressed in the name of the Governor of Bhamo to the Panthay or Chinese authorities whom we might meet with during our exploration into Yunan. I did not make use of these letters beyond transmitting a copy of one of them from Bhamo to Momein, because I discovered, only when it was too late for remedy, that the letters merely purported to be sent by a provincial governor instead of being addressed in the name of the Burmese Government. I do not think that it was ever the intention of theGovernment that we should proceed far enough to make personal delivery of either letter, neither did it calculate upon the probability of my forwarding on copies of the letters to pave the way to our introduction and arrival within Panthay territory. I have elsewhere been led to express an opinion that the arrival of this letter at Momein afforded evidence of Burmese co-operation, and incited the Panthays to the attack on Mauphoo. I now further incline to the belief that the secret mission from Mandalay to Yunan, which could not have been dispatched till late in April, was intended, in one material respect, to counteract the use I had made of the Burmese letters, and explain, as far as *we* were concerned, the mysterious working of Burmese state policy.

he wrote to the Governor of Bhamo and framed charges which resulted in the imprisonment of the interpreter's wife (as security for the interpreter himself) pending his absence in the service of the expedition.

134. And what became of the silver mines? The whole project may justly be considered as a mere flimsy contrivance, under cover of which it was intended to watch our action at Ponsee, and defeat by an overwhelming preponderance every honest endeavour to force our exit and our interests beyond the limits of our Kakhyen encampment.

135. Their success was certain, had we not anticipated them by securing the support of the Panthay Government.

It only remains to be told that the mining or undermining operations of this shallow confederation naturally ceased with our own departure from Ponsee. Left as it was without purpose or resources, the party return baffled and disheartened to Bhamo, to recount there the history of its own failures and the marvel (as it must certainly have appeared to them) of our success.

136. But the expedition is still at Ponsee. I must go back to the first week in April. The Saray Saubwa had left us in consequence of an alleged quarrel with the Ponsee Saubwa, who is said to have threatened the former with a life-long enmity if he assisted us to leave his jurisdiction and Saubwaship. The Ponsee Saubwa had been our friend for one short week, or from the time the Ponlyne chief left us until the arrival of the Burmese armed mining party at Ponsee. He was now our avowed enemy, and had openly conspired with neighbouring chiefs, and invited them to attend his sacrificial offerings to the minor deities whose propitiation was a preparatory measure only to our own intended immolation.

137. The Saray Saubwa himself brought this fact to my notice, and dwelt upon it in his own defence as evidence of the hostility which threatened, not only ourselves, but all who aided or befriended our cause. I told the chief that he as well as the chiefs of Ponlyne and Ponsee had guaranteed me safe conduct as far as Manwyne: that if evil befel the expedition, the probabilities were that force would be dispatched from Mandalay to afford assistance and seek redress. The old chief replied with a smile, "You will get no assistance from Burmans; they have repeatedly sent to tell me that you are not to go on. If you persist, we have been advised to make away with you in any way we please, and the reward offered is the appropriation of your property."

138. It will be remembered that the Ponlyne chief on a former occasion spoke much in the same terms of the Burman influences by which he and other Kakhyen chiefs had been instigated, and even ordered, to assume a state of enmity towards us. It is important, and perhaps instructive, to mark the course of that enmity as instanced in the case of the Ponsee chief's sudden hostile demonstration.

139. Some days had passed in assembling chiefs and maturing means for an effectual onslaught. The sacrificial buffalo had been slaughtered, and the usual revel was being kept up in a manner dear to Kakhyens as long as they are assured of a plentiful supply of beef and shamshoo. The night of the revel was no secret, and we were well prepared for eventualities. Only two chiefs of any note had joined Ponsee. His principal Paw-mynes held aloof, and rejected the conventional pound of flesh which had been sent to invite their attendance at the domestic festival. The Paw-mynes had already signified to me their dissent from the Saubwa, and stigmatised his conduct as that of a madman, and his actions as dangerous and beyond all control.

140. I assured them of passive resistance only on our part as long as the Saubwa confined himself to threats and demonstrations. If, however, an actual attack was made upon our position, I should assume the offensive, and the consequences might be disastrous.

It was necessary to deal somewhat in mysteries. A month's residence at Ponsee had caused our fame to be noised abroad as a people whose knowledge and powers exceeded even that of demons and deities. Breech-loading rifles, Adams' and Colt's revolvers, photographic apparatus, Bryant and May's patent vestas, which "ignite only on the box," and defy both wind and rain, had all helped

helped to create and maintain a practicable belief in our connectionship with supernatural agencies.

141. On the day of the expected attack, the police escort had been drawn up under arms, and the opportunity was taken of entertaining our friends for the first time to the sound of a volley. The firing was good, and the effect salutary and immediate. The Paw mynes were alarmed, and prayed that their houses might not be included in the general destruction which now seemed to await all who were foolish enough to belong to the number of our enemies. I simply referred them to their own chief, who was the immediate cause of present misunderstanding. My own strong desire, I said, was to live on friendly and peaceable terms with all, but even Kakhyens must not expect that any number of Englishmen would ever quietly submit to an attack which threatened them with annihilation, without some effort to save themselves, and retaliate on those who had forced them into hostility.

142. But Ponsee now had come to his senses. The morning's volley had penetrated the scene of his convivial rioting, and the pugnacious confederates cooled down very considerably under a formal introduction to 50 muskets which would all *go off*. It was soon hinted to me, as a preliminary to reconciliation, that the *Nats* had looked with disfavour on the Saubwa's intentions, and failed to give him any encouragement in his evil designs against the expedition. (This was only to be expected, as the Meetway or *Nat* oracle was my friend, and *in my pay*.)

My Paw-myne friends next intimated that they had come to terms with the refractory Saubwas, who were now anxious to be introduced to me and secure our friendship. This meant that I was expected to receive and give presents to the men who for a week past had been sitting in council against us and plotting our destruction.

143. Nevertheless I was prepared to secure peace for the present at any cost, and pave the way to a better understanding for the future. It was difficult, however, to restrain a burst of either indignation or laughter when the chiefs presented themselves, and I was openly asked to pay a money indemnity to which the Ponsee Saubwa had become liable for having cut down a Shan petty trader who had committed the crime of bringing supplies to our encampment!

Thus, I was not only to receive with open arms those who had an hour before been conspiring against our lives, but to pay a heavy ransom for acts of hostility committed against ourselves, and which threatened, as they did, the very means of our existence!

Still there was nothing extraordinary in all this to the people we were dealing with. They could not be elevated in a day to a just appreciation of our principles, either in punishing crime or rewarding virtue. Nor, when I exceeded even the limits of Christian charity, and submitted to the necessity or inclination of doing good to our revilers, did I calculate upon developing all at once in the Kakhyen intellect a proper appreciation of its own folly or of our magnanimity. The chiefs tendered their friendship and received ours, and presents into the bargain. Their minds may not have grasped the soundness of a moral code which enjoins us to love our enemies and do good to those who despitefully use us, but certainly were not backward in seeking immediate application of the principle in their own case, and profiting by it, it may be hoped, in their future estimation of Christian friendship and British conciliation.

144. They left rejoicing; but the Ponsee chief sat silent and sheepish. Much had been urged on his account or in extenuation of his hostility towards us, because that hostility is said to have taken its rise in anger at my supposed neglect of him on the one hand and Ponlyne's rapacity on the other. But, strange to say, this animosity did not manifest itself in any very dangerous form until after the departure of Ponlyne, and until the arrival of the armed Burmese party from Bhamo. One of the buffaloes which was offered up as a propitiation for sins, or as an enticement to the gods to favour the means of our destruction, was provided by this Burman party, and the official in charge, understanding well the purport of such a gift, had accepted the pound of flesh

which was to bind the interests against us and array them on the side of the refractory Saubwa.

145. The demonstration had failed: we were masters of the position, and the significance of this superiority was the more valuable, because it rested on the acknowledgments of the hill tribes that we lived under the auspices and protection of their own presiding deities. Another source of satisfaction was that a reconciliation had been come to between the chief and his Paw-mynes. The latter had sided with me throughout, and it was at their instigation, on a renewal of friendship, that I was induced to pay Ponsee 100 rupees to make up, in some respects, for our own supposed neglect and the loss sustained by Ponlyne's misappropriation.

146. The Saubwa in swearing friendship vowed that he had always regarded us as his friends and relations.

"Save me from my friends," I exclaimed laughingly, "if connectionship with them is supposed to carry with it the previlege of being assassinated at will to suit the love or the caprices of the Saubwa's relatives!" The Saubwa grinned uncomfortably. I tried his temper still further by asking why he had omitted his new relations in the late distribution of beef at Ponsee? He understood the allusion, and left somewhat awkwardly, but in good humour.

147. During the first few days of April matters were hopeful and exciting. The great drawback was that the Saubwa and Paw-mynes had been reconciled only as regards conventionalities, but their interests jarred at once as soon as any reference was made to the affairs of the expedition, or the means required for our further progress. On both sides there was an over-zealous desire to be of service. The Paw-mynes were willing to supply porters in any abundance. The Saubwa volunteered to go and procure mules. The object of either party was to secure to itself the whole, or as large a proportion as possible, of our valuable baggage. Privately, the Saubwa advised me to have no dealings with the Paw-mynes, and described their intentions as evil and dishonest. To his face and to mine the Paw-mynes accused the Saubwa of entertaining a design against our property. Each frustrated the other in any attempt to be useful. Their united or rather disunited friendship was thus rendered as unprofitable and futile as their joint enmity. I had paid 100 rupees for a mere outward show of reconciliation, which seemed only to have widened the breach of their greedy disunion.

148. Early on the morning of 6th (April) the Paw-mynes brought a small crowd of Kakhyen coolies and asked for our boxes. I was ready to move, I said, but not without a previous understanding:—

1. The Saubwa must be a consenting party to our proceeding.

2. The Paw-mynes must convince me that they had sufficient men to carry the whole of our baggage at one time.

On the first point, the Paw-mynes said that the Saubwa was a nonentity and need not be consulted; on the second, that, though the coolies were not all then present, they would come in gradually in sufficient numbers to make the start that day. "Let them come," I said, "and we will make arrangements for an immediate move." But they did not come. Overtures, however, were made to the Saubwa during the afternoon, and a temporary reconciliation was agreed to, on the understanding that the Saubva and his party should be privileged to carry 40 mule-loads of our baggage.

149. The events of 7th April must be taken from my rough journal of that date:—

"This has been an eventful day, in promise big, in effect an abortion. Up at daylight. Tents struck and baggage arranged for an early start. The Saubwa and Paw-mynes appear by turns, but the coolies only begin to assemble at 8 a.m. The parties are still at loggerheads about the appropriation of baggage. Time and patience reduce matters to something like order, but there is still a strong party spirit at work. The opposite factions regard each other as implacable foes, both being intent only on loot, and each vieing with each other for the lion's share. The existence of dishonest intent is palpable in the barefaced

barefaced rivalry which is displayed by either party in seizing upon the most *promising* packages, regardless of their weight or size. My small japanned tin cases bring on a crisis. The Saubwa's men have secured them, and "Death's-head," Paw-myne, is in a fury of madness and drink. I have told off the escort into detached parties to prevent the exit from camp of any baggage until all is in readiness for a start. The small circumference of our encampment is filled with armed Kakhyens. They are our porters and friends. It would be awkward in this scene of confusion if they turned out to be enemies! The Paw-myne seizes my gold *dah* which is in the hands of a Burman. Williams is standing near, and wrenches it from both with a twist which was irresistible.

Paw-myne is at bay for an instant, but rushes away excitedly, and suddenly re-appears with his slow match in a blaze. He advances to within three paces of me, and is priming his piece preparatory to fire. Before I could move he had fired it into the air with a loud report. There is consternation for a moment, but no immediate movement. All would have been quiet again, but unfortunately an assistant surveyor with our party carried a revolver and fired it off in the air with unmeaning effort. Again tumult and confusion. The Kakhyens show that they have no fight in them, and fly in all directions as if panic-stricken. There is no movement on our side. The Saubwa too is quiet, and behaves with a just appreciation of events. He calls upon the Kakhyens not to fly, and at the same time makes us understand by word and gesture that the Paw-myne's anger has no reference to ourselves, but is directed against him. Order is restored after a time, and the coolies return to their respective loads.

I had taken the precaution of telling off the escort for the march in such a way that, when the start was made, each set of coolies would be under surveillance, with a chain of communication between the advance and rear guards. The japanned tin cases, or rather the coolies who were to carry them, were placed under the immediate supervision of armed followers, and could not bolt without creating an alarm.

The precautions were disagreeable to both factions, and rather confounded their schemes of bolting with our baggage under the disguise of porters. Time wore on. It was noon. The coolies had arranged their loads, and a start might even then have been made, when it suddenly occurred to the chiefs that, being late that day, we had better remain where we were and make an early start on the morrow.

This proposition was irresistible, because it had come from the Saubwa and Paw-mynes, whose disinclination to move without solid advantages to themselves, or when they saw that their plans for wholesale robbery had been to some extent frustrated, was an argument *per se* which it would have been in vain to oppose. I was, therefore, bound into acquiescence—a grievous disappointment to say the least of it, after six hours' exposure to a hot sun, and a month's captivity at Ponsee. Shall we start to-morrow? that is the question, and a very doubtful one too, if we are allowed to judge by this morning's experiences of Kakhyen treachery and caprice, &c., &c., &c.

150. We did not leave! The morning of the 8th was ushered in by a demand for money. Up till 9 a.m. not a cooly had presented himself in camp; at half-past nine the Paw-mynes appeared, and informed me that, as the Saubwa had withdrawn his support they could not assist me single-handed. I must consider their promise to forward me on to Manwyne as already at an end. Shortly afterwards the Saubwa came in person and laid the onus of our false start on the Paw-mynes, whom he again accused and condemned as men who were intent only on robbery and imposition.

151. I soon discovered the real source of mischief and miscarriage in the presence of the Nanlyaw Tamon, who had already held a conspicuous place in our Burmese experiences. The last trip he made to Ponsee had been undertaken with the express object of inducing the Ponlyne and Ponsee Saubwas to desert us on the hills and return with him to Bhamo. His influence and advice had now been enlisted on the side of the Burmese armed party of miners at Ponsee, and having been successful on his former mission, it is only reasonable to suppose that he would again be armed with authority to negotiate with the chiefs and assist them to the utmost in our further discomfiture. He can hardly have been instrumental in the "abortion" of 7th April, but I attribute our

disappointment on the succeeding day to secret influences, of which he (the Tamon) had become by tuition and intuition a most inflexible agent and promoter.

152. Happening to meet the man in our camp on the 8th, I caused him to be arrested, and would henceforth have detained him as a spy and a prisoner; but the Paw-mynes, with whom he was on particularly intimate terms, interceded so forcibly in his behalf, that I was obliged to concede to their scruples rather than be subjected to interminable dispute or additional misunderstanding. The Tamon was dismissed with a warning not to cross our path again, and I have never seen or heard of him since.

153. At this juncture, or rather on 9th April, letters reached me from Momein, and I was informed therein that Tah-sa-kon, the Governor of that place, had taken the field in person and had resolved upon the extermination of Lees-hee-ta-hee, who then held the passes and heights of Mauphoo, situated half way between the Shan State of Mynela on the one side, and the Chinese, or rather Panthay, town of Nantin on the other. This Mauphoo had been a place of considerable note during those days of commercial prosperity when, as the people themselves describe, "trade flourished to such an extent that the caravan fires at the successive halting stations were never extinguished."

154. It is just matter for surprise that the Panthay Government had so long submitted to allow this stronghold, commanding, as it did, the high road between the Shan States and Momein, to remain in the occupation of a robber chieftain who utilised it indirectly in the cause of Burmah, partly because it served as a buffer to the Panthays by closing the direct means of inroad to Bhamo, and partly on account of the convenient means it opened out to himself for safe retreat and successful brigandage.

155. Lees-hee-ta-hee may have often been disturbed in his possessions at Mauphoo, but on no former occasion had the Governor of Momein so deliberately determined on securing his downfall. It had now been made apparent to him that foreign interests were at stake, and his assistance was invoked in the cause of an expedition which promised once more to put the province of Yunan into commercial intercourse with the old trading mart on the Irrawaddy at Bhamo. The letters which brought the intelligence of Tah-sa-kon's intended attack on Lees-hee-ta-hee warned me further not to advance beyond Ponsee until further advices had reached us of a settlement of affairs at Mauphoo. Their arrival raised me at once to a position of superiority, from which advice and admonition could be the more readily exercised in still temporizing with our Kakhyen associates and rousing them betimes into active adherence.

156. On one point in particular it had become a vital consideration to give vent to firm and decided plain speaking. Kakhyens, Burmese, and Shans alike had conceived extravagant ideas as to the value of our baggage, and frequently suggested by their behaviour and speech that the hope of some day making it their own was one of the indirect inducements which aided in our detention on the Ponsee hills.

I began, therefore, at this time to proclaim on all sides that though we had cheerfully submitted to privations and delay in conciliating the hill tribes and ingratiating ourselves into their favour and good will, they were not to suppose that this state of long suffering would continue for ever, or that we would patiently endure perpetual isolation.—"Extremis malis extrema remedia." I told them that any extremities to which we might be reduced would not involve an abandonment of our baggage, for I did not intend that there should be anything left to abandon. All that we could not take away with us for want of carriage would be piled up *en masse* to set fire to, and blaze forth in flames the cause of our departure. If to their own disappointment in losing this supposed source of wealth they added the probabilities of future demands in compensation for losses sustained at their hands or through their neglect, they would find small cause, I said, for after triumph in having alienated those who now had desired, above all things, to be considered their friends.

157. It will, of course, be understood that, in making known to the Kakhyens the determination to destroy our property rather than allow it to fall into their own avaricious and unworthy possession, I had not desired to exhibit in myself

or

or to illustrate to their detriment a dog-in-the-manger principle, which would have been no less degrading to British character and civilization than ruinous, perhaps, to our safety and future interests. The chief comprehended and believed what was said, and I thought then, as I think now, that the practical removal from their minds of one grave temptation to err was a subject for general satisfaction, as it contributed in no small degree to generate in them, and probably also in ourselves, the elements of future confidence and mutual understanding.

158. The burden of their reply was as follows:—

"Do not altogether blame us (Kakhyens) for your misfortunes; we have always been in doubt how to act towards you on account of the many warnings we have received to withhold assistance and oppose your progress. *Now* we know you, and will no longer attend to bad advice. You have been always kind to us and are a powerful people; only give us *rupees* and we will procure carriage at once."

The gist of the speech is in the *rupees*. Mules we did not then require, since our instructions from Momein negatived an advance until further advices.

On the whole, the position, though surrounded by uncertainties, was nevertheless more hopeful and promising than it had hitherto been since our arrival at Ponsee.

There was a satisfaction in feeling that Burmese stratagem was so far on the decline as to force Kakhyens into an acknowledgment of our superiority and a tacit dependence on powers which could neither be trifled with with impunity nor affronted without retaliation.

159. The determination to make a bonfire of our property and then seek reprisals at some future date, when the expedition had returned to recount the history of its losses to its own Government, was a speck on the political horizon which even to Kakhyen comprehensions contained the elements of interminable enmity. On the other hand, they could not help perceiving that under just treatment we were harmless as friends, and promised in our future intercourse, as pioneers of trade, to open up to them old sources of wealth and prosperity. Added to this, the uniform kindness with which we requited all just services were valuable recommendations in themselves, and contrasted in a marked manner with the treatment to which they had hitherto been subjected in their dealings with other races.

It is not to be wondered at, then, that the delay at Ponsee has been productive of at least one great advantage, in having worked out for us an ascendancy in the Kakhyen mind, the importance of which will be manifested in time to come by the facilities of future action and intercourse in the same rich field of civilizing enterprise.

160. Nearly six weeks had elapsed since the desertion of my Chinese interpreter, Moung Shwè Yah, at Ponlyne. The manner of his flight, without cause or warning, at a time, too, when his services were of the utmost urgency to the well-being of the expedition, was dastardly and inexcusable. Now, in the middle of April, I am all at once made aware of Moung Shwè Yah's whereabouts, and received a written explanation of the causes which are said to have necessitated his flight from Ponlyne. These may or may not be true and consistent in themselves, but the sources from which my information comes are so divergent in themselves, and at the same time so mysteriously coincident, as to invite special reference and examination.

161. On the evening of the 10th April two Kakhyens arrived in camp with letters which purported to have been written by Shwè Yah himself from some halting place on his journey through the Shan States. The Kakhyens could give no consistent account of themselves, and contradicted each other in trifling matters of detail, without being able to state how long the letters had been in their possession, or from whom they had been received.

162. The next morning one of the Burmese armed mining party stationed at Ponsee brought me a letter from Moung Shwè Yah, which, he said, had been given to him *fourteen days before*, at the house of the Kakhyen Saubwa of Suddan; but instead of bringing me the letter, he had taken it to Bhamo *by*

mistake, and only *now* remembered that it was in his possession, and that it would be as well to deliver it.

The flight of Moung Shwè Yah, serious as it was at the time, had long since lapsed into comparative insignificance, and for five weeks or more he was a thing of the past and deservedly forgotten. *Now*, however, for a whole day previous to the delivery of his letters, Moung Shwè Yah was in every one's mouth, and the subject of his desertion and whereabouts was forced upon me, *usque ad nauseam*, by my Burmese followers, who had private friends amongst the Burmese armed mining party from Bhamo.

These reports, I afterwards ascertained, reached me under special Burmese instigation, and it was Burmese stratagem which planned that I should receive on the same date letters from Moung Shwè Yah himself, written on different dates from widely distant destinations, and brought by directly opposite routes.

163. My solution of the affair is as follows:—

Moung Shwè Yah, after his shameful desertion at Ponsee, either returned direct to Mandalay to report progress, or made his reports at Bhamo and awaited further orders from Mandalay. The King could not have heard with indifference that his own special deputy with the expedition should have behaved towards us in a way which would compromise himself and lead to complications with his government. Moung Shwè Yah too would have naturally heard, during his five weeks' stay at Bhamo, that a diversion had been made in our favour by the Governor of Momein, and would be led to believe in the probabilities of our successful advance into China without Burman aid, or in spite of Burman interference. The same reports would have reached Mandalay, and have given rise to similar apprehensions. Hence, I conceive, arose the necessity of despatching stringent orders to correct so glaring an abuse, and remedy past defaults by a mock show of zeal and a superabundance of courteous deception.

164. Moung Shwè Yah had evidently only just started for Momein when the two letters reached me, and their arrival through a Burman source is accounted for by a sudden and excessive desire on the part of the officials to carry out their master's instructions, and save his reputation by making it appear that Moung Shwè Yah had never wavered in his service to the expedition.

The clumsiness of this contrivance places it on a par of apparency with other shallow expedients of a similar kind, whenever patchwork is resorted to as a means of covering and concealing an old and dirty piece of jobbery and wrong-doing.

165. On the 11th of April, the *Choung Zan Moung Mo*, whom I had formerly used as a Kakhyen interpreter, but was treacherously carried off by the Ponlyne Saubwa on the 18th of the preceding month, returned from Bhamo and offered me his services. I had formerly held out to Moung Mo every inducement in my power to make him disregard mere Burmese threats, and he had at length agreed to attach himself to the British expedition if I would afford him protection against the Burman officer then in charge of the mining party at Ponsee. Moung Mo pleaded that he had ceased to have any official connectionship with the Burmese armed party or with the Government, and that his services were at my disposal for any appointment to which I might choose to appropriate them.

166. I have already said that Moung Mo was one of the village head men who had been specially made over to me by the Governor of Bhamo as Shan and Kakhyen interpreter to the expedition, and I had every right to claim his services from the date of our departure from Bhamo. But the Governor proved insincere in his promises, and Moung Mo only at length joined me under private pecuniary inducements, and after he had freed himself from official restraints by breaking off all former connectionship with the Burmese Government.

His disinterested account of affairs at Bhamo at the time he joined me may be briefly recorded as illustrative of much that has already been said in describing the peculiarities of our present position on the Kakhyen Hills.

Moung Mo *loquitur*.

A. Orders have been received from Mandalay concerning the expedition. The officials are directed to be careful in their obstructiveness, and

and not to allow the *royal ears to be ashamed* by reports of shallow half measures. The King was displeased with the complaints which reached him of our detention at this place. The Ponlyne Saubwa has been written to, and told *that he may take you* as far as Manwyne in accordance with his original agreement. His reply was, that he would willingly have carried out his engagements from the first, had he not been tampered with by Burmese officials, and ordered to abandon the expedition almost before the journey had commenced. Having been led thereby to compromise himself with you, he now positively refused to attend further to the Governor's orders, or to conduct the expedition on its journey to Manwyne.

B. The Governor was surprised and enraged at hearing that you had been able to despatch letters from Bhamo to Momein without the knowledge of any of his subordinate officials.

He threatened them with dismissal from office as soon as the necessary reports could be made to Mandalay.

C. The idea of working the silver mines was a sham from the commencement. The party came to Ponsee with 50 men, and already orders have been given not to continue the work. The object of that party is to watch your proceedings and prevent your progress, by disseminating evil reports of your intentions. The Kakhyens are afraid to assist so long as they see amongst them an armed party of Burmans, with orders not to allow you to enter the Shan States.

D. Do not go on to Manwyne until you hear again from the Panthay Governor at Momein, or until they send to meet you. I hear all that goes on, and I know that Lees-hee-ta-hee has sworn to oppose you if you attempt to cross into the Shan States. Not one of your party is to be *left alive.* Depend on what I say, and mind do not leave, although the Kakhyens agree to conduct you, until you are assured all is safe.

E. Numbers of Shans and Burmese are anxious to accompany you as interpreters, or in any other capacity, but they are afraid to do so. The officials know that if they can prevent your getting an interpreter your position is comparatively a helpless and dependent one. Their object is to add to your difficulties in the hope of making them insurmountable.

F. When you sent a packet of letters a few days ago to be forwarded to Bhamo, the Sayay-dawgyee would not allow any Burman to take charge of it, although he communicated daily with Bhamo. Do not send letters at all; they will never reach their destination.

167. So much for the confessions of a man who, being a Burmese official himself, has been behind the scenes from the commencement. He has since rendered me faithful services, and I am indebted to him for subsequent disclosures, which will be recorded in their proper place as my narrrative proceeds.

168. Moung Mo had no sooner established himself in my service than further light was thrown upon the subject of his confessions by the arrival of the Toung-mhoo of Bhamo, a man who, it will be remembered, acted as my guide from Bhamo to Sitkaw, and then rendered us most valuable assistance.

This official now informed me that he had been specially deputed to examine and report upon the practicability of continuing operations at the silver mines. If his opinion was unfavourable, he was vested with authority to stop the work, and order the withdrawal of the Burmese armed party.

Considering that the party had not at this time commenced to mine (for silver, at least), and that its original organisation and equipment was that of soldiers and not of miners, it was rather premature to talk of relinquishing the undertaking, and of withdrawing the party altogether, from Ponsee. Another ridiculous phase of the affair (enough in itself to expose its mere equivocal character) was that the Toung-mhoo, according to his own confession, knew nothing of mining, and less of silver ores, so that his opinion can really have had no practical or professional weight by which to decide on terminating so momentous an undertaking. As Moung Mo had already stated, the whole affair was a snare and a delusion.

169. Although time has become a matter of very serious import, both as regards our detention at Ponsee and (to descend to trifles) the exceeding length of this laborious narrative, I must digress for a moment to note a hail-storm which occurred on the 12th April.

The most observable feature of the storm, as apart from its violence, was that each hail-stone was composed of a *flat* piece of clear ice with a small opaque nucleus at its centre. The pieces were of all shapes, and some of them exceeded half an inch in breadth or diameter.

170. For several days subsequent to the hail-storm heavy rain-clouds had been coming up from the south-west, and showered down their contents in copious profusion, although north-easterly gusts still blew furiously at times over our camp, as if to keep up an appearance of being the prevalent monsoon. But the rains had set in to a certainty, and apart from the inconveniences of very imperfect shelter, it was a serious reflection to think that an expedition which started under apparently fair auspices, and with a reasonable conviction that its employment and occupation would not extend beyond the limits of a single dry season, should find now, whilst on the threshold only of its operation, that that season has passed, and that further efficient progress would only be attainable (if attainable at all) by prosecuting exploration in the face of a south-west monsoon.

171. On the 15th April messengers again arrived from Momein with a Chinese interpreter, who spoke Burmese fluently. They did not bring letters, but were privately despatched by the Governor to make further personal inquiry into our circumstances at Ponsee and the purposes of our mission to Momein.

The ordeal I was subjected to was not a pleasant one, as the deputation had arrived under a suspicion that the expedition had been despatched with sinister designs, and that we were mere political spies, who were preparing the way for a vast army which was to follow and sweep all before it into British possession.

172. The messengers commenced fairly enough by stating that they had been sent to clear up certain points touching the objects of the expedition. Doubts and contradictions had arisen, they said, in consequence of evil reports which had reached Momein, both from Bhamo and Mandalay.

I submitted, out of courtesy and for reasons of policy, to a rigorous cross-examination, although the members of the deputation were given to understand from the first that they could not expect me to treat with them as real accredited agents, because they had failed to furnish me with written proofs in support of their right to act in an official capacity.

173. In my subsequent conversations with this deputation I learned the following facts:—

1st. That the Governor of Momein had received letters from Bhamo in which he was warned against us on the ground that we represented a formidable nation, and that our real object was to side with the Chinese (our allies by treaty) and drive the Mahomedan population out of Yunan.

2nd. That we were not Mahomedans, but had always been aliens and foes to the Mahomedan race all over the world. Both statements were discredited, it was said, inasmuch as they directly contradicted the first reports which had been sent from Bhamo to Lees-hee-ta-hee, and which plainly gave out that we were foreigners and were allied in race to the Panthays (that is to say, we were neither Burmese, Shans, nor Chinese), and that our object was to join with our Panthay friends in securing to the latter the full enjoyment of their Yunan possessions.

174. It is worthy of notice that the new doubt which it was intended to establish in the Panthay mind relative to the evil purposes of our mission into Yunan is coincident, as regards time, with the arrival at Momein of the Burmese deputation, which passed through Ponsee on the 28th March, with the avowed object of hiring Chinese coolies to aid the working of the silver mines.

It seemed evident to me at the time that the men who formed that deputation were the bearers of letters or reports which were intended to interfere mischievously

chievously with our own progress. The fact that such letters reached Momein from a Burmese source at the time they did warrants the belief, though founded at first on conjecture, that Burman intrigue was still alive, and would impede our objects long after they had ceased to have any connectionship with Burmese territory.

It was at first hoped to ruin our enterprise by making common cause with the Chinese, and exciting their enmity under an impression that our interests were identical with those of the Panthay Government.

But when the Panthays replied with cordiality to my protests against Chinese intrigue, and had promised assistance with which we must have triumphed in spite of Burmese duplicity and opposition, it was time for Burmans to shift their ground of political tactics and affirm, with a recklessness which did not even escape Panthay observation, that the expedition which was once proclaimed to have been got up in the Panthay cause, had become exclusively Chinese, and threatened destruction to Mahomedan Government in Yunan.

176. But why anticipate events at Momein? Burman intrigue was still with us at Ponsee. Up to as late a date as the 16th of April I was appealed to by the Saubwa to contradict a report which made it appear that we contemplated reprisals, and were about to retaliate on the Kakhyens for the delays and annoyances to which they had subjected us during our stay on their hills.

The *Red** Paw-myne affirmed most positively that the Burmese officer in charge of the armed mining party had personally told them that we were about to burn down the village and make an indiscriminate slaughter of its inhabitants. He spoke feelingly, and begged I would not forget the numerous obligations I was under to himself and to the Kakhyens of the neighbourhood, with whom I had always been on terms of friendly and social freedom. The man was excited and in earnest, though more or less under the effects of liquor. I laughed at his misgivings, and referred, as *he* had done, to past kindnesses as an earnest of future good understanding. There had been an excess of friendship on either side. Disputes may have occasionally arisen with the chiefs, but they related to business only, and had resulted in an increase of good feeling as soon as the injurious influences which inspired them could either be explained or altogether removed. What cause now existed for supposing that our feelings had changed, or that we contemplated a vicious retaliation on those whom it was still to our interest to conciliate and retain as friends?

177. The Paw-myne relented and confessed to a too hasty judgment. The apprehensions he had indulged in now appeared to him visionary and unfounded, but to us there was a stern reality in the fact that Burmese intrigue remained illimitable, and was still insatiably at work to inspire animosities of a very dangerous tendency.

178. I now approach a time in the history of the expedition when a multiplicity of considerations impelled me, in the cause of success and the interests of government, to advise a reduction of our party and a return of some of its members to British territory.

179. These considerations and the responsibilities attaching to them (and to myself in particular) for having consented to or encouraged in any degree a breaking up of the expedition as compared with its original efficiency are so fully disclosed in a series of letters (which will appear in their proper place in the Appendix to this Report, and in my demi-official letter to the Chief Commissioner, dated Ponsee, 28th April 1868) as to obviate the necessity of a separate report or of further lengthened explanation. It is only by a close attention to facts as they stand disclosed in those letters, and at that particular period, that it is possible to appreciate the motives or make allowances for the necessities under which an extraordinary course of action may have been either suggested in practice or warranted in execution.

180. It will be generally admitted as a self-evident fact that at the time I addressed the circular letter of 18th April to the members of the expedition, the

* Paw-mynes are an hereditary class of Kakhyen officials subordinate to the Saubwa. Those at Ponsee belonged to one family, the two principal members of which we had nicknamed for sake of distinction *Red Paw-myne* and *Death's-head Paw-myne*.

the probabilities of an advance beyond the limits of Ponsee were both remote and uncertain.

The rains had set in, and exploration surveys in a strictly engineering sense had ceased with the dry season, and were virtually impracticable.

181. The funds at my disposal had become sensibly reduced by unforeseen delays both at Bhamo and Ponsee.

Five months had been named as the probable time during which the expedition was expected to complete its operations, *and for that period, accordingly, its funds had been apportioned.*

Four months had elapsed in comparative inaction, but not without an expenditure which seemed to be multiplied and increased in an inverse ratio to expeditionary progression.

182. To have sent back for funds and have awaited for three months their arrival at Ponsee would have amounted to an assumption, which I had no right to make, that the expedition regarded neither time nor season, and would prosecute its plan with indefinite limitation.

It would have become incumbent, under that assumption, not only to have provided against pecuniary deficiencies, but to have solicited a complete refitment or an entirely new organisation on a scale commensurate with our altered conditions.

183. For it will be borne in mind that we were not free travellers, living alone on our zeal and dependent only on individual responsibilities. Our party numbered nearly a hundred government servants, and the change implied by waiting for funds or extending the scope of our enterprise over an illimitable period involved the consideration also of a corresponding provision, not only in funds, but in food, pay, clothing, medical stores, and general requirements.

184. Such a consideration led, moreover, to the inevitable question whether the refitment which the expedition must undergo could be carried out at Ponsee, or whether it was not rather desirable that we should return *en masse* to British territory, and make a new start under new auspices, more perfect preparation, and a new dry season. The latter, no doubt, was an unpleasant alternative, which could not be contemplated even, as long as it appeared feasible by reducing our strength and economizing resources to devise a means towards the accomplishment of our object without incurring the odium of a primary failure, or risking the doubt of a renewal of our undertaking.

185. The determination I had come to of remaining at Ponsee until a favourable opportunity offered of continuing the journey into Yunan was based upon the immediate prospect of securing political and commercial advantages, which were so promisingly held out at the time by the friendly attitude and assurances of the Panthay Government.

But I had no means of forming a positive opinion as to the time which must elapse, or the further delays which might be incurred, in accomplishing the desired object. The rains had set in, and the engineer's department was practically of no further use (as it then appeared to me) for purposes of either exploration or survey. My funds were low, and a rigid regard to economy had become an unpleasant but imperative duty. There was no immediate prospect of a speedy delivery from present bondage. In fact, it was very questionable in certain points of view whether the expedition had not already come to an abrupt termination. Such a contingency, however, had never been contemplated; on the contrary, it had become a fixed resolve for some time past, apart from pecuniary considerations altogether, to abandon our baggage and trust for shelter to the resources of the country, rather than submit to failure, and ruin the hope, for a generation at least, of all further successful efforts in so fair and cherished an enterprise.

186. But I deemed it a natural question enough, in determining the course which then seemed to me the most effective and desirable in serving the interests committed to my keeping, to propose what appeared to me under the circumstances an immaterial reduction in the strength of our party, and secure by so doing to those who remained a more certain prospect of eventual success than would otherwise have been available had the whole party been kept together according to its original composition.

187. It

187. It must not be supposed that, in dispensing with Captain Williams's services, I underrated the importance of engineering science as an essential aid to our expeditionary adventure; but it was reasonable, and I may add imperative, in the position I then found myself, to disregard all mere subsidiary accompaniments, and limit our enterprise to means which not only provided against *total* failure, but held out in the distance a hopeful promise of complete success.

188. Both Captain Williams and Mr. Stewart, in electing to sever their connectionship with the expedition, were actuated by a conviction that they thereby added to the means of my progress. Their departure from Ponsee was a matter of convenience, which originated with myself, and for which I alone am held solely responsible.

189. I may be pardoned, therefore, for expressing a hope that the Chief Commissioner, as well as the Government of India, in reviewing the circumstances of the case as they are here set forth in this Report (as well as in the correspondence which took place at Ponsee between myself and the members of the expedition during the month of April last), will approve of the measures which were necessarily adopted by me when a reduction in the strength of our party had become an indispensable expedient, which not only tended to our own advancement, but conduced to the best interests and welfare of government.

190. It must be obvious throughout that the onus of Captain Williams's return from Ponsee rests entirely with myself as leader of the expedition. It is a duty, therefore, I owe that officer to bring his conduct to notice, and to suggest that his willingness to comply with my wishes at a personal sacrifice to his own material interests ought to secure for him the thanks of his departmental superiors, and invite also the favourable notice of the Chief Commissioner of British Burmah.

191. Captain Williams left Ponsee on 29th April.

On the 19th, the day after the issue of my circular letter of the 18th of the same month, news reached me of the fall of Mauphoo; and on the 20th I received letters from the Governor of Momein, in which he informed me of his successes, and invited us to advance under the protection of the several Kakhyen and Shan Saubwas *en route*, whose co-operation was ensured as loyal subjects of the Panthay government.

Assurances were also given of pecuniary support, and I was even informed by the messengers who brought the Governor's letter that the mule hire was a matter of secondary importance, and that all expenses of this and every other kind would be borne by the government as soon as we reached Panthay territory.

192. But the original difficulty of procuring mule carriage was as prominent as ever. Mules were known to be in abundance everywhere, but their proprietors were restrained by a multitude of misgivings against hiring them for a purpose which would ensure Burmese enmity without gaining the approval of their own Shan superiors.

193. Another party of armed Burmese had passed through Ponsee on the 20th April, under the guidance of that arch-offender, the Nanlyaw Tamon; and although their avowed object was said to be the collection of rice supplies for the party at Ponsee, their departure into the Shan States was full of ominous significance to those who had already realised the mischievous results of similar Burmese excursionists.

Happily, however, Burmese intrigue was beginning to wane.

It was inevitably succumbing to its own falsity and the realities of our conciliatory demeanour and continued moderation.

194. On the 22nd April the Ponsee Saubwa presented himself before me in penitential mood, and expatiated upon the obligations he was under for having been raised from a state of careless boyhood into a masterly sense of his duties as a powerful and hereditary Kakhyen Saubwa.

Our kindness and consideration to himself and his people had produced a feeling of gratitude which, he confessed, it was impossible any longer to disregard. He had now brought himself, he said into complete obedience to

my advice, and for several days past had rigidly abstained from drink and debauchery.

The English were his friends, and had taught him to esteem himself as a ruler and chieftain. It was his duty to befriend us to the utmost of his power. He would proceed himself to Manwyne in conjunction with the Saray Saubwa (who had already repaired to the same place) and concert measures which would at once relieve us from the irksome position which we had so long been placed in at his head-quarters at Ponsee. The man was in earnest, and it was evident at the time that he had yielded to Panthay influences.

195. I replied encouragingly and with a small money *douceur*, which sent him away in a state of joy and exultation. In a short time afterwards we had the satisfaction of seeing him actually start in company with his head Paw-myne on the road which led towards Manwyne, and the barometer of our hopes rose under an earnest expectation that the Saubwa's journey would be productive of results and lead to a deliverance from our Ponsee imprisonment.

196. But day by day fresh evidences affirmed that our stay in Kakhyen land had given rise to attachments which Kakhyens would cling to as a means of continuing our detention rather than assisting in (to them) a disadvantageous separation. That detention, however, had not as yet affected the actual progress of the expedition as regards its arrival at any given destination in Yunan. Had we descended earlier from the hills into the Shan State of Manwyne, we must still have been detained there or at some other Shan town as long as Mauphoo remained in the hands of Less-hee-ta-hee.

It is with a feeling of proud satisfaction that I turn to our sojourn on the Kakhyen hills, and prove the possibility of forming friendships with mountain tribes, many of whom (to our misfortune) had learned to love us so well that they would not exert themselves to aid our departure.

To quote from my diary:

197. "Chiefs and people swarm in from distant villages; women and children are ever present with gifts of rice, tobacco, vegetables, and beer.

"They testify, in a variety of unmistakable ways, that the foreigner is a valuable acquisition to their hills, and will ever be welcome as long as he behaves himself with moderation and treats *them* with justice. The general observation amongst our more distant visitors is,—'Why did you not come *our* way? We should then have been the recipients of favours which are so freely enjoyed by the inhabitants of Ponsee.'

"It speaks well for Kakhyen instincts and intelligence that, although this hitherto despised people has never experienced anything save oppression and injustice at the hands of cognate races on the plains, it should now so readily appreciate and esteem the exercise of disinterested kindness and friendly conciliation. It is not to be supposed that Kakhyens are free from certain evidences of degradation which are innate in savage instincts all over the world.

"The more prominent of these are treachery and ingratitude; but most of the races we have come in contact with possess nevertheless, in compensating abundance, many of the finer sensibilities of human nature, which raise them considerably above the supposed level of ordinary hill tribes in a state of semi-barbarous civilization. Numbers of Kakhyen women are in the habit of daily visiting our camp with small presents, for which they hope to receive a return in looking glasses, beads, or other finery, which will immediately be converted into a means of female decoration.

"The women form in lines, and each clasps her neighbour in an embrace which is at once affectionate and provoking. The time spent in conversing with and observing these interesting groups is well repaid by the insight afforded into their domestic relations and the state of civilization they may have collectively attained to.

"My interpreter, Moung Mo, is a rip, and goes in strongly for love-making. His object is to give us an opportunity of verifying his former statements relative to the freedom observed by Kakhyen maidens in their daily intercourse with their male admirers. If conversation is to be accepted as a test of manners, some of the young ladies we were introduced to exhibited a freedom of speech and gesture which certainly went far to prove the easy

and

and promiscuous state of relationship in which they stand towards the other sex.

"Promiscuous intercourse is the rule amongst Kakhyen lovers of every degree.

"Marriage rarely takes place until the parties have come to a very complete and practical understanding on the natural temperament and physical capabilities of those most concerned.

"An unmarried woman is but lightly esteemed until she is proved to be a child-bearing reality. She then acquires a corresponding value in the matrimonial market, and a total revolution takes place in her former ideas of maiden morality. The marriage code punishes unchastity with death, and Kakhyen males are as jealous and unforgiving in a case of adultery as savagery and civilization can combine to make them.

"Moung Mo makes love for us all, and the conversation is animated, and I dare say *naughty*, if we could understand it all. It is a pardonable diversion, perhaps, in the interests of scientific research, to herd even with savages, and gain an insight into their habits and modes of thought by a temporary submission to forms of speech which most effectually smooth the way to native affections.

"After all, it is only a game, not for love, but for beads. The women are sure to be the winners. There are insuperable obstacles to intimacy beyond a mere fanciful play of words and a complete absence of all fine sentiment."

198. But this is a digression. We must go back to the Ponsee Saubwa, who returned from Manwyne on 30th April with the news that certain of the Shan chiefs have met in council, and awarded their consent to our progress through the states.

The Panthays were reported to be busy in collecting taxes, and regulating assessments consequent upon their recent successes, and the expulsion of Lees-hee-ta-hee from his stronghold at Mauphoo.

The Shans were described at this time by the Saubwa as delighted with their freedom from the Lees-hee-ta-hee incubus; they paid heavy exactions to this predatory chief without being absolved from their dependency to the Panthay Government.

In either case the exactions were arbitrary, and the sensation of present relief is said to be satisfactory and complete. The Panthays were spoken of by all with whom I then held communication as kind and lenient masters, and their late success over the predatory band whose existence at Mauphoo implied the interception of all healthy communication between Burmah and China could not but be considered at the time, by all of us, as an event which was full of good omen to our own cause, and to future commercial intercourse with an enlightened government in Yunan.

199. It was not, however, until the return of my Kakhyen messengers with letters from the Governor of Momein (on 5th May) that the least certainty existed of a speedy deliverance from Ponsee captivity. Lauloo, the Kakhyen who had first conveyed my letters from Bhamo to Momein, had just returned from Nantin, where he had remained for two days in the suite of the Governor of Momein at a time when active operations were being carried on in the vicinity of Mauphoo.

Tah-sa-kon, the Governor, had determined upon coming himself as far as Sanda to meet the expedition, but the Shan chiefs waited on him in deputation, and begged that they might be allowed to escort us themselves.

They knew what was meant by the march of a Panthay force through their respective territories, and understood that Tah-sa-kon's threat of proceeding to meet us in person was intended as a rebuke against dilatory action, as already manifested in their continued neglect to co-operate with his friends. The chiefs guaranteed their assistance; and the Governor having conquered Mauphoo, and otherwise arranged for our advance through the Shan States, sent us word of his triumphs, and returned himself to his head quarters at Momein.

200. In accordance with their guarantee, the Shan chiefs elected certain high officials from each of their states, and requested them to meet us at Ponsee with the means of transit from thence to Momein.

The deputies arrived at Ponsee on 18th May, and their manner and bearing at once declared them to be men of superior civilization and ready intelligence. Had the Shan chiefs been left to follow the bent of their own inclinations, it is not improbable that recent political adversities and the discouragement to action, imposed under the false tutelage of Burman and Chinese emissaries from Bhamo, may have estranged them from us for a still further indefinite period, and left us in a state of perpetual isolation.

201. But the kindred offices and congenial efforts of the government of Momein intervened in our favour to expedite a union, and when the deputies from the Shan States arrived at Ponsee, they professed a genuine sympathy in our undertaking, which at once compensated for all former shortcomings, and proved that they had been produced by varying uncertainties rather than engendered in a spirit of neglect or opposition.

The deputies alluded to a feeling of regret, which was shared in, they said, by all Shan chiefs, on account of their inability to hold intercourse or treat with me personally during our residence at Ponsee; but as a plea for neglect and dilatory inaction, they let me understand that individual chiefs were restricted in such matters, and could only treat with foreign agents after all interested Saubwas had met in council and expressed a general assent to questions which concerned them as a collective confederacy.

Two days were spent in pleasant intercourse with the Shan deputies, whilst effectual arrangements were being made for an immediate advance into the contiguous Shan States.

202. The Ponsee Saubwa and his Kakhyen Paw-mynes were in constant attendance, and in no way concealed from their Shan superiors the kindly regard which had won their good will and leagued us to them as allies.

This manifestation of Kakhyen good will was an incalculable advantage as an introduction to a race which had been taught at a distance to regard us as foes, but now learned by practical experiences at close quarters to estimate us as friends.

The Kakhyens expressed eternal devotion. They asked me significantly not only to consider their hands at my service but their whole bodies,—a figurative form of speech, which meant a good deal, I fancy, in Kakhyen conceptions, and was received with applause by the Shan deputies. The Saubwa affirmed that our departure would be a source of regret not only to himself, but to all his people. There was not a man or woman far or near within the limits of his Saubwaship who had not profited by our stay, and whose houses did not testify to our liberality and friendship.

203. But so persistently unstable are Kakhyen impressions, that, in spite of all past manifestations of friendship and regard, the very Paw-mynes who had blessed us on the 10th had turned to anger and were implacable on the 11th.

So complete was the reversion and the severity of their threats, that the Shans became terrified, and we were in danger at one time of losing their services.

The 11th was fixed for our departure from Ponsee, and the start which would have been made at a comparatively early hour was delayed by a wrangling argument with the Kakhyen Paw-mynes, who deemed the opportunity a good one for urging at the last moment a multiplicity of demands, which were extravagant in their nature and defied all settlement. The most outrageous pleas were put forward as a means of extorting money or of aiding in our detention.

At one moment it was urged that some of our party had set up instruments (a photographic camera) in front of the chief Paw-myne's house, and had thereby deliberately bewitched his family and household.

I was called upon to make restitution for such demoniacal practices.

Then the subject of mule hire was brought forward, and I was asked to make good the amount of Ponlyne's defalcations.

204. The last monstrosity was a demand of two rupees per head for each mule which the Shan deputies had just brought with them to convey us from Ponsee. Unless this was paid, I was warned that no member of the expedition would be allowed to leave our encampment. "Death's-head" Paw-myne was in his most bullying and offensive mood. The Kakhyens about him were pertinacious

pertinacious because they saw a prospect of rupees. The Shans naturally hesitated and were alarmed for their own safety. It was evident that decided steps must at once be taken by which to control at once the offensive action of the Kakhyens and inspire confidence into the wavering Shans.

205. All reasonable endurance had come to an end. Turning to the Shan deputies, I forcibly asked them to get ready their mules, and at the same time declared in the presence of the Paw-mynes that it was my determination to start, and that whoever opposed me would do it at his peril.

The Shans understood me and acted with vigour. The Kakhyens perceived an earnestness of intention which plainly told them that their plans were a failure. Their opposition had been nothing more than the brag and bluster of cowards. The Shans brought their mules, and the Paw-mynes relapsed as naturally as possible into a kindly state of inoffensive action, and even friendly acquiescence.

206. But we did not get off till after mid-day. The actual fact of having made a start seemed like a dream too pleasant for reality.

The scene presented by a monotonous train of loaded mules, as they toiled with our baggage up the eastern slope which led from Ponsee, would have been insignificant in itself without other improvised accompaniments which formed to the mind's eye an agreeable background of varied perspective.

I called out to a clerk in my employ who was about to return to Bhamo, and exclaimed perhaps with more enthusiasm than prudence, —

" Look at this scene; describe it to the governor at Bhamo, and tell him that you saw us leave Ponsee under the patronage and protection of all the chiefs of these free Shan States. Tell him especially from me that the two months' persecution which has followed us into the hills has resulted only in *his* disgrace and our advantage. Say that the expedition started in a good and benevolent cause, and by God's help it has prospered, and will prosper still, in spite of all that Burmese man can do to frustrate it, &c."

207. On leaving Ponsee a gradual descent for nearly four miles brought us to the foot of the larger spurs which slope down in irregular projections between the main ranges of the Tahpen valley. We are now on the minor undulations which merge, so to speak, into the valley of Sanda, and the eye roams over a narrow expanse of plain, stretching away in an easterly direction into space, but bounded laterally by two lofty parallel ridges of mountain, with an average intervening area of about four miles.

This valley is richly cultivated throughout, and presents an endless succession of villages which either skirt the bases of the high land on either side, or nestle within clustering bamboos on the margin of the Tahpen. The Tahpen itself has become a broad placid stream, with occasionally well-defined banks and anon shelving reaches of shingle and sandbank, which limit its mid-valley windings through the plain.

208. Several small villages are passed ere we reach the town of Manwyne, formerly a dependency of the Sanda Saubwaship, but ceded to Mynetee as the dower of a Sanda princess who married into the Mynetee family. The town lies on the right bank of the Tahpen, and is a succession of villages, which are more or less detached or separated from each other by luxuriant enclosures of lofty bamboos. There is a mixed population of Shans and Chinese, who enjoy the semblance of a prosperity which is characteristic of all Shan communities which are fortunate enough to escape the notice of foreign governments.

209. Our own arrival at Manwyne was a disappointment. The mule-men with our baggage had preceded us on the march, and on reaching the precincts of the town. had thrown down their loads in reckless confusion on a portion of the dry bed of the river, at a very inhospitable distance from habitation or shelter. But this distance was no security against the curiosity of several hundreds of the inhabitants, who quickly formed a wall of humanity round any given spot where a European member of our party might choose to locate himself. Chinese have always been accounted a notorious nuisance in this respect from the time that foreigners first gained a footing in the Celestial Empire, but I will back the Chinese Shans of the Sanda valley to be more

eagerly uncouth and wondrously curious in their first acquaintanceship with European travellers than the rudest village community anywhere in Asia.

210. On the river's bank the human or inhuman blockade was so effectually maintained as to shut us out for a long time from everything save our own individuality. When at length the officials had cleared a road to us, and were induced, after considerable entreaty, to provide us quarters within a religious building adjoining the town, the curiosity nuisance had in no way abated. Neither priests nor officials had power to check it. There was absolutely no relief in eating, drinking, reading, writing, washing, dressing, and undressing (to say nothing of other equally ordinary domestic arrangements); it was in vain to attempt privacy. The glaring curiosity of these unsatisfied gazers was a positive affliction, forgotten happily for a time, though by no means terminated even in sleep.

211. On 13th May I visited the dowager Saubwa, who ruled at Manwyne as the widow of its late chief. She is a portly, dignified old lady of some fifty summers, evidently well bred, and of refined and even gentle manners. A friendly conversation ensued, in which I entered fully into the cause and objects which had brought an English expedition into the Shan States, and thanked the Saubwa-gadaw for the consideration which she had shown us whilst at Ponsee, as well as for the kindly reception within her Manwyne territories.

Manwyne was so situated, I said, at the foot of the Kakhyen hills, on the direct highway to Momein, as to make it a place of very considerable importance in the restoration of the old trade between Burmah and South-west China. In spite of all the drawbacks caused by a comparative cessation of trade, the people of Manwyne, I was glad to see, were happy and prosperous. This showed that they were well governed. To what an illimitable extent would their well-being be increased under a state of affairs which made Manwyne a central depôt for merchants and merchandise between two great and powerful empires.

212. The Saubwa-gadaw replied with pleasant affability. She was delighted to see us; regretted that she could not converse with us in our own language; hoped that we might succeed in our undertaking; begged that I would make effectual arrangements with the Governor of Momein for future tranquillization of the country; being only a woman, she could not interfere in politics. Advises us to stay a whole year in the Shan States, and not return until after the close of the rains. Hopes that we will not be offended at the rudeness of her people, whose curiosity in crowding round new comers cannot be controlled. People who travel through a new country with the object of opening out trade relations must be patient and forbearing, &c. &c. Would Dr. Anderson prescribe for her daughter (a nun), who had been for some time past in a delicate state of health? &c. &c. &c.

213. Tea was handed round during the conversation in true Chinese style, and the general impression which a novice would derive from the occasion and its surroundings would be that he had suddenly dropped from the Kakhyen hills, *not* into the Shan States, but into veritable China.

214. The Saubwa-gadaw's house or "haw," or palace, is situated in a central position within the town, and, like all other *haws*, is built on the Chinese plan of a succession of telescopic courtyards, four or five deep, which lead into each other by a communication of arched doorways, with an exterior wall surrounding the whole. The inmost recesses are devoted to the Saubwa's harem (if he has one) and his family.

The penultimate forms his reception room for guests. The ante-penultimate may be used as a caravansery, stables, barracks, or accommodation for attendants and menials.

215. The prosperity of the Shans of Manwyne was a perplexing fact for a long time, until explained by their comparative immunity from taxation at home or the arbitrary interference of an alien government. It is a lawless, unsettled community, no doubt, and to a casual observer there is an apparent absence of any controlling authority of sufficient force to keep in subjection the evil proclivities of an unchecked mob. Yet it is this very lawlessness amongst

amongst Shans (anomalous as it may appear) which produces order. Men live under an instinctive sense of right and wrong, and their individual interests are, or seem to be, a mutual guarantee against unneighbourly practices.

Religion, too, is by no means unrepresented, for although Shan Budhist priests are lax and unorthodox, when viewed from a Burmese stand-point of Budhism, they nevertheless exercise a moral effect for good, as instanced in the large congregational attendances at their "Kyoungs," and the devotion to ceremonies which daily fills the alms-bowls of the priesthood.

216. The population of Manwyne and its adjacent villages does not probably exceed 5,000 souls. It fortunately escaped the desolation which a greater portion of the Shan States was subjected to at the outbreak of the Mahomedan rebellion in Yunan, and received, too, an accession to its population by becoming an asylum of refuge to those who were driven by poverty and invasion from the more disturbed districts on the Chinese frontier. Its proximity to a large productive area of the Kakhyen hills and its own fertile resources in soil and climate have conduced to an almost superabundance of creature necessities, by which poverty and want have become unknown entities in a Manwyne existence.

217. The visit to the Saubwa-gadaw was an event which produced a decided improvement in our social relations with the Manwyne population. I had made her a few presents of cloths from amongst our stock, and return presents were forwarded in the shape of rice, fowls, eggs, and a variety of Shan comestibles, which gave bulk and substantiality to our table luxuries, without, perhaps, commending themselves in other respects either to the sight or palates of even hungry Europeans.

But the demeanour of the people had sensibly changed, and the mutual return of courtesies between ourselves and their chief had placed us on a familiar and friendly footing with her dependants and subjects of every degree.

218. Our friends, too, the Kakhyen Paw-mynes of Ponsee, had accompanied us to Manwyne, and were solicitous only about extorting promises of a speedy return to the scene of our late sojournment on their hills. They volunteered their services and promised to meet us themselves on the return journey and provide full means of transit between Manwyne and Bhamo.

219. These new evidences of hospitality and welcome formed a bright contrast to the monotonous void of three months' inaction at Bhamo and Ponsee.

The 14th May was the day fixed upon for the march from Manwyne, and much argument and consultation had been carried on between the respective deputies of Sanda and Mynela as to the route which the expedition should now proceed by. A large portion of the Mynela district lay on the left bank of the Tahpen immediately opposite to Manwyne. The Sanda States occupied the whole extent of the right bank from Manwyne to beyond the town of Sanda itself. A small saving in distance might have been effected by crossing the river at once at Manwyne and proceeding direct to Mynela along its left bank, but this would have cut us off from all communication with Sanda, and have defeated one of the express objects I had in view, of treating personally with all the principal Saubwas on the route towards Yunan.

When, therefore, I was appealed to by the contending parties to decide between them as to the route to be taken on leaving Manwyne, I affected indifference, and merely stipulated that we should enter Sanda. The Sanda officials accordingly triumphed, and their victory would have been a simple one as regarded ourselves had it not roused the jealousy of Mynela and led indirectly to resentment and hostility.

220. Some 3,000 men, women, and children were assembled on the outskirts of Manwyne to witness our departure. The camp was crowded to excess with all the *élite* and fashion of a mixed Shan, Chinese, and Kakhyen community. The population was well dressed, and the female portion of all races scrupulously neat and cleanly in their attire. Men wore loose jackets and trousers of dark blue, but the women enjoyed a pleasant variety of gaudy dress colouring. Their jackets were white or pale green, slashed with red at the sleeves and collar. The skirt is dark blue with a variegated silk embroidery, a foot in depth, from the knee downwards. Fanciful leggings or gaiters of rich design cover the ankles. The *tout ensemble* was rich and effective. Exception must be made in the case

of the Chinese, who, as a rule, wore patched clothes and evinced signs rather of penurious thrift than of absolute poverty. The elaborate head-dresses of the women and their cramped apologies or substitutes for feet proved equally attractive to novices on account of certain exaggerated proportions from head to heel at either extremity.

221. Several Shan officials led the way, mounted on ponies with huge saddles of red cloth and padded coverlets, which raised them at least a foot above their animals' backs. The route lay in a north-easterly direction along the right bank of the Tahpen. Road-making had only been attempted at rare intervals, in places where a bridge was indicated rather than a roadway. When such a bridge occurs it is built of long slabs of granite, which are laid laterally side by side, so as to form a semicircular arch over the channel to be crossed. So true is the semicircle in most instances, that it is impossible to resist an inclination to look down for the other half, which is below high-water mark, and exists rather in imagination than reality.

222. At a distance of a mile from Manwyne we passed the village of Onlen or *Nyounglen*, which belongs to the once notoriously hostile Poogen or chief of Manhleo. Opposition is a thing of the past, for the villagers now turned out in hundreds and evinced a hearty interest in our undertaking by spontaneous expressions of welcome and good cheer so manifestly genuine as to invite in ourselves an indiscribable thrill of silent ecstacy.

223. But anon, there is cause for annoyance and disappointment, for it suddenly became evident, during one portion of the march, that the left bank of the river was occupied by an armed party of Shans, whose gesticulations and shouts were unmistakably hostile. At first I was inclined to believe that the demonstration was unmeaning, until it became evident that the Shans of our own party had commenced to indulge in return manifestations of threat and defiance.

224. We were proceeding along a portion of the river's bank which was high and precipitous. The opposite shore was a wide reach of sand-bank, along which the hostile party, consisting of about 50 armed Shans, were keeping pace with us in a state of furious excitement. Their actions can have been intended to be demonstrative only, otherwise it was an easy matter, had the party been really intent on active opposition, to have crossed at any of the river fords previous to our own arrival and have disputed our advance.

As it was, when they found that gesticulation was of no avail in retarding our progress, a shot was fired, and a spent bullet whizzed at an uncomfortable proximity to my pony's head, which caused *him* to plunge and *me* to "duck"! The Shans shouted and thought I was hit. Two more shots were fired, and the demonstration was at an end.

225. But being a short distance in advance of our carriage, my proposition was to halt until it came up and make all secure against further attack, but the Shan deputies with our party begged me to go on and treat the dacoit party with the contempt it deserved. They could do us no harm, it was said, and would never dare to cross over to the Sanda side of the Tahpen river. The deputies were right, and we went on as if nothing had occurred. Our foes were satisfied with a mere demonstration, and evidently deemed it imprudent to come to close quarters.

226. A Mynela deputy by name Kingen was with us at the time of the hostile demonstration, and I have reason to believe that he secretly abetted it.

As soon as it was over he crossed the river, and rode off alone in the direction of our supposed enemies.

But no satisfactory explanation was ever given of this imbecile opposition, beyond the fact that the malcontents belonged to a disturbed portion of the Mynela district, which for many years past had declared its independence and boasted of its allegiance to no chief or government.

227. The Sanda deputies treated the matter from first to last as a mere empty demonstration which was intended to punish our want of discrimination in having selected the Sanda route in preference to that which led through Mynela. The true facts of the case will probably never be known, for I failed to ascertain them after our return to Manwyne, when we passed over the very portion

portion of the disturbed Mynela district in which the demonstration had been originally got up.

228. The whole day's march, from Manwyne to Sanda, disclosed fresh scenes of pleasurable interest, as, apart from the personal gratification of a Shan ovation, or the temporary excitement of a hostile attack, the monotonous grandeur of this endless valley, with its sublime ridges towering up on either side to a height of 5,000 feet, and running in straight parallels into boundless space, was in itself a source of infinite admiration. But to this estimate of its interest and its sublimity I may add the fact that the whole valley area teemed with villages, and was alive with a population which had laid out and conjoined every available acre into one vast garden of fertility and wealth.

229. Half way between Manwyne and Sanda is the Chinese town of Karahokha, which is important as a central mart, at which periodical fairs or market days are held in common with all other towns in the northern Shan States. The bazaar is a mere broad road, which is flanked on either side by Chinese shops, but on market days the intervening space, or rather the whole road-way, is occupied by a succession of stalls in which butchers, bakers, druggists, and jacks-of-all-trade do a thriving business.

With the exception of buttons, needles, and an occasional piece of woollen-cloth, I did not notice that British manufactures were represented here or at any of the bazaars or fairs within the Shan States.

230. The interest of the fair at Karahokha is centered in the fact of its being essentially Chinese in the midst of a large Shan population. A market was being held on the day of our arrival, and the concourse of people was so great, and their curiosity so intense, that our Shan friends advised us not to go through the town, but simply to skirt it on one side and avoid all chance of collision with those who, as the sun declined, would have indulged to the full in Chinese stimulants.

231. This never-ending supply of strong drinks throughout the states we have traversed bordering on China ought, according to ordinary ideas of political or social economy, to be the bane and scourge of any community of people in the world subjected to its influences. But, somehow or other, it does not interfere with the well-being or prosperity of Shans and Kakhyens, who exist and thrive in a figurative sea of beer and shamshoo.

Five cash, or the hundredth part of a rupee, is sufficient to purchase a small teacup full of a spirit which approaches in taste and potency to Scotch whiskey. This is drunk freely, and probably to excess, though it must be supposed to be "the cup which cheers, but not inebriates," as little interruption is caused thereby to trade or to the general tranquillity of a Shan market day.

231½. In our case, however, we were always advised not to visit a fair during the afternoon, when the bulk of those present were already supposed to have imbibed their modicum of *solvents*, and any latent animosity towards strangers, would then, if ever, be very readily evoked. Caution was required, *not* as regards the mass of the people, for the "*in vino veritas*" principle would, I believe, have been verified to our advantage, but a few evilly disposed emissaries always lurked in our train, and with them a collision whilst in liquor was a con, tingency at all times imminent.

232. Karahokha was passed without incident or accident, and the road, leaving for a time its mid-valley course, turned away northwards, and brought us to the foot of one of the many projecting spurs which abut from the counter-slope of the western range. The peculiarity of these spurs is that they are for the most part barren, whilst the main ridges are clothed with a dense vegetation.

The soil is a bright red, which can be discerned for a distance of several miles. At present these spurs would seem to belong only to the western range, though their former prolongation and connectionship with the eastern range is often traceable at certain corresponding points where the red soil crops up in unmistakeable relationship.

233. Our route is continued in a northerly direction to Sanda itself, which lies at the foot, or rather occupies the base, of one of these red spur projections, and is close within the border of the main north-western range.

Sanda, or as it has hitherto been known in our maps *Santafoo* (having the designate termination of a second rate Chinese city) is poor and insignificant both in appearance and reality.

There are neither towers nor temples, nor minarets, nor pagodas, nor any of the outward evidences which proclaim the approaches to a provincial capital. The remains of an old defensive brick wall may still be traced round a portion of the suburbs, but within its inclosure all is ruin and dilapidation.

234. In 1863 Sanda was subjected to a Panthay irruption. The town was first gutted by Panthay soldiers, and subsequently handed over as a prize to any number of Kakhyen adherents who professed to favour the Panthay cause.

The town contains, perhaps, 800 houses with a population amounting to about six thousand souls. The apparent poverty of its dejected inhabitants is a sad contrast to the independent bearing of the Shans of Manwyne. Fire and sword have been ruthlessly applied. Their most lasting evils are in the check which has been given to private thrift and national industry. Nothing has been done during five years of retrogression to repair former losses or provide for further resettlement. The houses represent ruins. The kyoungs or monasteries are mere bamboo erections of the most flimsy construction. All bears evidence of doubts and uncertainty, the origin of which may be traced to Yunan and the evil effects of a neighbouring rebellion.

235. On the 15th of May I visited the Sanda Saubwa in company with Dr. Anderson and Captain Bowers. We were conducted from our Phoongyee house residence to the palace of the chief by a retinue which comprised the *élite* of the Sanda officials. The approach to the *haw* is somewhat imposing, and consists of a triple arched gateway with one principal and two side entrances, the architecture throughout being essentially Chinese. We passed through two courtyards, which communicated with each other by roofed archways and side inclosures. Our reception took place in the vestibule of a penultimate building which led directly into the Saubwa's private apartments. Here we found a fixed number of high-backed armchairs, Chinese in form, and therefore unaccommodating and impossible in construction. The open space or courtyard in front of the vestibule was crowded with respectable visitors, who had been invited to the interview and to note our communications with the chief of Sanda.

236. The Saubwa made his appearance in due course, and placed himself upon one of the impossible seats which was nearest the door by which he had entered.

He was evidently unaccustomed to ceremonial visits, and glared at us for some time in impotent idiotcy.

I was obliged to break ground by a few introductory remarks of greeting and salutation, to which the chief replied by vacant noddings.

But his Prime Minister, or factotum, a steady, clear-headed old Shan, who was evidently recognised as the Saubwa's duplicate, took up the conversation, and responded to me with a genial good sense, which was both pleasant and encouraging.

237. After I had generally explained the objects of the expedition and the benefits which would be realized by a re-opening of the old trade route between Burmah and China, the mouthpiece informed me, with a good deal of earnestness, that the Saubwa himself with his subjects welcomed us heartily and sympathised in our undertaking. If our efforts succeeded, we should be hailed as deliverers and saluted everywhere with shouts of "*Thadoo.*"

The immediate cause of present anxiety did not depend so much, he said, on trade stagnation as upon the uncertainties produced by the war in Yunan. Owing to the various phases of that conflict and the varying successes of Chinese and Mahomedans, the Shan States had been subjected to hostile irruptions three times during a period of 12 years, and its towns laid waste by fire and pillage. There was neither security for the present nor hope for the future. The one thing looked forward to was further disturbance, and probably further invasion.

238. In reply, I said that one of the principal objects of our mission was to ascertain the present causes of disturbance, and exercise our power as a friendly neutral

neutral in the restoration of order and the conciliation, if possible, of some at least of the contending interests. The unsatisfactory state of affairs in Yunan had attracted the notice of the British Government, and had sensibly affected British merchandize. Our interests in China were represented by a British minister, who resided permanently at the Court of Pekin. It was not impossible, in course of time, when our acquaintance with Yunan had been more clearly developed, that representations would be addressed to the Imperial Government, and an effort made towards the restoration of trade.

The Panthays had ruled for 12 years in Yunan, and if, by any legitimate interference on the part of other governments their sovereignty was confirmed and recognised at Pekin, the province would be tranquillised and the Shans restored to former prosperity. I, too, would strive to secure these advantages and favour the cause of conciliation and commerce. The Panthays were known to be interested in my visit, and would listen to propositions which held out so many promising conditions to themselves, and secured the possession of their recent acquisitions.

239. The whole of this reply was listened to with an attentive interest, which now and then exploded in murmurs of assent and approbation.

But I had not finished. My next effort was to let the Saubwa and his officials thoroughly comprehend our present circumstances and the position we were placed in as regarded themselves.

Having come to them as friends, we did not feel satisfied, I said, with the idea that Shan support and assistance had been reluctantly proffered under a compulsory requisition on the part of the Panthay Government.

The object which the British Government had at heart in seeking to resuscitate trade with China through the Shan States could only be accomplished with Shan assistance. The Shans must come forward boldly of their own free will, and believe that they are serving their own best interests in seconding the efforts now made by us on their behalf.

The Saubwa and his people must not believe mischievous rumours which ascribed evil intentions to our mission, and a desire on the part of the British Government to extend its dominions in the direction of the Shan States.

Shans were shrewd and could reason for themselves. Let them be guided by facts and give credence to nothing derogatory to our mission until duly assured by the evidence of their senses.

We, too, had numerous Shan subjects in British territory. They had emigrated in great part from their own free States and settled down in a country where they found security for their persons and protection against injustice.

It was not uncommon, I said, for the Shan Saubwa of any State adjoining British Burmah to make an application to place himself and his territory under British rule.

Several Saubwas had even applied in this manner to the British Government, and solicited its interference to enable them to throw off their subjection to Burmah. With our permission they promised to wage a war against Upper Burmah and deliver over the country to British rule.

The Government had replied that it did not require an extension of territory. That, as friends of the King of Burmah, we were bound to respect his rights and abstain from acts which might tend to foment strife or discord within his dominions.

The Saubwa and his people, if they believed in these instances of our moderation and forbearance, would learn thereby that we were more concerned in the observation of treaty rights than the mere gratification of territorial aggrandisement.

This led to the subject of our treaties with Burmah, and I spoke at length on that portion of them which related to the amount of export duties on goods passing between British territory and the provinces beyond Upper Burmah.

240. The conversation had taken a decidedly political turn. There was a satisfaction in feeling that what I said had an interest for the people, and was credited in spite of the damning reports which had preceded the expedition into the Shan States.

The most encouraging assurances were given of friendship and co-operation. I was even asked in a tone of confidence, which was almost too genuine to have

been assumed for the occasion, to use my influence with the Governor of Momein and prevent, if possible, another Panthay invasion.

241. The good effects of this visit were soon manifested in a multiplicity of minute attentions which had hitherto been either negligently overlooked or purposely disregarded. Since our arrival at Sanda the Saubwa had sent abundant supplies of rice and firewood for our whole party. They were now supplemented by delicacies, which comprised ducks, fowls, bacon, eggs, and dried salt-geese, the latter quite equal in taste and flavour to the best English-cured-bacon.

During the evening the old minister or *medium* also made his appearance with other Shan officials, and passed the night in friendly conversation. I now learned by their apologies that the Saubwa has ever been singular as a man of few words. His tact and ability, however, in other respects (and possibly also in the art of *thinking*) were very favourably reported on, and gained him the confidence and esteem of his people.

242. I was agreeably surprised to find the next morning (16th May), whilst making provision for a start from Sanda, that a deputation had arrived with presents from the Saubwa.

I had given him a few cloths and carpets, which were esteemed of great value on account of their rarity in the Shan States. In return the Saubwa sent me three handsome Shan pillows, one for each member of the expedition, and a very dandy satin coverlet or counterpane of Shan manufacture, which I was told was intended for my personal use at Momein, where I should find the climate cold and inhospitable as compared with that of the valley of Sanda.

243. A very extraordinary message accompanied these presents. I was asked to adopt the Saubwa's grandson, a boy who was recommended to my protection as being next heir to the Saubwaship.

It was at the same time notified that certain Shan astrologers, who had been consulted during the previous night, had given out as the result of their divination that the young heir to the Saubwaship would neither prosper in health nor acquire social position within his own estates unless I consented to consider him my son. The earnestness of the request was matter for surprise, and could only be accounted for by making full allowance for the reverent credulity with which charms and spiritualism are everywhere regarded throughout the Shan States.

244. Shortly afterwards it was casually made known, as if the result of an after-thought, that the Saubwa himself would visit me before we started, and I had only time to make a few hasty preparations for his reception when his arrival was announced. He was accompanied by a goodly retinue of attendants and two large umbrellas, one of red silk with a heavy broad curtain, and the other a veritable gold *chatta* of Burmese manufacture.

I received the Saubwa at the door of our monastery, and rather took him by surprise by seizing his hand and leading him in my grasp towards a seat specially prepared for him. The object of the Saubwa's visit was one which naturally called for a display of diplomatic reserve. But in the present instance his anxiety and impatience were so great that almost before he would allow himself to be seated or exchange the usual salutation of greeting with the members of the expedition, he had introduced me to his grandson, and begged, as if his life depended on it, that I would adopt him into my family and treat him as my own child.

At the same time, another silk counterpane and a long silver pipe were presented to me in the young Saubwa's name, and I was urged to bear in mind that their use was intended to recall old memories and make the child's interests identical with my own.

245. It is difficult to convey a correct idea of the earnest and importunate manner in which the request for the adoption was urged upon my notice. The fates had been consulted, and some sage astrologer, strong in the Shan cause and with an intuitive foresight into a political Shan future, was led to predict that the well-being of the heir presumptive to the State of Shanda depended on a close family alliance with a representative of the British Government. The old chief

chief was sensibly affected by the willing courtesy with which I accepted the charge entrusted to me, but the youthful scion was shy and would not be reconciled to his new connectionship. I made a few return presents, and the interview passed off with becoming cordiality.

246. It was arranged by the Saubwa that our departure from Sanda should be honourably signalised by a public demonstration. The route we were to take was made to pass the Saubwa's palace, and as our procession advanced up the street leading to the front entrance a salute was fired, and a flourish of trumpets heralded our approach. We dismounted for a final hand-shaking with the Saubwa, and I took the opportunity of giving my newly-adopted son a few shining four-anna pieces, which won his affections and probably made him my friend for life.

247. If to wear rupees is a sign of livery, it may be truly said that a large number of influential Shans, Phoongyees included, have already donned Her Majesty's uniform. There is a greed on the part of all Shan swells for four-anna pieces, and the coveted possession is no sooner gained than Her Majesty's coin is turned into finery and becomes an article of ornamental equipment. The novitiates of the monasteries, and even the priests, are the supreme leaders of fashion, and indulge in a mass of varied ornamentation which would prove a study to even Budhist ritualists.

248. But to return to the Saubwa. It is due to him to say that he was no longer afflicted with nervous incapacity, and had lapsed into a state of positive cheerfulness. He grinned with delight at my recognition of his grandson, whom he nursed and tended with almost silly devotion. We parted with many expressions of mutual good will. The trumpeters in advance heralded us onward with repeated blasts of most brassy intonation. Sanda was alive with a concourse of people, who must have gloried in knowing that the present procession betokened peaceful promise, and presented in this respect a marked contrast to recent exhibitions of hostile triumph.

249. The road led through paddy fields for a distance of some two miles across or athwart the valley, in a direction south-east, and brought us to the foot of another red hill projection, which we cross and descend on its eastern slope to the right bank of the Tahpen, when the route again assumed its north-easterly course through the centre of the valley.

250. Unlike Sanda, the town of Mynela lies on the left bank of the Tahpen, at the base, or along the lower ridges, of a central spur which divides the main valley longitudinally into two separate gorges, without causing any material deviation in the direction of the Sanda valley itself, or the general parallelism of its high flanking ridges.

251. The Tahpen is crossed at the ford of Nammon, which, in addition to its being a convenient ford, is also at this season a vast expanse of sandy desert two miles in breadth, which represents between well-marked banks the dry bed of the Tahpen and Tahaw rivers at the particular point of their apparent confluence. As we proceed and approach Mynela the Tahpen is lost in an amphitheatre of hills, which form a noble background to that ancient metropolis. It has entered the western of the two gorges into which the valley is here divided, and its source is traced to the town of Rooyon, some three days' journey north from Mynela. The Tahaw keeps to the eastern gorge and marks our route as far as Momein.

252. Mynela, including its suburbs, contains about 1,200 houses, with a population of from eight to 10,000 inhabitants. Like Sanda, the town is defended by a loopholed brick wall, from eight to 10 feet in height, with watch-towers which overhang the wall at intervals and do the duty of bastions. The position with regard to the valley we have been traversing is similar in most respects to the position of Sanda. Both towns are built on rising ground, or on small spurs which abut a short distance only into the valley from the main western range. The houses rest on a ground floor, and are built of unburnt bricks without any upper story. With the exception of the main street, inhabited by Chinese, and in which the daily bazzar and weekly fairs or market-days are held, no attempt has been made to lay out the town into streets. The

various roadways leading through the town are mere connecting lanes flanked alternately by the backs of houses on the one side, and by walled inclosures with small covered gateways leading into petty court-yards on the other. The appearance of these Shan towns is disappointing as regards cleanliness and the evidences or rather absence of household wealth or domestic economy.

The evidences of former prosperity are, perhaps, more strongly marked at Mynela than at Sanda, and the difference is to be accounted for by a very palpable infusion of Chinese blood which has permeated the old Shan stock and left traces only of Shan originality.

253. On entering the town at 3 p.m. on the 16th May, we were escorted by the officials to a Chinese temple, which had been newly roofed and otherwise put into repair for our accommodation. Chinese temples on a first introduction are no less a study as regards their laborious structure and variety of design than in the illimitable play of their interior decorations. Demigods and heroes are personated in all the grotesque exaggeration of a mythical period. Each temple may possess, and doubtless professes to have, a history of its own, but four intepreters and the sages they consulted were only able to form (or at least to impart) a very faint idea of the conceptions of those celebrated artists, whose graven images and laborious designs were nevertheless a subject of adoration and praise to a host of ignorant but self-satisfied worshippers.

254. The temples at Mynela are costly stone buildings, and the interior decorations have been carried out with a lavish expenditure of gold-leaf and labour which proclaims the wealth of the people at large, and are evidence also of their artistic attainments.

255. The number of these temples as compared with purely Budhist monasteries is proof also of the predominance of a Chinese element at Mynela, and determines the fact that geographical position has had its influences on religion and given to the Budhism of these parts a variety of forms which stultify its pure tenets and are the reverse of orthodoxy. It would be a work in itself of labour and research to attempt the barest nomenclature even of the various images of Budha and the never-ending series of demigods and deified representations of brutes and heroes which go to make up the sum of Shan-Chinese theology. My note-book contains a few observations on certain scenic decorations with which the temples abound, and which illustrate the mode of disseminating scriptural truths amongst the manifold worshippers at a Chinese shrine.

256. I must be excused for making two short extracts.

"(1.) The floor of one room (inside the temple) contained a model on a large scale which was intended to be typical of a man's journey through life, and represented in practical development the allegorical paths which lead respectively to life or destruction.

"A broad deep river separates man from eternity. On the one bank is misery and human affliction; on the other paradise and heavenly liberation (nikeban). The river is spanned by a solitary bridge, which all must cross who hope for salvation. There is a double roadway; one broad and seductive; the other tortuous and intricate.

"The paths to seduction are pleasant and manifold. They are brightened for a time with the allurements of sin and the temporary attractions of vice and immorality. But they lead to destruction.

"The haunts of vice, though partially concealed, are typically represented by their dangerous position on the extreme edge of the bridge, with an abyss below, which yawns forth death, or rather life in death, in most terrorizing propinquity. Removed from these seductive pathways is a narrow road which winds its way through a labyrinth of difficulties. The good and the virtuous are seen bravely threading its mazy intricacies and striving to reach the haven of their desires, a paradise teeming with all that is estimable in man's conception. Those who strive with steady purpose with their minds intent only on piety and religion, and dead to the allurements of human existence, cross the bridge and enter a region of heavenly enchantment, whilst others, who have recklessly followed the broad road to ruin, have fallen into the abyss, and are seen underneath the bridge, struggling in billows of molten lead or wound in the coils of monster serpents.

"Altogether the scene is one which, once looked upon by a true believer in the

the hideous reality of such after-punishments, is intended to cure him of all wandering propensities, and guide his inclinations to the narrow road which leads to life and everlasting happiness."

257. "(2.) In an adjoining apartment was another model which illustrated the Budhist belief in transmigration and the inflexible laws which guide and direct the living principle or vital force into certain grooves which have been expressly contrived or cut out for its passage from one state of existence to another. In one cavity, which has the appearance of a hollow tomb, the living principle is symbolised as an embryo fœtus in a state of quiescence. From this hollow tomb a number of grooves or branch roads are seen to diverge in all directions, and each groove is illuminated by pictorial designs which typify the peculiar existence into which the vital force may or may not enter in its passage from the cavity in which it first became matter. Certain rules and conditions are supposed to exist by which direction is given to these inert forces in their transitory stages, and it seemed evident that the model was intended to teach and inculcate these conditions and afford 'a wrinkle' as to the readiest mode of hitting off a particularly happy groove; but my interpreter, like all Chinamen when religion is on the tapis, professed a pardonable ignorance of details which seemed to suggest that even Chinese theology does not bear questioning, but that simple faith without reason or inquiry, is a fundamental principle also in the creed of even Mynela worshippers."

258. Whilst on religious subjects I may here mention, as one of the peculiarities of Shan Budhism, that it seems to create a strong desire in the female mind to assume the garb and duties of wandering priestesses, or in other words, incites them to become peripatetic female Phoongyees. These Phoongyees or nuns shave the head, dress in white, and have separate monasteries or rather convent nunneries of their own. But here the analogy, if there is any, with the European order ceases, for a Shan nun is a migratory animal, and is never content to remain for any length of time in one place. It seems to be one of the duties to make annual pilgrimages to the most celebrated Budhist shrines, whether in China or Burmah, and in this respect she is a person of political importance on her return to her own native states, where she becomes the sole dispenser of foreign intelligence, and a well-tested authority in the political status of the countries she may have visited.

259. I was forcibly reminded of this fact during our stay in the Shan States by frequent personal communications with these nuns, and a careful observation into their habits, and the social position held by them amongst their own native communities. Whilst at Mynela, I was visited on several occasions by a gathering of eight or more priestesses, some of whom spoke Burmese fluently, and had even resided a portion of their lives in British territory at Rangoon.

Rangoon is a kind of Budhist Mecca to certain Shan old ladies, who will not believe that they have perfected themselves in their religious calling until a pilgrimage has been made to the shrine of Dagon. It is doubtless owing to this fact, and the itinerant habits of Shan nuns in particular, that the English occupation of Pegu has both been acknowledged and appreciated in the Shan States. One of the old nuns who visited me, spoke in rapturous and familiar strains of *Rangoon Mahamengyee-Phayyah* (Colonel Phayre), and the esteem in which he and other English officers were held by our Burmese subjects in Pegu. I could *now* understand and account for the almost spontaneous display of good feeling with which Shans, who are left to their own inclinations, have always welcomed British enterprise, although directed towards their own dependencies.

260. The Shan nuns who have been in the habit of making pilgrimages to Rangoon have returned from time to time to their several states filled with the fulness of their own good works, and carrying with them a lively and grateful sense of the power, the justice, and the toleration of the British Government. It is not too much to say that the present expedition is indebted for much of its success in the northern Shan States to the veritable dicta of these female divines, whose presence at Rangoon, with shaven heads and long white robes, is a pleasant or unpleasant momentary attraction, but whose political powers for good or evil involve us in a problematic conception too fanciful and far fetched, perhaps, for the most visionary of diplomates.

261. As I have before said, the Chinese element was proportionately in greater force at Mynela than at Sanda. The close proximity of the robber chief, Lees-hee-ta-hee at Mauphoo, had a terrorising effect over the Shan population, and kept up a divided allegiance between their old and new masters. Lees-hee-ta-hee had been powerful enough for some time past to levy tax contributions at Mynela, and his presence in the neighbourhood with a band of Chinese marauders not only favoured Chinese expectations, but produced doubt and distrust in the Panthay Government. His recent defeat and the dispersion of his associates at Mauphoo, had of course somewhat destroyed his prestige at Mynela, but I was painfully reminded nevertheless, on a first acquaintanceship with Mynela officials on their own soil, that as friends of the Panthay Government, we are not altogether desirable visitors, and that the Chinese yoke was preferable as a permanency than the seeming instability of their pretentious conquerors.

262. The effect of repeated conversations with these officials disclosed to them that the English expedition was not pledged to any particular party or people, and its sole object was centered in a desire to ascertain with precision the present causes of trade obstruction between Burmah and China, and with the assistance and co-operation of the intermediate races and people, to devise a remedy and urge a reconciliation of all adverse interests. The people of Mynela had gradually become polite and courteous in their manner, but there was an absence of that extreme cordiality which had marked the conduct of their Shan brethren of Sanda.

The old Saubwa was dead, and his son, a lad of 15 years of age, was hardly in a position to guide the affairs of the province under the regency of a mother already known to be in her dotage.

263. It had been arranged on the day after our arrival that I should pay a ceremonial visit at Government House, and (although the dowager-regent excused herself for not seeing me, on the plea that she had no teeth and did not care about exposing her deficiencies), the young heir apparent received me with all due formalities and with a large concourse of his family and officials. An opportunity was thus afforded of entering into an explanatory discourse on subjects which have been already recorded as having formed the basis of my conversation with the old chief of Sanda.

264. My desire was to push on towards Momein, without any unnecessary lengthened detention in the Shan States, but the officials of Mynela were inclined to demur at the responsibilities which would attach to themselves provided harm befel us on the route between Mynela and Mauphoo. The road was still infested, they said, with dacoits, and only a day or two previous to our arrival a caravan of more than 30 mules which was proceeding with rice to Nantin had been attacked and several lives were lost. If I pressed for an immediate start, they were bound to attend to my wishes, with the proviso, however, that they were absolved from whatever responsibility might arise out of accident or misadventure, and that all such responsibilities rested solely with myself.

265. It was at this juncture of affairs that the Shan Saubwa of Hotha arrived, and his superior intelligence and bearing soon asserted itself in the councils of the timid and undecided officials of Mynela.

The Saubwa was himself proceeding to Momein with a caravan of 150 mules laden with cotton which had been brought from Bhamo by the central or ambassador's route, *vid* Momouk, to Hotho. He had been instructed by the Governor of Momein to join our escort, and give us the benefit of his assistance on the marches below Mynela and Momein.

He declared decisively that he was not prepared to leave Mynela until assured that the route *vid* Mauphoo was in all respects safe and practicable. His information led him to believe that large bands of Lees-hee-ta-hee's dacoits were still at large with the avowed purpose of disputing our right of way and of looting our baggage.

266. Under these circumstances, I found it necessary to write and forward a letter to the Governors of Nantin and Momein, and as three or four days must elapse before replies can be received, it may be as well here to glance cursorily at the affairs of a Shan State either as a separate principality or as one of a group of States which combine in the formation of a separate province.

267. The northern Shan States, with which we are now concerned, have been hitherto

hitherto known in Burmese nomenclature as the "Shan Sheet Pyee," or eight Shan states, whereas the Shans themselves divide this same territory into ten states in the following order:—

Eastern.	*Western.*
1. Mynechai.*	6. Hotha.
2. Mynechon.	7. Latha.
3. Sayfan.	8. Mynela.
4. Mynemaw.	9. Sanda.
5. Mynewun.	10. Mynetee.

We have explored and acquired a pretty accurate geographical knowledge of five of these States which form the western group. Mynewun, too, of the eastern group has been partially explored by an assistant engineer, who was detached from Hotha to survey the Sawuddy route *vid* Mynewun to Bhamo.

Mynetee, Mynela, and Sanda lie within one valley range, Hotha and Latha occupy a second, Sayfan and Mynewun occupy a third, Mynechai, Mynechon, and Mynemaw a fourth.

268. Each of these ranges or valleys lies more or less in a north-easterly and south-westerly direction in straight parallel courses. On their north-eastern extremity they merge into the higher ranges which are continued in a southerly direction into the Cambodian and Malayan Peninsulas. On their west they are lost in the irregular groupings which constitute the so-called Kakhyen hills, so that the northern Shan states, instead of being, as was once supposed, a wide expanse of open country leading on to the plains or table-land of China, are in reality mere strips of narrow valley caused by a gradual opening out of the several hill ranges as they tend in a northerly direction from the Kakhyen chaotic group on the one side, and are shut in or lost at the other extremity by the snowy ranges of central Yunan.

269. The whole of these Shan and Kakhyen ranges of hills which comprise the 10 northern Shan states lie within the basin of the Irrawaddy, and act as water-sheds to one or more of the several tributaries which feed that river at this portion of its middle course. But on reaching the higher ranges on their north-east extremity, the valley of the Irrawaddy is defined, and we seem to have reached the water-shed of the Salween, or, at all events, of some other river basin.

The general and physical geography of these hitherto unexplored regions is full of lively interest to every inquirer in the field of science, and it is tantalizing, perhaps, that our exploration has been necessarily limited to a comparatively small extent of unexplored territory. But the knowledge gained is not without interest, and will eventually aid the solution of much geographical uncertainty.

270. The Shan state of Mynela pays an annual subsidy of 5,000 baskets of paddy to the Panthay Government at Momein. The officials complain and think this an unreasonable assessment, not so much on account of its amount as because it is equivalent to what used to be paid to the Chinese Government, before the desolation caused by Mahomedan invasion. But complaint is unreasonable. Mynela, as a state or principality, is divided into five districts, each of which includes some 20 villages; each village contains on an average 50 houses. The incidence of Imperial taxation does not, at this rate, exceed one basket of paddy to each house, or 1 *s.* 6 *d.* per house per annum. This does not include other assessments which are levied for the maintenance of the Saubwa and his officers. The Saubwa is assisted in his government by four councillors or ministers, to whom certain villages are assigned as revenue, and subjected to a moderate assessment, which is specially fixed by the Saubwa himself. Each village, too, supports a Tamoh, or headman, of its own selection, who acts as a subordinate magistrate in chastising misdemeanours and the settlement of petty civil disputes.

There are no other state exactions, and the people enjoy a wonderful immunity from

* *Ch*—pronounced as Greek.

from taxation as compared with the inhabitants of the adjoining countries or with their own Shan communities subject to Burmah.

271. No direct means exist for arriving at an exact estimate of the population of the Shan States, but a pretty close approximation may be gained by observation and enquiry in the states visited, and the estimate arrived at by these means may be extended even to those states with which, perhaps, we had not the advantage of becoming personally cognizant. My own observation leads me to believe that the state or principality of Mynela may be accepted as a very fair criterion of the extent and capabilities of the nine remaining Shan States. According to the computation given above of the number of houses contained in each village, and allowing an average of five persons to each house, the population of the Mynela State alone would amount to 25,000, and that of the ten states, at the same computation, to two hundred and fifty thousand, which may be generally assumed, as an approximate estimate only, to be within, rather than in excess of, actual fact.

272. This does not include the various hill tribes who occupy the several ranges which divide the state into separate valley compartments. The division in some instances has been so effectual as to have produced palpable variations in dress amongst the same race, and more than mere idiomatic or dialectic variations in language between closely adjoining states.

273. But, ethnologically speaking, all Shans are alike. The type is well marked by facial characteristics which distinguish Shans from the several cognate races in the midst of whom they have their existence.

The Mongolian predominates, but the broad nose and thick lips of the veritable Burman are softened down into comparative symmetry, without altogether assuming the sharper and better defined facial outline of the Yunan Chinese.

It would be easy to look upon Shans as a cross between these two extremes, were it not that the distinctive nature of the Shan language is evidence of a distinct tribal origin, which is allowed to retain certain physical distinctions of race, owing to the geographical peculiarities and condition of the country it has so long occupied.

274. The dress, too, of the Shans is another indication of their distinctive nationality. The dark blue jackets and short loose trowsers of the men are somewhat Chinese in origin, and a very large percentage of the better classes of the males of Sanda and Mynela have assumed the Chinese pigtail and use Chinese chop-sticks. But Shan women dress after a fashion of their own which differs in every particular (if we except a portion of the Mynetha Shans of the Hotha valley) from anything akin to either Burmah or China.

275. The *puggery* or head dress is a long blue cotton scarf with embroidered ends, which is wound round the head so as to ascend in gradually increasing circles until it has assumed the shape and proportions (comparatively of course) of an inverted pyramid. The jacket is made of white or light blue cloth or satin, and falls loosely to the hips without any pretension to cut or shape. But the collar is stand-up and close fitting, *à la militaire*, and both collar and sleeves are slashed and lined with red cloth.

The nether garment is a loose skirt, about a yard in diameter, which is brought together in front and tucked in at the waist. This skirt is made of plain dark cotton cloth, but the better classes attach a showy embroidery of gold or satin patchwork (or mosaic), a foot in depth, round the lower edge, which gives the garment a dressy appearance. Over this skirt as well as over the jacket a very richly embroidered shawl is drawn round the hips from behind and fastened in at the waist in front. It is an ugly appendage altogether, and is only, therefore, worn in full dress! Fanciful gaiters of variegated cloth and embroidery fit closely to the legs from the ankle to the kee, and silver ornaments in profusion, head tiaras, earrings, necklets, necklaces, bracelets, chatelains, and various pendants without end, complete the costume.

276. The dress is a trying one, no doubt, and the only wonder is how any woman can possibly look well in it. Shan women must be exceptions. There is something graceful in the dress and in the women when the eye has familiarized itself to local peculiarities, but I confess it takes time and a long separation from European civilization to convert a Shan woman, with a hideously

apportioned

apportioned attire, into a veritable beauty of feminine or seductive degree of desirability.

277. Letters were received from Momein on the 21st May, and on the same date my Chinese interpreter, Moung Shwè Yah, who had so disgracefully deserted the expedition at Ponlyne, suddenly presented himself with a number of Panthay officers and a large military escort which had been sent by the Governor of Nantin to meet and conduct us on our route *vid* Mauphoo.

278. Moung Shwè Yah entered into a few particulars relating to his desertion at Ponlyne, and was fertile in excuses which were not only intended to absolve him personally from all blame, but to prove with consummate plausibility that he had been a faithful adherent to our cause throughout, and that his timely arrival at Momein had afforded the means of counteracting evil and producing a friendly reaction in our favour. It is only necessary to record, in refutation of these plausible misstatements, that Moung Shwé Yah did not attempt the journey to Momein after his sudden exodus from Ponlyne, until news had reached Bhamo of the favourable issue of my letters to the Panthay Governor, and of the generous advances which the latter had proffered in the furtherance of our enterprise.

Had these advances not been made, it is more than evident that Moung Shwè Yah would never have left Burmese territory at all, and judging of his conduct from first to last, I am bound to state that his private journey to Momein, without any intimation to me of his intentions, and after the news had been spread abroad of Panthay good-will and co-operation in our enterprise, was undertaken with the object of counteracting what had been favourable rather than of adding fresh facilities to our proposed advance.

279. But Moung Shwè Yah was too late. Shrewd and cunning by nature, it is no libel to say that his conscience allowed him at times to indulge largely in deceit and duplicity. The following may be assumed to be a very possible explanation and solution of his conduct and motives.

On reaching Momein he evidently found a state of affairs which had outreached his influences and promised a more certain remuneration to himself if *we* succeeded than if he continued an ineffectual endeavour to carry out the policy of his master the King. He had thus been accidentally converted into an indirect help, and it is due to him to say that during my stay at Momein he so far attached himself to our cause as to become (partly by necessity perhaps) my chief medium of communication with the Governor of Momein.

280. The three Panthay officers who accompanied the escort from Nantin called upon us in due form, and announced their arrival at our residence by sending in cards, or three separate sheets of coloured paper, with their names and titles printed in Chinese. They are well-dressed, handsome-looking men, and the Arab or Mussulman type of countenance and features is unmistakeably pronounced, in spite of a decided Chinese admixture.

Our conversation was friendly and unreserved, but it was rather perplexing to discover that our new friends were under an impression for some time that we were their brethren in creed as well as by race. It became necessary, in all our first interviews with Panthay officials, to provide against misconception of this kind, but the explanation was always made and received in good humour, and did not in any way interfere with the friendship of our intercourse.

The fact that the jemadar and 30 of the police escort, as well as a large percentage of our private followers, were true believers in the creed of Mahomed, was an introduction in itself which went far towards conciliating Panthay prejudices, and paving a way to confidential communications.

281. All was in readiness for an early start, and the Mynela officials having shuffled out of their responsibility by consigning us to the protection of a Panthay escort, our departure was no longer delayed, and we left Mynela on the morning of the 23rd. A march of two miles brought us to the right bank of the Tahaw, and here the Panthay advance guard called a halt, and announced that a strong party of dacoits were ahead and intended to dispute the entrance to the Mauphoo defile.

282. The Hotha Saubwa joined us during the halt with a large caravan of mules, and his information coincided with that received by the Panthay officers

as to the fact that our route had been waylaid by a hostile assemblage of unfriendly dacoits. I use the word *unfriendly*, because it is not unusual for travellers and residents of villages within the haunts of Chinese freebooters to compound with *local* brigands, and purchase immunity from attack or plunder.

283. The sudden announcement of an intended attack was thoroughly embarrassing, and became almost ridiculous under Moung Shwè Yah's drunken exhortation to "go on and fight the blackguards; who was afraid?" It was difficult to know whether his treacherous tendencies might not have been at work to lead us into an ambuscade, but he seemed in earnest, and to judge by appearances, we had no reason to apprehend really formidable opposition.

284. The route we were to follow had been traversed the day previous by our Panthay escort, and no report of an intended attack had come to the notice of the Mynela authorities; on the contrary, they had given their consent to my proceeding, and guaranteed safe conduct as far as Mauphoo.

Besides, to have turned our backs on an uncertainty, without any positive assurance of real danger, would have ruined our prestige, and have prejudiced the chances of further progress.

To have remained and encamped where we then were must have argued weakness; and, if it was true that a resolute enemy was anywhere in our vicinity, would have inspired them with confidence and invited the attack, which I was bound, if possible, to avoid.

285. Under these circumstances an advance was inevitable, but it was not until I had drawn up the police in line and fired a very respectable volley to try their muskets (they had been loaded several days), that the Panthay officers evinced any sign of zealous excitement. They *now* exclaimed that with 50 muskets like ours, which would all "*go off*," they were ready at any time to "*whop creation*," or rather perform in their idea an equally arduous feat, and march to Pekin.

286. It was arranged that the Panthays should send out feelers, and in order to carry out this duty the more effectually, I attached five Mussulmen of our party to proceed in advance, and take with them their muskets, whose going-off powers had already excited the valour and admiration of our Panthay escort. Captain Bowers was eager to head this party, but cheerfully submitted to my desire of avoiding what I conceived to be unnecessary exposure. Nothing would have tended more to compromise the future prospects of the expedition, than the complications arising out of conflict with an enemy. It was necessary, therefore, to guard as much as possible against unnecessary risks, and court danger only when it became an indispensable aid to progress and safety.

287. We proceeded in this order some two or three miles, and arrived at the duty station of Kanfan, where a halt was called by the Hotha Saubwa. The Panthay guard had proceeded in advance, and after a short halt we were informed that they had reached the foot of the Mauphoo hills without encountering an enemy.

288. The valley had now narrowed very considerably, and as we approached its north-eastern extremity, the only outlet was a narrow gorge or defile, through which the Tahaw rushed with the force and velocity of a mountain torrent. The sides of the gorge were formed, for the most part, of bare precipitous rock, more or less scarped, which rose at intervals to a height of several hundred feet. No roadway would have been practicable through the gorge itself, and it became necessary, therefore, to ascend a portion of the western range parallel with the gorge for a distance of seven or eight miles, until a descent is made into the Nantin valley.

289. The far-famed fort or stronghold of Mauphoo is situated on this highland, about half way between the ascent from the Sanda valley on the one side and the descent to the Nantin valley on the other side. Its appearance as we approached was singularly picturesque, not only by reason of natural scenery and position, but because a strong Panthay force which garrisoned the town had thought proper to embellish its battlements with numerous gay banners, and to present in their own persons a gaudy variety of costume and equipment.

290. Mauphoo itself is insignificant both as a town and fortification, but its position

position had been well chosen as a safe and convenient place of retreat and rendezvous on account of natural defences and general inaccessibility. The Panthays for some years past had either tolerated or submitted to the presence, at Mauphoo, of an enemy who intercepted their communication with Burmah and disputed with them the sovereignty of the northern Shan States. It is now evident that this submission originated in a fear of offending against Burman scruples by direct interference with one who was known to be the secret agent of the Burmese Government. It was not therefore until my letters had reached Momein, and the Governor had been led to believe that we were supported and countenanced by the Burmese Government, that the Governor undertook the work of reducing Mauphoo and of opening out communication with ourselves at Ponsee. He argued rightly, that either Mauphoo must cease to be a Chinese garrison, or the British expedition must fail in gaining access to the Chinese frontier.

291. Tah-sá-kan took the field in person against Mauphoo with a force of 5,000 men. The besiegers contented themselves for several days by a close investment of both Mauphoo and Mawsoon, the only inhabited portions of the Mauphoo hills. Every approach was strictly watched, and the assualt only took place after a large portion of the besieged had either been reduced into capitulation, or had fallen in unsuccessful attempts to force a way through the Panthay cordon. More than 300 of Lees-hee-ta-hee's followers were killed during the investment, and although this number may be somewhat in excess of reality, still the putrefying remains of corpses, even at the time of our arrival, made the vicinity of the town, as well as its inner defences, an abomination of corrupt exhalations which revealed the truths of indiscriminate slaughter. Panthay revenge had satisfied itself to repletion on a hated band of Chinese marauders.

292. The march from Mauphoo to the Nantin valley will ever associate itself in our recollections with the gratifying marks of honourable greeting with which the Panthays bade us welcome to their hospitable possessions. Strong guards had been stationed at appointed intervals along the route, and the nature of the country was such as to enable them to be seen in the distance in all the gaiety with which full sunshine, variegated costumes, long silver lances, painted match-lock, and large national flags of multiform design and colouring, could possibly invest them. As we approached, the guards severally beat gongs, fired muskets, waved flags, and otherwise evinced, in their own fashion, a species of salutation which would have done honour to the resources and civilization of any state in Asia.

293. The descent into the Nantin valley brought us again to the bank of the Tahaw river, at a point where it enters the long narrow gorge above mentioned, through which it has worn for itself a way into the Sanda valley.

How superbly quiet and picturesque the view which is disclosed during the descent from the Mauphoo heights! At our feet lies the Tahaw, now a smooth quiet stream, flowing between deep precipitous banks of alternate rock and vegetation, and spanned by a veritable iron suspension bridge, the first of a series which assures us that we have passed the confines of the celestial empire. Six miles in advance (though apparently at our feet) may be descried the towns of Mynetee and Nantin, the former Shan and the latter Chinese, though at present under the rule of a Panthay Governor. In the distance the valley stretches away into space, with a dark background of lofty mountains which tend northerly far into Yunan.

294. The average width of the valley did not exceed three miles, and the well-defined terraces or gradations of terraces at corresponding heights on either side were evidences of a lacustrine period during which a gradual outlet was being forced through the Mauphoo gorge. The lake itself had silted up and formed the present rich allúvial expanse of plain and valley. There is reason to believe that the other Shan valleys we have thus far visited owe much of their present formation to a lacustrine origin, and that their unusual fertility and elevation is due as much to former sedimentary lake deposits as to a continual accession of productive matter which is being incessantly superadded by periodical flood, as well as by the descent of *débris* from the adjoining slopes towards their several valley centres.

295. The iron suspension bridge at the foot of the descent from the Mauphoo hills into the Nantin valley is used only during the rainy season, when the route from Mauphoo to Nantin lies along the high ground on the left bank of the river. On the present occasion we kept the right bank, and crossed the Tahaw at a ford opposite to the town of Mynetee. But on the return journey in July the river was unfordable throughout its whole course, and the "iron bridge route" became a necessity.

296. The bridge itself is about 80 feet in length with a roadway six feet in breadth, which is formed by a number of parallel chains, which are stretched across the river from bank to bank and rigidly clenched behind strong stone embankments. The chains are made of rod-iron an inch in diameter, which is worked into single links a foot in length and about four inches in width. Joists or crossbeams overlay the chains, and the whole is covered with a flooring of earth and gravel so as to form a practical roadway. The approaches to the bridge on either bank are covered in, and form guard houses or resting places for travellers, and a Chinese ornamented roofing gives a picturesque finish to the buildings and told of our advent to Chinese localities.

297. The present Shan town of Mynetee is distant at least a mile from Nantin, of which it may originally have been considered a suburb. It is the head quarters of the Shan Saubwa of the Mynetee State, and although the town itself is inhabited by a Shan population, a new outline of appearances is everywhere visible, and we feel and know that we have passed Shan limits and are in a new country and under a new government.

The line of demarcation is more strictly defined at Nantin itself, to all intents a Chinese walled city, in which the buildings, the pagodas, the bazaars, and the inhabitants are at once divested of all Shan associations. But it is a town of desolation and poverty; one half has become a ruin, and the other half is occupied by a Chinese population of squalid aspect, who exhibit, as Chinamen, a manifest absence of ordinary thrift and national vitality.

298. We reached Nantin as it was getting dusk, and were conducted to the ruins of a Chinese temple, which had been used as his head-quarters by the Governor of Momein during the recent expedition against the Mauphoo stronghold. Very shortly after our arrival the Panthay Governor paid us a visit, accompanied by a Panthay military officer of high rank (a nephew of the Governor of Momein), and the Panthay Cazee or magistrate of Nantin, a man of unmistakeable Mahomedan bearing, and with perfectly orthodox beard and raiment. The visit was repeated on the following day, and the Governor was now accompanied by the famous Chinese robber chief Thongwetshein, who came in after the capture of Mauphoo, and transferred his allegiance to the Panthay cause.

299. Thongwetshein evidenced in his outward exterior an impressive realization of a living brigand. A man does not rise to power in these parts, even as a robber chief, unless possessed of a mental superiority which lifts him above the level of his followers. Thongwetshein had achieved this superiority, and was the "brigand" to perfection in his courteous bearing and off-hand civilities. But the tone of his voice was deep and sepulchral, and he gave vent to opinions in a voluminous roll, which added to their effect, and commanded the respect of attentive listeners. The transfer of his allegiance to Panthay rule is an event of importance, which was indirectly influenced by our own expedition. It is reasonable, therefore, to conclude that a still more vigorous and determinate effort to promote intercourse, and open out the old trade-routes, will be the surest and most effectual means of resettling the country, by securing the submission of other chiefs against whom whole armies would be inoperative, and assist rather than diminish the causes of disturbance.

300. I returned the Governor's visit the following day (25th May), and our reception, though purely ceremonial, was courteous to a degree, and intensely gratifying. The Shan *haws* (palaces) already described have evidently been built after a Chinese model. The Government House at Nantin represented a continued succession of quadrangular courtyards, flanked by lateral buildings, and connected with each other by a series of roofed archways, so arranged as to be exactly opposite, and present in line an imposing perspective.

301. A salute

301. A salute was fired as we reached the palace, and, as a mark of special honour, the centre gates of the several archways were thrown open for our use. (The same custom prevails in Burmah; only a king or a prince of the royal family is allowed admittance into the inner enclosure of a palace through the large central gateway. All other persons enter by a small side wicket.)

The hall of audience is a building which occupies the place of the penultimate archway at the further extremity of the third courtyard. It was open in front, but well furnished in Chinese style with chairs, tables, elegant wood carving, and a variety of well-coloured Chinese paintings.

302. The Governor was dressed in a blue satin embroidered robe, which reached to his feet, and possessed a peculiarity of cut which coincided, he told us, with the dress of Chinese Governors under a former dynasty. This peculiarity consisted in a sort of clerical or rather quakerish stand-up collar without roll or ornament; in other respects the grand robe had no cut at all, though full of a particular merit which might make it a cherished possession to those who delight in gaudy dressing-gowns.

303. There had been a slight hitch in our relations with the Governor on account of my refusal to accede to his request of opening to view the contents of our packing cases. Having once explained that the cases contained either stores for our use, or presents for his superiors, I looked upon the request to display their contents as an impertinent interference, which not only argued ill-feeling and distrust, but was at variance with the spirit of cordial greeting which had welcomed our arrival within Panthay territory. The matter was not pressed, but I was given to understand that my refusal to comply with the Governor's wishes might entail delay, or necessitate our detention until a report was made, and instructions received from the Governor of Momein.

304. It was not until our friendly interview with the Governor at his own residence that I ascertained the real cause of his anxiety to learn the contents of our packages. Amongst the many injurious reports which preceded our arrival at Nantin was one which invested us with supernatural means of offensive action; some of our boxes were said to contain magical materials which could subdue whole cities, and bring their inhabitants into complete subjection; other cases were filled with living dragons, which might be utilized at command into an irresistible weapon of offence against enemies.

305. Absurd in effect as these reports appeared, it was almost impossible to treat them with ridicule, or ignore the mischiefs they were intended to generate. I was now convinced that the original desire to inspect our boxes had neither been urged in malice nor dictated by curiosity. My stubborn nature forsook me in a moment, and I was prepared, I said, to open to view any number of cases which appeared to the Governor either doubtful or suspicious. But common sense had taken the place of ignorant credulity, and no further allusion was made to our caged dragons, or to the boxed-up infernal machines which were to have been the means of desolating whole provinces, and subduing all men into compulsory allegiance.

306. The report which attributed to us the possession of magic has been satisfactorily traced to a Burman origin. The Kakhyen chief, Ponlyne, was heard to excuse himself to the Governor of Bhamo for not having caused our destruction, by saying that Burmese had themselves informed him that we were veritable demons, and that some of our cases contained a peculiar fire with which we could, at any moment, destroy our enemies and burn up their possessions. He was deterred himself from open hostility by the certainty of provoking this irresistible power, and overwhelming himself and his family in ruin.

Thus reports conceived in a spirit of opposition were happily converted into a positive protection, and acted in some respects as a wholesome check to the very evils which they were specially designed to create and make offensive.

307. The march from Nantin to Momein was full of interest. The configuration of the valley had somewhat changed, and the eastern main range no longer continued to be a single continuous ridge such as that which had characterised its direction along the line of the Sanda valley. As apart from the main range, there now appeared to be a ramification of irregular semi-detached spurs all tending in a northerly direction, and yet so closely allied to each other as to

form a connected series of undulations, or, in other words, a broad expanse of uneven table-land high above the level of the circumadjacent valleys.

308. The ascent to this table-land is commenced half-way between Nantin and Momein, and as soon as the high ground is reached, it slopes away again by a gradual series of descents as far as the city of Momein; which is itself situated within the fork of two valleys, that on the west being a sinuous prolongation of the Nantin valley on the one side, whilst on the east another small valley has been formed between the Momein mid-valley ridges above mentioned and the main eastern range (Deebay), which has again entered an appearance, and is now the principal watershed between the Tahaw and Shwèlee affluents of the Irrawaddy.

309. The volcanic origin of the Momein plateau, as well as of the whole surrounding region, is very manifestly indicated by more than the usual signs of igneous activity and reproduction.

On one of the ridges which flank the plateau on its western side are a series of very remarkable hot springs, the largest of which, at the time we visited it, did not exceed four feet in diameter, but its exposed surface was in a perpetual state of bubbling ferment, and violent jets of steam were projected from it, as well as from a number of smaller springs and cavernous fissures by which the larger spring was partially surrounded.

The deep dull sound, which was audible for a considerable distance from the springs, spoke of subterranean caverns at no great depth below the surface, and produced a sensation of distrust in the intervening crust, which seemed ready at any moment to fall in and carry all away with it into a boiling ocean below.

310. Dr. Anderson has brought away a quantity of the water for chemical analysis, and we shall learn in time its mineral ingredients. It is satisfactory for the present to know that this spring in particular has been rendered famous throughout the surrounding country for its curative properties, and the afflicted from all parts come and bathe in its waters, or utilize its vapours as a palliative to their several complaints. The temperature of the water is rather above the boiling-point, and is highly serviceable to tourists in this respect for nearly all culinary purposes. But bathing is only practicable after the water has been carried away in a small rivulet to a considerable distance from the springs themselves, and has been cooled down by evaporation or mingled itself with cold water streams from other sources. The collective rivulets combine to make a small stream of tepid water, which is borne away into the valley and soon loses itself in the waters of the Tahaw.

311. Another of the indications of volcanic origin is the existence of an extinct crater, which occupies in fact a large portion of the Momein plateau, and presents a most interesting feature in the physical geography of this particular region. So extensive is the space which formed the old aperture, and so indistinct at first sight to an inexperienced eye the indications which give special definition to this form of volcanic structure, that I think I should have passed the crater unheeded, had not Dr. Anderson pointed out its well-defined splintery outline, as well as masses of rugged scorious black rocks everywhere strewn over a surface bared of all vegetation.

312. But I must go back to the hot springs. It was during the time we had halted to make an examination of their principal peculiarities that a cruel and cowardly attack was made on our Panthay escort, which had proceeded in advance in charge of the mule caravan with our baggage. A portion of this escort had journeyed almost the day before on its way from Momein to Nantin; and so remote was the idea or anticipation of danger, that the Panthay officers of the escort, who belonged to the Nantin garrison, were accompanied by their wives, or rather female relatives, who rode in front with the advance guard.

313. It was a novel and pleasing sight, in the absence of more genial female companionship, to see Panthay ladies in full Chinese costume riding at the head of our already singular and picturesque cavalcade. I noticed them when we made a start from Nantin, and they were then apparently full of lively anticipations, and looked upon the journey to Momein in our company as an enjoyable diversion in the dull monotony of their every-day existence. The next time I saw them they were loudly bewailing the unfortunate slaughter of two of their nearest and dearest relatives.

314. The

314. The Panthay escort, having proceeded about three miles beyond the hot springs, had just rounded one of the many small lateral spurs which abut into the valley from the eastern main ridges, when shots were fired from a concealed position above the road, and two Panthay officers, who were some distance in advance of their own party, fell wounded. The dacoits, seeing that they were unsupported, rushed out from their place of concealment and hacked the officers to pieces with their swords. From all accounts it does not appear that the Panthay escort in the rear made any timely effort to save these officers or avenge their death; on the contrary, I believe that the suddenness of the attack caused a panic, and that a fatal lapse of time was allowed to occur before the chief officer of the escort (a nephew of the Governor of Momein) was able to rally his men and make head against the dacoits.

315. It was during this interval that several of our own leading mules fell into the hands of the attacking party and were looted of their loads. A sick Panthay soldier, too, who was being carried on a litter, had been deserted by his bearers, and was barbarously murdered.

316. All this time the members of the expedition had been very diligently enjoying a halt at the hot springs, with the full approval of the Hotha Saubwa, who accompanied the party as guide and adviser, and of the Panthay officers who were intended to act as our safeguard and escort. No warning was given of danger such as that which had called for caution on the march to Mauphoo; on the contrary, it was assumed as a certainty that all due precaution had been taken against surprise and attack.

317. When we arrived at the scene of dacoity the sight was anything but cheerful or encouraging. The bodies of the murdered officers had already been lashed to long bamboos, and were ready to be carried back to Nantin. Broken boxes lay in the way, and in some instances their contents had been more or less pillaged. Unfortunately, our personal baggage, being light, happened to be in advance and suffered most. Dr. Anderson's loss was a serious one—one of his tin packing cases had been opened and partially looted; another, which contained books, papers, and instruments, was apparently intact. The arrangements made for bringing it on with us miscarried, and the box and its contents were never heard of afterwards. A few other articles might have been saved had we possessed the means of transport, but two mules had been carried away (or carried themselves away bodily), and the remainder had gone on to some distance, or were otherwise unavailable.

318. We had still 12 miles of road to get over, and the Panthay officers were excited and spoke of the likelihood of another attack, which they rather deprecated in so cramped and indefensible a position. We pushed on, therefore, a mile or two to the foot of a steep ascent which led on to the high uneven tableland stretching towards Momein. Here most of our baggage mules were halted, and I fell in again with the Hotha Saubwa, who appeared faint-hearted in the extreme, and gave a very discouraging view of what was in store for us within the next six miles of our onward journey.

319. He now disclosed to me, over biscuits and brandy pawnee, that, according to his information, the two Chinese robber chiefs Leoqwanfan and Lees-hee-ta-hee had joined their forces, and that the present attack had been expressly planned at Bhamo with the full determination of preventing our arrival at Momein. Lees-hee-ta-hee was under a distinct promise, he said, to the Burmese officials at Bhamo to interrupt our progress, and had gone so far as to even guarantee our destruction.

320. I did not quarrel with the Saubwa outright, but I called him to account for former reticence, as well as for having assented to our halt at the hot springs, when he must have been well aware that we thereby subjected ourselves to imminent peril.

321. But the Saubwa was intent on the dangers ahead, and had no desire for retrospect as regarded the past. The attack which had just been made on our baggage was trifling, he said, in extent to what would be attempted as soon as we continued the march. Hitherto the Saubwa had shown himself to be intelligent and obliging. But his doubts or his fears on the present occasion made

him anything but an agreeable companion, and forced him into the uncourteous admission that he had acted imprudently in having joined our party, and thereby incurred a risk which would have been avoided had he proceeded alone. His misgivings, however, were of no avail, and I was glad to know that he could not retreat. Go on we must at all risk, and with the certain prospect (according to his account) of armed opposition.

322. Disposition was accordingly made, and a few scouts were sent ahead as an advance guard to act as feelers. The interval of excitement was of short duration, for we had not proceeded more than a mile from our last halting-place before the advance guard reported that it had fallen in with a strong Panthay patrol from Momein, which had been sent by the Governor that day as an honorary addition to our military escort.

The route was clear and hopefully practicable. The scene had shifted from one of anticipated conflict to the more interesting prospect of visiting for the first time a frontier city of the Chinese empire, and of feeling that a way was disclosed to the successful attainment of our expeditionary projects.

323. The approach to Momein is very grand and very beautiful. We had been descending for some time the eastern side of the high ridges which I have already described as intersecting to some extent the main valley of the Tahaw. The road, after passing down a long series of grassy undulations, led round the southern slope of a tumulus-shaped hill, 1,000 feet in height, crowned on its summit by a high Chinese tower pagoda. It is at this point that the city of Momein is suddenly brought into view in a hollow basin, enclosed on all sides by hills of every shape and altitude, which slope down apparently to its very walls.

324. In reality they are at some distance, and the intervening valley spaces are either under cultivation or mark the remains of large Chinese towns, now for the most part in ruins and deserted. Beyond the city, from our present point of view, the Tahaw and Momein valleys have formed a junction, and a narrow plain extends for about five miles in a northerly direction along the banks of the Tahaw, until limited in the distance by the gradual convergence of the lateral hill ranges. On the extreme north the horizon was bounded by a dark rugged outline of black mountains, with an apparent north and south direction, which form, as far as it is allowed to deduce facts from observation and inquiry, a portion of the main central Himalayan chain, which is continued far south into Burmah and the Malayan peninsula.

325. But the most effective and heart-stirring scene of the whole, as it then appeared to me (with senses by this time somewhat deadened to the grandeur and attractions of mountain scenery), was that which presented itself in the foreground half way between our position at the foot of Pagoda hill and the southern face of the city wall. The Governor had thought fit to come out in full state to welcome us to Momein, and his guards and retinue formed a temporary encampment which was intended to be impressive and to display with effect the power and resources of the Mahomedan Government.

326. The encampment was marked by a long line of flags of never-ending variety, shape, and colouring. On coming within sight of them I halted for a few moments to make preparation for meeting so formidable an array of our expectant friends. We were a motley and mottled group of adventurers. A march of 23 miles over dusty hills and across muddy ravines did not add to personal appearances or to that dignity of demeanour which would be anxiously looked for in the pioneers of trade or the representatives of western civilization. A dozen of the most respectable-looking or least dirty of the escort were sent in advance to herald the way, headed by the police jemadar carrying my Burmese gold sword. The members of the expedition followed under the canopy of two large golden umbrellas, which were opened to their widest extent and carried by Burmans in green livery. The remainder of the escort brought up the rear, and our seedy accompaniments and general equipment was in striking contrast with the gay appurtenances and soldierly bearing of the Governor's body-guard.

327. As we drew near, guns were fired, gongs beaten, and bands of music struck up a selection of their own, which had the merit of being soft and harmonious as compared with the clanging harshness of Chinese performances.

I was

I was altogether unprepared for a ceremonial reception on so formal a scale, for although the reports which reached us from Momein were calculated to produce a very favourable impression of the Governor's individual greatness, still it seemed unlikely that a state which for years past had been known to be a centre of riot and disturbance should have had it in its power to assume at a moment's notice the festive semblance of a holiday ovation.

328. The number of large standards, by a rough computation, exceeded two hundred, the staffs being in most instances covered with plain silver plating. The standard bearers were dressed in what may be said, on the *lucus a non lucendo* principle, to have been uniform. There was a manifest diversity in the cut and the colouring of their several vestments, but the head dress in every case was unique and striking. It consisted of a succession of large variegated rosettes, which rose up from both ears to a point over the forehead, where they were terminated, or rather continued by the long tail feathers of a new species of pheasant of extraordinary beauty.

329. The standard bearers were ranged in line on either side of the road, and in front of them Panthay officers of all grades had deployed, so as to form a line through which it was intended that our procession should pass. Our appearance as we filed past this martial assemblage must have been as novel and remarkable to the Panthays, by reason of its unaffected simplicity, as their gorgeous display seemed inconsistent and out of order on account of its comparative extent and unmeaning magnificence.

330. But the reception was flattering and courteous to excess, and as such produced feelings of special gratification in those who had come as strangers to an unknown government, and after three months of obstruction and annoyance, suddenly found themselves amongst powerful friends and raised to the position of well-favoured guests.

Tah-sa-kon,* the Governor, had stationed himself at the extreme end of the lane or line of standard bearers and troops. His position was marked by three large red silk umbrellas with deep fringes of gold lace. Carpets had been spread and chairs arranged in line, with gaudy red cushions and rich silk drapery. The Governor was dressed in full mandarin costume,† with a few Panthay modifications, and came forward to meet us as we advanced. We shook hands in a style which was Mussulman on his part, but English on ours. Very little was said or done beyond mutual recognition and greetings, and we moved on in the direction of the city, followed by the Governor and his gorgeous attendants.

331. It happened to be market day, and the suburbs we passed through were thronged with vendors of petty wares, who were allowed in true Chinese fashion to erect temporary stalls in the midst of the thoroughfares; all was Chinese,—houses, shops, people and language. We were conducted to a spacious temple outside the city, at its south-west angle, and in close contiguity with the Governor's residence, which, though inside the walls, was at all times within the reach of instant communication by means of a guard permanently located on the city walls immediately above our residence. The temple was built on the palatial or government house plan, with a succession of quadrangular courtyards leading into each other, and flanked on either side by ranges of insignificant out-buildings.

332. But we have now fairly got to Momein, and it is time, perhaps, to pause and make some apology for the extraordinary dimensions to which this narrative has already attained. It would have been a comparatively easy task to have generalised only on the events related, instead of recording them at length in descriptive detail; but I have conscientiously adopted the more laborious of the two courses, with the double object of securing a base for my own observations, and of showing how far those observations may have been correctly deduced. Whilst, therefore, I propose to continue the report in its present form, I shall strive to avoid digression, and limit myself to matter which strictly pertains to the objects of the expedition or tends to illustrate its action and interests.

333. Our

* *Tah-sa-kon.*—The Government title of office.

† He afterwards presented me with the dress he wore on this occasion.

333. Our life at Momein and the manner in which the business of the expedition was conducted at that city will be best described by extracts from my diary.

28TH MAY 1868.

Visited the Governor for the first time in an official form, accompanied by Dr. Anderson and Captain Bowers. Government House is a succession of quadrangular courtyards leading into each other in the usual Chinese style already described (*vide* plan and drawings). Our arrival was announced by a salute of three guns and a clanging of gongs and cymbals, followed by the softer strains of flute and clarionet.

Tah-sa-kon was in full robes in the central hall of audience, and came forward to receive us, shaking hands and motioning us to chairs at the "west end" of the apartment. The presents we brought with us were carried by 20 men (Mussulmen) of the police escort in undress, and laid on tables which ran down the centre of the audience hall. The presents looked well, and were a passport in themselves to the good graces of the Governor and his attendant officials. They consisted of carpets, velvet-pile table covers, double barrel guns, telescopes, binoculars, broadcloth, pistols, and a choice assortment of nicknacks, minutiæ of no great value in themselves, but in special favour and demand at Momein.

I opened the conversation by assuring the Governor of the real obligations we were under to him for having so generously co-operated in the work which had brought a British expedition into Yunan. Without his active assistance, I said, in having provided the means of transit and personally superintended the removal of obstacles to our progress through the Shan States, it would have been out of my power to have reached Momein, or to have even left Ponsee with possession of my baggage.

Tah-sa-kon replied by saying that it had rejoiced him from the first to learn that a British mission had been sent from British territory with the object of entering into commercial relationship with his government. He had himself entered into the enterprise with a will, and his first effort had been to despatch a force to Mauphoo and disperse the Chinese brigands who held its passes into the Shan States. He had proceeded himself on the Mauphoo expedition, and after its successful accomplishment had collected the several chiefs of the Shan States at Nantin, and made arrangements for our advance, as well as for the future settlement and control of customs duty leviable on merchandise passing through the Shan States, &c.

I next spoke of my desire to proceed beyond Momein and confer with the Panthay Government at Talee. Tah-sa-kon informed me that we had arrived at a very inopportune period for prosecuting our journey further into Yunan. At the present time two separate forces, he said, were actively engaged in scouring the country between Momein and Yoonchan. For several months past there had been no free communication between these two places. Other routes to Talee were equally impracticable, unless we were prepared to encounter opposition and fight our way onward. It was far from his wish, he said, to stand in my way. He would even provide us with an armed escort if I finally determined upon an advance in opposition to his strong remonstrances and advice. The Panthay King at Talee had been informed of our intentions, and had expressed satisfaction and a desire to second our efforts. At the same time he (Tah-sa-kon) felt certain that an advance beyond Momein was in our case both unsafe and impracticable. If hastily undertaken at the present time, without a prudent regard to time and circumstances, it might lead, he thought, to possible disaster, and destroy rather than assist in the eventualities for good which the expedition was designed to bring about.

I thank the Governor for the kindness and consideration of his remarks, and frankly assure him that, great as our desire was to penetrate further into Yunan, I was not prepared to neglect his advice, or even act without his approval. I would therefore, confidently leave the matter in his hands, and await circumstances and further deliberation.

Tah-sa-kon.—"This is well: remain here a few days and judge for yourself. Everything shall be done to further the objects of your expedition. One of your main objects it so resuscitate trade between Burmah and China. I have already bound over the chiefs in the Shan States to aid the enterprise. I will summon them again to Momein before you leave."

To this I replied that I thought a congress of the several chiefs at Momein during my stay was highly desirable.

Tah-sa-kon assented, and wound up by exhorting me to be under no apprehension of apathy on his part, or on the part of the Government at Talee. "A trade route shall be opened *viâ* Bhamo. English merchants who arrive at Bhamo next season will find carriage and safe escort to Momein; but there is plenty of time to arrange all this before you leave. I must at once report the news of your arrival to Talee, and shall forward on at the same time the presents you have brought me. They will be very acceptable to the Panthay king, &c."

I next referred to the death of the two officers who were killed whilst on escort duty with our baggage between Nantin and Momein, and expressed our sympathy and concern in a loss which had been specially incurred in advancing our interests.

Tah-sa-kon admitted that *he too* felt exceedingly the loss of these officers, as they were both brave men and had done good service.

They had died, he said, in the performance of their duty, and we were not to concern ourselves about them further.

The fact was not to be disguised, I said, that two Panthay officers had met their death

by

by giving assistance to a British expedition; and I begged to assure the Governor that it would be my duty to report the circumstance to my Government, and make suitable provision for the families of those who had died in our service.

The reference to, and remarks on, this subject were apparently well timed. Tah-sa-kon seemed personally gratified, and a murmur of approval and satisfaction made itself felt in the general assembly.

The conversation was continued for some time on various topics of interest, whilst Panthay attendants presented us with continuous courses of tea, dried fruits, sugar-candy, and Chinese confectionery in profuse variety.

Several Pantha officers were present, amongst whom two were introduced to us as belonging to the Governor's council, and consulted by him on all matters relating to the government of the province.

Another salute was fired as we left and more beating of gongs. The interview had been a success. Shortly after reaching our temple residence, the Hotha Saubwa called and said he had been specially sent by Tah-sa-kon, with an invitation to all the members of the expedition to dine with him on the following day. We were told that the Governor had been very favourably impressed by our visit, and fully believed in the sincerity of our objects.

Moung Shwè Yah too, who had acted as Chinese interpreter, came in later in the afternoon with similar friendly messages. The Governor was delighted. The presents we had given him were a source of general admiration.*

They would be sent with a despatch to Talee. Other messengers also came from Government House with an abundant supply of Chinese confectionery and fine white granulated honey. We were especially warned whilst eating the latter to avoid onions in our food, as an admixture of the two in the human system was universally followed, it was said, by fatal results.

29th MAY 1868.

The Governor has sent this morning to say that he intends returning our ceremonial visit to-day. The officials and people about us are all smiles. This is merely a reflection in them of the good will borne towards us by their chief. Several Chinese merchants of the town have called upon us, and appear to be earnest in desiring an end to the present unsatisfactory state of affairs in Yunan. They liken the rude condition of the province to a stagnant lake, which has neither an outlet for its accumulations, nor an inlet for fresh supplies. In the meantime its stores of wealth deteriorate by time, waste, and evaporation. The simile, as coming from them, is significant, and shows that they have rightly comprehended the evils which attach themselves to a country even temporarily cut off from its natural and legitimate trade communications.

The Governor called in state at about mid-day. He was dressed in full mandarin robes, and his followers wore gay uniforms, and carried gold swords, silver spears, and the other insignia of a Governor's office. Presents were also brought as follows:—

1 bullock.
2 sheep.
Trays of fruits and confectionery.
40,000 rupees cash.

I would have gladly rejected the cash, but my objections, though courteously offered, were summarily overruled. The money was distributed amongst our escort and followers, and proved very acceptable at a time when expedition funds were only available for actual necessaries. Each man received cash to the value of about one rupee.

The visit being purely one of ceremony was soon over, but the Governor hinted, on leaving, that for the future he would call upon us without form, and begged that we also would treat him without reserve, and make our visits to Government House as often as we felt inclined.

The Mussulmen of our escort are in great favour with the Panthays. Both affect to be drawn towards each other by the inspiration of a common belief. The Panthays are evidently proud of the recognition which the Mahomedanism of Yunan receives at the hands of unadulterated believers from Hindoostan.

The police jemadar is a true "Syed," and is constantly summoned to officiate as moollah in the Panthay musjid. The Panthays "pump" him under a belief that he will disclose the existence of any sinister designs connected with the expedition, but he remains staunch. The only dangerous man of our party in this respect is, to my idea, our native doctor. He hates us, I believe, with all the fervour and some of the malice of his race and creed. Luckily he is simple and idiotic, and his enmity, if put into speech, is not likely to be impressive.

30th MAY 1868.

The thermometer during the past few days has ranged between 53° and 70°—not a high average for a hot weather month.

My compensated aneroid barometer shows the height of Momein to be 7,000 feet above sea

* This must have been chaff, I fancy, as regards some of the articles; for instance, Edmund Jones & Co.'s 40-rupee double barrel guns!

sea level. We have risen by a succession of lofty terraces from the time we left the valley of the Irrawaddy. Momein itself, by native report, is the highest habited portion of the uneven table-land which divides Western Yunan from the Shan States and Burmah.

In the language spoken at Momein, a traveller from any given direction journeying towards Momein is said to "go up" or "ascend," and in the same way on leaving the city he is said to "descend." It is more than probable that this idea is fallacious, and takes its rise in a natural misconception of comparative altitudes. We shall find, I think, on further research, that the plateau extends, with a varying increase in altitude, throughout the greater portion of Yunan province.

The Governor visited us this morning in a quiet way. He is in plain clothes and has only half-a-dozen attendants with him.

We amuse and interest him by firing off our revolvers and exhibiting a small galvanic battery with other scientific instruments.

In talking about the attack made on our baggage between Nantin and Momein, and the hostile demonstration on the march from Manwyne to Sanda, Tah-sa-kon remarked that he considered our misfortune in this respect to be due to the exaggerated reports that had reached Momein and Talee, and had excited even the cupidity of other adventurous communities, who were supposed to be more scrupulous in their dealings than ordinary dacoits. He was prepared himself to hear the worst accounts of our party had we attempted an advance beyond the Kakhyen hills without due precaution, or until the necessary preparation had been made for safe conduct.

Another great source of danger, as apart from our supposed wealth, lay, he said, in the evil reports which had been circulated by Burmese agents, and which caused those who would otherwise have been friends to hold aloof and regard us with suspicion.

It was on that account that he had determined upon taking the field in person and securing Mauphoo. Severe fighting had taken place on both sides, but success had attended his efforts in opening to us a road as far as his capital.

I could only acknowledge this confession of active co-operation in our cause as a sincere proof of friendship, which would be appreciated and duly acknowledged by every government then interested in prosecuting commercial enterprise with South-Western China.

Tah-sa-kon affirmed, with much earnestness, that not only himself, but that the Panthay Government at Talee, was eager in its desire to enter into commercial relations with Burmah, and through Burmah with Rangoon and the Pegu seaboard. The subject was one of vital importance to the whole of Yunan, and frequent references had already been made to the King of Burmah to co-operate with the Panthay Government in the resuscitation of trade *viâ* Bhamo.

But the Burmese Government was lukewarm, and no steps were ever taken to further the renewal of direct trade communications, although the necessities of their situation forced the Yunanese population into an arduous and expensive alternative of reaching Mandalay with a limited caravan once a year, rather than be excluded altogether from the most valuable of their trade resources. The news of our present expedition had been the more welcome to them because it seemed to afford evidence that the Burmese Government had co-operated with us, and assented to the re-opening of direct communication between Bhamo and Momein. It was this idea which had roused him (Tah-sa-kon) to action and justified the expulsion of Lees-hee-ta-hee from Mauphoo. A commencement had been made by the British Government, and it would be zealously advanced by all the assistance they (the Panthays) could give, as well as by the despatch of a government mission from Talee to Rangoon. This could all be arranged hereafter. He (Tah-sa-kon) had come this morning to take us to an entertainment specially prepared for us at his own residence.

We accordingly adjourned to Government House, and the rest of the day was devoted to festivity and amusement. On our first ceremonial visit the Governor gave me a seat on his left in the body of the room in which he received us. On the present occasion we were asked, as a mark of special attention, to sit with him on a raised dais at the further or most honourable extremity of the audience apartment.

The feast was sumptuous and interminable, but purely Chinese to the tea and even shamshoo. Tah-sa-kon did not drink himself, but he was polite enough to disregard all Mussulman restraints when hospitality was called for towards foreign guests.

An interesting feature in the entertainment was the presence of the dowager Saubwa of Mynetee, who happened to be on a friendly visit at Momein. She was attended by a number of well-dressed Shan ladies, who laughed and chatted in good humour and with true Shan good breeding. I took the opportunity of speaking to the Governor in her presence about the Shan States generally, and their natural capabilities as a source of trade and revenue, &c. I complimented him on the foresight and intelligence with which he had hitherto allowed the Shans to govern themselves, instead of imposing on them chiefs and governors of an alien race with whom there was no community of feelings or interest, and drew a comparison between the Shan States of Yunan and the more southern states dependent on the Burmese Government. In the former case the Shans, under the rule of their own hereditary Saubwas, enjoyed comparative peace and prosperity. In Burmah the hereditary rulers had either been summarily deposed or placed under the governance of Burmese officials. The consequence was, that the states were subject to chronic disturbance, and industry had yielded to indolence and poverty, &c., &c.

During

During the afternoon we adjourned to the theatre, and were entertained for some time by a tragedy in which kings, queens, princes, and princesses took prominent parts. The dresses of the actors were gorgeous and genuine; the music soft and monotonous, with no deafening clatter of cymbals or brass drums, which usually ruin the interest of all Chinese performances.

After the theatricals Tah-sa-kon led us through his private apartments to a garden in the rear, which was very tastefully laid out with dwarfed flowering and fruit trees in great variety. I noticed amongst them peach, plum, fir, box, apple, and orange. The trees were generally from two to four feet in height, and in most instances the dwarfing process had been carried out by tying knots in the stem whilst yet a sapling, or contorting it into horizontal spiral twists, so as to stunt the natural growth and diminish the height.

The zenana occupied a range of pretty neat buildings on two sides of the garden. Our Burmese Assistant Surveyor has appropriately noted them in his plan as *ladies' chambers*.

The walls of Tah-sa-kon's private apartments were covered with Chinese paintings, or hung with old armour. I also noticed an English alarum-clock with a gaudy gilt face. The bed was an honest four-poster, draped with blue silk damask curtains, which were looped up into festoons with silver chains. The dressing room contained several suits of military uniform, amongst which the rosette and pheasant-tail head-dresses of Panthay standard bearers were most conspicuous, &c.

31st May 1868.

Long conversations with Chinese merchants. The conclusion they have come to is that a resuscitation of the old trade route between Yunan and Burmah will alone be effective in restoring order and tranquillity to the province. If old routes and old sources of trade were available, villagers, they say, would gradually gain confidence, and thousands who now depend for a subsistence on predatory pursuits would find employment as labourers, agriculturists, servants, or petty traders.

During the day six noted dacoits have been apprehended, tried, sentenced, and executed. All public executions have a brutalising tendency no doubt, but the Panthay method of carrying out a sentence of death is kind and humane as compared with the cruel savagery of Burman practices. In the latter case the condemned criminals are taken in procession to the burial ground and kept in suspense for hours, whilst a crowd of drunken executioners dance before them with naked swords and intentionally add to the terrors of death by a hideous rehearsal of execution ceremonials: more than once the death dance is stopped, and the executioners rush forward with swords uplifted as if to strike, but when half delivered the stroke is stayed as if by an after-thought, and the blade (I speak as an eye-witness) is quietly stopped on the victim's neck. But the end is not yet. The dance is continued, and the condemned wretch, with feelings at length deadened even to death, has passed through a hundred agonising existences ere real dissolution comes as a reprieve to end the term of earthly torment. With the Panthays punishment is probably not less deterrent in its nature, though marked by a hasty impetuosity in the mode of its infliction. In carrying out a sentence of death a military guard escorts the prisoners to the place of execution. There is no delay, no confession, no formalities beyond the firing of a musket as a signal to the executioners. A proper position having been taken up, each prisoner, still standing, is made to project his head a little, and on doing so the fatal blow is dealt from behind. In nearly every instance one stroke suffices to sever the head from the body. Another musket shot announces the conclusion of the proceedings, and the military guard returns to garrison.

The Panthays are no respecters of race in awarding death penalties. In the present case the victims were four Chinamen, one Shan, and one Panthay.

They were all taken red-handed in crime, and justly punished on account of their offences.

Their bodies exhibited no marks of mutilation or torture. This too formed another contrast to a Burmese execution, when, in most cases, the criminal has been so barbarously subjected to a refinement of cruel appliances, to aid in extorting a confession of his crimes, that, maimed and unable to walk, he is thrown into a cart and borne in agony to the scene of his suffering.

2nd June 1868.

We have been to another entertainment at Government House. On the present occasion the *corps dramatique* seemed to think that a discreet mixture of becoming levity would better accord with our dissolute (?) tastes than the stern amount of tragic display which had greeted us on a first introduction to Momein theatricals.

Herewith my impressions of two performances which we witnessed—tragedy and burlesque.

No. 1.—Tragedy.

"Two famous robber chiefs, who had formerly lived at rivalry amongst themselves and at enmity with the government, were induced to join their forces and aid the state against a foreign invader One of them (Red Face) rose to high command, and worked himself into

into royal favour to an extent which secured him the hand of a fair princess; but, unfortunately for his peace of mind, he possessed a political mother, who had interested herself in state intrigues, hated the princess, and favoured the cause of a rebellious pretender.

"Red Face (against his will, be it said,) is bound in duty, and by an elaborate exhibition of filial devotion, to join a conspiracy against his father-in-law, and to this end it became necessary that there should be a complete severance between himself and the princess. This is embarrassing, for husband and wife are supremely attached, and the manner in which it is arranged that the severance shall be effected, viz., by the death of the princess at the hands of her husband, is a crisis too crude and sensational, perhaps, for even a Chinese stage.

"But all agree that the princess must die, and the husband is urged, by filial affection and the commands of his mother, to act the part of his wife's executioner. There is to be no plotting or other underhand contrivance; all is to be done with gentlemanly deliberation. The husband breaks to his wife the difficulties of the situation, and obtains her consent to die at his hands! There is some real good acting at the last interview between husband and wife, in which love and duty are made to clash with an effective display of seeming emotion.

"The wife is tractable and wonderfully accommodating.

"With a generous fortitude, so true to the stage, she draws her husband's sword from its scabbard, and saves him the pain of becoming her murderer by plunging it deep into her own bosom. The husband gazes, is overcome with grief, and gives vent to loud howls; but somehow or other he suddenly recovers himself, cuts off the head of his deceased wife, and bears it to his mother as an evidence of obedience to maternal commands.

"The incomprehensible portion of the whole (unless we interpret it by that contradictory element in the Chinese character which makes their civilization a mystery to science) is, that the political mother takes up the bleeding head of her victim and joins the husband in what is intended to represent a genuine wail of lamentation and woe. The whole of the *dramatis personæ* now appear on the stage, and the play is abruptly terminated by a beat to arms and a general rush of all parties to join new scenes of political discord."

No. 2.—Comedy.

"The principal characters in this piece are a very old *blasé* king, a young and beautiful queen, and a handsome prince.

"The trio proceed on a hunting excursion with a numerous retinue of royal attendants, and much scenic state pomp. The handsome prince is a prodigy of valour, and his successful encounters with tigers and other wild beasts of the forest make him deservedly famous, and particularly excite the admiration of the queen.

"It soon becomes evident that her attentions to the prince are more than queenly, and subside occasionally into passionate flirtations.

"The prince is backward and exhibits less valour in love than war. The interest of the performance centres at this time (as between king and queen) in the imbecile efforts of the former to conceal his jealousy and restrain her passion. All the old man's utterances and actions are cleverly designed to excite ridicule and expose the vices which grow up out of a matrimonial connectionship between youth and old age. In the meantime, the queen is fertile in resources, and has so far overcome the king's jealousy as to obtain his consent to her accompanying the prince alone on one of his Shikar adventures. The most is made of this sportive opportunity, and on their return to headquarters the lovers present themselves before the king to try and blind his suspicions by a frank admission of each other's good qualities. But the wary old king refuses to be taken in, and exclaims with a genuine sarcasm of fun which tells wonderfully on the audience—'Yes, this is all very nice for you two to be so pleased with each other, but it is precious poor fun for me, I can tell you.' The lovers are subsequently surprised by the old king in the ardent enjoyment of a vigorous flirtation. For a time he looks on in silence, until, overcome at last by a feeling of his wrongs, he rushes into prominence, and there is a stage denouement! Gongs are beaten, cymbals clashed. The play is over, and we profess to have been abundantly amused by so faithful a caricature of royal domesticity."

Tah-sa-kon informed me to-day that he had despatched letters to Talee to inform the government of his having advised us not to proceed further into Yunan during the present unsettled state of the country. Since our arrival, he said, he had received intelligence of several encounters between a portion of the Momein contingent and a Chinese force under the celebrated General Tahboukgyee and Wansengyan at Lonlyne on the direct route between Momein and Yoonchan.

Seeing that I was disappointed, and that our hopes tended in the direction of Talee, the Governor was courteous not to offend by open opposition to our plans, but his repeated mention of difficulties were simply dissuasive, and intended to point out that an advance beyond Momein would be met by armed opposition, and subject the expedition to more than mere ordinary risks. He will not admit that it is not in his power to send an escort with us of sufficient strength to ensure safe conduct, but his argument is, that no escort he could send would be exempt from attack, and that such attack would extend to ourselves and place our party in extreme jeopardy, &c., &c.

I again assured the Governor that I had no intention of quitting Momein without his express approval.

Having

Having already experienced substantial proofs of Panthay sincerity, we felt that his present advice was tendered out of no desire to frustrate our wishes or to nullify the objects of successful exploration, but was necessitated by a just regard to consequences, and a hearty desire to guard against the certainties of conflict, &c. &c.

It is market-day to-day, and the Governor sent a small guard with us to visit the bazaar.

Markets occur at Momein as well as in the principal towns of the Shan States every fifth day, and the crowd is so great on these occasions, and the curiosity to see and to surround Europeans when they present themselves is so irresistible, that without an accompaniment of men in authority who can command a right of way, progress would (for us at least) have been altogether impossible.

At Momein the bazaar is held in a broad street leading in a straight line from the southern gate of the city.

The permanent shops on either side are supplemented by a line (sometimes a double line) of temporary stalls, at which a thriving trade is done in Chinese comestibles and small wares of every kind.

Rice, sweetmeats, cakes, cotton cloths, native yarns of every hue, gilt and coloured papers, salt, tea, tobacco, jaggery, sugar candy, drugs, jewellery, turpentine, amber, books, fans, chopsticks, looking-glasses, pipes, shoes, gold embroidered skull-caps, Indian ink, opium, lamps, walnuts, plums, apples, peaches, celery, potatoes, pork, mutton, beef, &c., &c., with livestock consisting of bullocks, sheep, buffaloes, and pigs, formed a few of the articles exposed for sale on a market-day at Momein. One street or quarter was devoted to the manufacture of copper utensils, another to jade-stone sculpture, a third to ready-made clothing, a fourth to bakers, carpenters, painters, and wood carvers, &c. &c.; but with the exception of the bustle and crowd on market-days, the ordinary everyday appearance of Momein manifests an absence of thrift or settled industry.

Visited a Chinese warehouse at the end of the eastern suburb, in which were stored a large number of bales of cotton belonging to the Hotha Saubwa. A Chinese merchant, to whom the warehouse belonged, invited us inside, and was particularly attentive and hospitable. He told me that he had traded on a large scale with Burmah before the Panthay outbreak. At that time Momein was a large flourishing city, and the villages around centres of population and industry. Years of anarchy and disturbance had not only destroyed its trade, but converted a country teeming with life and prosperity into a wretched scene of desolation and poverty. The old man, who had drawn a more unfavourable picture of affairs than affairs themselves warranted, was led by degrees to admit that there was still "corn in Egypt," and that any effort which could be made to resuscitate trade and give security to communication by a practicable route between Yunan and Burmah would tend to a return of industry and production and restore the province to its former prosperity.

I spoke to him of the short-sighted policy of his countrymen in Burmah, who were under a delusion that success to us meant ruin to them. They have deceived themselves into the belief that, if our expedition proved instrumental in opening out the old trade route *viâ* Bhamo, their interests would suffer by being brought into competition with English enterprise and English merchants. On the contrary, I had expressed to them my opinion that the present object of their anxieties would turn out to them a source of advancement; for English merchants would in the first place be under the necessity of selecting native agents from amongst themselves (the Chinamen), and entrusting their consignments to middlemen, who would thus be more advantageously employed in large undertakings and derive a greater emolument thereby than if engaged, as at present, in the miserable contrivances of a precarious subsistence.

The old man smiled a smile of significance, and said he was aware of all the troubles which had been thrown in our way in opening a route between Bhamo and Momein. He sympathised in our undertaking and felt that now was the time to make an effort to save this country from the still greater calamities which threatened it, unless some special power or providence interfered to stay a forshadowed ruin. Left to itself the country must lapse from bad to worse, and finally be left without either government or subjects.

The old Chinaman promised to see me again and give me his ideas as to the most feasible plan of regenerating trade between Burmah and Yunan.

3rd JUNE 1868.

The water-fall on the Tahaw at Momein is worthy of notice. The whole water of the river falls perpendicularly a hundred feet at one drop, or without a single interruption. It then rushes along in a succession of rapids until it reaches the level of the Nantin valley. The river, that is to say its water surface, at this season does not exceed a hundred feet in breadth, and the discharge of water is not very great, but the crag over which the water-fall descends has been boldly scraped into the usual crescent form, and presents on every side a luxuriant growth of ferns, docks, and bramble. Nothing can be more strikingly picturesque or beautiful in landscape scenery than the waterfall and its accompaniments as seen from a southerly position on a level with the fall. In the immediate foreground is the river spanned at a short distance above the fall by a Chinese double-arched stone bridge with characteristic roofed approaches and stone parapet. The turreted walls of Momein are seen in prominent relief above temples and suburb, and the background is filled in by lofty hill ranges which commence immediately behind the city and are con-

tinued in successive variety till lost in distance. Oh! for a camera and a 12 × 10 plate with all its belongings.

After visiting the waterfall we commenced the ascent of Pagoda hill and passed through fields of potato and celery. The potato would appear to be an indigenous species, for it is difficult to conceive its introduction into Yunan or the Kakhyen hills (where it grows abundantly) from a European stock. The tubers are generally round and covered with an outer pellicle which is invariably pink.

The entire slope of the hill forms one vast burial ground, covered to the extent of fifty acres at least with substantial tombs or sepulchres of stone, of oblong tumulus form, from four to eight feet in height and about six or eight feet in length. The front or head of the tomb is arched and contains one or more gothic niches which have the appearance of being mere portals to the sepulchre, and are closed with marble slabs bearing an *in memoriam* inscription to the deceased. Some of the sepulchres are twin-like in design, and proclaim themselves to be family vaults in which husband and wife, or parent and child, have found a final resting place. At the same time, there is a general resemblance in the architectural construction of all these tombs as tombs, although a poorer class of *tumuli* are met with, which consist of simple mounds of earth or loose stones, much like our own graves in shape, but raised at one end with an arched hollow niche or opening, which is invariably blocked up by a rough unhewn boulder, and is singularly suggestive of Jewish sepulture of the New Testament period.

Of them it may literally be said that a stone has been rolled to the mouth of the sepulchre!

On all sides there is a profuse growth of brambles which produce blackberries as well as varieties of red and yellow raspberries. The wild rose too is in bloom everywhere, and in these parts the flower is double, with an abundance of petals. The seed when ripe is picked and sold abundantly in the bazaars as a fruit.

4th JUNE 1868.

The Governor has called again to-day, and is particularly kind and sociable in his manner. He refers to the presents which have been sent on to Talee, and says that a suitable return will be made to the English Government. In the meantime he is anxious to present us with some slight memento of his friendship, and asks us to name our particular fancies. I particularly begged that the Governor would not trouble himself with the consideration of making any return for the presents which he had brought to Momein. They were as he well knew, trifling both in extent and value, although it was a source of gratification to us to know that the scarcity of most of the articles at Momein had enhanced their acceptability. The English Government did not expect any return, and would be amply satisfied with the knowledge that the expedition had been well received by the Panthay Government, and had enjoyed the support and friendship of the chief of Momein.

Tah-sa-kon felt sure that the Government at Talee would insist on making a return for the presents it had received. The matter had already been discussed before my own arrival, and it was generally determined that a deputation should proceed to Rangoon, and carry presents to the British Government.

The Governor now unfastened a small gold dagger which hung suspended by a gold chain from his waist and handed it to me, saying that I was to keep and wear it as a memento of his friendship. At the same time he took off a jade-stone and four gold guard-rings which he was wearing, and insisted on placing them all (five rings) on the third finger of my left hand in exactly the same sequence as regarded the position of the rings as he had been accustomed to observe in wearing them himself. I felt infinite pleasure in the acceptance of these gifts, not on account of their intrinsic value, but because they were given with a chivalry of manner and purpose which, coming from a man of Tah-sa-kon's eminence, and in the presence, too, of several of his chief officers, was a convincing mark, not only of real personal esteem, but of honourable and consummate attention.

The Governor remained to breakfast, after which he walked out with us through the city and paid visits at the houses of some of his chief officers. We are in high favour everywhere.

5th JUNE 1868.

The dowager, Saubwa-gadaw, of Mynetee, has called to-day, and is accompanied by a very picturesque and attractive suite of Shan ladies, who are wonderfully well behaved, but at the same time sufficiently easy and communicative in manner to make them very agreeable though rather distant companions. Even the ugly pyramidal turban is not unbecoming when set off by faces of delicate softness and pleasing, if not beautiful, delineation.

The old lady apologises for the scantiness of her presents but invites us on our return from Momein to stay a few days with her at the head-quarters of her Saubwaship at Mynetee.

I gave her a few suitable presents, and then distributed needles, thread, scissors, and small looking-glasses amongst her maiden attendants, which took amazingly, and won their affection. But we are on our good behaviour: any undue levity would be a shock to the high state of morality which Shan ladies of an interesting age attain to instinctively

in

in their domestic relations with the other sex. They, nevertheless, unbend to us very considerably under the effects of scissors; and afford proofs that, as a race, they are free from prejudice and can readily consort with foreign civilization.

Another long conversation with the head Chinese merchants.

6th JUNE 1868.

Private interview with Tah-sa-kon at his own residence. Having full reliance on the Governor's friendship towards us, my object was to try and obtain from him personally an expression of his opinion on the state of Yunan, with reference, more especially, to the political character and stability of the Panthay Government.

Hitherto our knowledge of the province had been confined to rumours of incessant hostility between the Panthays and Chinese.

Panthays were declared to be rebels, although they had established themselves as a government for fourteen years.

How far was that government recognized by the Government at Pekin?

Was the present contest kept up by the mutual desire of the contending parties, or was its continuance due to the want of mediation and proper understanding?

Were the Panthays eager to achieve fresh conquests, or would they be content to settle down and give good government to the possessions they had already acquired?

We were interested, I said, in these questions, because the disturbed state of Yunan had affected British possessions and British trade in Burmah. The British Government was represented by an ambassador at the court of Pekin. Could his influence be utilized in any way to bring about a reconciliation of interests between the Imperial Government at Pekin and the Mahomedan Government at Talee?

These were the questions which I was enabled, in my private conversations with the Governor, to put to him in a way which was not only not thought obtrusive, but which secured an expression of opinion that my anxiety to learn the true state of their affairs did not evince any traces of sinister design, or of a wish to oppose Mahomedan advancement in a province which belonged to them by right of conquest.

Tah-sa-kon said he was glad that I had introduced the subject. There was no doubt in his own mind that both the Chinese and Panthay Governments were tired of disputing the possession of Yunan. There were faults on both sides, but the Panthays no longer manifested or supported an aggressive policy against China. The blame (if it was one) of keeping up the contest rested with the Governor of Yunan* (city), who, instead of making any serious attempt to recover lost territory, sent parties of marauders to harass and molest Panthay possessions. This led to retaliation and fresh conflict, in which the Panthays were compelled in self defence to act on the offensive, and to extend their territory without any definite design either of conquest or aggression. He would communicate all I had said to head quarters at Talee and inform me of results. In the event of my having left Momein before replies were received, he would write to me in full, and, for this purpose, begged that I would make over to him a private seal which he would impress on his letters to assure me they were genuine. In like manner, he promised to give me his own official seal to be used in my communications with him as a check upon fraud, &c., &c., &c.

At a late hour the same evening my Chinese interpreter came towards me almost stealthily, and made known in an undertone that a very important visitor was outside and wished to speak to me.

Explanation followed, and I discovered that the visitor or visitors turned out to be a deputation from the celebrated Chinese robber chief Leoqwanfan, who professed an anxiety to make our friendship and provide us with an escort on our further travels.

A pony had been sent for my acceptance as a preliminary to further friendly recognition. My duty was clear, though the position generally could not fail to be a little embarrassing. Politically we were guests of the Panthay Governor of Momein without any evidence of having espoused his cause or the cause of the Mahomedan Government in Yunan. At the same time, the British Government were bound to China by a treaty of friendship and commerce; but in the interests of trade, and under a very laudable desire of ascertaining the cause of, and providing a remedy against, a perpetual cessation of commercial relations between Yunan and Burmah, the members of the expedition were, of necessity, led in their exploration to avail themselves of the assistance and hospitality of the Government which was in open conflict with their avowed treaty friends, the Chinese. That Government, though raised out of rebellion, had established itself as a Government for more than 12 years in a province which had originally belonged to China, so that the appellation of *rebels* could no longer be consistently applied to it by Governments, however much such a term may have been jealously insisted upon by the Chinese Imperial Government at Pekin. To all intents and purposes we were neutrals, and in a civilised state the realities of our position would have at once been understood and recognized; but the niceties of European international law cannot be expected to influence the actions or feelings of native combatants in a frontier province of the Chinese empire.

The point of neutrality was, therefore, one which, though it might have been urged in sincerity, would have created suspicion, and might have proved dangerous, if relied on as a means

* Called also Mynesee.

a means of securing the hospitality or seeking the aid alternately of either of the contending parties.

On these grounds I refused to receive the Chinese deputation, or to accept the presents sent me, whilst under the lawful protection of the Governor of Momein. I was glad, I said, to hear that the Chinese General, Leoqwanfan, was well disposed towards us, as we had come into Yunan with the earnest desire of securing the friendship of all parties, however adverse amongst themselves, and of aiding, if possible, in the adjustment of their disputes. It was on this account in particular that I was now debarred from adopting a secret or underhand course of action, which would belie my neutral character and compromise all honest efforts for good. At the same time, I said, I was quite willing to treat and confer with Leoqwanfan or the members of his deputation, provided I could do so openly, and with the knowledge and consent of the Government at Momein.

The next day (I am now anticipating and abridging my diary) I was informed that the Governor had been made aware of the arrival of Leoqwanfan's deputation at Momein, and did not oppose it or apprehend its members, because he believed that Leoqwanfan had taken advantage of the opportunity afforded by our arrival to enter into a negotiation and give in his adhesion to the Panthay Government.

This was what actually did take place. Leoqwanfan at this time put himself into correspondence with the Governor of Momein, and a document was drawn up and agreed to, in which Leoqwanfan stipulated for the privilege of establishing a duty station at a place called Shatgan, guaranteeing in return that Panthay possessions in Yunan should not be molested either by himself or by any of the force then under his command.

This may be received as a proof, perhaps, that Leoqwanfan did not in reality hold a commission under the Chinese Government; otherwise it is inconceivable that he should have stipulated for the possession of a single duty station under the Panthay Government of Momein. Or, taking the converse of the question, if, as certain parties hold, Leoqwanfan was commissioned by the Chinese Government, his negotiations with the Governor of Momein for employment at Shatgan may be assumed to imply that the Imperial Government of China had recognised another power in Yunan, and was ready to treat with it as an established government.

But to continue the words of my diary of 7th June, our mission to Yunan, unpretending as it has been, and void of those outward semblances of splendour or power which are an essential qualification in the composition of every political mission (we are not political, by-the-bye) to an eastern court, has nevertheless already tended in no small degree to effect the pacification of a large portion of the old trade route between Burmah and China.

1. Thoung-wet-shein, a Chinese brigand chief, of great power and note, has been defeated and captured at his stronghold of Mauton, on the route between Nantin and Momein. He has now transferred his allegiance to the Panthay Government, and was one of the hosts who entertained us at Nantin.

2. Lees-hee-ta-hee has been driven from Mauphoo, and is now a fugitive.

3. Leoqwanfan, the most powerful of the seven robber chiefs of the old trade route, has volunteered his submission to the Panthay Government, and entered into a guarantee that he will not disturb Panthay possessions in any portion of Yunan province.

Thus, no chief of note is left to obstruct the roads south and west of Momein. I do not mean by this that the country has been suddenly reduced to order, or that dacoities and disturbances may not occur under the happiest conditions of society or government, but accidents of this kind have been reduced, I consider, from certainties to contingencies, which must gradually succumb to ordinary efforts.

It is not too much to say that the present expedition, in thus indirectly ridding the country of three of its most eminent and dreaded freebooters, has performed a work which is of special importance in estimating the value of present attempts, and affording a reliable incentive to still further efforts.

9th JUNE 1868.

THE Governor has visited us again to-day. I hint complainingly at our protracted stay and the compunctions we feel at trespassing so long on his generous hospitality.

Tah-sa-kon will not hear of our departure, and gives me to understand that the matter of hospitality is his affair, and that he will give us an opportunity of repaying it when the mission from Talee visits Rangoon. He is aware that our life at Momein is not a very cheerful one, but it distresses him, nevertheless, to think that we are in such a hurry to leave. Are we so soon tired of his friendship? He begs we will try and make ourselves at home for a few days longer. If it is our wish to visit any part of the country adjacent to Momein, he will send an armed escort to guide and protect us from all harm.

The real cause of the Governor's wish to delay our departure from Momein is, that he expects replies from Talee to his letters announcing our arrival at Momein. The Governor, too, is busy in making up suits of clothing as presents to our police escort and followers, and his tailors are evidently not fast workmen. It is further alleged that the Governor feels a little proud and elated at the idea of having a British expedition at his head quarters, and our presence lends a sort of prestige and security to his governorship. All these causes operate more or less to cause our detention. Provisions are cheap, and

our

our average expenditure or cost to the Governor does not probably exceed 30 rupees per diem. The great drawback to ourselves is, that we are ill supplied with cash, and although I have enough to pay our way back to Bhamo, there is nothing to spare in indulgences or in the purchase of much that would be interesting on our return.

To attempt to raise the wind here by a loan or by drafts on Mandalay would be lowering to our position, and we, therefore, find it prudent to husband our rupees as well as our dignity, &c., &c.

15th JUNE 1868.

It has rained most persistently since the 4th instant. The downpoor at any one time has never been great, but there is a continued misty drizzle which damps everything, and is suggestive mentally and physically of an existence in clouds.

A walk on the city ramparts is, however, practicable at all seasons. The wall* is a work of prodigious labour. Many of the granite slabs with which it is faced are four feet in length and one foot in depth. The turrets are built of burnt blue bricks, which are so hard and perfect in construction, that the wear and tear of three centuries has not availed to roughen their surface, or blunt their keen sharp edge. There are no bastions, but small towers rise at intervals on the ramparts within the wall instead of projecting from it, and the gateways are surmounted by large handsome buildings, which are used as guard houses.

After attempting with no great success to probe my interpreter and his Panthay companions into an intelligible relation of Momein chronicles, I was led by degrees, whilst facing its battlements and musing on the past, to attempt a speculative flight into the haze of the future. We are now in the clouds, and may indulge in a reverie.

Seven thousand feet above sea level, an elevated expanse of tableland diversified by lofty hills and rich fertile valleys, with the climate and produce of temperate regions!

18th JUNE 1868.

The Shan Saubwa of Keeinkhan is here on a visit. His Saubwaship lays some five days' journey south-east of Yoonchan, between the Salween and Cambodia rivers. This is his own definition of geography, the vagueness of which is hardly relieved by the further fact that the well known entrepôt of Kyaing-yoon-gyee is described as being 20 days' journey south of Keeinkhan.

Keeinkhan itself is subject to the Panthay Government, and the Saubwa's definition of localities serves, in some respects, to show the extent of Panthay conquests, which we thus find to extend themselves to the southernmost limits of Yunan.

The Saubwa of Keeinkhan has heard nothing of the French exploring party from Saigon, but there is a report at Momein that seven Europeans have been seen measuring roads and cities on the eastern frontier of Yunan, some 10 days' journey east of Talee. This looks as if the French party has been making its way direct to Yunan (city) and avoiding Panthay possessions altogether.

There is a further report in circulation to the effect that the Panthays have made themselves masters of several of the towns to the eastward of Yunan (city). Tah-sa-kon confirms this report, and says that he believes that Yunan is at present in the possession of the Panthays. This is the report, but he will not rely upon it without official confirmation. The capture of Yunan will not have the effect of removing the Panthay capital from Talee, which is said to contain a strong citadel within the city, and is otherwise more favourably situated, as regards supplies and the requirements of a military position, than any other city within the province.

I have been fortunate enough to procure separate histories of Yunan, Talee, and Momein; those of Yunan and Talee are illustrated with maps and plans of the principal cities and their neighbourhood. Each history is contained in 10 printed volumes, and it will be a work of interest and labour to get them translated and reduced to an intelligible proportion. They may possibly throw some light on the alleged facts, as stated at Momein, that Talee was at no remote period a separate kingdom, peopled by an extinct race, whose language and customs bore no affinity to any of the Chinese races now extant in Yunan.

It was with great difficulty I procured copies of these histories; the parties who supplied them acted with a certain amount of secrecy, and cautioned me to conceal their possession as long as I remained within Chinese limits. The instinct of conservatism was strong enough in this instance even at Momein (and under Panthay rule) to deprecate and view as a crime the diffusion of political statistics to the people of a foreign Government.

19th JUNE 1868.

The Governor has sent his nephew with several officers and an armed escort to join us in a day's ramble into the interior. A guard had become a necessity owing to the unsettled state of the country and the numbers of half starved vagabonds who have been forced into brigandage as the only means left them of securing subsistence. The chances of

* For dimensions and particulars, *vide* plan.

of an adventure with any of these lurchers are always imminent, and can only be avoided by a due regard to offensive and defensive preparations.

Our party mustered, something like 35 men of all arms (swords, spears, and muskets), and taking a southerly direction from the city, we soon came in sight of the town of Yaylow, which stretches out for a mile and a half along the base of the Deebay or eastern range of the Momein valley. Proceeding westerly we skirted Pagoda hill and arrived at the old town of Shwedway, so called on account of its vicinity to a small current of water which was utilised as a source of power in supplying force to a mechanical contrivance for pounding paddy. Water-wheels of various construction are frequently met with on all the streams in the vicinity of Momein. The town is almost deserted, but the remains of masonry buildings and substantial stone terraces or causeways are proofs of former wealth and comparative prosperity.

We next visited a range of very interesting Chinese temples, which had been built into the side of an old quarry or ravine, partially excavated and scarped so as to allow the buildings to rise rather obliquely one above the other by a gradation of terraces. The images and interior decorations had escaped destruction, and were apparently in all their pristine exaggeration. A centre-piece of statuary in pure white marble represented a life-size image of the goddess of Conception. The face may have been a little out of proportion to suit Chinese tastes, but a perfect acquaintanceship with true art was manifested in the natural folds of the drapery, which had been chiselled into form with all the flowing elegance of reality. The goddess holds forward in prominent relief a naked male babe of wonderful parts and exceeding virility. Religion has been thus prostituted, perhaps, to a rather fanciful mode of administering relief to human shortcomings. There must be something comforting, however, in the belief which causes thousands of women who, being disappointed in the object of their legitimate amours, seek, if happily, to find an imaginary remedy for mortal infirmities.

Opposite to Shwedway, on the northern slope of an adjacent hill, is the large Chinese town of Hawshoënshan, which contains about 2,000 houses, and is the rallying point to which a certain number of fugitives have resorted from the desolated villages of Shangnan Tahinshan, &c. &c. Our guide pointed out an open grassy plain on the southern outskirts of the town, which only a few months before, he said, had been strewn with the dead bodies of Chinese insurgents. The people of Hawshoenshan had temporarily thrown off their allegiance to the Panthays, and joined the ranks of the Chinese general Leoqwanfan. They were attacked and defeated by a Panthay force, and the plain we were then riding over was at once their battle field and graveyard. The slaughter which took place was cruel and excessive, but proportioned only to the system of retaliatory warfare, or to a struggle for independence on the one side, and extermination on the other. We return to our quarters before sunset, as pleased as it was possible to be with an excursion which passed off without accident, and failed even to bring us into conflict with Momein brigands.

22nd JUNE 1868.

'Masa Tahzyungyee, the chief military officer at Momein, but subordinate to the Governor (who is both Governor and Commander in Chief), has called to invite us to an entertainment, specially prepared for us at his own residence. It would be difficult in any society to pick out a man of more polished habits or cultivated taste in his domestic arrangements than this soldier of fortune in the Panthay army.

The feast at his house commenced with a dessert of plums, peaches, sugar-candy, and sweet toddy. Next several courses of roast, boiled, and curried meats, with rice and vegetables, wine, shamshoo, &c.

Tahzyungyee joined us at the final course, and a large jug of hot grog was brought to the front and set down before him. He filled a large goblet and handed it to me. One mouthful sufficed to take away my breath and leave an after-taste of alchohol and pork fat. The goblet was passed round several times, Tahzyungyee joined us in turn, taking his liquor like a man and a Mussulman. I was glad to see that he was less of a Wahabee in this respect than many of his confrères in Chinese Mahomedanism. At the same time, he is a man of note in the Panthay Government, and acted as general in chief of the Panthay force which made an irruption some five years ago into the northern Shan States and brought them under Panthay rule.

His household arrangements are elegant and in good taste. The reception hall was hung with Chinese paintings. The panelling of the walls and ceiling, the window frames and some of the beams of the roof, and wall plates were beautifully carved, so as to represent landscape scenes with trees, bridges, and even running water. This apartment led into a garden which was intended to be perfection of its kind, and was evidently nurtured with special care, but with the negative merit of stunting rather than of promoting growth. The walled inclosure was painted with Chinese frescoes of exaggerated design. Lofty crimson hollyhocks in full bloom grew in line at the garden entrance. The whole of the trees within this line had been artificially dwarfed into a comparative diminutiveness which made them mere marvels of nature and of man's ingenuity.

Tahzyungyee is young, and his antecedents and intelligence point him out as a man who is still destined to take a leading part in the future Mahomedan Government in Yunan.

This friendship for us over the punch-bowl had reached a climax when it led to an admission that he considered us so nearly allied to himself in race and social position, that he would

would be proud of adopting us into his family, and bestowing upon us his daughters in marriage.

This probably was the extreme of Panthay courtesy and good breeding, and represented a figurative style of speech which meant nothing. It was a critical moment, however, for any amongst our party who might have objected to being hurried *nolens volens* into a matrimonial engagement. The difficulty was soon at an end: instead of wives we were each presented with jade-stone rings and white camelias.

Moung Shwè Yah, my interpreter, told me in a whisper that our jovial host was a man of amorous propensities, and that it was his practice to drink every evening at bed-time a decoction of Sambur's horn mellowed down with honey and spirits, a medicine in great esteem in China on account of its invigorating and stimulant properties.

It struck me this might be the stimulant we were then imbibing, though nothing was said as to the additional item of pork fat; but when afterwards I mentioned my suspicions to Anderson, he assured me that he had taken a sly look into the jug, and amongst the sediment had discovered certain *débris* which bore unmistakeable resemblance to pieces of hog-skin with the bristles still adhering to them.

But the evil effects of Sambur's horn and the debauchery to which it is said to give rise, were disclosed by-and-bye, in the fact that two of Tahzyungyee's wives and three other females in the family were declared to be barren. Anderson was called upon professionally to prescribe. The inconsiderate males believed that an English physician possessed remedies which acted as a charm against barrenness or imbecility, without requiring that the patients, male or female, should themselves be subjected to professional examination. This we said was absurd. The women must show. After some little hesitation two of the supposed sterile females were persuaded into making their appearance at a screened doorway. Both were fine, healthy-looking women, but one in particular was strikingly well made, and a living development of all that seemed requisite to falsify the idea of conjugal disqualification.

It would have been a mockery to subject either women to inquiry or treatment. Anderson as much as said so, and asked for the husbands.

This was awkward. The ladies retired, and for some little time we were made to feel that a doubt had been thrown upon the practical efficacy of English medical science.

It was satisfactory, however, to find, after some little delay, that Anderson's suspicions had been rightly conceived and were duly appreciated.

Shortly before we left, a miserable-looking individual of the *genus homo* was presented to us in the last stage of imbecility, and a direct request made for medicine to cure, in the male, an affliction which had been already ascribed with palpable obliquity to the innocent female. *This* man was the husband of "living development" above referred to, and I would not have given him a place in my diary were it not that, apart from the illustration afforded of the practical working of Sumbur-horn mixture on the Panthay constitution, a light is thrown on the alleged sterility of Chinese ladies, which practically absolves them from a suspicion of infirmities, but leaves the cause of false accusation as confusing and inexplicable a mystery as ever.

24th JUNE 1868.

A Chinese festival is being celebrated to-day in honour of Ceres, or some other divinity which presides over agriculture and the fructification of trees and plants. The offerings at the several shrines consist wholly of fruits or flowers. Food is distributed to the poor, and trees are planted in the sure and steadfast hope they will live and multiply. Chinese theology or mythology is a mystery. The temple we inhabit is sacred to the memory of 10 learned doctors of medicine, who have been deified in virtue of their proficiency in the healing art. The idea seems to be that they either transmit their powers to those in the trade who seek their assistance, or that virtue passes out of them in their deified state, and is efficacious in healing the afflicted who resort to their shrine in contrite spirit *and with an abundance of offerings!*

Chinese priests in these parts appear to be mere temple scavengers, and take the place of Phyah Gyoons (slaves of the temple) at Budhist shrines in Burmah. They have a small dwelling within the precincts of the temple, clear away accumulations of dirt, renew the incense pots, and lead lives of piety and celibacy. Beyond this they do not seem to preside at religious ceremonies or take any part in expounding the Scriptures. These remarks are limited, perhaps, in their application to Momein only, or to those portions of Yunan where Mahomedan influences have been at work in demolishing idols and degrading the priesthood of an "infidel" worship.

It is evident that in the struggle which has been carried on for supremacy in Yunan there has been a decided tendency to indulge religious antipathies by a wanton desecration of places of public worship. On visiting the Panthay musjid at this place a few days ago, I found it established in an ordinary Chinese building, with no pretensions whatever to Mahomedan architecture or decoration. On expressing surprise I was told that formerly Momein contained a magnificent mosque, built in orthodox style, and fitted up with all suitable appurtenances and ornament. It had been burnt down in revenge by a Chinese rabble at the outbreak of the Mahomedan rising in Yunan.

The Panthays have retaliated without reserve by carrying destruction into every Chinese temple within their power. In this respect the war is one of religious extermination, and Panthay instincts are singularly intolerant, in spite of an affiliation with China, which is said to extend over 1,000 years.

By dint of repeated inquiry, I have been enabled to procure a few short extracts from a manuscript in Chinese, which professes to account for the origin of Mahomedanism in China. The record is very meagre, and has suffered no doubt by translation into Burmese, but it is confirmatory in a great measure of the contents of a paper read by General Fytche at a meeting of the Asiatic Society in December 1867. (I have translated it into English, and placed it amongst the Appendices.)

26th JUNE 1868.

Tahzyungyee has called to say that he is about to start at the head of 2,000 men against a large Chinese force which threatens the Panthay town of Kayto, about 30 miles in a north-westerly direction from Momein. He is afraid that we may have left before his return, and has therefore come to say "*good bye.*" I have given him a double-barrel rifle, and we may calculate on life-long friendship.

30th JUNE 1868.

The Governor has been very unwell for some few days past, but I have had a long private interview with him to-day, at which he disclosed information of much interest and importance relating to the present state of affairs in Yunan.

In the first place, letters have been received from Talee, in which the Panthay King professes to have been well pleased with the news of our arrival at Momein, and had promised to forward presents in return for those which we had made to the Governor, and which had duly arrived at Talee.

He had concluded against the advisability of continuing our present exploration into Yunan, but gave us notice, through the Governor, of his intention to dispatch a mission to Rangoon, and apprise us moreover by letter of the earliest season when the state of the country would allow a British expedition to reach Talee in safety to itself and with credit to his Government.

Tah-sa-kon further informs me that authentic intelligence has arrived of the capture of Yunan, and of its present occupation by a Panthay force.

The official letter giving details of the capture was brought and read in my presence, and proclamations in large type have been posted up upon the city walls as an official announcement of Panthay successes.

30th JUNE 1868.

A remaining item of intelligence relates to the French exploring party from Saigon. Tah-sa-kon states that the party came into collision with certain hostile tribes in the vicinity of Kyaing-yoon-gyee, and suffered severe losses. Some of their number are said to have perished. The remnant arrived in wretched plight at a place called Thela, where they were well received, and supplied with food and clothing. At that time they were in a state of complete prostration and absolute want.

The Governor regarded this information as correct and reliable in all its details. It had come to him direct, he said, from a Panthay relative who resided at Thela, and who had purchased some of the arms and other property which had belonged to the French party previous to the disaster.

It seemed to me extremely probable that the French party may have met with serious difficulties somewhere, as more than a year had elapsed since it was last heard of on the north-eastern confines of Burmah, in the Kyaingtoung Saubwaship, which closely adjoins Kyaing-yoon-gyee. I was loth, however, to give full credence to the Governor's information, and gladly persuaded myself that it may have been based on exaggerations.

More startling information as regards our own expedition is conveyed in the fact that a Burmese private mission, with presents from the King of Burmah, has been dispatched from Mandalay direct *viâ* Thinee to Yunan, and it is at present at a place called Sheedin, on the high road between Yoonchan and Talee.

I never felt myself in a more critical and awkward position than when Tah-sa-kon informed me of this mission, and asked how it was that it had been dispatched without my knowledge. Letters, he said, had reached him from the party at Sheedin, but the presents, which were being conveyed on 20 mules, and consisted principally of raw cotton, could not be forwarded on account of the unsafe state of the roads between Sheedin and Momein.

My awkwardness arose out of the false position which I must have appeared to hold in the estimation of the Governor, who had been hitherto made to believe that the British expedition had set out on its travels under the express patronage of the King of Burmah.

In spite of the opposition of Burmese officials, and although I knew that much of this opposition had been practically disclosed to the Governor himself, it had nevertheless been my policy to avow that the King of Burmah was still our friend, and that the difficulties we had been made to encounter originated with petty officials, who were thereby serving their own private interests as opposed to the interests of the state and government.

It was impossible any longer to continue this belief in what had now resolved itself into a palpable illusion. It became painfully evident, as soon as *my* turn came for making inquiries and seeking explanation, that the Burmese letters from Sheedin had put the Governor into possession of information which he would not disclose, and which, for a time at least, gave him the whip-hand of me, so to speak, and produced on my part an awkward amount of reserve and confusion.

But

But Tah-sa-kon was too much of a gentleman to take advantage of his position, or to evince, by any outward manifestation, that his confidence or friendship had been in any way affected.

Still, a thousand viss of cotton coming in so insidious and insinuating a form from a monarch so powerful as the King of Burmah was a sore temptation to any Governor, and I could hardly repress either anger or humiliation at the idea that the design of the present had been studiously contrived in seeming antagonism to the British expedition.

I was further reduced to the very unpleasant and dishonourable position (in *appearances* only, be it remembered) of a political impostor, who had already defied the Burmese Government, and thrust himself forward at all risks to sow dissension and plan the future conquest of Yunan.

Had Tah-sa-kon not been a man of sound sense and ready discernment, and provided also our expedition had been in any degree offensive to the Panthay Government, the secret mission from Mandalay might have proved still more embarrassing, and placed us individually in a position of extreme degradation and positive danger.

Our departure homewards from Momein is said now to be dependent on a break in the weather. At present rivers and rivulets are filled to overflowing, and are more or less impassable.

The Governor reports fresh disturbances on the Kakhyen hills, and the Hotha Saubwa, instead of waiting to escort us on the return march to Bhamo, has proceeded in haste to his own domains to guard against an extension of disturbances in the direction of Hotha.

This is in reality only another pretext for our detention at Momein. Tah-sa-kon wants time to complete certain articles of dress which his tailors are hard at work in making up for our party. He is also in expectation of further advices from Talee regarding us, and desires that the work of the mission, as far as he is concerned, shall be made as complete as possible before he agrees to our final departure.

6th JULY 1868.

Tahzyungyee, who left this on 28th ultimo with a force of 2,000 men, has come upon the Chinese rebels at Kayto. Momein is in a state of greedy excitement to-day to learn the particulars of the late encounter. One thing is certain, the Panthays have succeeded in securing 300 ears, that is to say, 300 of the enemy have bitten the dust, and their left ears have been sliced off and sent into head-quarters, as proof of the number killed. Bare despatches are not believed in; nevertheless they have been received this morning from Tahzyungyee, and read aloud in public at Government House. The general admits that his loss even amounted to 40 in killed alone. This proves that there has been hard fighting.

Tah-sa-kon has sent to tell me that he has received further despatches from Talee. Presents have been forwarded for us from that place, but are detained at Sheedin, a large town half way between Momein and Talee.

The Burmese mission from Mandalay is also at the same place, and can neither advance nor recede. It is not known whether the mission is to go on to Talee, but Tah-sa-kon says that they will not be allowed to advance beyond Sheedin until they have first visited Momein. This latter alternative is out of the question for some time to come, on account of the disturbed state of the roads.

As an instance of the present insecurity, Tah-sa-kon mentions that out of three messengers who carried his despatches from Sheedin, two were waylaid and killed. The third escaped, and has arrived in safety at Momein, but with a portion only of the Talee despatches.

Hardly the sort of country for exploration in its present state by a peaceable body of European travellers!

Had the Panthay Government really borne us ill-will, or desired our discomfiture, nothing was easier for it than to have committed the expedition to a further prosecution of its travels, and thus have secured its certain destruction. On the contrary, its policy towards us from first to last has been dictated by a friendly regard for present interests, and a prudent desire to provide against contingencies which might destroy, in their results, all hope of profitable relations with the British Government.

7th JULY 1868.

Tah-sa-kon has called to say that letters have been dispatched by him to the chiefs of Nantin, Mynela, Sanda, and Hotha to make preparations for our return journey to Bhamo. He promises to send a Panthay armed escort of 300 men with us as far as Mynela. If the presents from Talee now at Sheedin do not arrive before our departure, they shall be forwarded with the Panthay embassy, which will proceed to Rangoon at the commencement of the next cool season.

Tah-sa-kon says that six or eight months at least must have elapsed since the disaster which befel the French exploring party in the southern districts of Yunan. He maintains, in spite of our incredulity, that some of the party were killed, and that their arms, baggage, and equipage of every kind were abandoned.

I say that he has given too ready credence to exaggerated reports, but he only smiles and affirms more doggedly than ever that his information is correct in all material respects. I probe him as far as I am able as to names of places and dates, but in these matters he is at a loss, and his ideas of geography are vague and illimitable. I do not dare to press matters

further, or commit what would seem to be a breach of courtesy, by discrediting statements which the Governor is so earnest in affirming to be true, and to be based on sound and reliable information.

Tah-sa-kon makes mention of another party of 200 foreigners, called by him *Lawmike*, who he says were sent by the Chinese Government to assist in making war against the Panthays. The party was under the leadership of a foreigner who had been honoured by the Chinese emperor with the title of *Mike-Tah-See-Dun*, the first syllable being his own name, and the latter three his Chinese title. The party is said to have come from the direction of Canton, and to have been actually engaged against the Panthays in the vicinity of Yunan. The report is, that they were defeated and nearly all killed.

Who can these rowdies be? Tah-sa-kon says they are neither French nor English. This is said out of courtesy to us, for it is hardly conceivable in his present state of enlightenment that he should be able to draw a distinction between European races. He believes in the extermination of the party, and I am fain to admit that it has been deservedly punished for gratuitous interference with Panthay possessions.

The Governor has sent to invite me to a final conference to-morrow. After the conference we are to partake of a farewell dinner. I am warned to be in readiness to move any day after to-morrow. No exact time will be fixed. The object is to get us off quickly, and give no opportunity to dacoits or other evilly-disposed parties to conspire for mischief, or waylay our route.

Stone celts are procurable in almost any quantity at Momein. They vary in size, but are of uniform shape. The Chinese regard them with the same veneration as Burmans, and believe that they have been hurled from the sky in their present shape as thunderbolts. To support this idea they say that the celts are frequently found embedded in the trunks of trees, where, under no other supposition, could they possibly have gained admittance. They are believed to possess medical and curative properties, and are brought into use as charms, and dipped into medicines under the belief that virtue has thereby passed out of them, and duly communicated itself to the thing to be administered. Officers and soldiers proceeding on active service, if fortunate enough to possess celts, carry them on their persons, and are comforted by a feeling of perfect immunity from personal mishaps. In the event of a protracted labour, women are said to derive immediate relief from the presence of one of these *sky productions*. Pain ceases, and the labour proceeds to a close with ease and certainty.

Bronze or copper celts are more uncommon, but we met with them at Manwyne and Hotha in the Shan States on the return journey from Momein. The shape of those I saw were uniform, but very peculiar. They are all provided with sockets, so as to be easily adjusted to handles. One that I purchased at Manwyne for 25 rupees (200 rupees was the first price asked) was said to have been found in a paddy field, not far from the town and not much below the surface. So precious are they, and so notorious does a man become by being a possessor, that I was frequently told, at different intervals of our journey, of a certain Kakhyen Saubwa in some remote part of the hills, who was a fortunate owner, and who, if I ever met him, might be induced to sell on the receipt of suitable consideration. Copper celts are neatly encased by their owners in small bags, and held by a guard chain, which is suspended from the neck. But whether of stone or copper, it argues a taste of barbarism, and amounts almost to sacrilege, to place a celt on the ground or in any position which, in Burman ethics, betokens inferiority. The more reverently they are cared for, the more powerful becomes their efficacy as an omen of success and good fortune in every human or inhuman adventure.

The conference with the Governor to-day has been very satisfactory. His chief officers were present, and a very fair settlement arrived at on points affecting the question of re-opening the old caravan trade between Yunan and Burmah.

Tah-sa-kon is not quite satisfied as to the means which may or may not be at hand of transporting goods between Bhamo and Rangoon, and *vice versâ*. He is afraid that the provisions of our treaty with Burmah, which directs that goods from China passing through Upper Burmah to Pegu shall pay only a one per cent. *ad valorem* duty in Burmah will cause ill-feeling and continued opposition on the part of the Burmese Government: personally he is delighted at the prospect of avoiding transit and customs duties on goods passing through Burmah, but he is apprehensive of difficulties with the Burmese Government.

I assure him on these points by stating that abundant means of carriage were at all times available on the Irrawaddy, and that we had proved the navigability of the river above Mandalay by having ourselves performed the journey in a large steamer provided by his Majesty the King of Burmah.

In the matter of transit and customs duty, I informed the Governor that he would see in the copies of our treaties with Burmah, which I had given him, that the articles of the treaty relating to duties were equally binding on both Governments, and had been specially conceived in a mutual endeavour to promote the welfare of their subjects, and secure advantageous commercial relations with the Chinese frontier. The difficulties which the Governor had very naturally deemed possible as likely to arise out of indirect opposition on the part of the Burmese Government would, if they existed, be amply met by the appointment, under our late treaty with Burmah, of British agents at Bhamo and Menhla, whose exclusive duty it would be to watch over the interests of trade and guard against any infringement of treaty stipulations.

The Governor informs me that he is determined to make the experiment this next cold season

season of dispatching his caravans to Bhamo instead of to Mandalay direct *viâ* Thinee. He has already reported his intention of doing so to the Talee Government, and been given to understand, in reply, that the Talee caravans will also receive orders to proceed to Bhamo, provided it can be ascertained that there is sufficient inducement, or rather that their goods can be sold, and that a sufficiency of raw cotton is procurable at Bhamo to load their mules to Yunan. If these points are settled, there is nothing, the Governor says, to prevent the caravans accomplishing the Bhamo trip twice and even three times during a season, and within the period at present occupied by one trip to Mandalay.

I was in a position to assure the Governor that the necessary arrangements could be made at Bhamo during the forthcoming season to supply the whole of the Yunan caravans with raw cotton, but I advised him to make the experiment with his Momein caravans, and to be under no indefinite apprehension of failure. The Governor promised to send his caravans with the mission which the King of Talee had proposed to send to Rangoon. The object of this mission, he said, would be to enter into commercial relations with our Government, and obtain correct perceptions relating to the feasibility of trading direct with Rangoon instead of with Mandalay, means of carriage, freight, charges by boat or steamers, general advantages, &c., &c.

I did all I could to impress these objects on the mind of the Governor, and to encourage the experimental trip which was to be made to Bhamo. All the advice which my position and experience justified me in offering amounted, in fact, to an urgent appeal in favour of the overland trade *viâ* Bhamo with China. In becoming the advocate of so noble an enterprise, I found myself in the happy circumstances of one who was appealing to a willing and sympathising people, whose interests were specially bound up with our own, and who are as keenly alive to the benefits of promoting trade with Burmah as we are eager to form a commercial relationship with South-Western China.

The experimental trip to Bhamo and the Panthay mission to Rangoon had been adopted as the readiest and most certain means of brushing away past prejudices, and of gaining personal insight into certain altered conditions in favour of commerce, which had arisen out of the British occupation of Pegu and our commercial treaties with the Burmese Government.

The Governor next called one of his secretaries, who brought and gave me a letter which I was asked to deliver to the English Governor at Rangoon. The letter was read out publicly and its contents translated. All was most favourable as evidence of our expeditionary success, and of the desire on the part of the Panthay Government to second any efforts we might make to establish commercial intercourse between Burmah and Yunan.

I noticed, however, that no mention had been made of transit or customs duties leviable on goods within Panthay possessions. Tah-sa-kon replied by saying that it did not appear to him either *courteous* or customary to allude to such matters in his first friendly letter to the Governor of Rangoon. He had no objection to furnish me separately with the list of duties payable at Momein or within Panthay territory, but at the same time he said that, in the present unsettled state of affairs, any such list was unnecessary, and could not be deemed final or satisfactory as regarded the trade of Yunan.

There was nothing to be got by pressing matters, and I allowed the Governor to conclude our conversation on this subject with the following promising, but off-hand, remarks :— "After all, what use are tariff lists? Are we not brothers? My wish is to reduce the rates to the lowest possible limit, or even to abolish them altogether, if by doing so I can entice commerce to this route. I will be guided by your advice at all times on this and other subjects."

As a winding up to our conference the Governor presented me with two seals to be used in my correspondence with him after my return to Mandalay. I also gave him two large gold seals, one engraved with a coat-of-arms cut into white cornelian; the other represents an owl seated upon an hour-glass, elaborately engraved on a large topaz. It was fortunate that these seals were in my possession at the time, as they well answered the purpose to which I have designed them, and are appreciated by the Governor. The seals I received in exchange are seals of office, as peculiarly belonging to Tah-sa-kon in his capacity of Governor of Momein. It is believed that this interchange of seals, besides being intended as a special mark of confidence and esteem, will give an impress of reality to our correspondence and secure us mutually against fraud and imposition.

10th JULY 1868.

The whole day has been devoted to ceremonial visits and leave-taking. We proceeded to Government House at mid-day to say good-bye; and the Governor almost immediately afterwards returned our visit with a full suite of his retainers and a quantity of useful presents, which he begged us to accept ourselves and to distribute amongst our escort and followers. It was expressly stated that the presents were not to be considered as in any way a return for those which had been given to him on our first arrival at Momein. Suitable return presents would be forwarded with the mission to Rangoon from Talee during the next cold season. In the meantime, the Governor wished us to accept a few articles as coming from himself, and which would be found of use during our return journey to Bhamo. The bulk of the presents consisted of—

80 cotton jackets.
80 Chinese sun or rain hats.
80 pieces of waterproof oiled paper.

Of the above, one each was to be distributed to each of the police escort and our native servants. The European members of the expedition were each presented with—

1 piece of flowered silk.
1 silk jacket.
1 amber rosary or necklace.
1 straw sun hat.
1 pair Chinese boots.

In addition to the above, the Governor presented me personally with his own full-dress mandarin suit, which consisted of a full flowing robe of blue satin covered with silk and gold embroidery, an official head-dress with ornaments—

1 pair black silk boots.
1 gold and jade-stone chatelaine.
4 Panthay spears with long silver-plated handles.

The jemadar commanding the police escort and his wife (a Burmese lady who accompanied him to Momein) were also each presented with a silk jacket and straw hat.

We could not fail to mark the kindness of disposition which led Tah-sa-kon to provide our escort and followers with means which were expressly intended to conduce to their personal comfort on the march to Bhamo. The rains had set in with violence, and the waterproof oiled paper and rain-hats had become a positive necessity, which I could not conveniently have procured myself without the Governor's kind interference.

Tah-sa-kon next handed me a Chinese document of very formidable proportions, which was opened out and read aloud by his chief secretary.

The document was several feet in length, and purported to be a transcript of the proclamation which had been posted upon the city wall as a public announcement of Panthay success at Yunan. Apart from its literary details, which are at present a mystery to us, the prodigious size of the document would make it a literary curiosity in any museum in the world.

Next came the promised letter addressed to myself on the subject of customs duty leviable within Panthay territory. The only duty stations mentioned between the Burmese frontier and Momein are those situated at Mauphoo and Nantin. On my noticing the deficiency as regarded the Shan States, the Governor remarked that those states had always been a mere dependency, and had no special right to levy customs duty on government account. This matter had already been explained to the Shan chiefs, and definitely settled by communications which had been forwarded to them since the date of my arrival at Momein.

In reply, I said that it appeared to me impolitic to make any arbitrary distinction (in the case of the Shan chiefs) which limited their hereditary right to levy transit duty on goods passing through their respective principalities.

I was arguing, I said, against our own interests, perhaps, in advocating the cause of the Shan Saubwas, and the Governor would be able to judge thereby of the sincerity of my suggestions. Tah-sa-kon was amused, and hinted to me that the Shans knew very well how to take care of themselves. There were certain fees and perquisites attached to a Saubwaship which were very trifling and would not be interefered with. He did not think it advisable to formally recognize the right of each Saubwa to levy customs duty at will within his own state. A precedent might thereby be established which would militate against his present idea of reducing customs duty to a limit which would encourage rather than act as a burden on trade.

For the same reason also he was not inclined to fix any definite duty rates for Momein. The time had not come for so much nicety in the collections. He was himself his own collector at Momein, and his desire was, if possible, in the matter of reductions, to exceed even my own wishes. For instance, if I mentioned a 1 per cent. duty, his own inclination would lead him to be content with one-half of that sum, or eight annas!

I could not help believing in the sincerity of his intentions, for Tah-sa-kon had proved himself in his dealings with us from first to last to be a man of large-minded views and generous impulses.

I was obliged, however, to tell him that our mutual friendly regard for each other was not a sufficient guarantee to merchants in British territory who would not consent to embark in trading adventures with Yunan without some definite guide by which to calculate their chances of profit or loss, as dependent on the amount of transit or customs duty leviable beyond British territory.

After a long conversation on this subject (the details of which are too tedious for record), the Governor gave me his verbal assurance that in no instance would the aggregate amount of duty, taken at any or all of the duty stations between the Shan States and Talee, exceed (as he expressed it) 10 rupees on goods valued at 250 rupees, or, in other words, a 4 per cent. *ad valorem* rate.

I saw the necessity of being contented with this assurance. It would have been impolitic, at the very outset of our dealings with a new people and government (having in contemplation the revival of an extinct trade in their country), to have insisted on a more definite or binding arrangement. The object in doing so, without being appreciated, was open to misapprehension, and might have given rise to adverse suspicions. Besides the customs duty being the perquisite of Panthay Governors, the matter was one which affected Tah-sa-kon's private purse, and their reduction could not have been more persistently urged than they were without the fear of unnecessary offence.

Such persistency, moreover, would have been immature, I consider, as regards the present

sent state of our national relations. We therefore parted under a mutual exhortation to cherish the recollection of present friendship, and, above all things, to bear in mind that nothing would more directly tend to tranquillize Yunan and restore it with other neighbouring provinces to their former prosperity than a steady adherence to the means now offered of resuscitating the old caravan trade *viâ* Bhamo, and of thereby extending that trade by the only direct natural outlet of the Irrawaddy to the rich commercial seaboard of Pegu and British Burmah.

334. We have said good-bye to the Governor, and are on the eve of departure from Momein. It is time, therefore, to make further apologies for the unwieldy character of the present report. The copious references to my diary, and the supplementary notices and observations which are everywhere called for, have led to digressions of a lengthy, and sometimes a tedious character. They will rightly be regarded as an undue infringement of all the ordinary rules of official correspondence. To me the task of recording our experiences in their present form has been one in which I have seemed to live over again the toils and pleasures of a moderate adventure. Much of interest remains to be told. The return journey to Momein was not accomplished without an accumulation of incident and observation which would preserve its interest in almost any form; but time, ill-health, and the more legitimate duties of my present office, are all in active opposition to the continuance of the narrative in its present proportions. I am therefore compelled, somewhat reluctantly, to hurry over the return journey from Momein, and shall allow myself a limited margin only for remarks on special points in which my opinion is called for as leader of the expedition.

335. When I found, after a protracted residence at Momein, that there was no prospective chance, within a reasonable period, of my being able to proceed further into Yunan, without the certainty of encountering armed opposition and involving the government in troublesome complications, which it was my duty to avoid, I was compelled, under a variety of pressing considerations, to think of a return homewards, and preparations having accordingly been made, we left Momein on 13th July, and commenced the journey to Bhamo.

336. In my several conversations with the Governor as to the choice of a route to Bhamo, I had always taken care to let it be understood that my earnest desire was to return by a different route to that by which we had reached Momein. The Governor in his willingness to serve me feigned a compliance with my wishes, but with a certain hesitation of manner, which, at the time, was a little mysterious. I afterwards discovered that the hesitation was due to a very reasonable supposition that the other route which I proposed to explore might be made to lead direct to Yoonchan and ignore the existence of Momein altogether.

337. I combated this idea so far as to cause arrangements to be entered into by which the Hotha Saubwa was directed to meet me at Nantin, and escort us thence *viâ* Shamalon and the Hotha valley to Hotha, from which place it would remain at my discretion either to pursue the Sawuddy or southern route across the Kakhyen hills to Bhamo, or follow the direct central route, which had hitherto been universally used by successive Burmese and Chinese embassies in their political intercourse between Bhamo and China.

338. The Hotha Saubwa failed in his arrangement to meet me at Nantin, and I pushed on to Mynela in the hope of catching him there. Here, as well as at Sanda and Manwyne, the officials were openly opposed to my leaving the Sanda for the Hotha valley. Their opposition was natural enough, for the Shans, judging by what they had heard of our success at Momein, had actually realised the fact of a revived trade between Bhamo and Momein, and were reasonably averse to the idea of encouraging any proposal by which that trade would be so diverted as to exclude them from all immediate participation in its many advantages.

339. I upbraided them gently for the apparent selfishness of their motives as opposed to measures which were intended for the public good; but I could not help feeling at the same time that the reluctance to assist me, at the cost of excluding themselves from a prominent position on the newly-proposed trade route, afforded the strongest presumptive evidence of the success which the expedition had already secured for itself throughout an important section of the northern Shan States.

 340. A south-west

340. A south-west monsoon and continuous rain aided the Shans in their hospitable endeavours to retain us as their guests and prolong our stay at their several chief towns. It was not until my arrival at Manwyne that the Hotha Saubwa was induced to remember his engagements and concert measures for crossing the hill range which separates the Sanda and Hotha valleys.

341. The alleged difficulties of this route were twofold. The direct route leading from Nantin into the Hotha valley would necessarily cross the Shamalon range, which was then known to be infested by parties of Lees-hee-ta-hee's free-booters, who, having been driven from Mauphoo, had taken shelter in another hill fortress. Thus far at least I was willing to admit that the objections to the direct Nantin route were in themselves reasonable and probably correct. But on reaching Mynela and Sanda, from both of which places a practicable road was available between the Hotha and Sanda valleys (without passing Shamalon), it was at once apparent that the further objections raised for limiting our travels to the Sanda valley were based upon no more positive foundation than the simple, though very laudable desire (as it may have seemed to them) of securing a permanent commercial highway through their own states, to the exclusion of any other more available line of country which our exploration might have disclosed.

342. In crossing from either Mynela or Sanda to the base of the range which divided the Sanda and Hotha valleys, it was necessary to pass through a portion of the Mynela district (already alluded to), which owed allegiance to no particular chief, and had existed for some years past in a barbarous state of outlawry and misrule. It was affirmed with some show of truth that the demonstration which had been made against us on the march between Manwyne and Sanda on 15th May had been planned and carried out by the lawless inhabitants of this disaffected district, and it was through a portion of this same district that our present route must of necessity pass in crossing the range between Sanda and Hotha.

343. I will not attempt to describe in detail the laborious conferences with Shan officials, the protocoling between Sanda and Mynela, and the various *points d'appui* which had to be maintained or conceded before a practicable breach was made in the formidable *cordon* by which our too-loving Shan friends of the Sanda valley had designed to make us exclusively their own.

344. They succeeded in forcing upon us the Sanda valley as far as Manwyne; but this resulted, I consider, in a positive advantage, for whereas there was no particular object to be gained by proceeding direct from Nantin to Hotha, the prolonged stay amongst our friends at the chief towns of Mynela, Sanda, and Manwyne did much to familiarise us with the people and afford them convincing testimony of the sincerity of our intentions.

345. The final arrangement by which a passage through the Mynela disturbed district became in anywise practicable, was due to our having won over to our cause two Shan officials who had each acquired a moderate degree of notoriety as friends of disorder rather than as peaceable subjects of their respective Saubwas. Both men have already been mentioned; one was the Poogen, or head-man of Manhleo, who had resisted our advance whilst at Ponsee, and proclaimed himself to be in open antagonism to all who claimed alliance with the Panthay Government.

346. The other was Kingen, a Tamon of Mynela, and one of the deputies on the part of the Mynela chief who was sent to meet us at Poonsee in May, and afford escort from thence to the Shan States. It was not until after his duty had been performed on that occasion that I subsequently found cause to suspect that the hostile demonstration of the 15th May was in great measure due to his secret influences. Both men were possessed of authority in the disturbed portion of the Mynela district, and it was very evident that all the authority of the Mynela and Sanda chiefs must have proved ineffectual in opening a way between Sanda and Hotha, unless I succeeded in subsidising those who were powerful only in their association with outlaws.

347. It may be one of the anomalies of the present Shan Government that these said outlaws were allowed, in the presence of their legitimate Shan chiefs, to guarantee us safe conduct through a state in which its lawful rulers were impotent

impotent and unrecognised. It is stranger still that the same chiefs, instead of asserting their rights and branding the outlaws, should have acknowledged their power and urged me to accept the proffered guarantee. As in Yunan, so in the Shan States, brigands belonged to a recognised order, and legalised rule had dwindled into outlawry: might was right. There was no other line of interdependence between Kakhyens and Burmese, Burmese and Shans, Shans and Kakhyens, Chinese and Shans, Panthays and Chinese, Shans and Panthays, or the numerous other changes which might be rung on this high-toned mass of incongruous material.

348. But there was order in chaos—outlaws and states were equally tractable. Manhleo and Kingen were staunch in their adherence, and zealously worked in the cause of our mission. I paid them abundantly; metallic passes were frequent and effectual. Their services were recorded by me, at their special request, in separate written certificates, which they instinctively prized as their chief reward. Certificates were also asked for by the Shan deputies of Sanda who accompanied us on the return journey as far as Manwyne. I was specially requested to stamp them with my seal, and give the documents an impress of validity which would secure the notice of future travellers and pave the way to further good offices. I parted from outlaws and deputies alike, under a deep sense of gratitude for faithful service and a steady adherence to the cause of our mission.

349. Amongst the events which marked our homeward journey, I must pause for a moment to mention the arrival of Mr. Robert Gordon, who had been dispatched to take the place of Captain J. M. Williams as engineer to the expedition.

350. Some 10 days previous to Mr. Gordon's arrival, a Burmese armed party of 100 men had reached Mynela with 5,000 rupees, being a portion of the 10,000 rupees forwarded from Rangoon for our use by the Chief Commissioner of British Burmah. The Burmese officer* in command of this party was afraid, according to his own account, to move beyond Mynela, and had failed even to send on any communication by which news of his advent would have reached me at Momein. He happened to be the same official who headed the Burmese miners at Ponsee, and who had at that time conducted himself towards us as a baneful, obstructive, and dangerous oppositionist. He was now abject and submissive, and crouchingly entreated me not to bear resentment towards him for past offences, but to consider him my slave, and trust henceforth his aid and fidelity.

351. It had become a part of the Burmese programme that the Sayay-dau-gyee should make amendment for past shortcomings by proffering aid when no longer required, and exacting an acknowledgment of Burmese obligations. It was with grief, therefore, he learned I could do without him; but his disappointment was complete when I ordered him to leave, and signified my intention of exploring new routes between the Shan States and Burmah. The tables were turned, and the Sayay-dau-gyee knew it. *We* were masters of the position, and despised and dreaded a Burmese connectionship. The Sayay-dau-gyee was obliged to leave, but I afterwards heard that he lingered at Manwyne in the hope we might still abandon our plans and return in his train as rescued dependants.

352. Mr. Gordon's arrival has been a matter of unquestionable importance in supplying the desideratum of a professional opinion on a greater portion of the route which the expedition has traversed. As compared with *our* trials and disappointments, his journey from Mandalay was signalised by facilities of significant good omen. Not only was he favoured by the *active* support of the Burmese Government, but profited to the full by our policy of conciliation. The Shans received him with open arms, and his welcome everywhere was signal and triumphant. This is fortunate, for Mr. Gordon, in his zealous resolve to join the expedition at all risks, and under a misconception, no doubt, of probable consequences, had conceived the idea of *fighting his way* across the Kakhyen hills, and of rising superior to all opposition. All chances of conflict had been happily

* Goung Byoo Sayay-dau-gyee.

happily averted, and Burmese officials, under altered circumstances, vied with each other to be as complacent and yielding as they had formerly proved themselves inimical and obstructive.

353. There was further cause for congratulation in the fact that the advance of 150 armed Burmese to Mynela, as bearers of supplies to the British expedition, would work its effect on Panthay comprehensions, and add a link to our own significance. But the crowning boon was the receipt of rupees. I could now indulge in comparative munificence, and provide the means of adding to our collections. In Shropshire, as elsewhere, perhaps, "money makes the mare to go," but in the Shan States and amongst Kakhyens its effect is electrical, and outstrips the measure of mere horse rapidity. But it is time to push on.

354. We left Manwyne at 10 a.m. on 10th August, and the first few hours were passed in dubious efforts to cross the Tahpen. The baggage had already been packed on mule panniers, and sent down the river in canoes to a point where the river communicated with a creek on the opposite bank. The object of sending the baggage by this creek was, that it could be transported to a desired point without being subjected to the necessity of passing through a morass on the bank of the river opposite to Manwyne.

355. This morass was originally paddy land, which had lately acquired a large residuum of alluvial soil from recent and continuous river inundations. The overflow had subsided a short time only before our arrival, and one or two days of sunshine had caked the mud sufficiently to give it the appearance of smooth sticky clay, bared of all vegetation, and cracked up into a network of fissures, which were the more awkward on account of the treacherous inconsistency of the immediate subsoil. Nevertheless we worked our way onwards for a considerable distance without extraordinary effort or exertion, until apparently a point of greatest depression had been reached, and the next hundred yards of our journey was ludicrously suggestive of a whole expedition hopelessly bogged!

356. My pony was leading, and floundered head-foremost. I disengaged myself in time only to get my legs into the clay, instead of my head and shoulders. Others were less fortunate. Long legs were an advantage. Captain Bowers was obliged to pay down rupees and submit to be dragged out of each fresh lodgment to which a move of position inevitably consigned him. By two p.m. we were well across, and fairly extricated from our clayey attachments.

357. The road at starting led up an abrupt lateral spur, which, to the height of 1,000 feet or more, abounded in boulders and outcroppings of pure white marble, similar in all respects to that which occurs in the same range, and at the same elevation, in the vicinity of the Ponsee silver mines. Time being a consideration, we pushed on without a halt until we had climbed 3,200 feet in four hours, and had reached a point, before night-fall, from which the Hotha valley was revealed in all the beauty of serene twilight. The longing desire which had so long possessed us to see and know the physical character of the country beyond the eastern range of the Sanda valley was at length gratified by the disclosure of another valley similar in general features to the Sanda valley, and flanked by a well-defined continuous ridge which lay parallel to the range we had then been crossing.

358. The ascent from the Sanda side had been steep and abrupt; we were now descending the counter slope into the Hotha valley, and looked down on what, within a few hundred feet of the base of the range, appeared in the distance to be a billowy accumulation of grassy knolls, caused by the gradual projection into the valley of multitudinous spurs and their intersecting ravines and water-courses. The valley itself, never perhaps more than from three to four miles broad (measured from the base of the flanking ranges), stretched away in a straight line for 20 miles, and was numerously studded everywhere with villages and plantations.

359. Darkness intervened long before we had reached the level of the valley, and as one of the inconveniences and mishaps arising therefrom, a small party with which I had become detached lost its way, and arrived, at 9 p.m., at a Shan

Shan village, several miles out of the direct route, and where the presence of a European was as novel and unexpected as if we had suddenly tumbled (as, in fact, we almost had done) out of the clouds. The ride after nightfall down rugged descents in close proximity to occasional precipitous ridges, which, fortunately for our peace of mind, were partly shrouded in darkness, was anything but pleasurable when allied to the fact that we had lost our way too irretrievably to hope for relief, at least till the morrow.

360. Anderson was with me, and we formed a select party, which consisted of the Manhleo Poogen, my Shan interpreter, three Burmese policemen carrying Tah-sa-kon's silver spears, and two lascars with my guns and ammunition. We reached a monastery, the Phoongyees of which, in affording us bare shelter, were mutely apathetic as to other necessities. Food and bedding were out of the question. It was divinely suggested, however, that an apple tree grew by the way, heavy with fruit, which we were welcome to, if any of our party could be persuaded into first going in search of the tree, and then climbing up it in total darkness.

361. We had evidently fallen upon inhospitable quarters. A Burman Phoongyee would have done the good Samaritan at all costs of usage or convenience, but the Shan divine was a little less tractable; so we lay down on the wooden floor as we were, and would soon have forgotten temporary cares in sleep had not the priest and his collegiates chosen this particular time for Budhist vespers, which they screached out for an hour in most irreverent discord. The hour was an age. The priests and their sanctity were a hideous nightmare, more inimical to sleep than the hard floor or the clothes in which we lay, still clammy and caked with clay incrustations.

362. One of the incidents of this prayer meeting roused me from stupor to a sense of reality. The well-known voice of my Shan interpreter appeared to mingle with the prayers of the Phoongyees, and turning half unwillingly in the direction of the voices, I noticed that the interpreter held out a silver coin, and was bargaining lustily for a measure of rice. The chief Phoongyee got up, took the money, supplied the rice, and returned to his devotions.

363. Such arrant unorthodoxy in a priest of Budh can only be appreciated by those who claim an acquaintance with Burmese Budhism.

Shan Phoongyees are evidently beings who disregard mere forms which place a barrier between themselves and the world, and would limit their utility to mental abstraction and religious imbecility.

364. Their night's devotion or my interpreter's coin had given a stimulus to priestly charity, for the Phoongyees relented about midnight, and supplied mats and Phoongyee clothes as a protection against cold. There was no inducement, however, to indulge in a morning's snooze, and we were up and on the move at daylight.

365. What a lovely valley! What thrift and care is exhibited in the nice definition of garden and paddy land, and economical means of drainage and irrigation! A substantial roadway leads mid-valley over grassy slopes, passed carved stone fountains and Budhist shrines, across neat stone bridges and shining rivulets, through orchards of apple trees and groves of chesnut, solitary firs and clumps of bamboo, and brings us too soon to our Hotha terminus.

366. On reaching the Saubwa's "haw," or palace, we were received with a salute of guns, and by the Saubwa himself in full official robes, who conducted us inside and claimed us as his guests. The life at Hotha from 10th to 27th August was full of novelty. Living *en famille* as we did with the chief and his household, many precious opportunities were afforded of acquiring a correct practical knowledge of Shan domesticity and national characteristics.

367. With the exception of the Saubwa's palace, there is nothing in the appearance or condition of Hotha as a town to distinguish it from any of the other numerous towns or villages of the entire valley. This valley includes two Saubwaships known respectively as Hotha and Latha, but collectively designated Mynetha, an appellation which has also been extended to its inhabitants to distinguish them from other divisions of the great Shan family.

368. The dress, language, and general physique of Mynetha Shans proclaim them to be distinct in tribal origin from their neighbours in the adjoining Shan States. The women wear short trousers and an apron (very masonic), with a broad stiff-embroidered belt, which is passed round the waist and gives support and configuration to the back and loins. The jacket is ornamented before and behind by masses of silver plate embossments. Instead of the inverted pyramid-shaped *puggery* worn by Shan women of the Sanda valley, the ladies of Mynetha plait their hair, twist it into a horizontal chignon at the crown of the head, and hold the whole together with a circlet of flat silver-headed hair pins, which are arranged so as to form a head ornament singularly unique and fancifully attractive.

The *tout ensemble* of both men and women, including dress and general physiognomy, has a decided Chinese tendency, which is little in accord with the Shan originalities of Manwyne and Sanda.

369. As regards language, there is a marked affinity between that spoken by the Mynetha Shans and the Leesaw hill tribes, who occupy portions of these hill ranges, and extend far away beyond Momein into Central Yunan. I have already remarked that the Leesaw language bears a striking resemblance to Burmese, and it is difficult at present to account for this triple connectionship in language between races which, though perhaps ethnologically allied, have been separated for many centuries from contact or intercourse. The Leesaws are nearly allied to Chinese, and on this account I am content to particularise them as Chinese Kakhyens, although the Kakhyens look upon them as a slave race, and will not admit to even a tribal relationship. The singular resemblance in the language of these three distinct races is no mere coincidence, and may be accepted as an interesting base for philological inquiry.

370. But I must go back to the expedition. The principal point for determination at Hotha was the selection of a route across the Kaykhyen hills between Hotha and Bhamo. My original wish and intention was to have proceeded from Hotha across the range which separates it from the Shan state of Mynewun (in Burmese Mowon), and to have pursued the route from thence to Sawuddy, a small town on the Irrawaddy, 12 miles south of Bhamo. But on arrival at Hotha I was induced by a multiplicity of considerations to decide upon a practical exploration of the direct central or embassy route, which from time immemorial had constituted the grand highway between China and Burmah, and was the route, *par excellence*, which Burmese and Chinese embassies had invariably traversed when deputed by their respective Governments to the capitals of either country.

371. This route had, however, been practically closed for more than five years, owing to the murder of seven unoffending Kakhyens by a drunken Burmese official of Bhamo. The principal chiefs through whose districts the road passes, having applied in vain for justice and redress, entered into a compact to avenge their wrongs by forswearing all communication with Bhamo and combining in a plan of reprisals on Burmese villages.

372. Notwithstanding these temporary drawbacks, the Hotha Saubwa favoured the idea of re-opening this route under pleas and considerations both reasonable and advantageous. He affirmed that the journey between Bhamo and Momein was shortened by two days as compared with the northern route *viâ* Ponlyne, and by five days as compared with the line known as the southern or Sawuddy route. He further urged that he was on intimate and friendly relations with all the Kakhyen chiefs who held the route between Hotha and Bhamo, and guaranteed his influence over these chiefs as sufficient, under the protection which would be afforded by the residence of a British agent at Bhamo, to put an end to present feuds, and restore, through the medium of our interference, a renewal of friendship between Kakhyens and Burmese.

373. The immediate objection to the Sawuddy route as regarded ourselves was, that doubts were disclosed at Hotha affecting the unfriendly disposition of the Mynewun Saubwa, who had succumbed, it was said, to Burmese influences, and was generally averse to European intercourse.

374. My Shan and Kakhyen interpreter, Moung Mo (himself formerly a Burmese official), suggested, rather significantly, as a reason for avoiding the Sawuddy route, that the Burmese authorities had been led to speculate upon our return

return *viâ* Mynewun, and might therefore interest themselves in raising difficulties or, placing indirect obstacles to our progress by influencing the Kakhyen chiefs who held the passes leading to Sawuddy. It was not without mature deliberation, on these and other material points affecting the welfare and eventualties of the expedition, that I finally determined to proceed by the direct central route from Hotha to Bhamo, and detach an assistant surveyor of the party to make a flying survey of the southern route leading *viâ* Mynewun to Sawuddy.

375. But before we leave Hotha, I may be excused for dwelling on a few incidents of interest illustrative of a residence in the Mynetha valley, and of our unrestrained intercourse with its friendly inhabitants.

376. I have already spoken of the Mynetha Shans, as distinguished by dress, language, and general characteristics from the people of the neighbouring Shan states. My impression is, that these distinctions are traceable to local causes or circumstances of position, and to a more general infusion of a Chinese element than is ordinarily met with amongst the average inhabitants of the northern Shan states. The chief of Hotha is a Chinaman by descent, and positively affirms that more than a half of his Mynetha subjects were originally Chinese, who, by long contact with Shan associations, have lost much of their originality, and degenerated at length into a Shan race.

377. The Mynetha valley is elevated 1,800 feet above the valley of Sanda, and enjoys on this account a climate which has enriched it with the varied productions of a temperate zone; apple, pear, chestnut, and peach trees have taken the place of bamboo and mango. The hedgerows abound in bramble and roses. Here and there is an occasional fir, and the hill sides are forests of chestnut and bauhinia.

378. The Shans themselves affirm that Mynetha exceeds in elevation all the valleys by which it is surrounded, and that a considerable descent is made on leaving Hotha to proceed to either Sanda, Mynetha, Mynetee, Mynewun, or Mynemaw. This assertion as regards its elevation (that is to say, the level of the Mynetha valley proper) holds good, I was assured by the Saubwa (no mean authority in such matters), in its application to a system of valleys similar in general direction to that of Sanda and Mynela, and which are continued in almost endless succession (in the Saubwa's words) as far as Quantong (Canton), by which he probably refers to the nearest seaboard of Cambodia or Cochin China.

379. During our stay at Hotha we accompanied the Saubwa at his own invitation on a picnicing expedition to his country-seat at Saykow (ancient Hotha), very charmingly situated on a slight eminence at the north-western extremity of the Mynetha valley. The ride through the valley was a source of gratification in unfolding exceptional beauties of scenery and landscape, and affording evidence of the economy and care which Shans bestow on agriculture and irrigation. It is at once apparent in this valley, as well as in the other states we have visited, that the whole population is purely agricultural. The land is held in hereditary allotments, and is the property of peasant proprietors, who live on its produce.

380. The strongest possible inducement is thus given to industrious activity, and the result is improved production and universal abundance. The land not immediately under cultivation is retained for grazing purposes, and consists generally of undulating slopes, which are covered with a green velvety sward, and intersected occasionally by an abrupt ravine or sparkling rivulet as it finds its way from neighbouring heights to join the central stream of the valley.

381. The roads are excellent in their way in supplying the wants of the population, which are limited as regards carriage to mules and pack-bullocks. In most places liable to inundation, they are raised and paved with stone slabs laid on horizontally, and fitted to each other with great nicety. The bridges are of stone, and built, after the Chinese model, of one or more high circular or hemispherical arches, flanked at either extremity by zayats or rest houses.

382. The direct road to Nantin from Hotha (a continuation of the old embassy route from Bhamo) leads out of the Hotha valley at a point where the hill ranges converge, and shut in the valley at its north-east extremity. The ascent from the valley to this pass is so gradual as to be almost imperceptible; and as the height of the Hotha valley is on a level, or nearly so, with the elevation of

Nantin, I am led to believe, from a general view of the configuration of the country, as well as from the information of the Hotha chief, that the intervening distance between Hotha and Nantin is free from any serious physical obstruction, such as that caused by the Mauphoo range on the direct highway between Mynela and Nantin.

Another road leads from old Hotha into the Sanda valley in the direction of Mynela, through a gorge of very diminished elevation as compared with our mountain experiences between Manwyne and Hotha.

383. The Saubwa's country seat at Saykow consists of a series of buildings, which lead into each other by a line of consecutive courtyards and small garden inclosures. The house in which the Saubwa and his family reside is a wooden structure of Chinese design, and is specially interesting on account of the elaborate carvings and ornamentation which is everywhere displayed in prominent elegance.

384. The Saubwa accompanied us a short distance from the town for the purpose of visiting a very interesting group of Chinese temples which had lately undergone extensive repairs and re-ornamentation. The temples are Budhistic, after a Chinese misconception (*sic mihi videtur*) of orthodox Budhism. The principal range is occupied by a colossal figure of the "Thugea men," or king of angels, who is enshrined in a huge casement of wood-carving of the most chaste design, and with graduated proportions, which give grace and symmetry to what must otherwise have resembled an exaggerated sideboard.

Gaudama and two other Budhs have a building to themselves below, and are encompassed by a multitudinous group of life-size designs, which represent the embryo god in the several existences which preceded an emergence into perfect Budh.

The greater portion of an adjoining temple is appropriated to Quah-gnein, whom I have already mentioned as the goddess of conception, and physician in ordinary to all women afflicted with barrenness. Here also, as elsewhere, she is represented nursing a naked babe with an inordinate development of male organisation.

385. The Saubwa entertained us sumptuously at his country quarters; dinner was served in really good style, and with a profusion which takes a novice by surprise. One of the objects of these entertainments is to leave no available portion of a dining table without its appropriate burden. Dishes are drawn up in lines and squares, so as to occupy the whole centre space of the table, and allow only a small outer margin for the convenience of guests. We drank *shamshoo* out of tumblers, and finished off with a dessert of unripe pears eaten with salt.

386. The eclipse of 18th August occurred during our stay at Hotha, and was seen to perfection, but in the latitude we were in (25° N.), there was of course no approach to totality. The first contact took place at about 9.45 a.m., and the last at 12.30 p.m. Not more than two-thirds of the sun appeared to be covered during the time of greatest obscuration, and though the quality of the light was sensibly affected, I could not perceive any appreciable diminution of its power. This fact was so evident that the Shans and Burmese who watched the eclipse with us, regretted that its existence would not be noticed by their fellow-countrymen of the neighbouring towns and villages. They were not aware that I had already foretold the eclipse at Mynela, Sanda, and Manwyne, and that the chiefs and Phoongyees would eagerly seek to verify my prediction.

387. At Hotha itself the excitement was intense. The Saubwa with his usual intelligence was apparently impressed with our explanation of the causes which gave rise to an eclipse. He endeavoured to explain these causes himself to the superstitious crowds who flocked around him. Nevertheless we were specially requested to fire off our guns, and aid in a general noisy demonstration, which was intended to avert calamities, and more especially to terrify a leviathan frog (if there is such an animal), which, according to Shan belief, devours the sun by degrees, and requires intimidation to make him disgorge.

388. If the contact commences from the right limb of the sun, Shans view the phenomenon as a sign of approaching famine. Contact from the left signifies plenty and prosperity.

In

In the present instance the contact was from above, and opportunity was afforded of allaying anxieties. Personally we had reason to be thankful that the eclipse was only partial, and that on that account it failed to attract general notice. Otherwise the prognostication of evil thereby implied would have been associated in the minds of the superstitious with our own advent, and have been prejudicial to ourselves individually, and affected the interests of future exploration.

389. My conversation with the Hotha Saubwa on various subjects more or less connected with the prospects of re-opening the old embassy route between Bhamo and Yunan, not only proclaim him a man of shrewd intelligence, but testify also to the personal interest which he has taken in the present expedition. He is by no means disinterested, and looks forward to trade as a channel of emolument to himself and of wealth to his countrymen. He promises himself to be the chief trader on this route, and guarantees to dispose of all the produce that arrives at Bhamo. But at the same time he feels that the conflict in Yunan between Chinese and Mahomedans must operate, as long as it lasts, in preventing a corresponding export of produce from Yunan itself and the adjoining provinces. There would be a difficulty in this respect in procuring return produce in exchange for foreign goods imported from Bhamo. Neither he nor Chinese traders from Yunan would have it in their power to pay advances for goods. Purchases would be made on credit for payment by an equivalent in Chinese produce within a given period. The introduction of a system of credits of this kind would tend, he believed, to renovate trade on a scale hitherto unknown, whereas the present mode of cash payments or immediate barter had the effect of reducing it to very circumscribed limits.

390. When I asked the Saubwa how he would ensure himself and others against accidents or contingencies, at all times imminent on account of the disturbed state of the country, and the existence of an almost recognised system of theft and brigandage, he replied by assuring me that he was not likely to purchase goods unless with the certainty of safe transport to their intended destination.

It was as easy, he said, by proper arrangements to come to terms with dacoits and brigands, as with recognised chiefs and legitimate governments.

391. This confirmed the impression I had already formed of the Saubwa's capacity for making things pleasant with all parties, under all conditions of time, place, and circumstance.

At present I know that he openly maintains a separate understanding with the dacoit leader Lees-hee-ta-hee, and the more renowned brigand chief Leoqwanfan. Nevertheless he is the acknowledged friend of the Governor of Momein, and pays tribute to the Panthay Government. Amongst his own people he preserves a dignity suited to his position, and is deservedly respected within his little kingdom at Hotha. Numbers of Kakhyen chiefs, too, with whom he communicated, treated him as their superior, and obeyed all his orders.

392. As regards ourselves, it is not too much to say that he esteems us as friends, and his intelligence, combined with the little experience which our society has afforded, has taught him that western civilisation is a model of superiority which entitles it to the reverent imitation of all Shan creation.

It is this belief in British superiority which has allied the Saubwa to our cause, and is destined further, in connection with his own private interests, to place him in a prominent position as a pioneer in the reconstruction of a vast trade between Burmah, the Shan States, and South Western China.

393. On one occasion the Saubwa sat down to table, and dined with us by invitation, with all the familiarity and good breeding of a polished Shan gentleman. He tasted freely of all that was offered to him, and exhibited only one peculiarity, viz., a vigorous pull at his pipe between courses. This he explained had been a life-long practice, and caused tobacco at meal times to be as essential a portion of his dinner accompaniments as any other consumable production.

394. After dinner his conversation took an unusually sentimental turn. He was labouring under a presentiment of impending calamity. Either the Shans would fight amongst themselves (as was their wont sometimes in the Mynela district), or the Chinese or Panthays, as alternately victorious, would come down

with a swoop and lay the country under ruinous contributions. The late destructive inundations and landslips were ominous of still further disturbances, and some change of vast import for good or evil was assuredly on the cards, and must inevitably be fulfilled.

395. I quite agreed with the Saubwa in believing in his presentiment of coming change, and reminded him that an event was now in progress which affected his country with more serious interest than the ordinary consequences of landslips or invasion.

The present expedition was intended to produce a revolution in fact and ideas, which would rouse the Shans to a sense of their interests, and combine all races for mutual good. This was the change which was being effected, I said, in spite of landslips or other portentous phenomena, which had raised misgivings in the Saubwa's mind. The chief laughed and courteously succumbed; but he proved himself still sceptical, by saying that, if disturbances arose which threatened the Shan states, he would flee for a home, not to Burmah, but to the secure borders of British territory.

396. It was during the interval of our stay at Hotha that I was enabled to collect confirmatory evidence of sinister designs on the part of the Burmese government, by which our plans were opposed and our existence imperilled.

Kingen (the Tamon of Mynela), who has already been spoken of as a prince of outlaws, but a man of wonderful resources under proper management, made known to me certain of his experiences which related to the time when the expedition was first spoken of as likely to enter the Shan states from Bhamo. He swears that at that time he read letters in the Shan language, forwarded from Bhamo, in which the people of the states were called upon, as they valued their country, to oppose the British Mission, and to refuse it admittance into the Shan states. He also held conversation with Burmese Shan emissaries from Bhamo, who brought these letters, and sedulously strove to create false impressions of evil, and incite the masses to suspect and hate us.

397. But Shans, according to Kingen, are shrewd, and argued as follows:—

"If the English are so dangerous as they are represented to be, why did the Burmese allow them a passage through their country? Having permitted the expedition to pass their frontier, why do they now ask us to be the medium of its destruction? There is something wrong and unreasonable in this. We will wait and judge for ourselves."

398. The Hotha Saubwa too, in referring to the subject of Burmese opposition, spoke on one occasion as follows:—

"Whilst you are still at Bhamo, and before the mission entered the Kakhyen hills, Burmese emissaries had arrived in the Shan states, and created a feeling of hostility to your advance.

"This *must* have resulted in disaster had you attempted to enter the states before you did. Indeed, you could not have done so without fighting, and your small party would soon have been overpowered. My belief is, that the Chinese at Bhamo bribed the officials there to spread these reports, because they feared that an influx of British merchants into Bhamo would interfere with their monopolies. I have always believed in the sincerity of your intentions, and am prepared to live and die in the good cause which has brought you to this country."

399. On another occasion he told me that the messengers who were first sent to hire mules for our party in the Shan states (the expedition had not then started from Bhamo) advised the Shans to send their mules without any regard to hire, and to feel secure as regarded payment by a proposal to seize and appropriate our baggage. It was never intended, they said, that we should cross the hills; but, having proceeded a certain distance only, means would be improvised for our discomfiture, and property and baggage would be quietly appropriated by our fortunate carriers.

Mule proprietors were soon attracted by so pleasant a mode of becoming enriched, and the necessary complement of animals was at once collected.

The above fact, as related by the Hotha Saubwa, throws considerable light upon the conduct of our mule men at Ponsee, and their sudden and abrupt departure without notice, permission, or even a demand for mule hire.

400. I asked

400. I asked the Saubwa whether he could further account for this peculiarity in their behaviour?

Saubwa.—"Of course I can. You knew nothing about the arrangements under which they had agreed to render services, and were unable therefore to divine the cause of their departure without a demand for legitimate wages.

"Their intention in leaving you was simply to secure their mules, and then join the Kakhyens in a simultaneous attack on your position and baggage."

Political Agent.—"But no attack was made; what saved us?"

Saubwa.—"Your own good fates, or rather a supernatural power against evil, with which you are endowed, as the result of good deeds in former existences! All other aid would have been unavailing. Some unseen power interfered to confound the designs of your enemies. When I first heard of your troubles I had determined upon setting out myself to your assistance, but was prevented by learning that the Burmese officials of Bhamo were conspiring to injure you. I was fearful of offending against Burman policy, and did not wish to be mixed up in their treacherous designs."

401. The above conversation has been copied from my rough notes, in the exact words in which it took place. The Saubwa's idea of our supernatural power to avert calamity is not very flattering, as it sets aside the supposition that tact and endurance were brought into requisition as an aid to the unseen agencies which the Saubwa believes effected our deliverance.

402. I have good reason to suspect that the Saubwa was himself at Bhamo at the very time that the conspiracy was hatched to ruin us at Ponsee. He eventually joined us at Mynela, after Burman intrigue had been successfully combated, and every Shan state had agreed, under Panthay pressure, to contribute its mite towards our march to Momein. The fear of offending the Burmese government by awarding us favours was no longer individually paramount, after a general combination had been entered into by all the states to side with and assist the British expedition.

On this account the Saubwa of Hotha was encouraged to befriend us to the end, and to make us his guests for a lengthened period at his Hotha headquarters.

403. One of the causes which contributed to this prolonged stay in the Hotha valley was, that preparations had to be made there for crossing the Kakhyen hills by the central embassy route to Bhamo.

The route having been virtually closed to general traffic for several years past, it was necessary to summon the several chiefs, and confer with them on the plan proposed by the Hotha Saubwa for allaying existing feuds between Kakhyens and Burmese, and obtaining consent in the present instance to our making use of it in returning to Bhamo.

404. The first Kakhyen Saubwa who answered the summons was the chief of Nambouk. He arrived with a strong party of well-armed followers, most of whom rode ponies, and were more civilised in appearance than the ordinary Kakhyens we had met with at Ponsee.

As soon as the chief saw me, he rushed forward eagerly and greeted me as his friend. We had met before once only at Bhamo, where the chief had received a few presents for which he even now seemed grateful. He had set out, he said, the very moment news reached him of our arrival at Hotha, and it was his intention, had he not been informed by the Saubwa of our intended visit, to have left several days earlier with a view of meeting us at Sanda or Mynela, and of persuading us to follow the embassy route in preference to that which passed through Ponsee.

405. He expatiated at length on its many advantages, guaranteed the friendly aid of all Saubwas *en route*, and volunteered a sufficient supply of mule carriage to take us the whole way from Hotha to Bhamo.

406. I could not help noticing, during my conversation with this chief, the striking difference between a Kakhyen when left to his own natural impulse, and the same being when subjected to the advice and sinister influences of domineering Burmese. The Kakhyens have learned to judge of us by our actions,

and their verdict is in favour of truth and fair dealing. Here, at least on the Shan border, they can act independently of Burmese counsels, and know by intuition that it is to their advantage to render us honest services. The two months' residence at Ponsee has established for us a reputation throughout Kakhyen land which cannot fail to be serviceable, for a generation at least, to all white faces which stand in need of Kakhyen assistance.

407. I must pass on to the time of our departure from Hotha, which took place on the 27th August. All the chief Saubwas who occupied territory through which the central embassy route passed had previously made their appearance (in person or by deputy) at Hotha, where a general meeting was held on 22nd August, and formal arrangements entered into for the survey of that route from Hotha to Bhamo.

408. The Saubwas themselves from the first expressed very general satisfaction at the determination arrived at to proceed and survey the central route.

The route, they say, has been untraversed for years, and that the rainy season was not a favourable one for coming to a decision upon its particular merits. Nevertheless, they believed in its practicability, and guaranteed to supply carriage and afford safe conduct so soon as we were prepared to start from Hotha.

409. I have already mentioned that, in electing myself to return by the embassy route to Bhama, I had made provision for a flying survey of the southern route *viâ* Sawuddy, by detaching an assistant surveyor (Moung Thazanoo) to proceed from Hotha to Mynewun for that especial purpose.

This survey involved both risk and responsibility, owing to the supposed opposition of the Mynewun Shans, and the absence of all means of communicating direct with the Kakhyen chiefs, whose consent was necessary to a free passage between Mynewun and Sawuddy. It was essential, therefore, that the surveyor should proceed somewhat in disguise, and attract as little notice as possible by travelling almost alone, and with only such instruments as were indispensable to enable him to judge altitudes and direction, and prepare a rough sketch-map of the country he might pass through.

The object was not so much to obtain a complete survey of the route as to gain some idea of its physical conditions (as observable by a practised surveyor), and compare them with information already acquired from other sources.

410. Moung Thazanoo, being a Burman, was easily transformed (in appearance) into a Shan, and set out from Hotha on 18th August, accompanied only by two followers; one a Shan guide, who spoke the Kakhyen language (and recommended by the Hotha Saubwa as a man intimately acquainted with the principal chiefs on the Sawuddy route), and the other a Shan and Kakhyen interpreter of my own, who could now be spared from amongst our followers.

411. My instructions to the surveyor were that, if he found the chiefs *en route* inclined to favour the project of establishing a general trade route *viâ* Sawuddy to Bhamo, he might disclose the true nature of his undertaking, and assure them, with reference to my own survey of the central or embassy route, that our object was to ascertain the most practicable route between Bhamo and the Shan states, and that the final selection of that route would depend in great measure on our present means of survey and exploration. If favourably inclined towards us, the chiefs would of course find it to their advantage to assist those means, and Moung Thazanoo's work be simplified by a comparative absence of risk and difficulty.

412. The surveyor fully answered to the good opinion I had already had occasion to form of his diligence and ability. He not only managed to find favour at Mynewun, but the Kakhyen chiefs with whom he held intercourse rendered all the assistance in their power, and expressed a strong desire that British merchants would select their route as the one best suited for the transport of merchandise between Burmah, the Shan States, and South-Western China.

413. On crossing the eastern range of hills which separates the Hotha valley from the Shan states of Mynewun, the surveyor found another valley similar in extent and general direction to those of Hotha, Sanda, and Mynela, bounded on the east by another parallel range, and drained by a mid-valley stream, which found its way in a southerly direction to the Shwèlee river, one of the great affluents of the Irrawaddy.

414. The

414. The surveyor's report of this route is a very satisfactory confirmation of all that has been urged in its favour by information obtainable at Bhamo and elsewhere. The road is reported throughout to be a broad beaten track, passing for the most part over undulating country with gradual ascents and descents, and free from those rugged declivities which are occasionally met with on both the northern and central routes. I append Moung Thazanoo's report in the vernacular, with a translation and sketch-map. Other particulars will doubtless be reported by Mr. Gordon, who joined us at Mynela, and was in charge of the engineer's department from thence to Bhamo.

415. Our own departure from Hotha took place on the 27th August. The Hotha Saubwa accompanied us as far as the boundary between the Hotha and Latha States, and then said "Good-bye." The parting with his family was earnest and affectionate. Many were the wishes and prayers that our affairs might prosper, and lead us back in haste to Hotha. Two grown-up daughters of the chief were amiable, handsome girls, full of fun, and innocently eager to learn our peculiarities. I am not sure that in our communications with them we ever exceeded the bounds of decorum, but this did not prevent them from indulging in what may have been a Shan modification of prudery, and constantly reminding us that we were to regard them as sisters, and never venture upon passages of love. It was not quite clear from their own behaviour at what point Shan young ladies draw the line between platonic affection and brotherly familiarity. Judged by their own standard of moral excellence, some of our actions (hand-shaking in particular) were open to misconstruction, and many of their own secret contrivances for facilitating communication and familiarity with ourselves, would hardly have passed "muster" as mere sisterly affection in a well-ordered state of Belgravian society. But this is another digression, which would hardly be pardonable unless it afforded a glimpse of Shan society, and instanced the freedom with which English gentlemen have been admitted to "sororize" with ladies of high rank in the family circle of a friendly Shan chief.

416. The route from Hotha lay in a south-westerly direction, along the right bank of the Namsa, a small tributary which drains the Hotha valley, and finds its way into the Tahpen a little south of Ponsee. We cross the Namsa by a wooden bridge opposite to Latha, the chief town of another state of that name, within the Hotha or Mynetha valley.

417. It was my wish and intention to have visited the Saubwa of this state, and to have remained a day or two within his territory. But a family feud existed between the chiefs of the two states of Hotha and Latha, and it was, moreover, made to appear that the chief of the latter place, besides being old, imbecile, and superstitious, was possessed of an idea that our advent into his house or town presaged evil to himself personally, and would be followed by injury or death to some of his family. In so little esteem was the Latha chief held, that his neighbour of Hotha professed on many occasions to ignore his official existence, and assumed the exercise of jurisdiction and authority, in disputes which arose within the confines of Latha. With the exception of this idiosyncrasy relating to the supposed evils which he believed would arise out of a personal interview, the Latha Saubwa was neither unfriendly in disposition, nor seriously opposed to our passage through his state.

418. The Hotha Saubwa had from the first been averse to my visiting Latha, and seemed to regard my desire of doing so as a personal matter which concerned himself. I was therefore constrained, for prudential reasons, to avoid Latha, and give its imbecile proprietor as wide a berth as our route admitted.

I took care, however, on the day we passed through the Latha district, to send the Saubwa a suitable present, which was well received and satisfactorily acknowledged. A return present was brought by my messengers, who were directly instructed by the Saubwa, in person, to inform me that, as far as he was himself concerned, he would have been glad to meet me, and receive our party with becoming hospitality, but some of his people had listened to stories which made us out to be sorcerers or magicians, and dangerous alike as friends or enemies. He had deferred in this instance to the scruples of his people, and respectfully urged us to leave his coasts. He nevertheless begged me to be assured that on our return (whenever that happy event might take place) we should be well received, and that in the meantime he would do all that was

required of him to restore confidence, and teach his people the value of our friendship.

419. This message was intended to be both complimentary and reassuring, but it did not alter or falsify realities. It was the Saubwa himself, as opposed to his people, who had given way to fear and distrust, and who deprecated our visit out of superstitious misgivings which boded injury to himself, and direful ills to all his household. I afterwards learned that he had been infected with the poisonous emanations which were foully issued from a Burman source, at a time when all other means of indirect opposition had failed to restrain us to Burmese territory.

420. After crossing the Namsa at a long wooden bridge opposite to Latha, the road begins to ascend gradually, and leads through a gorge into a lateral valley, and from thence over spurs with intervening valleys (valleys within a valley), the principal mountain ranges still maintaining their general parallelism, until we are fairly within that bewildering cluster of elevations hitherto vaguely described as the "Kakhyen hills."

421. We halted at Nambouk at 5 p.m., after a march of 14 miles performed in five hours. The Saubwa received us with a salute of three guns, and had prepared a shed for our accommodation. He thought it due to his hospitality, and to our own sense of propriety and convenience, that we should remain in his village for at least three days, and thus afford an apportunity to Kakhyens far and near, who had already been favourably prepossessed towards us by report of our fame at Ponsee, to come in with presents and offerings, and receive in return the usual tokens of our friendly regard.

We contrived, however, after an extraordinary expenditure of arduous pleading and a varied distribution of substantial inducements, to waive a portion of his affectionate restrictions, and got off from Nambouk at mid-day on the 29th August.

422. The 28th was passed in all the misery of making settlements with turbulent mule proprietors, who pressed forward certain hopeless claims for payment or extra payment with all the violence and obstinacy of their race.

The real difficulty in these cases is to find out what the recusants actually require. A too ready acquiescence with their imaginary demands (which I was inclined at times to admit without controversy on the principle of anything for a quiet life) is a fatal error, which adds tenfold to the distraction and worry which it was my anxiety to avert. *Their* object is to get a traveller fairly into their power, and then enforce a compliance with their demands. But they are mere bullies at heart, and succumb at once as soon as they find themselves properly confronted. The rule is to proffer all that is due in justice, but reject all claims which are pressed with bluster.

423. The temporary unpleasantness of these inevitable outbursts was more than compensated for by the manifest good feeling of the Kakhyen population. Their houses were our houses. We shared the accommodation of a Kakhyen homestead without inconvenience to its proprietors or annoyance to ourselves. Our presence caused no observable change in their domestic arrangements: pigs, buffaloes, and ponies herded in our apartments. The men smoked opium. Women sung songs, nursed their children, pounded paddy, or weaved cloth whilst we eat, dressed, slept, took notes, and made love, with all the zest of kindred companionship.

424. We did not succeed in getting away from Nambouk until after mid-day on the 29th. The road, or rather mountain pathway, was bad and overgrown from long disuse. Halted before dusk at the village of Ashan, distance about eight miles from Nambouk. Ashan and Nambouk are on much the same level, and neither place is more than 300 feet above the level of the Hotha valley. The road, which at present is made to pass over elevated spurs which rise at least 1,000 feet above these villages, might with ease be reduced to a uniform level.

425. The direct embassy central route, after leaving Ashan, passes *viâ* Kangouk to Hoton, which is only one good day's march from Ashan. But some of the most influential of the chiefs, under whose conduct we were proceeding, would not be comforted unless we made a very considerable detour, which would enable

enable them to introduce us to portions of the hills over which they exercised special sovereignty. We were thus constrained to make three marches instead of one, and to halt successively at Monwye and Loaylon before we were allowed to reach Hoton.

426. From Ashan the road dips down at once 1,000 feet again to the bed of the Namkhon, a mountain torrent which empties itself into the Tahpen opposite to Ponsee. From this a steep ascent leads up 800 feet to the village of Lassee, and we dip once more to our Monwye encampment. It rained incessantly throughout the day, and the road on most of the inclines had been converted into slides, down which men and ponies glided at times with ludicrous rapidity.

427. Loaylon had been determined upon as our halting-place after Ashan, but the Saubwa of Monwye, who had acted as our guide during the day's march, was led in his zeal to enveigle us to Monwye, instead of following the direct road to Loaylon. In this he deceived his own confrères, most of whom had gone on with our baggage to the village of Loaylon and there awaited us. The chiefs expressed disgust and annoyance, but in our case there was no room for displeasure, for the offending Saubwa had prepared accommodation, and was profuse in that careful ministration to our creature comforts which induced good humour, and healed the sore of temporary misarrangement.

428. We started from Monwye in the midst of pelting rain on the 31st of August, and descended a long steep declivity to the Mynekha stream, which forms a natural boundary between two divisions of the Kakhyen hills occupied by separate families of the Kakhyen race, under the tribal denomination of Kowlee and Lăkhon. Both races possess characteristic distinctions which are said to be very marked and determinable as amongst themselves, but to casual observers, Kowlees and Lăkhons assimilate in dress, language, and religion, so as to be apparently identical.

429. The Kowlee chiefs had assembled at Loaylon (called Mynekha) to receive us, and were determined to vie with the Lăkhons in their outward manifestations of hospitality and kindness. We were bound under certain conditions of Kakhyen etiquette to change horses, or rather mules and porters at Loaylon, although I had tried hard to book ourselves through from Hotha to Bhamo. The direct object of the change was that each section of the Kakhyen people, through whose territory we passed, might have the advantage of supplying carriage, and of profiting in other indirect ways by our temporary presence amongst them.

430. A halt for one day was necessary at Loaylon, and the time was not unprofitably or unpleasantly spent in friendly intercourse with the chiefs, and in special communications with the Muthin Saubwa, a man of rare excellence and intelligence, though only a hill chieftan in the wilds of Kakhyen land. He and the Loaylon Saubwa are sons of the old Muthin chief, who, during his life-time, was acknowledged to be the richest and most powerful of all the hill chiefs bordering on Burmah.

He, too, was the chief who had headed a confederacy to avenge the Burman murder of seven of their race by closing the embassy route, and instituting retaliatory measures against Burmese villages. His son was now present to wipe out existing feuds, and open out his country again to its former usefulness.

431. The present Muthin Saubwa spoke Burmese with ease and even fluency, and his ideas and principles, as deducible from general conversation, marked in him a higher degree of civilisation than that which is compatible with the ordinary supposed state of a semi-barbarous hill race.

"Every hill in the country," he said, "rejoices at the news of your intention to renew the old trade with China. The project was one which enlisted at once the sympathies and interests of all Kakhyens, and held forth to them the prospect of wealth and happiness."

432. In presenting us with fowls, eggs, beer, *shamshoo*, and a young bullock for slaughter, he apologised for shortcomings, and begged that I would remember that he was not at the time within the limits of his own saubwaship. He is disappointed that we are in a hurry to return to Bhamo, as he had calculated on detaining us at Muthin for a few days, and giving us a true impression of Kakhyen hospitality.

433. This never-ending desire to procrastinate is an unfortunate failing in the welcome afforded us by every Kakhyen chief. It was of no avail to plead that the season was unfavourable; that some of our party were not in good health; that the incessant rain might induce general sickness; that we were badly off for clothes and provisions; and that our long sojourn for nine months in a strange land had made us intent on a speedy return to our homes and country.

The only plan by which I succeeded in finding a way to the fulfilment of our wishes was by a direct appeal to Kakhyen future interests, and by honestly pointing out that any needless excess of time occupied by me in pursuing the journey between Hotha and Bhamo would be viewed by our Goverment as an argument against the practicability of the embassy route, and afford cause for its rejection in favour of a highway which was more easily traversed or less obstructed by the courtesies of chieftains.

434. This had its good effects in expediting our departure from Loaylon on the 2nd September, but it did not save me from a mountainous detour of 15 miles *viâ* Loaylyne and Muthin to Hoton, instead of a comparatively easy march of six miles by the direct route *viâ* Sakhiy. But the digression was not without its reward. The reception of Muthin was not only honourable in itself, but satisfactory as instancing the advanced state of Kakhyen civilisation, and the eager desire of the people to welcome the prospect of renewed foreign intercourse. A salute of three guns announced our arrival, and the beating of gongs and cymbals was continued from the time we entered the village until we were fairly housed within the Saubwa's inclosure.

435. The village of Muthin is situated at a considerably higher elevation than any Kakhyen village we have as yet passed, being more than 5,000 feet above sea level, whereas it has all along been observable that Kakhyens limit themselves, or rather their villages, to heights which do not generally exceed 3,000 feet.

436. The chief's house is a Kakhyen palace, and occupies the highest point of an undulating table-land on which the village is situated. It is approached by a broad flight of stone steps, which lead to an arched gateway and walled inclosure of Chinese design. The house itself is a wooden structure, built on the elongated single ridge principle peculiar to Kakhyens. It is palatial in size, finish, and ornamentation, as compared with the residences of ordinary Kakhyen saubwas. The ornamentation is confined to an abundance of wood carving, which is everywhere prominently in view on the posts, wall-plates, cross-beams, and door-frames.

437. We sat down in a lofty shed adjoining the house, drank Kakhyen beer, and were introduced to the chief's family. Crowds of women and children had assembled within and without the inclosure, many of them fine interesting specimens of their race, and comely to a degree, despite their matted locks and once-a-year ablutions.

There were other special attractions of a less delusive nature, which would have induced us to loiter at Muthin and enjoy the hospitalities of its intelligent chief, but the day being already far spent, it was necessary to push on so as to reach our halting-place at Hoton before sunset.

438. The descent from the Kakhyen hills by the central or embassy route to the Bhamo plain (or rather to the belt of land which lies between the base of the hills and the left bank of the Irrawaddy) commenced at Muthin, which, as before remarked, is more than 5,000 feet above sea level.

Hoton is an important Kahyen saubwaship, about two miles from Muthin. Within these two miles we have descended a thousand feet, and can now gaze over a magnificent expanse of plain, bounded on the north by the Mogoung hills, on the west by the lofty ranges which divide Burmah from Arracan. On the south, the view is lost at an illimitable distance in haze and horizon. The course of the Irrawaddy, swollen now by rain and flood to a breadth computable in miles, is seen threading its way through mid-plain in a slender line of silvery brightness. The view would at any time be enchanting, but under present circumstances, our followers, native and Burmese, strained forward to the plain as to a land of promise, and spoke out their joy in bounds of excitement.

439. But

439. But we are still at Hoton, and had we been allowed to reach it direct from Ashan *viâ* Kangouk and Sakhiy, instead of passing through Monwye, Loaylon, Loaylyne, and Muthiñ, we should have performed *one* comparatively easy day's journey instead of three toilsome marches, which were imposed upon us as the penalty of friendship, and because we were fit subjects for a display of Kakhyen hospitality.

Hoton is a place of importance on the central or embassy route, being the first Kakhyen village of any size which is reached on ascending the hills from the Bhamo plain. The direct dry weather route leads from Hoton *viâ* Momawk to Bhamo, but the plain through which it passes is more or less flooded during the rains, and I found it necessary on this account to descend immediately to the valley of the Tahpen and proceed by boat from thence to Bhamo.

440. After spending the night in the chief's house at Hoton, we were prepared to leave the next morning, but *l'homme propose* and the Kakhyen deities which ruled at Hoton were disposed as ever to favour postponements. The old Saubwa of Hoton, almost in his dotage, with his two wives and descendants of more than one generation, put in an appearance in their best attire, and presented me with the usual quantity of fowls, vegetables, cooked rice, and beer. They were followed by the Saubwas of Kadaw and Sakhiy with their families, the men wearing old black satin jackets of ancestral date, and the women clad in neat Kakhyen costume, but with a profusion of silver ornaments which proclaimed their Shan predilections.

441. The young Saubwa of Kadaw, who died of small-pox during our stay at Momein, was the son of the old Kadaw chief, who was now our visitor. The old man took his leave with every token of friendship, and under an assurance on my part that, on reaching Bhamo, I would consult with the Kakhyen chiefs, who had promised to accompany me and do what was considered just and expedient in making some amends for his family losses.

But another member of the family, a brother of the deceased chief, was not as easy to deal with. He not only became turbulent and obstructive, but insolently demanded immediate compensation.

442. I had become by this time sufficiently familiarised with Kakhyen incentives to thought and action to know that this blustering impudence was the simple result of my own indiscretion. I had foolishly allowed myself in a moment of weakness to make allusion to the young chief's death, and start the idea of pecuniary consideration. It was a well-known fact that the young Saubwa had died a natural death, and that, though he had followed me to Momein, the action was a gratuitous one on his part, and carried out against my wishes. It could not be said then that the death had taken place in our service, much less that it was in any way ascribable to our evil influences. But leaving a broad margin for Kakhyen influences and the superstitious element which would be infused into their mode of reasoning, I deemed it prudent, out of regard to our future interests, to deal liberally in the matter and leave no cause for misconception.

443. But the blustering brother in assuming the offensive had enlisted the sympathies of a few of our mule-men, and whilst preparations were being made for our intended start, I was distressed to find that baggage animals were not forthcoming, and that our final departure was made to depend on an immediate compliance with the brother's demands. We were thus once more in a Kakhyen dilemma which called to mind the experiences of Ponsee.

444. The natural inclination of Kakhyens, more especially if they happen to be mule proprietors, is to wrangle and create a savage discussion on every occasion which yields a chance of successful extortion. Chiefs are not above a jolly good quarrel with their subjects, and abuse is given and taken with a wonderful amount of outward demonstration, but little or no resulting action. Either party works itself up into a fury of wrath which promises death and extermination as the most insignificant of its denunciations. Old scores are jealously registered, to be paid with interest by succeeding generations, but present punishment or immediate penalties form no part of the Kakhyen criminal code. A furious quarrel of an hour's duration ends as it commenced in nothing save smoke. This was the case on the present occasion. All I had to do was

to expostulate with the chiefs kindly, but firmly, and, having secured a strong party feeling on our side, to look on with indifference and let the disputants fight or rather wrangle it out.

445. We got off about mid-day and commenced at once a descent to the plains. The road led through the village of Mantai, where the Kakhyen saubwa urged us to enter his house and accept the hospitality of himself and his family. He received us with a salute of guns, and we were made to sit down and drink home-brewed beer, which was poured out for us by a very demonstrative woman (his wife) and two lusty good-looking girls, his daughters.

446. This was the third time during the march from Hotha that we had been received with salutes of honour on entering the head-quarters of a Kakhyen saubwa. The fact is full of promising significance. It teaches us, I think, that a people who love rupees, drink beer, and fire salutes in honour of European travellers, are neither dead to enterprise nor dangerously opposed to friendly intercourse.

447. We are principally indebted to Burmese policy, or the conservative tendencies of its imaginative government, for a fearful picture of Kakhyen *bogeeism*. The picture is now pronounced a daub, without form, colour, or truth. It was hideous only in its unseen blackness; exposed to light it has vanished into nothingness. This state of Burmese conservatism is the more apparent from the fact that the Kakhyens bordering immediately on Burmah derive all their civilisation from China, and in a very large number of instances speak the Chinese language fluently, whilst utterly at a loss to understand or to express themselves in Burmese.

448. The distance from Hoton to the level of the plain, where we halted on the left bank of the Nanthabet river is 12 miles, and the difference of elevation between the two places more than 4,000 feet. The heavy rain of the past few days, the wetting mist, the steep declivities and slippery pathway along which we were hurried with slithering rapidity, all conduced to make us believe that we had fairly been washed out of Kakhyen localities.

449. The Nanthabet river was at this time a broad deep stream, full to the banks and alarmingly rapid in its current. The only means of effecting a passage was by a raft made fast to a rope of platted bamboos. Both rope and raft were imperfect, and our baggage being in rear, we were obliged to halt and pass an abstemious night, *sub jove frigido*, supplemented by a rustic canopy of bamboo jungle. Luckily it did not rain during the night, but the morning, which promised fair, changed suddenly to foul, and rain fell in torrents. We were drenched in a moment. All hands laboured for full two hours during heavy rain in the construction of a serviceable raft. Captain Bowers superintended, and it required not only considerable personal exertion, but all the professional ability which he was known to possess, to join and plat split bamboos, so as to improvise a hawser 200 feet long which could bear a strain in any portion of its length of several tons.

450. By 10 a.m. we were all across. Burmese officials appeared by degrees, and actually *apologised for having kept us waiting!* Their astonishment at seeing us in the flesh after an eight months' absence and a profound belief in the certainty of our annihilation had confused their ideas, and made them view us for some time either as a charmed species of humanity or as veritable apparitions.

451. But the sun had come out. We were now on the plains; care was behind; success ahead; and welcome everywhere. "All nature smiled" with radiance, which inspired a love for even Burmese enemies. At 12 we had reached the Tahpen, and found rafts and boats ready to transport us to the village of Sit-gna, where temporary accommodation had been prepared and our wants supplied in plenteous abundance.

452. The broad glassy Tahpen, now gliding peacefully between banks of plenteousness, was a pleasing novelty as contrasted with the noisy rush of foaming torrents which had charmed to satiety. The rafts on which we had crossed from Namphoung to Sit-gna were nicely furnished with chairs, curtains, and carpets. A band of Burmese musicians was also in attendance, but their performances

formances were abandoned in favour of two large Chinese gongs which had come overland with us from celestial regions, and were triumphantly beaten by our followers into a clang which drowned all meaner sounds of Burmese harmony.

453. The rafts were towed by war-boats, and we glided across to Sit-gna *in state*. How great the contrast between now and then! *Now*, when difficulties had been surmounted, assistance no longer needed, and even neglect and insult a matter alike of contempt and indifference, the Burmese officials not only treat us as superiors in the prudish forms of colloquial address, but provide gratuitously, when no longer required, a profusion of supplies, which money and remonstrance were powerless to procure in an ill-starred season of comparative adversity.

454. We left Sit-gna on the 5th September in the rafts and boats which had been provided at Namphoung, and dropped down the river towards Bhamo in an ecstacy of calm but triumphant satisfaction. And in this ecstacy we reach Bhamo, and close the narrative of a journey which, however bare in material incident, is big with signs of future promise, and marks an era in our commercial destiny.

455. My narrative is at an end, and although I believe that what has already been stated is abundantly comprehensive, when read as a whole, to admit of clear and practical deductions, it may not be inconsistent with the obligations I am under as leader of the party to conclude this report by expressing a few of my own opinions and convictions on points which call for special elucidation.

456. In the first place, then, I may remark, that two questions of vital importance had worked themselves up into prominent notice on our return to Bhamo. Reference may accordingly be more conveniently made to them here than in any previous portion of my narrative.

The first of these questions relates to the adoption of means for facilitating transit across the Kakhyen hills, and of securing, as one of the permanent results of our enterprise, the friendship and good-will of the Kakhyen hill races.

457. The second has reference to the establishment of a British agency at Bhamo, and both questions appeared to me at the time to be so immediately urgent as to require special report, as contained in my letters Nos. 193 and 194, of 25th September 1868, to the address of the Chief Commissioner, British Burmah, and agent to his Excellency the Viceroy and Governor General of India. These letters contain, in a condensed form, all that it is of interest or utility to make known, in connecting the subjects they relate to with the present report or with the plan and purposes of the recent expedition. I deem it advisable, therefore, for the sake of preserving uniformity and sequence, to enter the letters *in extenso* in the body of the report, rather than submit them as correlative matter only in an over-crowded appendix.

From Captain *E. B. Sladen*, Political Agent, Mandalay, to Colonel *Albert Fytche*, Chief Commissioner, British Burmah, and Agent to his Excellency the Viceroy and Governor General.—No. 193, dated Mandalay, the 25th September 1868.

As one of the necessities arising out of the late expedition from Bhamo to South-Western China, I do myself the honour of bringing to your notice that the establishment of a British Agency at Bhamo deserves very prominent and immediate consideration.

2. My experiences of the last few months lead me more than ever to believe that the Burmese government will still require considerable pressure before it will voluntarily facilitate trade relations between Burmah and China. All its feelings and antipathies are, and always have been, opposed to our free intercourse with foreign states through Upper Burmah, and it is not too much to say that its energies will steadily be applied to the adoption of indirect means whereby to prevent and discourage foreign trade by the overland route now open through Bhamo.

3. If my suspicions as to the insincerity of the Burmese government in this respect have any real foundation, it may rightly be assumed that the indirect means above referred to can be more readily and effectually applied at Bhamo than at any other place. *There* it will be a simple matter for the government to use its influence in a variety of ways by which to undo and reduce to a profitless minimum most of the advantages which the exploration party has so far secured.

4. It is with a view to counterbalance and counteract, if possible, these sinister influences that I now advocate the immediate appointment of a British agent, whose duty it will be to reside at Bhamo under the late treaty, and watch over the interests of inland trade. For let it be understood that although the tendencies of the Burmese government are opposed, in my belief, to the extension of trade *viâ* Bhamo, it nevertheless professes to be actuated by different motives altogether, and would wish us to believe that it is as eager for overland trade and intercourse with foreign countries as we are ourselves.

It is on this account that the appointment of a British agent at Bhamo is likely to have a beneficial influence in checking certain preventive measures whereby the Burmese government would otherwise have it in its power to obstruct and retard the revival of overland trade with China.

5. But apart from Burmese considerations altogether, the British agent at Bhamo becomes a necessity, not only as a guarantee of protection to traders from British territory, but as a means of encouragement and protection also to traders from beyond the Burmese frontier, many of whom have confessed to me that under no other security or consideration will it be possible for them to avail themselves permanently of the overland trade route between Bhamo and Yunan.

6. The Governor of Momein, as well as all the Shan and Kakhyen chiefs with whom I have conversed on this subject, were unanimous in their desire to have a British official permanently established at Bhamo, and received my announcement that such an appointment was likely soon to become a reality with expressions of unfeigned satisfaction.

7. I may mention that the (31) thirty-one Kakhyen chiefs who accompanied me lately from their hills to Bhamo, and there took an oath of fidelity to protect and give safe conduct at all times to traders of all denominations by the old embassy route across their hills, begged me very earnestly to reside myself at Bhamo, or at all events to remain there until another official might arrive, and take up the appointment of British agent.

8. I am sorry to say that this request was made in consequence of the bad feeling which at present exists between Kakhyens and Burmese, and which leads the Kakhyens to assume with reason that Burmese officials under their present Governor at Bhamo are much inclined at the present time to despise and keep them at a greater social distance than ever. But this is a matter which it is my intention to submit to you in a separate communication. I merely refer to it here as another reason for our availing ourselves, as soon as possible, of some of the privileges provided for in our late treaty with Burmah.

9. A remaining point for consideration is the pay which the agent should receive, and in this respect I attach more than usual importance to the position which his salary and accompaniments will enable the agent to assume and keep up at Bhamo. It will be necessary, moreover, to sanction the expenditure of sufficient funds wherewith to build a good and substantial residence, which would not be inferior in any respect to that occupied by the Governor himself. I am inclined to be particular on these otherwise trivial points, because we cannot blind ourselves to the fact that Shans, Kakhyens, Chinese, and Panthays will judge of us by first impressions, and will estimate our official agent at Bhamo, amongst other qualifying considerations, by his ability to maintain appearances, and possibly also by the length of his purse.

From Captain *E. B. Sladen*, Political Agent, Mandalay, to Colonel *Albert Fytche*, Chief Commissioner, British Burmah, and Agent to his Excellency the Viceroy and Governor General.—No. 194, dated Mandalay, the 25th September 1868.

I DO myself the honour of informing you that on my return to Bhamo with the expedition party which I was appointed to lead into South-Western China, I was accompanied by 31 Kakhyen chiefs and nearly 200 followers, who had availed themselves of my escort and protection to enter Bhamo and conclude arrangements for free transit and safe conduct to all trade and traders by the grand central or embassy route which I had just traversed from the Shan state of Hotha to Namphoung on the Tahpen river.

2. The Burmese officials at Bhamo, I am sorry to say, viewed my familiarity with Kakhyens and *their* ready acquiescence in my wishes with jealous distrust, which provoked the contempt and ridicule of even the Kakhyens themselves.

3. I had for some time past had in consideration the question of an annual subsidy to be paid to Kakhyen saubwas as a means of making them our friends and of securing a safe and ready means of transit across their hills. The idea of a subsidy originated of course with the assumption or belief that by no other practicable means would it have been possible to enlist the sympathies of these hill people, or cause them to regard our presence in the capacity of traders as a source of advantage and prosperity to themselves. Having satisfied myself, however, by ample experience that Kakhyens are more eager and interested in the re-opening of a trade route through their hills than we are ourselves, and that their ready co-operation may be freely relied on in any attempt we may make, either to open out old routes, or construct new ones, I have been advisedly led to avoid the inconvenience and complications which a subsidy might have given rise to, and hold to the fact that fair dealing, and kind and straightforward treatment on our part, are all that is required to secure

secure the friendship of these people and ready access to Kakhyen land for all the essential purpose of a through-route between Bhamo and South-Western China.

4. Whilst, however, the opportunity presented itself, it was of importance to secure certain benefits which seem to arise out of the friendship already contracted with the several chiefs who had accompanied me to Bhamo. These benefits would be obtained by a partial adoption of the Kakhyen's natural custom, by which it is usual with them on similar occasions to bind themselves over to a particular purpose by an oath of fidelity sworn to and strengthened by all the savage solemnities of a religious ceremony. Such an oath, whilst it professed to secure for us the sworn friendship and fidelity of all who participated in it, and gave to traders and travellers free access to the Kakhyen hills (or to such portions of them as are included in the oath), would not, on the other hand, bind us over to reciprocal action of any sort, or give the Kakhyens any claim on us beyond the very laudable one of drawing commercial enterprise to their particular localities, and inducing us to favour routes of which they were the sole acknowledged proprietors.

5. The Kakhyens entered into this proposed measure for strengthening and perpetuating our mutual friendship with a willingness which was the more astonishing, inasmuch as it was carried out in defiance of a certain amount of jealous opposition on the part of the Burmese officials at Bhamo. In the first place Kakhyens were first informed that they could not be allowed to perform any of their religious ceremonies within the precincts of Bhamo. Ingress to the town, or to my own residence, was as difficult and troublesome as the obstructive ingenuity of Bhamo guards at the several gateways could make it. Kakhyens were called upon to deliver up their swords on entering either of the approaches of the town. The purchase or sale of various articles, such as bamboos, and especially bullocks and buffaloes, which were essential in the ceremonial to be performed, was secretly interdicted, so as to make it a matter of difficulty to procure them. Whilst preparations were being made for the ceremony, the chiefs were called away and privately instructed by certain Burmese officials, that they were not at liberty to enter into any engagement with foreigners.

All this petty opposition was eventually overcome by my explanation to the governor, in which I proved to him that I was not acting solely on the part of the British Government, but that I was carrying out the orders of his Majesty the King of Burmah, who had expressly desired me to act on *his* account, and make use of *his* name wherever I might find it necessary by so doing, to conciliate existing differences, or secure the interests of trade, and of the expedition under my leadership.

6. The governor replied to my imputation of opposition on his part, by saying that if I had met with difficulties, *he* was not to blame, as his officials had acted without his knowledge, The Kakhyens, he informed me, were at liberty to perform any rites they pleased; and as to the difficulty of purchasing bullocks, it was explained away by the fact that Burmese objected to see their animals slaughtered in celebrating Kakhyen savage rites.

7. I was content to accept this explanation without for a moment believing that it had been given in good faith, and the Kakhyen ceremonies proceeded to completion with all the usual formalities. It may not be out of place to record a brief account of the ceremonial and form of oath taken on the occasion. For each buffalo to be slaughtered a separate building is constructed, consisting of strong posts sunk into the ground with cross pieces, to which the animal is tied previous to sacrifice. A separate altar is also prepared 20 feet in height with a platform of bamboos some four feet square, on which the sacrifice is offered. Kakhyen deities of every degree and denomination are invited to attend and bear evidence to the rite about to be solemnized.

The invocation is repeated twice: once before the animal is slaughtered, and again previous to laying the meat offering on the altar. It is performed by a special office-bearer, whose prayerful intonation on the occasion is strangely musical, and suggestive of portions of our own cathedral service.

8. The animal to be slaughtered is firmly bound by its horns to the wooden construction before mentioned, and then thrown on one side. The whole weight and strain of the body is on the neck, which is partially twisted. There is not a moment's delay; a Kakhyen specially equipped for the service rushes forward holding a plantain-leaf cup of sacred water in one hand and a naked sword in the other. The former is thrown over the sacrifice, whilst the latter is brought down with frightful effect on the portion of the neck where the strain is greatest. The result is complete. The savagery of the whole scene is somewhat atoned for by an absence of torture or suffering, from which the animal is saved in its almost instantaneous dissolution.

The carcase is cut up without loss of time, and the portion of it to which the deities are known by Kakhyen experience to be partial are alone cooked and laid on the altar to be feasted on by the gods. This is the time, whilst the deities are being propitiated with the semblance of a good dinner, that they are called upon to witness the oath for which the whole ceremony has been contrived. A small quantity of the blood of the slaughtered animal has been caught and is now mixed in a large vessel with an abundant supply of raw native spirits. The whole is stirred up with the points of swords and spears, which are dipped into the liquor *ad libitum*, and each chief, as he comes up in the supposed presence of the attendant deities, takes his draft from the sacred bowl, swears his oath of fidelity in muttered prayers which imply the most fearful denunciations as a certain consequence of infidelity..

9. The dipping of the swords and spears in the liquor in which the oath is drank is said to be typical (as far as I could understand the interpretation given me) of the violent death which would of a certainty be incurred by a departure from engagements contained in the oath. In the present instance the Kakhyens were simply called upon to protect and afford safe conduct to traders and travellers who might cross their respective hill ranges on the route between Bhamo and the Shan States. The means for securing so important an object may appear to us profane and irrational, but as a native religious rite they are natural enough to Kakhyens, and have a powerful and binding effect in keeping them to their engagements.

10. And as regards a certain profanity in the proceedings, there is unfortunately little or no distinction between the Kakhyen ceremonial and that which is of necessity enforced in the administration of oaths to natives in our own courts of justice whenever a Burman, or more particularly a Chinaman, takes his place in the witness box.

11. Altogether the oath of fidelity was sworn to by 31 Kakhyen chiefs, who are principally located on the grand central or embassy route between Bhamo and the Shan State of Hotha. The immediate benefits to those who may wish to avail themselves of the route are certain. The more remote, though not less important, results will be found to arise out of the increased influence we are likely to obtain by the notoriety of our friendly engagement with the Kakhyens, and the extensive circulation which their report of our true and liberal treatment of themselves will acquire throughout all parts of the country which we are engaged in conciliating to our cause and enlisting in the interests of trade with South-Western China.

12. It will be observed that the experiment of binding over Kakhyen saubwas by a custom of their own to protect and support traders of every denomination who may desire safe conduct across their hills has been limited in the first instance to the chiefs who occupy hill ranges between Bhamo and the Hotha valley by the old central or embassy route. I was afraid that the introduction of chiefs or Saubwas from other routes might create a spirit of jealous rivalry which might have marred to some extent the full accomplishment and object of the binding ceremonial. It will become necessary, however, in the event of a British agent being appointed to reside at Bhamo, to extend this ceremonial to the chiefs of the Ponlyne (or northern) and Sawuddy (or southern) route. If summoned in a friendly way to Bhamo, and solicited to give us a friendly support in the cause of trade, *they too* will be induced, by the anticipation of securing for themselves or for their particular route a monopoly of trade transit, to bind themselves by the customary obligation already subscribed to by their brethren on the central or embassy route.

458. The concluding paragraph of the above letter suggests the necessity of a few remarks relative to the determination of a practicable trade route between Bhamo and the Shan states, or rather we may say between Bhamo and Momein, for the particular route pursued across the Kakhyen hills practically determines its further course through the Shan states into Yunan.

459. For the sake of distinction I have already denominated the three principal Kakhyen routes with which we have become more or less practically acquainted as follows:—

1. The northern or Ponlyne route.
2. The central or embassy route.
3. The southern or Sawuddy route.

And I shall limit myself in what I have to say regarding them to a few general facts, without any desire of intrenching upon engineering details, which rightly belong to a separate department.

460. In the first place, I start with the assertion that the question as to which route is most practicable in an engineering point of view, is one which it would be premature to puzzle ourselves about for all present purposes, until we are prepared to entertain a definite scheme of road improvement, or even railroad communication.

461. What I mean is, that trade to an almost unlimited extent is now possible by any of the present existing routes, without reference to their engineering capabilities, and that the determination of either of these routes as a through-route for general traffic must depend for some time to come on questions of policy and general expediency, rather than of special adaptability or physical disqualification.

462. One of the main results of the recent expedition is, that it has assured us of the good will and hearty co-operation of the several races bordering on Burmah, in the furtherance and construction of any great permanent work which we may be led to project within their respective territories.

463. It

463. It has been further conclusive in showing that the Kakhyen hills form no real physical barrier to the construction of good practicable roads, and that the character and configuration of their several ranges are such as to afford ground for belief that a railroad which would connect Bhamo with the chief centres of trade in South-Western China, is an engineering project which may be reasonably entertained and successfully accomplished.

464. It is now a significant and important truth, that 130 miles of road or railway on the most practicable line between Bhamo and Momein would effectually tap the resources of Yunan and put us into direct communication with the wealth and resources of South-Western China. But until such a work has been specially projected, or until fresh surveys have been instituted, with a view to the final determination of a direct *through*-route between Bhamo and Momein, my opinion, with reference to the general adaptability of any of the existing routes for all present purposes of commerce and communication, is strongly in favour of the central or embassy route, which leads direct from Bhamo to Hotha, and my suggestions are that we should lose no time in utilising to the utmost the substantial advantages which have so far been secured to us by our late friendly alliances with the several Kakhyen chiefs who hold that route.

465. As soon as the British Agency has been established at Bhamo, we shall be in a position to enter into further friendly relations with the chiefs also of the northern and southern routes, and an active officer of engineers, having his headquarters at Bhamo, will be able, in conjunction with the British agent, to arrange during a single season for a system of practical surveys, which would add to our knowledge of the country, and aid in the determination of a highway (*road*, *tramway*, or *railway*), which must eventually, and at no great distance of time, connect the Irrawaddy with Yunan, or Bhamo with Momein.

466. I consider it, moreover, to be a matter of political expedience that the agent at Bhamo, or the engineer with whom he may be associated, should have it in their power to incur a considerable outlay in repairing and otherwise improving each of the present existing routes. The expenditure incurred would be amply repaid by strengthening our hold over the Kakhyen races, and securing to them the certainty of remuneration in return for labour.

467. Such an advantage can hardly be overrated, for whilst it provides us with willing labourers amongst races working, it may be said, under the incentive of self-interest, it will show these same races that our undertaking is in earnest, and that we have seriously determined upon utilising themselves and their country in the commercial openings which look towards China.

The more prospective benefits will develope themselves gradually in the means afforded for facilitating communication between Burmah and the Shan States, and of stimulating and drawing to its natural channel a trade which, for several years past, has either altogether ceased, or been influenced by a variety of causes into partial, and let me add temporary disuse.

468. And here I find myself brought face to face with the duty of resolving one of the main questions which gave rise to the present expedition. The chief objects of the mission, as laid down in paragraph 3 of my letter of instructions, No. 12, of 11th November 1867, are threefold:—

1. To investigate thoroughly the causes of the cessation of trade.
2. To discover the exact position of the Kakhyens and Shans and Panthay government in Yunan.
3. To influence these several communities towards the re-establishment of trade.

A reference to what has already been recorded in the narrative portion of this report must simplify very materially the work of coming to definite conclusions on the principal questions involved, as contained in the detailed instructions already quoted.

469. The cessation of trade between Burmah and China, consequent upon the breaking out of the Mussulman rebellion at Yunan, is of course primarily ascribable to that rebellion and its destructive influences on the resources and commerce of those portions of the country from which the chief products of trade were principally derived.

 470. That

470. That rebellion dates from the year 1855, but during the last five or six years, or since the comparative consolidation of Mahomedan rule within the province of Yunan, the necessities consequent upon comparative isolation, and the fact that Yunan was more or less politically cut off by rebellion from trade communication with other provinces of the Chinese empire, compelled the Panthays to look towards Burmah, and to contemplate a resuscitation of that trade which for generations past had found a natural outlet on the Irrawaddy, and established for itself an extensive mart at the Burmese frontier town of Bhamo. But a peculiarity, however, is observable in the Panthay mode of reviving this trade, and there is some reason to believe that at the outset of their undertaking certain political reasons may have conspired to restrict them to a long overland journey of two months (*viâ* Thinnee) from their capital at Talee to the capital of the Burmese empire situated at Mandalay.

471. These reasons were necessarily cogent and unavoidable as long as the Panthays felt themselves insecure as a government, and had failed to add the northern Shan States, bordering on Burmah, to the list of their conquests. During the interval, however, whilst the Panthay Government was in a measure debarred from reaching the old established and comparatively proximate trade mart at Bhamo, the necessities of its position were of so urgent a nature that trade with Burmah was profitable at any cost, and the conquerors of Yunan found it to their advantage to commit their caravans to an expensive land route of two months' duration to Mandalay, rather than submit to complete isolation from all trade intercourse with Burmah.

472. But when the way to Bhamo had been to all intents opened by the conquest of the northern Shan States in 1864, and friendly alliances had been entered into with the Kakhyens, so that no apparent barriers remained to prevent the recurrence of trade to its former natural and legitimate outlet, it is a rather significant fact that the projectors of the Yunan caravans should *still* have found themselves restricted to the long overland journey to Mandalay, instead of being guided by interest and expedience to strike the Irrawaddy at Bhamo, and reduce by one-fourth their time and their expenditure.

473. The reply to this seeming inconsistency is to be looked for, I conceive, in the anomalous attitude of the Burmese Government. It may be casting a slur on our diplomatic acumen to confess that I am only now beginning to realise to perfection the full amount of stern opposition with which the Burmese Government has indirectly confronted us in denying a highway through Burmah to China.

474. I can now account to myself for the reality of a hint thrown out in a former paragraph of this Report, that the British occupation of Pegu has of late years been made to play more than a subsidiary part in Burmese policy, in causing a cessation of the old Irrawaddy trade with South-Western China. What Burmah has always dreaded in that occupation is, that British interests would not be confined to British possessions, but that contingencies might arise which would give the foreigner the right of extending his influence to Upper Burmah, and to a point above and beyond the limits of the present Burmese capital.

475. Such a contingency was always imminent as long as it could be made demonstrable, in any way, that Bhamo might again become the natural emporium of a direct overland trade between Burmah and China. The same objection did not hold good, provided Mandalay could be made the mart for that trade instead of Bhamo, for in that case the intrusive foreigner would still be somewhat under control, and his operations for good or evil would not probably extend themselves in the same dangerous degree or direction, as they seemed destined to do if allowed to ramify from an emporium on the extreme confines of the empire, and in direct contiguity with races which did not owe allegiance to his Majesty of Burmah.

476. On this account the Chinese or Panthay caravans have been encouraged to come to Mandalay to the exclusion of Bhamo, and I most unhesitatingly conclude, from careful observation and from experience gained during the late expedition to Momein, that the causes which have actuated the Burmese Government

Government in its deliberate discouragement of all communication with China, *vid* Bhamo, have arisen in a great measure out of an instinctive and almost superstitious fear that the extension of British influence, beyond the capital of Burmah, would prove fatal to Burmese supremacy and destroy the vaunted exclusiveness of the Burmese Government.

477. Other predisposing causes have not been wanting in inclining the King of Burmah to hug this political conservatism, and to enforce it to the detriment of his subjects, and at an enormous loss to his own private and public exchequer.

One of these reasons is that he knows that the vast increase of commerce, which would be created by a resuscitation of the Bhamo route, would necessitate the presence of a fleet of English steamers, on the Irrawaddy, above or to the north of his capital. His avowed objection to such a contingency is that the steamers, being English, would come into collision with hostile influences, and that differences and complications would necessarily follow between the British Government and his own.

478. Another cause for political anxiety may have been that since the curtailment of Burmese power and resources, by the occupation of Pegu, the opening of a direct and proximate means of ingress and egress, *to* and from China, might conduce to a dangerous influx of Panthay material, and threaten the dominions of Burmah on her northern frontier, and at no great distance from her royal capital.

479. Compassed about, then, as the question was by all these obstructive elements of political discord, it will naturally enough be asked how the Burmese Government was ever persuaded into agreeing to our proposed survey of the Bhamo route? or why the King of Burmah encouraged our advances for such a survey by cordial approval, and with promises of hearty co-operation?

480. The apparent anomaly is now disclosed in all the bare nakedness of truth and fact. Refusal would have argued a want of interest in what concerned the prosperity of his own, and of our possessions. Compliance would only strengthen his own secret policy, by giving us the opportunity of practically demonstrating the utter inutility of our combined efforts to open wide the portals to China. In this latter belief he was of course supported by the conviction that, despite royal assurances of co-operation and aid, indirect obstructions could be successfully applied, in manifold variety, to defeat expeditionary efforts, and convert them into a furtherance of his own loved scheme of conservative retrogression.

481. The history of his failure is imperfectly recorded in the above narrative, and will be best noticed by a supreme disregard. At the same time, *we* too have a policy to pursue in the interests of our subjects in Burmah, and of commerce everywhere, and the influence of that policy should be promptly exercised in removing the cobweb of Burmese obstruction by honest straightforward diplomacy if possible, but with a determination of purpose which, if it fails to secure our legitimate ends, will, at all events, afford a proof that we no longer submit to cajolery and bad faith or to nefarious designs against the lives of our officers after they had been duped into dependence by false promises of aid and protection.

482. My report would be considered defective, perhaps, unless it specially touched upon the capabilities and resources of Yunan as a profitable centre for the extension of British trade *viâ* the Irrawaddy and Bhamo.

It would be equally defective, I conceive, were I to adopt the opposite extreme, and assume that the journey to Momein gave us any definite claim to speak with authority on the statistics of Yunan. My note-book contains information which might be cooked up into price currents and other statistical memoranda, more valuable as literary curiosities than as aids in investigating the commercial status of Yunan province.

483. As an instance of this I may notice that in Yunan itself the real price of natural productions had become greatly enhanced by reason of continued disturbances and temporary scarcity. European importations, very rarely met with in the bazaar, sold for amounts which varied from 300 to 500 per cent. above English prices.

From this it will readily be perceived that lists prepared in conformity with prices at present ruling in Yunan would be dangerous as a guide in estimating the value of the Yunan trade. One large consignment of European goods to Momein, or the first sensation of a return to tranquillity, would swamp the Momein market, and make present price lists a mere parody upon the ordinary realities of supply and demand.

484. The productive capabilities of Yunan may be more confidently estimated.

Its mineral wealth and natural resources have already been widely proclaimed by speculative theorists, who have zealously urged the expediency of reaching them by a Chinese overland route through Burmah. Those who have read the able report of Captain Bowers, who has been associated with the present expedition as mercantile representative, will see that his practical experiences are a valuable addition to our commercial knowledge of Yunan, and bear out all preconceived ideas of its adaptability to the requirements of British trade.

485. My own opinion, deduced from observation and such information as was obtainable at Momein, is that the mineral wealth alone of Yunan entitles it to special notice as a country with which it is almost a crime that British possessions in Burmah are not already allied by links of friendship and commercial intercourse.

I am not exceeding facts when I state that most of the products of Yunan which would find favour in a European market are at present procurable at Momein and its vicinity, at prices which vary from 50 to 100 per cent. below English rates. That these prices have ruled for years past, and that they are in excess even of the prices which obtain further within the interior of the province, may be reasonably inferred from the fact that Yunan merchants find it a profitable speculation to convey their produce by an expensive overland journey of two months to Mandalay, to pay all transit dues thereon, including a 10 per cent. customs duty in Burmah, and finally to dispose of that produce at rates which leave a large margin for profit in the English markets. At the same time, it is always necessary to bear in mind that a large or sudden demand, such as that which would inevitably follow a renewal of the old trade with Burmah, might produce a sensible influence on present prices in Yunan, and (for a certain season at least, or during the prevalence of present disturbances, or until our trading capacity is fairly understood), produce disappointment by a probable failure of export supplies.

486. The present importance, therefore, of commercial relations with Yunan, in its more immediate results on the trade of British Burmah, must be estimated rather by its capacity to consume European manufactures than as a producer of material to a European market. On this subject, however, in which I am approaching the intricacies of trade details, I can only speak suggestively, and with a diffidence proportioned, I hope, to my own want of experience. I am nevertheless firmly convinced, under all conditions of policy or circumstance, in the practicability of a large and extensive trade through Burmah with China, and without any wish to discourage the proposed attempt of reaching a point in Yunan by a direct line of communication from a Rangoon terminus, I am bound to express an opinion founded upon the experiences of our late expedition, and to declare that the Irrawaddy route *viâ* Bhamo to Momein is already an accomplished reality, and requires only the stimulus of ordinary encouragement to develope itself into a mine of incalculable wealth to our Eastern possessions.

487. The task of aiding this development rests with us, and depends upon the extent to which we are inclined to urge and enforce a progressive policy on the notice of the Burmese government. The disturbed state of Yunan itself may probably prove a more serious difficulty, and makes it premature to calculate upon the fulfilment of an established trade until a definite understanding has been come to between the Panthay and Chinese governments. This was the opinion of Panthay officials at Momein, and it will be traced very clearly in the tenor of the letter which I have had the honour of conveying from the Governor of Momein to the address of the English ruler at Rangoon.

488. It will be seen, however, in the account of our residence at Momein, that the Panthay Governor expressed himself very clearly in favour of a proposition

to

to terminate hostilities in Yunan by the influence and intervention of the British Government, acting through its ambassador at the court of Pekin.

The exigencies of our mercantile interests in British Burmah, and the great importance to the commercial world at large of this question of direct overland trade through Burmah with China afford ample justification for the exercise of even extraordinary political means for the attainment of a charitable as well as an eminently advantageous result.

489. There are numerous other points connected with this expedition which have either been inadvertently omitted in the present report, or which, if touched upon at all, may perhaps call for further special explanation.

I must plead the inexhaustibility of the subject, the ramifications to which each section of it leads, the urgency of time, and the undue limits to which my report has already extended, as a few of the excuses which necessitate the reservation of further details.

For the same cogent reasons I am bound to withhold much that might have been profitably said regarding the languages, ethnology, and customs of the several races who have fallen under observation during the progress of our journey to and from the city of Momein.

490. My concluding remarks must be strictly confined to a brief *résumé* of the more prominent results of the recent expedition.

1. The Panthay government has approved of the proposal to revive overland trade *viâ* Bhamo, and volunteered on its own part to dispatch a friendly mission to Rangoon to institute general inquiries into the most practical means of carrying on direct trade with British Burmah.

2. It has further promised that mule caravans from Yunan shall in future make Bhamo their terminus on the Irrawaddy instead of Mandalay, provided assurances are given that produce from Yunan can be profitably disposed of at Bhamo, and that return produce will be available there to meet all requirements.

3. The Governor of Momein has addressed a letter to the Chief Commissioner of British Burmah, and afforded written testimony of the friendly regard with which the Panthay government has viewed our desire to promote commercial intercourse with Yunan.

4. He has also given me a writing under seal, in which mention is made of certain transit duties on goods passing between Burmah and Momein. But on the point of duties generally, the Governor convinced me that it would be premature at present to lay down definite rules for their collection. From personal observation I am enabled to state, with some degree of certainty, that 12 annas per mule-load* will clear goods as far as Momein, and as regards their further transit into Yunan, the Governor's assurances are, that duties on exports and imports between the Kakhyen hills and Talee will in no case exceed an aggregate *ad valorem* rate of 4 per cent.

5. That portion of the Shan States which is principally involved and interested in the resuscitation of overland trade between Burmah and China has been effectually explored, and chiefs and people who were found to have been influenced by Burman intrigue and misrepresentation into a state bordering on active opposition, have been gradually converted, by a truthful recognition of facts as practically disclosed by our residence amongst them, into hearty supporters and undisguised friends.

6. All three routes by which the Kakhyen hills are crossed from Burmah in the direction of the Chinese frontier, have been more or less explored and surveyed, two of them by our whole party, and a third by a competent surveyor who was specially detached on that duty. The results of these surveys, in conjunction with other modifying considerations of policy and convenience, will eventually aid in the determination of a definite line of road between Bhamo and Momein.

7. Thirty-one

* A mule is warranted to carry 50 viss. This weight is exacted in the case of cotton bales, but ordinary packages should not be made to exceed 75 lbs. each, two to the load.

7. Thirty-one Kakhyen chiefs of the central or embassy route have been bound over by an oath of fidelity to protect trade, and afford at all times safe conduct across their hills. The Kakhyens, too, of the other routes have been won over to friendship, and eagerly crave for their own particular line a monopoly of transit, which I tried to convince them would in time be sufficiently extensive for profitable distribution amongst them all.

8. We have been practically assured that, although the discontinuance of trade between Burmah and South-Western China is primarily ascribable to the breaking out of a Mahomedan rebellion in the province of Yunan, the causes of present commercial inactivity may be traced to the adverse influences of the Burmese Government, and the jealous opposition with which it strives to guard against the extension of our commercial ascendancy beyond or in rear of the Burmese capital.

9. Finally, I record with deliberation my firm conviction that the Burmese government, if in earnest (or any other government by which it may be supplanted, and holding the same geographical position), has it in its power at the present time, almost without effort, and in spite of present Yunan disturbances, to open an immediate trade *viâ* Bhamo, not only with Yunan itself, but probably also, under suitable arrangements, with other of the outlying provinces of South-Western China.

491. It only remains for me to notice the services of those officers who have been associated with me on the recent expedition.

Captain J. M. Williams, the engineer who was first appointed to accompany the expedition to South-Western China, severed his connectionship with it at Ponsee, under circumstances the responsibilities of which I have already shown rest entirely with myself.

492. I find it impossible to laud too highly the services of Dr. John Anderson, Curator of the Indian Museum, who was associated with the expedition as medical officer and naturalist. The earnest and searching nature of his inquiries into all matters of scientific interest, his devotion to the objects of the mission, the zealous and attentive care with which, as a medical officer in the treatment of disease, he ingratiated himself into the good opinion of the several races with whom we came into contact, and impressed them favourably with a sense of English science and English generosity, and of the English mission generally, are facts which were patent to all, and deservedly invite the recognition of Government.

493. In one department of his duties, Dr. Anderson was called upon to select and purchase valuable specimens from amongst the products and manufactures of the countries visited whenever our funds admitted of such an expenditure. It was deemed to be a matter which affected the well-being and interests of the expedition to pay well for specimens, and thereby add to the certainties of collection. By this means vendors were induced to part with their property, or Shan and Kakhyen collectors found it to their advantage to roam the forests and return with an occasional valuable addition to natural history or botanical discovery.

I would earnestly recommend that all such expenditure should be borne by Government, and be adjusted as an item of expedition accounts.

494. Captain Bowers, commercial agent attached to the expedition, deserves special mention as an officer whose varied experience and professional knowledge have been of special utility in an enterprise with which he has been happily associated. I feel a true pleasure in recalling the numerous instances of unselfish and disinterested zeal with which he applied himself in every emergency to the solution of difficulties and the general furtherance of our expeditionary interests.

495. Mr. T. Stewart served with the expedition as mercantile representative, appointed by the Rangoon Chamber of Commerce, up to the time of his departure from Ponsee at the end of April 1868. I am indebted to him for many personal kindnesses, but more particularly for the readiness which he manifested at all times to sink private considerations and make them subservient to the interests of our enterprise.

496. Mr.

496. Mr. Robert Gordon, who took the place of Captain Williams, and joined the expedition at Mynela on the 16th July, has evinced throughout a laudable activity which well merits the notice of the Chief Commissioner, and of his departmental superiors. Of his professional abilities it would ill become me to speak, but I may allude to an excess of professional zeal, which required rather restraint than extraneous impetus to excite it to full action.

497. This fact leads me (now that I conceive I have fulfilled a duty, imperfectly, perhaps, to all my associates in the recent expedition) to record in addition to my thanks my earnest apologies for having on many occasions interfered with their professional utility, by contracting the sphere of successful inquiry. It resolved itself into a duty at times to curtail inquiry, and more especially to forbid the use of scientific instruments whenever I saw that our acts were suspected, and that reason and explanation were impotent in themselves to stifle prejudice or remove misconception.

498. No one who has not accompanied the expedition throughout, or who does not bear in mind the force of retarding influences, the conflict of interests, Burman intrigue, and, above all things, the natural suspicions which would attach themselves to our first contact with much that was discordant in race and religion can form any idea of the necessities for extraordinary caution in the minutest of our investigations.

499. To allude to these particulars, or to mark the instances in which an interdict was necessary, would be to resume the narrative of our expedition experiences. I can only beg, therefore, that my own shortcomings, and that the shortcomings of any other member of our party, whose fund of information in his particular department may seem to fall short of ordinary expectation, be laid to the charge of expedition interests, without casting a slur on individual inclinations.

APPENDICES.

From Captain *E. B. Sladen*, Political Agent, to Colonel *Albert Fytche*, Chief Commissioner and Agent to the Viceroy and Governor General of India, British Burmah; dated Bhamo, the 22nd January 1868.

I ARRIVED here last evening after a most pleasant trip, which has been signalised by the absence of difficulties of every kind in river navigation. The problem, as regards the practicability of the upper waters of the Irrawaddy for steamer navigation, has been satisfactorily and finally settled. There is no doubt whatever that the river is better in this respect between Mandalay and Bhamo than it is between Mandalay and our frontier. True, our steamer did not draw more than three feet of water, but with this draft we never grounded; and though the vessel bumped now and then on a sandbank, it was only to fall back again immediately into comparatively deep water. Our Burman captain had a good eye for water, and the journey might have been completed in five instead of eight days, had not the dense morning fog interfered with our starting hour, and made it often 10 instead of 6 a.m. We stayed, too, occasionally at places which promised an equivalent for delay, either in scientific or sporting results.

The murder of the old Bhamo Woon has had rather a depressing effect in these parts. The Kakhyens are said to show a more decided spirit of independence than ever. Yesterday, whilst the steamer was at anchor off Shwè-goo-myo, I went on shore with Williams and a small party of our followers; we passed through several small Burmese villages, all of which were fortified with interlaced split bamboos, as a protection against the attacks of murderous and kidnapping Kakhyens. The villagers were afraid to leave their fortifications, and cross the short distances (not a mile) which separated some of their villages, unless in armed parties of five men and upwards. It was with some difficulty that I managed to get a Burman to accompany and show us where we might possibly fall in with a Kakhyen encampment. It was moderately risky work, but we were too strong to fear attack, and felt sure that the Kakhyens, if properly spoken to and unmolested by us, would not attempt harm. Some villages had been deserted by Burmese in fear of Kakhyen inroads. We passed them, and after a while our cautious guide pointed to a hut in the distance, in which he said we should find what we wanted. He remained, and we went on. The house or hut was filled with Kakhyens. When first they saw our party, strong in numbers and arms, they made a sudden movement, which might have been construed either into an attempt to spring upon or away from us; but immediately I spoke they were quiet, and understood that we meant peace. There were a dozen or more Kakhyens in the house with their chief or Saubwa, who spoke Burmese. They spread mats in the most polite manner, and invited us into the house. Our followers advised caution, but we entered and sat down, when a pleasant and interesting conversation took place. I was called the Engleit-mengyee, and treated with every respect. After a time I persuaded the whole party of Kakhyens, with their Saubwa, to leave their house and accompany us on our way back to the steamer; but after proceeding some distance they held a council, and then informed me that press of business would not allow of their coming all the way to the steamer. They were of course afraid of putting themselves too much in the power of the Burmese authorities at Shwègeo, though they had so far placed reliance in us as to let us lead them through the centre of some of the villages specially fortified against their ingress. We parted as good friends, and I relate the incident at length because it augurs well for success in our further dealings with this much-belied race.

This morning two Tsitkays of Bhamo have paid me a formal visit on board the steamer. I received them formally, and our escort was drawn up on either side with shouldered arms. The written order which I caused to be forwarded from Mandalay to have mules in readiness here for our onward journey only reached the old Bhamo Woon, at Momeit, a few days before his murder, and the sensation produced by the murder itself, and the absence of a Governor at head quarters to arrange matters, has resulted in a miscarriage of intentions. The consequence is, that everything in the way of procuring carriage has to be done now. One road through the Kakhyen hills is closed on account of recent disturbances. This is the central Momouk road; but the Sawuddy route on the south, and the Tahpen route on the north, are reported to be practicable. Still no traffic exists on either. The Shans and Burmese on either side do not openly attempt the passage, and the Kakhyens alone do a small trade in salt and gnapee.

But I do not intend to take more than ordinary notice of these sensational reports, which originate more in funk than reality. I have caused letters to be written by the Tsitkays to the saubwas and chiefs on the Tahpen route (the most direct one), and sent my own men with the Tsitkay's people to watch events and explain our advent. In six days, if all goes well, we are to be supplied with 200 mules and 100 Kakhyen coolies. In the meantime I have leisure to make arrangements here and prosecute useful inquiries. It is not improbable that I may take the steamer up to the first defile above this, and test the navigability of the river as far up as I can. This will be better than absolute idleness. The

authorities

authorities are building us a "thandai" on shore. For the present we retain our quarters on board.

Bhamo is a ruin of former prosperity. The extinction of trade and intercourse with China has reduced it from health to downright insignificance, and even poverty. Most of the formerly-inhabited portion of the town is now deserted and overgrown with jungle. The old stockade is dilapidated and useless for all practical purposes of defence. The Chinese population thrive as Chinese seem to do everywhere, but I have as yet to ascertain their special mode or means of livelihood. Every variety of Indo-Chinese race abounds, and there is abundant food for ethnologists and photographers. Our steamer is daily crowded with curious visitants of all these races, who come in anxious bewilderment to look at the large fire ship, which moves apparently of its own accord against all opposition. The steamer has done her work well, and Burmese captain and Burmese crew are acknowledged by all of us to be superior on trial to native lascars in all save cleanliness. To-morrow I go in state to return the Tsitkay's call. Before I left Mandalay the King gave me two gold umbrellas by way of adding to my importance on the journey, and I intend to bring them into use at once.

In a few days there will be more to say of a reliable nature regarding our route inland towards China; now we can only speculate on results; but the present absence, so to speak, of direct impediments is suggestive of success, and no party was ever in greater earnest than we are.

From Captain *E. B. Sladen*, Political Agent, to Colonel *Albert Fytche*, Chief Commissioner and Agent to the Viceroy and Governor General of India, British Burmah; dated Bhamo, the 23d January 1868.

THERE has been a delay in the despatch of the boat from this, and I am able to send a few additional items of information. This morning I repaid the Tsitkay's visit with all due ceremony, and was received most courteously and hospitably. All promises well so far, but I cannot quite shut my eyes to the wild stories afloat regarding the difficulties of our expedition. No Burman or Chinese inhabitant here believes that we shall succeed. The difficulty does not lie with the Kakhyens, but the Shan states and the Chinese frontier have become impassable, it is said, owing to the depredations of large gangs of dacoits and marauders of all kinds, who have been compelled, by a state of protracted civil war, to get a livelihood by any other than lawful means. So much for report; we shall know very little for certain on this subject until we get further on towards the Chinese frontier; but with reference to the Kakhyens and late disturbances at Momeit, I am sorry to find that the Burmese authorities here have not acted in a way which is likely to ensure us a safe or hospitable reception when once we leave Bhamo. No Kakhyens are allowed to enter this town, and the sale of salt and gnapee to Kakhyens is absolutely forbidden. I have interfered to have these restrictions removed, but the authorities believe they have good reason for punishing the Kakhyens, and it will be difficult to make them desist from retaliatory measures on our account whilst the Kakhyens show a hostile front and continue their depredations on isolated Shan and Burmese villages. I may be able to do something with the new Governor of Bhamo on his arrival, though in many respects it will be more advantageous, I believe, to treat directly with the Kakhyen chiefs, if possible, without any Burman intervention whatever.

From Captain *E. B. Sladen*, Political Agent, to Colonel *Albert Fytche*, Chief Commissioner, and Agent to the Viceroy and Governor General of India, British Burmah; dated Bhamo, the 27th January 1868.

WE are likely to remain here a few days longer, I am afraid. In reply to the Tsitkay's letters to the neighbouring Kakhyen saubwas, they sent to say that without the direct orders of the Bhamoo Woon they would not come in to Bhamo. The men I sent were successful after a time in getting the Saubwas to understand that it would be to their advantage to come in and talk to me without any reference to the Bhamo officials; and I am assured the principal Kakhyen chiefs who have charge of the route I intend taking (the Tahpen route) will most probably be here to pay me a visit to-morrow or the next day. The only immediate difficulty will consist in procuring carriage; but if this is not obtainable, we must go without it, or take only what we can get. The chiefs will do nothing, they say, until they have seen and arranged with me independently of the Burmese authorities. The satisfactory portion of the whole is, that these chiefs, as far as I can at present ascertain, promise us safe conduct through Kakhyen land; and I feel pretty sure they will do all that is required by us if we manage them properly. The Bhamo Woon has not as yet arrived, but I expect him daily. The delay here will be profitable in many respects; it enables us all to collect information of various kinds. The mercantile representatives have no faith as yet in the practicability of trade being carried on to any extent, even though we penetrate China. Reports from the frontier of Yunan describe a state of chronic disorganization, and a chaotic confusion of conflicting interests, which no *present* means can possibly cure. There seems now to be no doubt that the road between Momein and Tali is occupied alternately by Chinese and Panthay outposts in open hostility to each other; no one supposes

that we shall ever succeed in passing these outposts. But more of this anon. A boat is just starting without much previous notice, so I will not add more now. They have built us a residence on shore, but we still retain the steamer here, and live on board. I think it right to keep the steamer until the Bhamo Woon's arrival, or until the Kakhyen chiefs present themselves and we come to final arrangements with them.

From Captain *E. B. Sladen*, Political Agent, to Colonel *Albert Fytche*, Chief Commissioner, and Agent to the Viceroy and Governor General of India, British Burmah; dated Bhamo, the 31st January 1868.

The Kakhyen Saubwas made their appearance for the first time yesterday; only two have come in, but one of them, the Ponlyne chief is supposed to be a host in himself. I have had a long public interview this morning, at which all the officials in the place attended. The Kackhyen saubwa was very reserved, and for a long time every kind of opposition was offered to the several propositions I made regarding the journey across Kakhyen land. First, the excuse was that carriage could not be procured, or, if procurable, each mule would cost 15 rupees from Tahpen to Manwyne, the first Shan village on the other side of the Kakhyen hills. Next, the chief said that he would only be answerable for us within his own particnlar district, would not supply us with anything *en route*, &c. &c. It struck me that most of the opposition was forced or due in great measure, if not entirely, to the presence of Burmese officials, and the knowledge the chief may have been brought up in to the effect that the Burmese government had ever been averse to British officers penetrating beyond Bhamo. I succeeded eventually, at a more private interview, in getting the Saubwa to say that he was glad to hear we intended crossing his territory; that he would supply men and carriage, which should take us safely all the way to Manwyne, and even build sheds for us at the several halting stations. So far so good; but we are entirely dependent on this Saubwa, and this produces a feeling of helplessness; a single false step, and we should never get beyond this place. As it is, I am obliged to be cautious in every thing I say or do. No one here wishes us to proceed; the officials look piteously upon the members of the expedition, and say in their own way that we are tempting Providence. Chinese and Burmese residents feel certain that success is an impossibility. They would rather remain as they are at present, and keep any small pickings there may be at Bhamo to themselves, than assist in keeping a road open for trade competition at all. They do not openly say so; on the contrary, they tell us "we should be glad to see the old trade route open again; but we know that this is an impossibility," &c. I will not say more about our difficulties. The great drawback is the feeling and knowledge that everything is done to discourage rather than give zest to our enterprise. Our zeal, I hope, is none the less. I am determined to push on, in spite of everything short of actual or imminent danger. We are well supplied at present with the good things of life, most of which I say must be left behind when once we make a start. This does not accord with the feelings of some of our party, who have only now begun to find out that travelling through Kakhyen land implies also an abnegation of certain personal and creature comforts. I have written thus far in the hope of being able to dispatch letters to day.

From Captain *E. B. Sladen*, Political Agent, to Colonel *Albert Fytche*, Chief Commissioner and Agent to the Viceroy and Governor General of India, British Burmah, dated the 2nd February 1868.

The King's steamer returns to Mandalay to-day. I kept her here a few days for our own convenience partly, and because I wished the Kakhyen Saubwas to have an opportunity of seeing for themselves that I have come up with the consent of the Burmese government. All are now convinced that I possess authority at head-quarters, however great the opposition may be on the part of petty officials here and at Mandalay. There has been a good deal of this petty obstructiveness to contend against. My interview with the Kakhyen saubwa yesterday was very satisfactory. Everything is arranged regarding transit and carriage between this and Manwyne, the first Shan town on the other side of Kakhyen land. Carriage is very expensive, each mule 12 rupees and each cooly 6 rupees, but a good deal of haggling took place to secure anything even at these rates. I took the Saubwa into my own room and talked to him privately. He emerged, all at once, from a state of savage stupidity into one of reasonable intelligence. He confessed to me that his only fear in taking us across his hills is that he will thereby incur the enmity of the Chinese of this place, and the Chinese dacoits between Manwyne and Momein, with whom he is now on friendly terms. He also confessed that the Chinese here had written to him and told him not to come in to me. The opposition of the Chinese has its foundation at Mandalay; I hope to be able to trace the matter out satisfactorily by-and-bye. One thing, however, is certain, viz., that the Bhamo Chinese have written to their dacoit friends on this side of Momein to stop us. I hope to outwit them. We shall still be here another week I expect, as the Saubwa requires time to collect mules. The Bhamo Woon has not as yet arrived, and the officials here are at loggerheads with each other. This makes them very useless to us. There is very little to be learned even here about the true state of the country beyond the Kakhyen hills. All accounts represent it as chaotic and disturbed. The object is to persuade us against an advance.

From Captain *E. B. Sladen*, Political Agent, to Colonel *Albert Fytche*, Chief Commissioner, and Agent to the Viceroy and Governor General of India, British Burmah, dated Bhamo, the 15th February 1868.

I HAD hoped ere this to have reported our departure from Bhamo, but it is of no avail now to ignore the fact that it was never the intention of the Burmese authorities, either here or at Mandalay, that we should commence our journey before the new governor's arrival at this place.

The King hinted as much when he placed his steamer at my disposal, by saying that I was not to go quickly, but arrange so that the governor, who would be unavoidably detained at Mandalay after my own departure, might catch me up by boat before the steamer's arrival at Bhamo.

It is not improbable that the authorities, King included, speculated upon the chances of a break down, and the compulsory return of the steamer to Mandalay, where provision would have to be made for a new start by boat. This would have occasioned a month's delay at the very least.

The new governor left Mandalay on the 25th January, and will not be here until 20th instant, if even then.

Had I fully comprehended the state of affairs here before I left Mandalay, I would have waited and brought up the governor with me in the steamer.

The absence of a chief controlling power at a frontier station like this gives rise to a disorganization which gradually permeates with evil effect, until the disturbing causes affect the lowest strata and conditions of society.

A Burman subordinate, in the absence of his chief, is afraid to assume power or authority. Orders are given with the certainty (or intention perhaps), that they will never be obeyed. Liability attaches to itself no one in particular. Add to this the probabilities of secret instructions, and the natural obstructiveness of Burmese officials at loggerheads amongst themselves, and my state of helplesness, as regards the avoidance of wearying delays, becomes painfully manifest.

By dint of urgent pressure of a kind and conciliating form, the Kakhyen chief of Ponlyne has been induced to accede to my requisition and collect mule carriage.

One hundred mules have been brought, I hear, from Shan towns beyond the Kakhyen hills. A certain amount of delay in procuring them was unavoidable. The mules cannot or will not come here, so we go to them. They are collected at a village called Hentha on the Tahpen river, some 20 miles above Bhamo.

The officials are determined that the old arrangement of not allowing us to start until the Governor's arrival shall be strictly carried out. I am not sorry for this. As matters stand at the present time, it is very desirable that I should see the Governor, and confer with him in person.

The presence of a Burmese Governor as Bhamo exercises a decided influence over the hill tribes to the east, who affect, however, to be independent of his power in all save a mere nominal allegiance.

The confused and abnormal state of affairs, produced by the murder of the old Governor, the protracted absence of his successor in office, and the imbecile action of the present authorities in this province, are manifest aids to failure at the very outset of our undertaking which must be provided against before we can leave Bhamo.

The Governor's presence here, and the moral effect of his implied support, may act as a guarantee against the present prevalent idea that the Burmese Government has no connectionship or concern in the future of the present expedition. Not that the Burmese Government is powerful, or feared as a government by either Kakhyens, Shans, or Chinese, but it has in its power, amongst the inhabitants of Burmah proper, very many Shans and Chinese families, who are connected, more or less, with the dacoit leaders on the frontier, and are known to have advised their friends to oppose our progress, and even loot us at discretion, *en route*.

I have tried myself to conciliate the Chinese here in every way in my power. They profess friendship, but offer no encouragement to our undertaking.

The whole of the petty trade of Bhamo is monopolized by them, and their private interests in this respect, coupled with a fair share of obstructive advice, which comes up from their Mandalay brethren, who profit by the Thinnee route, and therefore deprecate the resuscitation of trade *viâ* Bhamo, makes them believe that, if our expedition is successful, a crowd of English capitalists will come into the field and cut them out in their present petty speculations.

It is fortunate in some respects that we have not been able to leave Bhamo in too great a hurry; otherwise, under the present condition of affairs, we should certainly have got ourselves into inextricable difficulties. The instructions of Government, which so forcibly warn me to avoid all risk of collision with the tribes and people through whose country we are to pass, are too peremptory to be hastily got rid of or evaded by a too earnest desire to succeed, without finally clearing up, as far as possible, all apparent causes of doubt and difficulty.

Eager, therefore, as I personally must be to risk much, and endure more, in the successful accomplishment of a much desired object, I am by no means sure that those with whom I am associated on this expedition would feel any confidence in my leadership if I neglected all available means of dispelling or counteracting a prevalent belief in the supposed certainty of our proceeding only to meet with armed opposition and disaster.

We have nothing to fear from the Chinese, Panthay, or Shan Governments, where there is a Government; but the danger of ruin to our enterprise exists in the resistance and avaricious greed of large bands of reckless and irresponsible dacoits, who have sprung up out of the Chinese and Panthay disturbances, and who are and ever have been the real impediment and obstruction to trade with China, *viâ* Bhamo, since the period of those disturbances.

This obstruction is irrespective of other serious drawbacks more closely connected with those disturbances, but the nature and extent of the obstruction itself will not be understood until we get further into the country, and are able to record our practical experience on this and other matters, which rest now on mere supposition.

But I have said enough for the present. I shall probably not have an opportunity of forwarding this until the Governor's arrival.

From Captain *E. B. Sladen,* Political Agent, to Colonel *Albert Fytche,* Chief Commissioner and Agent to the Viceroy and Governor General of India, British Burmah; dated Bhamo, the 25th February 1868.

EVERYTHING has been so uncertain that I have put off writing till the last moment. Even now there is only time to say that our baggage is being sent off, and we make a start in earnest to-morrow morning.

The new Governor arrived on 20th instant, but did not land from his boat till 23rd. He has not proved himself our friend, and is downright obstructive in the matter of not allowing it to be openly seen that our expedition is favoured and supported by the Burmese Government. I cannot enter into explanation now on this subject.

The Kakhyen chief, Ponlyné, has come in again, and guarantees to conduct us safely as far as the Shan town Manwyne, but no further.

Manwyne is about five marches from this; there we must hire fresh carriage for the onward movement to Momein. Whether we succeed or not in this is still a matter of much uncertainty.

A few days ago I dispatched a letter privately to the chiefs at Momein; told them the object of the expedition; asked them not to believe false rumours; forwarded copy of letter from Burmese Government to them, soliciting their assistance and co-operation, and finally inserted copies of our former and recent treaties with Burmah. If the chiefs wish us to come on to Momein I have asked them to send and meet us with an escort at Manwyne.

I cannot rely entirely on the success of this letter, but it is a "*diplomatic venture*" in the right direction. I hope to confound the politics and villainy of the Chinese petty traders here. Panthay assistance alone will enable us to defeat the opposition of Chinese dacoits who hold the roads, and are to some extent in the pay or under the influence of the Chinese merchants or petty dealers of Bhamo.

I am hard up for funds. Duncan sent nothing to pay the police escort. We lose 30 per cent. in exchanging our rupees for silver bullion. The mercantile representatives find themselves badly supplied, and say they ought never to have accompanied the expedition. There are no immediate prospects, *according to their own account,* of a renewal of trade. They have learned that, even if we succeed in getting to the Chinese frontier, the present obstacles to the renewal of the old trade route are insurmountable, at all events, for some years.

Williams is seedy, and down in the mouth. He does not believe in this route. It is not an easy matter to be very cheerful under these circumstances. We have a very exciting time before us.

This will be the last you will hear from me for some time.

APPENDIX (A).

PROCLAMATION.

TAHSAKON, Governor of Momein, hereby publishes for general information, a proclamation, issued by his Highness Tayenshine, Commander in Chief of the Panthay army.

The enemy has been defeated in all the battles fought by Tayenshine; we have advanced without opposition, and established our government throughout the country. The opposition offered to us may be compared to that of an egg in conflict with stone.

Some time ago several divisions of our army proceeded to attack and reduce the city of Yunan. General Mahtatseeyoon, who was sent against the city of Reemin, effected its capture. He afterwards, with the connivance of Htinchinree of Tsinshin, Rankyeinbon of Khwenyah, Kyanyindin and ex-General Yopeetah Kyankyin, *alias* Mah Chein Sin of Whaikyan (all of whom opened the gates of their respective cities, received the General and united their forces with his), attacked and captured the cities of Cheinkon and Anlee. Their united forces then marched upon Yunan and overran the districts of Hookoon Tsanyinkikezay and the highlands of Woonsho, which are situated to the south of Yunan. They captured more than 50 stockades and killed 2,000 men.

Another division, of the army under Lyotahtsakyein and Mahtahtsalin attacked and captured the town of Pyeekyeekoon, and subsequently entrenched itself in a position to the west

west of the city of Yunan, whence it issued and captured more than 60 Chinese villages and killed not less than 3,000 men.

A third division, commanded by Generals Mahtasakhwin, Yantatseekein, and Myeeta-tsee-shin, after capturing the town of Hoomyin, fixed its head-quarters in more than 20 stockades on the northern out-skirts of the city of Yunan; and, after killing 2,000 men, took possession of more than 40 villages in that quarter of the Yunan suburbs.

Yunan is closely invested, and we are confident of effecting its capture. The enemy has lost an innumerable number in killed, including their leaders Ngyo-sho-yoh, Shah-tsoo-sho, Waytoohton, Kyintsan-mah, and Way-shay-kyeing. Such is the terror inspired by our presence that the city gates are closed and the enemy has lost heart and will not fight.

General Tahseekho, who had marched by a different route, attacked all the villages from Boomyin to Chankho; more than 10 towns were captured, and not less than 2,000 men killed. Mahsyanlin and Mahyinkyo of Tsongmyeng opened the gates of that city, and received our General Tahtseekho, who has since marched and laid siege to Yanlintapanch-yonk and Neelyan. Both cities must soon fall.

Another division under Generals Syneyanway, Tah-too-too, and Mahtatseetoo marched from Boomyin, by the Tsintin route, and attacked Reelampah, which, with more than 10 other towns, was taken, and a large number of the enemy slain. The capture of about 10 other towns has been delayed, as the country on all sides is inundated. The enemy, to the number of 50,000 or 60,000, advanced from the city of Tongyoungchyoo, and is now engaged in defending the city of Tsintin and the hills of Khonetsan.

Mah-htinshwin and Mahwaitchein of Tsintin have sent in their submission, and have been honourably treated. Our forces, with the aid of the troops under Syneyanway and Tah-too-too, managed to open communication with each other by filling the surrounding low land, under water, with firewood, branches, and hay, and which enabled them to commence operations against the enemy. Our troops effected the capture of more than 10 towns, and killed not less than 3,000 men. The inhabitants generally of the villages about Khoonkyoon have sent in their submission, and are now our subjects. The troops were subsequently collected at Tsintin, and from thence they marched, and a battle was fought at Khonetsan hill, where the Chinese gave way, and were put to the rout. They were pursued and more than 4,000 men perished. The inhabitants of Tonechyoontsin came out, tendered their submission, and were spared.

The Generals Tah-tsee-too and Tah-too-too next held a council of war, at which it was resolved that, as the city of Yunan had not as yet been taken, it would be imprudent to enter it without due precaution. So Tah-too-too was left with his troops to garrison the city of Tsintin, whilst Tah-tsee-too received orders to march and fight his way along the Yanlintapan valley. Mahsheetai, Mahkhwei, Mahhowk Yantsinkyee, with about 10 of the chief officials of Yunan, acknowledged themselves beaten, came out with presents, and tendered submission. They were spared themselves, and their city thus saved from assault.

Tayenshine having reason to believe that the people of Htinchinree would forsake the religion of the country and become Mahomedans, admitted them as auxiliaries to the forces then besieging Yunan.

Rankyeinbon and Kyanyinlin were respectively honoured with the titles of Tahtseelyaw and Tahtseekyee. Mahsyeetai, Mahshanlin, Mahyingyo, Mah-htinshwin, Mahwaitchyein, Mahtsayinkyee, and Mahkhwei were also honoured with the titles of Tahsarankyins and Kyareetsarankyins.

More than 60,000 men from different parts have given in their submission. The news of our successes has been noised abroad, and caused Kyinwoonkyoung of Kwaikyo to join our forces with contingents from the cities of Shineree, Kyeingbon, Tsinchein, and Nan-an.

Kyinwoonkyoung has accordingly been honoured with the title of Tah-too-too. A large body of fighting men from different parts of the country placed their services at our disposal, and with them their own provisions and equipments. Yunan is now like a "fish out of water," ready to be chopped up and put into the frying pan.

The enemy under General Seinyooyin has succeeded in raising troops at Linan, and laid siege to the towns of Reemin and Boolin, which had fallen into the hands of our General Tayenshine. The enemy also dispatched troops from Whaichyoon under Generals Yeinreekhaw and Panhtee Yein. They encamped about a mile distant from the town of Tahyowk. Our General in Chief Mahtatseeyoon ascertained that a strong force of the enemy had been sent for the express purpose of recapturing the towns of Yetma, Wooto, and Lawsee, and dispatched a force under Mahpyin-nan Tahtsarankyin to counteract this movement. The enemy was attacked, routed, and lost 2,000 men. We also captured and destroyed more than 60 intrenchments. The troops engaged in beseiging Boolin were also attacked by Lyohawkyankyin and utterly routed. More than 40 towns were taken and destroyed, and upwards of 300 persons burnt to death.

Generals Mahtatsapyin and Yowhtatseeway marched with a force of 2,000 men from Seizin city by way of Tahyowk to the towns of Wootee and Lawsee, and engaged the enemy under Ramreekhaw and Panhteerein. Several stockades were destroyed, and not less than 3,000 men were killed.

We have not as yet retaken the towns of Wootee and Lawsee, but there is every probability of their early capture.

This proclamation is issued for general information to generals, officers, soldiers, and the people of the country. The inhabitants of Yunan are in a state of alarm; our enemies have been defeated in every engagement. Their gods even withhold assistance. We are destined to be victors.

But we must still watch and guard against evil. Do not be deceived, but regard what I say as the warning of Providence.

No return has as yet been published of the numbers killed in the engagements at Reemin, Lansee, Boolin, Yeimah, and Wootee.

I pity those who must still perish. All are hereby warned that death awaits them if they give ear to the words of our enemies.

Issued this 7th waxing of the month of Wahzoh, 1230.

(signed) *E. B. Sladen,*
Captain, Political Agent, Mandalay.

APPENDIX (B).

From *Tahsakon*, Governor of Momein, to the English Ruler.

HAVING been informed that the political agent, Captain Sladen, was expected to arrive at Momein, *viâ* Bhamo with a party of upwards of 70 followers, for the purpose of opening a gold and silver road, and of entering into commercial relations with our Government, orders were dispatched to the officers of the several forts, outposts, and halting places, along the road by which he would pass, to protect his party from injury, and to escort them as far as Momein, where they have been received with all honour.

We beg to acknowledge with grateful thanks the receipt of the presents brought by Captain Sladen, and to inform you that it was our earnest desire that he should proceed on his journey and personally deliver the presents to our sovereign at Talee. But we regret to state that the continuance of hostilities in Yunan has rendered it expedient to prohibit foreigners and traders from entering the country during present disturbances. At the same time we beg to intimate to the English Government that it is our sincere wish to open out our country to trade, and to encourage commercial relations with other governments as soon as the country is sufficiently settled for that purpose.

We are moreover much gratified by the friendship which on the present occasion you have manifested towards us, and trust that it may endure for ever.

But as war is still being carried on throughout the country and along all the several roads by which Captain Sladen and his party would have to pass, we have deemed it right to caution him against being in too great a hurry to enter Yunan, and have been induced in our anxiety to protect him against all harm, to advise return for the present, without continuing his journey beyond Momein. The object of Captain Sladen's expedition is directed to the revival of trade, whereby a gold and silver road will be established between our respective countries. As such the expedition is entitled to, and has received, our warm support and commendation.

Our excellent sovereign has raised an army which consists of 100,000 fighting men commanded by officers who have been honoured by the following titles:—

Tah Tsee, Tah-kyan-kyin, and Tan-sankyin Tah-too-too. They have already captured and hold more than 100 districts and towns within the province of Yunan. We have also received under our government, and given the title and rank of Tah Tsee Lyaw to Sahyah, Yun-myo, and Kyein Bon of Thookhooyan and several other independent chiefs of different Chinese races. Thoogyee Kyan-yei-lin of Whaikyan has been raised to the rank and position of Tah Tseekyee Chinree of Tsinshin is styled Tah Tseehoo. Kyinwoonkyonng of Kwaichyo has the title of Tah-too-too.

Mamyoh chein-Lin of Ree-hton. Mamyoh See-yan-lin and Mamyoh Yinkyo of Tsoan-myin Mamyoh Waitchein and Htinshin of Tsindin. Mamyoh Shee Tei, Mamyoh Khwei, Mamyoh Howk, and Yan-myo Tsin-kyee, who are all officials of the city of Yunan, are conscious of our power, and have sent us presents. They further promised to assist us in accomplishing the conquest of the whole of Yunan, and have accordingly been rewarded with the titles of Tahtsayankyn, Tahtsayankyn, Tah-too-too, Kyareetsaran kyin, Sankyin, and Too-too. Upwards of 10,000 of the principal inhabitants of the suburbs have also sent in their submission. The population generally of towns and districts throughout the country has proffered help and seek to join us with arms and provisions. We have surrounded the city of Yunan and our troops have established a complete blockade. The city is without provisions, or hope of relief. The enemy has lost a million of men in the several battles which have been fought in and around Yunan; of prisoners, too, we have captured more than 1,000 officers of all ranks. Our spoils in guns, muskets, swords, spears, and arrows are too infinite to admit of calculation.

Yunan is now in the position of an egg, which may at any moment be crushed to atoms by our forces. It is a well-known fact that in every engagement victory has been with us.

Governors and magistrates have been appointed in the several captured towns and districts. Forts have also been built and garrisons placed in them. We have further established outposts along the chief lines of communication, and at all halting places within the interior of the province. Notwithstanding these arrangements, we cannot guarantee protection to foreigners travelling through the country, at the present season. If injury befell them, our government would be burdened with a heavy responsibility.

We therefore write to inform you that, in accordance with the esteem and friendship in which we hold Captain Sladen and his party, we have advised them to return from Momein without

without proceeding further into Yunan, and have signified our intention of accompanying the party on its return journey with a suitable military escort.

With reference to what has been said on the subject of commercial relations, we beg again to assure you that as soon as the country is restored to tranquillity, it is our intention to dispatch an envoy with letters to confirm and perpetuate our present friendly relations with your Government.

We wish you well (salutation), and beg that you will take a friendly interest in our affairs.

(signed) *Tahsakon* (with titles).

APPENDIX (C).

From *Panthay*, Governor of Nantin, to Captain *E. B. Sladen*, Political Agent.

YOUR letter of 10th Labyeegyaw reached this on the 11th, and brought the intelligence of your arrival at Mynela.

I have sent a guard to escort you from Mauphoo, and have reported your arrival to Tahsakon. He will send to escort you from Nantin.

Bring your Shan escort as far as Mauphoo; our guards will meet you there.

13 Labyeegyaw. (signed) *Wanhoo*, of Sha race.

(True translation.)

(signed) *E. B. Sladen*, Captain,
Political Agent, Maudalay.

APPENDIX (D).

From Governor of Momein, to Captain *E. B. Sladen*, Political Agent.

THE Panthays send greetings to their friends.

When Lanloo and other Kakhyens came to Momein, we conversed with them freely, and were extremely happy to learn that 300 foreigners had arrived at Bhamo.

Being of the same belief as yourselves, we know your willingness to help and assist us. We are the descendants of 3,000 men of the Lerroo country, who, being unable to return to their native land, settled down in China, where we have been upwards of 1,000 years. Some 10 years ago the Chinese Government became so intolerably oppressive, that by God's help Tahin-Shee, of the Too race, was commanded to separate the good from the wicked, and obtained possession of the Western Provinces of the Chinese Empire.

At present also we are carrying on war around Yunan. The whole country has sided with us, and we daily expect to capture that city. Already our rule at Momein has become so popular, that those who were formerly inimical have gladly joined our cause and government.

The Shan chiefs have also voluntarily placed themselves under our protection, and have been confirmed in their several states.

We have given peace to the country and merchants, and people can now carry on their several avocations with ease and security.

With regard to your intention of visiting Momein, we wish to consult your pleasure and convenience. We have sent word of your intentions to Tahinshoo, our king, and will write also to the Shan chiefs to help and assist you on your journey.

Fear nothing, but come by the Momonk route which leads direct to Momein. On your arrival all matters relating to trade and merchandise will be satisfactorily settled in accordance with your wishes.

We are of the same nation. Come without fear or anxiety of any sort.

(WRITER.)—Qualyen, a friend of the Lee race.

(True translation.)

(signed) *E. B. Sladen*, Captain,
Political Agent, Mandalay.

APPENDIX (E.)

From *Tahsakon,* Governor of Momein, to Captain *E. B. Sladen,* Political Agent.

IN accordance with the affectionate esteem in which we regard each other, and our mutual desire to open out commercial relations between the two great countries, I wish you to procure and forward price lists of goods, as per enclosed memorandum.

Orders have been issued to the several outposts and guard stations, to place no restrictions or impediments in the way of trade.

The duties leviable within our territories are as follows:—

At Mauphoo	-	4 annas per mule.
„ Chatout	-	2 „
„ Mawson	-	2 „
„ Nantin	-	4 „

At Momein itself this duty shall be reduced to a minimum rate.

It is my great love for you which has caused me now to write, and impress you with a confidence and belief that in the matter of trade it is our wish that both countries should be as one country.

(Signed and sealed.)

APPENDIX (G).

From *Tahsakon,* Governor of Momein, to the Kakhyen Chiefs.

THE chiefs of Saray, Loayyen, and Kounglah are hereby informed that the intelligence conveyed in the letters brought by Way-young-tha-yan-chin is to the effect that, owing to the continued fighting at Mawson and Mauphco, the roads are at present impassable. We are unable, therefore, to make suitable provision for our English friends.

The Kakhyen chiefs will be good enough to request them to stay where they are for the present, and wait for further advice as to the most convenient time for an advance to Momein.

From *Oolooquan*, or *Quai Lwin*, to *Ponsee Lauton Saubwa*.

SAUBWA LAUTON, of Ponsee, is informed that the chiefs of Mynela and Sanda have undertaken to escort our English friends to Momein. A careful inventory should be taken of their property. Charges on account of mule hire will be paid on arrival.

(signed) *Kwai Lwin*, of Lee race.

10th increase.

(True translation.)

(signed) *E. B. Sladen*, Captain,
Political Agent, Mandalay.

APPENDIX (J).

From *Tahsakon*, Governor of Momein, to Shan Chief and Governor's Secretary *Oolooquan*.

HAS the Shan Chief Oolooquan received my previous messages?

Our English friends wrote on the 14th Lazan to inform us that they would arrive at Momein with upwards of 80 mules.

The charges for carriage supplied by the Kakhyen chiefs amount to 750 rupees; but as our English friends have come from a great distance to open commercial relations, Oolooquan will please pay the 750 rupees in advance.

All charges will be satisfactorily adjusted as soon as the party arrives at Momein.

Qualnin (scribe) 14th Lazan.

(True translation.)

(signed) *E. B. Sladen*, Captain,
Political Agent, Mandalay.

APPENDIX (K).

From Governor of *Nantin*, to the Kakhyen Chiefs.

GREETING to the three Kakhyen chiefs, named Saray, Loayyen, and Ponsee.

We write to inform you that our (English) friends have expressed a desire to meet us at Momein, and are now at Ponsee.

Our desire is that the Kakhyen chiefs should receive them liberally. Our thanks will be specially due to you for this service.

We further request that the Kakhyen chiefs will procure mules for our English friends, and escort them with their baggage safely into the Shan states. We will send to Mynela and pay you in full on account of all mule charges.

We wish the Kakhyen chiefs also to come up as far as Momein. We intend to confer with them on matters relating to trade.

Tahsakon will make you suitable presents. Letters forwarded by the governors of Nantin.

Houng Shan of the Lee caste, whose title is Sayanchin, and Shee Quam of the Mah caste, whose title is Sayanchin, and Shee Quam of the Mah caste, whose title is Tahyechan.

(Signed) *E. B. Sladen*, Captain,
Political Agent, Mandalay.

Appendix (L).

Translation of a Chinese document, which purports to account for the origin and establishment of Mahomedanism in China.

The chief queen of the Emperor Tanwan adopted a child and called him Anlaushan. In time the child developed into a man of extraordinary comeliness and wonderful intellect.

The queen was enamoured, and the adopted son became her paramour.

Anlaushan soon rose to distinction. His abilities were of the highest order, and raised him at once to fame and influence. The queenly passion was not disclosed; but suspicion had been sufficiently roused to make it prudent on the queen's part to get rid of her lover and defeat all signs of illicit intercourse.

Anlaushan was accordingly accused of being privy to a conspiracy to dethrone the emperor. The influence of the queen prevailed to obtain a conviction, and her favourite was banished from the royal capital.

But the injustice of his accusation and a sense of wrongs roused Anlaushan to action, and induced him to become in reality a leader of rebellion. He lost no time in collecting a large force, with which he was able to make head against the government and successfully encounter the troops of the emperor. In time he had approached within a league of the capital, and city and palace were alike threatened.

The Emperor Tanwan in this emergency adopted the suggestion of his vizier, Kanseree, and dispatched a mission to Soeyoogwet, and implored foreign aid. A force of 3,000 men was sent under the command and guidance of three learned teachers, who arrived in due time at Tanwan's capital. By their aid Anlaushan was defeated, and eventually captured.

The rebellion was at an end, and the foreign contingent left China, to return to its own country. Here, however, a difficulty arose. Their rulers refused them admittance, and alleged as a cause for doing so that it was against the constitution of the country to receive back men who had come into contact with pork-eating infidels. They had herded, in fact, with pigs and infidels, and could no longer be regarded as unpolluted subjects, or as fit members of a society which held pork in religious detestation.

They returned therefore to China, and became permanent sojourners in a foreign land. They are the original stock from which Mahomedanism has sprung up in China, in various communities, and under several denominations, &c. &c.

Hotha, Shan States, 17 August 1868. Political Agent, Mandalay.

Appendix (P).

Report of Assistant Surveyor *Moung Thazanoo*, on the Southern or Sawaddy Route across the Kakhyen Hills between *Bhamo* and *Mowun*.

I started from Hotha on the 18th August, and arrived at Mynewun on 19th, where I put up in the Saubwa's house, and made all necessary inquiries.

The old Saubwa of the Mynewun Shan state was murdered some years ago by his younger brother, who fled to the Loaylyne Hills, and sought shelter amongst the Kakhyens. The Kakhyens were eventually induced to give him up to the Shans of Mynewun, by whom he was put to death as his brother's murderer. The Mynewun state is now governed by the old Saubwa's mother, during the minority of her grandson, who is about 15 years of age. The old grandmother is very powerful, and has great influence over her subjects.

It is arranged that the young Saubwa shall marry in two years' time, and assume the government of the Mynewun saubwaship.

There is a constant stream of trade *viâ* Mynewun (Burmese Mowon); merchants, mules, and pack-bullocks are always passing. The route is clear of all obstructions, and is wonderfully pleasant. A very large number of traders pass along the route *viâ* Sanhoung to the east of the Mynewun River. The Saubwa-gadaw and all her headmen and councillors were of one mind in saying that, if English merchants and traders could be induced to adopt the Sawuddy route to Mynewun, a guarantee would be given of safe conduct and protection against all annoyances.

The Kakhyen saubwa of Bhagon holds the route from Synekha to Kahyee, and charges one rupee upon each mule and eight annas for each pack-bullock which passes through his territory.

This was the rate fixed of old by Chinese traders, and will be continued in the case of English traders. There will be no other restrictions of any sort. The Saubwa is agreed to this.

The next saubwaship is that of Phongaw, which extends from Kahyee to Tanza. The Saubwa is most willing that English traders should make use of this route, and guarantees

that there shall be no other restriction or annoyance beyond the customary charge of eight annas per mule and four annas per pack-bullock.

The whole route from Sawuddy to Mynewun is smooth and even throughout. There are no difficulties of a nature to induce fatigue or wretchedness. The route is yearly in constant use. Traders who pass along it, on reaching Mynewun, strike off from thence, and follow any given route according to their pleasure.

The highest portion of the route lays in the Phongan saubwaship. Looking down from the hills at this point on a clear day, the course of the Irrawaddy can be seen as far as Bhamo.

Appendix (S).

Translation of a Statement made by *Moung Moh*, Kakhyen Interpreter, Resident of Bhamo, on the 27th November 1868.

The Tseetkay, chief writer Nga Kan, officials of Bhamo, sent me and Nga Nyee Tsway with letters to the Pon Tsee Toung Tsa Tsadoo and the Powon Nein Toung Tsa Tsouk-ya. When we delivered the letter on our arrival, to the Pwon Nein Toung Tsa, he asked Captain Sladen's writer to read it to him, and he, finding that the contents of the letter were bad, took it to Captain Sladen and showed it to him. The contents of the letter were, that the two officials named, were to allow Captain Sladen, the merchants and other gentlemen, and all the followers of the party to go forward, so that they may die and be no more seen, but that no return was to be permitted; they were to be deserted, and the two officials, after leaving them, were to return to Bhamo. After this, I returned to Bhamo, and after six or seven days again went with my cousin Moung No to Pwon Tsee Toung. On my arrival, as the engineer and the mercantile gentleman were alarmed and wished to return home, Captain Sladen sent me as interpreter with these two gentlemen. On arrival at Bhamo the chief writer, who was acting as Goung of the city, said to me, "We wrote to say that the English were to be allowed to proceed, but that there was to be no return for them; how came you to bring these people back again?" After stopping two or three days at Bhamo I returned to Captain Sladen at Pwon Tsee Toung, and shortly after arrival there I received a letter from my wife, begging me to return, as she had been put in gaol because I had brought two of the gentlemen back to Bhamo. I took this letter and showed it to Captain Sladen, who said he would guarantee my wife's safety, and he wrote to the governor of Bhamo, telling him not to imprison or persecute my wife. I then proceeded with the expedition, and when I finally returned to Bhamo I found that my wife had been imprisoned for two days, and had had to pay 10 ticals of silver. The letters to the Pwon Tsee Toung Tsa and the Pwon Nein Toung Tsa said that the expedition was to be quietly deserted, to die and perish either at Nan Boung Choung or at Pwon Tsee Toung.

Rangoon.

Appendix (T).

Proper Names which occur in the Report, with Glossary.

Ashan.—Kakhyen village (central route).
Ayeybyne.—My Burmese official title.

Bhamo.—Burmese frontier town.

Cazee.—Panthay official.
Cheoung-oke.—Burmese official over villages on the Tahpen river.
Cheoung kan.—Ditto, under Cheoung-oke.

Deebay.—Chinese town near Momein.

Haw.—Shan Saubwa's palace.
Hawshoenshan.—Chinese town near Momein.
Hotha.—Shan state. Name of chief town.
Hoton.—Kakhyen village (central route).

Kakhyen.
Kadaw.—Kakhyen village (central route).
Kanfan.—Shan duty station (between Mynela and Nantin).
Kangouk.—Kakhyen village (central route).
Karahokha.—Chinese bazaar (between Manwyne and Sanda).
Kayto.—Panthay town (Momein division).
Keeinkhan.—Shan saubwaship (south of Yoonchan).
Kingen.—Mynela official and outlaw.
Kowlee.—A trial denomination of Kakhyens.
Kyaing toung.—Shan saubwaship. } Written according to their Burmese pronunciation.
Kyaing yoon-gyee.—Ditto. }

Leesheetahee.—Robber chief in Chinese frontier.
Leogwunfan.—Ditto.
Loaylyne.—Kakhyen saubwaship.
Lakhoh.—Tribal denomination of Kakhyens.

Loayyen.—Kakhyen village (central route).
Loaylon.—Ditto.
Lawmike.—European rowdies defeated by the Panthays in Yunan.
Lauloo.—Kakhyen saubwa.
Leesaw.—A hill race (Chinese Kakhyens).
Lonlyne.—Kakhyen village.

Mauwyne.—Town in Shan states.
Meetway.—Kakhyen priest.
Momein.—Panthay walled city.
Mynekha.—Kakhyen village (central route).
Mynela.—Shan state (chief town of).
Myne-tha.—The name of the valley which includes the Shan states of Hotha and Latha.
Mynetee.—Shan town.
Myne-mau.—Shan saubwaship.
Mynewan.—Saubwaship.
Muthin.—Kakhyen saubwaship.
Momouk.—Shan town.
Mawsoon.—Deserted fort near Mauphoo.
Masa Tahzyungyee.—Title of chief Panthay military officer at Momein.
Mike-tah-see dum.—Title of leader of European rowdies defeated at Yunan.
Moung-shoay-yah.—Chinese interpreter.
Moung-mo.—Shan and Kakhyen interpreter.
Moung Thazanoo.—Assistant surveyor.
Menhla.—Burmese duty station.
Mauphoo.—Hill fort.
Monwye.—Kakhyen village (central route).
Manhleo.—Shan town.
Mantai.—Kakhyen saubwaship.

Nantin.—Chinese town (Panthay).
Nammon.—Shan town, near junction of Tahpen and Tahaw rivers.
Nanlyaw.—Shan Burmese village.
Nambouk.—Kakhyen village (central route).
Namsa.—River. Hotha valley.
Namkhon.—Mountain torrent.
Nukhandaw.—Burmese official.
Namphoung.—Burmese village on the Tahpen.
Nyoun-gen.—Kakhyen village (northern route).

Panthay.—Chinese Mahomedan.
Phaloung.—A race of Shans.
Ponwa.—Kakhyen village (northern route).
Poogen.—Shan magistrate.
Ponlyne.—Kakhyen village (northern route). Kakhyen saubwa.
Ponsee.—Ditto - - - ditto.
Paw-myne.—Kakhyen chief (under a Saubwa).
Sanda.—Shan state and town.
Sitkaw.—Burmese village on the Tahpen.
Saray.—Kakhyen village and Saubwa (northern route).
Sehek.—Burmese village.
Sawuddy.—Burmese village.
Saubwa.—Title of Shan and Kakhyen chiefs.
Saubwagadaw.—Wife of a Saubwa.
Sit-gna.—Burmese village on the Tahpen.
Sakhiy.—Kakhyen village (central route).
Shee-din.—Panthay city.
Shamalon.—Hill range (Nantin Shan states).
Saykow.—Ancient Hotha.
Saa-too-doo.—Panthay military title.
Suddan.—Kakhyen village (northern route).
Sayfan.—Shan State.
Shoay-doay.—Chinese town near Momein.

Tamon.—Shan village head man.
Tahsakon.—Official title of present governor of Momein.
Talee.—Panthay capital.
Tahpen.—Affluent of Irrawaddy.
Tahaw.—Ditto; falls into the Tahpen near Mynela.
Tsitkay.—Burmese official (under a governor).
Thon-gwet-shein.—Name of Chinese brigand chief.
Thinee.—Burmese Shan state.
Tah-bouk-gyee.—Chinese general (name of a).

Wansen-gyan.—Name of a Chinese general.
Wacheoon.—Kakhyen village (northern route).

Yoonchan.—Chinese (Panthay) city.

(signed) *E. B. Sladen*, Captain,
Political Agent.

From Colonel *Albert Fytche*, Chief Commissioner, British Burmah, and Agent to his Excellency the Viceroy and Governor General, to the Secretary to the Government of India, Foreign Department; No. 39-61, dated 30th July 1868.

I HAVE the honour to forward a copy of a letter, dated 26th April, addressed to the "North China Daily News" by Mr. T. T. Cooper, who is endeavouring to traverse the through-route from China *viâ* Thibet to India. This letter has been kindly forwarded to me by Her Britannic Majesty's consul at Shanghai under date the 16th June.

2. It will be seen that Mr. Cooper writes from a place named Tai-tsian-loo on the extreme western frontier of China, bordering on Thibet. He contemplates, should he fail in being able to pursue that route, to try and make his way to Tali, and so to Bhamo and Mandalay.

3. From his present letter, however, it appears that he has met traders on the Yangsè-Kiang river who had been to Tali, and who intended returning, so that there would seem to be a traffic route still open between Western China proper and that portion of Yunan under the new Mahomedan ruler, who has placed custom houses on his eastern frontier.

4. The information Mr. Cooper has obtained in these western Chinese provinces corroborates the importance I have attached to the resuscitation of the trade by the Bhamo route. He states: "So sure as the Bhamo and Tali route is opened, so sure will Burmah take to herself the trade of the provinces of Yunan and Kweichow."

MR. T. T. COOPER'S EXPEDITION.

THE following letter from Mr. T. T. Cooper will doubtless prove of interest to our readers:—

Tai-tsian-loo, Western Borders of China,
26 April 1868.

To the Editor of the "North China Daily News."

Dear Sir,

Since writing you from the village of Hi-yan-su, a troublesome and dangerous journey of seven days brought us on the 9th instant, in company with the good Bishop of Thibet, Mons. Cheauvean, to this place. Our road for the first four days lay through a country similar to that about Hi-yau-su. On the morning of the 5th we arrived at Loodinchow, a small town on the left bank of the Tai-tow-ho, a branch of the river Min at Kia-tung-foo, and navigable for small junks only 80 miles west of that place. This city is famous in China for its chain suspension bridge some 150 yards in span, built about 80 years ago. Crossing the river at this point we continued along its right bank north for two days, the road winding along frightful precipices sometimes 500 feet above the river, the wall-like sides of the mountains forming gorges of terrible grandeur. At noon on our sixth day, leaving

leaving the Tai-tow-ho, we entered what is called the Tai-tsian-loo gorge or valley. This place, so I am told, is the most dangerous part of the grand route from Chen-tu to Lassa; to form an idea of it you must picture to yourself two mountains from 1,000 to 1,200 feet high, running parallel to each other, their sides perpendicular, and in many places overhanging the mountain torrent rushing in white anger at the base, their summits capped with snow and a cloud of white mist throwing into this terrible gorge the gloom of twilight. The torrent (scarcely 30 yards wide) as it leaps on its headlong course to the Tai-tow-ho washes in many places the narrow path running along its right bank with spray from numerous waterfalls, while huge boulders forced from their resting places high over head by the fierce hurricane which seems ever to sweep the bleak summits of these mountains fill the gorge with the noise of a hundred thunders as they crash into the angry stream below. Such is the Tai-tsian-loo gorge, at the head of which, 38 miles west of the Tai-tow-ho, lies this border town of Tai-tsian-loo.

The town Tai-tsian-loo divides the province of Szechuen from the Mandzu country, which extends to Kyan-kha (being so called in contradistinction to Thibet proper, which commences only at Kyan-kha, the tribes inhabiting this country generally speaking Thibetian, wearing the same costume, and believing in the same religion, and are subject to Thibet) and is of great importance as an exchange trading mart. Thither come Shansi merchants with tea, glass beads, and tobacco, which they exchange with the Mandzus for hartshorn, gold, musk (from musk deer) and lynx, fox, wolf, and leopard skins, and a variety of a commoner sort, such as sheep, deer, and yak; this is the principal trade of the place. It is also of importance as a Chinese military station, containing nearly 1,000 soldiers.

As my next step onward will take me out of China into a country the trade of which can never be of great importance to my commercial friends in Shanghai, I will take leave of them with a few words relative to foreign trade with Western China. Many merchants in Shanghai told me that the exploration of the upper Yang-tze and Western China was of no importance to their trade, and sceptically asked me to prove to the contrary. I could then only point to the enormous wealth of Szechuen, its gigantic trade with Hankow in rhubarb, hemp, native medicines, sugar, and tobacco as exports, and cotton and piece goods as imports; all this was nothing new to them, and they looked upon my expedition as likely to result only in good pheasant or snipe-shooting for myself. Even with the report of a meeting of the Royal Geographical Society, extracted in your columns from "The Times" of the 6th June 1867, before them, and reading therein the importance which Sir A. Phayre attaches to the Burmah trade with Yunan, they remained unconvinced. Many, however, warmly upheld my undertaking, and to these gentlemen I address the following remarks:—

Chung-king, the trade gorge of four provinces, Szechuen, Younan, Kweichoo, and Chensi, depends upon Hankow for the supply of foreign piece goods which it annually sends into these four provinces. The present junk transport on the Yang-tze between these two places, besides being extremely disastrous to trade on account of the total loss of many junks and their cargoes, is very expensive, and this added to the mandarin's squeezes renders the price of foreign piece goods after leaving Chentu so heavy, that they are unsaleable beyond the Yang-ling range of the mountains near Chin-chi-chien, and this is the limit of foreign trade with Western China, numerous small rivers forming the arteries through which trade flows from Chung-king into Kweichow, Eastern Yunan, and Southern Chensi. The present trade between Chung-king and Yunan and Kweichow is only temporary, on account of the closure of the Bhamo and Tali route, and as sure as this route is opened, so sure will Burmah take to herself the trade of these two provinces, and if, as is probable, British merchants establish at Ava, then a rivalship for the trade of Western Szechuen between China and Burmah merchants seems almost certain, the result telling probably in favour of the latter both in export and import. Trade by this route has flourished before without European enterprise, and as soon as it is re-opened, the trade between Hankow and Chung-king will be lessened by one-third. The Mahomedan chief at Tali has already established custom houses on the eastern border of his territory, and at Hi-yan-sú I met several merchants who had come from Tali and intended to return there to trade, in spite of their having to pay Imperial and Mahomedan duty. Perhaps these facts are important for the Shanghai trade, if so, then the China merchants have but one object to gain to rival with equality the Burmah merchants, and that is the opening of the upper Yang-tze to Chung-king. The Chinese authorities might be glad to checkmate the Mahomedan chief by this means. If the king of Burmah abdicates in favour of British rule, that will place all India alongside of Western China, and no official mismanagement will cramp the energies and resources of the British merchant in Burmah. For steamers properly constructed, and drawing not more than six feet of water, the navigation of the Yang-tze to Chung-king is possible. At the lowest winter level (January 1868) known for some years, there were seven feet of water at the lowest rapids.

As to the route between Sudya and Likiang, this in Shanghai seemed to me practically useful for the Calcutta trade with China, but I am constrained to admit now the fallacy of such a hope, and this admission is based upon the following remarks of Mons. Cheauvean, who resided for many years in the neighbourhood of Tali and Likiang. He tells me, "Likiang is a name only, the place whereof is marked by a few small houses near the foot of the Snowy Mountains, which are impassable on account of perpetual snow and want of passes, while the Laotsan and Now-kiang rivers are fierce, unnavigable, and unbridged; the country through which they flow being inhabited by savage tribes, constantly at war

with each other, and beyond this, in Bing, there is another obstacle in the Pat-koi range. Admitting, for the sake of argument, that a practicable route could be found, the goods which Calcutta would send to China Burmah would send at a less cost. No! India has a brighter prospect in store for her trade with Thibet, and this must flow either through Nepal to Lassa, or Sudya to Bathang, the latter route, however, having to pass the Himalayas, and a dreadfully hilly country, to within a short distance of Bathang. At Lassa there are already over 3,000 Nepalese trading in European goods, while, to deal in the figurative, the rivers of Bathang run with gold."

For the information of my sporting friends in Shanghai, I may tell them, that so far my bag consists of one wild goose shot near Hankow, my journey to this place having been through a country destitute of sport.

Up to this time I have cherished the hope of being able to reach Sudya from Bathang, but important considerations force me to abandon the idea. Without instruments and funds I cannot and dare not penetrate the unknown country between these two places. With the help of Providence I will reach Lassa, where, disposing of my mules and ponies, I will foot it to Khatmandoo, hoping at some future time to accompany a proper expedition through this country.

Nothing can exceed the kindness of the Catholic missionaries in China, especially Mons. Desflech, bishop of Chung-king, and Mons. Cheauvean. To the latter I shall ever owe a deep debt of gratitude, while to the united help of the French and Italian Catholic Missionaries generally I am indebted for the pleasure of being at this moment on the western borders of China.

Personally, with the exception of a slight cold and profuse sweatings at night, I have nothing to complain of, or rather feel that it is no use complaining; otherwise I might fill pages with grumbling at martyrdom from vermin, bad housing, the pardonable tyranny of my Chinese interpreter, and wretched food. With regard to the latter, the ghost of departed dinners *à la Russe*, with old dry sherry and champagne, trouble me no more, but occasionally in moments of thirst dim visions of Allsopp's best India pale ale rise up before me, which are instantly dispelled by resort to the celestial drink—tea.

For the information of future travellers I should mention that beyond this place, as far as Lassa, money is at a great discount, two or three needles and a little thread, or a piece of red Chinese cloth, often procuring what money cannot. Rupees pass for 32 tael cents, but the Mandzu people do not particularly care for them, and *sycee* is used at a great loss. I have laid in a stock of needles, thread, cloth, and a kind of turquoise stone much prized by Mandzus and brought hither from Shansi. These stones, about the size of French beans, I purchased at 2½ taels per 100. The idea of becoming a needle and thread hawker is novel and amusing.

I leave this on Wednesday, the 29th instant, having been detained more than 20 days to procure mules, ponies and an interpreter. If I am stopped at Tsamdo by the Thibetans, I shall return to this place and make for Ava *viâ* Tali and Bhamo, but I hope this is the last you will hear of me until I reach Nepal.

Trusting that this will reach you in safety,

I am, &c.
(signed) *T. T. Cooper.*

From Colonel *Albert Fytche*, Chief Commissioner, British Burmah, and Agent to the Viceroy and Governor General, to *W. S. Seton-Karr*, Esq., Secretary to the Government of India, Foreign Department, No. 39-77, dated 19th September 1868.

I HAVE the honour to forward a copy of a demi-official letter received by me from Captain Sladen, dated Bhamo, the 5th September, announcing the safe return of his party to that town, and giving many interesting details of his visit to Momein, the seat of an important officer of the Panthay Government.

2. It will be unnecessary to remark at length on all that is described by Captain Sladen in this letter, as his official report will shortly be received, and the whole question of the trade route by Bhamo will require to be fully discussed; but I think I may even here notice one or two points of interest connected with the progress and results of the expedition. I am of opinion Captain Sladen was right in deciding not to go beyond Momein under the circumstances which he explains. The original purpose for which the expedition was started was to discover the position held by the Khakyens, Shans, and Panthays, and their disposition, or otherwise, to resuscitate the extinct trade which formerly existed through their territories. This purpose has been fully carried out. It would doubtless have been interesting from some points of view had the party succeeded in reaching Talifoo, the head quarters of the Panthay Government, but it certainly appears that the Panthay authorities, whom Captain Sladen met at Momein, were of sufficient importance and position to render their views and opinions a safe criterion of the feeling of the Panthay Government in the matter. It is evident that on their part a strong desire exists for the resuscitation of the trade. The long residence of the party among the Khakyens and in the Shan States has been productive of the best results. Apart from some local jealousies (caused by a wish to secure for themselves the advantages of having the route through their individual territories) it would seem that the Shan chiefs are fully alive to the gain to them of the renewal of trade; while

while the Khakyens seem to have realised the peaceable character of the mission and the profitable future they may secure if the route be re-established. Even the physical difficulties of the route are by no means great, and they can be materially modified, whenever it may be considered advisable to do so, by local labour, which is only too anxious to be employed.

3. The previous history of this line of commerce proves beyond doubt that there exists an important field for trade in these localities; and the knowledge acquired by the present mission assures us that the parties most interested in this commerce are eager for its re-establishment. It remains solely with Government to decide whether or not it shall be re-established. If a determination be arrived at that there is here a scheme worthy of being carefully and persistently carried out, the result admits of no doubt. I feel certain that there depends on the decision of Government a question of the very highest Imperial importance. Our sea-borne trade with China is being actively competed for by America. It seems inevitable that sooner or later it will be diverted to the Pacific coast of that continent, and that New York will reap the "exchange" on the commerce with China, which is now shared between India and England. Not content with the Pacific railroad, which is being pushed on with unexampled energy, I observe that the American Government has officially recommended to the European States the great enterprise of a ship canal to be constructed across the Isthmus of Darien.

4. I mention these considerations, because I would not have the Government suppose that, in strongly advocating the continuance of our efforts to open this trade with Western China, I am solely influenced by a wish to advance the interests of this province. The gain to British Burmah in being a new highway to China would, doubtless, be very great, but it would be entirely subsidiary to the still greater gain of the empire in having that highway established. Time becomes an important element in a question like this, and if Government is to act with effect, it should doubtless act at once. I conceive that the good effects of the visit of Captain Sladen and his party should be promptly and vigorously followed up. I strongly support his recommendation that an officer be placed at Bhamo as soon as possible. He would be there to keep up the reality of our intentions and to maintain communication with the Shan chiefs and the Panthay Government, and he would also continue to influence the Khakyens towards giving facilities for safe transit of goods. The intention of placing a British official at Bhamo has been kept in view in all our treaties and communications with the Burmese court, and it appears to me that the time has come for carrying it into effect. I should be glad to receive the views of Government on this subject. The officer would have to be carefully selected, and his proposed appointment to Bhamo communicated to the Burmese Government as soon as possible.

5. Captain Sladen mentions the fact of two Panthay officers having been shot while escorting him to Momein, and suggests that a sum of money be presented to their families on the part of Government. I would recommend that I be authorised to give 500 rupees to the relations of each of the officers, or 1,000 rupees in all.

6. I propose to await the official report of the whole course of the expedition before reviewing the various incidents which require notice; but as the specific work of the mission is virtually ended, I take this opportunity of meanwhile recording my opinion that the successful termination of the expedition reflects very great credit on the energy and good judgment of Captain Sladen. He seems to me to have acted throughout with sound discretion; and he has shown much discrimination and tact in his intercourse with the various authorities with whom he has had to deal.

From Captain *E. B. Sladen*, Political Agent, to Colonel *Albert Fytche*, Chief Commissioner of British Burmah, and Agent to the Viceroy and Governor General of India, dated 5th September 1868.

You will be glad to hear of our return in triumph to Bhamo. All has been successful thus far, though some little disappointment will probably be felt at the fact of my having found it impracticable to extend our exploration beyond Momein.

Anxious and *eager* as we all were to push on to Tali, several weighty considerations combined to make a further advance into Yunan a matter which must have led to inevitable complication, in addition to the *certainty* of conflict with large bands of Chinese dacoits, against whom the Governor of Momein confessed that, with all the assistance he could give us, even to the extent of providing an escort, it was out of his power to guarantee protection, or ensure us against hostile attack. The road was effectually closed in two places between Momein and Yoonchan; and a strong body of Chinese had taken up a position in the vicinity of Sheedin, an important town where the grand caravan route from Southern Yunan and Mandalay *viâ* Theebo and Thinnee joins the highway between Yoonchan and Tali. At the time we reached Momein a Panthay force was actively engaged in an endeavour to open up the country in the direction of Yoonchan. Large bands of Chinese dacoits occupied positions in the vicinity of the direct route to Yoonchan, and their leaders assumed to hold commissions as officers under the immediate orders of the Chinese Government.

During our stay too at Momein an additional force of 2,000 men was sent out to assist in the subjugation of various portions of the country in the immediate neighbourhood, which were still a prey to Chinese influences, and opposed, therefore, to Panthay interests and the tranquillization of Yunan.

The Governor of Momein (a man who deservedly gained our respect and esteem by several friendly acts which afforded proof of a sincere desire on his part to promote our interests personally, and to further the general objects of the expedition) strongly advised me not to advance in the direction of Yoonchan. In giving this advice, he was not actuated by political considerations, or a wish to preserve Yunan in jealous exclusiveness. He naturally enough anticipated evil results if I continued my journey at a time when the route to be taken was unfortunately more than usually impracticable. He asked me to await events and to allow time for communication with Tali on the subject of our further advance through Yunan. If determined to proceed in opposition to his advice, he felt bound to provide me with a military escort; and it would be a matter of comparatively trifling concern to himself, he said, to hear that the escort had been engaged and suffered reverses; but if one of my own particular party fell in conflict with the Chinese, it appeared to him that complications might arise which would lead to further troubles and injure the hope we entertained of restoring tranquillity and re-opening trade between Burmah and the south-western provinces of China.

But in coming to a decision regarding the practicability or consequences of an advance with my party beyond Momein, it was necessary to bear in mind that evidence was not wanting which would lead to a well-grounded supposition that some of the so-called Chinese bands with whom we must have come into conflict, whilst under Panthay escort and protection, were indirectly connected with the Chinese imperial army; and that their leaders were supported and encouraged at Chinese head quarters in Yunan (city) to harass and disturb Panthay possessions within the province by every possible species of cruel and vicious hostility. To have held communication of any sort with members of the Chinese government, whilst under Panthay protection, would not only have been in itself a matter of extreme difficulty, but must have exposed the expedition to an amount of suspicious distrust which would have interfered injuriously to ruin the fair prospect of making the Panthays true friends.

These and other cogent reasons will appear by-and-bye to show that I should have been guilty of great disregard to the wishes of Government and to your own had I exceeded my instructions in advancing beyond Momein, especially so, after arriving at a belief that the several objects which the expedition had in view could be as completely realised at Momein as at Tali.

My inability, however, to make progress beyond Momein, without incurring a risk which would have compromised all the good which the expedition was intended to bring about, is more than compensated for by the knowledge that in all other respects a fuller amount of success has attended our efforts for good than could ever have been reasonably expected, when the idea was first formed of penetrating Western China by an expedition which was to take its start from British Burmah. But this is mere preface. I must take up the story of our progress from the date of my last communication, dated at Ponsee, 11th May 1868. We left that place on the 12th May, and reached Momein on the 26th of the same month. The advance through the Shan States was, in effect, an ovation. The population, generally speaking, of towns and villages, turned out in crowds, and on several occasions greeted us with unmistakable signs of welcome as we passed through their several districts. It was necessary to remain a few days at each of the larger towns of Manwyne, Sanda, Mynela, and Mynetee; and this detention will account for our not having reached Momein until the 26th May. The interval was well spent in friendly intercourse with the Saubwas and people, and in giving them a true insight into the objects and purposes of the expedition. Of all the Shan chiefs the Saubwas of Sanda and Hotha particularly have been conspicuous for the friendly welcome awarded, and the marked hospitality with which they have entertained my whole party during the time passed in their respective States. On both occasions of our visit to Sanda, going and returning, the old Saubwa himself attended at our departure, and caused salutes of guns to be fired, and his own trumpeters blowing long brass horns to proceed in advance of our party through the town to its extreme limits, an honour which is only paid to the highest authority in the country. He further asked me to adopt a boy of eight years of age, his grandson and heir to the Saubwaship, whom, he begged, I would in future look upon as my own son. A Panthay military escort met me at Mynela, and escorted us from thence across the Mauphoo range (always a dangerous locality) to Nantin or Mynetee, where a still larger body of men arrived in time to conduct the expedition into Momein. At Momein the Governor himself came out in right regal style to meet me half a mile from the city, and gave the expedition a ceremonial reception, the interest and magnificence of which will not soon be forgotten by any of us. But I must reserve details for a further report. I have already said that our advance through the Shan States wore the semblance of an ovation. On one occasion, however, whilst in the Sanda district, we experienced an imbecile attempt at opposition, made by a small party of dacoits, who fired three shots at us from the Mynela side of the Tahpen river, at the respectable or respectful distance of between 300 and 400 yards. I took no notice of them, and they found it prudent to keep the river between themselves and my party. The defaulters in this instance are well known, and their cause of grievance, in addition to the inducement held out of improving their worldly means at our expense, is described to have been brought about

about by offence taken at my refusal to proceed from Manwyne to Sanda by a route which led through their particular district.

The Mynela and Sanda deputies, who met us at Ponsee, almost quarrelled over a question raised as to which particular route the expedition was to honour in its passage through their respective States.

Again, on the march from Nantin to Momein, the Panthay escort which went in advance, in charge of our baggage, was fired into by dacoits, and the two leading men, both unfortunately officers of rank, were shot dead. The dacoits looted two mules and a portion of their loads before the escort had time to engage and put them to flight. I and the rest of my party were at the time some three miles from the scene of action. So little idea was there of opposition or attack, that we had stayed to explore and examine some remarkable hot springs which are met with on the route between Nantin and Momein, and in which we were very innocently and unconsciously disporting our naked bodies at the time of the cowardly attack on the Panthay advance guard. The death of the two Panthay officers was of course a matter of much concern to us all, but especially so to the Governor of Momein, as both were men of note, and had done good service in their time. They have left families, and having died, it may be almost said, in *our* service, I am going to ask you to solicit Government to recompense each family by a donation of 500 or 1,000 rupees. The maxim "*Bis dat qui cito dat*," will be appreciated in this instance, and I hope no great length of time will be allowed to elapse before the recompense is made. The facts of this dacoity have been greatly exaggerated, and I am only afraid that rumour will have converted them into a report of our utter ruin and discomfiture before any true statement of events can possibly have reached Bhamo or Mandalay.

Nothing can have exceeded the friendly hospitality with which the Governor almost overwhelmed us during the whole period of our stay at Momein. I was treated in all material respects with the honour due to a mission from a foreign power. It would have been a vain attempt at hypocrisy to have ignored my political existence, or the political nature of the work I was engaged in.

A spacious temple with every accommodation had been prepared for us, outside the city, in close communication with the Governor's residence, and rations, including necessaries of all kinds, were daily supplied in abundance to the whole party.

My first visit to the Governor was purely ceremonial, and we were received at Government House with salutes both on arrival and departure. The visit was returned in full state by the Governor and his suite, but after these first preliminaries had been got over, we came to a mutual understanding that our visits (which were frequent) should be made in simple friendly form, and ceremony was altogether dropped. The Governor occasionally asked us to dinner, and enlivened our stay with Chinese plays and other entertainments. But by far the most satisfactory portion of my several interviews had reference to the subject of the British Mission to Yunan, and to explained and received opinions, affecting the main objects for which the mission had been undertaken. The work was comparatively an easy one, for I found the Governor and all his officials as eager and earnest as ourselves in their desire for trade and for friendly commercial relations with foreign Governments. Perhaps the most delicate and difficult task I had to get through was that which related to our relations with the court of Pekin. I never tried to disguise the fact that the British and Chinese Governments were on friendly terms, and were bound by treaty stipulations in their intercourse with each other. I even went so far as to intimate that the friendly state of our relations with the court of Pekin might be utilised to the extent of bringing about a reconciliation of contending interests in Yunan, provided I could assure myself, during my stay in the province, that the government at Tali and the Chinese head-quarter government (wherever it might be in Yunan) could be made to agree as to the terms of a mediation. The excuse I made for bringing forward this proposition was that present disturbances in Yunan affected the prosperity of British possessions in Burmah; and our Government would not be slow at the present time, in the interests of trade, to exert itself in any legitimate manner or direction which might be deemed advantageous to the several states or countries most concerned. My meaning was understood, and received with a sincere expression of friendly good feeling. The Governor promised to communicate with Tali on the express subject of my proposition, and to give me a distinct reply before my departure. But the subject was necessarily dropped in consequence of important events which were then being enacted in Yunan. Before we left Momein official intelligence had arrived of renewed hostilities between the Chinese and Panthay governments, which had resulted in the capture of Yunan (city) by the latter, and the occupation of what may be called the whole of Yunan province by the Panthay government. I have a copy of the government proclamation, a document several feet in length, which was posted up at Momein, as an official public announcement of Panthay successes in Yunan, including the capture and possession of its chief city.

But it is time to return to our doings at Momein, where I remained for a month and a half in almost daily communication with the Governor and other provincial officers.

Tahsakon, a designation by which the Governor is officially known, is a tall handsome man, generous and liberal-minded to a degree. He has risen to power and command by the force of natural ability, added to a wonderful capacity for military adventure. It may literally and truly be said of him that he is riddled and scarred all over with a variety of wounds received in action. But to be brief, I may as well record at once the general results of my conferences at Momein, and I preface them by the remark that the results

themselves could not, in my opinion and belief, have been more complete, with the limited powers I held, even though the conferences had been held at Tali itself. Tahsakon, the Governor of Momein, is generally spoken of as second only in the government to the King of Tali; and his power to act throughout Momein province, including the Shan states dependent on the Panthay Government, is absolute in all matters in which the expedition was interested either in discussing or bringing to a definite issue.

Results:—1. The Government at Tali has fully approved of the proposal to revive overland trade between Burmah and South-Western China *viâ* Bhamo. It has expressed a sincere wish to co-operate with and assist our efforts to accomplish so desirable an object: at Momein itself the resuscitation of trade is already declared to be a certainty.

2. The Panthay government has *volunteered* to send a mission at the end of the present year from Tali and Momein to Rangoon with presents in return for those presented by me at Momein. The principal object of the mission will be to institute a general inquiry into the feasibility of direct trade with Rangoon merchants by the interchange of commodities at Bhamo or other commercial mart. The mission will also be required to obtain information on all points connected with trade, and with the facilities, means, and cost of transit of goods, including duties, between Bhamo and Rangoon, and *vice versâ*.

3. The Government at Tali has given its consent to a proposition made by me to the Governor of Momein, to the effect that the mule caravans from Yunan for the ensuing season shall proceed direct to Bhamo instead of to Mandalay, provided it is assured in time that Yunan produce can be disposed of at the former place, and that return produce will be available as desired.

(I could not myself undertake to give *assurances* on these points, because I recognised the difficulty, as regarded time, of supplying raw cotton (at Bhamo), the article in principal demand by the Yunan caravans.)

4. The Governor of Momein has given me a letter to be presented to the Chief Commissioner, in which my arrival in Yunan is spoken of in congratulatory terms. He further congratulates himself for the part taken by him in having fought and cleared the way for us at Mauphoo, as well as in having provided the means of transit and protection through the Shan states. Reasons are assigned in the letter to account for my not having been conducted beyond Momein; and assurances are given that, a beginning having now been made in resuscitating overland trade between Burmah and South-Western China, the Governor of Momein is prepared to further our commercial enterprise by all means in his power which are likely to conduce to success.

5. The Governor has further given me a writing under seal, which relates to the collection of transit duties on goods to and from Momein.

This document is of no practical importance, as it does not settle definitely the amount of duty to be taken in the Shan States, or at Momein itself. On the point of duties generally, the Governor convinced me that it would be premature at present to lay down definite rules. Having secured our friendship, he said, and considering *my* relationship to himself to be that of a brother (I believe I am styled so in the official correspondence), he promises to be faithfully guided by my advice in all matters relating to the imposition or abolition of duties and the general improvement of trade. He does not admit that the Shan Saubwas have any right to impose duties at all, but I discouraged this cavalier fashion of dealing with Shan privileges, and insisted upon the advisability of fixing definite rules or rates of duty, it being an acknowledged fact that Shan chiefs have always exercised the right of exacting transit dues on goods, though to a very trifling extent. From personal observation I may state with some degree of certainty that 12 annas per mule-load will clear goods through the Shan States as far as Mynetee; and as regards their further transit to and from Tali, Tâhsakon gave me his word and assurance that transit duty on exports and imports between the Khakyen hills and Tali, should in no case be allowed to exceed an *ad valorem* rate of 4 per cent.

6. That portion of the Shan States which is principally involved or interested in the re-opening of overland trade between Bhamo and China has been explored, and chiefs and people who were found to have been influenced by intrigue and misrepresentation into a state bordering on active opposition have been gradually converted by a truthful recognition of facts, as practically disclosed by our residence amongst them, into holding feelings of friendly encouragement and undisguised good will.

7. All three routes by which the Khakyen hills are crossed from Bhamo have been explored and surveyed; two of them by myself and party, and the third by a competent surveyor whom I detached on special duty from Hotha, at the time when the expedition was about to set out from the same place to Bhamo, by the central or ambassador's route. The result of these surveys, in conjunction with other modifying considerations of policy and convenience, will eventually define and decide the most practicable line for a through-trade route. In the meantime it may be generally stated that the Khakyen chiefs on both routes have been won over to friendship, and eagerly crave for their own particular line a monopoly of transit, which I try and convince them will eventually be large enough for distribution amongst all.

Such is the beginning which has been made; and in arriving at even these results it will be

be acknowledged that, in the absence of all real political power, I have gone to the full length of my letter, without compromising Government, or binding it to any particular line of reciprocal action in return for advantages offered and obtained. I may have exhibited the bright side of the picture in recording results, but the picture itself has not been exaggerated or falsified by over-colouring. What has been accomplished will serve primarily as a means of estimating the present disposition of the people and chiefs with whom I have held intercourse, and act as a guide to further political or commercial intercourse. Personally I cannot help feeling satisfaction at the fact that our endeavours to promote the good work for which the expedition was undertaken, whatever their result may be in other respects, have been thus far concluded without a single important mishap; and that although conflicting interests of no mean order have been at times opposed to us with all the intensity which it was possible to superadd by the insidious designs of self-interested intriguers, they have been successfully combated by a spirit of straightforward conciliation, which has given assurance to those who were inclined to waver, and raised up a genuine feeling of friendly regard for ourselves and sympathy in our undertaking which cannot fail to prove a secure base and groundwork for further exploration and commercial enterprise in all parts of the country to which the influences of our visit must eventually extend.

I commenced the return journey from Momein on the 13th July, but not until communication had been held with Tali, and the head-quarters Government had signified its approval of my visit, and dispatched a quantity of presents in return for those which I had given to the Governor of Momein. These presents only came as far as Sheedin, a large town halfway between Momein and Tali, where they were necessarily detained, owing to the insecurity of the road to Momein. Six Burmese officials had also arrived at the same place by the Thiunee route, direct from Mandalay, with letters and 50 bales of cotton as a present from the King of Burmah to the Governor of Momein! Neither the Burmans, nor their cotton, nor our presents could come on to Momein, neither could we get them, but letters had reached the Momein Governor stating the nature and object of the Burmese official visit. I rather gloried, I must confess, in the discomfiture of this Burmese secret mission, for it was by no means a pleasant idea, in the position I then held at Momein, to feel that Burman intrigue and opposition, which had so signally failed at Bhama and Ponsee, might still be following us into Yunan, to create suspicion and distrust in quarters where all had been brought into a state of mutual friendly reliance. The purport of the Burmese letter was not disclosed. Probably it contained nothing of importance; but had its contents been favourable, I cannot conceive the existence of any sufficient reason for keeping them secret after I had expressed a wish to have them made known. As a further cause for suspecting that the letter and presents signified no good to our undertaking, it is only necessary to keep in view the anomalous character of a Burmese private embassy with presents to Momein at a time when the British and Burmese Government were engaged in a *joint* undertaking to re-open trade with Yunan by the dispatch of a British expedition under Burmese patronage!

On the journey from Momein I heard at Yyne-tee of the arrival of a party of Burmans at Sanda, or Mynela, who had been dispatched it was said, to escort us back to Burmese territory! This seemed a mystery: and it was only solved on my own arrival at Mynela by the receipt of your letters and the somewhat ghostly appearance of a European in those parts in the person of Mr. Gordon.

The Burman party of 100 men had been at Mynela some eight or ten days, and the Sayaydaugyee in charge had made no attempt to get on himself or to communicate with me at Momein. He was in too great a funk I believe to do anything.

Gordon intended coming on, he says, had we not met him at Mynela; but it is very fortunate that he did not do so without first giving notice of his intentions at Momein and receiving Panthay aid; otherwise nothing can have saved him from conflict, in which I do not think that Burmans would have distinguished themselves. It is further a subject of congratulation to us all that Gordon enjoyed the *real* support of the Burmese Government, as well as the full advantage of our conciliatory policy which had preceded him, and made friends of all on the route he was to take.

The money you sent, 7,000 rupees of which reached me at Mynela, has been of very essential service. It has enabled me to spend freely, and make presents in rupees (which are more acceptable in these parts than any other kind of gift). Had your letters and rupees reached me at Momein, I might have been influenced to make a longer stay there, in the hope that something might have resulted out of the capture of Yunan city by the Panthays which would have afforded a means of my proceeding beyond Momein.

You seem to have been informed that the French exploring expedition from Saigon has succeeded in its object of penetrating China. The information I obtained on the same subject at Momein, on the authority of the Governor, tends, I am sorry to say, to a belief that the expedition terminated in disaster somewhere in the vicinity of Kiaing-Yung-Gyee.

I pressed the Governor very closely as to the sources of his information, so much so that he quite laughed at my doubts when I suggested that the story of the disaster might be only partially true, or very greatly exaggerated. The Governor assured me that his information was obtained from a Panthay relative who held some appointment not far from Kiaing-Yung-Gyee. The French party is said to have been treacherously led into difficulties and then attacked by hill savages, who killed two or three of the party and looted the whole of the baggage. An account is given of a few who escaped and took refuge in a neighbouring village, where they arrived in a state of nudity and starvation. Muskets which belonged to the French party were seen in the possession of natives, and some of them

were afterwards bought by the Governor's relative; such is the story. I do not pretend to believe it myself, though the Governor of Momein, my informant, vouched for its authenticity, even after I had warned him that the matter was a serious one, and begged that he would not mislead me or cause me to mislead others if the slightest doubt existed in his own mind as to the truth of what he related or the fate of the French party. I am inclined to think that the party may have simply met with a reverse which has been magnified into a disaster. Our hope is that *your* information is correct, and that the party has long ere this returned to Saigon crowned with success and covered with glory.

It only remains to say a few words about my return from Momein *viâ* Hotha and the old embassy route across the Khakyen hills to Bhamo. When I found, after a protracted residence at Momein, that there was no prospective chance within reasonable limits of my being able to get on further into Yunan without encountering armed opposition and involving the Government in troublesome complications, which it was my bounden duty to avoid, I was compelled under a variety of pressing considerations to think of a return homewards, and made preparations accordingly. It had always been my intention, in case the expedition succeeded in reaching its destination, wherever that might be, to return if practicable by a separate route across the Khakyen hills to that taken on my journey to Momein. I several times conferred with the Governor of Momein on the subject, and he *apparently* seconded my wishes, though with an evident hesitation which could not at the time be well accounted for. I afterwards ascertained beyond doubt that the Governor was not personally inclined to favour other routes as apart from that which the expedition had taken as far as Momein, because he laboured under an impression. not without reason, that such other routes might lead direct into Yunan *viâ* Yoonchan, and ignore the existence of Momein altogether. I tried to combat this idea, and succeeded so far as to cause arrangements to be made so that on arrival myself at Nantin or Mynetee I should be met by the Hotha (Shan) Saubwa, and be escorted by him through the Hotha valley to Mynewon (or as Burmans call it Mowon), and from thence proceed by the southernmost or Sawuddy route to Bhamo. This arrangement was not fully completed; the direct route from Nantin to Hotha *viâ* the Shammaloon hill was reported unsafe, and some of Lees-hee-ta-hee's dacoits held certain of the villages on the route. This may or may not have been true. At any rate, had there been no other reasons on the part of the Momein Governor for wishing to confine me to the Sanda valley, I think I might have crossed direct from Nantin *viâ* Shammaloon into the Hotha route. The Hotha saubwa failed in his agreement to meet me at Nantin, and I was obliged therefore after some little delay to push on to Mynela in the hope of catching him there. Here, as well as at Sanda and Manwyne, the officials were almost openly opposed to the very idea of my leaving the Sanda for the Hotha valley. Their opposition was natural enough, for the Shan, judging by my reception and success at Momein, had actually realised the fact of revived trade between Burmah and South-Western China, and were reasonably averse, therefore, to the idea of encouraging any arrangement by which that trade would be diverted to parts which would virtually exclude them from immediate participation in its advantages. I upbraided them gently for shortsightedness in opposing plans which were intended for general good; but could not help feeling at the same time an inward sense of satisfaction at the fact that their reluctance to assist me, by excluding themselves from occupying a prominent position on a direct trade route, afforded the strongest presumptive evidence of a certain degree of success which the expedition had already secured for itself within the Shan States. I stayed several days at Mynela and Sanda. Heavy and continuous rain aided to prolong my stay at each place beyond average limits; and it was not until my arrival at Manwyne that I was able to induce the Hotha Saubwa to join me and keep to his agreement of escorting the Mission to his Saubwaship at Hotha. After all there was but little reason to regret that I could not proceed from Nantin to Hotha direct without passing through Mynela and Sanda.

The prolonged stay at each of the places has done *much* to familiarise us with the people and convince them of the sincerity of our intentions. They have shown the warmest sympathy with us throughout; and at each place our departure always seemed to be a cause of regret to the population generally, who would have detained us with pleasure amongst them for months had it been in their power to do so. The real object I had in view in wishing to return *viâ* Hotha has been accomplished; that is to say we have, to all intents and purposes, inspected the whole Hotha valley, and thoroughly *done* the Khakyen hills; neither they (the hills) nor the Khakyens themselves are any longer a bugbear to trade or a bogy by which it has hitherto been the practice of Burmese officials to terrorize and obstruct would-be traders to China. The Hotha Saubwa received us in state with a salute at Hotha, and housed all the members of the expedition in his own *haw* or palace with marked kindness and hospitality. His interests are of course bound up in securing a revived trade-route through his own domains in the Hotha valley; but he would hardly dare to encourage such a route at the expense of offending his superiors or of opposing the wishes and interests of the Governor of Momein. Once at Hotha, it became necessary to decide upon the most desirable route across the Khakyen hills to Bhamo. My original intention was to have proceeded by what is known as the southern or Sawuddy route; but after mature consideration at Hotha I determined finally on exploring the grand central (embassy or ambassador's) route myself, and sending an intelligent Burmese surveyor, who was made over to me by Captain Williams when he left the expedition at Ponsee in April last, to proceed and report upon the Sawuddy route *viâ* Mowon. Both surveys have been successfully made. I remained at Hotha until all the Khakyen Saubwas had been summoned there, and had not only formally assented to our proceeding across their respective hills or districts, but had invited

invited us to do so. The Khakyens themselves provided the necessary carriage, and leaving Hotha on the 27th August, we reached this place on the 5th instant. It rained in torrents throughout the journey. This and the fact of my having found it necessary now and then to leave the direct route for the purpose of visiting the abode of some remarkable Saubwa who desired the honour of a visit will account for certain delays *en route*. The three principal Khakyen Saubwas on this route received the expedition at their several head-quarters with cannon salutes and the beating of gongs in real Chinese. Imagine the civilisation to which Khakyens have attained! and their desire to do right when unbiassed by sinister influence and intrigue! The Khakyens have faithfully adhered to their promises, and conducted the expedition from Hotha to its destination without a single loss or mishap of any kind. They vied with each other in showing us Khakyen hospitality. If two routes led to the same place, one Saubwa would almost quarrel with another for the honour of getting us to visit any particular village, or give any particular route the preference over others. Although our journey, as far as Khakyens were concerned, ended at Nanphoung on the Tahpen, some 20 miles above this, several Saubwas with nearly 100 followers have followed me into Bhamo on their own account, with the sole idea of influencing my decision and causing me to give preference to the old embassy route across the hills, and make it the sole commercial highway in the direction of China. It would be premature and out of order, I find, to think of subsidising Khakyen Saubwas at present on either of the available routes. The idea of a subsidy only originated with the false impression that Khakyen assistance was otherwise unattainable. All that Khakyens want is just treatment, a fair allowance of wages, and temperate management. With these inducements to serve, we may reasonably calculate on faithful services and free and unfettered transit for travellers and traders alike through any portion of Khakyen land to which our influences may extend themselves. Khakyens exult in the idea of our employing them as hired labourers to construct a road across their hills, or keep in repair existing routes. In this respect there will be no difficulty in the construction of any kind of road through the hills. At present nothing more is required than a good mule track in the most direct line. I am no advocate for railways at present in these parts. When they do come it is satisfactory to know that physical difficulties as regards route and country do not exist to any great extent; and that Khakyens, Shans, and Panthays will give willing assistance, and combine with effect for the furtherance of so extensive a work. For the present, at least, we shall have an open road into China, and it will be our duty to improve it as circumstances and conditions call for active interference; and as regards interference of any sort in the opening of a trade-route towards China, I am led to the very important consideration of a British agent at Bhamo, as provided for in our late treaty with Burmah. It is essential that this appointment should at once be created and filled. If possible, the agent should be a man well acquainted with Burmese character and policy, and able to combat any amount of indirect opposition and corrupt petty intrigue with which Burmese officials will still for some time continue to surround every attempt to extend our influence in these parts, or on the overland highway towards Yunan. All Khakyen and Shan Saubwas, as well as the Governor of Momein, to whom I mentioned the subject of an agent, seemed to think that under no other circumstances would it be possible to resuscitate for any length of time the old overland trade between the two countries. I perfectly agree with them, and feel convinced that, unless an agent is at once appointed and enters upon his duties at Bhamo, many, if not all, of the benefits which the present expedition has so far secured will succumb to influences over which we shall be able to exercise little or no control. I will write officially on the subject by-and-bye, but in the meantime my recommendation is that no time be lost in the selection of a competent British agent to reside at Bhamo. Let him be a man of good common sense and conciliatory in manner, but firm and inflexible in purpose. He should be well paid and provided with means and an establishment which would convince Shans and Khakyens of his importance, and show them that we were sincerely in earnest in stimulating trade in these parts at any cost.

The Burmese authorities have received me on my return here like a prince. Boats and barges were in readiness at Nanphoung on the Tahpen, and necessaries provided in abundance for our whole party. The officials are servile and subservient now, because they are conscious that they have been outwitted in former attempts to bring ruin on the expedition, and know, moreover, that the evidences of their villainy are too patent and palpable to be evaded, unless by a show of conciliatory kindness by which to compensate and atone for past offences. There is not much more to add. If I except myself, I may say generally that all the members of the expedition have returned in good health and in high spirits; though exposed to months of continuous rain and climatic extremes of all sorts, there has been little or no sickness. A taxidermist in the employ of Dr. Anderson died at Momein of small-pox, and one of the police escort died at Ponlyne, on the first march into the Khakyen hills, from the effects of an over-draught of water when heated. With these exceptions the expedition has returned as it started; and few of us are sorry to get home again, for after all there has been hard work at times, and our followers have cheerfully submitted to privations which under other circumstances would have entitled them to growl and grumble to some purpose. I am much indebted to all for hearty assistance and support on many trying occasions. A great deal has yet to be done and many drawbacks still exist (such as those resulting from indirect opposition in Burmah, the unsettled state of affairs in Yunan, and the high cost of mule carriage on the overland route), which will require modification and adjustment before any real commercial results are achieved; but a beginning has been made, and our merchants at home and abroad have reason to congratulate themselves that a road has been opened from Burmah, by

which their goods can be forwarded overland to China. That such a road is open to commerce, and that goods will be so forwarded and bartered at remunerative rates for Chinese inland produce without undue risk or opposition, are facts the certainty of which is ready for realisation as soon as sufficient commercial enterprise is brought into the field under the fostering care and encouragement of able and interested governments.

From *W. S. Seton-Karr*, Esq., Secretary to the Government of India, to Colonel *Fytche*, Chief Commissioner of British Burmah; No. 1177, dated Simla, the 13th October 1868.

I HAVE the honour to acknowledge the receipt of your letter, No. 39–77, dated 19th September last, and of its enclosure, intimating the safe return of Captain Sladen and his party to Bhamo.

2. His Excellency in Council will await the receipt of the official report which you promise. But two points are raised in the present communication concerning which the Viceroy and Governor General in Council considers it necessary to intimate his opinion at once before the arrival of the fuller report.

1st. You propose to give 500 rupees to the relations of each of the two Panthay officers who were killed whilst escorting the members of the expedition to Momein.

2nd. You recommend the appointment of an agent at Bhamo for the purpose of maintaining and improving commercial intercourse between British Burmah and Western China.

3. His Excellency in Council sanctions the first proposal, and desires that no delay may occur in making the recompense now sanctioned for the families of the deceased Panthay officers. As regards the second of these two propositions, the Viceroy and Governor General in Council much doubts whether it would be prudent, under the existing state of affairs in Burmah, to appoint an Englishman as agent to the British Government at Bhamo.

4. From paragraph 4 of your letter his Excellency in Council apprehends that you contemplate the nomination of a British officer as agent, and not of a native, and he observes, that not long ago you yourself pointed out, demi-officially, the present insecurity of the King's position and life, and showed that another revolution was not an improbable contingency. Under any circumstances, and even in peaceful times, the officer appointed to this charge, in an isolated position, ought to be a person possessed of a certain amount of ability, and of much tact and great powers of conciliation; while, in case of any internal commotion in Burmah his position, at a distance from aid or support, would expose him to very considerable risk. All these contingencies, I am to observe, demand careful consideration, and it will be for you to say, supposing they are not insurmountable, whether there is any English officer in British Burmah whom, in the face of those difficulties, you could safely and conscientiously recommend for the post. The King of Ava must be consulted in this matter before any action is taken, and you must use all your endeavours to ascertain his real opinion on the subject of the appointment of such an agent. It should be carefully explained to the King that by this proposal the Government of India only contemplate the revival and development of trade.

5. The information which his Excellency in Council has now received, through your letter and enclosures under acknowledgment, sufficiently proves the energy and tact with which Captain Sladen, in spite of many obstacles, has carried out the work assigned to him. The report of Captain Sladen has been perused with interest, and the results of the expedition have been more successful than at one time there was reason to expect.

6. In replying to the present letter you should state what salary you should assign to the proposed agent, and what establishment he would require.

From Colonel *Albert Fytche*, Chief Commissioner, British Burmah, Agent to His Excellency the Viceroy and Governor General, to *W. S. Seton-Karr*, Esq., Foreign Secretary to the Government of India; No. 39–94, dated Rangoon, 30th October 1868.

I HAVE the honour to acknowledge the receipt of your letter, No. 1177, of the 13th October instant, sanctioning a recompense of 500 rupees to each of the families of the two Panthay officers who were killed in escorting Captain Sladen, and conveying to me the remarks of his Excellency in Council on the proposition to place a British agent at Bhamo.

2. I shall, as requested in your third paragraph, at once communicate with Captain Sladen regarding the early disbursement of the bonus sanctioned to the families of the Panthay officers.

3. Regarding

3. Regarding the establishment of a British agent at Bhamo, you will observe that my letter suggesting the measure was dated 19th September, and I have since received a letter from Captain Sladen, dated 25th September urging the importance of the appointment in question. In a private letter of the same date, Captain Sladen describes his first interview with the King after his return, which took place on the 24th idem. After some general conversation and congratulations on his return, his Majesty inquired of Captain Sladen:—

King.—"Are you going back to Bhamo?"

Political Agent.—"No, but I believe that a British agent will soon be appointed to reside there."

King.—"I will take care, whoever he is, that there shall be a Governor with whom he will pull well and be on friendly terms."

After these remarks no further allusion was made to business on that occasion, and I understand that in subsequent interviews with the King no remarks have been made by his Majesty regarding the expedition.

4. I have carefully considered the observations of his Excellency in Council, contained in the concluding portion of the third and in the fourth paragraphs of your letter under reply. I do not conceal from myself that there must be some personal risk undertaken by the officer placed at Bhamo in the event of internal disturbance in the Burmese territory. It is difficult to foresee in what particular shape the next civil disruption in Upper Burmah may occur, but I should not anticipate that in any struggle for the throne there would be violence shown to British officers. There certainly would be the danger of lawlessness among the people consequent on the conflict of authority, but this, it appears to me, is a kind of peril which must be accepted in our intercourse with native states. The question of course is one of degree, and I would say that the position of the agent at Bhamo would not, in my opinion, be unduly hazardous.

5. In judging of this, too, some thought must be given to the results that we hope to obtain by placing an officer at Bhamo. Are they such as would justify risk and expense? I have already indicated to Government my opinion on these points. In a commercial aspect this line of traffic seems worthy of support. Imperial interests will be gained if we can establish a highway to the western borders of China: and scientific inquiry is being directed to the tract of country, not very extensive after all, which intervenes between two such important markets as India and China. All these objects will be served by the presence of a British officer at Bhamo. If trade has any tendency to flow by this old route, it will do so the more readily that the British agent is there to protect the merchants. If the hitherto disunited condition of the authorities who hold the through route is to be changed into friendly co-operation, it will be carried out, as it has been begun, by British agency. If information is to be gathered regarding the head-waters of the Brahmapooter, the Yang-tsi-kiang, and the Irrawaddy, our knowledge will be increased by the residence of a British officer at Bhamo, the most central and the best adapted post from which to push inquiries.

6. Believing, then, in the advantage eventually to be gained from the establishment of a British agent at Bhamo, and being of opinion that the difficulties in the way are not insurmountable, I would, in reply to your query, "Whether there is any English officer in British Burmah whom you could safely and conscientiously recommend for the post?" beg to nominate Captain G. A. Strover, Assistant Commissioner, 1st grade, at present town magistrate of Akyab. He is an officer in whose judgment, discretion, and conciliatory disposition I have full confidence. I have also ascertained his willingness to undertake the duties of the appointment, provided it be sanctioned.

7. With reference to the concluding portion of the fourth paragraph, in which you point out that the King must be consulted before any action is taken, and that his real opinion on the subject of the appointment of such an agent must be ascertained, and that he must be informed that the Government of India only contemplate by the proposal the revival and development of trade, I would beg to remark that, from the conversation I have recounted in a previous portion of this letter, it will be seen that his Majesty evidently contemplated our placing an officer at Bhamo, and expressed his readiness to see his officer co-operate with the British agent. Indeed, the Court and ministers were well aware that the appointment of such an agent would be the natural result of the late expedition to Momein, and when the objects and advantages of that expedition were discussed between the Burmese officials and myself in 1867, while I was in Mandalay negotiating the last treaty, there was no concealment of the prospective establishment of a British officer at Bhamo. It will be seen from Captain Sladen's letter that the Burmese Government still profess to be actuated by the same desire to facilitate trade with China that the British Government is, but that, unless we take steps to carry out our avowed intentions in the matter, obstructions will be thrown in the way of inland commerce.

8. Doubtless the Court of Ava is half-hearted in the matter. A lingering suspicion of our ulterior views will probably induce it to give the project but faint support, if it does not lead it to covert opposition. I think all this will the sooner disappear, and be the more easily overcome by our steadily adhering to our intention, long ago announced and accepted

by the King, of, as far as in us lies, developing the through traffic with China. It will be seen from letter No. 462, of the 12th May 1862, from the Secretary to the Government of India, Foreign Department, to the Chief Commissioner, British Burmah, that six years ago the attention of this administration was directed to this subject by the Government of India, and the Chief Commissioner specially instructed to keep it in view in negotiating the treaty of 1862. The importance of the question has increased rather than lessened during that period, and I should much regret to see our policy falter at the very time we have obtained information of its soundness. In accordance with your instructions, however, I shall communicate the wishes of Government to Captain Sladen, and request him to use his best endeavours to ascertain the real opinion of his Majesty the King on the subject of appointing a British agent at Bhamo.

9. In reply to the last paragraph of your letter, I would beg to recommend that the pay of the assistant agent at Bhamo be 1,500 rupees per mensem. It will be seen that Captain Sladen attaches considerable importance to the status of the agent to be placed at Bhamo; and I agree with him that the pay of the appointment should be such as to enable the agent fittingly to represent the British Government. As to his establishment, I would suggest a guard consisting of—

	Rs.	
1 Jemadar, at 50	50	per mensem.
15 Privates, „ 20	300	„
4 Peons, „ 20	80	„
1 Burmese writer, at 50	50	„
Total, *Rs.*	380	per mensem.
	12	
Per annum	5,760	
Clothing for 16 men, at 13 rupees	208	
Total, *Rs.*	5,968	per annum.

And for the first year I would, in addition to this, allow a sum of 12,000 rupees for contingencies, including the construction of a house. The total charge would therefore be for the first twelve months, say,—

	Rs.
Pay of assistant political agent	18,000
Establishment	6,000
Contingencies	12,000
Total, *Rs.*	36,000

and this amount I have included in the provincial budget for 1869–70. I would not recommend that the guard should form part of the police department, but that the asssistant agent should select and enlist his own men from such classes as he thought best fitted for the duty.

10. I think the assistant agent should retain his position in the Commission, and be "seconded" during his employment at Bhamo, at least until it is seen how far the duties of the appointment may suit the present nominee, our present measures being necessarily in some degree tentative.

From Colonel *Albert Fytche*, Chief Commissioner, British Burmah, Agent to His Excellency the Viceroy and Governor General, to Captain *Sladen*, Political Agent in the Territory of his Majesty the King of Burmah; No. 39–96, dated Rangoon, 30th October 1868.

I HAVE the honour to enclose you herewith a copy of letter, No. 1177, of 13th instant, to my address, from the Secretary to the Government of India, Foreign Department, being a reply to my letter, No. 39–77, dated 19th ultimo (copy of which has been furnished you), and also copy of my letter of this day's date to Government, regarding the appointment of an assistant political agent at Bhamo.

2. Be so good as to take early steps regarding the disbursement of 500 rupees to each of the families of the two Panthay officers who were killed in escorting you to Momein. Mention again to the King of Burmah the fact of an assistant political agent being about to be stationed at Bhamo, and endeavour to ascertain the real opinion of his Majesty on the subject; such are the instructions of his Excellency in Council, but it appears to me that the King has already accepted the measure, and raised no objections to it.

From *W. S. Seton-Karr*, Esq., Secretary to the Government of India, Foreign Department, to Colonel *A. Fytche*, Chief Commissioner of British Burmah; No. 1413, dated Fort William, the 7th December 1868.

I AM directed to acknowledge the receipt of your letter, dated 30th October last, No. 39-94, in which you reply to the question of the appointment of a British agent at Bhamo.

2. His Excellency the Viceroy and Governor General in Council thinks it so important that there should be no risk of misapprehension on this question, that he will refrain from passing final or definite orders on the proposal until the King's sentiments shall have been ascertained, not by means of casual conversations, but by a distinct assent to the plan carefully explained to him, as one which requires a clear understanding and a full approval on the part of his Majesty.

3. The expressions used in paragraph 8 of your letter, and the doubts thrown out by Captain Sladen in his 2nd paragraph, render it imperative that formal demand should be made, and the King's assent be as formally given, before the appointment of an agent can be settled.

4. You will therefore instruct Captain Sladen to ask for an audience of the King for this object, and to ascertain distinctly what his Majesty's views and wishes may be on the whole subject.

From Colonel *Albert Fytche*, Chief Commissioner, British Burmah, and Agent to the Governor General, to *W. S. Seton-Karr*, Esq., Secretary to the Government of India, Foreign Department; No. 39-114, dated Rangoon, 11th January 1869.

I HAVE the honour to submit, to be laid before his Excellency the Viceroy and Governor General in Council, copy of letter No. 229, dated 23rd December 1868, from Captain Sladen, in answer to my communication, transmitting him copy of your Despatch, No. 1177, dated 13th October 1868.

2. When this letter was written by Captain Sladen, he had not received a copy of your letter, No. 1413, dated 7th ultimo, to my address, which was forwarded him on 16th idem, with directions to carry out the instructions of his Excellency the Viceroy and Governor General in Council, as therein contained, with all convenient dispatch. On receipt of Captain Sladen's reply to the latter communication, it shall be at once submitted.

3. It is to be hoped that the several references that have been made to the King on this subject will not tend to lead his Majesty to suppose that it is not the wish of his Excellency to post an assistant political agent at Bhamo, or that the expediency of such a measure is not recognised.

From Captain *E. B. Sladen*, Political Agent, Mandalay, to Colonel *Albert Fytche*, Chief Commissioner, British Burmah, and Agent to His Excellency the Viceroy and Governor General; No. 229, dated Mandalay, the 23rd December 1868.

I HAVE the honour to acknowledge the receipt of your letter, No. 39-96, of 30th, with enclosures, and to inform you in reply, that the amount sanctioned as compensation to the families of the Panthay officers, who were killed whilst escorting me to Momein, shall be forwarded by the first safe opportunity.

2. In my several conversations with the King on the subject of establishing a British agent at Bhamo, his Majesty has always rightly assumed that his formal consent to this measure had already been attained, and instead of offering objection to the appointment or raising unnecessary misgivings, he has promised, on the appointment being made, to arrange that a good understanding shall be maintained between the incumbent (whoever he may be) and his own Governor of Bhamo.

3. I can well remember that during the negotiations of the late treaty the Burmese Government was of opinion that one of the first results of that treaty would be the location of British agents, both at Bhamo and Menhla. It would be bad policy, I conceive, in the present case to disturb the impressions secured by treaty rights by a diffident inquiry into the risks attending the exercise of those rights.

4. If the question were now asked whether his Majesty approved generally of the establishment of a British agent at Bhamo, no amount of diplomacy in approaching the subject would conceal an implied diffidence, which must naturally suggest itself as involved in the question. The King would take advantage of our doubts and put forward serious objections,

if by doing so he saw any reasonable hope (as he certainly would do) of retarding the appointment, or of even doing away with it altogether.

5. My own belief is, that the personal risk of a residence at Bhamo would not be as imminent as those to which the political agent at Mandalay would be subjected in the event of a rebellion, which, according to Burmese history, always takes its rise or assumes its most hideous shape at the royal capital.

6. But, setting aside risk altogether, it should be borne in mind that we have been at considerable pains to obtain from the Burmese Government the very important concession of appointing British agents to reside at duty stations in Upper Burmah; and it remains for us to decide, as apart from the wishes or policy of the King (who, by-the-bye, has already assented to the measure), whether the circumstances which now call for the services of the British agent at Bhamo are not paramount to every other consideration, or to the mere risk which must of a necessity be incurred by every European resident under foreign rule in an Asiatic State.

7. Judging by my own experiences on the late expedition into Yunan, I can only add as a supplementary remark to my letter No. 193, of 25th September last, that unless a British agent is located at Bhamo in the person of an officer of standing and ability, the expedition *viâ* Bhamo to Yunan may as well have never been undertaken, and overland trade with China will remain in abeyance as long as the Burmese Empire exists, or the Burmese Government fancies that it is best serving its own interest by obstructing European progress and refusing it the means of commercial extension through the comparatively insignificant tract of country known as Upper Burmah.

From *W. S. Seton-Karr*, Esq., Secretary to the Government of India, Foreign Department, to Colonel *A. Fytche*, Chief Commissioner of British Burmah; No. 200, dated Fort William, the 8th February 1869.

I HAVE the honour to acknowledge the receipt of your letter, No. 39–114, dated 11th ultimo, submitting a communication from Captain Sladen on the subject of the proposed appointment of an assistant political agent at Bhamo.

2. In reply, I am directed to inform you that the Viceroy and Governor in Council will await the receipt of your answer to the letter from this department of the 7th December last, No. 1413, in which the views of the Government of India, and the course to be pursued, were clearly indicated, as well as the result of the reference which was to have been made to his Majesty the King of Burmah.

From Colonel *Albert Fytche*, Chief Commissioner, British Burmah, Agent to His Excellency the Viceroy and Governor General, to *W. S. Seton-Karr*, Esq., Secretary to the Government of India, Foreign Department; No. 39–125, dated Tavoy, 12th February 1869.

REFERRING to your letter, No. 1413, dated the 7th December 1868, in which I was informed that the Government of India desired that the wishes of his Majesty the King of Burmah regarding the appointment of a British agent at Bhamo should be distinctly and specifically ascertained, I have the honour, in continuation of my former correspondence on the subject, to submit, for the information of his Excellency the Governor General and Viceroy in Council, copy of a letter. No. 252, of 16th January, from Captain Sladen, Political Agent, Mandalay, in which he describes a special interview, held on the 11th January, with his Majesty the King with the view of ascertaining his Majesty's wishes on this matter.

2. It will be seen from this that his Majesty is quite willing that an agent should be stationed at Bhamo. He naturally asked that a prudent officer should be sent, and with that proviso stated that "the appointment had his full consent and approval."

3. I would now repeat to the Supreme Government my conviction of the importance of at once acting in this long-discussed matter, and so bringing to a legitimate conclusion (on this point at least) the commercial policy towards Upper Burmah, which has guided our intercourse with the court of Ava for years.

4. I beg again to bring to the notice of his Excellency the Governor General in Council that when my predecessor, Sir Arthur Phayre, proceeded in 1862 to negotiate a treaty with the court of Ava, one of the main points he was directed by the Government of India to bear in mind was the development of through trade with China *viâ* Bhamo. He was directed to further the re-opening of the commercial route to China *viâ* Bhamo by a joint British and Burmese mission. He was to provide for the passage of British or Asiatic merchants by that route, and for their residence at Bhamo.

5. In obedience to those instructions, Sir Arthur Phayre concluded a treaty, having as its sole object these important measures, and to obtain them we abolished our frontier duties, which

which then amounted to 60,000 *l.* Viewed as a mere matter of commercial policy, I believe the abolition of these duties was a wise step. On the Burmese side a very heavy tax was levied, and it was hoped that the court of Ava would gradually reduce the rates levied on their frontier. This object was secured by my treaty concluded with the court of Ava in October 1867; and we need have no regret at the lapse of our frontier duty when we find that our inland trade with Upper Burmah, which amounted to 112,900 *l.* in 1863–64 (the year our duties were abolished), has increased to 2,545,100 *l.* in the year 1867–68.

6. Still the wise policy which led to the treaty of 1862 has been but faintly persisted in since that time. Sir Arthur Phayre reported to the Governmant of India in his letter of 21st November 1862, that the treaty was expressly framed to provide for free passage of steamers on the Irrawaddy, and for the residents of merchants at Bhamo or elsewhere; and the King and his ministers were fully prepared for their appearance.

7. Again, in my treaty of 1867, distinct provision was made for the appointment of a British agent at Bhamo, or other places in Upper Burmah, where duties were levied; and the intention of the British Government to carry out this portion of the treaty was most assuredly understood by the court of Ava. On the same occasion opportunity was taken to gain the King's assent to the dispatch of a British expedition to re-open the route from Bhamo to China.

8. So much has been written of the importance of establishing a thorough traffic with Western China that it is superfluous to go over the same ground. I have already expressed my strong opinion of the great value of such a measure in various communications with the Supreme Government. *The most immediately feasible route is undoubtedly* viâ *Bhamo*, and we may hope gradually to resuscitate and develope the valuable trade which formerly flowed by that channel. But to do this, the presence of a British agent at Bhamo is, in my opinion, essential, and having in consideration the great commercial issue at stake (one which I am satisfied will year by year become of increasing Imperial importance) I would most strongly urge on his Excellency the Governor General in Council to give his assent to the appointment of a British agent at Bhamo.

9. The detail measures requiring sanction as to the pay of the agent and his establishment I have already submitted for the consideration of Government in my letter, No. 39-94, dated 30th October 1868.

From Captain *E. B. Sladen*, Political Agent, Mandalay, to Colonel *Albert Fytche*, C. S. I., Chief Commissioner of British Burmah, and Agent to the Viceroy and Governor General of India; No. 252, dated the 16th January 1869.

I HAVE the honour to acknowledge the receipt of your letter, No. 39-108, Foreign Department, dated 16th ultimo, and to inform you that on the 11th instant I was admitted to a special audience with the King for the purpose of explaining the nature of the Bhamo appointment, and of ascertaining his Majesty's views and wishes in their relation to the same subject.

2. During the interview I succeeded in making his Majesty conversant with all sides of the question, and begged that I might be favoured with a clear and distinct expression of his Majesty's opinion thereon, either then or as soon as it might be convenient to admit me to another interview.

3. Somewhat to my surprise his Majesty seemed to have considered the matter, and to have already arrived at a definite decision on the subject of my interview. He replied almost immediately as follows:—

King.—I have no objection whatever to the Bhamo appointment. I shall not be sorry to hear that you have appointed an agent at Bhamo, as well as at other duty stations in Burmah (Tonghoo and Menhla). All I stipulate for is, that your Government will not send obstinate or intractable officers, who will be guided solely by their own opinion, without any regard to advice or reason.

Political Agent.—Your Majesty may rest assured that the British Government will be most careful in its selection of an officer to fill the Bhamo appointment. He will be a man of prudence and ability, with special qualifications for so responsible a position.

King.—In that case I have no misgivings. The appointment has my full consent and approval. When the officer arrives I wish you to introduce him to me, and I will then cause the attendance of the Governor of Bhamo. Between us we will arrange that the Governor and the British agent shall understand each other, and be placed, as regards their mutual relations, on a sound and intelligible footing.

There is another point. I do not like the idea of English steamers proceeding above Mandalay. The population generally may be led to believe that Burmah is again invaded, and the steamers may get into difficulties.

Political Agent.—Your Majesty will do wrong, I think, to raise any question now affecting the rights of British steamers on the Irrawaddy. Those rights have already been secured by treaty, and would not, in all probability, be relinquished without difference and misunderstanding. The difficulty, as regards popular opinion in your Majesty's dominions, may be avoided by a royal proclamation on the first occasion that any English steamer attempts the passage of the river north of Mandalay.

King.—Why should your steamers wish to go toBhamo? Does it not amount to the same thing if I make my steamers available for all cargo or goods that may pass between Bhamo and Mandalay?

Political Agent.—No, by no means; such an arrangement would interfere injuriously with the rights of owners, shippers, and consignees, to say nothing of the interests and profits of trade. Besides, treaty rights cannot easily be lost sight of. It is my duty, I think, to advise your Majesty not to raise objection to the passage of English steamers beyond the capital. I am not in a position myself to recognise any such objections when I find that they involve a breach of treaty stipulations. But if your Majesty wishes it, I will communicate what you have said to the Chief Commissioner of British Burmah.

King.—No, I will take your advice; say nothing about the steamers. But I must not be blamed hereafter if British steamers get into difficulties in navigating the Irrawaddy above my capital.

Political Agent.—Your Majesty has no reason to apprehend undue responsibility in this matter. All that we can reasonably expect is the protection of a friendly government, and this protection your Majesty has agreed, by treaty, to extend to all British traders within your Majesty's dominions.

4. No further allusion was made during the interview to the Bhamo appointment, and my impression is, that his Majesty is sincere at present in his desire to avoid all suspicion of indirect opposition, past or present, in the work of regenerating overland trade *viâ* Bhamo with South-Western China. In fact, I believe that he is fast recovering from the effects of certain evil influences which may have induced him, after my own departure for Bhamo, to view the expedition with disfavour, and to try and defeat its main objects. Since the return of the expedition to Mandalay, it has been in my power to tender to his Majesty advice and information which, I am led to hope, have produced reaction in favour of the establishment of a British agency at Bhamo, and the furtherance of commercial enterprise in the direction of Southern China.

From *W. S. Seton-Karr*, Esq., Secretary to the Government of India, Foreign Department, to Colonel *Albert Fytche*, C.S.I., Chief Commissioner of British Burmah; No. 359, dated the 15th March 1869.

I AM directed by his Excellency the Viceroy and Governor General of India in Council to acknowledge the receipt of your letter, dated 12th ultimo (No. 39–125), and to state that, on the understanding now arrived at, that the King of Burmah is quite willing that an Agent should be appointed to Bhamo, his Excellency in Council will recommend the appointment to the financial department.

2. But his Excellency in Council would first wish you to report, after consulting Captain Sladen, the name or names of any officer or officers who possess the qualifications which the Government has a right to look for in the person who shall fill the proposed appointment. The agent, it is almost unnecessary to urge on you, should be a man versed in the language and customs of Burmah, and of acknowledged discretion, readiness, and tact.

3. His Excellency in Council is also disposed to think that 1,500 rupees a month is too high a salary for such an appointment; and that, at first, it would not be necessary to assign to the post more than 1,000 rupees a month, or 12,000 rupees a year.

4. The officer to be appointed might be styled assistant agent at Bhamo, and might be placed in subordination to the political agent at Mandalay; both officers being, of course, under your supervision as Chief Commissioner.

5. The pay of the political agent at this latter place, I am to remark, is only 1,500 rupees a month.

From Secretary to the Chief Commissioner, British Burmah, and Agent to His Excellency the Viceroy and Governor General, to *W. S. Seton-Karr*, Esq., Secretary to the Government of India, Foreign Department; No. 39–139, dated the 27th March 1869.

I AM directed by the Chief Commissioner and Agent to the Governor General to acknowledge the receipt of your letter (No. 359) of 15th instant, and to request that the Chief Commissioner's letter (No. 39–94), dated 30th October last, which contains in detail the information required, may be laid before the Right honourable the Viceroy and Governor General in Council. A copy of this letter is inclosed for ready reference.

2. The Chief Commissioner, I am to say, consulted Captain Sladen long ago regarding the officer to be nominated for the appointment of assistant political agent at Bhamo, and he fully concurs with General Fytche that Captain Strover is eminently fitted for the post. An officer placed in the important and responsible position which the assistant political agent will be placed in at Bhamo, and completely cut off, too, from all European society and support,

support, should be well paid. Captain Strover now draws 1,000 rupees a month, is close on promotion, and it would not be worth his while proceeding to Bhamo on the salary mentioned in your letter under reply. If he does not accept the appointment, the Chief Commissioner has no other officer here in a position to take the office, who possesses the necessary qualifications for the post.

3. As stated in your telegram just received, the pay of the political agent at Mandalay is 3,000 rupees per mensem, and not 1,500 rupees, as given in your letter.

4. A Schedule showing the pay recommended for the salary of the assistant political agent and his establishment, in paragraph 9 of the Chief Commissioner's letter above referred to, is annexed, as also copy of a notification for publication in the "Gazette of India," in the event of his Excellency thinking fit to appoint Captain Strover.

NOTIFICATION.

The Right honourable the Viceroy and Governor General of India in Council is pleased to appoint Captain G. A. Strover, Madras Staff Corps, to be assistant political agent at Bhamo, in the territory of his Majesty the King of Burmah, under Article VI. of the Treaty with his Majesty, concluded on the 25th October 1867.

SCHEDULE of the Proposed Establishment for the Office of Assistant Political Agent at Bhamo.

FURTHER PAPERS

REGARDING THE CASE OF

THE EX-NAWAB OF TONK.

From Colonel *W. F. Eden*, Governor General's Agent for the Rajpootana States, to the Secretary to the Government of India, Foreign Department, with the Governor General, No. 970–52P., dated Mount Aboo, 12 August 1867.

For the present information of his Excellency the Viceroy in Council, I have the honour to forward a copy of the papers marginally cited, regarding a collision which occurred on the 1st instant at Tonk between the Nawab's retainers and the followers of the thakoor of Lawa, in which, it is stated, six or eight lives were lost on either side, Rewut Sing, the thakoor's uncle, being amongst the number.

1. Translation of a khureeta from Nawab of Tonk, to Agent, Governor General, dated 2nd August.
2. Agent, Governor General, in reply, dated 7th August.
3. Purport of note from Tonk Vakeel, dated 8th August 1867.
4. Telegram from relations of Lawa thakoor, dated 5th August, received 8th August.
5. Letter, No. 947-58, dated 8th August, to Political Agent, Harowtee.
6. Anonymous petition, dated 1st August, received 10th August, from followers of Lawa thakoor.
7. From Political Agent, Harowtee, to the Agent, Governor General, No. 89-13, dated 7th August, received 12th August.
8. From Agent, Governor General, in reply, No. 969-61, dated 12th August.

2. Whether the Tonk authorities have been really guilty of the foul treachery imputed to them is a matter on which I cannot offer, until further evidence is forthcoming, a decided opinion. Probably the charge has been exaggerated; but I most certainly do not place reliance on the highly improbable story set forth by the Nawab. My personal knowledge of the deceased thakoor, Rewut Sing, assures me that he would never have attempted to have forced his way at night into Hakeem Surwur Shah's house as has been represented, whilst the Hakeem, an intriguing, mendacious Affghan, is just the character to take an active part in a piece of foul play with but small compunction.

3. I rest assured his Excellency will desire a full enquiry and report into this matter, and I have therefore deputed Captain Bruce, Political Agent, Harowtee, to Tonk for the purpose.

4. Trusting that the action I have taken will meet approval.

Enclosure No. 1.

Purport of a Khureeta from the Nawab of Tonk, to the Governor General's Agent, Rajpootana, dated 2 August 1867.

You are aware of the insubordinate and rebellious conduct of the thakoor of Lawa, and it is not, therefore, necessary to relate it here; but as a fresh disturbance has been created by Rewut Sing, uncle of the thakoor, it is advisable that I should acquaint you with it.

In order to reprimand the thakoor for oppressing and ill treating the subjects of Tonk residing in villages near Lawa, I summoned him to Tonk. He gave no heed to my admonition, and suddenly one day his uncle, Rewut Sing, with 40 men, proceeded to the court of the Thuggee and Dacoitee officer, and there created a disturbance and resorted to arms. The full particulars will be communicated verbally by my Vakeel in attendance on you.

Enclosure No. 2.

Purport of a Khureeta from the Governor General's Agent, Rajpootana, to the Nawab of Tonk, dated 7 August 1867.

I HAVE duly received your Highness's khureeta of the 2nd August, intimating that you had summoned the thakoor of Lawa to Tonk to reprimand him in the matter of his insubordination, &c., and reporting that a fresh disturbance had been caused by Rewut Sing, the thakoor's uncle.

I do not, however, find anything in the khureeta regarding the collision which took place, but your Highness's Vakeel informs me that Rewut Sing has been killed; and as this very grave occurrence has taken place in Tonk itself, I beg your Highness will report the full particulars of this lamentable event.

Enclosure No. 3.

PURPORT of a Note from Vakeel of Tonk, to the Governor General's Agent, dated 8 August 1867.

I HAVE to-day received a letter from the Nawab of Tonk communicating the conduct of the Lawa thakoor in creating a disturbance, &c. I do myself the honour of forwarding the letter in original for your information.

Purwana from Nawab of Tonk, dated 6 August 1867.

You have been already made acquainted with the insubordination and disobedience of the Lawa thakoor, of his tyranny and oppression to the villages near Lawa, of his other acts of misconduct, and of his non-payment of his tribute. In order to reprimand him for these matters and to obtain his tribute, I called him to Tonk, and he came about 15 days ago.

On the 1st August the thakoor's vakeel was summoned to the court of Hakeem Surwur Shah, the officer in charge of the criminal court and of the Dacoitee department. Rewut Sing, the Thakoor's uncle, and certain other Rajpoots presented themselves. Surwur Shah, the Hakeem, was inside the house insensible (" be-hosh") from sickness, but the other officers in the court entered into a conversation with Rewut Sing about the tribute and other matters, but he gave no heed, stated what was not the truth, and then went away in a rage.

About eight or nine P.M., Thakoors Rewut Sing, Bejey Sing, and 40 armed men suddenly came to Hakeem Surwur Shah's house, called for the hakeem, and attempted to enter the house. The guard, on account of the illness of the hakeem, the unseasonable hour, &c., begged them to stop; they would not, and a quarrel ensued; both parties commenced hustling each other; one of the thakoor's men's puggree fell off. On this the thakoor drew his sword and began laying about him. In the fight Rahmut Khan and Gholab Khan (a relation of the Nawab) and six (6) others were killed and nine wounded, and on the side of the thakoor's, Rewut Sing, Bijey Sing, and (8) eight others were killed, and one wounded man and seven others were taken prisoners; the rest fled. On hearing this, fearing that Thakoor Dheerut Sing, who with 25 men was in another house, would create a disturbance, I caused them to be surrounded. Subsequently the thakoor laid down his arms and presented himself; he is now in surveillance. Some sepoys went in pursuit of the thakoor's men, who had fled from the scene of the disturbance as far as Lawa, but they were fired at, and therefore returned.

The nine wounded men, as well as the seven captured men of the thakoor's, are in confinement pending an inquiry.

I am at a loss to account for this rebellious and stupid conduct on the part of the thakoors.

On receipt of this letter communicate the purport to the agent, Governor General.

Let there be no delay.

Enclosure No. 4.

TELEGRAM from *Dodey Sing and Ram Sing*, the relatives of the Thakoor of Lawa, from Jeypore to the Agent to the Governor General, Rajpootana, dated 5 August 1867.

ON the 2nd of August the Nawab of Tonk cited Dheerut Sing of Lawa, then encamped at Tonk. Dheerut Sing did not go himself, but he sent his uncle, Rewut Sing, and his brother, Bijey Sing, with some other nobles. They arrived at the house of the hakeem, the minister of Tonk, who captured them all, and put Rewut Sing, Bijey Sing, two officers, and seven other persons to death. The Nawab has imprisoned Dheerut Sing and besieged Lawa, hoping for administration for the same.

Enclosure No 5.

From the Agent to the Governor General, Rajpootana, to the Political Agent, Harowtee, No. 947–58, dated 8 August 1867.

I have the honour to forward copy of the documents, as marginally noted, regarding a disturbance which has occurred at Tonk, in which several lives have been lost.

1. Khureeta from Nawab of Tonk, to Agent, Governor General, dated 2nd August 1867.
2. Agent, Governor General's reply, dated 7th August 1867.
3. Kyfeeut from Tonk Vakeel, dated 8th August.
   Telegram from certain relations of Lawa Thakoor.

2. The tenor of these papers is widely dissimilar. If, on the one hand, the kyfeeut of the Tonk Vakeel states the truth, no immediate active action is demanded; if, on the other hand, troops are marching on Lawa and further bloodshed is likely to ensue, you are authorised to desire the Nawab promptly to withdraw his men pending the orders of the Government of India.

3. You will further, from your proximity to Tonk, be in a position to judge what caused and brought on the collision which has occurred.

It is scarcely to be supposed that the thakoor would have resorted to arms in Tonk itself without some exceptional provocation, unless the quarrel rose in a brawl, which may have gradually spread.

If it should appear from the rumors and reports, which will surely have reached you, that there has been any foul play, or that life has been wantonly sacrificed, as stated in the telegram, I beg you will at once proceed to Tonk and report fully after enquiry. Under any circumstances, it would be expedient to desire the Tonk authorities to send to you the Thakoor Dheerut Sing, so that he may be able to speak freely as to what occurred.

Enclosure No. 6.

PURPORT of an Anonymous Petition purporting to be from one of the followers of Lawa Thakoor, dated 1 August 1867.

THE Nawab of Tonk summoned the Thakoor of Lawa to Tonk; he accordingly went there. On the 1st August Hakeem Surwur Shah sent for the thakoor with his followers. The Thakoor sent his uncle, Rewut Sing. Hakeem Surwur Shah called him up alone into an upper chamber; the remainder of his (Rewut Sing's) followers remained below. By the order of the hakeem some Affghans killed Rewut Sing. Some 300 or 400 sepoys were also in readiness, and firing a volley, killed all the attendants; I escaped wonderfully. The Thakoor himself is besieged in his house, which is surrounded by a regiment of horse and foot, and they demand him to surrender. They have not yet yielded, but I am certain the Nawab will kill them also.

Rewut Sing and the others that were with him were murdered at the Nawab's order.

The Nawab, after summoning the thakoor, has committed this treacherous deed.

We ask for justice. To set this matter in a favourable though lying light before you, a Sahibzadah has been deputed to you.

A great force has also been despatched to Lawa, &c. We have no hope except in your justice.

Enclosure No. 7.

From Captain Bruce, Political Agent, Harowtee, to the Governor General's Agent for the States of Rajpootana; No. 89-13P., dated 7 August 1867.

I HAVE the honour to report that official confirmation has this day reached me of a rumour to the effect that a serious fracas, resulting in loss of several lives on either side, had taken place at Tonk between the Nawab's retainers and some of the followers of the Lawa thakoor, who it appears, had been invited to the capital.

2. On hearing that a disturbance had occurred, I forthwith despatched an agency "Chobdar" to ascertain and report all particulars, and desired him, pending further instructions, to remain with the thakoor's camp. I at the same time addressed the Tonk Durbar regarding the rumour which was in circulation, and begged reliable information of what had really taken place. I have to-day been favoured with a reply from his Highness, and although the Vakeel informs me a full report has been furnished to your office from Tonk, I deem it my duty to submit this letter on the subject.

3. The reports of this unfortunate occurrence are most conflicting. The Nawab asserts that Rewut Sing, the thakoor's uncle, who fell in the affray, brought on the quarrel by attempting an armed entrance into the house of one of the Raj officials; whilst the story told me by the thakoor's brother, who is now at Deolee, would point to treachery on the part of the Tonk Durbar, whereby the Rajpoots were entrapped and killed.

4. At present it would be premature to record any decided opinion in the matter. There is no doubt fighting took place, for the casualties, as reported, are pretty equally balanced on either side. It is, however, hard to believe that the Lawa people would have been foolhardy enough to have bearded the Nawab in his own capital, and, *primâ facie*, the circumstances induce grave apprehension.

5. Your assistant, Captain Roberts, leaves Deolee for Tonk at once, and I have the honour to forward herewith copy of a letter I have just addressed him with a view to his endeavouring to elicit, for your information, the real facts of the case whilst there. On receipt of Captain Robert's report I will again address you, and at once repair to Tonk myself should circumstances appear to render my presence expedient or desirable. In the meantime every precaution has been taken to prevent further bloodshed.

6. On hearing some days ago that a force had been moved towards Lawa by the Nawab, I at once deputed the naib moonshee of this agency to proceed there, and, if possible, prevent hostilities. I am now informed by the thakoors that the troops have been withdrawn.

7. Trusting that the action taken by me may meet with your approval.

From the Political Agent, Harowtee, to Captain *Roberts*, Assistant Agent to the Governor General, Rajpootana, No. 147, dated 7 August 1867.

OFFICIAL intimation having this day reached me from the Nawab of Tonk to the effect that a serious fracas, involving the loss of several lives, has taken place between some of his Highness's retainers and the followers of the thakoor of Lawa, and as it fortunately happens that you will be passing through Tonk to-morrow, I think it would be very desireable you should take advantage of being on the spot to enquire all particulars for the information of the Governor General's agent, to whom a copy of this letter will be forwarded.

2. I would also beg the favour of your kindly acquainting me with any details you may learn at Tonk.

Enclosure No. 8.

From the Governor General's Agent for the States of Rajpootana, to the Political Agent, Harowtee; No. 969–61 dated 12 August 1867.

I HAVE the honour to acknowledge the receipt this day of your letter, No. 89-13, of the 7th instant, and, in reply, I would express my approval of the course you have adopted in respect to the recent lamentable fracas at Tonk.

2. As I am presently informed, a grave measure of suspicion attaches to the Tonk authorities as to their action in this matter, and a full report must be made for submission, to the Government of India. I assume that you will have proceeded to Tonk for this duty, as suggested in my letter, No. 947, of the 8th instant.

Awaiting an early report.

(For. Department Political—No. 981—53 P. of 1867.)

From Colonel *W F. Eden*, Governor General's Agent for the States of Rajpootana, to the Secretary to the Government of India, dated Aboo, 14 August 1867.

IN continuation of my Despatch No. 970/52 P. of the 12th instant, I have the honour to submit for the information of Government a demi-official communication

munication of the 9th instant from my assistant, Captain Roberts, reporting the result of his visit to Tonk, and of the inquiry he made regarding the very grave occurrence which was transacted at that place on the 1st instant.

I am very much afraid that the conclusions arrived at by Captain Roberts are but too true, and that Thakoor Rewut Sing and his attendants were treacherously entrapped and murdered.

2. I have telegraphed to the Political Agent, Harowtee, to proceed to Tonk at once and make a full inquiry. I enclose a copy of the telegram and of the letter I have addressed that officer, and his report, on receipt, will be submitted for the orders of Government.

3. In the meantime I would merely remark that if this inquiry should establish the conclusions which, from the information presently before me, I am compelled, however reluctantly, to accept, I will solicit his Excellency the Viceroy to mark the sense of the displeasure of our Government for this wicked and bloody tragedy in a manner so prominent, that it will not only not readily be forgotten by the Tonk authorities, but leave its stamp on the minds of other chiefs in this province.

Enclosure No. 1.

COPY of a demi-official LETTER from Captain *A. W. Roberts*, Assistant Agent to the Governor General, to the Political Agent in Harowtee, dated Tonk, 9 August 1867.

I HAVE now to state for your information, and that of Colonel Eden, the various statements made to me at this place regarding the occurrence of the 1st instant.

2. I arrived here yesterday at dusk, and this morning visited the Nawab at eight o'clock. His Highness' account of the affair is, that the Lawa thakoor and his uncle came here at his Highness request to settle several matters, and that the uncle, Rewut Sing, conducted the business of his nephew. In this capacity he paid several visits to Hakeem Surwar Shah who acted for the Nawab at the Thuggee and Dacoitee office, of which department Surwar Shah is the head.

3. That on the evening of the 1st of this month, Rewut Sing, accompanied by a body of followers, proceeded to the above-mentioned office, and requested to see Hakeem Surwar Shah; that he was informed that the Hakeem was not feeling well, and did not see people at that hour; that on this Rewut Sing's party became clamorous, and whilst in this excited state some person's turban was knocked off; that on this swords were drawn, a struggle ensued, and Rewut Sing and some eight or nine of his followers were killed, and above five or six of the Tonk soldiers; and that next morning the corpses of the Hindoos were burnt, and those of the Mahomedans were buried.

4. The Nawab added that, on account of this occurrence, he deemed it necessary to keep a guard round the Lawa thakoor's house, but had lately withdrawn it.

5. When the Nawab had finished his relation, I impressed him with the necessity of allowing the thakoor to proceed at once to Lawa, and of his Highness abstaining from any further action regarding Lawa until a Khureeta was received from the Agent Governor General. I repeated this advice several times, and the Nawab in reply fully consented, and since I commenced to pen this letter the Lawa thakoor has left for his home.

6. A little after noon, the young thakoor called upon me; on taking his seat he was much overcome, and indeed his agitation was so great, that he could give no coherent answer to what I said; all that he could state was that his uncle had gone to the Thuggee and Dacoitee office at the request of Hakeem Surwur Shah, at about nine o'clock in the evening, and that he was accompanied by his nephew, Bijey Sing, Dewarree Brahmin, a Lawa kamdar, Munnee Lal, another kamdar, and several followers. In what way his uncle, cousin, and servants were killed, he doesn't know, but he added that several of the servants who went escaped to Lawa, and that they alone will be able to state what really occurred. As for himself, he was kept a prisoner for some days, and had only lately been given his liberty.

7. I then told the thakoor that the Nawab had acceded to his at once proceeding to Lawa, and that I should send your Agency chuprassee, Ram Suroop, with him. I also warned him of the necessity of avoiding all disputes with the Tonk officials, and urged him to restrain his followers from anything that might reopen the question, and I finally bid him to wait quietly at Lawa until the views of the Governor General's agent were known.

8. Impressed with the value of what you said to me in our conversation at Deolee, I determined to acquire, if possible, the testimony of one or two independent witnesses. I accordingly sent for the native doctor in charge of the Dispensary, and he informed me that on the 1st August, Surwur Shah requested Rewut Sing to visit him. The thakoor accordingly went accompanied by his followers; after they had conversed for a short time, Surwur Shah bid the thakoor and his party take off their swords; on their refusing, the Hakeem, having spoken a few words in Púchtoo, went away. On this a number of Walaitees rushed out from all parts of the building and shot and cut down the thakoor's party. The guard outside also endeavoured to secure those of the thakoor's party that remained outside, but some escaped. During the day there was an idea in the city that something was going to happen, and many persons were seen to enter the Thuggee and Dacoity Office, and when, at nine o'clock in the evening, shots were heard, persons amongst themselves observed that the Lawa party were being massacred at the "Girazee"* office. The Doctor added that from fear of the Durbar few persons would be found in the city who would dare to give evidence; that he had several authorities for what he had stated, the principal of whom was his compounder, a Mussulman whose house was directly opposite the "Girazee" office, and who had heard the firing. On my observing that I should like to see him, the Doctor said that in the first place he doubted whether the man would speak on the subject to me, so great was the dread of the Durbar; and that, secondly, he doubted whether the man would be allowed to see me.

* Thuggee and Dacoitee.

9. As I am not officially investigating the matter, and am merely recording, for Colonel Eden's perusal whatsoever I may hear in this place, I thought it best not to send for this person, as it might do him harm, and I see no reason to doubt the truth of the native doctor's statement, he being quite a disinterested person. The doctor further added that after the tragedy a regiment was at once sent off to Lawa, and some guns were to follow, but that the Nawab's uncle and "peer" had pointed out to him the foolishness of such a step after what had occurred. The guns were accordingly countermanded, and the infantry who had proceeded to Lawa were ordered to return singly and out of uniform to conceal the step that had been taken.

10. Your Chuprassee Ram Suroop's account is, that only Rewut Sing, Bijey Sing, Dewarree, and Munnee Lal, went inside the "Girazee" office; that they were the first killed, and that when their followers outside suspected what was happening, that they also drew their swords, and that several of them were killed and several escaped. He adds that the corpses of the Hindoos were immediately cut up, packed in a cart, and taken away and burnt. This in itself is most suspicious.

11. From all I have heard I have no doubt in my own mind that the Lawa party were treacherously inveigled and attacked. At first I thought the Nawab was not cognizant of the affair, but I have since changed my mind, for it could not have been done without his knowledge. The old Thakoor Rewut Sing was the most able of the advocates of the young Thakoor in his case between Tonk and Lawa; by getting rid of him and the two kamdars, there is no one left to advise the nephew, or to manage the affairs of the thakoor. The Tonk Durbar have calculated this, and promise themselves that, for the future, they will be able to have their own way, especially as the thakoor is young and has not yet evinced any aptitude to administer his own affairs. All therefore that was wanted was an unscrupulous agent; Surwur Shah filled this place; from all I hear and have seen of him he appears thoroughly capable of planning and carrying out what has happened; and to effect his means, he has at his disposal some 500 or 600 Wulaitees ready to do any deed of blood.

12. The Durbar seems fully to intend to hear what the Colonel has to say before they take any further action, so that I see no need for your coming over here. The Nawab several times promised me that nothing should be done until the Colonel writes, and I am inclined to believe him in this.

13. The native doctor has only said what he has on the promise that his name should not appear; I therefore trust that, as I gave this promise, his name may not get known, as he is in great dread that the Tonk Durbar should hear what he has stated; he vouches solemnly that it is correct in all its leading points.

14. In conclusion, the only persons who will be able to give a credible account will be those who have escaped to Lawa; those who are prisoners here are liable to be coerced.

15. Just as I close this letter the postmaster has come. His statement is to the same effect as that of the rest, viz., that Surwar Shah invited Rewut Sing to his house, that the old thakoor, with three or four men went inside; that they were asked to take off their swords; they refused; a number of Wulaitees rushed in and cut and shot down the thakoor and his friends, at the same time those outside were also attacked.

All this independent evidence, hearsay though it only is, leaves no doubt in my mind that this massacre was a deliberately planned one. I cannot absolve the Nawab from cognizance of it, for the soldiers would not have obeyed anyone else's orders.

P. S.—Excuse errors. I am anxious to get to get this off at once.
Ram Suroop has gone to Lawa with the thakoor, and will report matters to you daily.

(signed) *A. W. Roberts,*
Acting Agent, Governor General.

SERVICE MESSAGE.

From Simla, dated the 24th August 1867. | To Aboo.
From Foreign Secretary. | To Colonel Eden.

"REPORT of 14th on Tonk affair received. Communicate following instructions to Political Agent:—Viceroy desires that the evidence be taken with great care, all important points being fully brought out and irrelevant matter excluded. The building in which tragedy occurred should be examined, its condition and any marks of conflict observed, and a sketch of it made showing exact position of the two parties of the thakoor's people when attacked. Ascertain also the number of the thakoor's men who accompanied his uncle to Surwur Shah's house, and the arms each man carried; likewise the age and description of each, and especially of the leading men, as this may throw important light on the probabilities of the case. Similarly note the numbers and arms of Nawab's party at Surwur Shah's house.

"If practicable, evidence of all parties should be taken in presence of each other. To keep Native doctor's evidence secret would be inconvenient, and, indeed, almost useless. Unless given before Surwur Shah, it can be of no value. Still it is quite natural that he and others should be afraid to speak out for fear of Nawab's future vengeance. If so, assure them not only of protection by British Government, but of service being provided elsewhere similar to what they now have.

"Investigate facts connected with Nawab's alleged order for troops to move on Lawa and extent to which they were carried out."

From Colonel *W. F. Eden*, Governor General's Agent for the States of Rajpootana, to the Secretary to the Government of India, Foreign Department, with the Governor General,—No. 1085-59P., dated Aboo, 6th September 1867.

I HAVE the honour to submit a letter, No. 97-16, of the 26th ultimo, from the Political Agent, Harowtee, with enclosures, reporting the result of the inquiry instituted to ascertain the circumstances under which Thakoors Rewut Singh, Beejey Singh, and others of Lawa met their death at Tonk on the 1st of last month.

2. I may premise that your telegram of the 24th ultimo, conveying the instructions of his Excellency the Viceroy as to the manner in which the investigation should be conducted, was immediately telegraphed to Mr. Bruce; the inquiry had, however, terminated on the 23rd idem, and that officer had returned to his head-quarters at Deolee before the telegram reached him.

3. As was anticipated, the evidence that has been elicited is of the most conflicting and irrreconcilable nature. The great mass of direct testimony lies with Tonk; and I propose, in reviewing the case, first, to touch on the evidence set forth by that Durbar; next, to analyse and compare it with the circumstantial and other evidence that has been adduced, in order that we may arrive at a just conclusion as to how far the direct testimony of the Tonk witnesses may be accepted as trustworthy; and lastly, to proceed to the deposition of the sole surviving eye-witness on the part of Lawa, testing his evidence also in the same manner as that of the witnesses on the side of Tonk.

4. The Tonk Durbar's version of the story as to the circumstances under which Rewut Singh and his attendants were killed may be thus summarised:

That the thakoor of Lawa was summoned to Tonk in order that the Nawab might reprimand him for his insubordination and misconduct, as well for the non-payment of the tribute due to the Durbar and for oppressing the villages near Lawa; that the thakoor accordingly presented himself; that during the day of the 1st August, Rewut Singh, the thakoor's uncle, with about 50 men, proceeded to the office and residence of Hakeem Surwur Shah, the Dacoitee officer; that the hakeem was unwell and unable to see Rewut Singh, but sent him a verbal message by his subordinate, Ameen Mahomed, to effect that Lawa would have to contribute like others for schools, dispensaries, &c.; that on

hearing this Rewut Singh became violent and went away, using harsh language; that the same evening about 9 P.M. he again suddenly presented himself at the head of a number of attendants at the hakeem's residence; that on being denied admittance owing to the hour of the night and to the illness of Surwur Shah, the door was forcibly pushed open; that Rewut Singh and his men then poured into the court-yard; words ensued with the guard there; some one's turban was knocked off, on which Rewut Singh struck one Ally Bahadoor, and then a general *mêlée* ensued, in which Rewut Singh and nine others of Lawa were killed and one man wounded and made prisoner; that on the Tonk side Golab Khan and six Hindoos were killed and nine Mahomedans wounded; that the Nawab, hearing of the fracas, and fearing that Thakoor Dheerut Singh might create further disturbance, immediately gave orders to have the house in which the thakoor was residing surrounded and watched; that some few troops were also despatched towards Lawa in pursuit of such of Rewut Singh's men as had escaped; and that on reaching Lawa they were fired at, and therefore returned to Tonk.

Vide Enclosure C., witness No. 1.

5. In support of this statement we have, first, the evidence of Hakeem Surwar Shah, who deposes to effect that Rewut Singh, accompanied by a party of attendants, came to his office and residence during the day of the 1st August; that, as deponent was unwell, he sent the verbal message above alluded to, on receipt of which Rewut Singh went away in a rage; that he (Surwar Shah) became insensible about 5 P M., and so remained till next morning, when he learnt that Rewut Singh had presented himself the preceding evening, and that, on being refused admittance, a fracas had ensued, as before related.

Vide Enclosure C., witness No. 2.

6. The second witness, Ameen Mahomed, corroborates in almost the same words the statement of Surwar Shah regarding the mid-day visit of Rewut Singh and of the Thakoor having gone away in a passion after receiving the verbal message. Of the evening visit and of the fracas which then ensued deponent knew nothing.

Vide Enclosure C., witness No. 3.

7. The third witness, Yacoob Ahmed Khan, stated he knew little or nothing of what took place; that he saw 17 dead bodies, ten of Lawa men and seven of Tonk; that he was next morning directed to go and catch the fugitives but didn't succeed.

Vide Enclosure C., witness No. 4.

8. The fourth witness, Nusseeroodeen, deposed to having heard firing on the evening in question; that, on proceeding towards the direction of the shots, he was met by an order from the Nawab to make arrangements for surrounding the house in which Thakoor Dheerut Singh was residing.

Vide Enclosure C., witness No. 5.

9. The fifth witness, Faiz Mahomed, deposed to having gone to the hakeem's house on hearing of the disturbance, and to having there met Yacoob Ahmed Khan (witness No. 3), and to having ordered him immediately* to go and apprehend such of Rewut Singh's men as had escaped. Deponent further stated that 16 Hindoos were killed and one Mahomedan; that the bodies of the former were burnt next morning by Shahab Khan; that the names of the six Hindoo sepoys of Tonk that were killed were Lutchmun Singh, Ram Singh, Shewloll, Kulloo Ram, Bhageerut, and Hurree Ram. On being questioned as to the places of residence of these men, he stated he knew nothing about them, and further, on being asked whether it was or was not the custom to send the bodies of persons meeting a violent death to the native doctor of the dispensary for examination, deponent replied in a prevaricating manner, which may be held, however, as admitting that such is the custom in Tonk, and that in the present instance it was not acted up to.

Vide Enclosure C., witness No. 6.

10. Sixth witness, Abdool Hummed, narrates having heard firing, and that on going to the locality he saw some dead bodies, and that he heard a fracas had taken place owing to a "puggree" having been knocked off.

Vide Enclosure C., witness No. 7.

11. The seventh witness, Roopa, a klassie, whose house adjoins the hakeem's office, states that he was smoking about 9 P.M.; heard some one demand admittance into the office, which was refused; and that the request was repeated, and

* *Vide* Yacoob Ahmed Khan's statement, who states he was ordered next morning.

and shortly after a shot was fired, which was followed by several others, but that he did not leave his house from fear.

12. Witness No. 8, Abdool Rahman, No. 9, Abdoola, No. 10, Ally Hussein depose to Surwar Shah having been ill with fever and paralysis. *Vide* Enclosure C. witnesses Nos. 8, 9, and 10.

13. Witnesses No. 11, Aziz Khan, No. 14, Mahomed Syud Khan, No. 15, Mahomoodeen Khan, No. 16, Ally Bahadoor Khan, No. 17, Moleedad Khan, profess to relate the manner in which the collision commenced; they state that about 9 P.M. Rewut Singh summoned them to open the gate as he wanted to see Hakeem Surwar Shah; that he was in reply requested to come the following day, as the hakeem was ill; that Rewut Singh and his followers persisted in forcing their way in; that some one's "puggree" was knocked off, on which Rewut Sing struck Ally Bahadoor, and then a general *mêlée* ensued. *Vide* Enclosure C., witnesses Nos. 11, 14, 15, 16, & 17.

14. Witnesses No. 12, Jumoodeen Khan, No. 13, Mahamood Khan, and No. 18, Meeroo Ally, only speak of the collision after it had commenced, but in which they took no part. *Vide* Enclosure C., witnesses Nos. 12, 13, and 18.

15. The next two witnesses, Nos. 19 and 20, are Hindoos and brothers, who state they accompanied the Lawa party to the hakeem's house to see the fun, or "tamasha;" that on arriving at the gate admittance was demanded and refused, on which the thakoor's men forced the door: a quarrel ensued, and weapons were resorted to; that they fled, but were arrested by a Chobdar, and that they have been in confinement in the Tonk kotwallee ever since. *Vide* Enclosure C., witnesses Nos. 19 and 20.

16. Witness No. 21, Nanoo Singh, also deposes to having accompanied Rewut Singh, seemingly for no reason, and narrates the story of the collision in the same manner as the two preceding witnesses. *Vide* Enclosure C., witness No. 21.

17. Witness No. 22, Shahab Khan, merely deposes to having had 16 corpses burnt; witness No. 23, Lutchmun, states he was absent and knew nothing. *Vide* Enclosure C., witnesses Nos. 22, and 23.

18. Such, then, is the evidence in support of the Tonk version of the case; the witnesses all hold together, and tell the same tale with almost suspicious exactitude. Of its kind, the evidence is very perfect; I would now proceed to analyze it.

19. To commence with the causes which led to the summons of the Thakoor to Tonk, I would invite attention to the Nawab's reasons as assigned in the papers marginally noted to my address; therein it is stated that the thakoor was called to be reproved for his insurbordination, for the non-payment of his tribute, for oppressing the villagers near Lawa, &c. Compare this with the letters* from Surwar Shah to the Lawa thakoor, desiring him to come to Tonk. In these the Nawab is represented as anxious to honor and reward the thakoor, as desirous of granting him a jaghire, urging the thakoor to come to Tonk quickly, as the Nawab was going to Seronje. Here there is a palpable falsehood at starting; and bearing in mind the persistent manner in which the Nawab has endeavoured to ruin the thakoor, the sudden wish to honour and reward him would, had nothing happened, have been very singular, but, regarded in the light of the tragedy which has occurred, cannot fail to leave the strongest suspicions that Surwar Shah's letters of invitation were the first steps of the snare into which the thakoor was cunningly duped.

1. Khureeta from Nawab of Tonk, dated 2nd August.
2. A note from Tonk Vakeel enclosing perwannah from Nawab of Tonk, dated 6th August, translations of which were submitted to Government with this Office Despatch, No. 970-52, dated 12th August 1867.

20. The next point we have to consider is whether Rewut Singh did or did not visit the hakeem's office during the day of the 1st, as stated, and whether, if he did, any quarrel then occurred.

That Rewut Singh did visit the office either on the 31st July or 1st August is admitted on all sides; it cannot, however, be shown so clearly whether any high words did pass on that occasion. Surwar Shah and Ameed Mahomed (1st and 2nd Tonk witnesses) state that Rewut Singh got in a passion and went away after using harsh or abusive language. On the other hand, there is the evidence of Thakoor Dheerut Singh, as well as of Dhan Singh and Rewut Singh, to show that Thakoor Rewut Singh came back very pleased with his interview, which would scarcely have been the case had there been a quarrel; and if we remember the tenor of the Hakeem's letters of invitation to the thakoor,

Vide Enclosure C., witnesses Nos. 1 and 2.

Vide Enclosure B., witnesses Nos. 1, 4, and 5.

* *Vide* Enclosure A.; letters dated 22nd and 27th July 1867.

thakoor, dated but a few days previously, the most natural conclusion is that, as stated by the deceased Rewut Singh to Thakoor Dheerut Singh, the promises made in them were verbally reiterated. I may here remark that the value of Surwar Shah's evidence can be in some manner tested by referring to the stated date of this interview. He has deposed that it took place 10 days subsequent to the thakoor's arrival at Tonk, whereas his letter of invitation pressing the Thakoor to come, and with which the latter complied, is dated* 27th July, so that the truth of the unanimous statement of the Lawa witnesses that they reached Tonk on the 29th July can scarcely be doubted, and hence the interview must have taken place two or three days after their arrival, most probably the former, instead of 10, as affirmed by Surwar Shah.

* *Vide* Enclosure A.

21. We now come to the visit of Rewut Singh to the hakeem's office about 9 P.M. on the 1st August. The Tonk witnesses seek to establish that Rewut Singh proceeded there uninvited, and brought on the collision by his own violence.

No 1. Deerut Singh.
„ 2. Pope Singh.
„ 3. Beejey Lall.
„ 4. Dhan Singh.
„ 5. Rewut Singh.
„ 6. Ghassi Singh.
„ 7. Shenoath Singh and others.

But, on the other hand, there is the concurrent testimony of the witnesses marginally cited to prove that on the evening in question a chobdar came from Hakeem Surwar Shah to call Thakoor Dheerut Singh, who sent his uncle, Rewut Singh, accompanied by Beejey Singh, the two Lawa Kamdars, and some attendants. This of itself would be sufficient to throw grave doubts on the statements put forth by the Tonk witnesses; but, coupling it with other concomitant circumstances attaching to the case, the Durbar's version of the story becomes so improbable as to be utterly unworthy of credence.

It appears that none carried fire-arms, except, perhaps, Rewut Singh himself—*vide* Enclosures.

22. It is quite certain that, had Rewut Singh been silly and hardy enough to attempt to insult or attack Surwar Shah at Tonk itself, he would have taken a stronger party with him and better armed, and he would not have been accompanied by the kamdars, Moona Lall and Lalljee, elderly, infirm men, unused to carry arms.

23. Nor does it appear at all likely that the collision was brought on gradually, arising from a brawl, for had such been the case, the wounded would have formed a far greater portion to the number killed. As it was, every man on the Lawa side appears to have been killed outright then and there, excepting Megh Singh, who attributes his own escape to the circumstance of his having had his turban fortunately tied like an Affghan.

Vide Native doctor's Evidence, Enclosure D.

24. I am very sceptical as to the number of the casualties which are stated to have occurred on the Tonk side. One Mahomedan and six Hindoos are said to have been killed and nine Mehomedans wounded; of the latter, four were only scratched, reducing the number of those really hurt to five.

The bodies of the six Hindoos in Tonk employ, stated to have fallen, are said to have been burnt next morning, so that the Political Agent was unable to ascertain beyond all doubt by seeing the corpses whether they ever had any real existence. There are grave doubts on this point. It is most extraordinary that all the six Hindoos should have been killed, whilst their Mahomedan comrades should have escaped with the proportion of one killed to five wounded. These six Hindoos, too, appear to have been singularly friendless; no one seems to know their homes, and there was no one even in Tonk of their own religion who would perform the last funeral rites; for according to the showing of the Tonk witnesses, their bodies were burnt by a Mahomedan, one Shahab Khan.

Vide paragraphs 28 and 29 of Political Agent's Report.

25. The Political Agent clearly discredits the Tonk statement on this point, but he appears to have missed what occurs to me as the real solution of the matter.

I entertain a very strong conviction that 16 Hindoos were killed; but instead of ten belonging to Lawa and six to Tonk, the whole were of the Lawa party.

Vide Enclosure B, witness No. 1.

On referring to the evidence of Dheerut Singh, we find he gives the names of 15 persons as having accompanied Rewut Singh, and in a subsequent part of his deposition he states all, except Megh Singh, were slain. Here we can at once account for 15 Hindoo corpses, leaving a discrepancy of but one.

Vide Enclosure B., witness No. 8.

But, on turning to the evidence of Megh Singh, the only surviving eye-witness on the part of Lawa, it will be observed that he states one Siree Lall ascended the fatal staircase in Surwar Shah's house, together with Rewut Singh and Moona

Moona Lall ; and this statement is repeated in the memorandum attached to the plan of the building (*vide* Enclosure F.).

26. We may, therefore, suppose that he too was slain. Siree Lall's name is, however, not amongst those mentioned by Thakoor Dheerut Singh; probably it was an oversight; and if, therefore, I am correct in this surmise, we have the full number of 16 corpses. I have telegraphed to Mr. Bruce to make inquiry on this point without delay; his answer may be received ere I close this Despatch: should it confirm my supposition, I need hardly add that more conclusive evidence against the statements put forward by Tonk could not possibly be forthcoming. It establishes that the whole of the Tonk eye-witnesses have perjured themselves, and that not a word of reliance can be placed on what has been urged by the durbar.

27. It will be observed that amongst the Tonk witnesses there are two individuals from whom, as being unconnected with Tonk, valuable information might be looked for; I refer to Girdharee, No. 19, and Roor, No. 20. They profess, on the casual acquaintance of one of the Lawa kamdars, to have accompanied Rewut Singh on the evening of his fatal visit to Surwar Shah's house. The kamdar no longer lives to disprove the statement; but it is extraordinary that neither of these witnesses can recognise, or be recognised by, any person attached to the Lawa thakoor, although by their own showing they were at the Lawa thakoor's house before starting with Rewut Singh. The improbability of their being asked by Purohit Lalljee to accompany Rewut Singh for no ostensible purpose is apparent; and the utter failure of Roor* to prove the circumstances under which he met and made the Purohit's acquaintance, as recorded by the Political Agent at the foot of the witness's deposition, is sufficient to cause us to reject their testimony: nor must we overlook the fact that these two witnesses had been in confinement in the Tonk kotwallee, seemingly without any cause whatever. where doubtless threats and bribes were not wanting to secure their silence or co-operation.

Vide Enclosure C.

28. In like manner, I distrust the evidence of Nanoo Singh, witness No. 21; he, too, states that he accompanied Rewut Singh's party owing to a casual acquaintanceship with the deceased Moona Lall.

29. I now proceed to the reasons which have been assigned for despatching troops to Lawa, and for surrounding the thakoor's house at Tonk for some days. It seems unnecessary to do more than express my entire concurrence in the conclusions arrived at by the Political Agent, Harowtee, in his 32nd paragraph, and again in his 51st and 52nd paragraphs.

There can be no doubt that the surrounding of the thakoor's house and the despatch of troops to Lawa were part of a preconcerted plan.

30. Taking the Tonk version of the case either in whole or in part, we cannot but be convinced of its utter untruthfulness throughout.

31. I would now advert to the evidence on the part of Lawa.

We have first cordial invitations from Surwar Shah to Thakoor Dheerut Singh to visit Tonk, which the thakoor complied with, reaching Tonk on the 29th July. On or about the 31st, Rewut Singh, uncle and manager of the young thakoor, visits Surwar Shah, and returns home well pleased, informing him that their grievances are to be settled.

Vide enclosure H.
Vide evidence of Dheerut Sing and others.

On the evening of the 1st August a messenger comes from Surwar Shah to the thakoor saying that, as the Nawab was about to start for Seronje, the Thakoor would be presented with a khillut the following day, and requesting the immediate attendance of the thakoor at the hakeem's house, in order that suitable arrangements might be made. Dheerut Singh at once deputes his uncle, Rewut Singh; his cousin, Beejey Singh, with his kamdars and some attendants, whilst at the same time Beejey Lall, one of the kamdars, proceeds to a banker's house to obtain money for a suitable "nuzzar." Of the party that started for Hakeem Surwar Shah's house, there is but one witness living to tell the tale.

Vide evidence of Dheerut Singh and others.

Vide Enclosure B., witness No. 3.

On

Vide foot-note by Political Agent on Roor's deposition, No. 20 of Enclosure C.

Vide Evidence of Megh Singh, Enclosure B., witness No. 8.

On arriving at the gate, the party was challenged by a sentry, who remarked that the hour was an unusual one for a visit, but goes to announce them, whilst they themselves sit down and await his return.

He returns and conducts Rewut Singh, Beejey Singh, and two kamdars up a staircase, the attendants remaining below. After an interval of about half an hour, they were suddenly set upon and cut down by a number of Wullaitees, all being slain outright but the deponent, Megh Singh.

Vide Evidence of Dheerut Singh, Pope Singh, and others.

Vide Evidence of Gopal Singh, also Mendhi Ally. *Vide* Enclosure B., witness No. 15, and Enclosure E.

The noise of firing had no sooner reached the ears of Dheerut Singh and those who had stopped with him, than they found the house in which they were residing, the doors of which they had promptly closed, fearing treachery, surrounded by troops demanding them to yield; and early next morning a considerable body of Tonk troops appeared before Lawa, and kept up a little desultory fighting for two days before they were recalled.

32. Such, then, is the narration of events set forth by the Lawa witnesses. The whole story is in all points supported by circumstantial evidence; the very absence of all details in Megh Singh's deposition looks truthful: confounded by the suddenness of a night attack, it is impossible he could have known much that occurred beyond the plain facts that he stated. He had been a prisoner in the hands of the Tonk authorities from the evening of the massacre until the moment his evidence was recorded by the Political Agent, so that he could not have been tampered with or influenced by the Lawa thakoor.

33. In short, the direct evidence adduced by Lawa, coupled with the circircumstantial evidence and the testimony of all uninterested persons, as adverted to by the Political Agent, establishes fully and clearly that the thakoor was summoned to Tonk by the durbar with treacherous intent; that he was invited to attend at the Hakeem Surwar Shah's house on the evening of the 1st August; and that his uncle, Rewut Singh, who attended in his stead, together with those who accompanied him, were there suddenly set upon and cruelly massacred; measures being taken at the same time to capture Dheerut Singh and the remainder of his attendants, and to seize Lawa.

Vide Paragraphs 57, 58, 59, and 60, of Political Agent's Report.

34. His Excellency in Council will not fail to observe that the Nawab's own uncle and his own brother secretly admitted to Mr. Bruce the truth of the conclusion arrived at; they only endeavoured to palliate the conduct of the Nawab and Hakeem Surwar Shah in so far that they deny there was any intention of butchering Rewut Singh, and those who accompanied him, and declare that the arrest of the party was all that was desired; that through failure or bungling in execution such deplorable results ensued.

Vide paragraphs 72, 73, and 74 of Political Agent's Report.

35. The Political Agent, leaning chiefly on what he heard from Native gentlemen at Tonk, has accepted this view of the case, though he considers Surwar Shah must be held answerable for the wanton sacrifice of life that occurred, since he failed to take such precautionary steps for effecting the arrest of the party as the peculiar circumstances of the cases demanded; it being almost a matter of certainty that without due precautions bloodshed would assuredly ensue.

36. Glad as I would be to concur even in this degree of extenuation, I most reluctantly record that the stern, unbending facts on evidence wholly prevent my doing so.

37. If it had been the object of the Nawab and of Surwar Shah simply to arrest Dheerut Sing, Rewut Sing, and their retainers, this could have been easily, nay far more easily, effected by surrounding them altogether in the house in which they resided, and in which on the night of the massacre Dheerut Singh was himself confined, than by dividing the party into two, capturing each separately. What could have been easier than to have surrounded the whole in Dheerut Singh's house, and starved them into surrender, as was done in the case of the Thakoor himself?

The Lawa party could not have exceeded 50 armed men, and with such a handful resistance, as hopeless, would never have been attempted. In short, to argue that the invitation to Surwar Shah's house had for its object the division of the Lawa party to facilitate their arrest is tantamount to saying that those who planned the plot wanted ordinary sense and foresight.

38. Again

38. Again, the circumstances of the massacre, as detailed by Megh Singh, preclude us from believing that anything short of wholesale butchery was intended. The party were not summoned to surrender, or directed to throw down their arms, or even overawed by superior force, but they were suddenly set upon and cut down without any warning whatever. Further, had Golab Khan and his Wullaitees received orders to arrest, not to massacre, the party, and admitting that the Rajpoots fought to a man rather than be captured, I look upon it as a matter of certainty that some few whilst cut down and placed *hors de combat* would have survived the conflict a few hours: all were, however, killed outright, but Megh Singh, and his escape I attribute to providential good fortune rather than to the mercy of his assailants; probably he was not observed as being alive until the noise of the disturbance drew people to the locality, when to have him killed in cold blood would certainly have been noticed, and would have upset the story put forward by the Tonk Durbar.

39. In short, it appears to me that whilst there is no evidence whatever to support the conclusion that a massacre was not intended, there is very strong reason to believe it was, and I am of opinion that Captain Roberts in his demi-official letter of the 9th ultimo, submitted to Government on the 14th idem, correctly estimated the causes and arguments which induced the perpetration of so foul an outrage on humanity.

40. Thakoor Dheerut Singh is young, weak and inexperienced, and has been entirely guided by his uncle, Rewut Singh, a stout old soldier, who was until 1865 employed in the Ulwur State as Commander of a body of cavalry; when, however, the Nawab threatened his nephew, the head of the family, he resigned the Ulwur service and proceeded to Lawa, where he has been the most vigorous and able advocate in support of the young thakoor's rights; I believe, therefore, that the Tonk Durbar trusted, by cutting him off, together with Beejey Singh and the Lawa kamdars, to sweep all those of sufficient weight and influence to offer any opposition.

41. I would here draw attention to the words addressed, or said to have been addressed, by the Nawab to Dheerut Singh himself, to the effect that the past could not be recalled, and that had he, the thakoor, been present at Surwar Shah's house, he too would have suffered the fate of Rewut Singh. *Vide* evidence of Dheerut Singh.

42. The author and prime mover in this tragedy has been undoubtedly Hakeem Surwar Shah; from the first he has been the instigator of the Nawab in his uncalled-for action against Lawa.

He is notoriously a bad and wicked man, and his attempts to prove he was ill during the night of the massacre by suborning the Native doctor only further tends to establish his connection with the crime. *Vide* Native doctor's Evidence, also Paragraph of Political Agent's Report.

43. It is somewhat difficult to determine how far the Nawab has been implicated in this disgraceful affair. If he were weak and indolent, it might be imagined that the treacherous plot was concocted without his connivance and wish: but he is, on the contrary, the most vigorous ruler in Rajpootana and jealous of the power of his ministers. Surwar Shah has certainly great influence over him, but I feel convinced the hakeem would never have attempted to carry out the plot without the consent and approval of his master; and we may further rest satisfied that this deed of blood would never have been transacted unless all the actors had been assured of their chief's tacit consent, and were promised his full support, whatever happened. The Nawab's subsequent conduct and action fully support this belief; not the slightest regret has been expressed for what occurred, but, on the contrary, witnesses have been suborned and false statements set forth, and Surwar Shah and his myrmidons backed to the fullest extent.

The Nawab's connivance in the scheme to entrap the Lawa party by treachery has been admitted by his nearest relations, and is fully borne out by the evidence; and the mind that can approve of one kind of foul play has not far to step when acceding to another.

44. I would now proceed to suggest, for the consideration of his Excellency the Viceroy in Council, the steps that appear necessary and desirable to mark the grave sense of the displeasure of the British Government for so cruel an abuse of power by one of its feudatories.

To prevent the possibility of a recurrence of such a savage and barbarous act in any Native state, it is alike demanded of us, by humanity as well as by policy, to adopt such forcible and punitive measures as will not fade from the memory of any chieftain.

I would respectfully submit that the facts which have been proved in this painful case clearly illustrate the Nawab's utter unfitness to be entrusted with the lives of others.

I am not aware whether the Government of India is prepared to take so decided a step; but to my mind the removal of the Nawab from authority would not in any way be too severe a punishment for his share in the crime committed.

He has a son about 10 years of age, who might be appointed to succeed, the conduct of affairs being entrusted, till he became of age, to Sahibzadah Ibadoola Khan, brother of the late, and uncle to the present, Nawab. Ibadoola Khan is personally respected and liked, and for 30 years past has held important charges in the state. Should this measure be concurred in, it would be necessary to fix a stipend for the present chief and to direct his residence other than at Tonk.

45. But whether his Excellency accepts this proposition or not, I would most strongly recommend that the Lawa estate be placed totally and entirely without the jurisdiction of the Tonk Durbar for all time to come. I would also suggest that the tribute of 3,000 rupees heretofore paid by Lawa to Tonk be discontinued, and that the thakoor be placed under the Political Agent, Jeypore, in the same position as the Kotree chiefs of Kotah; no inconvenience would arise from this arrangement.

46. A reference to the map will show that Lawa lies on the border of Jeypore, to which state it originally belonged, and with which Court the thakoor has always maintained his connection. There would be no difficulty, therefore, in placing Lawa under Jeypore if this were deemed a preferable measure, reserving to ourselves, of course, the right of resuming the charge whenever we thought proper. I need hardly say that the Maharajah of Jeypore would gladly accept the suzerainty of one of the ancient offshoots of the state.

After the recent display of violence against Lawa, I look upon the separation of the fiefship from Tonk as a most essential protective measure.

47. I would next recommend that a pension be assigned to the families of Rewut Singh and those who were massacred with him, to be defrayed by the Tonk State. I will report in detail on this point hereafter should the proposal be approved of.

48. I would recommend a demand for the immediate surrender of Hakeem Surwar Shah, and that he be detained under our custody as a political prisoner for the term of his natural life. It is useless to arraign him on a criminal charge, for he could obtain no judicial evidence.

49. I would also recommend a demand for the immediate discharge of every sepoy attached to Hakeem Surwar Shah's office who was in Tonk on the 1st August last: this would ensure some measure of punishment to those who were concerned in the massacre.

50. And, lastly, I would recommend that the salute of the Nawab of Tonk be reduced from 17 to 11 guns.

51. However marked our action may be in this case, we shall receive the full approval of public feeling in Rajpootana. The news of the massacre sent a thrill of horror throughout these states, and the deed is compared to the diabolical tragedy perpetrated by the Nawab of Tonk's grandfather, the free-booter Ameer Khan, at Nagon, A.D. 1808, when the Maharajah of Jeypore and many nobles were treacherously butchered.

Vide page 149, vol. II, *Tod's Rajasthan.*

52. In conclusion, I may mention that I visited Lawa in January last with a view to ascertain whether the Nawab had any real and just cause of complaint against the thakoor; and I came away convinced that the charges of insubordination, oppression, &c., preferred against him were utterly groundless, and that the thakoor was prepared to accept in every way all reasonable commands of his chief. On this occasion Surwar Shah had been deputed by the Durbar

to

to accompany me. The thakoor was most courteous and deferential to the hakeem, and pressed the acceptance of such hospitality as his house offered, and I then observed with regret that it was refused.

Prior to the mediation of this office in the Tonk and Lawa dispute in 1866, the thakoors of Lawa had never presented themselves at Tonk, or rendered feudal service. Since then, however, Dheerut Singh has been constantly in attendance at the capital, and the tenor of the thakoor's notes to Surwar Shah clearly exemplify the absence of an insubordinate spirit towards the Durbar. I mention this because the Nawab has not refrained from making the most untruthful charges against his vassal, simply with a view to justify his own unjustifiable proceedings.

Reported to Government by letter, No. 142–5, dated 5 February 1866.

Mr. Bruce, it will be observed, has recommended the withdrawal of the Tonk troops from Goordhunpoora.

When at Lawa I examined this fort; it has been built of mud in an open plain about 1,200 yards from Lawa, and is of no use whatever save to disturb and annoy the villagers. It was then garrisoned by a number of Wullaitees, some of whom were unable to speak the language of the country. It appears most desirable and necessary that this fort should be vacated.

List of Enclosures to Letter, No. 1085–59, of the 6th September 1867, from the Governor General's Agent, Rajpootana,

Letter No. 97–16, dated 26th August 1867, received 2nd September, from Political Agent, Harowtee, to the Agent, Governor General, enclosing—

(A.)—Correspondence between the thakoor of Lawa and Hakeem Surwar Shah, relative to the visit of the former to Tonk.

(B.)—Lawa evidence.

(C).—Tonk evidence.

(D.)—Deposition of Native doctor and compounder.

(E.)—Deposition of Dawk Baboo, Ram Suroop, Agency Chobdar, and Mendhi Ally, Naib Moonshee, Rajpootana Agency Office.

(F.)—Sketch of scene of tragedy.

Letter, No. 98–17, of 31st August, from Political Agent, Harowtee, to the Agent, Governor General, Rajpootana, enclosing—

(G.)—Purport of petition from Naib Moonshee, Harowtee Agency.

(H.)—Purport of khureeta from Political Agent to the Nawab of Tonk, and reply on subject of withdrawing troops from Goordhunpoora.

(I.)—Purport of note from Vakeel of Tonk, and reply, on the subject of Surwar Shah's suspension from office.

(signed) *J. Blair*,
Assistant Agent, Governor General.

Enclosure No. 1.

From Captain *Bruce*, Political Agent, Harowtee, to the Governor General's Agent, Rajpootana, Confidential; No. 97–16 P., dated 26th August 1867.

For the information of his Excellency the Viceroy and yourself, I have now the honour to report confidentially on the result of my inquiry to ascertain the circumstances under which Thakoor Rewut Singh and others recently met their death at the Tonk capital.

2. You are aware that when the rumour of this catastrophe reached me, your assistant, Captain Roberts, was at Deolee, and our political relations with the Tonk State being under the direct control of the Governor General's agent, it appeared to me, as that officer was on his way to Jeypore *viâ* Tonk, he might appropriately inquire particulars for your satisfaction, and a copy of Captain Roberts's demi-official communication to my address was forwarded to you under cover of my letter of the 9th instant; subsequently the tenor of your No. 947–58, dated 8th idem, induced me on the 14th instant to proceed to Tonk and investigate the matter. Your telegram of that date reached me there.

3. On the day of my arrival the Nawab visited me; his Highness was on that occasion much perturbed, and warmly asserted his innocence of having desired to do Rewut Singh any harm. He expressed deep regret at what had occurred, and assured me he would abide by any advice or decision the Government might arrive at in the matter.

4. His Highness acknowledged that he had sent for the Lawa thakoor to visit Tonk with a view to the final settlement of differences; that Rewut Singh had by his rashness in

forcing himself uninvited on the hakeem's residence brought about this melancholy affair; and that the story of the thakoor's attempted armed entrance was really, as far as he could ascertain, what had actually occurred; and for the disturbance which took place the Nawab blamed the sepoys. His Highness acknowledged having confined the Lawa thakoor lest further bloodshed might ensue, nor did he deny the dispatch of troops for the purpose of apprehending the fugitives.

5. I pointed out to the chief how much it was for his own interests to discover who was the person to blame in the affair, for that, until some one was held responsible for an act which was infamous to the reputation of the state, the world could not but believe his Highness was concerned in it; and I expressed a hope that every facility would be afforded me to elicit the truth.

6. The Nawab acknowledged all this, and said he would in every way aid me in my inquiry, and added that he courted the fullest investigation.

7. I would here record that anyone I expressed a wish to see was permitted to visit me, although it was painfully apparent the same freedom was not accorded to their speech.

8. Your apprehensions as to the difficulty I should experience in obtaining reliable evidence were well founded; nor can this be wondered at. An inquiry into circumstances of a gravely suspicious nature, seriously affecting the reputation of the chief in whose capital it is conducted, is a delicate duty to perform with any prospect of eliciting the truth. The assurance of our protection to witnesses is little encouragement to persons living under the rule of a chief who can, in more ways than one, encompass their ruin, unless, indeed, they are prepared to change their residence, which is a hardy penalty to pay for spontaneously speaking the truth, and the more so when silence can demand a price.

9. But the peculiar features of this particular case precluded almost any hope of arriving at a satisfactory conclusion from the recorded evidence only, for it must be remembered how little Lawa had to furnish, and how little that adduced by Tonk could be relied upon.

10. Many efforts were made to introduce the general Tonk-Lawa question into the present inquiry; but this I have carefully avoided as irrelevant to the point at issue, and in recording depositions I have endeavoured to keep to that point.

11. The papers marked (B.), and forwarded under a separate cover, represent the Lawa history of the event; and those marked (C.), also submitted separately, set forth the Tonk version of the story. As regards the independent testimony I have been enabled to acquire, I will speak presently; in the meantime, I propose briefly to epitomise the purport of the papers (B.) and (C.)

12. That the Lawa thakoor was invited to the Tonk capital by Hakeem Surwar Shah neither side denies (a translation of the correspondence upon this subject is marked (A.), and attached), but in respect of the tragedy which took place there is a wide difference of relation.

13. According to Lawa, it appears that, on the evening of the 1st August, a messenger was sent by the hakeem, inviting Rewut Singh, the uncle, and Beejey Singh, the brother, to his house upon some emergent business connected with the Nawab's departure for one of his outlying districts; that the thakoors above mentioned proceeded to the hakeem's residence accompanied by two kamdars and some 12 followers; that on arriving there Rewut Singh and Beejey Singh, with the two kamdars, went into an upper apartment; and that shortly afterwards the whole party, save one, were massacred to a man; that simultaneously the Lawa thakoor was surrounded and kept prisoner, and troops at once dispatched to capture his fort.

14. According to Tonk, on the other hand, it is asserted that on the very day of the occurrence Thakoors Rewut Singh and Beejey Singh had visited the Thuggee Office, and that warm words had passed; that the same evening, accompanied by an armed following, he again, uninvited, made his appearance there and demanded admittance, which being denied to him on the plea of the hakeem's sickness, he and his followers forced an entrance; that they were opposed, and in the scuffle a puggree fell off, whereupon the thakoor is said to have struck some one with his sword, when blows were exchanged and a general *mêlée* took place, which resulted in serious loss of life.

15. It is difficult to reconcile statements so opposite.

If we give credence to the one story, we must pronounce the Tonk authorities to be guilty of as cruel a piece of treachery as it is possible to conceive, or as history has ever recorded.

16. If we believe the other version, the audacity of the Lawa thakoor in thus bearding his feudal superior in the Tonk capital justly merited the treatment it received. Rewut Singh thereby only paid the penalty of his rashness, and the clemency of the Nawab stands out estimably.

17. If, however, we analyse in the light of probabilities the evidence which each side has adduced to substantiate his statement, the veil of doubt is put aside.

18. Lawa's

18. Lawa's testimony in respect of the fracas consists only of evidence to prove that a messenger invited Rewut Singh to go to the hakeem's; that he went in company with 15 others, of whom one only lives to tell the tale, and he is produced to tell it. There is evidence also of the subsequent proceedings of the Durbar authorities in respect of the confinement of the thakoor, and the attempt to capture Lawa.

19. With Tonk it is all plain sailing. Their story is complete in all its details, and step by step we are carried along with a tide of evidence which would have flowed along its smooth channel until to-day, if necessary.

20. We are told how contumaciously Rewut Singh behaved on the very day of the disaster, and our mind at once grasps the idea that he had an ulterior object in view, and one prejudicial to the hakeem, in visiting his house at an unseemly hour of the night.

21. We have the living testimony of eight men, who were wounded on the occasion, to declare that Rewut Singh effected a forced entrance; and we are told how gentle expostulation failed to prevent the thakoor from intruding on the sick man's privacy; and when there was nothing for it but to keep his followers back, we learn that blood was first drawn by the thakoor's blade.

22. Eye-witnesses others than those engaged are not wanting to prove this tale; and we have a touching picture to substantiate that he who is supposed to have entrapped his victims was sick unto death and unable to arrest the bloodshed occurring at his very door.

23. How natural, also, that the Nawab should have confined the Lawa thakoor lest he too should create disturbance; and some of his uncle's followers having escaped, it occurred to his Highness wise to dispatch infantry in pursuit of them.

24. Can a story so clear be for a moment doubted? Would not all Tonk vouch for the facts as stated? Involuntarily one answers, it would be difficult to imagine a case more consistently adhered to by the evidence, yet bearing upon the face of it falsehood more transparent. And were such an instance to be decided by such evidence, blood might in vain call out for justice, nor could any crime obtain redress.

25. Cunningly as it has been devised and sworn to, common sense repudiates credence to a story wearing so deep a shade of improbability.

26. To those who know the history of the Tonk-Lawa differences, it is insulting to ask them to suppose that Thakoor Rewut Singh, who has been the leading spirit and adviser throughout, would voluntarily have created a disturbance in the Tonk capital, which the meanest intellect might have perceived could only end in one way.

27. It was no secret that Tonk contained at that time some 800 or 900 Wullayatees subserviently obedient to the man upon whom Rewut Singh is said to have forced an armed entrance with a few followers; and it is absurd to suppose he would thus wantonly have sacrificed his life without any possible chance of bettering his cause, and with the certainty of ruining it.

28. Much of the evidence, too, is equally repugnant to common sense. Take, for example, the list of casualties. It is, to say the least, passing strange that out of 17 killed 16 should have been Hindoos and one only a Mahomedan! whilst of the 10 wounded, one only should be a Hindoo (the Lawa man who escaped) and nine Mahomedans!

29. It would have been some little satisfaction to have exhumed the bodies and had ocular testimony that the casualties were not all on one side; but, curious to relate, of the seven men alleged by Tonk to have lost their lives, six happen to have been Hindoos, whose bodies were burnt, and are not therefore traceable! whilst all their wounded, without a single exception, are Mahomedans. This in itself is a marvellous coincidence.

30. It will not be overlooked, too, how much capital is made by the death of the so-called Sahibzadah Golab Khan, who was commanding the Tonk sepoys on the occasion.

He is the scape-goat when any admission becomes inevitable. He it was who ordered his men to repel the intruders, and by his orders did they eventually strike. He also it was who cut down Rewut Singh!

31. I would invite attention, too, to the evidence on the Tonk side of Rooe Singh, Girdharee, and Nanoo, alleged eye-witnesses of what occurred.

These men assert that they, one and all, accompanied Rewut Singh's party to the hakeem's by invitation of the thakoor's own kamdars. Is it likely, I would ask, if the thakoor really intended to visit Surwar Shah for some object of his own, that his people would publish that intention to every casual acquaintance they met in Tonk? I need hardly allude to the extraordinary fact that no one is now living amongst the thakoor's followers whom any one of these three can name as an acquaintance, or who might recognise them as having been at the Lawa abode that evening; nor is it worth while to attract notice to Rooe Singh's signal failure to establish his statement as to how he came to know the purohit who took him to the thakoor's.

32. The absurdity of the tale that troops were dispatched to Lawa to apprehend such of Rewut Singh's followers as had escaped is self-apparent.

A lunatic would scarcely dream of sending a body of infantry to capture a few fugitives; and we have the testimony of the naib moonshee of your own agency, who heard the firing, to prove that they had crossed the Burmass during the night; as also the evidence of the compounder, who saw the elephants start laden with scaling ladders, and other paraphernalia for a siege, all of which would refute the Nawab's assertion. Moreover, the naib moonshee of this agency, whom I dispatched to arrest hostilities so soon as I became acquainted a force had marched, can answer that the troops reached Lawa, and that fighting took place, particulars of which are given in the deposition of Thakoor Gopal Singh.

33. I have alluded to the peculiar features of this case from the fact that Lawa had but little evidence to adduce in support of so serious a charge. All, save one, who could have spoken of what actually occurred, had been swept away, and those who remained could, with that single exception, testify only to the invitation sent by the messenger, and state what they had heard.

34. Little though that evidence be, however, that little is not without considerable weight. A perusal of the papers will show that out of the seven men imprisoned by Tonk, as concerned in this affair, six were coolies and chumars, whose sole crime was having accompanied the Lawa thakoor to Tonk, when he accepted the Nawab's invitation to go there; and they knew nothing whatever of the occurrence for which they were confined.

35. But Megh Singh, the seventh prisoner, is a very important witness in the case, being the sole survivor on the Lawa side; and his evidence convinces me that, whatever may have subsequently happened, Thakoor Rewut Singh and his luckless companions did enter Surwar Shah's house at Surwar Shah's instance.

36. Megh Singh tells his tale truthfully and without hesitation. He does not attempt to relate more than he may reasonably be supposed to know. He can say nothing of what occurred inside, and at once acknowledges his inability to do so; he admits that on their arrival a sentry remarked on the inappropriateness of the time for a visit, but nothing more; and he points out at the scene of the occurrence the stairs up which Rewut Singh disappeared, and the spot occupied by those who waited below; both places being true to his verbal narration.

37. I believe this man the more implicitly, because from the date of the occurrence until the day of my arrival at Tonk he had remained a prisoner in the hands of the authorities. From his prison he was brought to my tent, and I then and there took his evidence. He had no opportunity of being taught, and it is highly improbable the Tonk people would allow him to learn a story which disproves their own, and goes far to establish that of Lawa.

38. The evidence also of Pope Singh and Beejey Lall in promptly denouncing Luchmunna, from some eight or ten men, as the messenger who had come to call the thakoor to the hakeem's, though not conclusive, leaves but little doubt on my mind of their truthfulness.

39. The attempt made by Tonk to prove that Rewut Singh visited the hakeem's house on the day of the occurrence, when warm words are said to have passed, is opposed to all the Lawa testimony.

40. Of the 14 attendants who accompanied Thakoors Rewut Singh and Beejey Singh to the hakeem's on that fatal evening, a list of whom will be found in the Lawa thakoor's deposition, five belong to classes which do not, as a rule, carry arms, and there is nothing to show that they did so on this occasion. I allude to the two kamdars, Sheonath Chobdar, Gunesha Hujam, and Ramooleea. That the rest were armed only with swords is, I venture to think, satisfactorily established by the fact that every wounded man on the Tonk side is wounded by sword cuts. One received a thrust with a kutlar, or dagger.

41. It is impossible, with any hope of truth, to learn how many Tonk sepoys were at the Thuggee Office on the occasion; the only Lawa witness forthcoming (Megh Singh) can but say there were a great many, and I ascertained there always are many there; we must needs accept, therefore, the Tonk statement, that there were but the usual number. The place is large enough to conceal 200.

42. That very severe fighting did take place there can be no question, from the nature of the wounds received by some of the Tonk sepoys; several of them had six and seven bad swords cuts: one, indeed, though twice brought to me to give evidence, was unable to speak, the whole of his face, nose, mouth, and chin, having been sliced off.

43. The Durbar narrative of this unfortunate affair, transparently false as it is, has, in one respect, been most cleverly coined; for, by adhering to that story, the sepoys who were actually implicated in the fight, not only acted under the avowed orders of their superior officer, who is dead, but in doing so did nothing more than we should expect any guard to do under the circumstances they relate; and that they clearly understood this point, I at once discovered when trying to induce Queen's evidence.

44. They had nothing to fear, and many to vouch for their story. They were, one and all most thoroughly prepared, and each deposed in almost the same words as the other.

I confined

I confined my recorded examination of these men, therefore, to the affair itself, for I soon found out that it was but waste of time to question them further. Five of them were really ill, examined on their beds, and unable to speak much.

45. The tenor of these remarks would, perhaps, lead to the inference that to my mind the results of the inquiry substantiates the Lawa version of the affair as true, whilst throwing out the Tonk version as untrue; but such would partly convey my opinion only.

46. In exposing what appears to me the glaring falsehood of the Tonk story, I would not accept for gospel all that Lawa must naturally think and say, although, to do the thakoor justice, his tale is one which would assuredly occur, under the circumstances of his case, to anybody thus losing so many near and dear to him; and I conscientiously think that all he says he verily believes, a marked contrast to the evidence on the other side.

47. But in conducting this inquiry I have endeavoured to elicit information from people not dependent upon the Durbar, and from persons of position and respectability, and I would delay no longer in recording that my opinion would absolve the Nawab from having in any way contemplated the massacre which eventually took place.

48. All that I have been enabled to gather from these, who were in a position to know state secrets, leads me to believe that his Highness directed or sanctioned the apprehension of Rewut Singh and the kamdars with the intention of capturing Lawa immediately afterwards, and that it was not his desire to take their lives; and the Nawab would have occupied a more dignified position in this inquiry had he acknowledged the truth rather than attempt, as he did, to foist upon me a fable bearing the impress of deception on the face of it.

49. That the chief's orders or intentions were wilfully or bunglingly carried out I firmly believe, and for the consequences I would hold Hakeem Surwar Shah mainly responsible. Abhorrently as I regard this creature, I do not say his intention was to commit murder, not because I believe him incapable of such an act, but simply because the dictates of prudence would, I think, have held him back.

50. I sincerely believe the thakoor was invited to visit the hakeem on that particular evening, and, as stated, that he, with those who shared his fate, went upstairs. Surwar Shah had then in his power all who were irksome to him in the Lawa dispute, for the thakoor himself is perfectly incompetent to look after his own affairs, and here within a small compass were his business advisers. An attempt was probably made to take their arms, and resistance offered. The rest one can easily picture. Rewut Singh had all the attributes of a fine Rajpoot of the better class, and would ill brook insult at Mahomedan hands. It is quite possible, and not improbable, that he, misinterpreting their object in confining him, unsheathed his sword, and, blood once drawn, there was a general massacre: the fewer left to tell the tale the better for the survivors.

51. Then, again, the almost simultaneous dispatch of troops to Lawa, and the surrounding of the thakoor's house in Tonk, all lead to the idea that preconcerted arrangements had been made for taking the fort and securing the thakoor so soon as Rewut Singh was in their hands.

52. Were the Tonk version of the story true, viz., that Rewut Singh came uninvited and surprised them, there would have been no such prompt action as this. It takes time to get British troops under weigh; it takes a very long time to get the ill-disciplined rabble of a Native state under arms; and yet these men had reached Lawa, 20 miles distant, by daybreak, with a swollen river, too, between them.

53. In exonerating the Nawab from any desire to take Rewut Singh's life, I consider he must necessarily have been a party to the deceptive way it was intended to capture Lawa; and though he may have had some cause to feel incensed at the attitude the thakoor has long evinced towards the durbar, having invited him to his capital on promises which were so cruelly broken, his consent to so mean a plot must be viewed as very discreditable to him.

54. It now behoves me to explain my reasons for adopting the opinion I have expressed; I will endeavour to do so.

55. It will be easily understood that persons of rank and position in a Native state would be very loath to mix themselves up in an inquiry which might reflect injuriously upon a ruler to whom they are subject. As you say, in the third paragraph of your letter, marginally noted, "Threats and bribes will not be wanting to close the mouths of those whose testimony would be of value;" and in truth their position would be a very unenviable one. To extract information, therefore, was a difficult matter. The presence of a third party rendered success quite hopeless; it could *only* be done confidentially, and in this manner do I record what was told to me, for such consideration as it may be deemed worth. No. 980-64, dated 14 August 1867.

56. To give an instance of the difficulty experienced in this matter, I would observe that, a few days after my arrival at Tonk, the Nawab's uncle, Ibadoola Khan, a brother of the late Wuzzeeroodowlah, and in those days an important state functionary, visited me. The Tonk vakeel, who introduced him, was present during the interview, and the sahibzadah

related to me the circumstances of this affair, word for word, as they are detailed in the Tonk evidence.

57. Two days afterwards I again expressed a desire to see the sahibzadah, and on this occasion we were alone, when he told me without reserve that exposure would be ruination, but that the general impression of what had happened the day after the occurrence was, that treachery had taken place; as such, he said, was it related to him, and not till some time after did he hear the story now in circulation.

58. He added, however, his certain conviction that the Nawab never for a moment anticipated bloodshed, nor does he think did Surwar Shah; that, as far as he knows from what he heard, it was arranged at a conference to make Rewut Singh and his party prisoners and then capture Lawa; and that the tragedy occurred through the clumsiness with which Hakeem Surwar Shah had carried out the plot. The sahibzadah himself expostulated with the Nawab upon the folly of besieging Lawa after what had happened, and induced his Highness to recall the troops.

59. Precisely similar information was in the same manner given me by the Nawab's own brother, Sahibzadah Ooboodoolah Khan, and by Moonshee Zhor Ally, a gentleman of respectability at Tonk.

60. They all concurred as to the rumour which was abroad at first; viz., that Rewut Singh and his party had been invited to the hakeem's and slain; but they unanimously asserted that such, they believed, was never the Nawab's intention, his only object being to take Lawa after confining Rewut Singh; and I am bound to add that, as far as I could ascertain, this opinion was a general one, and is, I believe, to be the true solution of the affair.

61. Amongst others, I questioned the agent for the firm of Luckmee Chund of Muttra, who has been all his life at Tonk, and 23 years in the Seth's employ. His evidence was precisely to the same effect as that which I have already recorded in the three preceding paragraphs.

62. It is here but just to remark that Choonee Lall, the agent to a large Kotah banking house at Tonk, told me that he had heard the durbar story only; and an old gentleman known as Choteh Meean, who, I think, enjoys a jaghire from the raj, also assured me to the same effect.

63. I have as yet not alluded to the evidence of the Native doctor at Tonk, which, as directed, I took down privately prior to the receipt of your telegram, dated the 24th instant, which reached me after I had left Tonk. A copy of his deposition and of that of the compounder is marked (D.), and attached.

64. These men spoke without hesitation, though they not unnaturally feared exposure; but, save on the subject of Surwar Shah's illness, their evidence is only hearsay, corroborative of the first general impression of the affair.

65. The Native doctor's assertion, that the perwannahs directing him to attend upon the hakeem were antedated, is suspicious. Two out of the three made over to me have been in some way abstracted from my bundle of papers. As I had mastered their purport, however, there is little harm done; they simply represented a request from the Nawab to visit and treat the hakeem.

66. Bheeky Singh's denial of having treated Surwar Shah professionally is opposed to that individual's assertion to the contrary, though it is only fair to say that he really has been ill, though not so ill, from all accounts, as to have been unable to control his actions.

67. I cannot, perhaps, adduce more satisfactory evidence as to the popular impression which this catastrophe made immediately after its occurrence than by recording the following statement:—.

68. I sent for the deputy postmaster at Tonk and questioned him as to the affair, and he described it as having occurred as related by Lawa. I then asked him if he had made any report on the subject to his departmental superior. He said he had, but had not retained a copy of it. It occurred to me very desirable to obtain this document, as possibly written with more freedom from a native to a native, and I called upon the inspecting postmaster of the division to submit it to me, which he did in original; and I beg to quote the following translation of the petition attached to the proceedings:—

TRANSLATION of a PETITION from *Gokul Chund*, Deputy Postmaster, Tonk, to the Inspecting Postmaster, Jeypore Division; dated 2nd August 1867.

I BEG to report that the thakoor of Lawa, in obedience to the orders of the Nawab of Tonk, arrived here with his uncle and brother. On the 1st August they were sent for to Hakeem Surwar Shah's house, and, having been taken to an inner apartment, on a signal given to some Wullayatee sepoys, were massacred, and Thakoor Dheerut Singh and the few followers who remained with him, are in confinement with foot and horse sentries placed all round his dwelling. A great excitement prevails, and for the last day or two there

there has been a decrease even in the number of letters posted, and I am apprehensive lest any disturbance occur in the Post Office.

69. I would venture to observe that when reliable evidence can with such difficulty be obtained, this document is a very valuable one.

70. It is important to know what really was the public opinion before all mouths were closed. This paper is dated the day after the tragedy; the dawk baboo resides in the heart of the town, and the Post Office is a frequented place; his letter must be taken, then, fairly to represent what the people thought, and what they freely spoke when their tongues were loose.

71. But when general impression coincides so nearly, indeed, I may say precisely, save in intention, with what so many have stated as the facts of the case, and with what common sense would dictate as the only probable solution of the mystery, there remains but little doubt that the document I have quoted truly describes what happened as regards the visit to the house, which, viewed in any light, was a deep piece of treachery on the hakeem's part, whether, when he originated it, his ulterior motives meant murder or confinement.

72. Allowing him the benefit of the doubt, and conceding that he never contemplated bloodshed, there is no denying that the tragedy took place at his door; and as it is impossible to believe the thakoor forced himself there, I would hold Surwah Shah answerable for what occurred.

73. A moment's reflection would have shown him that the act he was about to commit would assuredly lead to blows. Knowing the character of the man he was about to entrap, and the antagonism which existed between them, it was to the last degree improbable that the thakoor would tamely submit to be thus captured, when, without doubt, the first thought which flashed across him was that their object was to get rid of him; the poorest creature would fight in such a position, and a Rajpoot thakoor of Rewut Singh's stamp would at once resent the cowardly betrayal.

74. I say, then, admitting, in the absence of judicial proof, that circumstances, not premeditation, caused this tragedy, ought not those circumstances to have been self-apparent to Surwar Shah? Could there be any but one result from the course adopted. And if, as I maintain, precautions were neglected which might have saved life, the hakeem is justly answerable for the consequences of that wilful neglect.

75. An extraordinary feature in this case was the blind belief apparently entertained by the Nawab in the innocency of Surwar Shah, and the inferences reflected injuriously upon his Highness.

76. At length, I am happy to report, the chief has seen the necessity of taking some action in the matter; and lest, as he says, people should fear to come forward and give evidence against him while in office, he has, pending the decision of Government, suspended him from his appointment, and has him under surveillance. But his Highness himself still fails to attach any real blame to the hakeem, averring that nothing has been proved against him.

77. Before closing this letter, I may, perhaps, be permitted to remark that the presence of 800 or 900 Wullayatees in the Tonk capital is dangerously provocative of disturbance; and I venture to suggest that an expression of opinion be conveyed to the Nawab upon the subject of dispensing with their services.

78. Were these men, to whom deeds of blood and rapine are a pleasureable occupation, under the control of the Nawab, there would be less cause for apprehension; but they are, I am led to believe, entirely subservient to Surwar Shah, at the best, from all accounts, a bad and unprincipled man; and I cannot but think that the chief's actions have in consequence been somewhat fettered by the fear of further disturbance. It was more than once told to me that these Wullayatees were quite prepared to see Surwar Shah through the business at any cost.*

79. His Highness has not been very long in power, and though nothing can excuse much that must have had his tacit consent at any rate in this affair, there may be a shadow of extenuation in the fact that he has been badly advised in a matter which has long been a very sore point to him, and one deeply probing his sense of pride. He is unfortunately inclined to raise persons to high and responsible positions from almost menial occupations, and must now feel the painful straits to which their evil counsel has brought him.

80. Surwar Shah during the late Nawab's lifetime was but a native practitioner of medicine at Tonk; he is now in power, one of the first in the State, and he and a few others very well known, exercise a baneful influence there.

81. To

* I spoke to the Nawab upon the desirability of dismissing these men, and have just heard that he is gradually reducing them.—*A. N. B.*

81. To summarise, then, briefly: —

I cannot for a moment believe the Tonk version of this melancholy event, which is opposed to all the dictates of common sense and the light of probabilities; and, for reasons already stated, coupled with much that one gathers on the spot which it is impossible to put on paper, I am bound to believe that of Lawa in all respects save that of premeditated intention to kill. I entirely exonerate the Nawab from the graver charge of desiring the destruction of Rewut Singh and his companions, but I hold him responsible for the occurrence of so gross an outrage in his capital, as also for complicity in a mean attempt to obtain Lawa at the sacrifice of truth, honour, and reputation.

82. I consider suspicion, amounting to conviction, rests upon Hakeem Surwar Shah of being guilty of the basest treachery, and would make him answerable for the sacrifice of human life which occurred therefrom.

83. I would, in conclusion, observe that there is, perhaps, no chiefship in India situated so invidiously as is Tonk in Rajpootana, the sole Mahomedan principality in a Hindoo country, with her possessions scattered in small patches over the face of it.

84. From the date when the great Pindarry leader's territorial acquisitions were confirmed to him, the princes of Rajasthan have ever regarded with jealousy the Mahomedan usurper who came and conquered in their midst, whose creed they abhor, and whose habits and customs violently outrage their own religious prejudices. Each outlying district, moreover, now the appanage of Tonk, once formed a portion of some adjacent Rajpoot state; and as each district is thus surrounded by those who entertain Rajpoot sympathies, there are natural causes enough to render the Nawab's position an unenviable one.

85. I do not hesitate to say, however, the existence of a general impression that treachery had been enacted upon a Rajpoot thakoor by Mahomedan mercenaries in the Tonk capital will render the Nawab's position still more unenviable.

86. I would solicit indulgence for any shortcomings which may appear in this report; to establish judicial proof under the peculiar circumstances attending the inquiry was hardly to be expected; but if I have failed in securing as much information as might have been acquired, you will do me the credit to believe that I have done my best, to the utmost of my ability, in the performance of a very painful and delicate undertaking.

87. The Nawab has been requested, both verbally and in writing, to withdraw the troops stationed at Goordhunpoora, in the immediate vicinity of the Lawa fort,* pending the final orders of Government; and I have detached an agency chupprassee to remain with the young thakoor.

List of Enclosures submitted with Confidential Letter, No. 97–16 P., dated 26th August 1867, to the Governor General's Agent, Rajpootana.

(A.) Correspondence between the thakoor and Surwar Shah regarding visit to Tonk.
(B.) Lawa evidence (submitted separately).
(C.) Tonk evidence (submitted separately).
(D.) Depositions of Native doctor and compounder.
(E.) Deposition of Dawk Baboo, Ram Suroop, Agency Chobdar, and Mendhi Alli, Naib Moonshee, Rajpootana Agency.
(F.) Sketch of scene of tragedy, with explanation.
(A. D. and E. in separate cover.)

(signed) *A. N. Bruce,*
Political Agent.

Enclosure No. 2.

(A.)

Purport of a Khut from *Thakoor Dheerut Singh*, of Lawa, to the Address of *Hakeem Surwar Shah Khan*; dated 13th July 1866.

The paper sent by me through the hands of Ram Sookh Purohit must have reached you, and its purport understood. I now send Beejey Lall and Kullian Buksh. You state that his Highness the Nawab has promised to settle all my differences satisfactorily; two months have now nearly elapsed, and nothing has been done in the matter. The moulvee and darogah are daily causing me fresh troubles; the well sunk is now being built up with masonry; the moulvee is further establishing a village on the Lawa lands. I look up to you as my patron, and am certain you will exert your endeavours to have my grievances satisfactorily adjusted. I write to you, and send the two above-named persons;

* Since writing this paragraph I have received a khureeta from the Nawab informing me of their removal.—*A. N. B.*

sons; if his Highness has actually ordered the final settlement of my case, you will of course see to it being done amicably; if otherwise, the durbar has ordered the completion of the well and the establishment of the village, I have no alternative left but to submit, as I cannot contend against the wishes of my liege. The moulvee and darogah are giving me great trouble daily; they are, I think, the only obstacle between his Highness's favour and my humility and submission; for this reason I trouble you so often.

PURPORT of a Khut from *Thakoor Dheerut Singh*, of Lawa, to the Address of *Hakeem Surwar Shah Khan*; dated 20th July 1867.

THE letter which I had written to you has not been favoured with a reply, which seems uncourteous. When his Highness dismissed me from Tonk, he was pleased to order me to leave my vakeel, and whatever propositions he would submit, the same would be acceded to by the durbar and perwannahs duly granted. Up to date, not a single iota of this has been carried into effect; I therefore address you with a hope that you will represent all my grievances to his Highness fully, and have them satisfactorily settled.

PURPORT of a Khut from *Hakeem Surwar Khan*, to the Address of *Thakoor Dheerut Singh*, of Lawa; dated 22nd July 1867.

YOUR letter reached me, and its contents understood. What you state regarding the cultivation of the Mohuny land has been duly made known to his Highness the Nawab, which greatly displeased him, and the durbar has thought proper to order a chobdar to proceed at once and put a stop to the culture, and inform the zemindars that the Nawab intends to confer this land as a jaghire on the thakoor of Lawa; consequently, it is forbidden to be ploughed. The chobdar has received orders regarding the misconduct of the sepoys, and the resaldar in commaud has been ordered to Tonk for an explanation, when serious notice will be taken of their misbehaviour, rest assured. I request, on the receipt of this letter, you will not fail to repair to Tonk, when all your differences will be satisfactorily settled, and the grant of the Mohuny land will be given to you. I therefore entreat you to come. Pay attention to what the chobdar verbally tells you. Any commands from you will be promptly executed. I again advise you to come, as his Highness is about to leave Tonk. The grant of the village will be given to you along with a khillut, when all your grievances will at once cease. Come with confidence, and fail not; your differences will be amicably settled.

PURPORT of a Khut from *Thakoor Dheerut Singh*, of Lawa, to the Address of *Hakeem Surwar Shah Khan*; dated 25th July 1867.

YOUR letter was delivered to me by the hands of the chobdar, and its contents read. You state that the land tilled, which belongs to the village of Mohuny, will be prevented from being cultivated by the chobdar. I do not object to the Mohuny lands being put under tillage; it is the Lawa land, which Mahomed Oomer is ploughing, I complain against. You repeatedly observe that the Mohuny lands now under cultivation will be prohibited from being put under culture, because his Highness the Nawab intends to confer it as a grant to me. Allow me to inform you that this land already belongs to Lawa, and not to Mohuny, for which an annual tribute is paid by me on, or a month after, the fixed time; if the durbar actually intend to grant me some land as jaghire, there are other places from which it can be given. The chobdar arrived here on the 24th instant, and prevented the cultivation of the land in dispute, according to the orders of the durbar; but on the following day, the 25th idem, Mahomed Oomer again caused the land to be put under tillage in defiance of the Nawab's orders. You always write that his Highness is very anxious to rectify all past grievances; this assurance is certainly very pleasing to me, but the durbar's positive orders to be disobeyed appears to me very surprising. My presence at Tonk, requested by you, would have been complied with at once had not indisposition prevented me from doing so. I do assure you that nothing would give me more pleasure than to be always at Tonk under the kind protection of his Highness, which would add fresh honours to my dignity.

PURPORT of a Khut from *Hakeem Surwar Shah Khan*, to the Address of *Thakoor Dheerut Singh*, of Lawa; dated 27th July 1867.

I HAVE received your letter by the hands of Moona Lall, kamdar, and its contents understood. Your complaint regarding the disobedience by Mahomed Oomer of the Nawab's orders will receive due consideration. He will be removed from his position, which will tend to stop any further trouble to you. I write to you that as a special mark of his Highness's favour, and at my request, the durbar has been pleased to send a chobdar with this letter, which honour had never before been conferred on any person connected with this state, but yet you plead sickness which prevents you from coming to Tonk till after a week. If you consider it advisable, after the perusal of this letter, come at once with the chobdar; if not, kindly direct him to return. I leave it to your option; do as you think best.

I have settled everything in your favour according to Captain Blair's suggestions; consequently, I have sent for you. If his Highness the Nawab leaves Tonk for Seronje, which he intends to do in a few days, your case will be put off for years, and you will then daily prefer complaints against the sepoys. If you will take my advice, come; if not please yourself. I have written to you every way, and have managed to send a chobdar; no blame, therefore, can be attached to me in this matter. Although you are unwell and under medical treatment, still I advise you to come with the chobdar. His Highness the Nawab will soon dismiss you on account of your illness, and I will also intercede for you for early permission to leave Tonk. If you intend to come, don't send away the chobdar before you leave, but come with him; this will look well and honourable. I would advise you never to mention that the Mohuny lands now in dispute belong to Lawa. I am sure it is not going to be given to you in contract; it is to be a free gift on the part of his Highness, and no tribute is expected for it. You should look to your interests. Suppose even if this land was confiscated from you, and the durbar intend to restore it again in the shape of a new grant, you should be grateful for it and not say it belonged to Lawa. You can represent that your brethren are anxious to know what new jaghire the Nawab has conferred on you as a mark of his favour, remarking that the land now given is well known to belong to Lawa, and I am certain the durbar will, at my recommendation, grant you a separate piece of land in addition to that of Mohuny. Please pay heed to what Moona Lall tells you.

Enclosure No. 3.

(B.)

DEPOSITIONS taken by the Political Agent, Harowtee, at camp Tonk, on the 16th August 1867 and following days.

Witness No. 1.—*Dheerut Singh*, Thakoor of Lawa.

Q. Will you be good enough to state all you know respecting the death of Thakoor Rewut Singh?—*A.* In the first place two letters were received from Hakeem Surwar Shah calling me to Tonk, and subsequently Abdool Kadur, a chupprassee,* came to say that the Nawab was going to Seronje and wished me to come in speedily. I accordingly accompanied the messenger, and arrived at Tonk on the 29th July, putting up in the residence of Shumsheodeen. A day or two after my arrival Rewut Singh and Beejey Singh had an interview with Hakeem Surwar Shah; I saw nobody. After that interview Rewut Singh on his return said that the hakeem had told him I had done well in coming, as the Nawab was going to Seronje, and that now I should get back all my lands, &c., which had been resumed.

* Chobdar.

When Rewut Singh returned from the hakeem's, did he come back having seen Surwar Shah himself?—Yes.

Is anyone now alive who accompanied Rewut Singh on that occasion?—It can be found out on inquiry.

(After inquiry no one could be discovered.)

What do you know in respect of Rewut Singh's death?—About 9 p.m. Luchmunna Chupprassee was sent by the hakeem to where I was living; Thakoor Rewut Singh and I were at that time sitting together. Luchmunna said that the Nawab was going to Seronje, and that the hakeem had called me to consult about the khillut which was to be presented to me. In consequence Rewut Singh and Beejey Singh, with Gooljee, rajpoot, Buldeojee, rajpoot (Narooqua), Gobindjee, Rhatore, Ummur-bajun, Samee, Sheonath, Chobdar, Hunwunt Singh, rajpoot, Megh Singh, rajpoot, Ram Dhun, Kishen Lall, Barait, Jeewun, Chokrail, Moona Lall, kamdar, Lalljee, vakeel, Gunesha, Naik, and Ramooleea, chakur, went on foot. I know nothing more about them for certain; I heard that they had been entrapped and slain. One only of all these, Megh Singh, is living. Simultaneously with this event my dwelling was surrounded, and somebody asked me to come out; I don't know who it was. For three or four days the house was in this way guarded, and I was told by every one to put down my arms and be subservient to the Nawab. I declined to lay down my weapons, but said I was obedient to his Highness. Three days after the occurrence Sahibzadah Abdool Rahman, Nusseereodeen, Budroodeen (captain), and another, came and asked me to visit the Nawab, and swore there should be no treachery. Fastening on my arms I went to his Highness, and urged that I had been treated with great tyranny. The Nawab said that the past could not be recalled, and added that, if I had been present on the occasion, I would have been killed too. He then requested I would reside in the house of Abdool Rahman, to which I did not concur.

Did the Nawab say anything to you about Rewut Singh having attempted an armed entrance into the hakeem's residence?—No.

Who else was present during your interview with the Nawab?—Nusseeroodeen, Abdool Rahman, and Budroodeen, I know, were present; the others I don't know.

Between the time of the occurrence and the day of your departure from Tonk did any one hold you responsible for Thakoor Rewut Singh having, as is stated, proceeded uninvited to the hakeem's?—No.

Were

Were you informed that his conduct was the cause of your house having been guarded and surrounded?—No.

What happened after visiting the Nawab?—I returned to my residence, which remained guarded as before. Nusseeroodeen and another came and told me that, if I would write a "razeenama," the Nawab would add greatly to my rank and dignity, and give me an elephant, palkee, and village. I replied that, having been sent for to Tonk and my people murdered, what use were these to me now? I added that I had no power to write razeenamahs; that was in the power of the heirs of those who had been massacred. They then suggested that I should send for the heirs, which I declined to do. I begged permission to proceed to Lawa and perform the necessary ceremonies consequent upon the deaths of my relatives. Nusseeroodeen said I had better come myself to the Nawab and ask permission. I explained that for 12 days I could not go out. He then said, if you can't go, write a petition asking for leave. I said I was uneducated, and asked him to write it for me. A Hindee petition was written by the chowdree, and Nusseer took it to the Nawab, who consented to my request, and promised to return me my horses, &c., which had been seized, but these were not returned that day; the following day, when Captain Roberts arrived and sent a chobdar to call me, and I went and told that officer all I knew, and he said I might proceed to Lawa, then the animals, &c., were returned, and I started that evening. I know nothing more.

Witness No. 2.—*Pope Singh*, Son of *Hunwunt Singh*, Rajpoot (Narooqua), an Inhabitant of Sorha, in Jeypore, aged 30 Years, in the Service of the Lawa Thakoor.

Q. DID you accompany the thakoor to Tonk?—*A.* Yes; I came to Tonk with the thakoor on the 29th July, four days after which this business took place.

Prior to the occurrence had there been any interviews with the Nawab or with Hakeem Surwar Shah?—Yes; once Thakoors Beejey Singh and Rewut Singh had an interview with the hakeem, but with no one else.

What do you know regarding the occurrence of the 1st instant?—Luchmunna Chupprassee came to Thakoors Rewut Singh and Beejey Singh, and said that the Nawab was about to proceed to Seronje, and that, consequently, the hakeem had sent to call them in order to present to them a khillut. This was about nine o'clock at night. At that hour the two thakoors with Moona Lall and Lalljee, kamdars, and some 10 or 12 followers, went to the hakeem's residence. Beyond this I cannot say what happened, though the sound of firing reached my ears, and the house in which we were lodged was surrounded. Then I put on my arms and sat down inside, and the Nawab put me and the thakoor to great straits; for three or four days food and water were denied us. Beejey Lall can also testify to Luchmunna having come to call Rewut Singh. This is all I know.

Question by Tonk Vakeel.]—When did the first interview take place between Thakoor Rewut Singh and Hakeem Surwar Shah?—The day before the tragedy.

Who accompanied the thakoor?—I don't know.

Can you say whether any who did accompany him on that day are now living?—I cannot.

Where were you when the thakoor went to the hakeem's on the first occasion?—I was at the Commissariat for supplies.

Can you prove that Rewut Singh went to visit the hakeem the day before the disturbance?—I heard that he had done so; I cannot prove it.

A number of men are shown to Pope Singh, and he is requested to point out Luchmunna Chupprassee, the man whom he states to have come from the hakeem to call the thakoor.

He at once, without the slightest hesitation, points him out.

(signed) *A. N. B.*

Witness No. 3.—*Beejey Lall*, Son of *Siree Lall*, Brahmin, Inhabitant of Lawa, aged 26 Years, in the Service of the Thakoor.

Q. DID you accompany the thakoor to Tonk?—*A.* Yes; I arrived with him on the 29th of July.

When did this occurrence take place?—On the 1st August.

Prior to that date had the thakoor of Lawa seen the Nawab or Hakeem Surwar Shah?—The thakoor had not; but on one occasion Thakoors Rewut Singh and Beejey Singh had an interview with Hakeem Surwar Shah at the house of the latter.

What do you know of the event which has caused this inquiry?—About 9 p.m. Luchmunna Chupprassee was sent by Hakeem Surwar Shah to say that the Nawab was going to Seronje, in consequence of which the khillut would be given in the morning; so Thakoors Rewut Singh and Beejey Singh were wanted at the hakeem's. Rewut Singh and Moona Lall sent me out to make arrangements for some money to be presented to the Nawab as a nuzzur, and the thakoor himself, with Thakoor Beejey Singh, Moona Lall, Lalljee Mull, and 12 or 13 others, went to the hakeem's residence. I know not what occurred there. About 10 p.m., when I returned to the residence of the Lawa thakoor, I saw that the place

was guarded on all sides by foot and mounted sentries and the house surrounded. I became alarmed and fled into Jeypore territory. I know no more.

Question by Tonk Vakeel.] As people are forbidden to appear in the streets after 10 p.m., how was it you were about?—For some two hours after that time people are about.

To what house did you go to get money for the nuzzur?—To Ram Lall, a banker of Tonk, but he was out, and as I did not know his private residence, I returned.

Did you, going or returning, meet any people you knew?—Opposite Ram Lall's shop, there is a shop belonging to Jowhee Lall, a banker, and there I met a man whom I know, but whose name I know not.

Do you know who went with Rewut Singh on the occasion of the affray which took place on the 1st instant?—I do not.*

You say that after seeing the Lawa house surrounded, you fled to the village of Kangote, in Jeypore; do you know anybody in that village?—At midnight I was there with Sans Mull, chohan, in the service of the thakoor of Mairoom, and I told Sans Mull why I had come to the village; I said no more.

This witness also was confronted with a number of men, and desired to point out Luchmunna Chupprassee, whom he stated to have come from the hakeem to call Rewut Singh. This he did without the slightest hesitation or loss of time.

(signed) *A. N. B.*

Witness No. 4.—*Dhan Singh*, Son of *Huree Singh*, Rajpoot (Narooqual) of Lawa, aged 55 years, in the service of the Thakoor.

Q. What do you know regarding the death of Rewut Singh?—*A.* I came to Tonk with the Lawa thakoor, and was on duty opposite the door of his sitting-room, when, at about 7.30 p.m., a chupprasse, or hurkara, unknown to me, of the hakeem's, came and said that the hakeem had sent for Thakoors Rewut Singh and Beejey Singh. He remained about 10 minutes, and took Rewut Singh and Beejey Singh away with him to the hakeem's; about 15 followers also went with the thakoors. A short time after their departure the sound of firing reached us. The thakoor at once said to me, "This looks like treachery; arrange for our defence quickly." We at once shut all the doors, and armed ourselves.

In the meantime the house was surrounded on all sides by the Tonk troops, and we were desired to give up our arms, but we did not do so. For three days the place remained without food or water. On the fourth day, three or four persons (names I know not) in the service of the Nawab came, and having vowed not to harm him, went to the thakoor. I know not what occurred. The thakoor was afterwards taken to see the Nawab, when he obtained permission to leave Tonk, and he returned to Lawa. I returned with him. I cannot say what difference occurred between Rewut Singh and the hakeem, at the house of the latter. Two days prior to the occurrence, Rewut Singh went to see the hakeem, and returned much pleased. In this way he was induced to go a second time.

Witness No. 5.—*Rewut Singh*, Son of *Sooruj Mull*, Barait, of Lawa, aged 45 Years.

Q. WHAT do you know regarding the death of Rewut Singh?—*A.* When the Lawa thakoor came to Tonk on the 29th ultimo I accompanied him. On the 1st instant a chupprassee, whose name I know not, came to me, as I was on duty at the entrance, and inquired after Rewut Singh; I told him where he was; he went to Rewut Singh and said the hakeem had sent for him. Thakoor Rewut Singh at once (7.30 p.m.) went to the hakeem's residence with some 16 or 17 followers. I did not go with him. Some 10 minutes after they had gone the sound of firing reached us, and all who remained behind said we must prepare the place for defence, for all who have gone to the hakeem's will be killed. Having said this, he closed and fastened the doors, and going upstairs saw that the place was surrounded and our horses taken away. The Tonk sepoys called to the thakoor to come out; when soliciting to know what had become of Rewut Singh and his party, we were asked what business that was of ours? They desired to take our arms, but we declined to deliver them. Afterwards four persons came, and through their instrumentality the thakoor was taken to have an interview with the Nawab.

Prior to this occurrence did the Lawa thakoor, or Thakoor Rewut Singh, visit anybody?—Yes; on the previous day Thakoors Rewut Singh and Beejey Singh had an interview with the hakeem.

On that occasion did you accompany Thakoor Rewut Singh?—I did not.

When Rewut Singh returned from that first interview, did he appear pleased or angry?—He seemed pleased.

Do

---

* This reply refers to the followers.

Do you know at all how Rewut Singh met his death?—No.

When you heard the sound of firing, what idea occurred to you?—It struck me at once that Rewut Singh was killed.

Witness No. 6, *Ghassi Singh*, Son of *Deo Singh*, Barait, of Lawa, aged 42 Years, in Service of the Thakoor.

Q. Do you know anything respecting the death of Rewut Singh?—*A.* I came to Tonk with the Lawa thakoor. Here it was my duty to attend to the horses, and the place where they were kept was about 15 paces from the thakoor's dwelling place. I was sitting at his door, when about 8 p.m., a Chupprassee, a stranger to me, came, and, addressing the sentry, said the hakeemjee has sent for Thakoors Rewut Singh and Beejey Singh. The two thakoors with 15 or 16 followers went to the hakeem's house; and after I had dined I went to sleep in a small enclosure near where the horses were tied, and I know nothing more. Afterwards troops surrounded the house and began to loosen the horses and seize the syces. I then ran away to Roopbass, in the Jeypore district. I know no more.

Do you know anything as to what happened to the Thakoor Rewut Singh at the hakeem's house?—No.

Witness No. 7, *Sheonath*, Son of *Manjee*, Barait, Inhabitant of Lawa, aged 25 Years, in the Service of the Thakoor.

Q. What do you know in respect of Thakoor Rewut Singh's death?—*A.* All I know is that at about 8 p.m. some man came from the hakeem's. I was sitting at the door. He said I am going in to the thakoor. I gave him permission; and this person took Rewut Singh, Beejey Singh, and some 15 or 16 others to the hakeem's residence. I don't know what happened there. Shortly after they had gone the sudden sound of fire-arms aroused suspicion, and shutting the doors, we remained armed inside.

On every side Tonk sentries were placed, and we remained for three days without food or water. Subsequently three persons in the Nawab's service, unknown to me, came to the thakoor and took him to see the Nawab. After this I accompanied the thakoor back to Lawa.

Prior to this occurrence had the Thakoor or Rewut Singh visited the Nawab or the hakeem?—I don't know.

Could you recognise the messenger who came to call Rewut Singh?—No.

Witness No. 8, *Megh Singh*, Son of *Futteh Singh*, Rajpoot (Narooqua), Inhabitant of Sirus, in Jeypore, in the Service of the Thakoor of Sirus.

Q. How did you become a prisoner at Tonk?—*A.* I went to Lawa from Sirus to see my sister. The thakoor of Lawa was then going to Tonk; he desired I should accompany him. I went. Some four days after our arrival at Tonk Thakoor Rewut Singh went to Hakeem Surwar Shah's house. He took me with him. On reaching his dwelling, whilst the others remained outside, Rewut Singh, Beejey Singh, Moona Lall, and Siree Lall went upstairs. After a short time the Tonk sepoys snatched away my sword, and wounded me on the head, and the rest of our party were cut down and killed. Muskets were fired, but without effect. When wounded I ran away, but was seized on the road.

Could you recognise the man who wounded you?—No; it was night-time, and dark.

Did you show any fight?—No.

Do you know anything as regards Rewut Singh and his party who went inside?—Not a word, nor did any noise, as of firing, reach our ears from inside.

How long after Rewut Singh had gone upstairs did this massacre occur?—About half an hour had elapsed when the Wullayatees wounded me.

How many men accompanied Rewut Singh to the hakeem's house?—In all about 15.

Why do you suppose you were attacked?—I cannot say; out of all who went I alone escaped with life, which I attribute to the fact that, after I had been wounded the Wullayatees were under the impression that I was a Wullayatee, from the manner in which I had tied my puggree.

How many Wullayatees were present?—I cannot tell exactly, but there were a great many.

Did nobody escape save yourself?—I really do not know who were killed and who escaped.

When Rewut Singh arrived that night at the hakeem's house, did anybody attempt to stop his entry?—A Hindustani sepoy said the time was ill chosen for a visit, and requested the thakoor to await awhile. The thakoor and Beejey Singh then sat down; a short time after sitting there the same man came and said, "come along." The four above mentioned then went upstairs, whilst we all remained below.

When the Hindustani above referred to stopped Rewut Singh, did any words take place —None whatever.

Did the man say anything about Hakeem Surwar Shah being ill?—He said nothing about that; he merely said the time was an inconvenient one.

When Thakoor Rewut Singh arrived at the hakeem's house, do you know anything about anybody's puggree falling off?—No puggree fell off before me; I cannot say what happened upstairs.

Can you point out the place where all this occurred?—I can show the spot where I was waiting outside, and also the stairs up which Rewut Singh and his party disappeared.

On my visiting the scene of the occurrence, Megh Singh (who deposes as above) accompanied me, and clearly pointed out the places mentioned.

(signed) *A. N. Bruce,*
Political Agent.

Witness No. 9, *Bhairoo Buksh,* Son of *Kamreea,* Chumar, of Lawa, aged 17 Years.

Q. How did you become a prisoner at Tonk?—*A.* I came in with the thakoor of Lawa, in the capacity of a bigarry. One evening, after eating our dinner, four of us, chumars, and Gobinda Bhullai, went to sleep in another chumar's house. About midnight six or seven sepoys belonging to Tonk, with a chowkeydar, came and arrested us all, and put irons on our legs. To-day those irons have been taken off.

Why were you arrested?—I don't know.

Do you know anything as regards the death of Thakoor Rewut Singh?—No.

Witness No. 10, *Gobinda,* Son of *Bhopa,* Chumar, of Lawa, aged 22 Years.

Q. How did you become a prisoner?—*A.* (The witness records precisely the same answer as the one who preceded him, excepting that he states the hour of their seizure to have been evening, and adds that the irons were taken off his own legs a few days since, and off the khuteeks' to-day).

Why were you imprisoned?—Because I was taken for a svce.

Do you know anything about Rewut Singh's death?—Nothing.

Witness No. 11, *Assa,* Son of *Goomana,* Chumar, of Lawa, aged 25 Years.

(This witness states precisely the same as the preceding one, but gives the time of his arrest as midnight, and states that he was seized, he imagines, because he had come in with the Lawa thakoor's following).

Witness No. 12, *Saija,* Son of *Munsa,* Chumar, of Lawa, aged 28 Years.

(This witness deposes precisely as does the preceding one).

Witness No. 13, *Gobinda,* Son of *Kamur, Bhullai,* of Lawa, aged 25 Years.

(This witness also deposes as above, adding only that on the night of their arrest they were put in the stocks, and the following day in irons, which had just been taken off).

Chinna, Son of *Rama,* Khuteek, of Lawa, aged 25 Years.

Q. How did you become a prisoner?—*A.* I came to Tonk to purchase soap, &c. The Lawa thakoor was here before my arrival. Moona Lall, the thakoor's kamdar, met me, and said where are you going to? "Sleep here." I accordingly went to sleep in the Dewanjee's enclosure, where the thakoor's horses were picketed. About midnight a chowkeydar arrested me and my brother.

Why?—I cannot say.

Do you know anything regarding the death of Thakoor Rewut Singh?—No.

Witness No. 14, *Lutchmunna*, Son of *Teja*, Khuteek, of Lawa, aged about 23 Years.

Deposes precisely as does Chinna. He does not know the hour they were arrested. Irons knocked off that day.

Witness No. 15, *Thakoor Gopal Singh*, Brother of the deceased *Rewut Singh*, and Uncle of the Lawa Thakoor.

Q. Do you know anything connected with the death of Rewut Singh? If so, state all you know?—*A.* On the 22nd July a letter was received from the hakeem at Lawa, but illness prevented the thakoor from proceeding to Tonk at that time; a second letter was subsequently received, and a chobdar was sent to call him. On the 29th July the thakoor left Lawa and arrived at Tonk. On the 31st idem news reached Lawa that Rewut Singh and Beejey Singh had had an interview with the hakeem, and that in a day or two they would be accorded permission to return. On the evening of that day a chumar came and said that at night sentries were placed round the dwelling which the thakoor occupied at Tonk, but little attention was paid to this story. On the 2nd August* Hookma, Meena, arrived at Lawa, having left Tonk prior to the occurrence of the preceding evening. He confirmed the report that sentries were placed round the thakoor's house, and that the impression as to what was the ultimate intention of the Tonk authorities was not encouraging, and he warned us to be on the alert. Whilst this conversation was going on, and before the morning of the 2nd had quite broken, the Tonk troops arrived. There were from 1,000 to 1,200 infantry, and they put up at Goordhunpoora; some of our cattle were plundered by them. Three hours afterwards 40 swivel guns arrived by detachments, and some 30 or 35 sowars; and the force was then divided into three parties, and batteries erected opposite each door of the Lawa Fort. Shots were fired on both sides, and matters continued so for two and a half days and nights. Four or five men were killed on our side, and the same number wounded. I don't know what their casualties may have been, but I heard three men were wounded. If guns were brought on this occasion, they must have been left at Goordhunpoora; they were not used. On the 2nd August three syces arrived, and said we have seen nothing of it, but hear that Rewut Singh, Beejey Singh, and others have been killed, the horses and property plundered, and the thakoor's house surrounded; we have crept here by stealth. Upon hearing this I proceeded to Deolee to learn the truth, having despatched Kullian Buksh there directly the Tonk troops came to Lawa. So far I know. On the third day the Tonk force returned to Tonk, some 250 Wullayatees remaining in the fort (Goordhunpoora).

* Morning.

Did you inquire of the syces how Rewut Singh had met his death?—Yes; they said that when Rewut Singh and the others went to the hakeem's they sat down for a short time, when they were invited in. Rewut Singh, Beejey Singh, Moona Lall, and Siree Lall went inside to the hakeem, the others remaining outside below. An officer of the Wullayatees requested them to give him their arms, which they refused to do, when a Wullayatee struck Rewut Singh with a sword; in this way the fight became serious, and those below were attacked and shot down. When Rewut Singh was asked to deliver his arms the hakeem was present.

What are the names of the three syces?—Bhuldeva, Khuteek, Gunesha, Darogah, and Hurnatha, Khatore.

(signed) *A. N. Bruce*, Political Agent.

Beejey Lall is re-examined, and asked:

Q. What were the respective ages of those who accompanied Thakoor Rewut Singh that evening?—*A.* I can only give them approximately: Rewut Singh, 35 or 40 years; Beejey Singh, 21 or 22; Gooljee, 45 or 50; Buldeojee, 30; Gobindjee, 28; Ummur-bajun, 35 or 40; Sheonath, 45 or 50; Hunwunt Singh, 24 or 25; Megh Singh, 25; Ram Dhun, 35; Kishen Lall, 30; Jeewun, 50; Moona Lall, 48; Lalljee, 55; Gunesh, 21 or 22; Bamooleea, 18.

What arms did they carry?—I cannot say for certain whether Rewut Singh had a gun; he may have had. The others carried swords.

Lawa has no further evidence to adduce, save the hearsay evidence of the three syces alluded to by Thakoor Gopal Singh.

These men have been sent for from their homes.

(signed) *A. N. Bruce*, Political Agent.

Enclosure No. 5.

(C.)

DEPOSITIONS taken by the Political Agent, Harowtee, at Camp Tonk, on the 16th August 1867 and following days.

Witness No. 1, *Hakeem Mahomed Surwar Shah*, in charge of Thuggee and Dacoitee Office, Tonk.

Q. How long have you been employed by the Tonk durbar?—*A.* Twelve years. I was employed as a hakeem during the late Nawab's life-time, and prior to coming to Tonk. I was for two years at Neemuch, living with Mahomed Ally Khan, the tehsildar of that place.

Why did you leave Neemuch?—I had no duties there; and as the late Nawab of Tonk sent for me, I came here.

How long have you had charge of your present office?—Nearly two and half a years.

Did you write a letter inviting the Lawa Thakoor to Tonk?—First of all a letter was received from the thakoor upon the subject of adjusting all differences. In reply a letter was sent to him to come into Tonk; he replied he was sick, but would speedily come. No reply to that communication went from this, but previously a letter had been sent to beg the thakoor to come in.

After the thakoor's arrival state all you know that occurred?—Some 10 days after the thakoor came to Tonk, Thakoor Rewut Singh and his nephew, with a number of followers, came to the Girazee Office about mid-day, and Hafiz Mahomed Ameen, my naib, informed me of their arrival. I told Hafiz Mahomed to explain to Rewut Singh that I was unwell and could not see him, but that the Nawab had fixed upon all his vassals a certain contribution for the purpose of supporting dispensary, school, &c., and the construction of roads, and that it was necessary Lawa should pay her quota; and that, if this were willingly done, it would be in every way advantageous to the thakoor. My naib duly conveyed these words to Rewut Singh, who on hearing them was displeased, and said, "I am not that kind of jaghiredar, I will not conform to new customs." Having said this he got up and went away. For two months I had been suffering from various ailments, and on that day, at about five p.m., I became insensible. There was little hope of life for me. That night Rewut Singh, with 30 or 40 armed followers, came and demanded admittance; the sentry told him I was very ill, and that such a time was not appropriate for an interview. They would not mind the sentry, and pushing the door, which was old, it gave way. The thakoor's followers commenced to pour in. The sepoys under Sahibzadah Golab Khan tried to stop them, when suddenly some thakoor's puggree fell off. The thakoor struck some one with a sword, and Golab Khan then directed the Tonk side to strike. Both sides engaged, and both lost many killed and wounded. In the morning, when I came to myself, I heard all this.

Have you suffered from this illness before?—I have had paralysis before; Bheeky Singh, Native doctor, has been treating me for a month.

Have you aught else to say?—Thakoor Rewut Singh never on any previous occasion came to my residence at night; on this occasion he came, and this business occurred.

Witness No. 2, *Mahomed Ameen*, Naib Superintendent of the Thuggee Office.

STATES, on the 1st August, Thursday, about 12 o'clock, I was present at the cutcherry held at Hakeem Surwar Shah's residence; Moonshee Moojeeboolah, Abdool Hakeem Khan, Molah Buksh, Azeemoolah Khan, and a Hindee Nawees were also there, when Thakoors Rewut Singh and Beejey Singh, with some 60 followers, came and requested I would inform the hakeem of their advent. I said that the hakeem was ill, and unable to come out, and I sent word to him by a female attendant that the thakoor had arrived. The hakeem sent for me and told me to explain to the thakoor how desirable it was he should contribute towards schools, dispensaries, roads, &c., as do other jaghiredars, and that in that case the agreement between them would remain intact; and the thakoor was also asked to desist from oppressing the people of the village of Moonee; that if these matters received a ready acquiescence at the thakoor's hands, the Nawab would be much pleased, and would confer upon him a robe of honour. I came out, and in the presence of Moojeeboolah, Abdool Hakeem, and Molah Buksh, delivered the message to the thakoor, who, on hearing it, became displeased, saying we are soldiers, not slaves. He then rose and left, with many hard words; but I gave no reply. After he had gone I told the hakeem what had happened. At 4 p.m. I closed the office and came away. I know not what occurred afterwards. I don't know what followers came with the thakoor, nor can I say who were killed and who are living.

Moojeeboolah Khan, writer in the Tonk Thuggee Office, states precisely as above.

Witness No. 3, *Yacoob Ahmed Khan*, son of *Fakeer Ahmed Khan*, Pathan, aged 26 years, Kotwal of Ameerguuge, in Tonk.

Q. How long have you been in the Tonk service?—*A.* Ten months.

Is the giraee office within your circle?—It is.

How far is the kotwallee from the hakeem's house?—One mile.

What do you know regarding the event which has caused this inquiry?—The kotwallee jemadar had gone out somewhere, and came back running to tell me that a serious affray was taking place at the hakeem's residence. I forthwith went there and saw the corpses; some were inside and some outside. In all there were 17 corpses and 9 wounded. I could not at that time tell how many men were killed on either side. In the morning it became known that Tonk had lost 7 and Lawa 10. When I had collected all the bodies together my superior officer, Faiz Mahomed, directed me to go and endeavour to apprehend those who had escaped, whilst he attended to matters on the spot; I accordingly went, but could not catch any; I therefore returned. This much I know about the affair. Fyz Mahomed had the corpses taken away.

Whereabouts did you find the bodies you say you saw lying outside and inside?—Two or three were outside the cutcherry, and others inside the compound near the gateway.

Where was Hakeem Surwar Shah at this time?—In the zenana apartments; I did not see him at that time.

Prior to this event when did you last see him?—Some 10 or 15 days previously.

Witness No. 4, *Nusseeroodeen*, son of *Imamoodeen* (Sheik), inhabitant of Tonk, aged 33 years.

Q. How long have you been in Tonk?—*A.* All my life.

How long have you been a servant of the Tonk State?—23 or 24 years.

When were you appointed kotwal, and what were you before?—Formerly I was in charge of the gardens and supply department, and I have been kotwal since the accession of the present Nawab.

What do you know regarding the death of Rewut Singh?—My house is in the city of Tonk; I was sitting there about 9 p.m., when the sound of firing reached my ears. As the Nawab's orders forbid firing at that time of night, a suspicion seized me, and I sent a chowkeydar to make inquiries, and ordering a horse I proceeded in person. When I reached the city I received an order from the Nawab to make arrangements for surrounding the house of Shumsheodeen, which was occupied by the Lawa thakoor, and I was to allow no ingress or egress. I therefore put sentries all round, and was unable to visit the scene of the occurrence. I know no more.

Witness No. 5, *Faiz Mahomed*, son of *Imamoodeen* (Sheik), of Tonk, aged 40 years, the Head of the Tonk Kotwals.

Q. Is the house where the recent disturbance took place within your charge?—*A.* All the city and Gunj kotwallees are under me.

Relate all you know regarding the occurrence?—I was in my house at Tonk, when at 9 o'clock I heard shots fired, and sent a chowkeydar to go and find out the cause. Before his return Sahibzadah Ahmed Khan's order reached me that an affray was taking place at the hakeem's residence, and desiring me to take the necessary action in the matter. I at once went, and on arrival found that Yacoob Ahmed Khan, kotwal of Ameergunge, with his chowkedars, was already there. From him I learnt that the followers of the Lawa thakoor had created the disturbance, and that some of them had escaped. I forthwith sent Yacoob Ahmed Khan to try and apprehend them, and remained myself at the scene of the outrage. Seventeen corpses were lying there, and nine wounded men. I conveyed this information to Sahibzadah Ahmed Khan, who ordered me to remain there pending further instructions. I, consequently, remained there and got a dresser for the wounded. In the morning, agreeably to orders, I had all the dead bodies burnt, and that of Golab Khan buried. Ten men were killed on the Lawa side and one wounded; and on that of Tonk seven killed and nine wounded. From the wounded and those who were present, I was informed that the affray had occurred in the following manner:—That Thakoors Rewut Singh, and Beejey Singh, with 30 or 40 armed followers, had come and wanted the gates opened, but that the sentries would not open them; that they pushed until an entrance was effected, when, attempting to come in, they were stopped, and some thakoor's puggree fell off, whereupon he struck a sepoy with a sword, and then commenced a fight on both sides. Of the 17 dead, 16 were Hindoos; and of the wounded, 5 were Mussulmen sepoys of Tonk, and 4 Wullayatees.

What are the names of the seven men who were killed?—Golab Khan, Officer Lutchmun Singh, Ram Singh, Shewloll, Kulloo Ram, Bhageerut, and Hurree Ram.*

(At a subsequent examination the witness was called upon to state to what places these six Hindoos belong)?—*A.* I cannot say.

Can you not mention the place of residence of any one of them?—Not one of them.

When sepoys are enlisted, are not these particulars ascertained?—These men did not belong to the kotwal's department; information may be obtained from the Bukshee Khana.

Who caused the bodies to be burnt?—Shahab Khan, a jemadar of the kotwallee, was directed to have them burnt.

Is it, or is it not, the custom in Tonk to have the bodies of people meeting sudden deaths of this nature shown to the Native doctor?—In consequence of the confusion on this occasion they were not shown to him, nor were the wounded shown to him that night. I cannot say when they were taken to the Native doctor; they were conveyed to the various places to which they belonged.

Witness No. 6, *Abdool Hummed*, Son of *Kootub Khan*, an Inhabitant of Nujeebabad, aged 23 Years, a Trader.

Q. Do you know anything regarding the death of Thakoor Rewut Singh?—*A.* I was asleep in my house, when about 9 o'clock a noise was heard and the sound of firing. I suspected some robbery was being perpetrated; taking my sword I came out and observed that people were running towards the hakeem's house. I walked slowly there. In the meantime Yacoob Ahmed Khan, the kotwal, had arrived there with chowkeydars. I heard that 17 men had been killed and nine wounded. The kotwal then sent everybody away.

Did you hear how this affray happened?—Some said that Thakoor Rewut Singh came in search of the hakeem, and that a quarrel had occurred at the gateway with the sepoys, when the thakoor's puggree fell off, and some say his puggree fell off in the street opposite the gateway and caused the disturbance.

Where did you see the dead bodies lying?—Opposite the gateway of the Thuggee office and on the threshold. No one let me go inside.

Witness No. 7, *Roopa*, Son of *Sheo Lall*, Chumar, an Inhabitant of Tonk, aged 30 Years, a Klassie in the Tonk Service.

Q. How far do you live from the Thuggee office?—*A.* The walls of our respective houses join; if I go out of the entrance to my house to go to the Thuggee office, two houses separate us.

What do you know of the occurrence which has caused this inquiry?—Near 9 o'clock on that evening I was preparing my hookah, when I heard people opposite requesting the door to be opened: somebody inside said the door would not be opened. I heard this repeated two or three times, and then a shot was fired, and afterwards many shots. I was too frightened to move out of the house. In the morning when I went out I heard that a disturbance had taken place between the sepoys and the Lawa thakoor's people. I did not see the corpses myself.

Witness No. 8, *Abdool Rahman*, a Hakeem, in the Service of the Tonk Government.

Q. WHAT do you know respecting the illness of Hakeem Surwar Shah?—*A.* I have been attending him with three other hakeems. He has been suffering from paralysis and fever. Whilst I was preparing medicines this disturbance took place, and I have not since been sent for. I was called in some 20 days prior to the occurrence of the first instant, and his sickness dates still further back.

Witness No. 9, *Abdoola Khan*, Hakeem, in the Tonk Service.

Deposes precisely as the preceding witness.

Witness No. 10, *Ally Hussein*, Son of *Hakeem Nissar Ally*, a Hakeem, in the Tonk Service.

Also deposes as above.

Q. Was his sickness such as to prevent him from getting up?—*A.* He was liable to lose his senses at night, and in sleep his throat became contracted; he had fever also.

---

* Efforts are being made to trace these men.

Witness No. 11, *Aziz Khan*, Son of *Zamoola Khan*, Pathan, Inhabitant of Tonk, aged 26 Years, a Sepoy in the Nawab's Service.

Q. How did you become wounded?—*A.* I was a sentry on duty outside the door of Hakeem Surwar Shah's abode. About 9 o'clock p.m. somebody called out from the street "open the door;" I said such are not my orders; who are you? They replied that important business had brought the Lawa thakoor to visit the hakeem at that hour. I said the hakeem is sick, but they would not mind me. I called out to Golab Khan Sahibzadah, an officer in the Thuggee department, that the thakoor of Lawa had come to visit the hakeemjee. He came out and said, "Tell them to come in the morning." I again told the thakoor's people they could not come in, but they heeded not, and kicked the door in. I told Golab Khan what has happening, and he told me to keep them back. I began doing so, when the thakoor's puggree accidentally fell off, whereupon the thakoor struck Ally Bahadoor Khan (Golab Khan's naib) with a sword; Golab Khan then struck the thakoor, and in the meantime the Lawa followers commenced to use their arms. When four or five men had fallen, Golab Khan asked me what I was doing looking about, and told me to strike too. I then engaged with two or three of the opposite side; others, doubtless, joined in, but I know nothing more. I was severely wounded six or seven times and became senseless. Seven men were killed on our side and nine wounded.

The prisoner was subsequently asked to state further particulars regarding the men killed. He stated that six were Hindoos and one (Golab Khan) a Mahomedan.

Witness No. 12, *Jumoodeen Khan*, Son of *Fuckroodeen Khan*, Inhabitant of Tonk, Pathan, aged 29 Years, Private Servant of *Hakeem Sarwar Shah.*

Q. How did you get these wounds?—*A.* I am the overseer of Hakeem Surwar Shah's private business. I went in the evening to make my report, but the hakeem being sick, I did not see him. I laid down on a charpoy in the compound. About 9 p.m. the sentry outside called out that somebody was creating a disturbance outside, and wanted to come in. Sahibzadah Golab Khan on hearing this went out, and shortly afterwards there was a great noise and sound of firing. I ran to see what was the matter, and saw that swords were being used. I also received six wounds. Seven of our side were killed and nine wounded. When I was wounded, I became senseless.

Witness No. 13, *Mahamood Khan*, son of *Irack Shah Khan*, Pathan, inhabitant of Persia, aged 20 years, a Sepoy in the Tonk Nawab's service.

Q. How did you become wounded?—*A.* We were all sitting in the Thuggee and Dacoitee office, when at 9 p.m. there was a great noise. I said, "Perhaps this is an attempted robbery;" and taking our guns we went outside, where we saw fighting going on with the Lawa thakoor. In the *mêlée* I received a wound on the right hand, and several men were killed and wounded on either side.

Witness No. 14, *Mahomed Syud Khan*, son of *Hameed Khan*, Pathan, aged 35 years, resident of Tonk, employed as a Sepoy in the Thuggee Office.

Q. How did you become wounded?—*A.* I was on duty at the giraee office, and was sitting near Sahibzadah Golab Khan in the cutcherry. Aziz Khan, who was on sentry, called out, "People outside are making a disturbance and trying to open the door." Golab Khan and I, with others, went outside, and after inquiry he said to Rewut Singh, the hakeemjee is sick just now; you cannot see him; come in the morning. He would not listen to this, and pushed at the door, when a panel fell out and a hinge came off. Golab Khan ordered us to keep them out, and we all attempted to do so. By chance the thakoor's puggree fell off, when he struck Ally Bahadoor Khan with a sword, and Golab Khan struck Rewut Singh with a sword. The dispute warmed, and blows were freely exchanged, and several on either side were killed and wounded.

Witness No. 15, *Mahomoodeen Khan*, son of *Zaimoolarfeen Khan*, Pathan of Peshawur, aged 25 years, a Sepoy in the Tonk Nawab's service.

Q. How did you receive these wounds?—*A.* I was on duty with Sahibzadah Golab Khan, and consequently was sitting with him at night. Aziz Khan was the sentry on duty at the door; he called out to Golab Khan that the Lawa thakoor was forcing himself in,

and wanted to see the hakeem. He got up and went outside, and I accompanied him, and the intruders were told to go away, but they would not, and giving the door a push, it fell down. Golab Khan said, "keep them back;" and whilst we were doing this, the thakoor's puggree fell off, whereupon he struck Ally Bahadoor Khan with his sword. Golab Khan then struck the thakoor with a sword, and on both sides arms were used, and men killed and wounded. I received these seven sword wounds, and became senseless.

Did you see Thakoor Rewut Singh yourself?—I saw him, and warned him off, but he would not mind.

Witness No. 16, *Ally Bahadoor Khan*, son of *Syud Ally Khan*, Pathan, of Tonk, aged 30 years, a Sepoy in the service of the Tonk Nawab.

Q. How did you receive your wound?—*A.* I was sitting with many others, by Sahibzadah Golab Khan, inside the cutcherry. At 9 o'clock the sentry, Aziz Khan, called out that somebody was creating a disturbance at the gate, and trying to open it. Golab Khan got up and went outside; I and others accompanied him. Golab Khan inquired who the intruder was. They replied, "the Lawa thakoor has come to see the hakeem; open the door." Golob Khan in vain endeavoured to restrain them. When pushing at the door, it opened and fell down. All of us, agreeably to Golab Khan's orders, tried to keep them from entering, when, accidentally, Thakoor Rewut Singh's puggree fell off. He struck me with a sword, and Golab Khan struck him with a sword; in this way the fight commenced, and on both sides men were killed and wounded.

A wounded prisoner was brought to me who had literally lost his whole face, save the eyes; it was impossible to take his deposition.

A subsequent attempt was made, but without success.

Witness No. 17, *Moleedad Khan*, son of *Muneer Khan*, Pathan, of Sambhul, in the Moradabad District, aged 21 years, a sepoy in the Tonk service.

He deposes precisely as does Mahomed Syud Khan.

Witness No. 18, *Syud Meeroo Ally*, son of *Syud Ahmed*, inhabitant of Swat, aged 40 years, a sepoy in the Tonk service.

Q. How have you been wounded?—*A.* My guard was on duty at the Girazee office. I was asleep there, when at 9 p.m. the sentry called out, "Get up quickly! There is a disturbance outside." I saw a great crowd and a fight going on. I was struck and wounded, and became senseless.

Witness No. 19, *Girdharee*, son of *Maida*, Naik, inhabitant of Doonee, in Jeypore, aged 21 years.

Q. What brought you to Tonk?—*A.* I came from Doonee to meet my sister, and my brother Rooroo came with me. In the Tonk bazar we met a Brahmin with whom my brother was acquainted. We smoked together, after which he took us to where the Lawa thakoor was putting up. As Thakoor Rewut Singh was going to visit the hakeemjee, my brother and I said we would accompany the party and see the tamasha. When the thakoor arrived at the hakeem's the door was closed. The Lawa followers called out to open the door, as the thakoor had come to visit the hakeem. They replied that the hakeem was sick, and that the door could not be opened. The Lawa people did not mind, and said, "We must be admitted at once, so open the door." Having said this, they gave a push, and one of the panels gave way. The sepoys on either side commenced to quarrel, and arms were used. Directly I saw this I fled with my brother on the road. A chowkeydar arrested us.

Where were you imprisoned?—In the kotwallee.

How did you become acquainted with the Brahmin who took you to the Lawa thakoor's place?—My brother knew him before; I did not. Towards evening my brother met him in the street, when he took us to the thakoor's. There were a number of other people there, but I knew none of them.

Witness No. 20, *Roor Singh*, Son of *Jait Singh*, Naik, of Doonee, in Jeypore, aged 25 Years.

Q. How did you become a prisoner?—*A.* I went to the village of Parheea, in Jeypore, for the purpose of performing certain religious rites of my brotherhood; when I came back I stayed for two days with my sister. On the Thursday I was walking about the fair, when I met Lalljee Teewaree, of Lawa, and he told me the thakoor was here. I went with him to the thakoor's place, and after a little while I found out that Thakoor Rewut Singh was going to visit Hakeem Surwar Shah. I accompanied him; when he arrived the door was closed. Rewut Singh's followers called out to have it opened; the sepoys within replied that the hakeem was ill, and that the door could not be opened. They gave no heed to this, and kicking the door, the panel fell down. Both sides commenced to abuse each other, and at length blows were exchanged. On seeing this I fled. A chowkeydar seized me and my brother, who was with me. Since then I have been a prisoner in the Tonk kotwallee.

When you went to the Lawa thakoor's house, who else was there?—There were very many there. I smoked outside.

When you met Lalljee Purohit, was anyone with him?—No.

Do you know any of the Lawa thakoor's followers at this present alive whom you may have seen when you were at his house that evening?—No.

How did you become acquainted with Lalljee Purohit?—I purchased some tobacco at the same time and at the same shop as Lalljee; that is how we became acquainted.

Do you know the tobacconist who sold to you?—I don't know his name, but I know the shop, which is near the place where the thakoor was living. The tobacconist's age is about 30 years.

N.B.—The witness describes the position of the shop, and a chupprassee is directed to go and call the tobacconist. There are two shops in the vicinity. Both tobacconists appear. The witness fails to recognise them.

The chupprassee is next deputed to accompany the witness in order that the shop may be pointed out. They return, and the chupprassee reports that the spot pointed out to him is a bare piece of ground without any appearance of a shop.

(signed) *A. N. Bruce*, Political Agent.

Witness No. 21, *Nanoo Singh*, Son of *Gooman Singh*, Naik, Inhabitant of Tonk, aged 35 Years.

Q. Do you know anything about Rewut Singh's death?—*A.* I was going from the Gunj to my own house, when I met Moona Lall, a Lawa kamdar, whom I had known for some time. He took me to the place where the thakoor was residing, and there we had a smoke. About 9 p.m. I was going to my house, when Moona Lall said, don't go now; we are going to the hakeem's house; come with us; I will introduce you to the thakoor. I went with him. When we reached the hakeem's the door was closed. The thakoor's followers called out, "open the door." The sepoys within said, "the hakeem is sick; we will not open it." To this no heed was paid, and they called out again, shaking the door; one of the panels fell out, and a disturbance commenced between the thakoor's followers and those within, and several men entered the inclosure. In the midst of this disturbance one of the thakoor's puggrees fell off, when the affair became more serious, and swords were drawn. I saw one man struck upon the shoulder, and at once fled. In the road a chowkeydar seized me.

Did you not know anyone belonging to the thakoor save Moona Lall?—No.

Witness No. 22, *Shahab Khan*, Son of *Ghassi Khan*, Pathan, an Inhabitant of Kote, in the District of Futtehpore, aged 35 Years, a Jemadar in the Ameergunge Kotwallee.

Q. What do you know respecting the death of Thakoor Rewut Singh?—*A.* All I know is, that my superior officer, Faiz Mahomed, sent me an order to have the corpses, which were lying at Hakeem Surwar Shah's place, burnt. I went there, placed them on carts and getting wood, had them consumed. In all there were 16 bodies.

Witness No. 23, *Lutchmun*, Son of *Gunga*, an Inhabitant of Tonk, aged 20 Years, a Servant in *Hakeem Surwar Shah's* employ.

Q. What do you know respecting the death of Thakoor Rewut Singh?—*A.* I have been occasionally to the Lawa thakoor's residence, but on the day when this business occurred I was away at the village of Eusufpooa on some work connected with my fields. The following day, when I heard of it, I came to Tonk. This is all I know.

PURPORT of a Kyfeeut from Political Agent, Harowtee, to the Address of the Vakeel of Tonk; dated 21 August 1867.

WITH reference to the inquiry going on into the late fracas at Tonk, begs to observe that, although the Nawab, on being asked by Political Agent, verbally informs him he has no more witnesses to produce, it is desirable, for record with the proceedings, to learn this in writing; requests, therefore, the vakeel will produce any further evidence, if forthcoming; otherwise furnish a reply.

PURPORT of a Kyfeeut from Vakeel of Tonk to Address of Political Agent; dated 21 August 1867.

IN reply to kyfeeut of to-day's date, observes that all the witnesses and evidence in the late affray at Tonk have been produced before Political Agent at Tonk; that should any others be forthcoming, they will be sent to Deolee without delay; but if Political Agent considers the presence of any other person necessary, he will be at once sent for on intimation being given.

Enclosure No. 5.

(D.)

DEPOSITION of Native Doctor *Bheeky Singh* taken by the Political Agent of Harowtee at Camp Tonk, on the 17th August 1867.

Q.. Let me know all you have heard in respect of the occurrence of the 1st instant.—*A.* I heard that at about 8 or half-past 8 o'clock in the evening a messenger was sent to the thakoor by Hakeem Surwar Shah, begging that he would come and see him in respect of some differences, which the Nawab was anxious to adjust amicably. The thakoor, it is said, suggested that Rewut Singh should go, as he had authority to act in all matters. Other messages were sent inviting Dheerut Singh, but it ended in the uncle setting forth with Beejey Singh, his nephew, two kamdars, and others, in all some 16 men. They were admitted, and the four big men of the party asked to go inside, which they did, and were then attacked and massacred; those outside being simultaneously cut down or shot. At the same time Dheerut Singh's quarters were surrounded and himself made a prisoner. He was asked, it is said, to come outside, but declined. The same night a small force (300 Wullayatees) were dispatched to Lawa, and the following day the Abdee Regiment was ordered there with elephants and ladders. They remained there three days fighting, and then returned. The corpses were said to have been treated with great indignity.

Do you know anything about Hakeem Surwar Shah having been sick at the time of the occurrence?—No; all I know is, that the evening before your expected arrival two persons sent for me, one the Kotwal, Nusseer's brother; the other Moulvee Abdool Malik. I, for certain reasons, declined to go, when next morning Hafiz Ahmed Hussein came to me and said that he would send me a perwannah, desiring me to intimate that I had, prior to the disturbance, treated Surwar Shah professionally, and was doing so now. I have these documents, and can produce them; they are dated prior to, though received after, the affair of the 1st instant. On the day of your arrival Hafiz Ahmed asked me if I had made any report to you of the event. I said, no. He then begged me to tell you I had seen the dead bodies. I declined. He then said you can say that the disturbance occurred outside. I said, No! I would not falsely state anything. He then said, very well; you can at all events tell the Sahib you happened to be out walking, and seeing the blood and flies in the street, you ran back. To this I tacitly consented.

Have you ever seen Hakeem Surwar Shah before you came to Tonk two years ago?—Never.

Have

Have you seen the wounded Wullayatees; and if so, how many are there?—The night before your advent they were sent to me. There were nine brought; five are severely wounded; four are merely scratched.

What became of the dead?—The Hindoos, I was told, were burnt by Bungays the following morning. The 16 Lawa people were said to be numbered, as follows:—

Thakoor Rewut Singh; his nephew, Beejey Singh.	One Naik.
Two Kamdars.	Four Meena sepoys.
One Chobdar.	Six others.

One syce escaped, and warned the Lawa people at Lawa of what had happened at Tonk.

Do you believe what you have heard to be the general impression of the affair?—Every one believes it so, but, for fear of consequences, no one will say so.

Did anything occur during the day of the occurrence to indicate what was going to happen?—My servants told me there were rumours in respect of Lawa, and it was pretty generally known that troops had been ordered to hold themselves in readiness to proceed somewhere. I had heard also that a dresser had been ordered to be at the hakeem's house by a certain hour that night.

On the 18th August Bheeky Singh stated that a man had been sent to him that day by the Nawab desiring him to state in writing that he had treated Surwar Shah for 20 days prior to the occurrence of the 1st instant. He declined to do so.

How many were killed on the Nawab's side, as far as you have been able to learn?—I believe only one; a second was spoken of.

On the 20th August the Native doctor and his compounder came to see me; the former brought three perwannahs received from the Raj requesting him to attend the hakeem. The first was received six days after the event, the other two on the day of my arrival, though they are all dated prior to the disturbance.

Bundeah Ally, Compounder, Tonk Dispensary.

Q. WHAT do you know as regards the occurrence of the 1st instant?—*A.* (Witness deposes precisely as the Native doctor), adding that his house is near the place of the tragedy, and he saw the hurry scurry in the street, and heard repeated firing. He also saw five elephants laden with ladders, &c. proceeding to Lawa. The dead bodies were hurried away without any reference to the Native doctor. The general impression is that it was a piece of foul treachery, but it would be ruination for anyone to speak out. He asserts that one man only was killed on the Tonk side.

On the 20th instant the compounder states that the previous day Hakeem Surwar Shah had sent for him, and begged him to get a rooka from the Native doctor to the effect that he had been treating him for some time prior to the disturbance.

(signed) *A. N. Bruce*, Political Agent.

Enclosure No. 6.

(E.)

DEPOSITION of *Gokul Chund*, Dawk Baboo, taken by Political Agent at Tonk.

Q. WHAT do you happen to know in respect of the occurrence of the 1st instant?—*A.* All I know is from hearsay. I was told that Thakoor Rewut Singh and his party had gone to the hakeem's house by visitation, and had been killed inside; that a fight had taken place and much bloodshed.

Was this the report generally rife in the bazaar?—It was.

Are you not aware that the Tonk version of the story is to the effect that the disturbance took place outside in consequence of the thakoor desiring to make a forcible entry into the hakeem's house?—Yes; I know that such is now promulgated, but it was at first freely spoken of as treachery on the part of Tonk towards Lawa.

Did you not report what occurred to your departmental superior?—Yes; fearing lest the excitement caused might delay the mails, I wrote to the Inspecting Postmaster of my division, reporting that the disturbance had taken place.

Have you a copy of that communication?—No; I am not quite sure what I wrote exactly, but you can get a copy of my petition by writing for it.

The petition in original was sent for and received, and its purport is given in full in paragraph 68 of the Report.

(signed) *A. N. Bruce*, Political Agent.

DEPOSITION of *Ram Suroop*, Chobdar in the Harowtee Agency, taken by the Political Agent.

Q. After your deputation to Tonk, what did you hear respecting the affair at the Thuggee office? Relate what you told Captain Roberts?—*A.* When Captain Roberts came here and questioned me, I said that the sentries placed around the thakoor's had been removed, and that a guard of 10 or 12 men now only remained at the entrance. I told the sahib what I knew about the place of occurrence, and how that the Tonk people had stated the affair occurred outside, but that I had heard four of the thakoor's people had been killed inside and the rest outside. The four above alluded to were said to have been killed in an inner apartment. I heard that six or seven men had been killed on either side, but afterwards it was said that Lawa had lost more. I know not who began the affray.

Can you state from whom you heard these particulars?—I heard them from the people of the place, but no one will come here and say so..

Witness afterwards asked—

Did you, on your arrival at Tonk, visit the scene of the tragedy?—I did.

Did you observe any marks on the walls which would indicate there had been fighting?—I did not.

(signed) *A. N. Bruce*, Political Agent.

DEPOSITION of *Mendhi Ally*, Naib Moonshee of the Rajpootana Agency, on deputation with Captain *Roberts*, Assistant Agent, Governor General, at Jeypore, dated the 20th August 1867.

Whilst at Tonk for a few days during Captain Roberts's visit to Deolee, I put up with Moulvee Irshad Hussein. On the evening of the 1st August we dined with Sahibzadah Ahmedyar Khan; after dinner we, *i. e.*, Irshad Hussein, Wuzeeroola Khan, and myself, returned to Irshad Hussein's in a "tanga." This was about 10 o'clock at night. My two companions began conversing; on my asking the topic of their conversation, Irshad Hussein replied, it is currently reported that troops are on their way to Lawa. I remarked, the thakoor is himself here; why should troops be sent there? They replied, they did not know why, and the subject dropped. The next morning (the 2nd instant) I left Tonk, on my return to Jeypore, at a little before dawn. After I had crossed the Bunnass, and had arrived at Dotana, a village on the Tonk-Jeypore frontier, some seven miles from the Bunnass, I sat down by the side of the Dotana tulao, and recited the morning prayer. Whilst sitting here, the potail and some of the villagers came up and began conversing with me. I said to them," "whilst sitting here, I have heard two or three reports like that of a cannon;" they replied, "those guns are being fired at Lawa." At the various villages I passed between the Bunnass and Dotana, the villagers were talking that 300 or 400 Wullayatees had been sent to Lawa.

The above was taken by Captain Roberts, Assistant Agent, Governor General, and forwarded to me. It is a pity the Moonshee was not asked what rumour he had heard at Tonk regarding the tragedy.

(signed) *A. N. Bruce*, Political Agent.

Enclosure, No. 7.

See SKETCH opposite.

I duly visited the scene of this tragedy, an outline sketch of which is given in the opposite page. It might be described as a large oblong inclosure, containing an inner inclosure; the street running at right angle with the direction of entrance. I regret I did not take a measurement of the place, but from memory I should be inclined to put down the length of the double-inclosure at about 80 yards, and its breadth, perhaps, 40 yards.

There is a second entrance to the inner inclosure from the front now guarded by a door, which Megh Singh asserts was not there on the eventful night.

This inner yard has buildings on three sides of it. Opposite the entrance is the cutcherry wherein the morning interview was said to have taken place. On the left some houses with a low upper story, which might be utilised for attendants or sepoys, and on the right a larger and more lofty range of buildings, which are the hakeem's quarters and zenana; on the right front corner, looking from the gateway to the cutcherry, is a flight of stone stairs, up which Rewut Singh, Beejey Singh, Moona Lall, and Siree Lall ascended and disappeared, whilst a wooden seat in the centre of the inner inclosure was the seat upon which they sat and

and waited till called, and where the followers remained when they went inside; the stairs and this seat being the places where Lawa declares they were attacked.

I could discover no marks of conflict on the walls either in the inner inclosure or the outer; but ample time had been given to remove or renovate all such traces.

(signed) *A. N. Bruce,*
Political Agent.

Enclosure No. 8.

From Captain Bruce, Political Agent, Harowtee, to the Governor General's Agent, Rajpootana, Confidential; No. 98-17 P., dated Deolee, 31st August 1867.

IN continuation of my letter, No. 97-16 P., dated 26th instant, on the recent Tonk-Lawa affray, I have the honour to submit further enclosures as noted on the margin.

No. 1, Enclosure G.—Purport of petition from Naib Moonshee, Harowtee Agency.
No. 2, Enclosure H.—Purport of khureeta from Political Agent, to Nawab of Tonk, and reply on the subject of withdrawing troops from Goordhunpoora.
No. 3, Enclosure I.—Purport of kyfeeut from Vakeel of Tonk, and reply on subject of Suiwur Shah's suspension from office.

Enclosure No. 9.

(G.)

PURPORT of Petition from *Jowhee Lall,* Naib Moonshee, Harowtee Agency, to Political Agent; dated 7th August 1867.

AGREEABLY to your honour's orders I arrived at Lawa to-day. I at once inquired about the Tonk troops. It appears that 800 sepoys and 25 juzails had arrived from Tonk and remained for two days engaged with the Lawa people in conflict. Although the Lawa people were numerically inferior, yet from having guns they were enabled to hold their own; four or five men were killed on their side, and two or three wounded by gun-shot. On the Tonk side I don't know exactly how many casualties occurred. On the morning of the 5th instant the Tonk force left this. There are only now some 20 or 30 Wullayatees in the Goordhunpoora fort.

Yesterday these Wullayatees seized some of the Lawa cattle, upon seeing which the Lawa people went out armed to fight, and shots were exchanged; one of the Tonk sepoys was severely wounded and two of the Lawa men badly hurt.

The Lawa people have on all sides of the fort closed and built up the entrances; people going in and out have to do so by means of ladders.

A jemadar (generally called Naib Resaldar) is the officer in charge of the Tonk sepoys at the Goordhunpoora fort, but just now he is out shooting in the Tonk district; when he returns I will, agreeably to your honour's instructions, warn him not to allow any disturbance to occur with the Lawa people. A man has arrived here to-day from Tonk, and we learn from him that the Lawa thakoor is in safety.

If anything occurs, it shall be communicated.

Enclosure No. 10.

(H.)

PURPORT of a Khureeta from the Political Agent, Harowtee, to the Address of the Nawab of Tonk; dated the 23rd August 1867.

ALTHOUGH I have already verbally pointed out to your Highness the necessity of withdrawing the troops stationed at Goordhunpoora in the immediate vicinity of Lawa, their presence there being calculated to create disturbance, I think it desirable the same should be conveyed in writing also, and therefore address your Highness to beg that all, save a small guard necessary for the protection of the place, may be withdrawn.

PURPORT of Nawab's Reply to the above; dated the 26th idem.

IN reply to your khureeta of the 23rd instant, on the subject of the withdrawal of the troops stationed at Goordhunpoora, I beg to inform you that the 100 men who had from the first been placed there for its protection have been recalled, and only some 12 men now remain to take care of the fort, and six men to look after the village of Goordhunpoora.

Beyond these there are no horse or foot there.

Enclosure No. 11.

(I.)

PURPORT of a Kyfeeut from the Vakeel of Tonk to the Address of the Political Agent, Harowtee; dated the 27th August 1867.

ADVERTING to the late affray at Tonk between an officer of the Thuggee and Dacoitee department, some Tonk soldiers, and the followers of the Thakoor of Lawa, wherein people on both sides were killed and wounded, and into which a strict and searching inquiry and investigation has been instituted both by his Highness the Nawab and by Political Agent, and during which nothing, beyond what was stated in the Durbar's khureeta* addressed at the time of the occurrence transpired to prove connivance on the part of Hakeem Surwar Shah Khan, intimates that, in consequence of the fracas having taken place at the hakeem's door, and he being the head officer of the Tonk Thuggee and Dacoitee, which may, perhaps, prevent persons coming forward as witnesses against him, his Highness has considered it necessary, as a precautionary measure, to suspend him from his position, and place him under surveillance pending result of inquiry now under investigation.

*N.B.—Purport also sent to Agent, Governor General.

PURPORT of Political Agent's Reply to the above.

IN reply to his kyfeeut of 27th August, intimating that his Highness had, for reasons stated, suspended Hakeem Surwar Shah from his appointment, and put him under surveillance pending result of the inquiry into the affray which took place, Political Agent is glad that his Highness, even at this late hour, should have deemed it advisable to take some action in a matter so gravely suspicious in its nature; but Political Agent is sorry that the result of the Nawab's inquiry into the affair should have left an impression on his Highness's mind with which Political Agent is unable to concur.

From Captain Bruce, Political Agent, Harowtee, to the Secretary to the Government of India, Foreign Department, with the Governor General, Confidential, No. 158 E; dated Deolee, 14th September 1867.

IN obedience to the instructions of the Governor General's Agent for Rajpootana, I have the honour to submit, for the consideration of his Excellency the Viceroy, copy of a further Report, with enclosures, as noted on the margin, on the recent disturbance at the Tonk capital.

No. 103-19 P., dated 13 September 1867.
Enclosure BI., Lawa evidence.
Enclosure CI., Tonk evidence.

From the Political Agent, Harowtee, to the Governor General's Agent, Rajpootana, Confidential, No. 103-19 P.; dated the 13th September 1867.

IN continuation of previous correspondence, I have the honour to submit further papers connected with my investigation into the circumstances attendant upon the recent death of Thakoor Rewut Singh at the Tonk capital.

2. Although convinced of the futility of endeavouring to elicit the real facts of this painful case by anything like judicial proof, the receipt of your telegram of the 3rd instant, in respect of the discrepancy apparent in the evidence as to the number of Hindoo casualties, induced me to determine that the most satisfactory course would be to personally examine at their homes, if possible, the heirs of the deceased; whilst I knew a further inquiry might afford me an opportunity to amplify the evidence of the more important witnesses, and thus enable

enable me to carry out, as far as practicable, the letter of the instructions which, you are aware, reached me after my return on the last occasion. I accordingly proceeded to Tonk with the intention of visiting Lawa, and returned to Deolee last evening.

3. I would take this occasion to observe that the desirability of acquiring satisfactory testimony as regards the casualties did not escape me on my first visit, but it would have been necessary to send for many witnesses; and, as my own duties rendered a lengthened absence inconvenient, I directed the presence of these persons at Deolee.

4. In my letter, No. 97-16P., dated 26th ultimo, the Lawa evidence formed Enclosure B. I now submit it as B.1.; and in like manner forward that of Tonk, marked C.1.

5. I have little to add to my previous remarks. Nothing of importance has transpired of which I was not aware before, but many questions are now on record which, though asked, were inadvertently left out in the written proceedings already submitted. I here more especially allude to the inability (ascertained, but not noted) of any of the Lawa witnesses, save Pope Singh and Beejey Lall, to recognise Luchmunna, Chupprassee, as also some questions put to Megh Singh.

6. I did not anticipate any new light being thrown on the affair by further inquiry, for I knew Lawa was helpless, and Tonk in a position to prove anything, as far as witnesses were concerned; and I felt that, under the peculiar circumstances of the case, I could not legitimately pursue any course calculated to elicit the real truth.

7. Of the six Hindoos said to have been killed on the Nawab's side, the representatives of four have been produced, and a reasonable excuse is offered for the non-appearance of the other two (*vide* kyfeeut from the vakeel, Enclosure C.1.).
Lawa urges 15 casualties, and they are all accounted for.

8. Were it possible, then, to believe both sides, the bodies of 21 Hindoos should have been consumed; but we have distinct evidence of Tonk witnesses that there were but 16 Hindoo corpses, and that number is confirmed by the burners of the dead (*vide* Papers C.1.) and it remains to decide which story is most likely to be true.

9. I must frankly confess I believe Lawa; and if my credulity in this matter does injustice to Tonk, I can only urge that the nature of their defence throughout, and the manner in which it has been supported, are calculated to induce scepticism as to their veracity.

10. This view, however, would only account for 15 out of the 16 bodies, and the only solution which occurs to me for this difficulty is to credit the idea that Tonk lost one Hindoo as well as one Mahomedan killed, which would corroborate the rumour mentioned by the native doctor, who heard of a second casualty on their side (*vide* Enclosure D. to letter No. 97-16 P.).

11. If testimony alone can establish a case, the Tonk evidence might be considered complete. In addition to that already recorded, they produce the heirs of their dead, and prove an *alibi* for the man who is said to have been sent to invite the Lawa party; but there is, notwithstanding, a savour of truth on the one side conspicuously absent on the other, which more than counter-balances the weight of evidence.

12. In paragraph 40 of my letter No. 97-16P. I observed there was little doubt the Lawa party carried swords only, from the simple fact that all the Tonk wounded were suffering from sword cuts. In further support of this I would solicit attention to the depositions of the heirs of the deceased (Papers C.1.), who, one and all, describe the sword as the cause of death, and there is a singular fidelity in their evidence as to the nature of the wounds!

13. The depositions recorded in this inquiry have been taken publicly. Both sides had opportunity to cross-examine. The Tonk Vakeel availed himself of this; the Lawa Vakeel made a favour of being excused asking questions; he was no lawyer he said, and feared damaging his own cause.

14. I duly visited Lawa, and have the honour to enclose two sketches of the fort and village, as also a rough ground plan of a small gurree erected by Tonk about a mile to the eastward.
For all of these I am indebted to the kindness of Assistant Surgeon De Fabeck, in charge of this agency, who accompanied me.
The village of Lawa consists of some five or six hundred mud huts in bad repair; and the general aspect of the place is one of extreme impoverishment. All the entrances were barricaded, and I was taken in by means of a ladder.

15. Whatever may be the result of this unfortunate affair, years must elapse ere the confidence of Lawa towards Tonk can be restored, and a bitter blood feud is likely to exist for a long time to come. In this particular instance it does not necessarily follow that the existence of such a feeling should be cause for most anxiety to, apparently, the weaker of the two; for without entering upon the general Tonk-Lawa question, it is difficult entirely to separate cause and effect, and if general report is to be believed, Lawa has hitherto been liberally supported from without.

16. In obedience to your telegraphic instructions, a copy of this Report and its enclosures will be forwarded direct to the Government of India.

Enclosure No. 2.

(B.I.)

DEPOSITIONS recorded by Political Agent, Harowtee, at Camp Lawa, on the 10th September 1867.

Megh Singh, Re-examined. (For previous Examination, *vide* Enclosure B.)

Question by Tonk Vakeel.]—As you belong to Sirus, in Jeypore, how is it you went to Tonk with the Lawa thakoor?—*A.* The thakoor took me.

Did any servant of the hakeem's come to call Rewut Singh to his house?—Not in my presence.

When you went to the hakeem's, how many attendants waited outside?—Four out of 15 went upstairs: the rest waited below.

Of those who waited below, did any escape save yourself?—I do not know.

You said that 15 men had been killed; if you don't know whether any escaped, how can you say so?—I did not say so; all I said was that I did not know.

When you ran away had any men been killed?—Fighting was going on when I ran away.

Question by Political Agent.] What arms had you on the occasion?—A sword.

What arms had the others of your party?—Two had guns belonging to the thakoor; the others carried swords.

You have stated that owing to the darkness you could not recognise the man who wounded you; could you point out any one who was present during the affray?—No.

When the thakoor went upstairs and you waited below, did you at that time observe many Tonk sepoys about?—At that time no one was about.

Could you recognise the Hindustani sepoy who said it was an inappropriate time for a visit?—No.

Do you know anything regarding the first interview Thakoor Rewut Singh had with the hakeem?—No.

When you were made a prisoner, where did they take you?—To the Kotwalley, where I was kept till the Political Agent arrived.

Were irons put upon your leg?—No.

Do you know the names of the attendants who accompanied Rewut Singh to the hakeem's that night?—I only know four by name.

What are those four names?—Moona Lall, Lalljee, Bejey Singh, Rewut Singh.

Dhan Singh, Re-examined. (For previous Examination, *vide* Enclosure B.)

Question by Tonk Vakeel.] COULD you recognise the man you say came to call Rewut Singh to the hakeem's?—*A.* No.

You have already said a Chupprassee, or hurkara came; did you see him?—No.

How do you know he was a servant of the hakeem's?—He came and said the hakeem has sent for you.

Can you prove this man was a servant of the hakeem's?—He mentioned the hakeem's name, that's how it is known. I could not prove it in any other way.

Did you lose any relatives in the affray?—Yes, I lost a relative in Buldeo Singh.

You say that 15 men accompanied Rewut Singh and Beejey Singh to the hakeem's; can you give their names?—Moona Lall (Kamdar), aged 50; Lalljee Tewaree (Vakeel), aged 55; Buldeo Singh (Narooqua), aged 25; Gobind Singh (Bhatore), aged 50; Golab Singh (Narooqua), aged 45; Sheonath (Chobdar), aged 30; Kishen Lall (Barait), aged 23; Ram Dhun (Barait), aged 25; Jeewun (Chokrail), aged 40; Gunesha (Mushalchee), aged 25; Rama (Chakur), aged 30; Gobinda (Chakur), aged 35. I cannot remember the names of the others just now.

Did none of these escape?—Two escaped, Megh Singh and Byree Lal.

Do you know what arms the party carried?—Swords and shields.

You have recorded that two days before this event Thakoor Rewut Singh visited the hakeem's and returned pleased; how do you know he was pleased?—I asked Rewut Singh about the interview, and he told me the hakeem had inspired confidence in him.

Rewut Singh, Barait, of Lawa, Re-examined. (For previous Examination, *vide* Enclosure B.)

Question by Tonk Vakeel.] COULD you recognise the Chupprassee you say came to call Rewut Singh?—*A.* No, it was night time, and I had never seen him before.

When Rewut Singh went to the hakeem's, how many accompanied him?—Sixteen.

How

How many of these returned thence?—One, Megh Singh.

Dhan Singh mentions two men who escaped; how do you account for this?—I only have seen one, and therefore can only speak accordingly.

Did any feeling of animosity exist between Rawut Singh and the hakeem prior to this event?—No, they were on very friendly terms.

Did any difference occur on the occasion of this visit to Tonk?—I was not present at the first interview, so cannot say.

Do you know whether any difference occurred prior to blows being struck either with the hakeem or any of his sepoys?—I do not know; I knew nothing of the affair until I heard the firing.

Question by Political Agent.] Do you know the names of the persons who accompanied Rewut Singh that evening?—Some I remember; some I do not.

Mention the names and ages of those you can remember.

Rewut Singh, aged 45; Beejey Singh, 22; Moona Lall (Kamdar), 45; Lalljee Tewaree (Kamdar), 45; Golab Singh (Narooqua), 45; Gobind Singh (Rhatore), 21; Buldeo Singh (Narooqua), 26; Sheonath (Chobdar), 50; Rama (Khidmutgar), 22; Ram Dhun (Barait), 26; Kishen Lall (Barait), 26; a Naie (don't recollect), 27; Jeewun (Meena), 50; Ummur-bajun (Samee), 28. I cannot remember any more.

Did any escape?—Megh Singh escaped with life.

What arms did the party carry?—Two carried guns, Gobind Singh and perhaps Buldeo Singh, or some other. The rest had swords.

You have recorded that at the first interview with the hakeem, Rewut Singh returned pleased; how do you know this?—He said nothing to the contrary on his return; hence I inferred he was pleased.

Sheonath, of Lawa, Re-examined. (Previous Examination recorded in Enclosure B.)

Q. Do you know the names of the persons who accompanied Rewut Singh that evening?—Yes.

Mention their names?—Rewut Singh, Beejey Singh, Moona Lall, Lalljee, Gobindjee, Buldeojee, Hunwuntjee, Golabjee, Ummur-bajun (Samee), Jeewun, Ram Dhun, Kishen Lall, Gunesha, Meghjee, who escaped. I cannot remember any more just now.

What arms did these men carry?—There were two guns belonging to the sirdars; I do not know about the rest.

Question by Tonk Vakeel.] Do you know whether any sepoys on the hakeem's side were killed?—I do not.

When did you learn who had been killed on the thakoor's side?—On the third day; the day of the occurrence we only heard the firing.

Was there any enmity between the hakeem and Rewut Singh?—No; whenever the thakoor visited the hakeem, the latter was friendly.

If there was no ill feeling, what made you, on hearing the firing, close the doors, and suspect that something had happened at the hakeem's?—Others ran into the house, and I did the same.

When the thakoor left for the hakeem's, did he, or any one else, tell you to close the doors if you heard firing?—No.

Did any of those who shut themselves in with you know anything about this?—I cannot say what they knew; I don't know their names even.

Ghassi, of Lawa, Re-examined.

Question by Tonk Vakeel.] How many men accompanied Rewut Singh to the hakeem's house?—Fifteen.

Do you know how the disturbance took place at the hakeem's?—No.

Did you hear afterwards?—No.

How many of those who accompanied Rewut Singh returned?—Sixteen went; 15 were killed and one escaped.

Did you run away directly the affair occurred?—Directly.

You say a Chupprassee came from the hakeem's to call Rewut Singh; could you recognise the man?—No.

Do you know the names and ages of those who accompanied Rewut Singh?—I know some: Rewut Singh, aged 45; Beejey Singh, 23; Lalljee, 50; Moona Lall, 50; Gooljee, 50; Sheonath, 45; Ram Dhun, 30; Kishen Lall, 25; Gunesha, 20; Hunwunt Singh, 22; Ram Singh, 22; Jeewun, 50; Gobind Singh, 22; Buldeo Singh, 22; I can remember no more.

Did any escape?—One escaped; I do not know his name.

Do you know what arms these men carried?—I saw two carrying guns; the rest had swords.

Did you hear of any of the hakeem's side being killed?—No.

Buldeo, son of *Kulloo,* Khuteek, inhabitant of Lawa, aged 25 years, in the service of the Thakoor; was the late Thakoor Rewut Singh's syce.

Q. Did you go to Tonk with Thakoor Rewut Singh?—Yes.

What do you know regarding the tragedy which took place at Hakeem Surwar Shah's place?—About 8 p.m. one of the hakeem's Chuprassees came to call them, and Thakoors Rewut Singh and Beejey Singh, with others (in all 15) went with him.

Did you accompany the party?—No; I don't know what occurred there.

Could you recognise the Chuprassee who came to fetch them?—No.

Do you know who went with Rewut Singh on that occasion?—I could not give a list.

What did you do that night after the occurrence of this affair?—After it had happened a carriage drove up to where the thakoor was residing, and in it was seated a stout person. I was at that time with the horses a few paces off. The man in the carriage said if the thakoor in this house should come out, cut off his head, and bring it to me, and kill the rest. After this a musket was fired close to where the horses were tied, and they began to loosen the animals, a sepoy at the same time firing the grass. When I saw this I fled, and two sepoys followed me for 100 yards. They did not catch me. I know no more. I ran to Lawa.

Did any others return with you?—No.

Did you come by the direct road?—No, I made a circuit of four miles, and at the village of Jeerana came across the Tonk troops. On seeing them I disappeared into the jungles, and, getting ahead of them, reached Lawa before they did. The whole place was asleep on my arrival, save Ram Sookh, who was on watch on the fort. I went to Ram Singh and Oodey Singh, and told them about the treachery which had been enacted towards Rewut Singh and Beejey Singh, how they had been killed, and the thakoor's house surrounded. On hearing this they became alert, and just then the troops arrived and bullets began to fly. This is all I know.

Umbah Lall, son of *Lalljee,* Brahmin, of Lawa, aged 30 years, a cultivator, in the service of the Thakoor.

Q. Was any relative of yours killed in the affray which occurred at Tonk?—*A.* Yes, my father.

Do you know how he was killed?—No, I was at Lawa; my father accompanied the thakoor, and was killed.

What was your father's age and general appearance?—Fifty years of age, dark complexion, and otherwise like me.

Boor Singh, son of *Goomah Singh,* Rajpoot (Rahtore), of Lawa, aged 70 years, a cultivator.

Q. Did you lose any relatives in the recent affray at Tonk?—*A.* My son Hunwunt Singh was killed.

Do you know how your son lost his life?—I was not present; I heard of the event when the thakoor returned from Tonk.

What was your son's age and general appearance?—He was 26 years old, and just beginning to get hair on his face.

Shewloll, son of *Jamanjee,* Barait, of Lawa, aged 30 years, a poet.

Q. Was any relative of yours killed at Tonk in the recent affray?—*A.* My younger brother was killed.

Do you know how?—No, I remained here; I can only speak of the force which came here.

What was your brother's age and personal appearance?—He was 28 years old, fair, black beard, short, and rather stout.

Are you his nearest of kin?—Yes, I and our mother.

Geeana, son of *Bhopal,* a half-caste Rajpoot, inhabitant of Lawa, aged 60, a Chobdar in the Thakoor's employ.

Q. Did you lose any relative in the affray which took place at Hakeem Surwar Shah's?—*A.* My brother Sheonath was killed.

Do you know how?—He went with the sirdars; I don't know how he met his death. I know that we were surrounded by troops on all sides at Lawa.

What was Sheonath's age and personal appearance?—Fifty-nine years old, grey beard, middle height; no distinctive marks on face.

Gunesha, son of *Jeewun,* Meena, inhabitant of Lawa, aged 25 years, a cultivator.

Q. DID you lose any relative in the affray?—*A.* My father was killed.
Do you know how?—He was killed with the sidars.
What was his age and appearance?—Fifty years old, grey beard, tall, and slight.
Are you his nearest of kin?—I am.

Gaoojur, Nund, son of *Shairjee,* Barait, of Lawa, aged 28 years, a poet.

Q. DID you lose any relative in the Tonk affray?—*A.* My elder brother, Ram Dhun, was killed.
How?—I cannot say; I was not there.
What was his age and personal appearance?—Thirty-two years old, black beard, middle height, and thin.
Are you his nearest of kin?—Yes, I and his little children.

Oodah, son of *Moonee Lall,* a Bunyah of Lawa, aged 13 years, in the service of the Thakoor.

Q. WERE any of your relatives killed in the affray which occurred at the hakeem's place?—*A.* My father was killed.
Do you know how he lost his life?—The sirdars of this place were killed, and my father with them. A force also came to Lawa.
What was your father's age and personal appearance?—Forty-five years old, somewhat grey, tall, and slight.
Are you his heir?—I am.

Busunteedass, adopted son of *Ummur-bajun,* Nagur, of Chandsee, in Jeypore, aged 20 years, a money-lender.

Q. DID you lose any relative in the Tonk affray?—*A.* My adopted father, Ummur-bajun, was killed.
Do you know how?—The thakoor sent for him and took him to Tonk; I don't know how he was killed. When the thakoor returned I heard of it.
What was your father's age and appearance?—Forty-five years old, tall, and black beard.
Are you his heir?—Yes.

Buldeo, son of *Rooroo,* Naie, of Lawa, aged 30 years, a barber.

Q. DID you lose any relative in the Tonk affray?—*A.* Yes, my younger brother, Gunesha, was killed.
Do you know how?—No; he accompanied the thakoor to Tonk.
What was his age and appearance?—Twenty-five years old, medium complexion, black beard, and middle height.

Deojee, son of *Abbi Singh* (Narooqua), of Lawa, aged 40 years, cultivator.

Q. DID you lose any relatives in the recent Tonk affray?—*A.* My younger brother, Buldeo Singh, was killed.
Do you know how?—No; I only know he was killed there, and a force came to kill us here.
What was your brother's age and personal appearance?—Thirty years old, tall, medium complexion, and black beard.
Are you his nearest of kin?—Yes.

Shewloll, son of *Roopa,* a half-caste, of Lawa, aged 55 years, in the Thakoor's service.

Q. DID you lose any relatives in the recent Tonk affray?—*A.* My nephew, Rama, was killed.
Do you know how?—I don't; he was with the sirdars, and I remained here.
What was his age and appearance like?—Twenty-three years old, hair on his face coming, middle height.
Are you his nearest of kin?—His mother and wife are his nearest of kin.

Murjad Singh, son of *Doorjun Sal*, of Ajmeeree, in Jeypore, a Rajpoot (Narooqua), aged 40 years, a Zemindar.

Q. DID you lose any relatives in the recent Tonk affray?—*A.* My elder brother, Golab Singh, was killed with Rewut Singh.

How was he killed?—I was not there; I heard the Nawab had treacherously killed them.

What was his age and personal appearance?—Forty-five years old, tall, and grey beard.

Are you Golab Singh's nearest of kin?—I am.

Thakoor Sham Singh, of Lawa, uncle to the Thakoor of that place, and brother of the late *Rewut Singh*.

Q. WHO is Gobind Singh's nearest of kin?—*A.* His mother; she is unable, being behind the purdah, to come before you.

Where is Golab Singh's nearest of kin?—His son is away purchasing some buffaloes. States that Rewut Singh's son is Rewut Singh's heir, and Dheerut Singh, thakoor of Lawa, is nearest of kin to his late brother, Beejey Singh.

Was there any man present in the Tonk affray called Biree Lall who escaped!—No, not when the occurrence took place. When the horses were being seized he was near the animals, and ran away when he was wounded with a bullet in the thigh.

Did he go with Rewut Singh to the hakeem's?—No.

(signed) *A. N. Bruce*,
Political Agent.

Enclosure No. 3.

(C.I.)

DEPOSITION recorded by Political Agent, Harowtee, at Camp Tonk, on 8th September 1867 and following days.

Faiz Mahomed, head of the Kotwals at Tonk, Re-examined. (For previous Examination, *vide* Enclosure C.)

Q. You have stated that the morning after the tragedy you, agreeably to orders, had the bodies burnt; by whose orders did you do so?—*A.* Agreeably to the Nawab's orders.

Who buried the so-called Sahibzadah Golab Khan?—His family.

What is the custom here with regard to burying or burning corpses when any sepoy or any other servant of the State dies?—Those who have heirs are made over to them for disposal; those who have not are disposed of by the State.

Had the six Hindoos who were killed no heirs?—They had.

Notwithstanding they had heirs present, why were their bodies not made over to them?—I received orders to have them burnt, not to make them over to the heirs.

How was it, then, that Golab Khan's body was made over to his friends; was there any order to that effect?—Golab Khan was a man of position; that's why his body was given over to his friends.

Is it or is it not considered a slur in India for a family, though present, to allow others to perform the last rites for their relatives?—It is.

You say that Golab Khan's body was made over to his friends because he was a man of position; do you consider thakoors Rewut Singh and Beejey Singh were also personages of respectability?—Yes, I do.

Were the relatives of these persons present at Tonk?—They were present in the Wuzeergunge.

How was it, then, although Golab Khan's body was made over to his friends through respect, that the remains of thakoors Rewut Singh and Reejey Singh were not?—I simply acted up to the orders I received.

You just now said that occasionally when a sepoy loses his life in a quarrel or affray he is buried or burnt by the Kotwallee authorities, not by his friends; what is the cause of this?—As the Nawab issues his orders, so they are obeyed.

Can you think of any previous occurrence when, notwithstanding the presence of the deceased's relatives, the corpses were disposed of without reference to them?—Yes; on one occasion a Pathan murdered Hafiz Abdool Rahman Khan, and the Pathan was also killed. When the durbar heard of it they said they are both criminals; don't give their bodies to their friends, but have them buried.

What was the reason for such an order?—On account of their crime, and as a future warning.

If on the occasion you have alluded to an order of the kind was issued in consequence of the displeasure of the durbar at the occurrence, was it not also on this account that similar orders were on this occasion passed regarding the dead?—I cannot say.

Are you aware whether these men who were killed had done anything to merit displeasure? —I am not.

You have mentioned the names of the six Hindoos killed; did you see their corpses?—I did not.

Had you ever seen these men before this occurrence?—No, never.

When you received orders regarding the dead that night, did you also receive instructions as to the disposal of the wounded?—In the morning orders were issued to send them to their several departments; that night they had their wounds dressed only.

ABSTRACT from a Roll of the Thuggee and Dacoitee Establishment of Tonk, according to *Bukshee Furut-ool-lah*, who is asked to what places the six Hindoos, said to have been Killed on the 1st August 1867, belong:

1. Lucthmun Singh, son of Kaisree Singh, Thakoor, an inhabitant of Tonk.
2. Ram Singh, son of Roopa, Goojur, an inhabitant of Tonk.
3. Shewloll, son of Bhowana, Naik, inhabitant of Nimbhera, in Tonk.
4. Kulloo Ram, son of Kana, Naik, inhabitant of Bara, in Tonk.
5. Bhageerut, son of Nundah, Dhanuk, inhabitant of Oudh.
6. Hurree Ram, son of Duljee, Bhowreea, inhabitant of Bishunpoora, in Tonk.

Bukshee Furut-ool-lah, of Tonk, Re-examined.

Q. ON the 20th August you furnished a list of the sepoys belonging to the Thuggee office; it is the custom when enlisting sepoys to take a descriptive roll of each man?—*A.* It is the custom, and a descriptive roll is here. That of the Hindoos killed is as follows:—

Ram Singh, son of Roopa Singh, Goojur, of Tonk, aged 30 years, complexion, wheat-coloured, broad forehead, open eyebrows, black eyes, prominent nose, black beard and moustaches; a scar from a stone on the left temple.

Kulloo Ram, son of Kana, Naik, of Bara, in Tonk. Description precisely as preceding one, a black mole on back of neck, two moles on left shoulder; aged 25 years.

Shewloll, son of Bhowana, Naik, of Nimbhera, in Tonk, aged 30 years. Personal description same as above; no distinctive marks.

Hurree Singh, son of Duljee, Bhowreea, of Bishunpoora, in Tonk, aged 25 years. Personal description same; distinctive marks, a boil scar on right temple and black mole on left of forehead.

Bhageerut, son of Sheonath, Naik, an inhabitant of Oudh (nothing more definite can be given). Personal description the same, save in the eyes, which had a squint, grey in the beard, &c. Distinctive marks, a dark mole on right of neck and a slight excresence on left of nose; aged 32.

Lutchmun Singh, son of Kaisree Singh, Rajpoot, of Tonk, aged 25. Personal appearance described as that of Shewloll and the others; black moles on right shoulder-blade and left of neck.

PURPORT of Kyfeeut from Tonk Vakeel, received 8th September 1867, to Political Agent, Harowtee.

AGREEABLY to your Honor's request contained in kyfeeut of 3rd instant, I beg to present the heirs of the undermentioned Hindoos killed in the recent affray with the Lawa Thakoor's followers:—

(Then follow names of four witnesses whose depositions are recorded below.).
Bhageerut was a resident of Oudh, and his nearest of kin is not at Tonk.
Shewloll's people live at Nimbhera, and will be presented when they arrive.

Buldeo Singh, son of *Kaisree Singh*, Rajpoot, of Tonk, aged 25 years, in the service of Tonk State.

Q. DID you lose any relative in the recent disturbance at the Thuggee office?—*A.* My brother, Lutchmun Singh, was killed.

How was he killed?—I was away on that day, but heard of the affair at the village of Buggree. I returned to Tonk, as my brother was employed in the Thuggee office; I then heard of his death, and the kotwal was taking the bodies of the killed to be burnt; I accompanied them.

Is it the custom when the relatives of deceased persons are present for the kotwal to perform the last rites?—I said my brother's body was amongst the killed, but he said, never mind who it is; you come along also.

Did you recognise your brother's corpse?—When we arrived at the burning place I did.

How many bodies were there?—Fifteen or 16.

How did your brother get killed?—He was cut across the shoulder and across the body, whereby his entrails protruded. He was sentry on Hakeem Surwar Shah's door. A disturbance took place with the Lawa people. I don't know who killed him.

Can you describe your brother's personal appearance?—His complexion was a medium colour; tall, marked with small-pox; black beard and moustaches, eyes black, prominent nose, and 22 years of age.

Are you his nearest of kin?—Yes, I and our mother are.

Duljee, son of *Bhairoo*, Bhoreea Chohan, of Bishunpoora, in Tonk, aged 36 years, a cultivator.

Q. DID you lose any relative in the recent affray?—*A.* My son Huree was killed. I heard of it two days after the event.

Did you see your son's corpse?—I did not.

What was your son's personal appearance?—He was tall and had no distinctive marks (same description given as that of preceding witness); he was 25 years old.

Ram Singh, son of *Roopa Singh*, Goojur, of Tonk, aged 26 years, in the service of Tonk State.

Q. DID you lose any relative in the recent affray which took place at Tonk?—*A.* My elder brother was killed.

How?—I heard in the morning that a disturbance had taken place, and that my brother had lost his life. My father and I ran to the spot, and saw some 10 or 12 bodies, and by orders of the durbar the corpses were being taken away. They took them all away to be burnt. We accompanied them to the burning place.

Did you see your brother's body?—Yes, when they were taking it away.

What wounds had he received?—A sword cut on the shoulder and one on the body, whereby his entrails were protruding; one also on the calf of the leg.

If you are Ram Singh's representative, why did you not perform the last rites?—The durbar would not allow it; there were 15 or 16 other corpses, and they all went together.

Can you say for certain whether there were 15 or 16?—I did not count them; I say this at a guess.

What was your brother like?—He was tall, stout, and fair, dark eyes, prominent nose, black beard and hair, aged 30.

Deva, son of *Kana*, Naik, of Bara, in Tonk, aged 35 years, a cart-driver.

Q. WERE any of your relatives killed in the recent disturbance?—*A.* Yes, my elder brother, Kulloo Ram.

How?—I heard the following morning that a disturbance had occurred at Hakeem Surwar Shah's residence; as my brother was employed in the Thuggee Department, I ran there and saw his corpse. There were some 15 or 16 other bodies there, I cannot say for certain, as I was too much upset; subsequently the bodies were taken away to be burnt, by order of the durbar; I accompanied them.

What wounds did your brother receive?—A sword cut in the waist, which exposed his entrails, and one on the buttock.

Are you Kulloo Ram's nearest of kin?—I am.

How was it, then, you did not yourself have the last rites performed?—I was not allowed, in opposition to the durbar order. I accompanied the bodies to the burning place.

What was your brother's personal appearauce?—Complexion medium colour, short, beard and moustache coming; no distinctive marks; aged 30 years.

Mohundah, son of *Saiwah,* Brahmin, of Tonk, aged 25 years, a burner of the dead.

Q. DID you burn the bodies of the men who were killed at Hakeem Surwar Shah's house?—*A.* I did. I received the order at daybreak; I went there and took the bodies away on two carts, eight on each cart.

Do you know whose bodies they were?—I cannot say precisely; they were the bodies of rajpoots, goojurs, &c. Two or three relatives of the Tonk dead came and asked for the bodies of their friends, but I told them I could only take them off at the burning place. When we arrived there I did not do so; half were burnt in one heap, and half in another.

Were the castes burnt separately or not?—They were not.

Sheo Narain, son of *Dewah,* Brahmin, of Tonk, a burner of the dead, aged 27 years.

HE is asked the same questions, and answers to the same effect as last witness. Gives number of bodies as 16.

Gunput, son of *Nund Ram,* Brahmin, of Tonk, aged 40 years, a burner of the dead.

HE is asked the same questions, and answers as above. Gives number of bodies at 16.

Luchmunna, Chupprassee, Re-examined. (For previous Examination, *vide* Enclosure C.)

Q. YOU have recorded in your deposition that, on the day of this occurrence, you were at the village of Eusufpoora; can you substantiate this?—*A.* The zemindars of the village know it.

Can you produce them?—They are present.

Baz Khan, son of *Chand Khan,* Pathan, late an inhabitant of Kerowlee, now of Eusufpoora, in Tonk, Patell of the village, aged 28 years.

Q. WHERE was this man, Luchmunna, on the 1st August last?—*A.* I don't know auything about dates; but I know that when this affair took place at the hakeem's, this man was at my house in the evening.

Jewun, son of *Roopa,* Goojur, inhabitant of Eusufpoora, in Tonk, a cultivator, aged 30 years.

Q. Do you know where this man, Luchmunna, was at the time of the affray?—*A.* Two days before he was at the village of Eusufpoora, and he was there on the night of the occurrence.

(signed) *A. N. Bruce,* Political Agent.

From Colonel *W. F. Eden,* Governor General's Agent for the States of Rajpootana, to the Secretary to the Government of India, Foreign Department, with the Governor General, No. 1110-61 P.; dated Aboo, 11 September 1867.

IN continuation of my Despatch, No. 1085-59, of the 6th instant, regarding the recent tragedy at Tonk, I have the honour to enclose postal copy of a telegram this day forwarded to your address, conveying the purport of a message just received from the Political Agent, Harowtee, in answer to a query* from this office respecting the number of the Lawa party that were slain on the occasion under advertence.

* *Vide* paragraph 26 of my Despatch, No. 1085-59, of 6th instant.

2. Fifteen are said to have fallen, and you will observe that, as Lalljee and Siree Lal were merely different names for the same person, and not different

individuals, as I very naturally supposed, there still remains a discrepancy of one; that is, admitting the accuracy of the unanimous statement of the Tonk witnesses, to effect that sixteen Hindoos were killed and their bodies burnt, is accepted.

3. The Political Agent, Harowtee, has proceeded to Lawa both to confirm the number of the Lawa party stated to have fallen, by an examination of their heirs and relatives, and to obtain, if possible, some clue as to the sixteenth Hindoo supposed to have fallen; and he will forward a copy of his report direct to your office, in order that all the papers may be laid before his Excellency the Viceroy in Council without delay.

4. I may remark, however, that if the former point is established, the latter becomes of little moment; for the general question is in no way affected by the circumstance, whether or not 15 instead of 16 persons had been so murderously put to death on the Lawa side.

EAST INDIA (EX-NAWAB OF TONK).

FURTHER PAPERS regarding the Case of the EX-NAWAB of TONK (in continuation of Parliamentary Paper, No. 119, of Session of 1871).

EAST INDIA (BRITISH BURMAH).

RETURN to an Address of the Honourable The House of Commons, dated 20 June 1871;—*for*

COPIES of Captain *Richard Spry's* LETTERS to the Secretary of State for *India* in Council, dated the 30th day of March and the 31st day of August 1870, and the 21st day of February 1871;

"And, of the several LETTERS thereto (in continuation of Parliamentary Paper, East India (British Burmah), No. 161, of the present Session").

India Office,
27 June 1871.

J. W. KAYE,
Secretary, Political and Secret Department.

COPY of a LETTER from Captain *Richard Spry* to the Secretary of State for India.

Trade with Western China direct from Rangoon.

Chief Commissioner Fytche's official "Memorandum" on Captain Sladen's official "Narrative" of the Bhamo Expedition, &c.

18, St. George's Terrace, Queen's Gate, W.
30 March 1870.

My Lord Duke,

PARLIAMENTARY Paper "East India (British Burmah), No. 251, Session 1869," presented from the India Office to the House of Commons in May last, stated:—

"Captain Sladen's Report has not yet been received, but will, with other Papers, be included in a Supplementary Return."

2. According to communications which reached me from India, the document in question, dated 24th February 1869, was dispatched, with others therefrom, in print, at a date which should have caused them to reach the India Office early in September last (1869), if not previously. Six months have, however, since passed without their having been laid, as promised, before Parliament; and it appearing still uncertain when they may be so made available for Parliamentary consideration and general public notice, I will no longer delay to avail myself of the private copy in my possession—printed last year at the Government Press, Rangoon—to address your Grace respecting it.

3. I do so to bring under your official notice grave misrepresentations contained in the "Memorandum" of the Chief Commissioner of British Burmah, dated Rangoon, 30th June 1869, to the Viceroy and Governor General of India, preceding Captain Sladen's "Narrative": misrepresentations which I am compelled to consider must have been intentional on the part of the Chief Commissioner, with the view of misleading the Viceroy on the matters submitted in those documents to his consideration.

4. The misrepresenting passages name me in connection with the "short direct land route" for peaceable and regular commerce between Rangoon and the south-west frontier of China; which route, after many years of full and and impartial inquiry into the practicability and advantage of all other routes, I felt it my duty, in the interests of the people of England as of India, to select and recommend for general and continuous commerce between the United Kingdom, the Shan States of Burmah, and the adjacent west of China.

5. The total length of the line is within 550 miles; the full first half of it is in British territory, and no part of the remainder is in the territory of China.

6. Subsequent to 1857 I and my late son circulated numerous * executive pamphlets and maps, with many thousands of printed sheets, on the subject, in India as well as in England, including British Burmah. The paper I read on it, in 1860, to the Royal Geographical Society, we also printed, with a clear explanatory map, and distributed extensively in both countries including the Press of each. In their columns the project received full examination and discussion, resulting in every case—save where official influence or private interests prevailed—in expressed approval and commendation of my views. And thus the project, with the statements on which it was based, was subject to continuous active public discussion, at home and in India, up to the year 1865.

7. In the January of that year Captain J. M. Williams, Assoc. Inst. C.E., and Executive Engineer of the Rangoon division of British Burmah, where he had served 12 years, having seen gross official misrepresentations in print,* both of the project and of the country it had to be carried through, drew up an official "Memorandum" thereon to the address of the then Secretary of State for India, Sir Charles Wood, with a map on a large scale, clearly showing, with the short direct land route, the several other routes subsequently suggested by official and private persons at Calcutta and Rangoon, for Indian objects or individual local interests. That Memorandum was presented to Parliament, with its map, in June 1865, in print; and I have reason to know that many copies of it were at the time transmitted to India and British Burmah, and that copies found their way to the hands of the members of the British Burmah Commission, including, beyond doubt, the present Chief Commissioner.

8. The first page of that "Memorandum" correctly described the line finally selected by me, as extending from Rangoon to Kyang-Hung, on the right bank of the Meikong or Upper Kamboja river; and stated its length, directions, &c. in the following terms:

> "For this new commerce in the East three distinct lines of railway have been now suggested; all, however, originating with Captain Speye, a retired officer of the Indian army.
>
> "His finally selected wholly land route, to commence at Rangoon, follows, as indicated by a red line in the annexed map, as straight a course as shall be found practicable across the north east frontier of British Burmah on the Salween, to Kyang-Tung, and thence to Kyang-Hung on the Meikong or Upper Kamboja river.
>
> "This route will be seen to embrace a continuous railway from Rangoon to Kyang-Hung, near to where the Meikong or Kamboja issues from the south-west frontier of China; and where the now Major General Mc.leod, in 1837, reported that river, called Lantsang within the Chinese frontier, to be, in the dry season, 540 feet wide, and exceeding 16 deep, and 1,600 feet wide, and 60 deep in the floods. After flowing a southerly course exceeding 1,200 miles from Kyang-Hung, through the Laos States and the recently restored† Kingdom of Kamboja, the stream falls into the Sea of China through the French Cochin Chinese possession.
>
> "The distance, in a straight line, between Rangoon and Kyang-Hung is shown by maps to be about 480 miles; the first and most important half of which, as having its terminus at the seaboard, is in British territory; and the other moiety mainly in the two very friendly Burman Shan States of Kyang-Tung and Kyang-Hung.

† Restored by the French authorities in Cochin China.

9. Subsequent to the date of that official "Memorandum," so well circulated as a Parliamentary Paper, viz., on the 15th of January 1866, I and my son addressed our 18th communication on the project to the Secretary of State for India, and therein submitted quotations in support of our views from high printed authorities; including Captain Sherard Osborn, R.N., "The Times" newspaper, Mr. Henry Duckworth of Liverpool, now President of the Liverpool Chamber

* In Deputy Commissioner O'Riley's, with Assistant Commissioner Captain Watson's, and Chief Commissioner Phayre's Reports and Despatches, printed at Calcutta and Rangoon in 1865.

Chamber of Commerce, "The Globe" newspaper, &c., all of which quotations, with the other parts of that communication, most clearly show that we limited our proposed commercial way to the right bank of the Kamboja river, some distance from the frontier of China.

10. Further, as reliable assurance that the commercial benefits we anticipated therefrom for England and India were not visionary or unauthorised, but in every respect worthy of the serious consideration of the Secretary of State for India in Council, as well as of Her Majesty's other Ministers, we subjoined in that letter officially recorded opinions on that point of Assistant Commissioners Richardson and McLeod, and Deputy Commissioner O'Riley, after they had severally travelled over very much of the country through which the line would pass, expressly to explore it commercially. Those our quotations from their official Reports, printed at different dates by the Government of India, were as follows:—

11. Richardson wrote thus to the Government of India in 1835; 31 years since:

"I need not descant upon the great importance to England and India of opening a trade to the south-west frontier of China for British and Indian goods and Chinese products. I learnt from the caravans I met of Chinese traders, and from other authorities, during my travels, that no difficulty will exist in our *merchants* visiting the *frontier* towns of the Yunan province. All the Chinese assured me there were no guards and no restrictions on merchants."

12. M'Leod thus wrote to the same Government in 1837; 29 years since.

"The ministers and chiefs of Kyang-Tung and Kyang-Hung pressed me much to send *merchants* up. The subject is therefore worthy the attention of Government, and advantage ought to be taken of the good understanding now established, and trading parties should be pushed up to Kyang-Hung if only to show the Chinese in particular that commerce with them is truly our object. Now that we find the State of Kyang-Hung, which is so closely connected with Western China in position and influence, as well as the envy of the Chinese merchants, willing and anxious to promote direct commercial intercourse with us, our aim should be to make an effort, even at some cost to Government, to establish a permanent trade with them."

13. Subsequent to which, and in the far more recent year 1861, Deputy Commissioner O'Riley, in reference to our proposition that, at first, a station and emporium of trade should be established on our Pegu extreme north-east frontier, in the direction of Kyang-Tung, wrote thus to the Government of India,—

"There are many considerations that induce a well-grounded opinion of the eminent capacity of the locality to be made an emporium of trade of the first importance. Surrounded on all sides by nations, whose commercial enterprise forms the prominent feature of their character, to whom neither ranges of mountains nor rushing streams oppose a barrier to the progress of trade; possessing within itself a numerous and comparatively wealthy population, the Karens and Shans, eager to a degree to possess the products of our manufactures; and favoured by nature with a position and climate propitious to the development of many valuable resources; the period would not be far distant when such a frontier emporium would carry our commerce through regions hitherto closed against our merchants and their enterprise, and to where it would be more appreciated than in any other commercial part of the world, the western provinces proper of the mighty Chinese Empire."

14. In September 1860, the line referred to in those documents, viz., that from Rangoon to Kyang-Hung, was ordered by Viscount Cranborne, Secretary of State for India, to be surveyed. Consequently, after fruitless remonstrances with his Lordship against the survey, the Government of India selected Captain Luard, of the Bengal railway department, and Captain J. M. Williams, for the service. They were able during the then passing dry season to survey the first half of the entire line; and their Report, with map and sections, subsequently presented in print to Parliament, was transmitted to the Government of India by

Colonel Fytche, then, as now, Chief Commissioner of British Burmah; with an official Despatch, dated Rangoon, the 25th day of June 1867, which contained passages to the following effect:—

"The final object of the survey is to ascertain the best practicable route for the construction of a railway from Rangoon to Western China.

"I can have no hesitation in recommending that the survey be continued to the frontier of China, and that it be resumed at the point where this year's survey ceased.

"From the Takan ferry across the Salween river, the more southerly route runs eastward, through the Burman Shan States of Kyang-Tung and Kyang-Hung, to the Meikong or Upper Kamboja river, so that this portion of the line can be fully surveyed under the protection of the Burman Government.

"Should his Excellency the Viceroy decide to continue the survey, it will be necessary that I should apply to the Government of Burmah for a 'Royal Order,' to facilitate the progress of the survey party up to the Kamboja river."

15. On the 15th of August 1867, a reply was sent by the Viceroy, from Simla, to the Chief Commissioner, directing him—

"To convey to Captains William and Luard the satisfaction of the Government of India at the manner in which they had conducted the survey duties entrusted to them; and requesting that the necessary arrangements might be made, subject to such further instructions as might be received from the Foreign department, to prosecute the survey at the earliest safe period of the coming dry season. Lithographed copies of the map and sections of what has been surveyed will be supplied to you."

16. On receiving that Despatch, Chief Commissioner Fytche of course caused requisite preparations to be made, and applied to the government of the King of Burmah, for the necessary "Royal Order" sanctioning the survey of the remaining of the line, as being through Shan States tributary to his Majesty. The "Royal Order" was forthwith issued by the King in due form; and additional to that facility, his Majesty sent an honorary escort from his capital to our frontier, to accompany the surveying party and render every assistance that might be necessary.

*As appearing in different Parliamentary Papers.

17. I will not here review, but reserve for future notice, the correspondence of that period* between the Chief Commissioner, the late Viceroy Sir John (now Lord) Lawrence, and the Secretary of State for India, which caused a stop to be suddenly put, by telegram dated the 15th of October 1867, to the completion of that survey, on misrepresentations of the distance remaining to be surveyed, of the nature of the country and character of the people, of consequent difficulties, nay, even perils to be encountered, of the length of time it must occupy, and of the expense it would involve beyond what the treasury of India could bear. Official documents in different Parliamentary Papers made it long since clear to me that those misrepresentations were made, and the completion of the survey of the direct route countermanded, solely that the very much longer, far more difficult, politically more dangerous, and infinitely more costly, survey of the Bhamo route might be entered upon, under the advice of the Chief Commissioner; though contrary to the real feelings and wishes of the King of Burmah, his Ministers, and people.

18. The change of route for survey having been by such means brought about and publicly announced, the Calcutta "Friend of India," a journal influenced from the first to oppose and decry the direct route from Rangoon, and to advocate a route from Calcutta *viâ* Assam, Munnipoor, Northern Burmah, Bhamo, &c., favoured its readers, on the 7th of November 1867, with an article which stated, among other fallacies—

"That the direct route project was simply to make railroad of 1,450 miles in length, where there is neither trade nor human beings, to an undefined point of Western China; of which line 1,105 miles were beyond British territory; and that the first season's survey of the most favourable portion of the 1,450 miles, that which *was* in British territory, supported their,

their, the 'Friend of India's,' many years' opposition, and justified the Government of India in treating it as a visionary scheme."

10. The correction of these misrepresentations by a Calcutta journal, whose columns had long been too manifestly open to interested writers on the subject, an article was put forth in the "Rangoon Gazette" of the 29th of November 1867; which was afterwards reprinted separately by the "Rangoon Gazette" Press, and freely circulated in British Burmah and India, as I here submit it to your Grace:—

THE DIRECT ROUTE FROM RANGOON TO WESTERN CHINA.

"The most bitter opponents of the scheme for establishing communication with China, *viâ* Rangoon, have generally been those who, while strangely ignorant of the actual facts on which its supporters base the importance of their proposals, for motives of their own decry the project as absurd and chimerical.

"Amongst those detractors the "Friend of India" has always held a conspicuous place, but the ignorance it displays, and the serious inaccuracies it commits in an article on the subject dated 7th November last, are more than inexcusable in a paper which ought to be the best informed and most reliable authority in India, on Indian matters.

"The following pages contain merely extracts from the article in the "Friend of India" above referred to, and the reply to it, which appeared in the "Rangoon Gazette."

(From the "Rangoon Gazette," 29th November 1867.)

"We have always been aware that the project for a railway from Rangoon to Western China has met with no favour from the "Friend of India." While regretting the hostility so persistently displayed, we at least gave the editor of that journal the credit of basing his opposition on reliable facts. We were therefore not a little surprised to observe in an article which appeared in that paper on the 7th instant, a statement in effect that Captain Sprye's proposal is simply to make a railway for 1,450 miles, of which only 245 are in our own territory, from Rangoon to an undefined part of Western China. So startling an announcement from so grave an authority on Indian subjects, induced us to refer to a map of the country lying to the east of British Burmah; when, to our surprise, we discovered that so far from arriving at an undefined part of Western China, a railway 1,450 miles in length would actually reach from Rangoon to Hong Kong! The *dream*, so called by the "Friend," assumes a tangible shape. Only 1,450 miles from Rangoon *to Hong Kong!* It is no romantic phantasy, but an actual fact, that a railway 1,450 miles in length would bring to Rangoon the trade, not merely of western, *but even of central China*, would place it in communication with Hong Kong, and, in a few years, convert this much neglected town into the first city in the East. However, although we entertain no doubt whatever as to the magnificent results which would quickly follow the achievement of *such* a railway, or even of the less imposing scheme for a tramway to the Cambodia river, our object in writing this article is not to speculate on probabilities, but to refute, by a representation of absolute facts, the grave misconception which the "Friend" has formed. The project of a tramway to extend from Rangoon to Western China has already been so fully subjected to public discussion, that we never for a moment imagined it would become necessary to reiterate the fact that it embraces the construction of a line only 600 miles in length; of which 250 are in British territory, or that it is to extend from Rangoon to Kiang-Hung on the Cambodia river, by no means to an undefined part of Western China; but, on the contrary, to one regarding which we have certainly more complete and reliable information than any other on the Yunan frontier. But we are told that the railway would be constructed where there is neither trade nor *human beings*. To which portion of the line does this statement refer? If to that within British territory we entirely concur with the writer; but we would at the same time remind him, that one of the chief arguments urged by the advocates of the route has been this very sparseness of population, and the consequent beneficial effect the railway would ensure, by introducing immigration from the thickly populated countries beyond. If, however, this statement has reference to that moiety of the line beyond the British frontier, we are enabled to report, on the authority of Captain Watson, whose personal knowledge of the Shan States is superior to that of any other European, that the southern portion of the Meh-byee valley is the most densely populated of the Shan States. This being the case, and, as very truly remarked by the writer of the article under review when advocating the Bhamo route, *the Shans being themselves the keenest traders in Asia*, the argument that there is no trade falls to the ground. The remark, that the first season's survey has justified the opposition of the Government of India, is entirely without foundation; and clearly shows that the writer is unacquainted with the object of that survey, which was undertaken merely to ascertain whether two especial routes, within British territory, might or might not be made use of; and this, only, because they were known to be doubtful and probably difficult. Other lines, differing only a few miles in length, can be selected within British territory, which are known to present no obstacle, and are on a dead level throughout, and therefore did not require to be surveyed. Had Captain Williams's report utterly condemned the lines surveyed last season, and we have good authority for stating this is far from being the case, the practicability or otherwise of the

construction of a railway from Rangoon to Kiang-Hung would still have remained an open question, only to be solved by at least another year's survey. Lord Cranbourne would certainly never have permitted the survey to be discontinued: and we confidently predict, that the present Secretary of State for India will find himself compelled to yield to public opinion in this matter, and again order its prosecution and final completion. The loss, however, of a season, which has been occasioned by Sir Stafford Northcote's short-sighted telegram, we regard as most lamentable; and more so, that the French Expedition from Saigon has now successfully ascended the Cambodia. Knowing, as we do, the anxiety of the Shans to enter into trade relations with Europeans, it appears highly probable the Kiang-Hung chief will only be too ready to accept French protection, a result which would shortly lead to a disturbance of the whole of the Shan States; and thus, while we lose the opportunity so long held out to us, but neglected, of establishing a peaceful trade with these States, we may find ourselves in a position of much embarrassment from the intrigue which will then be rife throughout the countries bordering on our frontier; and finally discover, to our chagrin, that any trade which we may succeed in effecting with Western China, will be on the will and pleasure of our French neighbours. Thus, on political grounds, we consider that it was of the utmost importance the survey should have been extended without loss of time to Kiang-Hung, since we might then have had some prospect of at least neutralising the influence of the French in that quarter, and securing to ourselves the trade with Western China. We can now only hope to obtain a share, on sufferance. It has constantly been argued by the advocates of other projects for establishing trade with China, that *their* proposed lines must be the best, because they are "old caravan routes." Has it never occurred to these gentlemen that previous to the British occupation of Pegu, Rangoon was a place of little importance, and that, consequently, in any trade routes with China, the capital of Burmah would necessarily be the terminus on this side. Let Yunan be once settled, and the caravans will very shortly find their way to Rangoon, in preference to Mandalay, with the exception of those journeying from so far north, that the river carriage from Mandalay to Rangoon will prove a matter of consideration. For these caravans the Bhamo route is certainly the best adapted, and will secure a trade which cannot be opened up at once by the direct route from Rangoon. In fact, as we have repeatedly pointed out, the Bhamo and the "direct route" are entirely independent of each other. The consolidation of the one, and the inauguration of the other, will render incalculable benefit to British and British Indian trade. But the "direct route," by railway from Rangoon is the one which, as confidently predicted by Chief Commissioner Sir A. P. Phayre, *would raise Rangoon in a few years nearly to the level of Calcutta or Bombay.*

20. It may be considered certain, my Lord Duke, that Chief Commissioner Fytche, residing at Rangoon, saw that article when it was first published in the "Gazette" of that city, and no less certain that he was fully aware with contents of it in its subsequent more convenient pamphlet form. I hold his acknowledgment of some of my own previous pamphlets, with which I was invited to favour him; and I feel no less assured that he possessed the many other public official and Parliamentary Papers and maps which had resulted from my proposition that trade should be opened with the west of China *direct from Rangoon*, to some of which I have hereinbefore referred.

21. Can your Grace, then, tolerate that, in the authoritative position of ruler over British Burmah, he should, on the 30th of June 1869, deliberately draw up an official document on the subject, for the information and guidance of a Viceroy who was a comparative stranger to the question, misrepresenting the direct land route in the manner I will now submit from the "Memorandum" with which Chief Commissioner Fytche transmitted to the Government of India Captain Sladen's "Narrative" of his Bhamo route exploring expedition. Though almost the entire Memorandum invites comment from me, I will on this occasion limit myself to the following passages of it:—

> "So much, however, has been written regarding the route proposed by Captain Sprye, *from Rangoon to Canton*, via *Kiang-Hung*, that the present papers might perhaps be deemed incomplete if all mention of it was omitted.
>
> "When I proposed the expedition to Bhamo, a survey of that route had just been completed from Rangoon as far as the border of our own territory, *for a line of railway from Rangoon to Kiang Hung, and thence on, through the mythical city of Esmok, to Canton.* * * * I have myself always looked on the Kiang-Hung line as a most Quixotic scheme as a route for trade.
>
> "But as a survey of the country from the Tukan Ferry on the Salween river, *viâ* Kiang-Tung, on to Kiang-Hung, on the Meikong or Kamboja river, a distance of about 200 miles, would be of great scientific and political service, I would advocate its continuation at any rate as far as that city. We have already a fair general knowledge of the country *from the British*

British frontier to the Tukon ferry, but the country between the Salween and the Meikong or Kambeja rivers is unknown.

When Captain Sprye's project was first proposed, there was something in it both plausible and attractive, *to connect Rangoon with Canton by a railway running through a country with, as it was supposed, no insuperable obstacles, and it very naturally commended itself to notice.* Canton was then, and had been for many years, the great centre of foreign trade with China. From Canton nearly all the tea, silk, and other valuable Chinese produce was shipped, and there all European goods were imported, &c. But the trade of Canton subsequently sunk so low, that it was, I believe, seriously proposed to abandon it altogether as a place of European trade."

22. In that extract from an official document deliberately drawn up by Chief Commissioner Ky to be so recently as the 30th of June 1869, expressly to inform the present Viceroy and Governor General of India, the Earl of Mayo, on the subject it treated of, and to assist him in coming to a correct conclusion as to the preferable route for active commerce, the year round, between *the United Kingdom*, the Shan States of Burmah, and the West of China, from our port of Rangoon; your Grace will not have failed to notice that the Chief Commissioner three times repeats, that the direct land route projected and advocated by me, embraces "a railway extending from Rangoon to Canton." His words are, to repeat them:

1st.—"The route proposed by Captain Sprye from Rangoon *to Canton*, *viâ* Kiang-Hung," etc.

2nd.—"For a line of railway from Rangoon to Kiang-Hung, and thence on through the *mythical* (Chinese) city of Esmok, *to Canton*," etc.

3rd.—"To connect Rangoon *with Canton* by a railway, running through a country with, as it was supposed, no insuperable obstacles," etc.

23.—In answer to these three unqualified assertions, I defy their writer to point out in any of my numerous pamphlets and many other printings and maps on this question through the past 12 years, a single instance where a railway from Rangoon to Canton is spoken of, or the idea of such an undertaking is even hinted at; on the contrary, those pamphlets, &c. all too plainly express the impolicy of our so entering any portion of Chinese territory; and the wisdom of our limiting any iron-way we may lay in that direction, so as for it in no manner to interfere with the internal trade of China, or with the carrying thereof, and for this sound reason, that I had learnt from various intelligent Chinamen in the East, the very strong conservative objection their government, provincial authorities, and people of all ranks had *to our competing with them in their interior commerce, or superseding them in its conveyance.*

24. Beyond those printed proofs of the knowledge I had acquired on these points, and of the opinion that I entertained that the feelings and wishes of the Chinese should herein be deferred to, I will add for your Grace's information, that between the 1st of March 1852 and the 1st of February 1867, the latest date to which I have a list made up, I and my late son, jointly or separately addressed to different members of the several Cabinets which ruled our country through that 15 years, no fewer than 103 official communications on this subject, many of them being of considerable length, treating of the project in every possible point of view, and covering a variety of explanatory enclosures and maps. All of those documents should be existing in the departments of the First Lord of the Treasury, the Chancellor of the Exchequer, the Secretaries of State for Foreign Affairs and for India, and of the President of the Board of Trade; and I deny that it can be shown in any of the 103, that we advocated the construction of a railway to Canton from any point whatever, or the laying of a single rail in any part of Chinese territory.

25. It may be possible, I grant, that in some of those communications we may have submitted to the Ministers to whom they were addressed, the more than probability that, when so imitative and trading a people as the Chinese should *see* the benefit of railways to commerce and to locomotion generally, in the practical working of one from some point of the Meikong or Kambeja river near their frontier to Rangoon, *they* would not be unlikely, in due time, to adopt the

mode of conveyance in their own interests and to construct railways for themselves in their own country.

26. Your Grace knows the adage, *falsum in uno, falsum in omnibus*, and I will proceed to show you that it is not wholly inapplicable to this "Memorandum" of Chief Commissioner Fytche's, the drift of which throughout is official hostility, under more or less of inspiration from others, to the route that must prove of beneficial service, the year through, to the manufacturing and commercial interests of Great Britain, and also as unmerited advocacy of a route adverse to them, but favourable to his and other officials' political desires and designs, and to the local interests of certain influences around him having their ramifications at Calcutta and in England, including those of the Irrawaddy Steam Navigation Flotilla Company, in the former city and in Glasgow.*

27. The second paragraph of my quotation from the misadvising "Memorandum" thus concludes:—

> "I have myself *always* looked on the Kiang-Hung line as a most Quixotic scheme as a route for trade."

28. On this I would remind your Grace that before Colonel Fytche was raised to the Chief Commissionership of British Burmah, he was for many years Commissioner of the Tenasserim division of it, the principal port, town, and seat of Government of which is Moelmyen. Throughout his rule there, a jealous rivalry was manifest between that port and Rangoon, and between their two Commissioners. After my proposal commercially to tap the Burmese Shan States, and the west of China, by rail or tramway direct from Rangoon, was made extensively public through the paper I read to the Royal Geographical Society in 1860, and printed with a map, and it received favourable public notice, Commissioner Fytche being unwilling that Rangoon should be the port to benefit thereby, and not *then* considering the Kiang-Hung line "a most Quixotic scheme as a route for trade," strove hard to make Moelmyen, instead of Rangoon, the ocean terminus for it.

29. On the 10th of June 1861 he addressed a letter, No. 116, from Moelmyen, to the Government of India, recommending to it,—

> "As a really useful and thoroughly practical project for more rapid communication with the west of China,"

the extraordinary route *south* from Moelmyen down the Gulf of Martaban and the Mergui Archipelago to the Isthmus of Kraw, south of our extreme southern frontier; across that isthmus by land, *east* to Tayoung, on the Gulf of Siam; by sea *north*, up that Gulf to Baukok, the Siamese capital; from there, *still north*, by the River Menam, in boats, to the Siamese Shan town of Zimmai; from there by land *east*, to the Kamboja river; and by it, again *north*, to Kian-Hung and China. In support of these views he obtained, for transmission with his letter, favourable reports and maps of the Kraw isthmus, as suitable for the construction of

---

* On the 18th of November 1863, and 4th of December 1867, the Glasgow Chamber of Commerce sent up memorials to the Ministers of those periods, supporting the memorials of the other Chambers, in favour of the direct land route.

The Rangoon firm of Todd, Findlay, & Co., who are interested in the Irrawaddy Steam Flotilla Company, and hold its agencies at Rangoon and Mandelay, are connections of the Glasgow firm of T. D. Findlay & Co., stated to be no less interested in that Flotilla Company. Mr. James Findlay, of the Rangoon firm, being home on a visit to his Glasgow kindred, drew up and forwarded to the Glasgow Chamber of Commerce, a Report on the West of China trade question, of marked hostility to the direct land route from Rangoon, and as decided advocacy of the Flotilla Company's river route. His descriptions sadly misrepresented each; the *first*, of course, adversely; and the *second*, as naturally, in all glowing colours; without offering any reliable authority for his statements.

The Council of the Chamber referred his Report to a Committee to consider; and without hearing any one on behalf of the short land route, the Committee, putting all faith in Mr. James Findlay's imaginative descriptions of it, reported against it and in favour of the Flotilla's river way. And thereon the Glasgow Chamber, on the 18th of December 1869, forwarded a third memorial to the Secretary of State for India, in which the direct land route received Mr. J. Findlay's erroneous character, and the circuitous river route very earnest recommendation to ministerial attention. I have noted Mr. James Findlay's Report for review when leisure permits.

of a commercial way, from engineer officers serving under him;" and, in reference thereto, subsequently wrote to the Government of India:—

"Allow me to solicit a very careful perusal of Captains Fraser and Fur-long's reports and maps. The subject needs a thorough and complete ventilation, which I trust the Government will deem it advisable to give.

"Should the proposed communication across the Isthmus of Kraw once be established, it appears to me that the trade would be soon directed down the Meeplaut to that isthmus.

"And the very great advantages which would accrue to their Majesties of Siam, by diverting the commerce with Western China in this direction, would, doubtless, be readily appreciated by them, and induce them to view favourably a project of communication through their territory, redounding in many ways so considerably to their own advantage, &c."

30. That very roundabout ocean, land, and river route for British commerce with the West of China, not appearing to the Government of India "so really useful and thoroughly practical" as Commissioner Fytche and his engineer officers pronounced it to be, he addressed another Despatch to the Government in favour of Moelmyen as the terminal port, dated from there the 10th of October 1864. It most fancifully characterised the direct route from Rangoon to Kyang-Hung as—

"Crossing mountains of 7,000 feet elevation, occupied by celebrated robber tribes, having little regard for human life; and covered with ice and hoar-frost at the very periods when merchants would have to cross them." And as "having enormous difficulties to be overcome from tribes and chiefs as wild and fierce as their forest denizens; and the lofty mountains and rivers impassable often to the inhabitants themselves."

Yet, not *then* deeming the Chinese frontier city of Esmok to be "mythical," he proceeded to state:—

"No doubt can exist but that the proper route for opening trade with the West of China is *that by land from Moelmyen*, through the Siamese Shan State of Zimmai, where a consular agent should be appointed; and by the high road from Zimmai to Kyang-tsen on the Kamboja river, in lat. 20° 30′ N., about 80 miles south of Kyang-Hung; and thence up the valley of that river to 21° 29′ N., where a stream debouches leading direct from Esmok.

"The caravans of Esmok, now never seen south of Zimmai, would then be escorted on in safety to British territory [Moelmyen], and a sure foundation be laid for what is sought by the Messrs. Spyre [from Rangoon], Kyang-Hung, a large town up the Kamboja river, the boundary of the Chinese empire in that direction, is nearly in the latitude Esmok is supposed‡ to be. Of *this* town, however, neither McLeod nor Richardson make any mention whatever, etc."

Tedious as it may prove to your Grace, and to any other reader of what I am offering to your consideration of the decided partisanship which Commissioner Fytche from the first displayed against the direct route FROM RANGOON *to Kyang-Hung*, and desirous as I am to avoid intruding unnecessarily on official attention, I cannot abstain from submitting some observations to you on three, at least, of these his statements.

31. *First.* As wholly refuting his alarming descriptions of the mountains and rivers to be crossed, the ranges between the Sittang and Salween rivers, I refer you to the more natural and accurate description of them contained in Captain J. M. Williams's "Memorandum" on the direct route, addressed to Sir Charles Wood on the 21st January 1865, and the subsequent "Report of the Survey" of

* The eminent Bengal engineer, Colonel Tremenheere's very many years' previous Survey and Report of the Isthmus of Kraw, the rivers Packhan and Chumpahoon, and the practicability of a commercial way across, by them, between the Bay of Bengal and Gulf of Siam, curiously enough, is not noticed by Chief Commissioner Fytche. It was adverse to the project.

† A river of Siam, flowing from a little north of Zimmai to the capital, Bankok, and Gulf of Siam.

‡ The latitude and longitude of Esmok was well established by the French Jesuit surveyors of China, as 22° 10′ 10″ N. lat. and 101° 10″ E. lon.

of that particular portion of the direct route by Captains Luard and Williams, dated the 15th of June 1867, with their respective maps, sections, and journals; documents previously referred to by me as being before Parliament, in part, to which I may well add, that the route the Commissioner recommended as preferable, from Moelmyen, by land crossing the Tanen-Tong-Ghee mountains, situated between the Salwe'n and Zimmai; Richardson's and Mc'Leod's descriptions of which, on record in the office Commissioner Fytche appears to have given, in mistake, of course, to the ranges which cross the direct line between the Sittang and the Salween.

32. *Second.* On Commissioner Fytche's statement to the Government of India, "that the town of Kyang-Hung, on the Kamboja, is the boundary of the Chinese empire in that direction, &c.," it has to be noted that, at the time he so wrote, there was deposited in his office McLeod's original journal of his Mission to Kyang-Hung in 1837, with its map. It described that Burmese Shan State as extending considerably to the *East* of the Me'i Kong or Kamboja, there being only four of its twelve subordinate Tsobwunships on the west of that river, whereas eight lay to the east of it. McLeod, writing at Kyang-Hung in March 1837, after due inquiries, states:—

"The territory of Kyang-Hung is bounded to the south, on the west of the Kamboja, by the Shan States of Kyang-Khieng and Muang-Nieng; on the south and west, by those of Kyang-Tung and Muang-Leng; on the south-west, by that of Muang-Lem, and the Kakies; on the north-west, by the Chinese province of Yunan; on the east, east of the Kamboja, by Tonquin and Cochin China; on the south-east, by Laos; and on the south, by the Shan States of Muang-Luang-Phrabang and Muang-Nan. The Kamboja, under the name of Me'ikong, flows through the length of the State, which is also watered by many streams of considerable size falling into it from both the east and west. The twelve subordinate Shan Tsobwunships under Kiang-Hung, are Muang-Khie, Muang-Long, Muang-Khieng, and Kyang-Khieng, on the *west* of the Kamboja; and Muang-Lu, the town of which stands close opposite to Esmok, Muang-Hum, Hauh-Laing, Muang-U, Kyang or Chin Teng, and Muang-Hing, on the *east* of that river. Kyang-Hung town, is in 21° 58' N., and about 100° 30' E."

33. *Third.* On Commissioner Fytche's further statement as above to the Government of India, "that of the Chinese frontier town of Esmok, neither McLeod or Richardson make any mention," it is for me to observe, that Richardson never having been nearer to it than Zimmai, 400 miles from Kyang-Hung, it is nothing extraordinary that he should not have described it; and that the Commissioner here also wholly misstated fact when he wrote that *McLeod* made "no mention of Esmok." For, on the contrary, when at Kyang-Hung, 50 miles only from it, he took considerable pains to collect information about it, which he recorded in his journal, the original of which having been deposited in the Moelmyen Commissioner's office was, of course, there available to Commissioner Fytche when writing the letter under review. On my first making mention of Esmok as the frontier town of China, in the direction of Kyang-Hung, its existence was denied by men who passed as geographically well informed. It was, therefore, that I embodied in the paper I read to the Royal Geographical Society, in 1860, the following account of Esmok, derived in part from McLeod's journal.

"It has been objected to my project that no such town as Esmok exists on the south-west frontier of China proper; and that it is not to be found in any map of that country, not even in the celebrated map of the Jesuits. Nevertheless, I possess different maps of China, published nearly twenty years ago in London, New York, and elsewhere, in which that frontier town *does* appear. Even in the Jesuits' map, which at that part of the Chinese frontier I can state not to be correct in the line of boundary, the Anglicised "Poer" will be found as Poel, and the Anglicised "Esmok" as Sz-mau. And although I do not quote printed authority, I can state to you as confidently as if I quoted the best published travels, that Poel, Pu'rh, or Poo-urh, is the south-west department of the Yunan province, and its chief city, Pu'rh-foo. Poel and Poer in some maps, is in 23° 02' N. lat. and 101° 19' E. lon., distant from Peking 6,805 li.; that besides one Hein district, the department contains three Ting districts, viz., Te-lang, Wei-yuen, and

and *Szmau*, or *Semao*, more recently *Sze-maon*, or, as written by McLeod, ESMOK; that this town stands on the north or left bank of the small stream Ta-cai-ho, which flows into the Loso-Kiang, a tributary from the north-east to the Meikong or Kamboja river, into which it empties on the left, some miles below Kyang-Hung; and that the Burman Shan town of Muang-La, which is one of the twelve Tsobwuaships subordinate to the Tsenwibua of Kyang-Hung, eight of which are, like Muang-La, *east* of the Kamboja river, occupies the opposite side of the Ta-cai-ho stream, *which* at that point *is the boundary* between China proper and the Burman Shan State of Kyang-Hung.

"Esmok is in 22° 10′ 10″ N. lat., and 101° 40′ E. lon., and is, as I communicated full two years since, viz., in 1857, to Her Majesty's Foreign Secretary, in one of my official papers to him on this subject, a walled town, the wall being about three fathoms high and three broad at the top, on which horsemen patrol by night. It has no gateway on its south or river face, towards Muang-La; and only one on each of its other sides. Its ordinary garrison is about 300 men, though sometimes as many as 1,000 are there stationed. Its governor is a mandarin of rank, about equal to a Burman Myo-Woon. Persons having interviews with him have to pass, without any attendant of their own, through six or eight apartments to the one of audience, the door of each being closed after visitors have passed through.

"Many Chinese merchants with caravans, the beasts of burden of which are ponies, mules, and donkeys, continuously pass to and fro through Esmok; trading between China, the Burman and Siamese Shan States, the Laos country, etc. They carry valuable merchandise hundreds of miles to and fro, without its receiving any injury by the way."

34. Commissioner Fytche's recommendation of the route by *Zimmai* received, however, no more favourable consideration from the Calcutta authorities than his previously suggested route by the *Isthmus of Kraw* had done. Therefore, not having then yet perceived what he states in his recent memorandum to Earl Mayo, "that the Kyang-Hung line was a most quixotic scheme as a route for trade;" or, "that a survey of it could only be of scientific and political service," he made yet another effort to open up trade with the Burman Shan States and western provinces of China, by a route which deviated from my proposed line only so much as would cause it *to start from Moelmyen*.

35. In para. 13 preceding, I alluded to what from the first had been an important part of my proposition, viz., that at the north-east extremity of our province of Martaban, on the right bank of the Salween, near *midway between Rangoon and Kiang-Hung*, and bordering on the Shan States of Burmah, a civil station and *Emporium for Trade* should be formed; and the first or British moiety of the rail, or tramway, there for a while terminate. Such a frontier station for trade I considered would be within the reach of the cattle of the Shan and Chinese caravans, and within their power of returning from, to their own countries, during the dry season of one year. My earlier maps, including the one attached to my Pamphlet VI., containing the paper I read to the Royal Geographical Society in 1860, have the precise point plainly indicated, with the words, "*Proposed Emporium*," in large type. I also recorded in my maps that, according to authorities I had collected regarding our boundary in that direction, an important tract not occupied by us was rightly British territory as part of the Martaban province, as it was held by our predecessors, the Kings of Burmah, though, strangely enough, it was neglected to be included within our line of frontier as fixed by Major Allen when he was employed to define it, in 1856, on the plea of being valueless.

36. Possessing these my published views and propositions, Commissioner Fytche, in 1863, made his *third* official attempt to increase the commerce of Moelmyen at the expense of Rangoon, by submitting to the Government of India:—

"To use the valley of the unnavigable Lower Salween river, at the mouth of which Moelmyen is situated; to extend our frontier boundary up the left bank of that valley, to the junction of the Kyay-ma-Phyoo river with the Salween, and there to create a civil station, with an emporium for trade."

37. In furtherance of this project the Commissioner obtained Government sanction, in August 1863, to send his deputy commissioner, the late Mr. O'Riley, to our north-east Salween river frontier, on the plea, among others, of arranging with the neighbouring Karens for the transit of caravans through all parts of Karen country to British territory. Mr. O'Riley proceeded on his mission in mid-December 1863. I have not at hand the instructions with which the Commissioner furnished him, but they evidently made significant reference to my route *from Rangoon* to the same frontier point, as objectionable, since, so immediately as the 16th of January 1864, Mr. O'Riley sent an express Despatch to the Commissioner, representing, in reference to some Shan bullock tracks by which he had crossed hills between the Sittang and the Youngselleen rivers,—

> "That the line was utterly impracticable for rail or tramway, and that for any practical purpose of wheel carriage the proposed scheme of Captain Sprye may be dismissed as impossible."*

38. The direct line, or *any* line, to our Salween river frontier, *from Rangoon*, thus summarily disposed of, and the ground so cleared for one *from Moelmyen* to the same point of my suggested route, Mr. O'Riley recommended, as advisable for this, that that part of our frontier should be advanced from the Pak-kyoung river to the more northerly stream, the Kyay-ma-phyoo, from its source to its junction with the Salween, as offering a better position for a frontier station and commercial mart. He obtained the additional territory to be acknowledged British by adjacent chiefs, and took steps to occupy it, supporting his views and justifying his conduct on grounds and with arguments having reference mainly to the value of that trade with the Burman Shans and Western Chinese, which Commissioner Fytche, under whom he was acting, now states to the Government of India, "that he has *always* looked on as a *most quixotic scheme* as a route for trade." Mr. O'Riley's letters and reports hereon, dated between the 1st of December 1863 and 1st of June 1864, contain, with others such, the following passages:—

> "It was the general complaint of all the traders I met, whether resident or travelling, that the want of such a frontier half-way emporium had occasioned the abandonment of a large course of trade by both Shans and Chinese, who were unable to travel the long distance to our ports and back to their own country, during one dry season.
>
> "I have merely to add that it is from this point, our Salween river north-east frontier,† that we must advance our commerce, civilization, and influence, to the remote regions of the Chinese Empire.
>
> "Such a trading mart at the junction of the Kyay-ma-phyoo with the Salween, will open out a means of commercial advantage to the more northern Shan States, and to the Chinese frontier province of Yunan."

39. That Report of Mr. O'Riley's, dated the 20th of May 1864, with a map showing his new boundary, which map he stated "to bear the seal of the Chief of Western Karennee," and "finally to dispose of the boundary question for the future," was transmitted by Commissioner Fytche to the Government of India, through the Chief Commissioner of British Burma, in a Despatch, dated Moelmyen the 5th of July 1864, in which he observes, touching the advance of our frontier:—

> "I would, therefore, now strongly recommend that our boundary be extended to the Kyay-ma-phyoo, along its whole course, from its junction with the Salween to its source, and onward by the blue line to the source of the Yank-tha-wa stream, as depicted on the map.
>
> "This new boundary being established, I beg strongly to endorse Mr. O'Riley's recommendation for a trading mart being established at the mouth of the Kyay-ma-phyoo. In paragraphs 46 to 53 of his report, and in

---

* Assistant Commissioner Captain Watson, passing over the same Shan bullock track, about that time, to the Salween river, on a mission from Chief Commissioner Fytche, sent him, on the previous 17th of December 1863, this similarly inspired Report, viz.: "That it was quite absurd to think of making a tramway as proposed by Captain Sprye."

† My very idea, made public several years previous, with this difference only, that I proposed starting for "this frontier point" *from Rangoon*, whereas, Colonel Fytche, then Commissioner of Moelmyen, coveted making this port the point of departure.

in his letters dated severally 28th and 30th of May last, Mr. O'Riley has so ably urged the great advantages to be gained by this measure, that little is left for me to add, except that I fully concur with him in every respect.

"A station of this description, protected, as recommended, by a police force drawn from the other posts in the Yoonzaleen subdivision, at no extra expense to Government, and made the head quarters of its Assistant Commissioner, would not only be the key to all commerce in that direction, and stimulate its expansion, but be at the same time an admirable strategical position; and, by extending our influence, save the necessity of a Government Agent in Karennee, &c.

"It is impossible to state the boon which such a valuable acquisition will be to the trading mart, when fully established. I think, also, with Mr. O'Riley, that it is possible a practicable road for wheel carriage may be constructed from such a mart along the east bank of the Salween, *viâ* Myneloon-gyee, to *Moelmyen*. Large caravans of merchandise carried by bullocks already proceed by this route, and it is deemed the most practical one of any in use.

"I am afraid there can now be little doubt that the Salween river, from the point of junction with it of the Kyay-ma-phyoo down to our Kyo-dow rope station, *is* so full of rapids and other obstructions, as to preclude that portion of the river ever being rendered navigable."

40. But two years before that letter of Commissioner Fytche's, dated 5th of July 1864, with Mr. O'Riley's Report and accompanying papers, were received at Rangoon by Chief Commissioner and Political Agent Phayre, *he* had been in official and private political correspondence with the Government of India, urging that he should be allowed to negociate a new treaty with the King of Burma, such as should lay open to British steamers the Irrawadee river from Rangoon to its sources, and equally open all other parts of his Majesty's kingdom to British subjects, with free trading privileges. This to extend to a revival of the old abandoned dry-season caravan trade between Bhamo in Northern Burma, about 1,000 miles, by the river, from Rangoon, and China. The objects to be thereby attained, as Chief Commissioner Phayre erroneously supposed, being unlimited Chinese coolie labour, at a low rate of wage, for the tea plantations of Assam, Cachar, and Sylhet, *and* the ready introduction of Indian *opium* into Western China, free from transit duty, or very nearly so.

41. The Despatch of the Government of India, dated Foreign Department, No. 462, the 12th of May 1862, assenting to Lieutenant Colonel Phayre's propositions, and sanctioning his proceeding to the Burman Court for their realisation by a treaty, contained, with others, these instructions —

"The points on which it is desirable that you should come to an agreement with the Burman Government are the following:—

"The old dry-season caravan route from Burma proper, *viâ* Bhamo, to the Chinese province of Yunan, to be re-opened by means of a joint British and Burman mission to the frontier of China.

"British merchants to be allowed to go by that route, or to send their agents by it, and to be allowed to place agents, European or Asiatic, at Bhamo, in order to attend to the trade.

"Chinese traders, and labourers from Yunan, to be allowed to pass into British territory without hindrance. This stipulation to be made to apply, if possible, to routes leading to Assam, as well as those leading to Pegu.

"Opium to be allowed to pass *duty free* from British territories through Burma to Yunan, or on payment of a moderate transit duty."

42. Chief Commissioner Phayre proceeded accordingly to the Court of Mandelay in October 1862, and under the anti-English guidance of his friend M. Bigandet, the French Roman Catholic Bishop and Vicar Apostolic in Burma, negotiated, on the 10th of November 1862, the very imperfect and unsatisfactory treaty known as "The Burman Commercial Treaty" of that year. In his Despatch, forwarding it to the Government of India (No. 1 A, Prome, 21st November 1862) he, of course, described its provisions all-favourably, and expressed his confidence that great commercial benefits would result. On the

two purely Indian subjects of Chinese labour for the tea plantations of Assam, &c., and the introduction of Indian opium into the west of China, he wrote :—

> Article 9, and the last, provides for people passing through the Burman to British territory* without hindrance. Should tea planters in Assam, &c. wish, therefore, to import Chinese labourers, they have only to send an agent to Bhamo, and no doubt they will be able to engage many.
>
> "The great object in view, I venture to state, was to remove obstacles existing to a direct trade between Chinese territory and Rangoon, which has been done effectually.
>
> "There is one subject which still requires to be mentioned, Opium. I proposed that a *separate* treaty article should provide for its transit through the country for sale in countries† beyond. The King has an objection on religious grounds to allow his subjects to consume opium, and was therefore adverse to admitting by a special article that the drug might be conveyed through his country, but said he would not object to its coming in, like other goods, under Article 4," &c.

* *i.e.*, Assam, &c., across Northern Burma.

† *i.e.*, Inthe Chinese Shan States, and in Western China.

43. Nearly eight years have passed away, my Lord Duke, since that much vaunted "Commercial Treaty" was ratified. Yet it may in certainty be said, that if returns were called for of the number of Chinese coolie labourers who have passed in the period from China through Bhamo to the tea or other plantations of any part of British India, and of the Indian opium, or British goods, that have passed through the same town of Northern Burma from any point of British territory to China, the figures will in each case be, as I predicted at the time, nil. Our British Burman Political Agents, and their Assistants at Mandelay, have greatly erred in considering and representing that the caravan trade formerly carried on between Northern Yunan and the capital of Burma, *viâ* Bhamo, has *died out* during late years; such is not the case. That periodical overland traffic has been wisely *diverted* by the King of Burma from that long, difficult and perilous route to more direct, more easy, and far safer southern routes, such as those through the Theinnee and Toungbain vallies, *to Mandelay*, his capital, thus wholly avoiding the much longer Bhamo route, its Khakyen mountains, their different lawless tribes, and numerous exacting chiefs.

44. Nevertheless, Chief Commissioner Phayre felt, or professed to feel, so assured his treaty contained all that was needed to create a trade by the Irawadee river and Bhamo, between Rangoon and Western China, such as should meet British Indian requirements and views, and that my much shorter direct land route from Rangoon to the more commercial Kyang-Hung frontier of China, as well as my and Commissioner Fytche's proposed midway commercial emporium on our Salween river north-east frontier, were for those mere Indian interests wholly unnecessary; that he transmitted the Moelmyen Commissioner's Despatch thereon to the Government of India, on the 19th of August 1864, accompanied with a Despatch from himself, disapproving and condemning its propositions and recommendations, and pronouncing them on various accounts uncalled for, undesirable, and impolitic.

45. I do not at this moment recollect any subsequent effort having been made by Colonel Fytche while he remained Commissioner of the Tenasserim division at Moelmyen, to establish commerce from that port with the west of China, across the intervening populous Burman Shan States, by the Salween Valley route, or any other. But when he was in England in 1866, and about returning to British Burma to succeed in the year following to its Chief Commissionership and Political Agency, he wrote to me :—

> "That he had had a long conference with Viscount Cranborne, then Indian Secretary of State, and considered him favourable to a Government survey of the routes projected for commerce with Western China, &c. from Rangoon, That he, Colonel Fytche, thought the matter should be effectually examined into, and would do all in his power to accomplish it."

46. Yet, from his arrival at Rangoon, and assumption of the Chief Commissionership and Political Agency, he devoted himself to diplomatic intercourse with the Court of Burma, to supplementing the commercial treaty of his predecessor, and to prosecuting and realising *his* Bhamo route, to the exclusion of the direct line to Kyang-Hung, more especially after Lord Cranborne resigned the seals

seals of the India Office. What were the measures he pursued therein, through his Mandelay Assistant Political Agent with the King and Government of Burma, and what his various representations and recommendations, official and demi-official, to the Government of India, I refrain from now treating of. Systematic persistent pressure from the representatives of a superior power, however courteously it may be cloaked or concealed, prohibited or disavowed, in official Despatches, is no less felt as *force* by an isolated weak power. The Burman sovereign and his ministers of the period, if sufficiently independent, would probably make known that *such pressure alone* caused them to enter into the Treaty of 1867, notwithstanding that Despatches between the Political Agent at Rangoon, his Assistant at Mandelay, and the Government of India, may represent it to have been voluntarily proffered by the King, to allow the establishment of a British judicial court in their capital, they being refused a court of corresponding jurisdiction and powers at Rangoon; to sanction a new British Military Political Agency with an imposing establishment at Bhamo, subordinate to the Military Assistant Political Agent at Mandelay, and ostensibly to concur in Captain Sladen's expedition across the Khakyen ranges to China, for the avowed purpose of diverting back to Bhamo, for conveyance by British steamers to Rangoon, the traffic now carried on by Chinese caravans, between the north-west of Yunan and Burma, over better and safer routes *to and from the Burman capital*, to the great benefit of its traders and inhabitants, and of the King's Government.

47. Considering, as we must suppose the King and ministers of Burmah to do, these recent extensions of controlling British authority over his remaining kingdom, his very capital, and its trade, *in connection with* the recommendation of Chief Commissioner Fytche and his chief engineer, that a railway, commercially needless, should be constructed along the navigable Irawadee river from Rangoon to Prome, and with the building, by a company subsidised by the Government,* of steamers "of a size and power capable of rapidly conveying entire British regiments from the Prome terminus of such railway to Mandelay," can it surprise that the King, his advisers and court, should entertain the belief that, if the annexation of their country has not preceded our attempt to establish commerce with China by the Irawadee and Bhamo route, it is destined *to follow it*, realising the too loud cry of some officials and merchants, "If the Government will not annex, to extend empire and commerce, then *we must so extend commerce* that annexation shall in certainty follow, and make the Upper Salween our eastern† boundary as far north at least as the latitude of Momien."

* *See* note to para. 26, *ante*.

48. Those who so desire and plan "annexations still" on our British Burman frontier, do not, however, stand alone in India as insatiable advocates of further territorial extensions. There are not a few who advocated the annexation of Mysore, and condemned Lord Cranborne's justice in acknowledging the heir of adoption. Others now publicly advocate in print the taking of Cashmere from the prince to whom, when in need of his treasure, we sold it, in utter disregard of the will of its people, while some, again, over apprehensive of Russia's progress, recommend the occupation of Beloochistan, to enable the extension to the Indus of the Euphrates Valley Railway, whenever this may be constructed. The security and peace of what we do possess, and the prosperity and happiness of the people thereof, will, however, as is doubtless felt by your Grace, be far better provided for by our scrupulously refraining from augmenting it, in any quantity, in any direction, on any plea, or for any object; and this more particularly in reference to the comparatively very contracted territory we have left to the royal race of Burmah, shut in by us from all other nations.

* * * * * *

50. A not uninteresting page of print, your Grace may possibly consider, for the King of Burmah and his ministers to possess, as no doubt they do, from Major

† Why?-and wherefore? The Salween river is our present boundary, only up to 18° 50′ N. lat. and 97° 20′ 45″ E. lon. Whereas Momien is in 24° 65′ N. lat., and 98° 40′ 45″ E. lon. Not only does all *west* of the stream through the six intermediate degrees of latitude belong to the King of Burma, but also very much situated *east* of the Salween, and to the east also of *the Kamboja*. Besides, the Salween is not the "natural boundary" through any part of its coarse. The natural boundary in that eastern direction is the lofty range, *east* of the Salween, which, southward, forms the watershed between the Gulfs of Martaban and Siam, and, more northerly, between the eastern feeders of the Upper Salween and the western feeders of the Meikong or Upper Kamboja.

Major Sladen's letter, as British Political Agent, to the Chief Commissioner, No. 194, dated Mandelay, the 25th of September 1868, given at pages 176 to 178 of the Narrative of his Expedition, as printed by the Government of India, and describing the taking of the "oath of fidelity" to him at Bhamo, on the 12th of that month, by 31 Khakyen Hill chiefs and Northern Shan Tsobwuas, against the will of the Burman Governor of Bhamo, must, I think, prove somewhat instructive to the King of Burmah and his ministers.

* * * * *

51. Your Grace will see that no aggressive "anhexation" of Upper Burmah and dethronement of its royal family—measures openly advocated in Captain Bower's published history of the Bhamo exploring expedition, and but too plainly hinted at in the Despatches of Chief Commissioner Fytche and his engineer officer, urging the construction of a railway from Rangoon to Prome—or "re-adjustment of our frontier," by taking possession of Chinese territory, is in any way a probable result of adopting the direct land route from Rangoon to Kyang-Hung, for British and Indian commerce with the Burman Shan States and west of China. Its course is distant from both the capital and territory of Burmah proper, and does not enter any part of China, the line being limited to striking, at the most suitable point in the Burman Shan State of Kyang-Hung, the right bank of the Kamboja river, before stated to be, at that part of its course, some 50 miles from the Chinese frontier town of Esmok. To ensure that commerce shall be carried on by this route in peace and perfect harmony with the King of Burmah, with the chiefs of those few of his Shan States as the line will cross, and with their several peoples, it is only requisite to enter into frank and equitable negotiations with his Majesty and those few chiefs, in which neither difficulty nor disagreeables will, I imagine, be experienced, if right persons are selected for the duty, and they are rightly instructed.

52. The rapid advances which other European nations and the United States of America have made during late years, in international and commercial relations with Siam, Cochin China, China, and Japan, and the successful completion of the Suez Canal, with the greater proximity it gives to the countries bordering on the Mediterranean and Black Seas to the seaborde of all Asia, are facts which cannot be wisely disregarded in a consideration of the advantageous opening our port of Rangoon offers for British trade, overland therefrom, with the States bordering on the north-east of our Pegu and Martaban provinces, including the inland western moiety of China proper; and, as showing that, from my first proposing this new line of commerce for England and India, I did not overlook or neglect to submit such facts to Her Majesty's ministers, and the department of State over which your Grace now presides, I adduce a few of many proofs at my command.

53. In April and May 1858, I transmitted several papers on the subject, drawn up with some labour, to the then Foreign Secretary of State, one of which, having explanatory maps attached, treated in great detail :—

> "Of the manufacturing and commercial progress of the United States of America, and of their intention to lay various lines of rail from the Atlantic to the Pacific, expressly to facilitate and command the trade of Japan, China, &c. across the latter ocean."

The Foreign Secretary acknowledged that communication flatteringly, with intimation that he had transmitted it to the Board of Trade for consideration, beyond which I never heard of it.

54. On the 15th of March 1860, I circulated my third or fourth pamphlet on his question, which was entitled :—

> "China; and how best for England to Preserve her Commercial, Political, and Military Position there, in reference to American, French, and Russian recent Approaches to it."

That pamphlet also treated, among other things, of the projected American and Pacific railways, &c.; and, in reference thereto, named four points as therefore urgently claiming the attention of the Home and Indian Governments, of which

which points the first three referred to our then relations with China, Burma Proper, and Siam, and the fourth to British Pegu, in these words:

> "And, as respects Pegu, to have a cheap single line rail or tramway laid, by the most direct practicable route, from the port of Rangoon, *vid* the ancient capital of Pegu, to our more north-easterly town of Shwaygyeen, on the River Sittang; and thence, by the most easy engineering line, to our extreme north-east frontier point on the right bank of the Salween river, &c."

55. Following that, I, in 1861-62, compiled and engraved a map of Asia, measuring about 7 feet by 3½, embracing from the mouth of the Red Sea to Japan, showing the proposed rail or tram line from Rangoon to that Salween river frontier point, and onward therefrom, *vid* the Takan ferry, across that stream and Kyang-Tung, to Kyang-Hung on the Kamboja river south-west frontier of China; in reference to which projected railway I caused to be conspicuously printed on the map, a copy of which, as of many others, was transmitted to each of Her Majesty's Ministers, the following note: —

> "TheSuez Canal completed, and the Rangoon and West of China Railway constructed, British merchandise of every variety will be conveyed from the United Kingdom to inland China Proper, within 40 days, and the rich commercial products of Western China and the Burman Shan States be brought in similar short time to England free from the delays, ocean and war risks, and insurances of the much longer conveyance round the Cape of Good Hope, through the Straits of Sunda or Malacca, and up and down the Chinese Seas."

56. From 10 to 12 years have passed, my Lord Duke, since I made those and many similar efforts to attract the attention of Her Majesty's and the Indian Governments to the importance to each of promptly making that overland commercial way to the south-west frontier of China; my labours, however, proved vain; excepting Mr. Disraeli, Lords Stanley and Cranborne, during their holdings of seals of office, no Minister has cared to give individual heed to what I submitted.

57. Thereon, the manufacturing and mercantile interests of the United Kingdom investigated its merits, and having satisfied themselves that the Secretary of State for India had judged and decided erroneously, they commenced, through their several commercial chambers and associations, a series of memorials to different of Her Majesty's Ministers, in favour of the project, such as no other mere commercial question has called forth in our day, numbering, I am led to believe, near 60 appeals in all, terminating with an earnest one to your Grace, as the Minister now controlling the Government of India, from the general body of the Chambers of Commerce of the United Kingdom, after a full discussion of the question and its present position at their annual meeting; nevertheless, because one Secretary of State, one Viceroy, and one Chief Commissioner have objected to the proposition without adequate or impartial inquiry into its merits, but resting mainly on such partisan, and prejudiced representations of it, as I have submitted, in preceding pages, from persons in the East officially desiring, or privately interested in, divers schemes having reference to the territory of the King of Burma; it is sought to be established by them, that succeeding Indian Secretaries and Viceroys are bound by such wrong decision, and that subordinate officials, even those having voice in Parliament, must continue to misrepresent the project, and to assign false reasons for the hostility to it of their chiefs. In no age can a more unsound principle have been followed as regards our national commerce, and most certainly your Grace cannot deem it one to have the countenance of British statesmen in the present period of rapid material progress and general commercial competition the world over.

58. In the meantime, however, what has been the result? Progress answers, America *has completed* one of her unequalled Atlantic and Pacific lines of railway, and merchandise of every variety for Japan and China, as well as from those countries, conveyed by fast steamers across the Pacific,* is now carried to and

* The American steamer "Japan," by no means a fast one, left Yokohama 24th January, and reached San Francisco 16th February, in all 23 days. And to give increased activity to American commerce in that and other directions, Congress is being prepared to grant subsidies to such steamer lines.

and fro by that rail between the ports of New York and San Francisco, to the benefit of American manufacturers, merchants, and shipowners, and the prejudice, more or less, of those of the United Kingdom.

59. So, likewise, the "reputed impracticable" Suez Canal, against investing in which British capitalists were earnestly warned by a deceased Prime Minister, *has been completed*, and all the countries of Europe being, by railway and steamer, nearer to it than is England, *their* manufacturers, merchants, and shipowners will acquire a similar advantage over those of our country, especially France, in trading through it with the different countries of Asia, and more particularly with China.

60. Does not it then behove the Government of India, and your Grace as controlling it, without further delay, and disregarding aggressive eastern ideas and plans for the earlier or later absorption of Burma Proper, to avail of every practical mode in its power, still further to lessen the commercial distance *between the United Kingdom and the west of China Proper?* For British merchandise to reach the western provinces of China at present, even through the Suez Canal, it must be carried:—

Viâ Shanghai and River.	*Miles.*
From England, *viâ* the Canal, to Shanghai	10,488
From Shanghai, up the River Yang-tsz, to the west of China	1,750
Total of ocean and river carriage — *Miles*	*12,238*
But, *viâ* Rangoon and Rail,	
From England, *viâ* the Canal, to Rangoon	7,830
From Rangoon, by rail or tram, to Kiang-Hung, on the west of China	530
Total of ocean and rail carriage — *Miles*	*8,360*
Difference in favour of Rangoon, and direct rail therefrom — *Miles*	3,878

Making a save of 7,756 miles on the out and home voyages.

61. Your Grace will admit, I feel assured, that in these days of increasing national competition in the manufacture and sale of goods, and in the purchase of the raw materials wherewith to manufacture them, such a save in time, sea risks, freight, and insurance is, to both the manufacturer and the shipping merchant, all-important. They consider rightly enough that they are entitled, for various reasons, to have it secured to them by the Government of India; and, among others, that the trade of India and the British Burman provinces of Pegu, Martaban, and Tenasserim, must greatly* and permanently benefit, in very many ways, by the construction of the required rail or tramway. The Government of India cannot surely feel that it acquires further estimation by immovably standing in the way, year after year, of a project in which the public bodies who represent the industries and commerce of the kingdom evince such interest; or that these bodies can consider that the Government so acting does not require to be reformed, to bring its administrative action something more in accord with the legitimate and just requirements of the Home country, by the power of which India was acquired and is retained.

62. The Board of Trade may issue favourable returns of our exports and imports, as regards the quantities of goods shipped from our ports, and of raw material imported into them; but, as bespeaking *profitable* activity of trade, those returns are often fallacious. Goods may be sent to foreign markets and there disposed of at considerable loss; and raw material be imported at similar disadvantage. A necessity for shipping-off stocks from overfilled warehouses, the contents of which are daily added to from the necessity of keeping manufactories in work, will overstock markets abroad, lower prices in them below profit, and even to losing figures, ultimately necessitating a greater or less stoppage of manufacture. This reacts prejudicially on the demand for imported raw produce, until loss is entailed upon both exporting and importing merchants. And because

* *See* mine and son's letter to Secretary of State for India, Sir Charles Wood, dated 20th January 1862; printed and circulated by us as our pamphlet, No. V.

cause, under such adverse circumstances, manufacturers are unwilling to part with the hope that "a better time is coming," and still keep their mills and works in more or less activity so long as they can dispose of their productions *without profit*; and merchants are content to ship them with similar result; neither the one nor the other can bear up against continued *losses* through fall of prices in the markets open to them. Therefore, while the Board of Trade's periodical returns may show no falling off in *the quantities* of merchandise exported and imported, it in no respect justifies its being considered that trade is wholesomely active, or yielding the benefit necessary for the country's prosperity. It is therefore that, looking at the present depressed condition of our manufacturing districts and commercial ports, it is of vital importance to the country generally, that every new market should be made accessible to them that can be peaceably opened up. No such market is now more universally admitted to be so promising as that of Western China; ridiculed as I have been, through many years for so declaring it, by opponents who are interested or misinformed in the matter.

63. The several printed reports of the Bhamo Route Exploring Expedition, including those of the surveyors, Captain J. M. Williams and Mr. Robert Gordon, of the commercial representatives, Messrs. Stewart and Bowers, of Captain Sladen, Chief of the Expedition, and even Chief Commissioner Fytche's partisan Memorandum thereon, all of which I possess and have attentively read, show to every impartial mind at all conversant with the country and its people, that to approach inland China by the Irawadee, Mandelay, and Bhamo route, for *British* commercial objects, is the idle dream I considered it when examining into its practicability years since; and, notwithstanding all the pressing advocacy of it by those who desire and strive to bring about the annexation of Upper Burma and its dependencies; of those who, as holders of tea plantations in Assam, &c., erroneously believe it would lead to the opening of a way across the wilds of Upper Burma by which they should receive from Bhamo unlimited and cheap Chinese Coolie labour; and of those others at Rangoon, Calcutta, and Glasgow, who, forming the Irawadee Steam Flotilla Company, too naturally desire that that river should be the sole route for trade with the west of China; the Bhamo route, be it considered of use for what political objects it may, is condemned by each and every one of the six reports referred to, as a way for regular trade deserving the name of British commerce.

64. As to the Yang-tsze river route to the west of China, Mr. Consul Swinhoe's Report of his late expedition up that stream to the eastern extremities of the Szechuen and Yunan provinces, recently presented to Parliament, fully confirms what Captain Blakiston's excellent survey and account of it years back established, of the unsuitableness of the upper portion of the stream for the conveyance of regular commerce; and in transmitting Mr. Swinhoe's Report to the Foreign Secretary of State, Her Majesty's Ambassador at Pekin observed:—

> "That all thought of obtaining access to the Upper Yang-tsze for steamers must be relinquished for the present; and it is clear no navigation by steamers is possible higher than Ichang."

I have, however, before me copy of a memorial from the Chinese merchants of Ichang to the Imperial Government of China, praying that the river between Hankow and their city may on no account be opened to foreign vessels of any kind; because, as they but too truly state, the effect must be to take the carrying trade between those cities wholly out of Chinese hands, as had been injuriously done between the open ports along the seaboard of the empire, between Shanghai and Hankow,* and between the mouth of the Peiko and Tientsin, to the very grievous wrong of their own vessels and people. The provisions, also, of Sir Rutherford Alcock's convention with China, which is being so strongly objected to by our merchants trading with the open ports, appear to indicate that the Chinese Government is indisposed, for the present at least, to encourage the further advance of foreign merchants into the interior of the empire.

65. Advices

* Four hundred foreign steamers passed up and down between Shanghai and Hankow, in 1869. No wonder, therefore, that Chinese junks and their builders and sailors, find *their* "occupation gone."

65. Advices from Hankow, of 8th of January last, communicate that enterprising Russian Hongs are building steamers to load teas therefrom, *viâ* the Suez Canal, direct for Odessa; from whence they will have grain freights to London, and return therefrom to Shanghai and Hankow, with general cargoes. The same Chinese advices state:—

> "That the increasing interest shown by the home and Indian press in the proposition to open up Western China, from the port of Rangoon by railway, and thus to draw to an English port the bulk of teas of the western districts, and at the same time shorten the sea voyage very materially, is attracting much attention."

66. There is still one rival route to the direct one from Rangoon to Kyang-Hung before the public, which I ought not to leave unnoticed in this communication to your Grace; because, among other reasons, a predecessor of your Grace's at the India Office, and if I recollect rightly, your own Under Secretary, Mr. Grant Duff—I have not their speeches at hand to refer to—in their endeavour, at the close of last Session, to justify the suspension of the survey of the direct land route, expressed themselves to have faith in such other route as a way for British commerce with the west of China. I refer to the Calcutta and Assam route, *viâ* Sudiya in Upper Assam, across the perpetually snow-clad eastern extremity of the Himalayas, in which lie the sources of the Irawadee, the Lohit, and other mountain streams; and then across the lofty ranges which run north and south between the Nou, the Lan-Tsan, and the Kinsha rivers, where these severally issue from Tibet, to the Chinese town of Bathang, on the Tibetan frontier of the province of Syechuen. The able and enterprising explorer, Mr. T. T. Cooper, made persevering endeavours, two years since, to cross *from* Bathang, by this route, or some proximate one, *to India*; but failing in that, and imagining it might be accomplished from Upper Assam to Bathang, he proceeded to Calcutta, and under the laudable patronage and support of its Chamber of Commerce, went last year to Sudiya in Upper Assam, to make the attempt. But no one, who has properly considered Lieutenants Burlton and Wilcox's Reports of their exploration of the Kampti country and sources of the Irawadee river, could anticipate that, whatever dry season mountain paths may exist across the mountain regions north of their route, any way could be found, or made, across them *for commerce*. Though Mr. Cooper spent considerable time at Sudiya in collecting information, making every possible preparation, and obtaining local guides, recent accounts from Calcutta state that, after making some considerable progress across the territories of mountain chiefs bordering on Assam, including those of the Degaroo Mishmee and Meju tribes, and extensive intermediate barren tracts, he was necessitated, by the jealous hostility of Tibetan Lamas and Chinese frontier authorities, to retrace his steps to British territory. One report, however, represents that he states his object was *not* to find a trade way *into China through Bathang*, but one into Tibet and the regions north of it, for the teas of Assam, &c.; a project which the Chinese, having the controlling power they have over Eastern Tibet, and supplying it as they have done from time immemorial with tea, are not, I imagine, likely to allow early realisation of, desirable as such a market must be to the tea growers of Assam.

67. Your Grace will, I trust, therefore see that the sole remaining way by which our manufacturers and merchants can have the western portion of China peaceably made accessible to them, is the one from Rangoon to Kyang-Hung, or to some point of the Upper Kamboja river in that State. It was 33 years since the tributary princes of Kyang-Tung and Kyang-Hung, their ministers and subordinate chiefs, frankly and warmly expressed to Captain McLeod *their* readiness to facilitate all in their power our trading with China across those States. The Chinese settled in them, and those of Esmok trading with caravans in the dry season over the country between the Upper Kamboja and the Salween rivers, no less earnestly expressed to him, as many such had previously done to Richardson, *their* wish and desire that we should so establish regular commerce with their country; where, they all said, our *merchants* would be well received, and most welcome. The judicious instructions Commissioner Blundell gave to McLeod, dated Moelmyen, the 20th of November 1836, and the letters he sent by him to the Tsobwa of Kyang-Tung and the Tsenwibua of Kyang-Hung, as well

well as to the Viceroy of Yunan in case he proceeded into China, expressly state that "the object of his mission was, peacefully, to extend British trade, from the "Gulf of Martaban, to their States, and the West of China"; and the replies the envoy took back from them, were even more friendly and promising than could have been hoped for. Though the length McLeod found the road to Kyang-Hung through the Siamese Shan States of Zimmai, &c., 638 miles, with *their* devastated condition, and the hostility of *their* chiefs to his object, caused the effort to be then no further prosecuted; our annexation, 15 years later, in 1852, of the Pegu and Martaban provinces of Burma, not only placed us in independence of the Zimmai route to Kyang-Tung and Kyang-Hung, but gave us command of a much shorter one, with the first half of it across our own territory. This half has been surveyed and reported on most favourably for a rail or tramway; and the Report of the Surveyors, with map and sections, has been, for some time before Parliament. Of its 250 miles, 169 are therein reported to be easy of construction, 35 moderately easy, and only 40 miles at all difficult, having a single mile of tunnel; and, excepting a few insignificant streams, having only one measuring 1,500 feet, to be crossed.

68. Seeing, then, that the full period of "a generation" *has passed away** since McLeod was so *urged* by the ruling authorities of Kyang-Tung and Kyang-Hung, and by the Chinese merchants there established, as well as by others periodically traversing them in the dry season with caravans from Esmok, to cause our trade to be extended across those States to China; I submit to the impartial consideration and practised judgment of your Grace, whether, in pressing this question on ministerial attention, the Chambers of Commerce of the United Kingdom can be rightly said, in their great need of new foreign markets, "to be following the mere will-o'-the-wisp," your Parliamentary Under Secretary, Mr. Grant Duff, permitted himself to affirm to Parliament they were; or whether, as he on the same occasion also stated they were, "they are following a man "with a chronometer in his head, to a country of which we know no more than "of that beyond the river Styx;" and are *still* "a generation too soon" to have their desires realised.

69. Under the official rebuffs and discourtesies which have been extended to me through the years I have felt it right to recommend the opening of this "new mark" to ministerial attention, it is possible I may not have advocated it without, in some instances, showing that I have felt those rebuffs and discourtesies to be unmerited. But my having so done, in no respect affects the merits of the project, or lessens the claim the manufacturing and mercantile interests of the kingdom have on the Home and Indian Governments in regard to it; and will not, I trust, be permitted to do so in your Grace's enlightened and practised judgment.

70. Among the letters which I and my late son addressed to Sir Charles Wood on the subject during the period he held the Seals of the India Office, there were two dated the 20th of January 1862, and 15th of January 1866, which are in print,† and contain more important information and reasoning in favour of the project than this communication does. Indeed, for a clear understanding of its merits and of the immediate and permanent benefit it will bring to England and India, a perusal of those two of our earlier communications is, perhaps, more essential at the present time than when they were written. And as we printed the first-dated of them as a pamphlet in the year it was written, and several copies of it were then forwarded to the India Office, and the later dated of them is in print as a Parliamentary Paper, both must be at your Grace's command. I would therefore solicit your notice of para. 64 of the latter document, in its 37th and 38th pages, and submit whether, if the proffer, it conveyed

* Among the erroneous reasons and unsound arguments with which Mr. Grant Duff sought to justify to Parliament the hostility of the Government of India to this project for the extension of our commerce in the East, he resorted to the common official plea, "that it was before its time, though it might be desirable a generation or two hence."

† The *first*, a pamphlet, V. roy. 8vo., London, 1862, "China and a New Commerce therewith from Rangoon," by Captain Richard Sprye and Reynell-Hele-Fowell Sprye, Esq. The *second*, Parliamentary Paper, "East India, Shan States, &c.," 350, Sess. 1866.

conveyed from me had been accepted, much trouble and considerable outlay* would not have been saved to the Government of India through the four years which have since passed, satisfaction have been given to the commercial community of the kingdom, and great benefits have resulted to England and India during the period.

71. I have confined myself in this letter to the few points it notices of Chief Commissioner Fytche's "Memorandum" to the Viceroy and Governor General of India, dated the 30th of June 1869, and of Captain Sladen's "Narrative" dated the 24th of February of the same year,† because I am preparing for submission to the Chambers of Commerce, in pamphlet form, a complete review of those documents and of the four other printed Reports of the Bhamo Route Expedition, referred to in para. 63 preceding; in connection with other trustworthy information which I received, from time to time, on the subject, from the East.

I have, &c.
(signed) *Richard Sprye.*

His Grace The Duke of Argyll, K.T.,
H. M. Secretary of State for India.

---

* Including among others, the considerable cost of Lieutenants G. E. Sconce's and C. E. Watson's misnamed "Salween River Surveying Expedition," of 1863; of Mr. Francis Fedden's and Captain C. E. Watson's as misdirected survey of the same river in 1864; and the still more serious cost, for the commercially as useless expedition, of Captan Sladen to Momien, in 1868-69.

† *See* subsection, No. LXXIX., Foreign Records of the Government of India.

COPY of CORRESPONDENCE, or EXTRACTS from CORRESPONDENCE, relating to the KOOKA OUTBREAK.

(No. 7 of 1872.)

From Government of India to Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, 19 January 1872.

WE enclose for your Grace's information a copy of the telegrams noted in the annexed list, regarding certain disturbances created by bodies of Kookas in the Ludiana district of the Punjab.

2. Two attacks were committed by these men: one, by a body said to be 200 strong, on Malodh Fort, during the night of the 14th January; the other, probably by the same body, though estimated at 500 in number, on Malair Kotlah, on the morning of the 15th. Both attacks were repulsed.

3. In compliance with the application of the Deputy Commissioner of Ludiana, a strong military force was promptly despatched to his aid from Delhi and Jullundur. Meanwhile, the Maharajahs of Patiala, Nabha, and Jheend, rendered prompt assistance, and about 100 Kookas, who were concerned in the attack on Kotlah, have been killed, wounded, or captured, including their two leaders, Lehna Singh and Heera Singh. The Deputy Commissioner telegraphs, under date the 17th instant, that tranquillity has been restored.

4. The leader of the Kooka sect, Gooroo Ram Singh, was at once ordered into Delhi by the Lieutenant Governor, and has since been sent, with two of his lieutenants, under a guard to Allahabad.

5. These are the only particulars we have yet received, but inquiries are in progress as to the causes which occasioned, and the persons who were engaged in, these outrages. It is conjectured, however, that the object of the Kookas, in their attacks on Malodh and Kotlah, was to procure arms.

6. We await the receipt of a full report from the Lieutenant Governor, and we shall forward it to your Grace as soon as possible.

TELEGRAMS.

(1.)

TELEGRAM, dated the 15th January 1872.

From Secretary to Government, Punjab, Delhi, to Home Secretary, Calcutta.

DEPUTY Commissioner, Ludiana, telegraphs the following:

"Two hundred Kukas attacked Malodh Fort last night, wounded Surdar Buddan Singh, and killed two men. One Kuka killed, and two captured. I go out at once. Particulars by post."

The crime shows great boldness on part of Kukas.

(2.)

TELEGRAM, dated the 16th January 1872.

From Viceroy to Lieutenant Governor of the Punjab.

YOUR telegram of yesterday received. It is very desirable that the most experienced officer available should be sent to the spot to inquire into the matter.

It is of the utmost importance that the whole facts of the case should be thoroughly sifted and ascertained without delay, so that there can be no possible chance of the Government being misinformed as to the causes which occasioned, and the persons engaged in, this most serious outrage.

(3.)

TELEGRAM, dated the 16th January 1872; 11.50 A.M.

From Lieutenant Governor of Punjab, Delhi, to the Viceroy.

ATTACK on Malodh by Kukas, already reported, was followed next morning by one on Malair Kotla. Seven inhabitants thereof killed; numbers of Kukas, 500.

In compliance with requisition of Deputy Commissioner of Ludiana for troops, one regiment Native Infantry, wing of Europeans, detachment of Cavalry, leave this morning for Khanna, between Umballa and Ludiana.

Deputy Commissioner has since telegraphed that a great number of Kukas have been surrounded at Malair Kotla, and that he has got cavalry from Nawab, but I have not stopped troops going.

Following on antecedents, these outrages show incorrigible conspiracy in leaders of sect. Country not safe whilst leaders at large. I have therefore authorised Forsyth to effect capture of Ram Singh and principal Soobahs. Report by post.

(4.)

TELEGRAM, dated the 16th January 1872; 4 P.M.

From Viceroy to Lieutenant Governor of Punjab, Delhi.

YOUR action entirely approved. We shall be anxious to hear further particulars.

(5.)

TELEGRAM, dated the 16th January 1872.

From Deputy Commissioner, Ludiana, Malodh, to Home Secretary, Calcutta.

16th January 1872.—THE inquiry progresses. The whole facts, and I hope the names of all engaged, will be discovered. I go on to Kotla to-night or to-morrow. It is not known yet with certainty where the Kuka rebels are.

(6.)

TELEGRAM, dated the 16th January 1872.

From Secretary to Government, Punjab, Delhi, to Home Secretary, Calcutta.

16th.—DEPUTY Commissioner, Ludiana, telegraphs to-day; "The inquiry progresses. The whole facts, and I hope the names of all engaged, will be discovered. I go on to Kotla to-night or to-morrow. It is not known yet with certainty where the Kuka rebels are."

(7.)

TELEGRAM, dated the 17th January 1872.

From Secretary to Government, Punjab, Delhi, to Home Secretary, Calcutta.

COMMISSIONER telegraphs from Ludiana, 16th: "The European companies from Jullundur have arrived. All quiet here. Seventy Kukas, very severely wounded, after Kotla

Kotla fight, were seized at Sherpur, in Patiala territory; probably these are all. Former number evidently exaggerated by native reports. Ram Singh was with Cowan to-day, and has now been sent for to come in here."

(8.)

TELEGRAM, dated the 17th January 1872.

From Cowan, Deputy Commissioner, Kotla, to Home Secretary, Calcutta.

TRANQUILLITY restored. About 100 Kukas killed, wounded, or captured. Patiala, Nabha, and Jheend giving active assistance.

(9.)

TELEGRAM, dated the 17th January 1872.

From Secretary, Punjab Government, to Home Secretary, Calcutta.

DEPUTY Commissioner telegraphs from Kotla 16th: "Tranquillity restored. About 100 Kukas killed, wounded, or captured. Patiala, Nabha, and Jheend giving active assistance."

(10.)

TELEGRAM, dated the 18th January 1872.

From Secretary, Government, Punjab, Delhi, to Home Secretary, Calcutta.

MAHARAJAH telegraphs following:

"Yesterday, 16th, at 11 morning, Sayad Nyaz Alli, my Naib Nazim of Omergurh, arrested with only a few men with him, with great courage, 68 Kukas who made disturbance at Kotla and Mulodh. Among them there are 29 wounded men. Heera Singh and Lehna Singh, their leaders, have also been apprehended. More by dâk."

(11.)

TELEGRAM, dated the 18th January 1872.

From Secretary, Punjab Government, to Home Secretary, Calcutta; Magistrate, Allahabad; and Secretary, Government, North Western Provinces.

RAM SINGH, Kuka leader, with Lukka Singh and Saheb Singh, his lieutenants, forwarded to Allahabad, under charge of European officer and Gurka guard by this morning's train.

(12.)

TELEGRAM, dated the 18th January 1872.

From Secretary, Government, Punjab, to Home Secretary.

AT Kotla, on 17th instant, 49 of the men who had attacked Malodh were blown away from guns by the Deputy Commissioner. The circumstances under which this was done are not yet clearly known, but explanation has been called for from Commissioner. The other Kuka leaders have been arrested.

(13.)

TELEGRAM, dated the 18th January 1872.

From Secretary, Government, Punjab, to Home Secretary.

AT Malodh two Kukas killed, four wounded, and five captured; 68 captured in Patiala territory, of whom 29 were wounded, others since captured. No Government troops were engaged.

engaged. At Malodh Surdar lost two men killed and two wounded. At Kotla the Kotwal was killed fighting gallantly; seven men also killed and 15 wounded. Quiet restored.

(14.)

TELEGRAM, dated the 19th January 1872; 1 P.M.

From Viceroy to Lieutenant Governor.

Clear the Line.—Stop any summary execution of Kukas without your express orders.

(No. 9 of 1872.)

From Government of India to Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, 2 February 1872.

IN continuation of our Despatch No. 7, dated the 19th January, we transmit for your Grace's information a copy of further papers, as noted in the annexed list, regarding the recent outrages committed by bodies of Kookas at Malodh and Malair Kotlah, in the Ludiana District of the Punjab.

2. In accordance with the recommendation of the Punjab Government,* and under the circumstances so fully explained by Mr. Forsyth, the Commissioner of the Ambala Division,† we have issued warrants under Regulation III. of 1818 for the detention in custody in the Allahabad gaol of the Kooka Goroo Ram Singh, and of 10 of his most influential subahs.

* Letter from Punjab, No. 9 c, dated 16 January 1872.

† *See* enclosure of letter from Punjab, No. 23 c, dated 19 January 1872.

3. While fully acknowledging the promptitude and vigour with which the local officers acted on the first intelligence of the disturbances, we regret we have been obliged to question the propriety of the ulterior proceedings of Mr. Cowan, Deputy Commissioner of Ludiana. We have, you will perceive, ordered his suspension, pending full inquiry into his conduct, in summarily executing the Kooka insurgents captured in the Patiala Territory.

TELEGRAM, dated the 19th January 1872.

From Secretary to Government, Punjab, Delhi, to Home Secretary, Calcutta.

THE following from Commissioner, 19th: "All at present known to have been concerned in attack on Kotla have been captured and convicted. Fifty were executed yesterday by Cowan, among them Heera Singh and Lehna Singh, subahs. Sixteen are now to be executed. Four made over to Patiala for punishment. Seven Kookas caught at Malodh, being in British territory, will be tried there by me to-morrow, and case sent to Chief Court immediately. No direct evidence against Ram Singh in this case sufficient to put him on his trial. Colonel Gough and detachment of cavalry here. Perfect tranquillity. Cowan's prompt action deserves praise. Patiala, Jheend, and Nabha gave signal help."

TELEGRAM, dated the 19th January 1872.

From Secretary to Government, Punjab, Delhi, to Home Secretary, Calcutta.

FOLLOWING telegram from Ludiana: "Sixteen more executed yesterday at Kotla by Commissioner. Four made over to Patiala. Seven, who were captured at Malodh, undergo regular trial to-day. Baillie still at Bhainee, which he has cleared of all males. One hundred and seventy-two, who came in yesterday afternoon and were sent off by me in parties to respective districts, except fifty, who, having no regular residence but Bhainee, are here in custody waiting Commissioner's orders. Smith from Lahore will take down Kahn Singh, and other subahs, to Allahabad this afternoon."

TELEGRAM, dated the 19th January 1872.

From Lieutenant Governor, Punjab, Delhi, to Viceroy, Calcutta.

YOUR telegram. Mr. Cowan's executions were followed yesterday by sixteen more, eliberately ordered by Forsyth after reaching Maler Kotla. Kookas arrested in British erritory will be regularly tried. No more summary executions will take place.

From *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 9 C.); dated Delhi, the 16th January 1872.

I AM directed by the honourable the Lieutenant Governor to forward copies of telegrams, the purport of which has already been communicated to his Excellency the Viceroy.

2. It will be seen that on the night of the 14th an attack was made by a party of Kookas, estimated at 200, on the Fort of Malodh, situate about 20 miles south of Ludiana, belonging to the Malodh Sirdars, Sikh chiefs of approved loyalty and service. One or two casualties occurred on either side, and the son of Sirdar Mith Singh, by name Badan Singh, a Jageerdar magistrate, was wounded. The object of the attack was presumably to obtain arms, but no details have yet been received. On receipt they will be at once communicated.

3. The next morning a larger force of Kookas, 500 in number, attacked the fort of the large town of Kotlah, capital of the Mahomadan State of Maler Kotlah, about 30 miles south of Ludiana. Some seven or eight persons were killed by the assailants, who appear to have been beaten off with some casualties. A telegram from Lahore mentions that thousands of Kookas are assembling in the neighbouring villages to re-attack. This statement is probably exaggerated, and this morning the Deputy Commissioner of Ludiana reports that two Kookas were killed and four captured, while a large number has been surrounded at Katta, which may be a mis-spelling for Kotla.

4. On the news of the attack on Malodh, the Lieutenant Governor at once deputed Mr. T. D. Forsyth, C.B., Commissioner of the Amballa Division, to Ludiana, to report at once the measures advisable to adopt; but before the departure of the train, the second report of the attack on Maler Kotla was received.

* * * * * * *

6. The honourable the Lieutenant Governor at once conferred with his Excellency the Commander in Chief, and it was arranged that the 1st Gurkhas, a wing of the 72nd Regiment, and a mule battery, should proceed to Khanna, the nearest station to Kotla, to act under the orders of General Tytler, commanding the Umballa Division, where necessary. A troop of the 12th Bengal Cavalry accompanied them. Ludiana, which is now unprotected, will be strengthened by three companies of the 54th Foot from Jullunder, and a half-battery of Royal Artillery.

7. The Lieutenant Governor has directed the arrest of Ram Singh and of his principal and most influential subahs—Sahib Singh, Rûr Singh, Lakka Singh, Kahn Singh, Brahma Singh, Jowahir Singh, Malak Singh, Man Singh, and Hukma Singh. The arrest of Ram Singh will be effected as rapidly as possible, the details of the capture being arranged by General Tytler, in communication with the Commissioner of the division.

8. The men above named, if arrested, will be at once forwarded to Allahabad, as his Honor does not consider it advisable to retain them in the Punjab. Regarding their future destination, the Lieutenant Governor will make further recommendations, but he now requests the issue by his Excellency the Viceroy and Governor General in Council of warrants, under Regulation III. of 1818, against all the men above mentioned.

9. So little information has been received as yet that it is difficult to form any conclusions as to the course the Kookas are now likely to adopt. The honourable the Lieutenant Governor, however, has every hope that the measures taken by him will restore confidence and tranquillity to the country at once. He is convinced of their necessity, and trusts that they may receive the full concurrence of his Excellency the Viceroy.

TELEGRAM, dated the 15th January 1872.

From the Deputy Commissioner, Ludiana, to the Secretary to Government, Delhi.

TWO HUNDRED Kookas attacked Malodh Fort last night, wounded Sirdar Buddun Singh, and killed two men. One Kooka killed and two captured. I go out at once. Particulars by post.

TELEGRAM, dated the 15th January 1872.

From the Deputy Commissioner, Ludiana, to the Commissioner of Umballa.

MALER KOTLAH attacked by 500 Kookas this morning. Eight or ten killed. Send troops sharp.

TELEGRAM, dated the 16th January 1872.

From the Assistant to Inspector General of Police, Lahore, to the Inspector General, Delhi.

DISTRICT Superintendent, Ludiana, reports that 200 Kookas attacked Maler Kotlah Fort. Few killed and wounded both sides. Thousands are assembling in neighbouring villages to re-attack. Civil officer informed Government.

TELEGRAM, dated the 16th January 1872.

From the Deputy Commissioner, Molankallee, Ludiana District, to Secretary to Government.

DON'T send troops. I have sent for some cavalry from Nawab. Two Kookas killed, and four captured at Madondhi. A great number surrounded at Katta.

Confidential, from *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 15 C.); dated Delhi, the 17th January 1872.

I AM desired by the Honourable the Lieutenant Governor to request that the name of Pahara Singh, omitted by mistake from my letter, No. 9 C., of yesterday, may be added to those of the Kuka leaders for whom warrants are required under Regulation III. of 1818.

From *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India, to *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab (No. 102); dated the 22nd January 1872.

I AM directed to acknowledge the receipt of your letters Nos. 9 C. and 15 C., dated respectively the 16th and 17th instant, reporting particulars connected with the attacks made by certain Kukas on the Fort of Malodh and Kotla; and in reply I am desired to state that the Governor General in Council is pleased to approve the action taken by the Honourable the Lieutenant Governor.

2. Warrants of custody under Regulation III. of 1818, against Ram Singh and his subahs (named in your letters) have been sent direct to the magistrate of Allahabad.

From *W. M. Souttar*, Esq., M.A., Officiating Under Secretary to the Government of India, to the Magistrate of Allahabad (No. 103); dated the 22nd January 1872.

I AM directed to enclose 11 warrants of custody issued under Regulation III. of 1818, against the Kooka leader, Ram Singh, and certain of his influential associates, who have been sent by the Punjab Government to Allahabad.

TELEGRAM, dated the 22nd January 1872.

From Home Secretary, Calcutta, to Lieutenant Governor, Punjab, Delhi.

WARRANTS against Ram Singh and followers sent by post to Allahabad.

From *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 18 C.); dated Delhi, the 17th January 1872.

IN continuation of my letter, No. 9 C., of yesterday, I am desired to forward, for information, copy of the first detailed report received from the Deputy Commissioner of Ludianah on the recent outbreak of the Kookas.

From *L. Cowan*, Esq., Deputy Commissioner, Ludianah, to the Commissioner, Umballa Division (No. 14); dated the 15th January 1872.

LATE on the night of the 13th instant, Surfraz Khan, Deputy Inspector of Police at Sanehwal, came in and reported that, on the same day, a gang of about 100 Kookas of the Patiala State who had gone to Bhainee to be present at the "Maghee" Mela held there, a small gathering (at which probably 500 persons assembled) had worked themselves into a state of frenzy, and declared that they would be revenged for the death of Gyanee, a culprit who was hanged at Ludianah last month. Surfraz Khan was present at Bhainee when this occurred. He stated to me that Ram Singh, the leader of the Kookas, went up to these men with a turban round his neck, and entreated of them not to create a disturbance; that they would not listen to him; and that Ram Singh then came to the Deputy Inspector, and reported to him that these men were up to mischief, and that he had no control over them. This occurred about 2 p.m. on the 13th. Ram Singh named Heera Singh and Lena Singh of Sukroudee, in the Patiala State, as the leaders of the gang. Soon after this gang left Bhainee, and the Deputy Inspector, notwithstanding the gravity of the report made to him, thought it sufficient to tell off a serjeant of police to see the gang out of our territory. The serjeant returned a few hours afterwards, and reported that the gang had entered the Patiala State and had gone in direction of Rampoor. Not till *then* did the Deputy Inspector come into Loodianah with a report of the affair. I should mention that the Kookas are said to have declared their intention of proceeding to Maler Kotla.

2. I immediately warned the Vukils of Patiala and Kotla, and noticed to the District Superintendent of Police the gross negligence of the Deputy Inspector in not having had this gang followed up and watched.

3. Information has just reached me that last night, about 7 p.m., a gang of 200 Kookas attacked the residence of Surdar Badan Singh at Malodh, wounded the Surdar and killed two men, and carried off two or three horses. Of the attacking party 10 are said to have been mounted. In this affair one of the attacking party was killed, and two have been captured; Surdar Badan Singh is related to the Maharaja of Patiala, and it is probably in revenge for the assistance rendered by the Maharaja in the butcher murder case that this attack has been made on his relative. If it be true that some of Surdar Badan Singh's horses have been carried off, this is not a pleasant feature, for it denotes that some other atrocity is in contemplation. I go out at once to Malodh to make inquiry into this case, and shall report to you all that I discover.

P.S.—Intimation has been sent to the Maharaja of Patiala by letter and telegram, informing him that Heera Singh and Leena Singh of Sukroudee are the reported leaders, and asking him to have them captured and give assistance.

I have summoned Ram Singh and his chief subahs to Malodh to make such inquiries as will, I hope, lead to the identification of all concerned.

From *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 23 C.); dated Camp Delhi, the 19th January 1872.

I HAVE the honour to forward herewith copies of letters from Mr. T. D. Forsyth, C.B., Commissioner of the Ambala Division, dated 17th and 18th instant, with annexures; and copy of a demi-official letter dated 18th, from Captain Menzies, Deputy Inspector General of Police; also a special report dated 17th, from Lieutenant Colonel E. Perkins, District Superintendent of Police, Ludiana District, on the subject of the Kooka outbreak.

2. The Honourable the Lieutenant Governor observes that the action taken by him, when the first news reached him by telegraph of the desperate attacks on Malodh and Maler Kotla, in sending to the scene of disturbance sufficient troops to restore order, and in deporting the head of a sect which had proved itself dangerous to the public safety, has been entirely approved by his Excellency the Viceroy; and his Honor the Lieutenant Governor has received this expression of his Excellency's approval with much satisfaction.

3. The Lieutenant Governor regrets the course taken by Mr. Cowan, Deputy Commissioner of Ludiana, in summarily executing the Kooka insurgents captured in Patiala

territory, and is of opinion that there was no such urgent necessity as to justify that officer acting without the orders of the Commissioner, whose letter directing formal procedure to be employed in the trial of the insurgents appears to have reached Mr. Cowan after the executions.

4. The position of the Deputy Commissioner was, however, peculiar. He was in a Native State, some distance from the officer to whom he had to look for instructions, and no doubt believed that the outbreak was of such a character, and likely to excite the sympathies and active co-operation of so large and powerful a sect, that it was necessary to take action promptly before it had grown to any formidable dimensions. The Commissioner, Mr. Forsyth, considers that the action of the Deputy Commissioner deserves praise, and has himself at Kotla executed, after formal trial, 16 more of the men implicated.

5. The Lieutenant Governor is aware that all the men implicated in murder, rebellion, and the most savage attacks on the towns of Malodh and Maler Kotla were liable to the punishment of death in ordinary course of law. He is also aware that any success, however temporary, obtained by the insurgents, would probably have been followed by risings of the Kookas in other districts; but he is still of opinion that there was undue haste in the executions, while policy would not have required, as an example, so large a number of capital punishments. At the same time the position of an officer, alone and acting upon his own responsibility, when naturally excited by the enormity of offences, the relative importance of which he is unable to judge exactly from ignorance of what is occurring elsewhere, must fairly be considered; and if Mr. Cowan has erred on the side of precipitancy, it is not given to all officers of Government to be at the same time energetic and discreet. An opportunity has been given to Mr. Cowan of explaining more fully the grounds of his action.

6. Complete tranquillity is now restored, and any other trials which may be necessary will be conducted for offences committed in British territory, and in accordance with ordinary legal procedure.

7. The deportation of Ram Singh, the leader of the turbulent Kooka sect, and his most influential lieutenants, appears to the Lieutenant Governor to have been an inevitable result of the present outbreak, and whether proof be forthcoming to connect him with the particular crimes under report appears to his Honor of little moment. The Kooka sect has shown itself to be obnoxious to public tranquillity; the series of violent crimes during the past year at Amritsar, Raikote, and Morindah, which had so much alarmed society, have now been followed by open rebellion and attacks upon towns, which, if successful, as from their suddenness they might well have been, would have occasioned serious inconvenience to the Government. The Government contented itself with punishing the actual perpetrators of the first-mentioned crimes, and trusted that its moderation would have induced the leaders of the sect to insist on their followers abstaining from violation of the law. Such has not been the case. It was at Bhainee, the village of Ram Singh, that the Kookas who committed the present outrages assembled, and from which they departed on their expedition; and whether Ram Singh at the last found his followers had got beyond his control, whether he desired an experiment to be made to try the temper of the Kookas, to be followed, if successful, by a general rising of the sect, or whether he only believed that the time had not come when action could be safely taken, is uncertain. What is certain is that the outrages were the immediate result of the doctrines taught by him, as the crimes at Amritsar, Raikote, and Morindah were committed admittedly with his knowledge, and nothing which has since come to light has in any way altered the view of the Lieutenant Governor, on which the instructions to the Commissioner of the Ambala Division were based, that the deportation of Ram Singh had become a measure absolutely necessary in the interests of public tranquillity. Mr. Macnabb, the late Officiating Commissioner of the Ambala Division, before leaving it, placed on record his opinion of the necessity for placing Ram Singh in confinement, and the Lieutenant Governor will submit a further report on the subject.

From *T. D. Forsyth*, Esq., C.B., Commissioner and Superintendent, Ambala Division, to the Secretary to the Government of the Punjab, Delhi; dated Camp Ludiana, the 17th January 1872.

I HAVE the honour to forward herewith copy of a letter received from the Deputy Commissioner, Ludiana, at an early hour (5 a.m.) this morning, reporting that tranquillity had been completely restored in his district. A copy of my reply is also forwarded.

2. I telegraphed to you last night the substance of news which had been brought to me by the vakil of his Highness the Maharaja of Patiala, to the effect that a body of about 70 Kookas, some with guns, some with swords, and others with gundàsas and sticks, had come from Maler Kotla to Sherpore, which is about 13 miles west of Kotla, and had surrendered to the Nazim of Amergurh. About 30 of these men were wounded, and all acknowledged

acknowledged that they had been in the attack on Kotla. The total number of Kookas employed on this attack appears not to have exceeded 125.

3. Ram Singh, it appears from one report sent in by the District Superintendent of Police last night, joined the Deputy Commissioner at Malodh, on his requisition, but was told to come into Ludiana by him, on Mr. Cowan's advancing to Kotla.

4. I have directed Colonel Baillie to cause Ram Singh to come to Ludiana at once. Lukka Singh came in of his own accord on the 15th, and has been detained till Ram Singh's arrival, when he shall be disposed of as ordered by the Inspector General's telegrams.

5. It is reported that 200 Kookas are collected in the village of Bhainee, which is 15 miles distant from Ludiana, *on the road to Kalka.* I have directed Captain Menzies to proceed there and bring back with him any Subahs or others whose presence may be required here.

6. As soon as I have decided what to do with Ram Singh, on his arrival here, I shall proceed to Kotla.

7. Two companies of Her Majesty's 54th Regiment arrived yesterday from Jullundur, and are lodged in the fort. The artillery from Jullundur is coming in. Colonel Gough, with 100 sabres, has just arrived. I have telegraphed to the General Commanding Sirhind Division to keep the European troops at Ambala, but to send on the 1st Goorkas to this place.

8. Further reports shall be submitted hereafter.

From *L. Cowan*, Esq., Deputy Commissioner, Ludiana, to *T. D. Forsyth*, Esq., C.B., Commissioner and Superintendent, Ambala Division; dated Camp Kotla, the 16th January 1872, 7.30 p.m.

IN reply to your telegram of yesterday's date, informing me that you would be at Ludiana this evening, and directing me to send a report to meet you there, which telegram has just been received by me, I have the honour to report to you that tranquillity has been completely restored, and that there is no necessity for you to come to Kotla.

2. The gang of rebels, for no other name will adequately characterise them, never numbered more than 125; of these there were at Malodh 2 killed, 4 captured; at Kotla 8 killed, 31 wounded. Of those wounded, 25 or 26 escaped at the time; but 68, including 27 wounded, have been captured in the Patiala State at Rurh, a village 12 miles from this. The entire gang has thus been nearly destroyed. I purpose blowing away from guns, or hanging, the prisoners to-morrow morning at daybreak.

Their offence is not an ordinary one. They have not committed mere murder and dacoity; they are open rebels, offering contumacious resistance to constituted authority, and, to prevent the spreading of the disease, it is absolutely necessary that repressive measures should be prompt and stern. I am sensible of the great responsibility I incur; but I am satisfied that I act for the best, and that this incipient insurrection must be stamped out at once.

From *T. D. Forsyth*, Esq., C.B., Commissioner and Superintendent, Ambala Division, to *L. Cowan*, Esq., Deputy Commisaioner, Ludiana; dated Ludiana, the 17th January 1872.

I HAVE to acknowledge the receipt of your letter dated Kotla, 6th January, 7.30 p.m.

2. The body of Kookas now apprehended in Patiala territory have committed two separate offences, one offence affecting British jurisdiction, the other offence affecting the semi-independent jurisdiction of Maler Kotla.

3. As regards offences committed in Maler Kotla, the authorities there have full power to try and sentence criminals, sending the case up to the Commissioner for sanction when the sentence is capital punishment.

4. I request that you will prepare at once the case against such as appear to you to be reserving of capital punishment, and I shall then give immediate orders; but with deference to your expressed desire for promptitude, the case is not sufficiently urgent to justify the abandonment of the very simple form of procedure we have at hand.

5. I purpose proceeding to Maler Kotla very shortly.

From *T. D. Forsyth*, Esq., C.B., Commissioner and Superintendent, Ambala Division, to the Secretary to the Government of the Punjab, Delhi; dated Camp Ludiana, the 18th January 1872.

I HAVE the honour to inform you that I have considered it absolutely necessary, for the preservation of peace in this district, first for the peace of the whole province, to deport Ram Singh, leader of the Kooka sect, at once from the Punjab, and to send him to Allahabad for safety until the pleasure of the Government regarding his final disposal be made known.

2. The complicity of Ram Singh in the outrages committed by his followers at Malodh and in the state of Maler Kotla has not yet been thoroughly inquired into; and it is a fact that he reported to the police the intention of Lehna Sing and Hera Sing, the chief actors in the present case, to commit outrages. But by his own admissions his followers make use of his name and take advantage of his presence among them to call on their fellows to commit murders and create disturbance. He admits, whilst I am now writing down his words, that some time (he says about a month or six weeks) before the Amritsar murder, two men, Jhunda Sing and Mehr Sing, asked leave to kill the butchers. Others joined in the request, but he strenuously forbade them; nevertheless, they perpetrated the crime. He admits that though he had a strong suspicion that these men were the culprits, he did not give any information to the Government. Some time afterwards, he says that Dull Sing, Mungul Sing, Dewan Sing, and two others came and asked his leave to commit the Raikote murder; but he forbade them, and they did the deed without his knowledge. But he admits that he never gave any clue to the Government officers, not even when he was summoned to Bassean by Mr. McNabb and interrogated. It is, therefore, quite evident that he kept the Government in the dark as to the proceedings of his followers. His excuse is, that he was ignorant of our laws, and that as he had forbidden his followers to be guilty of murder, there was no obligation resting on him to report the matter to Government, not even when he found that murders proposed by his followers had been committed.

4. To allow such a man to be at liberty is in the highest degree dangerous, even supposing his statement to be true, and then to be no more guilty of complicity than is to be inferred from his silence, when information from him, as in the Amritsar case, would have led to a prompt apprehension of the real culprits.

5. I trust that the action I am now about to take may receive the sanction of the Government, and that a warrant may be issued, under Regulation III. of 1818, for the detention in custody of Ram Singh and that of his subahs who during the next day or two shall be apprehended and forwarded to the magistrate of Allahabad.

DEMI-OFFICIAL LETTER from Captain *Menzies*, dated Ludiana, the 18th January 1872.

My dear Colonel,

I ENCLOSE special report from Perkins, just received. It appears that Mr. Cowan has acted on his own responsibility, and executed the greater part of those arrested in Patiala. Forsyth has gone out, and I fancy will try the remainder, and have them executed in the legal manner. They appear to have been quite beyond control. I was up all last night arranging for dispatch of Ram Singh, Lukka Singh, Sahib Singh, and Jowahir Singh, who were sent off under a guard of 12 Goorkhas and Mr. Jackson to Allahabad. Ram Singh came in here, in obedience to a summons sent out by you directing him to do so, with only four followers. He arrived at two a.m. and left at four a.m. During the two hours Mr. Forsyth questioned him, and he certainly acknowledged to have been aware of both the Raikote and Amritsar murders being contemplated, and has given up the names of the men who were the prime movers. In the former, Dull Singh, Dewan Singh, and Mungul Sing, and in the latter, Jhunda Singh and Mehr Singh, of Thutta, Zillah Amritsar. Baillie went off last night with 25 sowars to fetch Ram Singh from the direction of Malodh, but he had passed on to Bhainee; so Baillie halted at Sahnewal for the night, and at 4.30 a.m. 40 Goorkhas and 12 police were sent down to him by special train, and he went straight off to Bhainee to arrest remaining subahs, and to search for arms and papers. Just as he was leaving Sahnewal, five other subahs came in there with the clerk serjeant, viz.:—

Brahma Singh,
Pahara Singh,
Hookma Singh,
Kahn Singh, Nahung, and
Gopal Singh;

so he sent them on by morning train, and I have now got them here under a Goorkha guard waiting for a European officer to escort them. Everything seems quiet. I had written round to all districts about their gaol and treasury guards, and warned them against any surprise. We seem to have secured all the chief men except Maluk Singh, and he is said to be at Bhainee, and Baillie will probably bring him in this morning. I myself was against Ram Singh being deported, but Mr. Forsyth said that he must send him off before he went out to Maler Kotla.

POLICE DEPARTMENT, LUDIANA DISTRICT, No. 3 OF 1872.

SPECIAL REPORT OF CRIME, 17th January 1872.

1. Description of the Offence. Section of the Code; also distance and direction of place from Police Station.	2. 3. Number of Persons. Supposed to have been concerned.	2. 3. Number of Persons. Arrested.	4. 5. Value of Property. Plundered.	4. 5. Value of Property. Recovered.	Statement of the Case. Conduct of the Police. Steps taken by them.
					KOTLA.
396	About 100		–	–	Arrived here yesterday afternoon with Deputy Commissioner about 5 o'clock. On the road were met by me Rissaleh from Jheend, another from Nabah, also the Naib Nazim of Omerghur (Wezir Ali), Patiala, who reported Maharajah been successful in capturing the greater part of the gang who attacked this place. The capture seems to have been easily effected, no one being hurt. The Kookas were probably knocked up and dispirited. The Nazim stated that some 30 men were wounded; from this it is evident the Kotla Jamadar's men must have fought well. But one wounded Kooka was left behind. There were seven killed. 10 o'clock, a.m. Have just returned with Deputy Commissioner from inspecting the city and scene of action. The gang appeared to have met with little or no difficulty in entering the city than the broken-down wall, and no opposition until they reached the palace square; here they were met by the Thannadar and a few men, and at this place there was the only real fighting, about 15 being killed on both sides. The Thannadar is said to have killed three men before he succumbed to a sword wound in the head. The Kookas evidently hoped to get at the treasury, but luckily broke open the wrong door, finding only a few papers and missals in the place. They took some arms out of a *kothi*, but not finding any ammunition, threw them down a well. The Kotla people were evidently unprepared. This, they say, was in consequence of the short notice they received of the meditated attack (the reports from their vakil only reaching Kotla at eight p.m. on the 14th, the men having been informed by me at 10 o'clock the previous night, 13th). 17th, 12 o'clock. Just starting to assist in bringing in the Kookas, who are reported to be about six miles off. Roads very bad, and cattle knocked up. 3 o'clock. Returned to Kotla; met the party about seven miles off; collected fresh cattle for the hackeries, now about three miles off. Both Hera Singh and Lehna Singh, the leaders, taken. They are generally well-dressed and well-to-do men; but have the appearance of bold, determined-looking fellows. Hera Singh told Deputy Superintendent of Police that the *whole* band was taken. Several of them were exceedingly abusive, and declaring they would have no government but their own, &c. &c. 7 o'clock. Just returned from the execution; arrangements excellent; seven guns; 49 blown away, and one cut to pieces when savagely attacking the Deputy Commissioner.

Fortunately, as we were finishing the execution, Commissioner's letter was received directing these ruffians, up to their elbows in blood, to be tried under the extradition laws, &c.

8 p.m.—Kahn Singh, Subah, has just been brought in from Mulloopoor by party of Nabha cavalry (a village, five koss from this), by orders of Deputy Commissioner. This man is a most influential Subah and leading man amongst the Kookas, and attendant and confidential adviser of Ram Singh's.

(signed) *E. Perkins*, Lieut.-Colonel,
Deputy Superintendent, Police.

A report came in here this evening from Malodh, that 150 Kookas had congregated in a jungle near Khannah.

E. P.

From *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 24 C.); dated Delhi, the 20th January 1872.

In continuation of my letter No. 23 C. of yesterday, I am desired by the honourable the Lieutenant Governor to forward copies of letters Nos. 15 and 16 of the 17th instant, from Mr. Cowan, Deputy Commissioner, Ludiana, reporting further on the Kooka outbreak and his proceedings connected therewith. His Honor reserves further remark until the Commissioner's report is received.

From the Deputy Commissioner of Ludiana to the Commissioner of the Ambala Division (No. 15), dated the 17th January 1872.

In reply to your telegram, the receipt of which was delayed owing to my having left Malodh just before it arrived at that place, I addressed a hurried letter to you last evening reporting that tranquillity was completely restored, and that it would not be necessary for you to come to Kotla. I now continue the narrative of what has occurred.

2. I yesterday completed the inquiry in the Malodh case. Seven prisoners were placed on their trial; four of these men were wounded; they were taken red-handed. The evidence, and their own admissions, formed the most conclusive evidence against them. Their names are Bagwan Singh, Gyan Singh, and Tummun Singh of the Patiala State, and Mehr Singh of Aliwalpúr, District Jullundur, all Kookas. There was some doubt whether the other three persons joined in the attack; they are kept to be tried on other charges. From the inquiry it appeared that on the 13th instant, at Bhainee, Hera Singh and Lehna Singh of Sukroudie in Patiala, two men who had formerly been in good circumstances, but were now poor, collected a gang of Kookas, estimated at from 60 to 100 in number. These men they seated apart from the other Kookas who had come to visit Ram Singh, and by prayers, recitations, &c., worked them up to a state of frenzy, and then, after abusing the British Government and the native states who had assisted in the Raikote murder case, called on them to revenge the death of Gyanee, a subah who was hanged at Ludiana a month ago, promising arms, horses, and money, if they would follow them. These two men said that arms and horses would be found at Kotla, and that they would then proceed and sack Sangroor, Nabha, and Patiala, gathering strength as they went. Ram Singh gave intimation to the Deputy Superintendent of Police, Surfraz Khan, that this gang meditated mischief, and he himself begged of them not to create a disturbance *at Bhainee*. Whether this remonstrance was made in good faith, or was a deep move on Ram Singh's part, I am unable now to say.

3. About 2 p.m., on the afternoon of the 13th instant, this gang left Bhainee in a body; they proceeded *viâ* Rampoor and Pael, in Patiala territory, without, however, resting at these places, and about 10 p.m. reached Rubboo, a village in this district about 3½ miles from Malodh, on the border of the Patiala State. They remained at a well distant about 400 or 500 paces from the village of Rubboo. The Deputy Superintendent of Sanchwal (Surfraz Khan) came into Ludiana on the night of the 13th to report the departure of the gang from Bhainee, and about 11 p.m. I sent notice to the vakils of Kotla and Patiala, directing them to give warning to their respective states.

4. The Kooka gang remained in the neighbourhood of Rubboo during the night of the 13th and day of the 14th. There is no evidence to show that their numbers increased after leaving Bhainee; and I am inclined to think that the greatest number together at one time did not exceed 150 men. The delay at Rubboo was probably caused by a hope that they would be joined by others, or by doubts of the success of an attempt on Kotla. It probably occurred to the leaders, as they were about to start for Kotla, that it would be easy to obtain arms and horses at Malodh. It was certainly not their intention to attack Malodh when they left Bhainee.

5. The gang left Rubboo in the evening, and reached Malodh as it became dark. They made the attack in the manner I have described in a previous letter. Their success at Malodh was a very poor one; they killed two men, slightly wounded the sirdar, and secured three horses, one gun, and one sword. In return they left two of their number killed and four wounded prisoners. Considering the suddenness of the attack, this result is creditable to the people of Malodh and to the men of the adjoining village of Bheree, who turned out on hearing the beat of drum, and reached Malodh before the Kookas left it, and gave valuable assistance.

6. The Kookas then proceeded to Kotla, about nine miles distant from Malodh, and appeared at Kotla on the morning of the 15th. Intimation of the threatened attack reached the Ahulkars of this small state on the evening of the 14th, and some patrols were placed round the town during the night, and the guards at the gates strengthened. On the morning of the 15th these precautions were discontinued, and the Kooka gang about 7 a.m. made a sudden attack. They made for the palace and treasury, but were encountered by the Kotwal Ahmad Khan, and a few men. Ahmad Khan, who appears to have behaved with great gallantry, was killed, and, in the confusion which followed, seven

seven other persons were killed and 15 wounded. The Kookas failed to get at the treasure, and after taking two horses and a few swords, retreated, followed by the Kotla people who had now assembled armed. A sort of running fight was kept up and long shots fired, and many more Kookas were wounded, till both parties reached the village of Rúrr in the Patiala State, the Kookas carrying most of their wounded with them. At this place the Kotla officials were told by a wounded Kooka that the gang intended to return and repeat the attack on Kotla, and thought it prudent to return, after sending intimation to the officials of Sherpore in Patiala.

7. On receipt of the first intimation of the attack on Kotla and arrival of the Kookas at Rúrr, the Naib Nazim of Sherpore rode to Rúrr, accompanied by three sowars. He found the village abandoned, the Jât villagers having gone off in alarm with their families, and the Kookas seated in the jungle a little way from the village. The Kookas at first showed fight, advancing towards the Naib Nazim with drawn swords and shouting out abusive language, but this was mere bravado; the ruffians were completely cowed. They were hungry and tired, and had a number of wounded men with them, and after a short parley, they gave up their arms, many of the swords covered with blood, and surrendered. Sixty-eight Kookas (including a woman) were here captured who had been present at the attacks on Malodh and Kotla. Of these 29 were wounded, seven of them very severely. The prisoners were conveyed to the fort of Sherpore. I have sent for them. The Rajas of Nabha and Jheend responded with alacrity to my requisition for troops. In less than an hour after receipt of my *morasilas* they dispatched artillery, cavalry, and infantry to Kotla. I hope to be able to allow these troops to return this evening or to-morrow.

8. When I first heard of the attack on Kotla, the situation appeared to me to be a very grave one, and I telegraphed that troops might be sent. Two such atrocities as the attacks on Malodh and Kotla perpetrated by the same people who committed the murders at Amritsar and Raikote justified me in thinking that this was more than a dacoity. It looked like the commencement of an insurrection, and I trust I shall not be thought to have caused unnecessary alarm by my first reports.

9. It transpires that the disturbance was got up by two men, Hera Singh and Lehna Singh, residents of the village of Sukroudie in the Patiala State. These men were formerly in affluent circumstances, but have latterly become poor and desperate. They induced a number of the most ignorant of the Kooka men, who are easily excited, to join them; their sole object, in the first instance, being plunder. What the ulterior object of the leaders was it is impossible to say. One of the leaders, Lehna Singh, was captured at Rúrr, the other, Hera Singh, is believed to have been killed in Kotla; but the corpse has not yet been identified.

10. The losses sustained by the rebels in their short campaign of three days' duration are as follows:—

At Malodh - - - -	2 killed,	4 wounded and taken.
At Kotla - - - -	7 „	5 captured.
At Rúrr - - - -	68 captured, of whom 29 are wounded; whilst they have inflicted a loss of—	
At Malodh - - - -	2 killed,	2 wounded.
At Kotla - - - -	8 „	15 „
Total - - -	10 „	17 „

At least two-thirds of the whole gang have been killed, wounded, or captured. The remainder are being hunted like vermin, and many more of them will be taken.

11. I am in hourly expectation of the arrival of the prisoners from Rúrr. I propose to execute at once all who were engaged in the attacks on Malodh and Kotla. I am sensible of the great responsibility I incur in exercising an authority which is not vested in me, but the case is an exceptional one. These men are not ordinary criminals. They are rebels having for their immediate object the acquisition of plunder, and ulteriorly the subversion of order. It is certain that, had their first attempts been crowned with success, had they succeeded in arming themselves and providing themselves with horses and treasure, they would have been joined by all the abandoned characters in the country, and their extinction would not be effected without much trouble. By the timely preparation at Kotla the first efforts were defeated, and by the active exertions of the Patiala officials, this miserable attempt at rebellion has been stamped out; but others of their stamp must be deterred from following so bad an example; and that the warning should be effectual, it must be prompt and terrible. I have every confidence then that the Government of the Punjab will approve of the immediate execution of those prisoners who have been taken red-handed.

From *L. Cowan*, Esq., Officiating Deputy Commissioner of Ludiana, to the Commissioner of the Ambala Division (No. 16); dated the 17th January 1872.

In continuation of my letter to your address of this morning's date, I have the honour to report to you that 68 rebel Kookas were brought in to-day from Rúrr. Of these, two were women, leaving 66 men; 22 of the men were wounded, most of them slightly.

2. The conduct of these prisoners was most defiant and unruly; they poured forth the most abusive language towards the Government and the chiefs of Native States. *All of them* admitted that they were present at the attacks on Malodh and Kotla, and gloried in the act; they said they had attacked Malodh for the purpose of procuring arms, and Kotla because their religion required them to slay the killer of cows.

3. The two women were residents of the Patiala State, and I made them over to the officer commanding the Patiala troops for conveyance to Patiala. Forty-nine of the rebels were blown away from guns this afternoon on the parade ground of the Kotla chief in the presence of troops of the Patiala, Nabha, Jheend, and Kotla States. It was my intention to have had 50 men blown away, and to have sent the remaining 16 rebels to Malodh to be executed there to-morrow, but one man escaped from the guards and made a furious attack on me, seizing me by the beard and endeavouring to strangle me; and as he was a very powerful man, I had considerable difficulty in releasing myself. He then made a most savage attack on some officers of the Native States who were standing near me. These officers drew their swords and cut him down.

4. This was a most painful duty, and it was made inexpressibly painful to me by receipt of your letter of to-day's date, received as the last batch was being lashed to the guns, desiring me to make an inquiry and forward the proceedings to you for punishment (*sic*). In carrying out execution of my own sentence I acted on the honest and sincere conviction that I was acting in the best interests of Government. A rebellion, which might have attained large dimensions, was nipped in the bud, and a terrible and prompt punishment was in my opinion absolutely necessary to prevent the recurrence of similar rising.

5. I most sincerely trust that you will, after this explanation, approve of what I have done. I am placed in a most difficult position here, with reference to the 16 rebels who have remained unpunished. It was, as I have stated above, my intention to have sent them for execution to Malodh to-morrow, and I earnestly beg that you will sanction my carrying out sentence at once. I believe that these executions *have had*, and will have, a most happy effect. * * * The demeanour of the people, their shouts and remarks wherever I go, all show this.

6. I purpose dismissing to-morrow morning to their respective states the troops assembled here, and shall remain here till noon to-morrow in the hope of receiving an order from you sanctioning my carrying out sentence on the remaining Kooka rebels. Should you not accord this sanction, I will make inquiry and forward to you for orders.

P. S.—Among the rebels blown away were Hera Singh and Lehna Singh, the leaders of the gang, and instigators of the outbreak.

P. S. 2nd.—Just as I am closing this letter, the party of cavalry I sent in pursuit of the Kookas said to be concealed in the village of Maloopoor, which I communicated to you in my demi-official of to-day's date, has returned bringing with it Kahn Singh, an influential subah, who resides at Bhainee, and three other Kookas. I reserve inquiry into these men's cases until to-morrow, as I have been extremely harassed all day.

(Home Department.—Judicial.—No. 122.)

From *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India, to the Secretary to the Government of the Punjab.

Sir, Fort William, 24 January 1872.

No. 23c, dated 19th January 1872. No. 24c, dated 20th January 1872

I am directed to acknowledge your letters, quoted in the margin, reporting on the recent attack by fanatical Kookas on Malodh and Malehr Kotla. The Governor General has already, by telegraph, approved generally of the action taken by the Lieutenant Governor in dispatching troops to the seat of the disturbance, and in arresting and removing from the neighbourhood Ram Singh and his most influential Subahs. Warrants for their detention, under Regulation III. of 1818, have been already sent to the magistrate of Allahabad.

2. The local officers acted with promptitude and vigour on the first intelligence of the disturbance, but the subsequent proceedings seem to require serious notice. His Honor states that "he regrets the course taken by the Deputy Commissioner of Loodhianah, Mr. Cowan, in summarily executing the Kooka insurgents, captured in the Patiala

Patiala territory." The Government of India fully shares in the regret expressed by his Honor, and is of opinion that the papers submitted show nothing to justify the course taken.

3. Under these circumstances his Excellency in Council feels constrained to request that you will suspend Mr. Cowan until further orders, and awaits with anxiety such explanations as Mr. Cowan may have to offer, and the expression of his Honor's opinion on the whole subject.

4. The loyal, prompt, and efficient assistance given by the troops and officers of the Patiala, Nabha, and Jhind's States, no doubt, contributed materially to the suppression of disturbances, and to prevent their spread. I am to express his Excellency's entire satisfaction with their conduct.

TELEGRAM, dated the 22nd January 1872.

From Secretary, Punjab Government, Delhi, to Home Secretary, Calcutta.

A REPORT was received yesterday that the telegraph wire was cut between Ludianah and Ferozepore, and that Kukas were marching on the latter place. No truth in the report.

(No. 12 of 1872.)

From Government of India to Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, 2 February 1872.

IN continuation of our Despatch No. 9, dated the 2nd instant, we transmit for your Grace's information copy of further letters and telegrams* received from the Punjab Government, reporting proceedings connected with the recent outrages committed by Kookas at Malodh and Malair Kotlah.

* *See* annexed list.

TELEGRAM, dated the 21st January 1872.

From Secretary, Punjab Government, Delhi, to Home Secretary, Calcutta.

REPORT of Kooka demonstration in Rahun unfounded.

TELEGRAM, dated the 23rd January 1872.

From Secretary, Punjab Government, Delhi, to Home Secretary, Calcutta.

EVERYTHING up to this time has remained perfectly quiet in Ludiana and elsewhere.

(Confidential.)

From *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 29 C.); dated Camp Delhi, the 22nd January 1872.

IN continuation of my letter, No, 24 C. of the 20th current, I am desired by the Honourable the Lieutenant Governor to forward copies of letters from the Commissioner of Ambala, dated 19th and 20th January, reporting proceedings in connection with the Kooka outbreak. Copy of the Deputy Commissioner's letter alluded to in the marginal note of the Commissioner's letter of the 19th is also sent. Copies of the other enclosures have already been furnished with my letter of the 20th instant.

From *T. D. Forsyth*, Esq., C.B., Commissioner of Ambala, to the Secretary to the Government of the Punjab; dated Camp Kotlah, the 19th January 1872.

IN continuation of my letter dated 17th instant, fowarding reports from the Deputy Commissioner, Ludiana, I have now the honour to forward copies of further letters* received from him, and to submit a report of proceedings.

2. Up

---

* *Note.*—Nos. 15 and 16 of which copies were received from Deputy Commissioner direct and sent on to Government of India, with No. 24 C., dated 20th January.

2. Up to the time of dispatching the letter just referred to, no reliable intelligence of the whereabouts of Ram Singh had been received. It appeared as if he was playing a deep game, for he had reported to the police the departure of his followers from his village to commit some outrage, but it had been known and reported verbally by me to you some time before that a body of 200 Kookas were to assemble at Bhainee, Ram Singh's village, at the Lhori festival, which occurred on the 13th current, and that it was given out that there was to be some outbreak soon after. The correctness of these reports may have been doubted at the time as very vague, but, read by the light of subsequent events, there is, I think, little reason to question their accuracy, and for Ram Singh to wait till the party had gone off and then to report proceedings, and to declare himself without any influence, was a ruse on his part to try and escape the responsibility of the acts of his followers.

3. The Deputy Commissioner ordered Ram Singh to meet him at Malodh, which he did; but as Mr. Cowan was obliged to go on at once to Kotlah, he sent Ram Singh back to his home. Intimation of this was not however sent to me, and we had some trouble to find out where Ram Singh was. At 4 p.m., on the 17th, I dispatched Colonel Baillie with a party of Colonel Gough's cavalry to search for Ram Singh and bring him in. I had previously ordered parwanas to be sent in different directions requesting his attendance at once at Ludiana. Later in the evening I heard that he had reached Bhainee, where, I was informed, 200 Kookas were assembled. Mr. Hatchell, Assistant District Superintendent, who had passed through that village on the night of the 15th, had reported to me that there were no Kookas there beyond the ordinary inhabitants. These men must, therefore, have either concealed their presence from the police officer, or had assembled after his departure. I had instructed Captain Menzies to go out there at daybreak, but Colonel Baillie's subsequent movements induced me to make over the duty to him, a report of which will be forwarded shortly.

Sahib Singh. *
Jowahir Singh.
Servants.
Gooroutt Singh.
Nunoo Singh.

4. Ram Singh came into Ludiana with four followers noted in the margin, in obedience to the order I had issued. He arrived at 1 a.m. on the morning of the 18th, when I interrogated him and got answers, the substance of which I sent in an official letter to you by the morning train of the 18th* (yesterday). For reasons given in that letter, I decided to deport Ram Singh at once, and further information confirms my opinion as to the correctness of the step taken, although the particular outrage with which we are now concerned has been promptly dealt with, and we are able to report perfect tranquillity. We have no assurance that this tranquillity will not be disturbed at any moment. The assemblage of Kookas in the village of Bhainee, the appearance of small bodies of Kookas in villages near here, a few of whom have been apprehended, and the report received from Jullundher of a body of Kookas from Amritsur having raised their flag at Rahun, are a sufficient indication that there is some intention of a general rising, and the slightest failure on the part of the authorities to deal promptly with the maurauders now caught would be a signal to concealed parties to rush forward.

5. As I was travelling by rail to Ludiana on the 16th, I saw Kookas at three of the railway stations, and heard that others had been passing up the line. The Jhind Munshi reports that a Kooka in that state was observed to sell his land and throw away his property, declaring his intention of going off at once to join his Gûrû.

Yesterday afternoon a sowar coming from Malodh reported that he saw about 12 Kookas collected and seated on the ground near the road about two miles from this. The Deputy Commissioner at once sent out to search for the men, but they had disappeared. A party of Kookas had been seen to pass through the village of Saihbee in the Putiala Territory near Kotlah on the evening of the 15th, but afterwards separated. I beg to call attention to the Deputy Commissioner's letter just received, and sent in original with this.

6. It is with this impression on my mind that I now allude to Mr. Cowan's proceedings at Kotlah, which are fully detailed in his report. I had demi-officially and officially urged him to be careful to do nothing which could detract from the complete success of his energetic efforts to quell this disturbance. I pointed out that whilst offences committed against persons or property in British territory could only be tried according to regular form, and sentences only be carried into execution after confirmation by the chief court, the procedure in cases of crime committed in foreign states such as Malair Kotlah admitted of more prompt action, inasmuch as sentence could be carried out on the confirmation of the Commissioner.

7. Before, however, my official letter had reached him, Mr. Cowan had disposed of 70 prisoners in a summary manner. There was no question as to their guilt, for they were all apprehended red-handed; and unquestionably had the proceedings been sent up to me, I should have confirmed the sentence of death. Whilst then I regret the informality of the procedure, I consider myself justified now in confirming the sentence. There being no arrangements for hanging so many men at Kotlah, and considering the circumstances of the case and occurring in a native state, these men were executed by Mr. Cowan by being blown from a gun; a proceeding warranted by former precedents when large numbers of rebels were thus disposed of in 1857.

8. Having dispatched Ram Singh yesterday morning I rode out to Kotlah, accompanied by Colonel Gough and a party of his cavalry, and the remaining 16 prisoners were regularly tried by Mr. Cowan, acting on behalf of and sitting on the bench with the Nazim and

---

* *Note.*—Copy forwarded to Government of India with No. 23 c., dated 19th January 1872.

and Tehsildar of the Malair Kotlah State. The proceedings were formally recorded; and the sentence of death passed by them, having received my sanction, was carried into execution in the presence of the European officers and the officials of Malair Kotlah and the adjoining States.

9. There still remain seven persons implicated in the attack on Malodh, four of whom were captured at the time by the Sardar's people. This offence having been committed in British territory, the criminals will be regularly tried before the sessions to-day at Malodh, and sentence will be carried out after the confirmation by the chief court in the usual manner at Ludiana.

10. In the evening of yesterday I distributed the following rewards from the Malair Kotlah coffers to the persons prominently mentioned by Mr. Cowan as having distinguished themselves in apprehending the Kookas who were concerned in the attack on the Kotlah Palace and Treasury, and I gave instructions to the Nazim of that Principality to make proper provision for the family of the Kotwal, Ahmed Ali, and the others who gallantly defended, at the expense of their lives, the property of their state:—

	Rs.
Niaz Ali, Naib Nazim	1,000
Panjab Singh, a durbari	300
Jaymul Singh, who gave the information	200
Mustan Ali	100
Utum Singh	50
Ruttun Singh	50
Gulab Singh	50
Partab Singh	50

11. Letters of thanks on behalf of the Malair Kotlah State were at the same time addressed by me to the Maharajah of Patiala, and Rajahs of Jhind and Nabha, and delivered in Durbar to the Vakeels of the Rajahs.

From *L. Cowan*, Esq., dated Kotlah, the 19th January, alluded to in Marginal Note above.

YESTERDAY Narain Singh, Vakil of Sardar Hukkikut Singh of Ber (one of the Malodh villages), reported to me the receipt of information from his master that a party of 50 Kookas passed through the village of Ber yesterday at noon, and, in reply to inquiries, said that they were going to Kotlah; and that about two hours later another party of Kookas, said to be 40 or 50 strong, were seen seated in the grass preserve of the Sardar, and also said they were going to Kotlah.

2. Anup Singh, a Sowar in the service of the Malodh Sardar, was dispatched from Kotlah yesterday about half-past six p.m. with a letter for his master. On this side of Surrond, a village three *kos* from Kotlah, he observed a party of 10 or 12 men travelling *off the road* in the direction of Kotlah. Anup Singh was relieved at Surrond, and immediately returned to Kotlah, and, when about one and a half *kos* from Kotlah, overtook a party, probably the same, but increased in numbers to about 20, still marching parallel to, but some way off, the road in the direction of Kotlah.

I sent out a party of Patiala cavalry with Anup Singh as a guide in search of these gangs, but they returned unsuccessful.

3. Since the outrage at Kotlah several reports have been received of parties of Kookas from a distance having approached close to Kotlah and then disappeared.

From *T. D. Forsyth*, Esq., C.B., Commissioner of Ambala, to the Secretary to the Government of the Punjab; dated the 20th January 1872.

IN continuation of my letter of 19th instant, I have the honour to report that I proceeded yesterday to Malodh and held sessions there for the trial of the prisoners who had been captured there, and who were concerned in the case of dacoity with murder. Four men were put on their trial, and convicted on their own confession, and sentenced to death. But it is not my intention to put this sentence into execution, because a sufficient example has been made, and all four of these men are most severely wounded, and two have broken limbs. In a few days I purpose to commute the sentence to transportation for life.

 2. I have

2. I have received a report from Captain Menzies, Deputy Inspector General, that Captain Baillie found 172 Kookas in the village of Bhainee and the Subahs named in the margin. Four of these Subahs, viz., the first four, were sent into Ludiana for dispatch to Allahabad. The remainder are kept for the present in Ludiana pending further orders; 122 of the Kookas have been sent to their homes; the remaining 50 having no home and no ostensible means of living, being, in fact, a dangerous class of this sect, who having sold all that they possessed hold themselves in readiness to perform any act that their leaders may order, will be called on to furnish security, or, in default, will be incarcerated for a period of two years according to law.

Brahma Singh.
Kahn Singh, Nihung.
Pahara Singh.
Hookma Singh.
Futteh Singh.
Hera Singh.
Gurmukh Singh.

Kuzan Singh.
Harnam Singh.
Harsa Singh.
SummundSingh.
Uttur Singh.
Dharm Singh.

I have ordered a small police post to be established at Bhainee for the present.

A number of axes (30) were found in Ram Singh's house.

3. At Kotlah, towards which place parties of Kookas have been flocking from all parts during this last week, but have suddenly disappeared when within a mile or two of the place, there is a considerable apprehension of a second attack. I have therefore ordered the Nazim to rise 100 men, well armed, for the defence of the palace. * * *

4. In my letter announcing the deportation of Ram Singh, I mentioned that he had reported the intention of his followers to the police; this was said by me on the authority of the district officers; but, on examining the police officer yesterday, I find that the case is not nearly so favourable to Ram Singh. An assemblage of (it is said by him) 1,000 Kookas were at Bhainee on the 11th and 12th January. During these two days there was of course free inter-communication amongst the leaders and their followers. On the 13th the Deputy Inspector heard that a body of 100 men "mustana," *i. e.*, who had worked themselves into frenzied excitement and a state of desperation, had separated themselves from the rest, and were preparing to start for Kotlah. Hearing this, the Deputy Inspector went to Ram Singh and asked what it all meant; Ram Singh merely replied that they were "mustana," and had passed beyond his control. The Deputy Inspector asked for a list of their names; Ram Singh only gave 13 names, and said he knew nothing about the rest, though their number by all accounts was not less than 100. The Deputy Inspector then called on Ram Singh to bid them go to their homes quietly, whereupon Ram Singh went to them, putting a handkerchief round his neck, and begging them to go away and not get *him* into a row. * * * * * *

5. The events of the past week, and of the past year, show that the Kookas are a dangerous sect over whom their leader and the Subahs have no influence for good, and it is advisable for the peace of the country that they should be prohibited from moving about the country inculcating their doctrines, and that gatherings of Kukas in larger numbers than 10 or 12 should not be allowed.

6. It is also advisable not to leave Ludiana entirely without troops of some kind for the present until the movements of the Kooka sect cease to be troublesome.

7. I beg to bring to notice the energetic exertions of Mr. Cowan, Deputy Commissioner, whose prompt action has put a stop to what threatened to be a serious outbreak. I regret exceedingly that his summary executions without trial should detract from the good service he has rendered, but I trust that the circumstances in which he was placed may be taken into consideration. Immediately on receipt of my orders, he suspended proceedings, and proceeded to try in proper form the remaining prisoners. Colonel Perkins has accompanied Mr. Cowan throughout the whole time, and has been most energetic.

8. Colonel Baillie and Captain Menzies, Deputy Inspectors General, have rendered valuable assistance. I have already alluded to the prompt assistance rendered by the Maharaja of Patiala, and the Rajas of Jhind and Nabha, whose services I trust may be acknowledged by his Honor the Lieutenant Governor.

9. There being no longer any necessity for the presence of European troops at Ludiana, I recommend that the detachment of the 54th and artillery be sent back to Jullunder. Colonel Gough's party of 100 Sowars and the Goorkha Regiment might be allowed to remain for the present.

10. I now return to Ambala.

P.S.—Since writing this report, I have received your telegram directing me to stop all summary executions without the Lieutenant Governor's express orders. It will be seen that I had already done so, and I may here state that, on my arrival at Kotlah, I found 30 men apprehended; of these 16 were put on their trial for being more or less prominent in the attack on Kotlah, and, exercising the powers invested in the Commissioner, I sentenced them to death; of the remaining 14, four have since been sentenced to transportation for life, and the remainder have not been punished.

(Confidential.)

From *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 36 C.); dated Camp Gungatole, the 26th January 1872.

I AM directed to forward, for the information of his Excellency the Viceroy and Governor General in Council, a letter from the Commissioner of the Ambala Division, No. 27, dated 22nd January, with enclosure, on the subject of the action taken by Mr. Cowan, Deputy Commissioner of Ludiana, on the occasion of the late Kooka outbreak.

2. His Honor the Lieutenant Governor is of opinion that Mr. Cowan acted with great promptitude and energy in calling out the Jhind and Nabha Horse, and going himself at once to Malair Kotlah to aid in the defence of that place and the suppression of the disturbance.

3. As regards the executions ordered and carried out by him in concert with the Malair Kotlah authorities, the Lieutenant Governor believes that he acted as he thought for the best, and under a strong sense of his personal responsibility for the adoption of the promptest measures for securing the peace of the country, and his Honor considers that much allowance must be made for the difficult position in which he was placed, and for his being unable to judge certainly to how many places the Kooka outbreak extended, and in what degree it might gain head by delay in the infliction of punishment.

4 But, considering that the Commissioner was close at hand, and that many of the prisoners taken were wounded, and all greatly dispirited, the Lieutenant Governor is of opinion that Mr. Cowan would have shown more coolness and discretion had he obtained the previous sanction of his proceedings by superior authority. It is clear, however, that this sanction would not have been withheld, as, on his arrival, the Commissioner sentenced 16 more prisoners to death after trial, and, in doing so, it may be held that he did not exceed the authority vested in him as the *ex-officio* Political Agent for the Malair Kotlah State.

5. It may no doubt be reasonably questioned whether so many capital executions were, even under circumstances so trying, necessary or expedient, and whether an example equally deterrent might not have been made by a less indiscriminate sentence. The Lieutenant Governor himself inclines to this opinion, but on the other hand it is certain that all the prisoners executed were, even under the ordinary criminal law of the British territory, guilty of capital offences, whilst the position and antecedents of the Malair Kotlah State, as a solitary Mahomedan principality, constantly exposed to fanatical attacks, strongly impel its authorities and inhabitants to advocate as a measure of security their repression by the severest punishment. It is said that the Kotwal returned to the town apprehensive of a repeated attack, and both the Commissioner and Deputy Commissioner allude to parties of Kookas flocking round Malair Kotlah and creating fresh alarms. The authorities on the spot could alone correctly judge of the tendency of such demonstrations, and, in his Honor's opinion, the action taken in good faith by them must be supported.

6. Adverting to paragraph 11 of the Commissioner's letter, from which it might erroneously be inferred that the Lieutenant Governor had approved of the numerous executions ordered by Mr. Cowan, copies of the telegrams in question are herewith submitted. Writing in total ignorance of the large number of executions eventually carried out, the Lieutenant Governor, whilst supporting the Commissioner in his enforcement of regular judicial procedure, and so checking the Deputy Commissioner's precipitancy, was desirous at the same time of evincing his appreciation of the zeal and energy shown by him in following up the case.

From *T. D. Forsyth*, Esq., C.B., Commissioner, Ambala Division, to the Secretary to the Government of the Punjab (No. 27); dated the 22nd January 1872.

I HAVE the honour to forward the explanation* called for from Mr. Cowan, Deputy Commissioner, in your No. 22 C., dated 18th instant.

2. I also forward copy of the instructions which I sent to Mr. Cowan, and refer you to my telegram to you,† copy sent herewith, and your reply, and to my official letter of 18th instant to Mr. Cowan, copy of which I forwarded to you some days ago.

3. In considering Mr. Cowan's proceedings it is necessary to distinguish between acts done in British territory and those done in Native states to which our penal and procedure codes do not apply.

4. The procedure in subordinate Native states, such as Kotlah, is for the head of the

* Letter dated 21st January 1872, from Deputy Commissioner, Ludiana.

† No. 2 telegram at end of enclosures.

State to prepare a case of murder by taking evidence of witnesses, defence of accused, &c., then to pass sentence and forward the case for sanction of the Commissioner of the Division.

5. As his Honor is aware, I from the outset deprecated any departure from the regular course, and sent out instructions at once to Mr. Cowan to this effect. They unfortunately did not arrive until he had disposed of 50 men.

6. I regret exceedingly this hasty action on Mr. Cowan's part. His reason for such is that he felt it necessary to stamp out the incipient rebellion by a swift and terrible punishment. That his prompt and vigorous action had this effect is, I think, undoubted.

7. A party of 100 men, who had devoted themselves to death to carry out the plans of their leader, left the village of their Guru with the intention of seizing the defenceless State of Malair Kotlah, and possessing themselves of arms and treasure, to be distributed to the rest of their sect who were to flock round Kotlah from all sides.

8. As they passed Malodh, a sudden impulse prompted them to attack that place. Had all the men been caught at Malodh, all would have been liable under section 396*, Indian Penal Code, to sentence of death; but probably it would have been considered that all were not equally guilty, as all might not have clearly apprehended the nature of the expedition on which they had embarked. Moreover, the British Government is strong enough to maintain order without having recourse to wholesale executions in order to create a deterrent effect.

* Dacoity with murder.

9. The case, however, was very different when the same party passed on to Kotlah. Not one of these men could plead ignorance of the object in pursuit. They knew that blood rested on the head of the whole gang, and that they would probably shed more blood. No mercy then could be expected by them at the hands of the state they were to attack. Nor could the Malair Kotlah State afford to show any signs of weakness. They had been attacked once, and, unless the assailants were thoroughly cowed, they might be attacked again. It was in fact from fear of a second attack by a larger body of Kookas that the Nazim returned so suddenly to Kotlah from Rur, whither he had followed the gang.

10. It appeared to me then only right that a severe and prompt example should be made, and I was prepared to confirm the sentence of death against all those proved on trial to have been actually engaged in the attack on Kotlah. I should certainly have exempted from capital punishment those who had been severely wounded, and their number was nearly 20, but all the rest I should have condemned to death, and in fact did condemn 16 men, after fair trial.

11. Mr. Cowan's action placed me in an embarrassing position. When I first received his report I was under the impression that he had conducted the proceedings according to the custom in Native states, and had merely usurped my power of sanction. It seemed to me an unworthy act to suddenly disown the over-zealous proceedings of an officer to whom the Lieutenant Governor had just sent a telegram applauding his energy and zeal with reference to my own suggestion to moderate that zeal.

12. I therefore determined to confirm Mr. Cowan's acts so far as regards his usurpation of the Commissioner's authority. As there are no records of trial, none being held by him, I am unable to do otherwise than accept Mr. Cowan's assurances that all the men were actually present at the attack on Kotlah, and if so, all were equally liable to capital punishment, though as regards those severely wounded, execution ought to have been stayed.

13. Had I at once disavowed Mr. Cowan's acts, and mitigated the sentence on those who were subsequently regularly tried and convicted, after the proceedings had been sent to me, at a time too when bands of Kookas were flocking to Kotlah, to join the advance party, leniency on my part might have been mistaken for weakness. I therefore allowed the full sentence to be executed as regards those Kotlah assailants whose active complicity was legally established. But I took occasion, on the trial of the men concerned in the Malodh murders, to mitigate the severity of the former proceedings, and a telegram received the next day from you conveying the Lieutenant Governor's orders confirmed the judgment I had arrived at.

14. Whilst lamenting the hasty and irregular action of Mr. Cowan, I am bound to express my conviction that the very prompt and terrible measures taken by him crushed in its birth a very serious outbreak, and I trust the excellent service he has rendered may weigh against the irregularity and severity of procedure.

From *L. Cowan*, Esq., Officiating Deputy Commissioner, Ludiana, to *T. D. Forsyth*, Esq., C.B., Commissioner, Ambala Division; dated 21st January 1872.

I HAVE the honour to acknowledge receipt of letter from the Secretary to Government, Punjab, to your address, No. 22 C., dated 18th instant, forwarded to me by your precept of yesterday's date, and to reply as follows.

2. When I reached Kotlah the situation was very grave. The greatest alarm and consternation prevailed throughout this part of the country. Fields were deserted, and all ordinary occupations abandoned by the people of the villages between Ludiana and Kotlah. The men were collected in crowds in the gateways of the villages, and the women on the housetops, eager for information which reached them in an exaggerated form.

3. On reaching Kotlah I found that the rebel gang had been captured a few miles off in the Patiala State. I received information that small parties of Kookas were flocking towards Kotlah from distant parts, and I learned that the troops of the Kotlah state had given up the pursuit of the rebels and returned to Kotlah to protect the town from another expected attack. As the contingents from adjoining Native states had arrived, or were close at hand, I felt confident that in the presence of such a force, and with the arrangements I hurriedly made, there was no fear of an immediate attack on Kotlah or any place in its neighbourhood; but that a terrible example was needed to put a stop at once to what was assuming the proportions of a *rebellion*, and to prevent a recurrence of similar outrages at a future time, I therefore determined to execute near the scene of their crime a number of the rebels who were taken red-handed, and all of whom confessed their crime, and to execute the remainder at Malodh. I arrived at this determination after long and painful thought. I was sensible of the great responsibility I was incurring, but I acted in the honest conviction that what I did was in the best interests of Government and of society.

4. The later information received confirms the belief that a serious outbreak was intended, and that matters were precipitated by the hasty action of this fanatical party before the arrangements of the leaders were fully matured. For several days after the attack parties of Kookas arrived from all parts, and on hearing of the fate of their brethren instantly dispersed and disappeared. Had the large number of rebels captured been detained in custody to await a formal trial, there is not the slightest doubt that similar atrocities would have been committed in other parts and that a state of anarchy would have followed.

5. With this explanation I leave myself in the hands of the Government. I acted from no vain motive, or from cruelty, or a desire to display authority. It was my sincere conviction that the punishment, terrible as it was, was imperatively necessary to prevent the spread of an insurrection. One or two petty successes in other parts by other parties of Kookas would have caused great numbers to flock to the rebel standard, and the difficulties of Government would have been increased. I most conscientiously believe that the executions at Kotlah prevented a much more serious rising.

DEMI-OFFICIAL LETTER of Instructions dated the 17th January 1872, referred to in Para. 2 of Mr. *Forsyth's* Letter.

YOU have done *admirably*, but for heaven's sake don't let the whole thing fall short of perfect success by any hasty act.

By dealing with the men now caught as culprits in the Kotlah territory, they can be hanged legally, without the delay of sending the case to the Chief Court, by attending to the form usual in all such cases, *i.e.*, sending up the proceedings to me, and, to save time and trouble, I am going out to Kotlah as soon as I have disposed of Ram Singh. But if you hang (yourself) these men, *i.e.*, the men caught at Malodh, you will fall short of perfect success. A delay of 12 hours cannot produce harm, whereas illegal action may cause trouble. I only wait for Ram Singh to come in to-morrow morning, and I shall be out at once.

COPIES of the TELEGRAMS referred in Para. 6 of Secretary's Letter transmitting these Papers.

(1.)

From Deputy Commissioner to Secretary, Malodh, *viâ* Loodiana, whence it was dispatched on the 16th at 21 h. 15 m.

AGAINST four of the Malodh murderers the proof is convincing. Allow me to execute them on the spot. It is of importance that the punishment should be prompt. I go on to Kotlah, 16th January.

(2.)

From Commissioner, Ludiana, to Secretary, dated 17th January, 0 h. 20 m.

REFERRING to Cowan's telegram asking permission to execute at once four men. Since then we have got 70 men. I am on the spot, and can dispose of the cases according to form and without delay. Exceptional action not necessary, and would increase excitement better allayed.

(3.)

Reply sent on 17th from Secretary, Government, to Commissioner at Ludiana.

WITH reference to your telegram regarding execution of rebels, Lieutenant Governor concurs with you. He, however, approves Mr. Cowan's energy and zeal.

(4.)

First Telegram reporting Execution of Men was dispatched by Commissioner, from Ludiana, on 18th, at 7 h. 16 m.

Forty-nine Kookas blown from guns at Kotlah. One cut to pieces when savagely attacking Deputy Commissioner.

(No. 14 of 1872.)

From Government of India to Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, 16 February 1872.

IN continuation of our Despatch No. 12, dated the 2nd instant, we transmit for your Grace's information a copy of the further Papers noted in the annexed list, relating to the recent disturbances committed by Kookahs in the Punjab.

TELEGRAM, dated the 29th January 1872.

From Secretary, Punjab Government, Camp *viâ* Delhi, to Home Secretary, Calcutta.

YOUR letter No. 122, dated 24th of January. The Lieutenant Governor requests that action, in accordance with the 4th paragraph of your letter, may be delayed until receipt of my letter of the 26th instant, containing his Honor's views and Deputy Commissioner's explanation. He observes that the conduct of the Deputy Commissioner can hardly be considered apart from that of the Commissioner of the Division.

TELEGRAM, dated the 4th February 1872.

From Home Secretary, Calcutta, to Secretary, Punjab Government, Camp *viâ* Umballa.

YOUR telegram dated 29th January and letter dated 26th. Fresh papers do not alter the opinion stated in paragraph 2 of my letter of 24th January, and Government of India requests Lieutenant Governor to act in accordance with paragraph 3 of same letter.

(Home Department.—Judicial.—No. 289.)

From *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India, to the Secretary to the Government of the Punjab.

Sir, Fort William, 8 February 1872.

I AM to acknowledge your telegram of the 29th ultimo, and your letters noted on the margin, all having relation to the late Kooka outbreak. The Governor General in Council has considered these papers with anxious attention, and he wishes, before passing final orders on the subject, to direct your attention to the points which appear specially to require explanation.

2. His

No. 29 C., dated 22nd January 1872.
„ 35 C., „ 24th „
„ 36 C., „ 26th „
„ 38 C., „ 27th „
„ 44 C., „ 30th „

2. His Excellency in Council agrees with his Honor's opinion, expressed in his letter of 26th January, as to Mr. Cowan's promptitude and energy, and that some allowance must be made for the difficult position in which he was placed; but he feels that nothing short of immediate urgent necessity could justify such a measure as the summary execution of 49 persons, and that in an exceptional and highly objectionable manner.

3. The papers at present before his Excellency do not appear to him to show the existence of any such immediate urgent necessity. The following are Mr. Cowan's own statements on the subject. In his letter to Mr. Forsyth of the 16th January, he says:—

"The gang of rebels, for no other name will adequately characterise them, never numbered more than 125. Of these, there were at Malodh, 2 killed, 4 captured; at Kotlah, 8 killed, 31 wounded. Of those wounded, 25 or 26 escaped at the time, but 68, including 27 wounded, have been captured in the Patiala State, at Rurh, a village 12 miles from this. The entire gang has thus been nearly destroyed. I purpose blowing away from guns, or hanging, the prisoners to-morrow morning at daybreak.

"Their offence is not an ordinary one. They have not committed mere murder and dacoity; they are open rebels offering contumacious resistance to constituted authority, and, to prevent the spreading of the disease, it is absolutely necessary that repressive measures should be prompt and stern. I am sensible of the great responsibility I incur; but I am satisfied that I act for the best, and that this incipient insurrection must be stamped out at once."

4. In his letter (No. 15) of the 17th January, also to Mr. Forsyth, he relates the circumstances of the arrest of the prisoners. He says that 68 of them, of whom 29 were wounded (seven very severely), surrendered to the Naib Nazim of Sherpore and three native cavalry, and that the party, which originally consisted of not more than 125 men, had before that time lost nine persons killed and nine prisoners. He adds, "At least two-thirds of the whole gang have been killed, wounded, or captured. The remainder are being hunted like vermin, and many more of them will be taken."

To use his own words, "The ruffians were completely cowed."

5. In the same letter he remarks that in less than an hour after the receipt of his letters, the Rajahs of Nabha and Jheend "dispatched artillery, cavalry, and infantry to Kotlah." He also makes the following remark: "It is certain that had their first attempts been crowned with success, had they succeeded in arming themselves and providing themselves with horses and treasure, they would have been joined by all the abandoned characters in the country, and their extinction would not be effected without much trouble. By the timely preparations at Kotlah, the first efforts were defeated, and by the active exertions of the Patiala officials, this miserable attempt at rebellion has been stamped out." He adds, however, "but others of their stamp must be deterred from following so bad an example, and that the warning should be effectual, it must be prompt and terrible."

6. In his letter of January 21st, he says: "As the contingents from adjoining native States had arrived, or were close at hand, I felt confident that in the presence of such a force, and with the arrangements I hurriedly made, there was no fear of an immediate attack on Kotlah, or any place in its neighbourhood; but that a terrible example was needed to put a stop at once to what was assuming the proportions of a rebellion."

7. These statements show that no immediate danger was to be apprehended; that if the crime was an attempt at insurrection it had failed; that the insurgents were "completely cowed," and were nearly all made prisoners, many of them being wounded as well; that the danger which might have arisen, if the fort had been taken, had been averted; and that ample military force for the maintenance of order was at Mr. Cowan's disposal.

8. Mr. Forsyth's letter of the 19th, and its enclosure, no doubt, show that several small bodies of Kookas were observed on the 18th January (the day after the execution) in the neighbourhood of Kotlah; but the conduct of these persons on the 18th could not have had anything to do with Mr. Cowan's act from the first.

9. The impression which the papers leave on his Excellency in Council is, that Mr. Cowan ordered the execution, not under the pressure of immediate urgent necessity, but because he thought that it might possibly have the effect of preventing an insurrection of a more general kind.

10. In his Excellency's opinion, a general apprehension of this sort is not enough to justify what was done. Nothing could justify it except the presence of immediate urgent necessity, and of this his Excellency has no evidence whatever in the papers before him.

11. The apprehension that a general insurrection was imminent, and could be averted by the means taken, and not otherwise, might have the effect of excusing Mr. Cowan, to a greater or less extent, if it rested upon reasonable grounds, but the papers disclose only slight, if any, grounds for such an apprehension. Upon this subject what Mr. Cowan has to show is some ground for thinking that when "this miserable attempt at rebellion," as he calls it, "had been stamped out," a summary execution would, and that punishment in the common course of law would not, deter other persons from rebelling.

* * * * *

13. With regard to Mr. Forsyth's proceedings, they would appear to have been legal; but his Excellency in Council fails to perceive the necessity for such extreme and indiscriminate severity as Mr. Forsyth displayed.

14. His Excellency in Council awaits the explanations of the officers concerned upon these points, together with an expression of his Honor's views upon the whole matter, and will reserve final orders on the subject till they have been received and fully considered. Meanwhile, as you have been already informed by telegraph, his Excellency in Council thinks it necessary to maintain the instructions in paragraph 3 of my letter, No. 122, dated 24th ultimo, that Mr. Cowan be suspended from office.

(No. 17 of 1872.)

From Government of India to Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, 15 March 1872.

To Secretary to Chief Commissioner of British Burmah, No. 470, dated 10 March 1872.
To Secretary to Government of Punjab, No. 472, dated 10 March 1870.

In continuation of our Despatch, No. 14, dated the 16th ultimo, we transmit, for your Grace's information, a copy of the correspondence noted in the margin, showing that we have deemed it expedient to remove Ram Sing, the Kooka leader from Allahabad, and to order his detention in safe custody to British Burmah.

2. We await the reply of the Lieutenant Governor of the Punjab to our letter, No. 472, before determining on the course to be pursued with respect to the other State prisoners named on the margin of the 3rd paragraph of that letter.

(No: 28 of 1872.)

From Government of India to Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, 2 May 1872.

Judicial, to Secretary of State:
No. 7, dated 19th January 1872.
No. 9, dated 2nd February 1872.
No. 12, dated 2nd February 1872.
No. 14, dated 16th February 1872.
No. 17, dated 15th March 1872.

In continuation of our Despatches noted on the margin, we transmit, for your Grace's information, copy of further papers, noted in the annexed list, relating to the recent disturbances by Kúkas at Malodh and Malehr Kotla, the summary execution of the Kúka prisoners at the latter place, and the conduct of Mr. Cowan, Deputy Commissioner of the Ludiana District, and Mr. Forsyth, Commissioner of the Amballa Division, in connection therewith.

2. We beg to refer to our Letter to the Punjab Government, No. 857, dated the 30th ultimo, and to the Memorandum mentioned in the 2nd paragraph thereof, for full details of the circumstances of this painful case, and of the grounds on which we have determined to remove Mr. Cowan from the service, and to transfer Mr. Forsyth from his present appointment in the Punjab to a position in another Province in which he will not have to superintend the judicial proceedings of a Native State. We have also recorded our opinion that Mr. Forsyth should not in future be employed on similar duty.

3. In directing Mr. Cowan's removal from the service, we have done so with deep regret, both on account of his previous good character and conduct, and because he acted with promptitude in the first instance in concerting measures for the repression of the Kúka movement. We propose to address your Grace in the Financial Department, requesting that Mr. Cowan may be admitted to the benefit of a pension.

From *L. P. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 59 C.); dated Camp, Karnal, 7th February 1872.

* * * * * *

5. The attacks on Malodh and Malair Kotla, following so immediately one after the other, decided his Honour the Lieutenant Governor to deport Ram Singh and his most prominent Soobahs from the Punjab, and the information which has since been received and forwarded to the Government of India, together with the evidence forming the enclosures to this

this letter, taken in connection with the proceedings at Amritsar and Raikot, and the evidence recorded for several years past of the tendency of the Kooka teaching, and the character of its teachers, confirm the Lieutenant Governor in the conviction that the deportation was necessary. His Honor is also of opinion that Ram Singh and his Soobahs should be confined at a distance from the scene of their intrigues, at such a place and in such a manner as to render their rescue or escape, or return to the Punjab, impossible.

6. The evidence against Ram Singh, previously collected, has been considerably strengthened by that now obtained. His own statement recorded by Mr. Forsyth, Commissioner of Ambala, is conclusive as to his knowledge of the intentions of his followers to put a stop to the slaughter of kine by the murder of butchers, for which he admits that his permission was asked before the perpetration of the crimes at Amritsur and Raikot. Ram Singh states that he refused permission, but it may be presumed that the direct evidence as to his complicity by permission or instigation is true, since his followers would not have adopted a line of conduct of which their chief had expressed disapproval, and the Kooka teaching for some time past had denounced cow-killing as a practice which should be stopped.

7. It is impossible to disconnect Ram Singh from the action taken by his followers in the recent outbreak. It was from the village of Bhainee that the band departed on their expedition, and it is shown that the information which Ram Singh was at first stated to have given to the police of the intentions of the party was of the most meagre description, and given, not voluntarily, but after express interrogation by the deputy inspector. The evidence in the present proceedings is summed up by the Commissioner in the note dated the 1st February, which forms an enclosure to the present proceedings. This evidence affords strong proof that there was an intention of an organised rising of the sect in the Punjab, although it is probable that the undisciplined eagerness of some of the Kookas precipitated matters and ensured the failure of the design. The opinion of Native gentlemen of known loyalty regarding the tendency of the teaching of Ram Singh, and the objects at which he aimed, was entirely in accordance with that at which the Honourable the Lieutenant Governor has arrived, and his Highness the Maharajah of Patiala and other influential Native gentlemen had strongly advised the arrest and removal of Ram Singh from the country.

8. As regards the execution at Malair Kotla, his Honor would call particular attention to the evidence given in Appendix IV. It is sufficient, joined to the probabilities of the case, to prove that, had the gang of Kookas been successful at Kotla, their numbers would soon have been considerably swelled, and it would be impossible to contemplate, without much anxiety and alarm, even the temporary triumph of a fanatical mob appealing to the rooted and wide-spread prejudice against kine-killing.

9. In the opinion of the Lieutenant Governor it was an object of very great importance to check the gang at once and completely, and he thinks that great allowance must be made for the operation of this well-grounded conviction in the mind of an officer placed in the position of Mr. Cowan. Doubtless that officer felt deeply that it depended on his action whether this fanatical outbreak was to be quelled once for all, or whether, from hesitation, delay, or false mercy on his part, it was to gain head, and at the cost of much bloodshed and confusion grow into a serious religious insurrection. There can be no question that the frequent reports made of fresh bodies of Kookas being in the neighbourhood, threatening further attacks, together with the uncertainty as to the state of things elsewhere, were calculated to deepen his sense of responsibility, and apparently had the effect of bringing him to the desperate resolution he ultimately arrived at.

10. The Lieutenant Governor is not of opinion that the evidence now submitted indicates that the immediate retirement of the bands of Kookas who were observed moving towards Kotla was the result of the executions ordered by Mr. Cowan, for in nearly every instance they are said to have gone back on the 15th, the day the attack took place, whereas the executions were carried out on the morning of the 17th. Their retirement appears to have been caused really by the attack having been beaten off by the Kotla people. Still these reports made of the approach of fresh bands, and his ignorance of their further movements, naturally tended to increase Mr. Cowan's anxiety and to confirm him in his conviction that the circumstances called for, and justified, the immediate infliction of exemplary punishment.

11. The defects in Mr. Cowan's proceedings are patent. He recorded no evidence of witnesses of defence, or the criminals, although there appears to have been time to have done so on the 16th. He hurried on the executions, although the prescribed reference to the Commissioner would not have caused 24 hours' delay. Above all, he included, without selection of ringleaders and instigators, in one common capital sentence all the persons (excepting women and children) known to have been concerned in the attack.

12. But without desiring to disguise the precipitancy, the undisciplined presumption, or the unmeasured severity of Mr. Cowan's conduct, the Lieutenant Governor cannot lose sight of the countervailing considerations. He did no injustice. The crimes punished were deliberately planned and committed, were fraught with the utmost alarm to society from the secrecy of their conception, and the suddenness and desperation of their execution. It is true that the purpose was not accomplished; but there was not one of the criminals

whose life was not strictly forfeited to public justice. So much may be said, even if those outrages are looked upon simply as municipal offences, but it is impossible so to regard them; there is not only much evidence, but also a universal agreement amongst persons qualified to judge, showing that, originating in a carefully stimulated religious fanaticism, they had a political object, every step in the attainment of which threatened the most serious disturbance of the existing order of things. Hence not only was every one of these criminals' life forfeited to public justice, but it was essential to the maintenance of public authority that a striking example should be made. Mr. Cowan had for some time past officiated as Deputy Commissioner of the Ludiana District, in which are the head-quarters of the Kooka Sect. He had the best opportunities of judging of the nature of their organisation, and the tendency of their designs. As a magistrate, he has brought to conviction some of its members, and his life has been threatened in revenge. On hearing of the outrages under notice, he acted with promptitude in immediately proceeding to Malodh, and with forethought in summoning the troops of the protected States, and his informal and unauthorised sentences were, the day after their execution, supported by the deliberate pronunciation of similar sentences, by the authority to whom Mr. Cowan ought previously to have referred, on 16 similar offenders.

13. The Lieutenant Governor does not underrate the necessity for holding officers in the exercise of public authority strictly responsible that the forms and procedure prescribed for their guidance are exactly observed; nor does he deny that an officer of cooler head and greater forethought, or even one more fearful of responsibility than Mr. Cowan, would have vindicated in such a crisis the assailed rights of public order and political authority with more circumspection and discrimination. But, on the other hand, these very occurrences exemplify the difficult position officers may be placed in, and the dilemma to which minds not, perhaps, exceptionally strong, and necessarily much disturbed and excited, may be exposed. And the Lieutenant Governor cannot blind himself to the consequences of the growth of a belief that the only course that can be followed with personal safety is the cautious adherence to technical forms, and the studied evasion of individual responsibility. Where, therefore, as in the present case, his Honor sees no cause to doubt but that the proceedings, however, in his opinion, hasty and irregular, were taken in good faith as necessary to the public safety, and however indiscriminate, impolitic, and unduly severe, involved, nevertheless, no absolute injustice, the Lieutenant Governor holds that he chooses the lesser public evil in not withholding his support to irrevocable acts.

In compliance, however, with the instructions contained in your letter, No. 122, dated 24th January, Mr. Cowan has been placed under suspension, and the Lieutenant Governor can only ask for a careful consideration of the papers herewith submitted.

From *Lepel H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 72 C.); dated Camp Dadhopur, the 12th February 1872.

WITH reference to the order for the suspension from office of Mr. Cowan, Officiating Deputy Commissioner, Ludiana, conveyed in para. 3 of your letter, No. 122, dated 24th January, I am desired to forward, for submission to his Excellency the Viceroy and Governor General, copy of a letter from Mr. Cowan, dated 9th February 1872.

From *L. Cowan*, Esq., Officiating Deputy Commissioner of Ludiana, to *T. D. Forsyth*, Esq., C.B., Commissioner and Superintendent, Ambala Division; dated Ludiana, the 9th February 1872.

I HAVE the honour to acknowledge receipt of your Memorandum, dated 7th instant, forwarding extract from a letter of the Secretary to Government, Punjab, to your address, dated the 5th idem, directing my suspension from office until further orders. I only await the arrival of Major Parsons to make over charge of the district to him.

2. This degradation was most unexpected by me. I had hoped that my proceedings, irregular though they were, would, under the grave circumstances of the case, have met with the approval of Government. I entertain the hope that the order for my suspension was written before the evidence, so strongly confirmatory of the belief entertained by me at the beginning, reached the Government of India.

3. I have reported before that I did not carry out the executions at Kotla recklessly or thoughtlessly. I knew how great was the responsibility I was incurring; I knew that grave disapproval of my conduct by Government would, in all probability, be followed by dismissal from the service of Government, and to me, and to those dependent on me, dismissal means ruin and beggary. But I incurred this great risk in the belief that the preservation of the peace of the country required the severe measures of repression adopted by me, and that no more lenient measures would have had the same effect.

4. If

4. If I have unfortunately failed to convince the Government that such severe measures were necessary, I will beg that 23 years of faithful service, during which time I have repeatedly received the thanks of Government, may be weighed against this one irregular proceeding. I have never been accused of cruelty. I have never, in my recollection, raised a hand to strike a native.

5. I shall feel obliged by your forwarding this letter to the Secretary to the Government of the Punjab, with the request that it may be transmitted, should his Honor the Lieutenant Governor think fit, to the Government of India.

Dated Ambala, the 10th February 1872.

Endorsed by the Commissioner and Superintendent of Ambala Division.

FORWARDED to the Secretary to the Government of the Punjab.

From *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 76 C.); dated Camp Mahlana, the 14th February 1872.

I AM desired to forward, for the information of the Supreme Government, copy of the proceedings of the Commissioner of Ambala, in the trial of Kookas concerned in the recent outbreak.

COURT OF SESSIONS, AMBALA DIVISION.

CASE No. I., of 1872.

THE CROWN *versus* - - 1. Bhugwan Singh.
2. Gyan Singh.
3. Thumman Singh.
4. Mehr Singh.

Charge.—Dacoity with murder, Section 396, Indian Penal Code.

Arrangement of File.

1. Calendar, charge, and opening sheets.
2. Report of Civil Surgeon, Ludiana.
3. Other evidence for prosecution.
4. Examination of accused before committing Magistrate.
5. Defence.
6. Opinion of Assessors.
7. Finding and sentence of Sessions Judge.

CALENDAR of PRISONERS Committed by the Deputy Commissioner of Ludiana in the Month of January 1872, to take their Trial before the Sessions Judge.

Name, Parentage, Residence, Caste, and Age of Accused.	Offence, and the Date on which Committed.	FOR PROSECUTION. To the Fact.	To the Apprehension.	Medical Evidence.	Finding and identity of Property or Body.	Character.	Other Evidence.	DEFENCE. Defence.	Character.
1. Bhugwan Singh, son of Ram Singh, Kooka 2. Gyan Singh, son of Dulla Singh, Kooka. 3. Thumman Singh, son of Abbul Singh, Kooka. 4. Mehr Singh, son of Goolaba, Kooka. NAMES.	Date of Apprehension.	Whether on Bail or in Prison.
Accused 1, 2, 3, 4 - -	14th January 1872 -	In Prison.

ABSTRACT OF CASES.

Against the four accused—Bhugwan Singh, Gyan Singh, Thumman Singh, and Mehr Singh—The evidence is clear and conclusive. They are all wounded, and were taken in the very act of committing the offence with which they are charged. Their presence at the place of capture is incompatible with innocence. Some further inquiry must be made into the conduct of the remaining three prisoners, who are forwarded to the District Superintendent of Police for separate inquiry and chullan.

The accused Nos. 1 to 4 are committed to take their trial before the Sessions Judge, this 19th day of January 1872.

This order is explained to them. They have no witnesses.

Camp Malair Kotla, 19 January 1872. *L. Cowan*, Magistrate.

CHARGE.

I, L. COWAN, Esq., Magistrate of Ludiana, hereby declare that Bhugwan Singh, accused, on or about the 15th January 1872, committed dacoity with murder, and has thereby committed an offence punishable under Section 396, Indian Penal Code, and I direct that he be tried on the said charge by the Sessions Court.

15 January 1872. *L. Cowan*, Magistrate.

CHARGE.

I, L. COWAN, Esq., Magistrate, hereby declare that Gyan Singh, accused, on or about the 15th January 1872, committed dacoity with murder, and has thereby committed an offence punishable under Section 396, Indian Penal Code, and I direct that he be tried on the said charge by the Sessions Court.

15 January 1872. *L. Cowan*, Magistrate.

CHARGE.

I, L. COWAN, Esq., Magistrate, hereby declare that Thumman Singh, accused, on or about the 15th January 1872, committed dacoity with murder, and has thereby committed an offence punishable under Section 396, Indian Penal Code, and I direct that he be tried on the said charge by the Sessions Court.

15 January 1872. *L. Cowan*, Magistrate.

CHARGE.

I, L. COWAN, Esq., Magistrate, hereby declare that Mehr Singh, accused, on or about the 15th January 1872, committed dacoity with murder, and has thereby committed an offence punishable under Section 396, Indian Penal Code, and I direct that he be tried on the said charge by the Sessions Court.

15 January 1872. *L. Cowan*, Magistrate.

No. *of Sessions for the Month of January* 1872.

PROCEEDINGS of a Court of Sessions held by T. D. Forsyth, Esq., C.B., Sessions Judge of the Ambala Division, at Malodh, Ludiana district, on the 19th day of January 1872, with the aid of the following assessors: (1) Mir Hashum Khan Bahadur, Ressaldar; (2) Gholam Kadir, Superintendent of Aub; (3) Maatub Singh, Lumberdar of Daooda.

THE CROWN *versus* -
1. Bhugwan Singh, of Ram Singh, Kooka.
2. Gyan Singh, of Dalla Singh, Kooka.
3. Thumman Singh, of Abbel Singh, Kooka.
4. Mehr Singh, son of Goolaba, Kooka.

Charge.—Dacoity with murder, Section 396, Indian Penal Code.
Committed by Deputy Commissioner of Ludiana at Ludiana on the 19th January 1872.
The charge is read and explained to the prisoner, who acknowledged it to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

MEMORANDUM of Papers transferred from the Magistrate's File to the Sessions' File, and read out as part of the Proceedings of this Court.

Calendar.
Charge Sheets.
Report of Civil Surgeon, Ludiana.
Evidence of Sirdar Buddun Singh taken by Mr. L. Cowan.
Examination of the four accused before the committing Magistrate.

From *J. Ince*, Esq., M.D., Civil Surgeon, Ludiana, to the Deputy Commissioner, Ludiana; dated Ludiana, the 18th January 1872.

I HAVE the honour to report that, about 8 a.m. on Monday, the 15th instant, I received your verbal instructions, through the superintendent of police, to proceed without delay to Malodh for the purpose of examining and reporting upon the persons killed and wounded during the attack by the Kookas upon that place the previous evening. I at once laid out my horses and joined you at Malodh between 2 and 3 p.m. the same day, having been somewhat delayed in the latter portion of the journey by rain.

My hospital assistant, Mirza Ameer Beg, accompanied me with medicines, instruments, and surgical appliances.

2. The following statement shows the number of persons I examined:—

PERSONS.	Killed.	Wounded.	TOTAL.
Malodh men - - -	2	2	4
Kookas - - - -	2	4	6

Malodh men. Killed.

3. Of the Malodh men who have been killed, one was Boota, the Sirdar's coachman who was wounded in five places, the chief one being across the right temple, probably by a "gundassa," and the skull was fractured; the other was Nubbee Bux, a Munshee, who had received five very severe sword wounds, two of which were across the back of the neck, and by which his head was nearly severed from his body.

Wounded.

4. Of those wounded was the young Sirdar himself, Buddun Singh, who had received six wounds, three of which were probably sword-cuts, one by a gundassa, and two by sticks; fortunately they were all slight, but that across his left lower jaw, a sword-cut, about four inches long, will leave an indelible scar. The other, Nihal Singh, received three slight sword wounds, one across the right cheek, and two others upon the left hand and wrist.

Kookas. Killed.

5. Of the dead Kookas, No. 1 had an incised wound over the left cheek bone, and a fractured skull. No. 2 had an incised wound across the front part of the head, and also a fractured skull. The expression of these two bodies was a most fiendish one, and contrasted horribly with the placid faces of the two Malodh ones, which were lying beside them in the same shed; indeed, the scene afforded a striking proof of the fact that the state of the mind, or rather its facial reflection at the moment of death, is as lasting as the attitude of the remaining portions of the body.

Wounded.

6. Of the four wounded, Gahani Singh had received a bullet wound on the right arm, a little below the shoulder-joint, causing a very severe and comminuted fracture of the bone. Phagwan Singh had a slight contused wound on the back of the right elbow, and a contusion on the back. Thummun Singh had a slight contused wound about half an inch long just above the left elbow, and three slight contusions upon the head. Lastly, Meer Singh had a contusion over the left hip, at the slightest touch of which he cried out very vociferously, and out of all proportion to the apparently slight injury he had sustained.

Visitation of Malair Kotlah.

7. About 7 a.m. the next day (the 16th) I started on the same duty for Malair Kotlah, as the Kookas had made a still more formidable attack upon the latter town the morning after their assault upon Malodh. After a very disagreeable ride in a drizzling rain across country, which, owing to the very heavy rain, was here and there several inches deep in mud and water, I reached Kotlah about 10 a.m., and the following is a detailed account of the killed and wounded I there examined:—

Persons.	Killed.	Wounded.			Total.	Grand Total.
		Very Severely.	Severely.	Slightly.		
Kotlah men - -	8	2	4	9	15	23
Kookas - -	7	1	1	- -	2	9

Kotlah men.

8. The eight Kotlah men who were killed had all been burned or buried before my arrival, but I was informed that one was the Kotwal and the other seven sepoys.

Wounded.

9. The names of the two who were very severely wounded are Hafiz Ali Shere, Moonshee, who received five sword wounds, one across right side of the head, another across left side of face, another across right side of the neck, and another upon the lower hip; but the worst was that across the left temple, by which the skull was fractured; and Gainda, a sepoy, who received a sword wound upon the top of the head, which probably caused a fracture, and another slighter one upon the right arm.

The names of the four who were severely wounded are—

Meera Buksh - - - a sword-cut across left wrist.
Munda - - - - " "
Kara - - - - - " "

and Sussa, whose thumb and two first fingers of the left hand were cut off, and who is said to have killed the Kooka who maimed him. The names of the nine who were *slightly* wounded were, Beera, with four sword wounds; Gunda, three sword wounds across the fingers of the left hand; Kumma, two wounds, a sword puncture and a contusion; Maiho, several contusions by a *latti* or stick; Subadar Shahdul Khan, one sword-cut upon the left arm, near the wrist; Abdool Ruheem Khan, one sword-cut; Gholam Mohomed (who said he killed three Kookas himself), one sword puncture; Khudia, one contusion upon the head; and Deena, one contused wound.

Kookas. Killed.

10. The bodies of the seven Kookas who had been killed I found lying in pools of blood, and heaped together upon the floor of a small room near the Treasury; their attitudes were various, but the expression of the faces was nearly the same in all, and no less fiendish than that of their dead comrades at Malodh. They had been terribly hacked about with swords,

swords, chiefly about the heads and chests, and most of them had received several wounds; the head of one was nearly severed from the body, and the right arm of another was completely separated half way above the elbow, and was lying beside the corpse.

Wounded.

11. Of the two wounded Kookas, one was Wazeer Sing, who had received a dangerous sword wound, about five inches long, over the region of the spleen, and another, but slighter one, upon the left shoulder. Of the other wounded person only the severed right hand was picked up after the fight. I found it lying amongst the dead bodies, and satisfied myself that it was not a part of either of them, but really a member belonging to another.

Conclusion.

12. After examining the dead bodies, and visiting all the wounded which have been above described, most of whom were, except the Kookas, lying at their own houses in the town, and giving advice and directions regarding their treatment, I left them in charge of the native medical officer attached to the dispensary there. I then returned to the spot where the principal fighting had taken place; and, having written and despatched to you the demi-official account of what I saw on arrival at Kotlah, the particulars of the Kooka attack, the gratifying news of the capture of so many of the fugitives by the Patiala Tehsildar of Sherpore, and some other matters, I prepared to return to Ludiana, which I reached about 8 o'clock the same evening.

THE CROWN *versus* 1. BHUGWAN SINGH; 2. GYAN SINGH; 3. TUMMUN SINGH; AND 4. MEHR SINGH.

WITNESS No. 1 for Prosecution, *Surfraz Khan*, Deputy Inspector of Police of Sanchwal, Ludiana District.—States on solemn affirmation: On the 11th of this month I went to Bhainee to keep order at the fair there. The fair was over on the 12th. On the 13th in the morning, I heard that a body of *mustanas*, Kookas, had separated themselves from the rest. The Lumberdar and chowkeedar told me of this, and said they were up to mischief. I then went at once to Ram Singh, and said I wished to speak to him alone. He said, these people, *i.e.*, Hira Singh and Lehna Singh, residents of Lukrundee in Patiala, are heads of this body, and won't obey my word. I said "Why, what is their intention?" He gave me no answer, and only said they had become *mustana*. I asked him to give me a list of their names. He gave me a list of 13 men. I gave that list afterwards to the office. I have a copy here, and read it: "Lehna Singh, son of Mehtab Singh; Hira Singh, head; Anoop Singh, Oodam Singh, Nund Singh, of Hadaya; Jogha Singh, Wuryam Singh, Bhag Singh, of Mehraj; Narain Singh, of Rur; Sahib Singh, Soojan Singh, Gyan Singh, and Khan Singh, of Bulhera."

He said he knew no more. I asked how many men there were altogether; he said about 50 or 60. I then told Soobhoo Lumberdar, Dowlut Ram Lumberdar, Bhugwana Chowkeedar, and Kullander Khan, Serjeant, to inquire how many men there were collected in this separate body at a well close to Bhainee.

They reported the number to be about 100. After this I said to Ram Singh, "You explain to them that they are to commit no disturbance, and send them away." He went, and, putting his cloth round his neck, said to them, "Go to your homes, and don't make a row, or it will be worse for me." They replied, "Give us some food, and we will go." He fed them, and they went away, and Ram Singh reported their departures.

I then sent the Serjeant and Hurree Singh to follow them, and find out which way they should go. They went to Rampore Kattian, in the Patiala territory.

When they reached Patiala territory the Serjeant and others returned and reported the fact. I at once wrote information to the Thanadar of Doraha. I then came to Ludiana by the evening train, and at 10 P.M. informed the district superintendent of police, and then the deputy commissioner.

I was then ordered to go to the different Vakeels and inform them.

There were about 1,000 Kookas at the fair. They were occupied in reading and reciting passages, but no one said anything.

The *mustana* gang frequently expressed their intention of going to Kotlah.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* ONE BHUGWAN SINGH AND THREE OTHERS.

WITNESS No. 2 for Prosecution, *Dhonkul Singh*, son of *Maha Singh*; Age 60 years; Caste, Rajpoot; Resident of Malodh; Occupation, Cultivator.—States on solemn affirmation: I am durwan, and was on duty at the gate of the town on the evening of the 14th, when town lamps were lighted.

I was sitting at the gateway, when suddenly a number of men, Kookas, perhaps 200, came in. They seized my hands and tied them behind my back, and placed a guard of four

men over me. They passed on, and when they came back, and went out, my son untied my arms. They were in the fort about an hour or so. There was some fighting, and the Kookas ran out.

Prisoners do not cross examine.

T. D. Forsyth,
Sessions Judge, Ambala Division.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* BHUGWAN SINGH AND THREE OTHERS.

WITNESS No. 3 for Prosecution, *Kirpa,* son of *Oodam*; Age 28 years; Caste, Khatri; Resident of Malodh; Occupation, Shopkeeper.—States on solemn affirmation: Absent at Kotlah.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* ONE BHUGWAN SINGH AND THREE OTHERS.

WITNESS No. 4 for Prosecution, *Dussundhee,* Son of *Lahya;* Age, 40 years; Caste, Teylee; Resident of Malodh; Occupation, Teylee.—States on solemn affirmation: I am a syce in the employ of the Sirdar Mith Singh. I was in the stables when the Kookas came. My brother, Boota coachman, told me to get out of the way, and I went to my house from fear. But I heard a noise and went out, and found my brother killed. I hit about and my stick was broken. They took two mares away with them. I only got a blow on my arm; no mark left.

I recognised Puhara Singh. He was on a mule. I knew him, because he was born here. He came inside riding his mule. There is another man whom I can identify if I see him. He was wounded on the leg. I recognise No. 2 Gyan Singh also. He asked me for a horse, but I would give none. Then they attacked my brother.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* BHUGWAN SINGH AND OTHERS.

WITNESS for Prosecution, *Natheea.*—States on solemn affirmation: About 10 a.m., the day after the dacoitee, I went to village Arori. At the well near it I saw some one sitting in his blanket. I asked who he was; he said, a *sadh.* I seized his blanket, and he called out, "Don't, my leg is broken." I then knew he was a Kooka, so had him apprehended. I recognise him as Mehr. Kurri is not a mile from Malodh.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* BHUGWAN SINGH.

WITNESS No. 5 for Prosecution, *Kishna,* son of *Thakur Singh;* Age, 25 years; Caste, Rajpoot; Resident of Malodh; Occupation, Chuprasse of Sirdar.—States on solemn affirmation: I am chuprassee of the Ludiana Court, in service with Sirdar Buddun Singh. I was in the Cutcherry building in the evening, when about 18 or 20 Kookas came in. I was sitting about two paces from Kazee Nubhee Buksh. They demanded arms. The Moonshee said he had none. They then attacked him with axes on the neck and killed him. I got a blow from a stick on the back. It was night. I could recognise no one. I ran away. The Moonshee was killed in my presence. Purboo, another chuprassee, was there, and he attacked the Kooka, and got a slight wound in return. I do not recognise anyone. The Moonshee was seated and was dragged out, and asked for arms, and because he gave none was murdered. I then ran out, leaving the Kookas inside, and went to Khea, a village close by, and roused the people. About 90 men came with me, and stopped the door,

door of the village, and there was a scuffle. I know nothing about the capture of these Kookas now in Court.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* BHUGWAN SINGH.

WITNESS No. 6 for Prosecution, *Dewa Singh,* Son of *Jaimal Singh;* Age, 18 years; Caste, Jât; Resident of Malodh; Occupation, in service of Sirdar.—States on solemn affirmation: When the Kookas came I was in my father's house. About 20 men came in, and one of them struck my mother on the wrist, and asked for arms and for the keys to open the boxes in our house. They took away a double-barrelled gun belonging to my father, also a *tulwar* belonging to the Sirdar. I could not identify the men; it was night.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* BHUGWAN SINGH.

WITNESS No. 7 for Prosecution, *Hurree Singh,* Son of *Sher Singh;* Age, 50 years; Resident of Malodh; Occupation, service of Sirdar.—States on solemn affirmation: I am servant to Sirdar Buddun Singh. When the Kookas came in, Sirdar Buddun Singh had come from shooting, and it was eventide. I was sitting by him when some 10 or 12 Kookas came in and called out "*futteh,*" and attacked him. They asked for arms and horses. There was a scuffle, and all came outside the room. There they wounded the Sirdar by blows on the neck and head. He then seized an axe from one of them and laid about him with it, and they fled. They abused him, saying he was a friend of Maharaja and a child of the English. Bishen Singh and Nihal Singh were there at that time. I was merely pushed. There was no wound inflicted on me.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Divislon.

THE CROWN *versus* BHUGWAN SINGH.

WITNESS No. 8 for Prosecution, *Sahib Singh,* Son of *Gurdas Singh;* Age, 40 years; Caste, Jât; Resident of Kheri.—States on solemn affirmation: On the evening when the Kookas came I was in my village, when a chuprassee and sweeper came calling out that dacoit had attacked the village. I and my fellows turned out to the number of about 90 and ran to the gate of the Malodh Town; found t shut and protected by the Kookas, as we had to go out and enter by a bastion. I went first along the street and found that the coachman had been killed. We all collected, and there was a general fight, and four of their number were struck down and captured. I did not go into the bazaar. There may have been men killed. I do not recognise any dacoit, nor can I do so now. I thought they were ordinary marauders, but people all said they were Kookas. I had a *latti* in my hand; so had others. My lumberdars came out, too, to the rescue. Of the four now in Court, two were captured just outside the town near the *moree,* and two about 200 yards outside. It was dark. I don't recognise the men, but I knew they had been seized. My villagers had no arms, only sticks and stones. I got a wound on my shoulder, and many were wounded with stones and sticks. Of the four men who were brought in two died. Two others were apprehended in the morning. Of the four men brought in at night, all were more or less wounded.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* BHUGWAN SINGH.

WITNESS No. 9 for Prosecution, *Soobah*, Son of *Abbela;* Age, 20 years; Caste, Goojar; Resident of Malodh; Occupation, Syce in service of Sirdar Buddun Singh.—States on solemn affirmation: I am syce in Sirdar Buddun Singh's service. On the evening of the daicotee about 20 Kookas came into the yard where I was. Some passed on upstair. They took away 16 horses out of the stables. I came back, having been released by the inhabitants pelting the dacoits with bricks. They succeeded in carrying four excellent horses away. I did not recognise anyone. I hid from fear when they came, and did not get wounded.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

Transferred to Sessions File, the Sirdar being too ill to attend Court.

THE 16th January 1872. *Sirdar Buddun Singh* for Prosecution on Solemn Affirmation.—On evening of 14th, about half past-six p.m., I was seated in this room. About 12 or 13 men armed came up to the door, and came in. At first they salamed, then seized me by the hair and dragged me to the door. They said, "You give assistance to the English; that is not good. You are a relation of the Maharajah's." After being dragged across the doorway I seized an axe out of the hand of one of the Kookas and struck the men who were holding me with it. Before I seized the axe I was wounded in three or four places with a sword. They then ran away; they lighted a blue light (*mehtab*) to light them up my stairs. I identified one of the accused, Lukka Singh Soobah. He did not speak. I have often seen him. They asked for arms and saddles for the horses they had taken.

L. Cowan, Magistrate.

THE CROWN *versus* BHUGWAN SINGH.

WITNESS for Prosecution, *Ram Singh,* Son of *Goorditta*; Age 30 years; Caste, Jât; Resident of Sumul Khan; Occupation, Lumberdar.—States on solemn affirmation: I was present at the outside of the wall when two men wounded were captured and brought in. I do not recognise faces now, for it was quite dark at the time; but these men were caught and brought in. Two men had already been raptured when I saw the men captured at the *moree* and brought in. Out of the four men caught at night, two died. In the morning two more were caught and brought in.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* BHUGWAN SINGH.

WITNESS for prosecution, *Sunder,* Son of *Jaia*; Caste, Blahun; Resident of Malodh.—States on solemn affirmation: On the morning after the dacoitee I was going outside the village for a necessary purpose, and saw a man going along very slowly. He was wounded on his arm, and he asked me the way to Kubbenwal. I asked where he was going to, and he said to Kotlah. I ran on and told that a Kooka was outside, and the Thanadar then went out and brought him in. I recognise Tummun Singh as the man apprehended.

Certified that the above evidence was read over to the witness in the Oordoo language, which he understood, and acknowledged by him to be correct.

T. D. Forsyth,
Sessions Judge, Ambala Division.

(11.)

EXAMINATION OF ACCUSED.

16th January 1872. *Bhugwan Singh*, Son of *Ram Singh*, Kooka of Nuggul, Patiala. accused No. 1.—I went to Bhainee five days before *Maghee*. I went alone from my village, I did not join any gang. The Kookas who were seated near me talked of going to loot Kotlah. Lehna Singh and Hira Singh of Lukrundee were among them. There were about 50 or 60 men who planned to attack Kotlah. I don't know who first originated the idea, but I heard everyone saying that they would get horses and arms at Kotlah. There was no mention of Malodh at Bhainee. No one asked me to join them; it was my fate to join them. I do not see any Kookas among the party. This gang were not *mustanas*. This party were separate from all the others at a well of Ram Singh, about 300 paces from the village. They belonged to different villages. On the 13th, after eating food at noon, we all left Bhainee. There were about 50 or 60 in all. There were no swords with us. There were a few small *gandassas*. I did not hear anyone say that they would be revenged for Gyanee's death. I know that we were going to Kotlah to seize horses and arms. I do not know what it was intended to do after we got the horses and arms. We all went together from Bhainee, and gaining by Pael in the Patiala State reached Rubboo on the Patiala border 2½ *coss* from Malodh, when a watch of the night had gone (probably 10 p.m., 13th January). We did not stop at any village on the road to Rubboo. I do not know if any others joined in, or supplied arms on the road or not. I had only a stick in my hand. I was mounted on my mare (worth rupees 2-8-0). We rested that night and Sunday in Rubboo at a well outside the village. People from the village brought bread to us. I do not know their names. We all left when two *ghurrees* of the day remained. There was no Soobah with us. I did not see any one with *tulwars*. A few had axes, and the rest sticks. I did not know we were coming to Malodh till we reached the village. Hira Singh and Lehna Singh were our leaders. There were the same number when we reached Malodh as when we left Bhainee. I arrived at Malodh, and came in to village with the others on horseback. I am lame. I came only as far as the oilman's shop, where oil was taken from. I did not join in the attack. I sat on my mare in the bazaar, whilst the others attacked the house and cutcherry. A little while after the Kookas began to run away, and bricks were thrown from the roofs of the houses. I was struck in several places, and fell off mare. I was also struck by *latti* and seized. I only know the names of Hira Singh and Lehna Singh of the dacoits. I make this confession voluntarily. I do not know the names of the two Kookas who were killed.

The confession above recorded contains accurately the whole statement of accused, and to the best of my belief no influence was used to make the confession.

L. Cowan, Magistrate.

THE CROWN *versus* BHUGWAN SINGH.

Charge—396, *Indian Penal Code.*

No. I.—DEFENCE.

BHUGWAN SINGH, Son of *Ram Singh;* Caste, Kooka; Residence, Nuggul Ilaqua, Patiala, having pleaded guilty, says the statement he made before the magistrate is quite correct; it is read over to him, and there adds: I am not an enemy of the Government. I came with the party to see what was going on, not to plunder. I am lame, and does it look as if I was fit to commit a dacoitee? I rode on horseback. I was not present when the conversation took place between Labba Singh and Heera Singh, but I heard at the well, where we were all collected at Bhainee, that he had promised to join us.

The above contains the whole of the statement made by accused in my presence.

T. D. Forsyth.

(12.)

EXAMINATION of Accused No. 2, *Gyan Singh*, Son of *Dulla Singh*, Kooka, of Pholayree, Patiala.—I went to Bhainee on the 11th; I stayed there two nights. Thumman Singh, my nephew, went with me. About 10 or 12 Kookas worked themselves into a frenzy (*mustana*). A number joined them till there was about 100. They were shouting out that they would have an exchange for Gyanee, who was hanged. Heera Singh and Lehna Singh were the leaders.

leaders. I do not know the name of any others. On the second day the party left the village. I followed them with Thumman Singh, and joined them at Pael. They asked me to come to Kotlah with them, that they would there get arms and horses. They said they would first loot Kotlah, then Sungroor, then Nabha, then Patiala. I joined them and came on to Rubboo. At Bhainee Lukka Singh and Hurnam Singh, Soobahs, came and sat down with the *mustanas*. I heard Heera Singh say to them that they were going to take revenge for Gyanee's death, and would first go to Kotlah for horses and arms. The Soobahs said, "We will follow you, go on to Kotlah. I came from Pael to Rubboo with the gang. Remained a night and day in Rubboo. Heera Singh bought food in the village out of his own pocket and gave to us. We remained at a well about 500 paces from village. The people of Rubboo did not know for what purpose we were there. We all left Rubboo in evening. There was only one *tulwar* with Lehna Singh, some had gundassas, and some axes and sticks. I had a stick only. At Rubboo I and Thummun Singh were going to our houses. Heera Singh asked us to come with him as far as Kotlah. We were not told we were to loot Malodh. We arrived at gate of Malodh at dark. On the road I heard it counselled to come to Malodh, as there were 40 horses and arms to be had here. I came inside with the others. It was arranged that all those with sticks were to go and guard the small gate. I went there with Thumman Singh, Uttur Singh and another, whose name I do not know. A little after 10 or 12 men attacked us with sticks and bricks, and Uttur Singh and my fourth companion were killed. I was wounded by a shot in the right arm, and Thummun Singh was wounded. I fell, and was taken there. I do not know the names of any of the others of the gang. I make the confession voluntarily. At Bhainee Ram Singh came to us, and said—"Oh brother, do not create a disturbance!" and told us to go to our houses at once, as we would not obey him.

L. Cowan, Magistrate.

The confession above made contains accurately the whole of accused's statements, and no influence was used to make the confession.

L. Cowan, Magistrate.

Charge 396, *Indian Penal Code.*

DEFENCE.—*Gyan Singh*, son of *Dullah Singh*: Caste, Kooka; residence, Pholayree; having pleaded guilty, the statement made by him before the magistrate is read out and acknowledged to be correct. He adds: I am a friend of the Sirkar. I served in the cavalry; I have done nothing wrong. I did not know what was going to be done. When Labba came to talk to the mustanas, Heera Singh said, "We are going to Kotlah and Jhind, and Nabha and Patiala, to revenge ourselves for the part they took in Gyan Singh's death. If you are a poor lot (*pajee*) don't come; but, if not, come with us. Labba Singh said, go, I will come afterwards. Hurnam Singh was there, but said nothing."

The above contains the whole of the statement made by accused in my presence; it was read over to accused, who acknowledged it to be correct.

T. D. Forsyth, Commissioner.

(13.)

EXAMINATION of accused, *Thummun Singh*, son of *Albel Singh*, Kooka, of Pholayree, Accused No. 3.—I am Gyan Singh's (accused No. 2.) nephew. I went after him to Bhainee, and left after him on the 13th. I joined him and about 100 Kookas in Rubboo. I joined them. They said they were going to Kotlah to get horses and arms. I do not know for what purpose they wanted horses and arms. My uncle did not tell me. We left Rubboo in the evening, and arrived at the village at time of lighting lamps. I had nothing in my hand. I did not come inside the village. I went and stood outside the Moree. I did not know the others were going to loot Malodh. I thought they were passing through on their way to Kotlah. I went alone outside (deponent will not explain why he separated himself from the others). I was outside and heard noise and sounds of fighting, and a number of men ran out of the village and attacked me (deponent has wounds on the left arm and head). I fell down, and was arrested at once. I make this confession voluntarily. I do not know the names of the two Kookas who were killed.

The confession above recorded contains accurately the whole of the statement made by accused, and to the best of my belief no influence, by means of any promise, threat or otherwise, was used to make the above confession.

16 January 1872. *L. Cowan*, Magistrate.

THE CROWN *versus* BHUGWAN SINGH.

Charge—Section 396, *Indian Penal Code.*

DEFENCE.

Tummun Singh, son of *Albel Singh*; Caste, Kooka; age, ; residence, occupation, .—Having pleaded, his statement made before the magistrate is read and acknowledged to be correct, and adds: I only went to the fair. I had no stick, no arms. I did not know we were coming to plunder Malodh. I am not a Kooka; I am a Jat.

The above was read over to accused, who acknowledged it to be correct; it contains the whole of the statement made by him in my presence.

T. D. Forsyth, Commissioner.

EXAMINATION of accused, *Mehr Singh*, son of *Golaba* of *Alawulpore*, Jullundhur district, 16 January 1872.—I went to Bhainee for the Maghee and stayed there one day. I saw Heera Singh and Lehna Singh, Mustanas, with many other Kookas, but I don't know what they were doing. I did not see any Soobahs with them. I did not see Ram Singh go to them and tell them not to make a disturbance. I left Bhainee alone, leaving all these Mustanas at Bhainee. I came to Rubboo intending to go to Hosinpore to visit a friend. The Mustanas all arrived after me. Then says: "The Mustanas arrived at Rubboo before me. I did not join them. They did not ask me to join them. I left 'Rubboo' with them on the following evening. I did not know where they were going. I came to Malodh with them; I went to a well outside town. I was alone. Heera Singh gave me food at 'Rubboo.' After I had been a little while at the well outside the village, a number of men came and seized me and beat me. I was arrested there."

L. Cowan, Officiating Deputy Commissioner.

ORDER.—Against the accused, Sahib Singh, there was sufficient evidence to warrant putting him on his trial. I await a report from the police before examining him and the other two remaining accused.

16 January 1872. *L. Cowan*, Magistrate.

ORDER.—A report is received that Ram Singh, leader of the Kookas, has been detained by the heavy rain, but will soon be here. The excuse is a reasonable one as notice was given to him only yesterday about 1 P.M., and it has rained ever since.

As I am about to start for Kotlah notice is given that Ram Singh may return to Bhainee. He will be summoned to Ludiana on my return if necessary.

Adjourned.

16 January 1872. *L. Cowan*, Magistrate.

THE CROWN *versus* BHUGWAN SING.

Charge—Section 396, *Indian Penal Code.*

DEFENCE.

Mehr Singh, son of *Golaba*; Caste, Kooka; age, ; residence, ; occupation, .—Having pleaded not guilty, his statement made before the magistrate is read over to him and acknowledged to be correct. (This prisoner is in great pain and cannot move, his leg being broken.) He adds: I came as far as the Shewalla just at the gate of the village. I was wounded by a lathee between the Shewalla and the gate. After this I went to the well in Rooian and was apprehended next day.

The above contains the whole of the statement made by accused in my presence; it was read over to accused, who acknowledged it to be correct.

T. D. Forsyth, Commissioner.

THE CROWN *versus* BHUGWAN SINGH.

Charge—Dacoity with murder: Section 396, *Indian Penal Code.*

Opinion of Assessors.—In their opinion, after hearing the evidence for prosecution, the offence is fully proved against all the prisoners. They were all arrested on the spot and are wounded; besides, they confessed their guilt.

(True translation.)

19 January 1872. *Gunga Bishen*, Clerk of Court.

THE CROWN *versus* BHUGWAN SINGH, GYAN SINGH, TUMMUN SINGH, MEHR SINGH.
Dacoity with murder: Section 396 *Indian Penal Code.*

The history of this case is as follows:

At an assembly of Kookas at the Maghee fair in Bhainee on the 11th and 12th January, it was decided by a party of Kookas, who had worked themselves into a state of frenzy and excitement, that Gyani Singh Soobah's death must be avenged. Heera Singh and Lehna Singh of Sekrowndee in the Patiala Territory were some of the leaders, if not the chief men in this business. The Deputy Inspector hearing of their excited state went to Ram Singh, the Kooka Guru, and asked the intention of these men. He gave no answer, merely saying they were Mustana.

Subsequently Ram Singh having given the Deputy Inspector the names of 13 men, "Mustana," went to them and begged the gang to go away to their homes, and commit no row. They asked for food from him and then went away.

Two of the prisoners now on their trial say that Lukka Singh Soobah came to the gang, when he was called on to join, to avenge Gyani Singh's death, or he was a *pujie admi.* Lukka Singh then promised to follow. This may have been said by him merely to get rid of them. They declared their intention of going to Kotlah, Jheend, Nabha, and Patiala, to take revenge on these states because of the part taken by them in hunting down the perpetrators of the Raikot murder.

From inquiries made in the case disposed of at Kotlah it appears that the attack was first directed against Kotlah as being a weak and notoriously misgoverned state, that they might get arms and money with which to attack the other places.

A gang of about 100 Kookas left Bhainee on the 13th and halted for the night at Rubboo. Next day as they passed towards Kotlah it was suddenly determined to attack Malodh, where Sirdars Mit Singh and Budden Singh live. The party of Kookas arrived at the gate just at dusk. They took possession of the gate, and proceeding through the bazaar, where they dropped sentries at cross streets, so as to secure their retreat, made straight for Sirdar Mit Singh's house. Entering the gateway they found some stables on the left, and Boota Coachman. He was called on to give up his horses, and on refusing was immediately cut down and killed. Dhowkul Singh Durwan, witness No. 2, had his hands tied behind him at the gate. Dussunda, witness No. 4, saw his brother Boota murdered.

The party then passed on to the house, and in one court-yard found the Sirdar Moonshee Nubbee Buksh, and killed him. Kishna Rajpoot deposes to the fact.

Opposite to this court-yard is Sirdar Budden Singh's house. A party of from 12 to 18 went in, seized his horses, and going up-stairs to his room, pretending to pay their respects, abused and attacked the Sirdar, who with great gallantry turned on his assailants, and seized an axe, and laid about him right and left. The party then took flight and were pursued down the bazaar by the inhabitants, who attacked them with sticks, guns, bricks, &c.

The men of the opposite village, Kheree, came to assist and drove off the Kookas.

In the fight six men of the Kooka party were wounded, two died; of the remaining four, two, Bhugwan Singh and Gyan Singh, were captured just outside the wall and brought in at once.

Witnesses Sahib Singh and Ram Singh depose to the capture of these men, and Sundee deposes to the apprehension of Tummun Singh just outside the village next morning.

Nuthana deposes to seizing Mehr in the village of Rui, not a mile distant from Malodh, next morning.

All the rest escaped and attacked Kotlah, but all or nearly all were captured, and that case having occurred in independent jurisdiction has been disposed of by the Commissioner in his capacity as agent.

There is not the slightest doubt as to the intentions or acts of the party to which these four prisoners belong, and I can see no reason for not recording the sentence in which all who are concerned in dacoity with murder are involved.

The assessors are unanimous in finding the parties guilty; their statements, in fact, admit guilt.

For

For two reasons, however, I hesitate to put into execution the extreme penalty of the law. Severe examples have just been made at Malair Kotlah, and there is room now for a display of clemency.

The second reason is that all the prisoners are more or less severely wounded. Two have broken limbs, and possibly the life of one is in danger. I therefore remit the sentence of death, and pass a sentence of transportation for life against all four prisoners.

Malodh,
19 January 1872.

T. D. Forsyth,
Commissioner and Sessions Judge.

THE CROWN *versus* BHUGWAN SINGH, &c.

Charge—Dacoity with murder: Section 396, *Indian Penal Code*

THE Court concurring with assessors finds that Bhugwan Singh is guilty of the offence specified in the charge, namely, that Bhugwan Singh has committed the offence of dacoity with murder, and has thereby committed an offence punishable under Section 396 of the Indian Penal Code; and the Court directs that the said Bhugwan Singh be transported for life.

19 January 1872.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* GYAN SINGH, &c.

Charge—Dacoity with murder: Section 396, *Indian Penal Code.*

THE Court concurring with assessors finds that Gyan Singh is guilty of the offence specified in the charge, namely, that he has committed the offence of dacoity with murder, and has thereby committed an offence punishable under Section 396 of the Indian Penal Code; and the Court directs that the said Gyan Singh be transported for life.

19 January 1872.

Sessions Judge, Ambala Division.

THE CROWN *versus* TUMMUN SINGH, &c.

Charge—Dacoity with murder: Section 396, *Indian Penal Code.*

THE Court concurring with assessors finds that Tummun Singh is guilty of the offence specified in the charge, namely, that he has committed the offence of dacoity with murder, and has thereby committed an offence punishable under Section 396 of the Indian Penal Code; and the Court directs that the said Tummun Singh be transported for life.

19 January 1872.

T. D. Forsyth,
Sessions Judge, Ambala Division.

THE CROWN *versus* MEHR SINGH, &c.

Charge—Dacoity with murder: Section 396, *Indian Penal Code.*

THE Court concurring with assessors finds that Mehr Singh is guilty of the offence specified in the charge, namely, that he has committed the offence of dacoity with murder, and has thereby committed an offence punishable under Section 396 of the Indian Penal Code; and the Court directs that the said Mehr Singh be transported for life.

19 January 1872.

T. D. Forsyth,
Sessions Judge, Ambala Division.

PROCEEDINGS in the Case of the 16 Men tried at Malair Kotlah.

Malair Kotlah Jurisdiction *versus* Malair Kotlah State.

1. Albel Singh, Kooka of Balaon, Patiala.
2. Roor Singh, Mulu Majra, Patiala.
3. Kaisra Singh, Gillan, Nabha.
4. Saitha Singh, Rubboo, Ludiana.
5. Anroop Singh, Sakrondee, Patiala.
6. Sobha Singh, Rubboo, Ludiana.
7. Varriam Singh, Chuna Bahadoor Singh, Ludiana.
8. Sham Singh, Jagah, Patiala.
9. Hera Singh, Pittoo Ke, Nabha.
10. Baggat Singh, Kangla, Patiala.
11. Hakim Singh, Jubbal, Amritsar.
12. Varriam Singh, Mehraj, Ferozepúr.
13. Sobha Singh, Baddal, Nabha.
14. Soojun Singh, Rubbu, Ludiana.
15. Bela Singh, Rubbu, Ludiana.
16. Jourhir Singh, Bolean, Patiala.

Charge.—"Dacoity with Murder" at Kotlah on the morning of the 15th January 1872.

Niaz Ali for Prosecution on Solemn Affirmation.—18th January 1872.—I am Naib Nazim of Ummergurh, in the Patiala State. On the 15th instant, about noon, a zemindar of Burr came and reported to me at Sherepur that a body of Kookas had created a disturbance in Kotlah and had come to "Burr." I went at once with three sowars and a mohurrir to "Burr;" arrived there about 1 p. m. I saw 68 Kookas in the jungle about 30 or 40 paces from the village, of whom 29 were wounded, some only with contusions. The villagers had all fled out of fear. I asked them where they had come from; they said they had come after attacking Malodh and Kotlah. I told them to give up their arms. Some agreed to give up arms, others refused, and they disputed about it. At last they gave up 16 *tulwars*, one spear, and a number of *gundasses*, axes and sticks. The swords before the court are those they gave up. I arrested them and took them to Sherepur. There were no troops or people of Kotlah there. I got no information from Kotlah. There were four horses with them, three of them belong to the Sirdars of Malodh and one to some one in Kotlah. They had also a Kotlah chupprassee's badge with them. I identify the horses out of court. The 16 men before me and the two women were among the Kokahs I captured. The leaders were Heera Singh and Lehna Singh, of Sakrondee, and Gurmakh Singh, a lumberdar of Phariwai, in Kotlah. They told me they had left Bhainee with the intention of killing the cow-killers in Kotlah, and that on the road they turned off to get arms in Malodh. They did not tell me what they intended to do after leaving Kotlah. I told them it was no use to resist; that, though they might overpower me, the Maharajah would not leave a man alive. After taking the arms, I collected a number of men and escorted the Kokas to Sherepur, four *kos* from "Burr." I kept the prisoners a day at Sherepur and then sent them to you at Kotlah.

L. Cowan.

Accused do not question.

(No. 16.)

Punjab Singh for Prosecution on Solemn Affirmation. 18th January 1872.—I am lumberdar of Ramnuggur, in the Patiala State, and a durbaree of the State. On the 15th I sent out Niaz Ali to "Burr." My village is on the road from Sherepur to "Burr." I saw about 70 Kookas in the jungle outside the village, and the village deserted. After some dispute they gave up their arms to Niaz Ali. There were 16 *tulwars*, a spear, and a number of axes and *gundasses*. There were four horses. I identify the arms shown to me. All the swords were marked with blood, and many were without sheaths. About 20 or 25 were wounded severely. They said they had come from Bhainee to massacre the people of Kotlah who killed cows, and went to Malodh to get arms. The 16 men and two women now before me were among those whom I took to Sherepur. The four horses outside court are those taken from them.

L. Cowan.

Accused do not question.

(No. 17.)

Narain Singh for Prosecution on Solemn Affirmation. 18th January 1872.—I am the Mookhtear of Sardar Mith Singh, of Malodh. Three of the horses, two mares, and one horse outside court are the property of Sardar Mith Singh and his son, Buddun Singh. They were stolen from Malodh, on the evening of the 14th instant, by a gang of dacoits, who wounded the Sardar, Bhugwan Singh, and killed two men.

L. Cowan.

Accused do not question.

One of the swords shown to me was stolen from Malodh at the same time.

L. Cowan.

(No. 18.)

EXAMINATION of Accused No. 1, *Albel Singh*, Kooka. 18th January 1872.—I went to Bhainee for the Maghee festival four or five days ago. I met Heera Singh and Lehna Singh there. I left Bhainee with them and about 120 others. There was no talk about going to Kotlah. They said they were all going to their homes. I went with them to Rubboo; remained a night there. Next day we all went to Malodh. In the evening Heera Singh told us to come with him to Malodh and he would give us arms to kill the slayers of cattle. I remained in the bazaar when the others went into the fort. No Soobah came with us. When the gang left Malodh I accompanied and came to Kotlah. Heera Singh said the cow-killers were there. I came into the city with the others as far as the *Kella* Gate. I don't know who our guide was. I followed Heera Singh. I found a sword in Kotlah. I wounded a man with a sword before the Treasury. I don't know who he was. I then ran away with the others and went to *Burr*, where I was seized the same day by the Naib Nazim. No Soobah incited us at Bhainee to commit the outrage. Heera Singh at Bhainee and at several other places has asked me to join him in killing the killers of cows. The man I wounded was killed by one of my companions. I don't know if any joined us on the road from Bhainee. Several Kookas came to us and several left us. Ram Singh told us to leave Bhainee. I don't know why. I make this confession voluntarily.

Confession.
T. D. F.

(No. 19.)

EXAMINATION of Accused No. 2, *Roor Singh*, Kooka of Patiala. 18th January 1872.—I went to the Maghee fair at Bhainee. I joined the Kookas who were with Heera Singh and Lehna Singh. We did not speak about killing cow-killers; but the thought came into my heart to do so. I left Bhainee after Heera Singh and the party. I joined them next morning in *Rubboo*. I was going to my home. No one at Rubboo asked me to join them. I left Rubboo with the party and joined them at Malodh. In my heart I thought that we would get arms in Malodh. God told me. I went into the town, but remained in the gateway by God's order. I did not go further. When the Kookas returned I came with them and went to Kotlah. No one told me to go. I went. I came into the town and remained outside the gate of the palace. I had a stick. I joined in the fight before the Treasury, but did not strike any one. I did not get a weapon. We ran away; a number remained behind. I don't know if they were killed or not. The men whose corpses were shown to me were with us, but I don't know their names. I went from Kotlah with the others to "Burr," where I was captured. I don't know if all the other accused were in Kotlah with us or not. I don't know if any left our gang after we left Kotlah.

Confession.
T. D. F.

(No. 20.)

EXAMINATION of Accused No. 3, *Kaisra Singh*. 18th January 1872.—I went to Bhainee for the Maghee Melâ. I sat near where Heera Singh and Lehna Sing were. They did not advise me to join them in any enterprise. God put it into my heart to go with them. No Soobah spoke to us. (This last remark is voluntarily.) I left Bhainee with them. We went together to "Rubboo," and from Rubboo to Malodh. God ordered me to go there. No one else told me. I went inside, but stayed outside the fort gate, whilst the others went in. I had not even a stick. I then came with the party to Kotlah. I came inside the town to the palace gate. I was in the fight before the Treasury, but had no arms. I don't know who killed the Kotwal. I don't know who showed us the road in; I followed others. We came to Kotlah by God's order to kill the slayers of kine. From Kotlah we went to Burr, where we were captured. The whole gang was captured at Burr. None left us on the road.

Confession.
T. D. F.

(No. 21.)

EXAMINATION of Accused No. 4, *Saitha Singh*. 18th January 1872.—I went to Bhainee on the Maghee. I did not hear any counsel taken there to kill or rob. I followed the gang of Heera Singh and Lehna Singh to my house in Rubboo. I went with them

to Malodh the following evening. There were in all 50 men; all Kookas. I went inside, but stayed at the outer gate. I don't know why we went there. I went because Heera Singh and Lehna Sing went. From Malodh I went with the rest to Kotlah. Came inside of palace inclosure. I had a stick. I was in the fight, but did not hit any one. I left Kotlah with the others. I did not get a sword in Kotlah. We all came to "Burr." None left us on the road. At "Burr" we were captured. The men whose corpses have been shown to me were with us in Kotlah. I don't know their names. The other accused were all with us in Malodh and Kotlah.

(No. 22.)

EXAMINATION of Accused No. 5, *Arroop Singh*. 18th January 1872.—I went to Bhainee for the Maghee. I went with Heera Singh and Lehna Singh, who are of my village. No counsel was taken at Bhainee. I left Bhainee with Heera Singh and a number of Kookas. I don't know how many. I went to "Rubboo." From Rubboo to Malodh. I stayed at the outer gate by order of Heera Singh. I did not go to the Fort. I went from Malodh to Kotlah. I remained outside. Was not in the fight. When the rest ran out I joined them, and went to "Burr," where I was captured.

Confession.
T. D. F.

(No. 23.)

EXAMINATION of Accused No. 6, *Sobha Singh*, of Roobbu. 18th January 1872.—Came from Rubboo with the gang; did not go to Bhainee. Then says, I did not see Lehna Singh or Heera Singh in my village. The night of the row at Malodh I was in my village all night. On the 15th I left my home to go to the Pharwar Mêla. On the road as I was passing "Burr," I was arrested with the other accused. (I was alone.) I have no witnesses. (Pharwar is between Rubboo and Burr.) I lost my road.

L. Cowan.

This man was with the gang, and, from the geographical position of Pharwar and Burr, it is evident he was *not* going to Pharwar.

See statement of accused Nos. 3 and 4, as to all present being with gang at Malodh and Kotlah.

T. D. F.

(No. 24.)

Kurriam Singh, Accused No. 7. 18th January 1872.—I went to Bhainee for the Maghee fair. I saw Heera Singh there. I left Bhainee with him. He said nothing to me at Bhainee, but on the road he spoke about the killing of cows, and asked me to come to Kotlah and stop it. I went to Malodh with him. I stayed in the bazaar outside the gate of the fort. Was not engaged in the fight. Then I came to Kotlah; came to the palace yard; was in fight, but did not hit any one. I had only a stick with me. I then went to "Burr;" I followed Heera Sing. I was captured at "Burr."

L. Cowan.

Confession.
T. D. F.

(No. 25.)

EXAMINATION of Accused No. 8, *Sham Singh*. 18th January 1872.—Went to Maghee Mêla at Bhainee; met Heera Singh and Lehna Singh there. No counsel was held about cow-killing. I left Bhainee alone about noon; that night I put up at Kotlah under a tree outside the town. I did not eat any food there. I have no witnesses that I was there alone. That morning I went to "Burr," which is on the road to Jagah. I put up in the house of Muhtab Singh, Kooka. A lumberdar, whose name I don't know, saw me. I was in Mehtab Singh's house when I was seized. I was not with the other Kookas when I was seized.

Inaz Ali

Inaz Ali re-examined.—When Sham Singh was seized he was sitting with the other Kookas, and dressing their wounds.

Sham Singh—continued. I was formerly in service of the Jhind Raja, and dismissed for being a Kooka.

L. Cowan.

Confession of being at Kotlah. The case is clear against this man of being with the gang. *See* statement of accused Nos. 3 and 4.

T. D. F.

(No. 26.)

EXAMINATION of Accused No. 9, *Heera Singh.* 18th January 1872.—I went to Bhainee for the Maghee. I left Bhainee with Sham Singh (preceding witness who said he left alone). Came to Kotlah, stayed under a tree, and next morning went to "Burr." Put up in house of Heera Sing. His brother, whose name I don't know, was there. He is a Kooka. I went out for a necessary purpose, as Heera Singh and Kookas were being arrested, and I was arrested with them. I have no witnesses.

L. Cowan.

This man was not seized in a house. The whole gang were taken in a body. He confirms that he was at Kotlah. *See* statements of accused Nos. 3 and 4.

T. D. F.

(No. 27.)

Buggut Singh, Accused No. 10. 18th January 1872.—I went to Bhainee for the Maghee Mela. I saw Heera Singh and Lehna Singh there. I joined their party.

These two preached against cow-killing, and they said they were going to Kotlah to kill the killers of the kine, and invited us to accompany them. No Soobah came near us. Ram Singh came and told us not to make a disturbance *there,* but to take our food and go. A great many Kookas were in a state of frenzy. I was not. I went with them to Rubboo, then to Malodh, inside outer gate, then to Kotlah to palace yard. I had a stick; I was in the fight, but did not hit any one. I did not get any arms. We went first to the treasury. Heera Sing said that, after getting arms, we would kill the killers of cows. We ran away to "Burr," where I was seized. We had many wounded with us, therefore we remained together. I did not hear that we were to go anywhere after leaving Kotlah. Lehna Singh and Heera Singh were wounded in Kotlah, therefore we were dispirited and gave up the game.

L. Cowan.

Confession.

T. D. F.

(No. 28.)

EXAMINATION of Accused No. 11, *Hakim Singh,* 17th January 1872.—I did not go to the Maghee Mela at Bhainee. I went to Ambala to search for service 25 days ago. I lived with Sobha, a police havildar. I was formerly acquainted with him. I stayed four days with him. I asked Tehl Singh in the police to get me service. I don't know what his appointment was. I think he was a Munshi. He did not take me to any superior officer. I don't know if they will give evidence for me or not. I left Ambala 15 or 16 days ago. Went to Sooghur; put up with my "Nankee." I don't know how many days I stayed there. I don't know who lives next to my "Nankee" in Sooghur. From Sooghur I went to "Burr."* I went there in search of service. *I do not know any one in "Burr."* I sat down outside; other Kookas came up, and I was seized with them. I have no witnesses.

* What service is to be found at "Burr?"

L. Cowan.

This man was seized with the others of the gang in a body. His story about sitting down outside, and being joined by other Kookas, is quite incredible. He is a native of Amritsar. *See* statement of accused 3 and 4.

T. D. F.

(No. 29.)

EXAMINATION of Accused No. 12, *Kurrian Singh*, 18th January 1872.—I went to the Maghee fair at Bhainee. I met Lehna Singh and Heera Singh there, and I joined their party. They told us to fight for our religion, and asked who would follow them. I left Bhainee with them on afternoon of 13th. About 60 or 70 other Kookas were with us. We went to Rubboo, then to Malodh for arms. I went into bazaar, but did not enter fort. I did not fight. Then I came with the gang to Kotlah, entered palace-yard, had a stick, joined in fight, and struck several persons with my stick. Then fled with the others to "Burr," where I was apprehended. I did this because God told me to do so.

L. Cowan.

Confession.
T. D. F.

(No. 30.)

EXAMINATION of Accused No. 13, *Sobha Singh*, 18th January 1872.—I went to the Maghee Mela at Bhainee, and went with Heera Singh's party to Rubboo, then to Malodh, and afterwards to Kotlah. At Malodh I went into fort, but did not attack any one. At Kotlah I went into palace-yard; was in the row; did not strike any one. I had a stick only; then I went to "Burr," where I was captured. I went by order of Heera Singh to Malodh and Kotlah.

L. Cowan.

Confession.
T. D. F.

(No. 31.)

EXAMINATION of Accused No. 14, *Sojun Singh*, 18th January 1872.—My home is at "Rubboo." I joined Heera Singh at "Burr." I did not go to Kotlah or Malodh with them. I went to "Burr" six days ago for the Phurwar Mela (Phurwar is beyond "Burr"). I did not go to Phurwar because Gurmukh Singh did not go there. I am not Gurmukh Singh's servant, or in any way connected with him. I lived in "Burr" for one day in the house of a *man whose name I do not know.* I went out and sat down with some Kookas who were outside the village and was seized. I have no witnesses for my defence.

L. Cowan.

Niaz Ali's statement is clear that all the 65 Kookas were in the jungle 30 or 40 paces from the village of "Burr," and said they had come from Kotlah. All the villagers of "Burr" had fled out of fear. I consider this man's statement quite incredible. *See* statements of accused Nos. 3 and 4.

T. D. F.

(No. 32.)

EXAMINATION of Accused No. 15, *Bela Singh*, 18th January 1872.—I did not go to Maghee Mela when they came to my village (Rubboo). I joined them and went to Malodh; I went to bazaar. Then I went to Kotlah and entered the town. I stayed outside palace gate. I had no arms. I was not in the fight, but saw it. We went to Kotlah to kill the killers of cows.

Confession.
T. D. F.

(No. 33.)

EXAMINATION of Accused No. 16, *Jowahir Singh*, 18th January.—I went to the Maghee Mela at Bhainee. I left alone and joined Heera Singh at Rubboo. I went with them to Malodh and stayed at the outer gate. I then came to Kotlah, and came as far as the palace-gate. I did not join in the fight. I then went to "Burr," and was captured there.

L. Cowan.

Confession.
T. D. F.

ORDER.

ORDER.—The whole of the accused in this case were captured immediately after the attack on the town of Kotlah. They had in their possession arms which were deeply stained with blood, and property stolen from the State of Kotlah and Sirdar of Malodh. The whole of the accused make admissions which amount to confessions of guilt, and of their guilt no reasonable doubt can be entertained. The offences these men have committed are no ordinary ones. They have committed an act of open rebellion, and deserve the severest penalty of the law. I commit the accused for punishment to the Commissioner and Agent for the Kotlah State.

L. Cowan, Magistrate.

18 January 1872.

The conduct of certain officials of the Patiala State has been most praiseworthy. Considerable intelligence and courage were displayed by Niaz Ali, Naib Nazim, in the capture of so formidable a gang with the aid of only a few followers. His attendants, too, are deserving of rewards for the prompt and ready aid they rendered to him.

I recommend the following rewards:—

	Rs.
To Niaz Ali, Naib Nazim - - - - - - - -	1,000
„ Punjab Singh, Darbaree - - - - - - -	300
„ Izmak Singh, who gave the information - - - -	200
„ Mustan Ali - - - - - - - - - -	100
„ Ootum Singh - - - - - - - - - -	50
„ Ruttan Singh - - - - - - - - - -	50
„ Golab Singh - - - - - - - - - -	50
„ Pertab Singh - - - - - - - - - -	50

L. Cowan.

KOTLAH STATE *versus* ALBEL SINGH *and fifteen others, Kookas.*

Charge.—Dacoity with murder at Kotlah on the morning of the 15th January 1872.

THIS case has been conducted by the Deputy Commissioner, Ludiana, on behalf of the Kotlah authorities; the Nazim and Tehsildar sitting with him and conducting the trial.

The evidence of Niaz Ali and Punjab Singh shows that a compact body of 68 or 70 Kookas were found by them in the jungle outside the village of "Burr," which place had been deserted by the villagers through fear. When interrogated, these men all acknowledged that they had come from Kotlah. Swords, one spear, axes, and gundasses, were in their hands and covered with blood. The statements furnished by the Nazim establish the fact of the attack upon the palace and treasury of Kotlah, the murder of the Kotwal and seven of his men, besides wounding of 15 more.

It is impossible to discriminate now between those who actually struck the blows which caused the death of these men, nor at this present moment would it be wise to display leniency towards a gang, every one of whom is, according to law, equally liable to the same punishment. The intentions of the gang are clearly indicated by their leader Ram Singh, *vide* his statement made before me at Ludiana on 10th. As regards prisoners Nos. 1, 2, 3, 4, 5, 7, 10, 12, 13, 15, and 16, their statements are ample confessions of their being actually inside Kotlah. Nos. 8 and 9 admit being at Kotlah. Nos. 6, 11, and 14 admit being with the gang when caught, and their admissions, coupled with the statements made by accused 3 and 4, leave no doubt in my mind that they were of the gang, and therefore are equally liable to punishment.

I concur with the committing officer, and confirm the sentence of death against all to be carried out into immediate execution.

T. D. Forsyth,
Commissioner and Superintendent, and *ex-officio* Agent to the Lieutenant Governor, Punjab.

Kotlah,
18 January 1872.

The remaining prisoners caught, but who it appears were not taken with this gang, will be dealt with separately.

T. D. F.

THE meritorious conduct of the Patiala officials having been certified by the Deputy Commissioner, Ludiana, I sanction the rewards to each as recommended by him. The money to be paid from the Kotlah revenues. Provision is also to be made for the families of the Kotwal and others who fell gallantly defending the palace and property of the Malair Kotlah State; the details will be settled in consultation with the Nazim of Kotlah.

Kotlah,
18 January 1872.

T. D. Forsyth,
Commissioner

From *E. C. Bayley*, Esq., C. S. I., Secretary to the Government of India, to *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab (No. 569); dated the 22nd March 1872.

WITH reference to your letter, No. 76 C, dated the 14th ultimo, and the previous correspondence, relating to the trial and punishment of the Kookas concerned in the recent outbreak, I am directed to state that a paper drawn up by Mr. Forsyth, and containing the following passage, has been confidentially communicated to the Viceroy and the Governor General:—

"On reaching Ludhiana on the evening of the 16th, I received a letter from Mr. Cowan, expressing his desire to execute his prisoners at once. I wrote requesting him to leave all the men caught by the Patiala authorities in their charge till I could send out a guard to bring them into Ludhiana for trial. This letter Mr. Cowan must have received some time before he executed any."

2. This statement is directly contrary to the distinct assertion of Mr. Cowan, in the correspondence submitted by the Punjab Government. It is also contrary to the spirit of Mr. Forsyth's own account of the same incident in that correspondence. In his letter, No. 16, dated the 17th January last, to the address of the Commissioner of Umballa, Mr. Cowan refers to a communication which he had received before the execution terminated, when the last batch of prisoners was being tied to the guns; and this account is corroborated by Lieutenant Colonel Perkins, in his journal having reference to the same event.

3. Mr. Forsyth, in the correspondence submitted by the Punjab Government, extenuates the conduct of Mr. Cowan, by stating that his official letter and orders regarding the Kookas did not reach Mr. Cowan till the execution was over, making no mention of a demi-official letter which had reached Mr. Cowan sooner, though he alludes to the demi-official letter elsewhere. In the extract subjoined to paragraph 1 above, Mr. Forsyth speaks of having written a letter which Mr. Cowan must have received "some time before he executed any."

4. It is not clear whether this statement refers to some letter of which no official mention has been made, or to the demi-official letter mentioned by Mr. Cowan and Mr. Forsyth. If the former hypothesis be correct, the circumstance that the letter was not brought officially to the notice of Government should be explained. The latter hypothesis is inconsistent with the assertion of Mr. Cowan, which assertion was before Mr. Forsyth when the paper which forms the subject of my letter was drawn up by him.

5. These are points which, in justice to Mr. Cowan, should be cleared up. With this view I am desired to request that, under the orders of his Honor the Lieutenant Governor, you will be good enough—

(1) To obtain a copy of the letter referred to by Mr. Forsyth as having necessarily reached Mr. Cowan before the execution, and of the demi-official letter which is stated to have been delivered to Mr. Cowan during the execution, if there were two separate letters;

(2) if there was only one letter, to obtain from Mr. Forsyth a statement of the grounds on which he founded his belief that that letter must have reached Mr. Cowan before the execution;

(3) to obtain from Mr. Cowan an exact account of the circumstances under which the earliest letter from Mr. Forsyth reached him, of the hour at which it was delivered to him, of the place in which it found him, and of the number of Kooka prisoners who remained alive at the instant at which he became aware of its contents; and

(4) to obtain from Lieutenant Colonel Perkins a statement of the same character.

From *L. Griffin*, Esq., Officiating Secretary to the Government of the Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 914); dated Lahore, the 15th March 1872.

IN continuation of this office, No. 93 C, dated 22nd February last, I am desired to forward, for the information of the Government of India, copy of a letter, No, 56, dated 6th idem, from Lieutenant Colonel E. N. Perkins, district superintendent of police, Ludiana, reporting on the late Kúka outbreak at Malodh and Malehr Kotla.

From Lieutenant Colonel *E. N. Perkins*, District Superintendent of Police, Ludiana, to Major *A. H. Bamfield*, Deputy Inspector General of Police, Ambala Circle (No. 56); dated Ludiana, the 6th February 1872.

I HAVE the honour to acknowledge the receipt of your No. 157 of 29th ultimo, calling upon me for an official report of the proceedings of the late Kúka outbreak, &c.

As the Inspector General was informed of each day's occurrences by special report during the whole of the time I was absent at Malodh and Kotla with the Commissioner and Deputy Commissioner, I can but recapitulate the events of each day as already reported. The Deputy Commissioner taking the case into his own hands from the first, I only acted under his orders and carried into effect his wishes.

The assembling of the Kúkas at Bhaini (to which there was no restriction) for the Lohrí festival commenced on or about the 10th ultimo, everything went off quietly, parties arriving and leaving each day, the whole breaking up and going off to their homes by the 13th, with the exception of some 80 men headed by Heera Singh of Sukroudi, Patialá. This individual, it appears, had determined to avenge the death of one Giani Rutton Singh,* a subah (lately hung at Ludiana for the Raikote murders), and openly expressing his intention when starting from Bhaini, induced a number of other desperadoes to join him, intimating an intention of proceeding to Kotla, where they hoped to possess themselves of treasure, arms, &c.

* Gyani and Rutton Singh are two separate men, but hung at the same time.

The Deputy Inspector of Sánwál, Surfraz Khan, who was present at Bhaini, on hearing of this, sent a serjeant to follow them up, and on the return of this man with the report that the party had gone to "Rampúr" in Patialá territory, wrote to the Thanadár of Dourahá, in whose *iláquá* they then were, and came into Ludiana to report the matter in person. On his arrival I took him over to the Deputy Commissioner, who immediately had the information conveyed to vakils of Patialá and Kotla. Nothing more was heard during the 14th, and it was hoped that the band had broken up, but on the following morning an account of the attack on Malodh was received from the Deputy Inspector of Dehlon, upon which the Deputy Commissioner and myself started for the scene of action, and on the road were met by a sowar from Kotla, with information of another attack having been made on that place at 8 a.m. that morning, the man stating that when he left, the place was surrounded by Kúkas, and heavy fighting going on. Mr. Cowan, Deputy Commissioner, immediately wrote a telegram, requesting that troops might be sent, dispatching it by the Kotla sowar to Ludiana. On arrival at Malodh the place was inspected, and arrangements made for the security of the village, and the prisoners found placed under a proper police guard.

The band on leaving Bhaini appeared to have remained but a short time at Rampúr, and then started south, passing through the Patialá territory, and putting up for the night at a well belonging to one of the Kúka fraternity, near village Rubbú in Dehlon Thanná, on the confines of the district. Here they remained the night (13), and up to the evening of the following day (14).

At Rubbú it appears from the statements of the prisoners that the idea was first mooted of taking Malodh on their way, in hopes of obtaining arms, &c., from the Sirdars. They left Rubbú about 8 p.m., and entered the village by the west gate, leaving sentries to protect the same. One party proceeded at once to the house of Sirdar Buddún Singh, honorary magistrate, whom they attacked and wounded in the neck. Another party went to the stables, killed the coachman, and took away four horses. Nubbi Buksh, the munshi, was killed near the Sirdar's kutcherry; the whole street was full of men who were pelted with bricks, &c., from the roofs of the houses by the villagers, two of the Kúkas being killed and several wounded. The Kúkas possessed themselves here of three swords and a double-barrelled gun, remaining about an hour, and then left in the direction of Kotla, leaving behind them the killed and wounded, one shot through the arm by a shikari, and the others disabled by bricks and *lathis*.

The Deputy Commissioner was occupied the following morning (16) in examining the accused parties, and Ram Singh arrived about 12 o'clock, having been sent for from Bhaini the previous day, but the Deputy Commissioner being anxious to push on to Kotla, Ram Singh was told he would be called in to Ludiana, if wanted. We then left for Kotla, and on the road met the Risallahs of Jheend and Nábha, also the Naib Nazim of Omurghur (Wazir Ali), who reported his having been successful in capturing nearly the whole gang near Sherepore Patialá. On our arrival at Kotla, the greatest consternation and alarm still existed amongst the officials and townspeople, which only subsided on the appearance of the contingents of the surrounding states, for it was generally apprehended, from the constant reports from the neighbourhood of small bodies of Kúkas collecting in all directions, that another attack would take place.

The following morning (17) Deputy Commissioner and myself inspected the city and scene of action. The gang appeared to have had but little difficulty in entering the town through a large space in the dilapidated wall, and to have met with little or no opposition until they reached the palace square, where they were met by the Thanadár and a few men, and here the only real fighting took place, 15 being killed on both sides. The Thanadár is said to have killed three of the assailants with his own hand before he succumbed to a sword wound on the head.

The Kúkas evidently hoped to get into the treasury, but luckily breaking open the wrong door, found only a few papers, misls, &c., in the place. They also took some arms out of a Kothi, but not finding any ammunition threw them down a well, and they were afterwards

recovered. The Kotla people were evidently unprepared for the attack; this they say was in consequence of the short notice received, the report from their Vakil only reaching Kotla at 8 p.m. on the 14th, the man having been informed by me at 11 o'clock on the previous night (13), and the distance being only 31 miles. As the prisoners had not made their appearance up to 12 o'clock, I, after consultation with the Deputy Commissioner, went out with a few horse to meet them some six miles from Kotla, and brought them in, in safety. A more determined set of ruffians I never saw; several of them on the way in were excessively abusive, declaring they wanted no other government but that of their own sect.

It was determined by the Deputy Commissioner summarily, to execute 50 of the 68 captured by blowing them away from guns, reserving 16 to be hung at Malodh, and in consequence arrangements were made for the executions to take place that evening, which were duly carried out, a letter from the Commissioner *arriving too late to stop the same.*

I should have mentioned that on my meeting the party I found that Hira Singh and Lehná Singh, the leaders of the gang, had been taken, and the former informed me that the whole of the gang had been captured. During the executions a most savage attack was made upon the Deputy Commissioner by one of the prisoners, who was instantly cut to pieces. The following day (18) the Commissioner (escorted by a detachment of the 12th Cavalry under the command of Colonel Gough) arrived and confirmed Mr. Cowan's proceedings of the previous day. He also held a formal trial of the remaining prisoners, and sentenced them also to suffer death, thus showing that he considered the outbreak a serious one, and one from which, unless dealt with severely at the first, very great danger to the State was to be apprehended.

In the evening a Durbar was held by the Commissioner for the distribution of rewards to those who had done good service towards the capture of the gang, &c.

The following morning the Commissioner and party returned to Malodh, where he was occupied during the day in trying the four prisoners taken at that place; they were sentenced to be hung, a sentence which was afterwards commuted to transportation for life.

Up to the 18th information was frequently received that small parties of Kúkas from various quarters were flocking towards Kotla, and these gangs apparently only dispersed on hearing of the executions.

On the morning of the 20th the Commissioner, after receiving visits from the Sadars of Malodh, Rampúr, and Bhir, left for Dehlon and Ludiana. Deputy Commissioner Colonel Gough and self accompanying him.

I should have mentioned that the civil surgeon, Dr. Ince, went with us to Malodh on the 15th, and on the following morning preceded us to Kotla, and returned to Ludiana in the evening of the same day.

Referring to paragraph No. 2 of the letter, I am not aware of any extraordinary measures for information, &c. being in force consequent on the Raikot murders other than the arrangements I found on my receiving charge of the district at the latter end of November, which were those of Extra Assistant Commissioner Narain Singh, having been specially appointed to keep a look out on the movements of the sect, and report direct to the Commissioner and Deputy Inspector General; also a few men told off here and there through the district to report anything suspicious. The Kúkas, however, were particularly quiet previous to the late outbreak, which appears to have been quite a premature affair, and I believe against the wishes of Ram Singh, whose plans for a far more serious disturbance were thus, as it turned out, fortunately anticipated.

In conclusion, I have much pleasure in stating that the police worked well and willingly.

(Confidential.)

From *L. H. Griffin*, Esq., Officiating Secretary to the Government of Punjab, to *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India (No. 1270); dated Lahore, the 11th April 1872.

Letter No. 153, dated 8th April, from T. D. Forsyth, Esq., C.B.
Letter dated 8th April from L. Cowan, Esq.
" " 5th " " Lieutenant Colonel Perkins.

With reference to your letter No. 569, dated 22nd March, I am desired to forward copies of the replies marginally noted, on the subject of Mr. Forsyth's orders to Mr. Cowan regarding the disposal of the Kookas concerned in the recent outbreak.

From *T. D. Forsyth*, Esq., C.B., Commissioner, Ambala Division, to *L. H. Griffin*, Esq., Officiating Secretary to the Government of the Punjab (No. 153); dated Ambala, the 8th April 1872.

In reply to your No. 1076, dated 2nd April 1872, I have the honour to state that three letters were addressed by me to Mr. Cowan on the subject of the mode of dealing with the prisoners taken at Malodh and Malair Kotla between the time of my arrival at Ludiana on the night of the 16th January and the receipt of the news of the executions on 17th January. The first letter was sent off some time in the night of 16th, and before the dispatch of my telegram to you marked B. I am not quite certain of the hour of dispatch. That it arrived at

at its destination before the executions took place is unquestioned. Mr. Cowan informs me that he received it on the 16th or 17th, but he probably in his reply will give the exact hour of its receipt. As to the contents of that letter, it being in demi-official form, I unfortunately kept no copy, and Mr. Cowan informs me that the original has been mislaid.

2. According to my recollection, the letter was to the effect that he was to keep the captured Kúkas in the hands of the Patiala authorities in the Fort of Sherpur, till I could send a guard to bring them into Ludiana for trial; and meanwhile he was to beat up strugglers.

Mr. Cowan says in a letter to me lately received, "I remember having received a demi-official from you on the 16th or 17th January to the effect that it would be best to keep the captured rebels in the Fort of Sherpur till you could send out a force to take charge of them." So that, on the main point, Mr. Cowan's recollection agrees with mine as to the purport of my orders for the disposal of the prisoners.

3. As regards the second letter I have to state that Mr. Cowan's telegram A, copy given in the margin, was received at the Ludiana Telegraph Office at 5.2 a.m. on the 17th, and at 5.48 a.m. my telegram B was received.

A.

Telegram from Mr. *Cowan*, Malodh, to Secretary to the Government of Punjab, Delhi, dated the 16th January 1872.

Against four of the Malodh murderers the proof is convincing. Allow me to execute them on the spot. It is of importance that the punishment should be *prompt*. I go to Kotla.

B.

Telegram from Commissioner, Ludiana, to the Secretary to Government, Punjab, Delhi.

Referring to Cowan's telegram asking permission to execute at once four men. Since then we have got 70 men. I am on the spot, and can dispose of the cases according to form, and without delay. Exceptional action not necessary, and would increase excitement, better allayed, &c., &c.

4. On making inquiry subsequent to the receipt of your letter now under reply, I am informed by the Telegraph Office that these messages were delayed five hours in the office, and were not dispatched till 10.25 a.m. and 10.30 a.m., respectively. I waited till about noon expecting an answer from the Lieutenant Governor; and as none* came, I dispatched my official letter No. 2, copy of which is already before Government, and is again submitted for convenience of reference, which letter reached Mr. Cowan while the executions were going on.

5. The third letter was written subsequently, but, as the second letter arrived too late, it is unnecessary to go into particulars as to the time of arrival of later orders. A copy of the letter, however, is annexed.

6. With reference to paragraph 4 of the letter from the Secretary to the Government of India, Home Department, the loss of the original letter prevented my sending a copy.

As it was not couched in regular official form, and as it only contained instructions to keep the prisoners till they could be sent in for trial, and did not contain the peremptory prohibition against the summary executions to be found in the subsequent letters, it may be that Mr. Cowan considered he might exercise some discretion, and, therefore, his statement, alluded to by the Secretary to Government, may be taken to refer only to the prohibitory, and not to the declaratory order.

7. I take this opportunity to make some remarks explanatory of the sentence carried into execution against the 16 men on the 18th January.

8. When the case was submitted for my orders, I had to consider it in its judicial aspect, as well as from a political point of view.

9. Now, taking the judicial view of the case as it stood by itself, quite apart from all other considerations, 16 men belonging to a gang who had committed a double series of murders were pronounced to be guilty of the charge preferred against them. The sentence for their crime was death; and had the case been tried in the courts governed by our codes, it would have been incumbent on me to show very good cause why that sentence should be mitigated. Had the case then been a solitary one, there would have been no more ground for hesitating to confirm a sentence of death passed on 16 men, than there would have been last year for the chief court to hesitate to pass sentence on 12 men for the murder of the butchers.

10. I had, however, to consider all the surrounding circumstances, and the first one which would naturally influence me was the fact that so many men had already suffered for the same offence. But there were counterbalancing arguments which I now propose to reproduce.

11. One consideration was that, if the case admitted of it, Mr. Cowan ought to be supported. However much I might have deprecated his proposed action, and inwardly deplored it when as yet not taken, still when once done I felt myself placed in an entirely different and, it will be readily conceded, in a most difficult position. To hastily disavow his proceedings, and to cancel his acts at such a moment, I considered would be most unwise.

12. When the news of the executions by Mr. Cowan reached me, I had just ended a long confidential

* The answer, as follows, reached me after midnight, having evidently been delayed in transit:
"With reference to your telegram regarding execution of rebels, Lieutenant Governor concurs with you. He, however, approves Mr. Cowan's energy."—17th January 1872.

confidential talk with Guru Ram Singh. I had learned from him that the sect, which, when I met him at Anandpur Makhowal in 1867, owed him implicit obedience, now had passed entirely out of his control. Such was his assertion, and it was impossible not to be seriously affected by the reflections which arose out of such a revelation. The premature violence of Lehna Singh and his party might prove a miserable fiasco, but what assurance had I then that advantage of the occurrence would not be taken for the rest of the Kookas to rise, and thus support and push forward the movement began by their brethren? And would not the next step have been to plunge the province into actual war? When I went out to Kotla, I heard of bands of Kookas having been seen coming towards Kotla, but suddenly disappearing on reaching near enough to get information of the fate that awaited them. It was while the sentence passed on the 16 men was awaiting my sanction that news of some such bands being in the neighbourhood was brought to me, and men were sent out to ascertain the truth, and to apprehend the culprits.

To have shown leniency at such time, then, to any whom the law declared to be worthy of death would unquestionably have been mistaken for weakness. Every native knew that there was but one sentence to which those men were justly subject.

Last year the chief court had sentenced 12 men to death for the Raikot and Amritsar murders, and it was evident that these sentences had not had a deterrent effect.

13. There was another consideration to which weight had to be given.

The attack on the Mahomedan State of Kotla conveys but a small significance to the mind of the ordinary reader. But any one who has read the History of the Punjab Rajahs by Mr. Griffin will find that, so far back as 1794, Bedi Saheb Singh, lineal descendant of Baba Nanak, the first and most revered of the Sikh Gurus, proclaimed a religious war against the Malair Kotla Afghans, whom he accused of killing cows, as great an offence in the eyes of a Sikh as of any other Hindu.

This present attack, then, was but the repetition of former fanatical fury, with, however, an important difference. In the last century, and, in fact, till within the last quarter of a century, the normal condition of these provinces was anarchy, and attacks by one tribe or people on another were treated rather as a matter of course.

But since the British Government took possession of the country all classes have been taught to look for protection to the paramount power, whose first duty it has been truly said is to maintain security for life and property. To the British Government, then, the Mahomedans of Molair Kotla looked for deliverance in this hour of need.

As I entered the town of Kotla I was met by the Nazim and Tahsildar, who form the Council of Regency during the vacancy caused by the death of the late Nawab, and till the appointment of a successor. They earnestly described the dangers of their position, making, perhaps, more of the case than was correct, in order to exhalt their own services; but, in one respect, they were genuinely earnest. They were in a decided dread of a second attack, and spoke of other Kookas coming sooner or later to renew murders. That they had imbibed a fear, lest I should show too much leniency, was apparent from the earnest manner in which they begged that the men, whose complicity in the attack they, in conjunction with Mr. Cowan, had pronounced to be proved, should not be let off with a less severe punishment than the law warranted. I felt myself bound to give due weight to this consideration. I may here mention that the next day, when I went over to Malodh to try the men charged with the murderous attack on Sirdar Mith Singh's house, and before I began to take up the case, the Sirdar took me aside, and in a solemn manner assured me that, unless I passed sentence of death on the prisoners when found guilty, his life, and the lives of the people with him, would not be safe.

I did not allow this to influence my final decision as to the disposal of the culprits at Malodh, for reasons given in my judgment, but I went through the form of recording a sentence of death according to law.

14. There was yet another consideration. All these men had been doomed to execution on the previous day by Mr. Cowan, and it was known to all that they had only been spared temporarily by my orders arriving for their trial. If, then, after trial, it should be found that the sentence intended by Mr. Cowan was a just one, was there not a certain amount of necessity laid on me to justify his proceeding, in the eyes of the world by giving a legal sanction to his decision?

15. Viewing the whole circumstances of the case, I considered that the sentence ought to be carried out.

From *T. D. Forsyth*, Esq., C.B., Commissioner of Ambala Division, to *L. Cowan*, Esq., Officiating Deputy Commissioner of Ludiana; dated Ludiana, the 17th January 1872.

I HAVE to acknowledge the receipt of your letter, dated Kotla, 16th January, 7.30 p.m.

2. The body of Kookas now apprehended in Patiala territory have committed two separate offences; one offence affecting British jurisdiction, the other offence affecting the semi-independent jurisdiction of the Malair Kotla State.

3. As regards offences committed in Malair Kotla, the authorities there have full power to

to try and sentence criminals, sending the case up to the Commissioner for sanction when the sentence is capital punishment.

4. I request that you will prepare at once the case against such as appear to you to be deserving of capital punishment, and I shall then give immediate orders. But, with reference to your expressed desire for promptitude, the case is not sufficiently urgent to justify the abandonment of the very simple form of procedure we have at hand.

5. I purpose proceeding to Malair Kotla very shortly.

My dear Cowan,—You have done *admirably*, but for heaven's sake don't let the whole thing fall short of perfect success by any hasty act.

By dealing with the men now caught as culprits in the Kotla territory, they can be hanged legally without the delay of sending the case to the chief court, by attending to the form usual in all such cases, *i. e.*, sending up the proceedings to me; and to save time and trouble I am going out to Kotla as soon as I have disposed of Ram Singh. But if you hang (yourself) these men, *i. e.*, the men caught at Malodh, you will fall short of perfect success. A delay of 12 hours cannot produce harm, whereas illegal action may cause trouble. I only wait for Ram Singh to come in to-morrow morning, and I shall then be out at once.

17 January 1872. *T. D. Forsyth.*

From *L. Cowan*, Esq., Mussouri, to the Officiating Secretary to the Government of the Punjab; dated the 8th April 1872.

I HAVE the honour to acknowledge receipt of your letter, No. 1577, dated the 2nd instant, with enclosure from the Secretary to the Government of India in the Home Department, No. 569, dated the 22nd March 1872, calling for explanation on certain points connected with the punishments inflicted during the Kooka outbreak in January last. All my papers relating to the case have been left at Ludiana. I had hoped to remain at this place for a few days only; that the correspondence was over, and that it would not be necessary to refer to it during my absence from Ludiana. My recollection, however, of the occurrences at Kotla on the 17th and 18th of January is so distinct that I do not hesitate to furnish the explanation called for, without waiting for the papers.

2. Before the execution of the 49 men was over, I received *only one* letter from Mr. Forsyth, directing me not to execute the captured Kookas, but to keep them for trial. This letter reached me on the evening of the 17th January a little before sunset; I was on what is called the parade ground of the Kotla State between a line formed by the sepoys of the native States and the guns. Forty-two or 43 of the insurgents had been executed before this letter was delivered to me: the remaining six or seven men were tied to the guns, and a bugler was awaiting the order to sound the "fire." Colonel Perkins and some of the higher officials of the native States were standing near me. After reading Mr. Forsyth's letter I handed it to Colonel Perkins, with the remark that it would be impossible to stay the execution of the men already tied to the guns; that such a proceeding would have the worst effect on the people around us. This letter was the *only one* I received from Mr. Forsyth on the 17th, directing me to abstain from executing the prisoners.

3. Earlier in the day before or about noon, as I was riding through the town of Kotla, a letter was put into my hand from Mr. Forsyth, who had arrived at Ludiana late on the previous night. This note was to the effect that he had heard of the capture of the rebels, and that, in the present disturbed state of the country, it would be better that they should be detained in the Patiala Fort of Sherepur till he would send out a sufficient strong guard to take charge of them. This note did not contain any instructions to have them brought *to trial*. I put the note in my pocket, and thought no more about it. It contained only a suggestion which could not be acted on, for the captured Kookas were then close to Kotla on their way in.

4. The above is a plain statement of facts. Read by itself, the extract subjoined to paragraph 1 of the Supreme Government's letter plainly implies that I acted at variance with orders received some time before the execution. That such was not the case I have shown above; and, assuming that I had actually received orders not to execute the prisoners, and had disobeyed those orders, that such disregard of instructions would have been approved of is evidenced by the fact that, on the 18*th January*, after receipt (on the night of the 17th) of my report of the executions, Mr. Forsyth wrote to me as follows:—

"My dear Cowan,—I fully approve and confirm all you have done. You have acted admirably. I am coming out.

"Yours, sincerely,
"*T. D. Forsyth.*"

"18 *January* 1872."

I received this note about 11 a.m. on the 18th; a little later in the day, Mr. Forsyth, accompanied by Colonel Gough, and escorted by 30 or 40 sabres of the 12th Bengal

Cavalry, arrived at Kotla, and, after repeating to me verbally his approval of what I had done, ordered the immediate execution of 16 more prisoners.

5. On the 19th January Mr. Forsyth desired me to give him copies of all the demi-official letters he had written to me, and I furnished him with copies of all in my possession. My belief is that I sent him, with the others, a copy of the note I received in the town of Kotla on the forenoon of the 17th. I destroyed several papers which I deemed of no importance, and probably this note with the rest, for I have not got it now. This is unfortunate, but I could not have supposed I would have been called on to furnish a copy of it. I had no conceivable motive for keeping it back. My act had been approved of and confirmed before I was asked for copies of those notes, and I had *nothing* to gain by suppressing any of them.

6. On the 25*th March*, two days before I left Ludiana, Mr. Forsyth wrote to me for a copy of a letter in which he had asked me to keep the prisoners in Patiala *till he would send a guard to bring them in for trial.* I searched unsuccessfully among my papers, and replied by return of post that I recollected having received a letter from him, desiring me to keep the prisoners in Sherepúr till he could send out a force to secure them, and I added that I believed I had sent him a copy of this letter with the copies of his other demi official letters, but that I could not now find it.

7. To save time I have this day written to Mr. Forsyth, requesting him to forward to you a copy of the letter which he addressed to me on the 17th, and which I received as the executions were over, and also a copy of any other letter of the same date.

From Colonel *Perkins*, District Superintendent of Police, to the Officiating Under Secretary to the Government of the Punjab; dated the 5th April 1872.

In reply to your letter, No. 1078, of the 2nd instant (forwarded from Ludiana), I beg to state that I remember Mr. Cowan receiving a letter previous to the conclusion of the executions at Kotla, but cannot state the exact time of its receipt, nor the number of Kookas it all undealt with.

(Home Department.—Judicial.—No. 857.)

From *E. C. Bayley*, Esq., C.S.I., Secretary to the Government of India, to the Secretary to the Government of the Punjab.

Sir, Fort William, 30 April 1872.

No. 1270, dated 11th April 1872.

In continuation of my letter, No. 569, dated 22nd March last, and with reference to your reply noted in the margin on the subject of the summary execution of Kúka prisoners at Malehr Kotla, I am directed to state that the Governor General in Council is now in a position to pass final orders in this painful case.

2. His Excellency in Council has maturely considered the facts stated by Mr. Forsyth and Mr. Cowan, and the expressions of his Honor the Lieutenant Governor's opinion contained in your letters of the 19th January, No. 23 C, the 7th February, No. 59 C, and of the 16th February, No. 78 C, and, without recapitulating all the circumstances of the case, which will be found in the memorandum appended, he thinks it right to recall the following leading facts to your recollection as being those on which his decision proceeds.

3. On the 17th January 49 persons, many of whom were wounded, were by Mr. Cowan's orders blown away from guns at Malehr Kotla without trial. That these persons had been guilty of a great crime there is no doubt; but both the manner of the execution, and its excessive and indiscriminate severity, stand in need of the strongest justification. In the opinion of his Excellency in Council, nothing short of absolute necessity could justify these proceedings. If any judicial inquiry, however summary, had taken place, a distinction might have been made between ringleaders and followers, and the usual mode of punishment would have been employed. At the time when the extra-judicial execution was ordered, the disturbance which had taken place had been effectually suppressed. Mr. Cowan had at his disposal considerable bodies of troops, and there is no evidence whatever to show that actual immediate danger was or could have been apprehended either from the prisoners themselves, or from other members of the sect to which they belonged. The only fact which can be said to suggest the existence of such danger is, that various small bodies of Kúkas were seen in the neighbourhood of Malehr Kotla, who promptly disappeared. It appears, however, to his Excellency in Council, that their dispersion was owing to the defeat of their associates, and not to the summary punishment inflicted, and in this belief he is supported by the view taken by his Honor in your letter of the 7th February above quoted, paragraph 10, in which it is said:—

"The Lieutenant Governor is not of opinion that the evidence now submitted indicates that

that the immediate retirement of the bands of Kúkas who were observed moving towards Kotla, was the result of the executions ordered by Mr. Cowan, for in nearly every instance they are said to have gone back on the 15th, the day the attack took place, whereas the executions were carried out on the morning of the 17th. Their retirement appears to have been caused really by the attack having been beaten off by the Kotla people."

4. It is, in short, obvious, both from the circumstances of the case, and from many expressions in Mr. Cowan's letters, that his motive in ordering the executions was to prevent a rising which he considered imminent, by an act calculated to strike terror into the whole Kúka sect. In illustration of this, it is to be observed that both Mr. Forsyth and Mr. Cowan refer to the small effect which the execution of the Raikot murderers in due course of law had had in the way of deterring the Kúkas from further violence.

5. Before adverting to the peculiar circumstances under which Mr. Cowan acted, the Governor General in Council thinks it right to make some general observations on the principle on which that officer seems to have proceeded, as his Excellency in Council has reason to fear that it may have considerable influence on the minds of officers who feel themselves liable to be placed in positions of difficulty. This principle, perhaps rather felt than avowed, is that law is meant only for quiet times, and that officers are justified in disregarding it, as soon as political danger is apprehended, and in substituting punishments inflicted at their own discretion, and without any other measure than their own estimate, formed on the spot under the pressure of immediate excitement, of what is required in the particular case for the sake of example.

6. This view appears to his Excellency in Council to involve a grave error.

7. His Excellency in Council desires to impress, in the most emphatic manner, on all civil and military officers whom it may concern, the broad principle that the law of the land administered by the established courts is the instrument to which Government looks, and in which it trusts, for the purpose of suppressing crime, maintaining peace, and deterring ill-disposed persons from following the example of malefactors; and that it is a grave act of insubordination and presumption for any individual officer to take upon himself to decide upon the spur of the moment that the law is not strong enough to protect society, or that the punishments which can be inflicted in its ordinary course are not sufficiently severe to deter from crime. To do so is to usurp the highest prerogative of the Government. Cases may arise in which Government may consider it necessary to punish particular offences with exceptional severity, or to arm particular officers with special powers of summary trial and execution; but till this is done, the duty of all civil and military officers in all cases is to treat criminals when captured in the regular course of law; that is to say, to hand them over for trial to the proper tribunals.

8. In order to show that this course is not inconsistent with any degree of vigour and promptitude which can be required in the most arduous circumstances, it is necessary to bear in mind that for the suppression of violent crime, and the apprehension and safe custody of offenders, the law authorises, and indeed requires, the use of any degree of military force which may be necessary for the purpose. Rebels with arms in their hands, gangs of dacoits banded together for the purpose of robbery and murder, persons in the act of waging war against the Queen, and all who aid and abet them, may and ought to be attacked by force of arms precisely as armed invaders may be attacked. If their behaviour and number is such that it would, upon military grounds, be improper to grant them quarter if they were engaged in ordinary war, they might be killed upon the spot. In short, there is no severity which by the usages of war may be inflicted upon the enemies' troops for the purpose of defeating and breaking them up, which may not in strict accordance with law be inflicted upon bands of criminals, whether rebels or not, for the purpose of their defeat or arrest.

9. The one thing which cannot be permitted to any civil or military officer in any case whatever, is the regular assumption of the office of the judge and of the legislator. No such officer has right to punish his prisoners, still less has he any right to punish them according to a law made by himself, after the fact, and in reference to the circumstances of a particular case. The law authorises officers to do whatever is necessary in order to suppress crime and arrest criminals; but neither law nor any principle of justice or policy justifies them in punishing prisoners, when taken, as they think proper.

10. Officers may, perhaps, be assisted in understanding and applying to particular cases, as they arise, the principles above stated by a few observations on the policy which they are meant to carry out.

11. To administer justice with mercy is the fixed and settled policy of the Government of India; but it is absolutely essential to this great object that justice should be administered according to known rules, with due deliberation, and with discrimination between degrees of guilt. Sentences pronounced under excitement, and with little time for reflection, are liable to be neither just nor wise. It is probable that they will bear upon them the stamp of individual resentment or anxiety rather than that of deliberate justice. Summary orders are often taken for acts of vigour, when they are in truth acts of weakness. Such orders frequently show that those who give them doubt their own strength, and are afraid to be merciful to their opponents.

12. The Governor General in Council cannot consent to assume the attitude in which th ratification of such acts would place him. His Excellency in Council trusts, on the one hand, in the effect which a course of just and merciful rule cannot fail to produce in time in the minds of the people. He relies, on the other hand, on the existence of a military force sufficient to protect the mass of quiet and well-disposed persons against the small minority who, for whatever reasons, might be willing to plunge the country into anarchy and civil war.

13. His Excellency in Council cannot consent to be forced by the crime of a few fanatics into the sanction of acts repugnant to the whole spirit of British rule. The British Government is strong enough to keep order and suppress crime, and there is no occasion for indiscriminate severity; nor in any case could the exercise of such severity be a source of strength.

14. With reference to the special circumstances of Mr. Cowan's case, his Excellency in Council has to observe as follows:—

15. In the first place his Excellency is of opinion that Mr. Cowan's clear duty was to have detained the prisoners in custody until they could be proceeded against in due course of law. Referring to the principles already stated, there is no circumstance which tends to justify, or even greatly to excuse, Mr. Cowan's conduct. The prisoners were absolutely helpless. A large proportion of them were badly wounded. They had surrendered to very inferior numbers, and were under the guard of a considerable military force, which might have been increased to any required extent. Under these circumstances their illegal and indiscriminate execution was a measure for which there was no excuse. His Excellency in Council cannot regard as an excuse Mr. Cowan's belief that the execution was politically expedient. In fact, that he set aside the existing law because he thought it expedient to do so in the particular case, is one of the elements in the offence which his Excellency in Council considers Mr. Cowan to have committed.

16. There are, however, other matters in connection with Mr. Cowan's conduct which it is impossible to pass over, and which have been in part brought to his Excellency's notice at a very late stage in the proceedings. The following references to the documents on record will set this in a clear light.

17. On the 16th January Mr. Cowan telegraphed to the Punjab Government for leave to execute four men in a summary manner.

18. On the same day Mr. Forsyth wrote Mr. Cowan a demi-official note, which has been lost, in which Mr. Forsyth directed Mr. Cowan to send the prisoners to Sherpur, to be kept until Mr. Forsyth could send a guard to take charge of them. Mr. Forsyth believes that his letter said that the guard was to take them into Ludhiana for trial. Mr. Cowan believes that trial was not referred to. Be this as it may, the letter reached Mr. Cowan some hours before any of the executions took place. He says, "I put the note in my pocket, and thought no more about it. It contained only a suggestion, which could not be acted on, for the captured Kúkas were then close to Kotla on their way in." This conduct would imply that, in Mr. Cowan's opinion, the main point of the note was that the men should be sent to Sherpur; whereas it should have been also apparent to Mr. Cowan that Mr. Forsyth desired that the men should be kept in custody.

19. The executions, therefore, cannot be reconciled with the spirit of Mr. Forsyth's instruction, and took place before any reply had been received to a telegraphic message sent by Mr. Cowan the day before to the Punjab Government for leave to execute four men only.

20. Before the executions were finished, and whilst six or seven men were tied to the guns, Mr. Cowan received an official letter containing a positive order from Mr. Forsyth to proceed according to law. Mr. Forsyth's words were, "I request that you will prepare at once the case against such as appear to you to be deserving of capital punishment, and I shall then give immediate orders. But with reference to your expressed desire for promptitude, the case is not sufficiently urgent to justify the abandonment of the very simple form of procedure we have at hand." Upon this Mr. Cowan says, "After reading Mr. Forsyth's letter, I handed it to Colonel Perkins, District Superintendent of Police, with the remark that it would be impossible to stay the execution of the men already tied to guns, that such a proceeding would have the worst effect on the people around us."

21. His Excellency in Council cannot see that there could have been any serious difficulty in staying the execution without even communicating the reasons for doing so to the bystanders. It was Mr. Cowan's clear duty to obey Mr. Forsyth's order, in a case in which the lives of six or seven persons were at stake, and where the act forbidden was upon the face of it illegal.

22. While the Governor General in Council recognises that the lives of all the criminals involved in the recent outbreak in the Punjab were in principle forfeited to the laws, his Excellency is under the painful necessity of affirming that the course followed by Mr. Cowan was illegal, that it was not palliated by any public necessity, and that it was characterised by incidents which gave it a complexion of barbarity. That course was commenced in opposition to the spirit of instructions received from superior authority, and in the absence

of sanction, invoked but not awaited; it was prosecuted to completion in contravention of positive orders.

23. Under all these circumstances, his Excellency in Council is compelled to direct that Mr. Cowan be removed from the service. He does so with deep regret, as Mr. Cowan's previous character and conduct have been unexceptionable, and as he acted with promptitude in concerting measures for the repression of the movement.

24. It remains now to consider the case of Mr. Forsyth in reference to the approval passed by him on the act of Mr. Cowan, and to the confirmation by him as Commissioner of Umballa of the sentence passed by the native officials of the Malehr Kotla State, with the concurrence of Mr. Cowan against 16 other prisoners.

25. In confirming this sentence, and in ordering the immediate execution of the prisoners, Mr. Forsyth was acting in a political rather than in a judicial capacity. It is the duty of officers so situated to be specially on their guard against permitting the native states which are under their superintendence to act with a degree of harshness or precipitation alien to the spirit of English rule; and although Mr. Forsyth's proceedings were no doubt legal, that fact alone ought not to protect him from censure, if his proceedings showed a want of that merciful discrimination which ought in all cases to be characteristic of the British administration of justice. In this, Mr. Forsyth seems, to his Excellency in Council, to have failed, and the failure was apparently due to his having permitted a not unnatural desire to support a subordinate, to assume undue prominence in his mind in a case where interests of far greater importance were concerned.

26. On the morning of January 17th, Mr. Forsyth had telegraphed to the Punjaub Government, as follows:—

"Referring to Cowan's telegram, asking permission to execute at once four men. Since then we have got 70 men. I am on the spot, and can dispose of the cases according to form, and without delay. Exceptional action not necessary, and would increase excitement better allayed, &c., &c."

27. On the night of the 16th, he wrote a demi-official letter, which reached Mr. Cowan before the execution. On the 17th he wrote two separate letters, one official and one demi-official; the first directing Mr. Cowan, and the second requesting him in the most pressing, though in most friendly terms, not to proceed illegally. On the 18th, having received the report of the executions, he gave an unqualified confirmation of all that Mr. Cowan had done, in the following terms: "My dear Cowan, I fully approve and confirm all you have done. You have acted admirably. I am coming out." Mr. Forsyth thus anticipated, without necessity, the opinions of the Lieutenant Governor and the Government of India, committed superior authorities as far as he could to sentiments which might be repugnant to their judgment, and directly reversed his own distinct resolution formed and expressed up to that moment. On the same day he confirmed the sentence of the Malehr Kotla authorities, and ordered the immediate execution of the 16 men condemned by them, a course which was not warranted by the necessity of making a further example, or by the character of the parties concerned, among whom various shades of guilt might, by a less cursory inquiry, have been discovered.

28. In Mr. Forsyth's explanation of the course taken by him, he says in his letter of the 8th April 1872:—

"I take this opportunity to make some remarks explanatory of the sentence carried into execution against the 16 men on the 18th January.

"When the case was submitted for my orders, I had to consider it in its judicial aspect, as well as from a political point of view.

"Now, taking the judicial view of the case as it stood by itself, quite apart from all other considerations, 16 men belonging to a gang who had committed a double series of murders, were pronounced to be guilty of the charge preferred against them. The sentence for their crime was death; and, had the case been tried in the courts governed by our codes, it would have been incumbent on me to show very good cause why that sentence should be mitigated. Had the case, then, been a solitary one, there would have been no more ground for hesitating to confirm a sentence of death passed on 16 men, than there would have been last year for the Chief Court to hesitate to pass sentence on 12 men for the murder of the butchers.

"I had, however, to consider all the surrounding circumstances, and the first one which would naturally influence me, was the fact, that so many men had already suffered for the same offence. But there were counterbalancing arguments which I now propose to reproduce.

"One consideration was, that if the case admitted of it, Mr. Cowan ought to be supported. However much I might have deprecated his proposed action, and inwardly deplored it when as yet not taken, still when once done I felt myself placed in an entirely different, and, it will be readily conceded, in a most difficult position. To hastily disavow his proceedings, and to cancel his acts at such a moment, I considered would be most unwise."

He adds, in subsequent paragraphs, that he had had a conversation with Ram Singh,

which gave him a strong impression of the serious character of the outbreak, that whilst the sentence was awaiting sanction, he heard a report of Kuka bands being in the neighbourhood; and that the Sirdar of Malodh pressed him to pass sentence of death. The prominent feeling in his mind, however, seems to have been that Mr. Cowan ought to be supported in an act which Mr. Forsyth himself had repeatedly forbidden.

29. In conformity with the views enunciated above, his Excellency in Council is of opinion that, while Mr. Forsyth is undoubtedly guiltless of an illegal action, he has in no small degree identified himself with the errors committed by Mr. Cowan; that he failed to discern his duty as counsellor to a native government in a serious emergency; and that he acted eventually in a manner inconsistent with the recognised policy of the Government of India.

30. His Excellency in Council considers that Mr. Forsyth's conduct will be adequately dealt with by his removal from the Commissionership of Umballa to a position in another province in which he will not have to superintend the judicial proceedings of any native state, and by an expression of the opinion of the Government of India that he ought not in future be placed in a position in which he would be called upon to exercise similar control and superintendence.

31. The Governor General in Council is constrained to notice, with regret, that two documents essential to the information of the Supreme Government in this case were not brought to his knowledge in regular course, and at the commencement of this correspondence, viz., the demi-official letter written by Mr. Forsyth to Mr. Cowan on the 16th January, since mislaid, and the letter addressed by Mr. Forsyth to Mr. Cowan on the 18th, confirming his proceedings.

32. It is with great concern that his Excellency in Council feels compelled to pass orders which affect so seriously officers whose fault has no doubt been due mainly to over-zeal for the maintenance of peace and order, but he considers it absolutely necessary to cause it to be understood that, whilst every officer will be fully supported in any measures, however rigorous, which he may be justified by law in adopting for the maintenance or restoration of the peace, no one will be permitted to supersede the law at his own discretion. The line between the two things is broad and clear, and the Governor General in Council would be equally prompt to notice any remissness in the use of the means sanctioned by law for suppressing crime and bringing criminals to justice. He has no fear that the course which it has been necessary to take with regard to the present case will deter other officers from a becoming energy and promptitude in the presence of danger. On the other hand, his Excellency in Council fears as little that the course now taken will be misunderstood by the native population. He trusts that this example will teach them that under British rule all alike must obey the law, and they may be well assured that the punishment now inflicted on a British officer who has broken the law, is not in any way connected with indifference or indulgence to the crimes of those whom he punished unlawfully. Their offence was deserving of exemplary punishment, though it should have been inflicted in a proper manner, with greater moderation, and with more discrimination, between the degrees of guilt of the persons concerned. And, lastly, his Excellency trusts the present decision will make it clear to all classes that such proceedings as Mr. Cowan's are forbidden by law, and are bad in policy, because they leave no time for moderation and discrimination, and so take away the distinction between the deliberate satisfaction of the requirements of justice, and a hasty acceptance of the suggestions of excitement and alarm.

33. In communicating this review of the conduct of the Commissioner and the Deputy Commissioner, the Governor General in Council considers it due to his Honor the Lieutenant Governor to refer to the sentiments enunciated by his Honor in connection with those which his Excellency in Council has felt bound to record. The Lieutenant Governor, from the first, embraced and expressed the opinion that the conduct of Mr. Cowan was unjustifiable in regard to the precipitation, illegality, and indiscriminate rigour of his proceedings. A consideration of the exciting circumstances under which Mr. Cowan acted, of the political danger which he apprehended, and of the necessity of supporting officers of Government in acts even of excessive severity when done in good faith, and for the public interest, induced the Lieutenant Governor to withhold an expression of blame which would have been otherwise in accordance with his sentiments, and of which the Governor General in Council would have approved. His Excellency is, however, happy to be able to recognise that there is no essential difference between the views entertained by the Governor General in Council and those of the high officer entrusted with the administration and security of a province so important as the Punjab.

(Government of India, Financial Department—No. 151A, of 1872).

To His Grace the Duke of *Argyll*, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, 3 May 1872.

By our Judicial Despatch, No. 28, of the 2nd instant, in the Home Department, your Grace will learn that we have considered it necessary to mark our condemnation of the conduct of Mr. L. Cowan, late Officiating Deputy Commissioner of Ludiana, by removing him altogether from the service of Government.

2. The reasons for our action are fully set forth in the Home Office Despatch above quoted. We now venture to recommend to your Grace's merciful consideration Mr. Cowan's claim to a moderate pension.

3. Mr. Cowan is an uncovenanted servant, who, through a long service of 23 years, had raised himself, by meritorious and faithful conduct, to the responsible office of Deputy Commissioner, and had been for some time entrusted with the charge of the Ludiana District, which contained the head quarters of the Kuka sect. The selection of Mr. Cowan for the charge of a district which contained peculiar elements of disaffection and danger is a proof of the esteem in which his character as a public officer stood, and his acts in the early part of last year, in connection with the murders perpetrated by the Kukas at Raikot, fully justified the confidence placed in him. That he failed in the present instance we cannot but attribute in a great measure to the grave apprehensions which the proceedings of this sect, somewhat perhaps exaggerated by his close observations of them, had excited in his mind.

4. There can be no doubt that Mr. Cowan acted sincerely and zealously in accordance with what he erroneously believed to be the urgent demands of public duty. It is deeply to be lamented that he did not possess that firmness and calmness of temperament which enables a public servant to behave at once with energy and reflection in a serious danger. Mr. Cowan erred, but his errors is not, in our opinion, to be confounded with those deliberate infractions of duty which are commonly visited with the severest penalties. In this case there was no offence against the rules of morality or rectitude; it was the misfortune of Mr. Cowan to be confronted with an emergency which his character did not enable him to meet with success. Nothing short of the removal of Mr. Cowan from the service would adequately mark the reprobation which this Government entertains for the acts into which he was betrayed, but we have prescribed this severe measure of punishment with regret; we cannot withhold some measure of sympathy for the offender, and we should be sorry to see a sentence of absolute ruin added to the humiliation and loss which he must inevitably experience. We therefore earnestly solicit the assent of your Grace to the proposal which we now submit, viz., that as a special case Mr. Cowan be allowed a pension of 300 rupees per mensem, with effect from the date of his dismissal.

We have, &c.

(Judicial, No. 32.)

From Secretary of State for India in Council to the Government of India.

My Lord, India Office, 18 July 1872.

THE Despatch of your Excellency's predecessor in Council, dated 2nd May, No. 28, of 1872, relative to the Kuka disturbances, has been most carefully considered by me in Council.

2. In that Despatch, Lord Napier in Council stated that, after a full consideration of all the circumstances connected with the outbreak and its suppression, he had felt it his duty to dismiss Mr. Cowan from the service of Government, and to remove Mr. Forsyth to another appointment in Oude.

3. I have to express to you my concurrence in the principles laid down by the Government of India as applicable to this most painful case, and my entire approval of the dismissal of Mr. Cowan from the public service, and likewise of the orders which you have issued in respect to Mr. Forsyth.

4. In consideration of his previous services, I approve of the grant to Mr. Cowan of a pension of 300 rupees per mensem, as proposed in the Financial Despatch of Lord Napier in Council, dated 3rd May, No. 151A, of 1872.

I have, &c.
